It now seems high time to hold an inquest on the strange deaths of the Atlantic Charter and the "four freedoms." These were American war aims, which received at least the formal acquiescence of our allies. But they have proved to be a negation, not a blueprint, of the shape of things to come, both in Europe and in Asia.

Instead of freedom from want and from fear one finds destitution on a scale unknown since the Thirty Years' War. Almost everywhere there is haunting fear of a third world war, sometimes varied by desperate hope that such a war will come. This hope is whispered among the millions of miserable people who have lost everything they had because of arbitrary territorial changes, accompanied by mass expulsions and the setting up of tyrannical dictatorships.

There is no freedom of press in the police-state. And the police-state is the rule, not the exception, in the large area of Europe behind the iron curtain. Freedom of religion has fared little better. Characteristic of the European new order are such developments as the forcible absorption of the Uniat into the Soviet Orthodox Church in Ruthenia and the widespread terrorizing of Catholic priests in Croatia and Slovenia, culminating in the arrest and sentencing to a long term in prison of Archbishop Aloysius Stepinats, of Zagreb.

Let us recall the first three clauses of the Atlantic Charter:

"First, their countries seek no aggrandizement, territorial or other;

"Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned;

"Third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them."

Tell that to the million and more people who were deported from eastern Poland to the Soviet Union, those of them who have survived the ordeal of transportation in cattle cars and subsequent slave labor. Tell that to the hundreds of thousands of Poles, Letts, Lithuanians, Estonians, Ukrainians, Yugoslavs, Russians who have been dispersed as fugitives all over Europe! Tell that to the Germans who formerly lived in East Prussia and the territory between the Oder-Neisse border and the former German frontier—to those of them who are still alive as beggared refugees after undergoing orgies of pillage, rape, and murder.

II

Our foreign policy during the war was largely in the hands of ungifted amateurs who seem to have made the gravest international decisions on much the same basis of hunches, or perhaps lucky numbers, which, we are told, determined financial policy in the early years of the New Deal. Four principal assumptions on which American wartime diplomacy was based have proved to be costly mistakes. These were:

(1) That Russia, after a victorious war, would be a cooperative do-gooder or, at least, a passive factor in the international scene. It was assumed, with truly amazing naivete, that Soviet foreign policy would continue to be restrained when every element of check and balance in Europe and Asia had been smashed.

(2) That the way to get along with Stalin was to give him everything for which he asked. Curiously enough, the advocates of this policy were often the most violent critics of concessions to Hitler. The aftermath of the Yalta and Potsdam agreements proves that an appeasement policy is always in the red, because it is invariably interpreted by a dictatorship as an invitation to new aggression.

(3) That Germany was the sole source of international evil, past, present, and to come; that no country except Germany had waged an aggressive war in the past or would wage one in the future. This highly emotional judgment overlooked the historical evidence that the strongest military nation in Europe habitually yields to the temptation to abuse its power. It was childish oversimplification to confront the problem of aggressive war with a crude formula for destroying Germany.

From a practical standpoint this assumption that only Germany could be an aggressor was extremely harmful. For it discouraged any attempt to come to an agreement with forces in Germany which, as first told in this country by Human Events and included by me in the CONGRESSIONAL RECORD—WALTER H. JUDD, were working for the overthrow of Hitler's dictatorship. How much more hopeful the outlook would be if, instead of a destitute, broken, divided Germany, we could today deal with a united western-oriented Germany, under the leadership of the men who took part in the anti-Nazi rising of July 20, 1944.

(4) That America could completely destroy the balance of power in Europe without, as a sequel, facing a bitter choice of alternatives. These alternatives are either to throw America's full weight into the scales to help create a new balance of power, or else to watch all of Europe slide bit by bit into dependence on the single strong land power which existed at the end of the war, namely, the Soviet Union. Whichever horn of this delemma is chosen, the result will be continuous nervous tension and unprecedented drain on our national resources.

III

Some future historian may well devote considerable time and research to finding a plausible answer to a baffling question: Why did Franklin Delano Roosevelt, disposing of the greatest concentration of combined air, naval, and mechanized land power ever assembled, nevertheless make such an amazingly poor showing in translating his own professed ideals into accomplishment?

The treaties concluded after the First World War were subjected to severe and, in some degree, justified criticism. It was a wisecrack of 1919 that Wilson should have received the Nobel Prize for mathematics, because he made 14 equal 0. But the gap between the Fourteen Points and the Treaty of Versailles was far less formidable than the yawning chasm between the Atlantic Charter and the four freedoms on the one hand, and the present European shambles, on the other.

Our future historian may find a clue in a remark once made to me by a journalist of national reputation and long and ripe experience.

"Roosevelt never takes any interest in matching deeds with words, performance with promise. His reaction is that of an actor. If a slogan, a phrase, a set of principles serves the immediate purpose of arousing a favorable reaction he is not much concerned with its future implementation."

IV

A good illustration of the schism between phrase and deed that marked the Roosevelt foreign policy was the attitude toward one world. If you did not accept without reservations the bland assumption that we are living in a world of United Nations you were a Fascist, a reactionary, an advocate of no world.

Yet the definitive prepeace arrangements in which the Roosevelt administration acquiesced were most distinctly calculated to make not for one world, but for two worlds. This was accomplished by underwriting exclusive Soviet spheres of interest in various parts of Europe and Asia. There was never any serious attempt to obtain the realization of the pledges of joint Three-Power action "in assisting the peoples liberated from the domination of Nazi Germany and the peoples of the former Axis satellite states in Europe to solve by democratic means their pressing political and economic problems," to quote the language of the Yalta declaration.

American efforts to maintain the principles of the political and economic unity of occupied Germany were feeble and halfhearted.

"Liberated" Korea was slashed into two parts by a demarcation line along a wholly unnatural frontier. In order to obtain wholly unnecessary Soviet participation in the war against Japan, railway and harbor concessions that fairly reeked with old-fashioned imperialist odor were made to the Soviet Union in Manchuria at China's expense.

Wars are apt to inspire hallucinations and half-truths. A good example of pure hallucination was Mr. Henry Wallace's amazing declaration that the late war was being fought so that everyone in the world could have a quart of milk a day. To anyone who has seen the post-war European Continent this "quart of milk a day" interpretation of the late conflict is heartbreaking irony.

The late Wendell Willkie gave nation-wide publicity to the phrase "One World." This idea is perhaps more dangerous than a downright hallucination, because it is a half-truth. Science and technology have indeed diminished space and distance and made countries more vulnerable to atomic bombs and to ideas.

Unfortunately, side by side with the advance of a scientific invention, which should make for greater global unity, there has been a parallel growth of totalitarian practices. These surround large areas of the globe with Chinese Walls of deliberate thought control and censorship. There was a far freer circulation of ideas in the Europe of 1913, without benefit of airplane and radio, than in the Europe of 1947.

Now we must, for the time being, abandon the pleasant illusion of one world for the hard reality of two worlds. We must forget the illusion of an eternal wartime alliance and face the reality of a new and grim international alinement. We must replace the illusion that appeasement could be successful with realistic recognition that a firm stand is essential to preserve the basic principles of freedom.

To awaken from illusion to reality, and in time, is the primary necessity of our foreign policy.

Letter of Hon. Sumner Welles

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

BAR HARBOR, MAINE, *July 16, 1947.*

Hon. JOHN DAVIS LODGE,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: Thank you for your kindness in sending me with your letter of July 11 a copy of my recent article which you had published in the CONGRESSIONAL RECORD of July 9. It is most gratifying to me that you found this article helpful at this time.

The coming months, I think, will bring with them the determining crisis. It is tragic when this Government during the past 4 years has had such overwhelming advantages on its side that it should have failed so lamentably in bringing effective help to that great majority of the Italian people who want democracy, who are bitterly opposed to communism, and who are convinced that the independence and prosperity of their country can only be assured through intimate cooperation with the western powers. Remedial action of a sort is, of course, now under way, but the hour is very late indeed.

I was particularly sorry not to have the chance of seeing you again before I left Oxon Hill, but I shall hope for better luck next autumn.

With my kind personal regards, believe me,
Yours very sincerely,

SUMNER WELLES.

Soil Conservation in Iowa

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. DOLLIVER. Mr. Speaker, the excessive rains in Iowa this spring and early summer have emphasized anew the need of soil conservation. Our food production is completely dependent upon the fertility of our soil. The thin coverlet of productive earth sustains life on this planet. Its loss is an irreparable loss.

Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following two statements made by R. K. Bliss, extension service, Iowa State College, Ames, Iowa. He expresses an informed viewpoint on this important subject:

CONSERVING SOIL RESOURCES—OUR PARAMOUNT LONG-TIME ECONOMIC PROBLEM

I have a letter from a friend who lives in the lower Des Moines River Valley. In regard to recent floods he raises the question as to whether "the Des Moines River acted this way 500 years ago" and then answers his own question by saying "the best records we might secure would tell us that it did not so act." He goes on to comment that "slowly but surely the approach (to soil losses in Iowa) is in the direction of conditions in China and India."

And so during this Soil Conservation Week I urge each one to look about and see what is happening to the soil. During the past few days I have driven several hundred miles through parts of Iowa. Everywhere soil erosion is plainly and seriously evident. In regions where heavy dashing rains have fallen soil erosion is little short of appalling. How long can we maintain our prosperity as a State and permit these losses to continue?

All who possibly can arrange to do it and who are interested in Iowa's future should take time out and drive through the country. They should note the severe washing on cultivated, hilly land and especially in the regions that have had heavy, dashing, torrential rains. By so doing one gets a demonstration and picture far more forceful and compelling than any written word or lecture could possibly be.

As you drive through the country be sure to note the washing on what we usually consider gentle sloping land and particularly if it is a long slope. In most cases washing has been very severe on land that we do not generaly consider subject to soil erosion. Such land will also have to be cared for by better conservation if Iowa is to maintain her great production.

And why has land washed so badly this year? For one thing, Iowa has had a number of heavy dashing rains. There is nothing new, of course, about hard rains. We have always had them, but they have been unusually numerous and have come at corn-planting time when the ground was bare. Another reason for the serious soil washing is that through heavy and continuous cropping the humus of welding material in the soil has greatly diminished. Such soil runs together or puddles and does not absorb water easily. Under such conditions land washes readily.

As regards soil washing the handwriting on the wall or in this case the handwriting on the hillsides and sloping lands of Iowa is perfectly plain to all who will take the time to look and see. We must either stop this continual loss of soil and soil fertility or the time will come when we, like many other civilizations older than ours will be "weighed in the balance and found wanting."

Now, while nature puts on this great soil-erosion demonstration for us is the time for both country and city people to see what is going on. Now is the time to more carefully and effectively organize and develop ways and means of meeting the situation which confronts us. It can be met if we have the will to meet it.

As you drive through the country it is well to remember that the rich soil of Iowa is in reality your bank account. It is your guarantee of future prosperity and security. It doesn't matter whether you live in the country or whether you live in town. Loss of soil may not affect you quite so directly or quickly if you live in a city, but it will some day affect you or your children or your children's children, no matter where you live.

And why will this be true? The answer is that all life is supported by a thin layer of topsoil. Even the fishes of the sea depend directly and indirectly upon this precious topsoil. Destroy it completely and life would perish.

Everything you had on the table today except the water and a few sun vitamins came from the topsoil. You ate today a mixture of what was once rain, heat, cold, and sunshine. It took millions of years of the combined action of rain, heat, cold, and sunshine to build the few inches of topsoil on which the lives of all of us depend. According to the best of information available it takes nature from 500 to 1,000 years to build an inch of topsoil. But it takes only a few short years for man to destroy it.

People, human beings, are the great destroyers of topsoil. And of all people in recorded history the American people seem to have destroyed the topsoil at the fastest rate. Our mechanical ingenuity in building bigger and better machinery to cultivate more land faster has to date apparently enabled us to destroy soil at an accelerated rate. We boast of our technological advancement in general farming, our use of science in breeding grains and livestock, and in crop production generally, but we should remember at the same time that we are most unscientific when it comes to saving soil. We are foolishly and needlessly wasting our soil inheritance.

We need to reflect on what has happened to Iowa after 100 years of farming. Ten years ago, according to a report of our soil scientists and the State Planning Board, 9 percent of Iowa land was severely eroded, 31 percent was seriously eroded, 14 percent considerably eroded, and 33 percent slightly eroded. This left 13 percent that was not eroded. It was estimated that 30,000,000,000 tons of topsoil had been lost to Iowa through erosion.

What has happened since the foregoing report was issued? During the heavy, dashing rains 3 years ago in 1944 the Soil Conservation Service estimated that Iowa lost 150,000,000 tons of soil in 2 weeks. During the past 3 weeks we have certainly lost more soil than 3 years ago. Iowa has almost certainly lost more soil during the past 4 years than in any other 4 years of her history.

Saving of the topsoil is a problem in which all of our people are vitally interested—and not just the farmers. Blot out soil fertility, the topsoil in Iowa, if you can imagine such a calamity, and the State would all but die. Industry would largely perish along with agriculture. Under such conditions a crow would have to carry provisions with it if it attempted to fly across the State. But just to the extent that we lose this precious topsoil—to that extent both country and city suffer.

All people are interested in a fertile soil because all people need good food. There is an ever-increasing mass of evidence to show that animal health is largely dependent on soil health. In short, that soils deficient in proper plant foods produce inferior and weak animals. It is highly probable that people who eat the produce from such soils are affected the same as animals. If so, city people have even a larger interest in products grown on good soil because there are six persons living in the towns and cities for every one person living in the country.

We can save the topsoil if we will but use the intelligence God has given us. We can balance our soil budget. Working with nature we can build and replace soil as fast or faster than it is lost. All interests, rural and urban, need to combine, organize, close ranks, and march forward in a united effort to save the topsoil. We should look on money spent in saving soil as an investment in future security and not as a tax. We have piled up a deficit in soil losses the past 100 years. We need now to pay it off to set the machinery in motion to rebuild our soils this second hundred years. Saving and rebuilding our soil resources is our paramount long-time economic problem.

CONSERVATION FARMING PAYS HIGH PROFITS

One question that has bothered farmers in the hilly and rolling parts of Iowa is: Will conservation practices on my farm increase my net returns?

This question is answered decidedly in the affirmative by the farms now being operated by the Iowa State College Foundation. But let us first briefly state how these farms are operated.

A good friend of the college donated these farms to the Iowa State College Foundation in 1938. They were all distressed farms in most cases badly washed, eroded, and much below average in fertility. The plan was to see what could be done in rebuilding them and in making them profitable.

In carrying out this plan each farm has had to pay its own way. Expenditures have been made mostly for soil-building practices and on a basis that any landowner could follow. This practical approach to the problem makes the results of especial value. Any landowner can do the things that have been done on these farms and make a profit.

Let us take what is known as the Edwards farm in Louisa County as an example. Mr. Hotle operates this farm, and Jim Wallace farm manager of the foundation, advises and consults with him in the farm operation.

In 1938, when the foundation took charge, the farm was appraised at $26 per acre. The farm has no level land. The description of the farm briefly reads as follows: "The farm is badly cut up by drainage ways and has a rough terrain. The fields are out of shape and not easily accessible from the road, being separated by a railroad and a creek."

Pictures of the farm were procured soon after it was taken over by the Foundation. These pictures show several gullies from 5 to 7 feet deep. One was large enough to hide a car in. There were, of course, numerous smaller gullies running up low places in the hillsides. It was indeed a problem farm.

The only help that Hotle and Wallace had on this farm was that of a technician from the Soil Conservation Service who staked out the original contour lines. Contour lines are lines at the same level around hills and slopes. All the rest of the work such as terracing, filling ditches, changing fences, and strip cropping was done by Hotle, the farm operator, as his part of the program.

An old discarded road grader was purchased for $12 to build terraces and fill ditches. To make a long story short, this farm without any level land on it is now terraced with ditches filled, and farmed on the contour. Strip cropping is followed, that is, a strip of cultivated crops around the hill adjoins a strip of meadow or of oats. The cultivated strips are about 100 to 200 feet

wide, depending on the slope. These strips are too narrow for serious washing to occur.

Lime and phosphorus have been used in rebuilding the soil. A regular system of crop rotation is carried out. The livestock program provides barnyard manure for about 15 acres annually. These details have been given in order to show that the farm is operated on a purely business basis.

What have been the results? That is the question that farmers want answered. The answer is that the farm has been very profitable both to the Foundation and to the operator. Much of this profit is due to good management of the livestock enterprise and not altogether due to the farm. However, crop yields on the farm have more than doubled since the conservation program was started and apparently are headed for a still higher level. Most of this increase was due to soil-building practices.

The most impressive thing about the farm is that it has stood the test of heavy dashing rains the past few years with very little soil washing and practically no soil leaving the farm. I was on the farm last year following a torrential rain in that locality which gullied cornfields terribly that were planted north and south, east and west, up and down hill without regard to slope. The Edwards farm did not wash. The farm held again this year. Contour farming, terracing, strip cropping, and rotation of crops not only held the soil but increased the yields.

The best sold person on this kind of farming is the operator, Mr. Hotle. It has made money for him. He is so well sold that he lays out contours for neighbors when time permits. This, to me, is important. It demonstrates the fact that farmers can do these jobs themselves and make more money by doing it. It should be kept in mind that all the help Mr. Hotle had on the Foundation farm was help in laying out the original contour lines. He himself built the terraces and filled the ditches. With the advice of Wallace, Foundation manager, rotations were established and strips for cropping were determined and the livestock program agreed upon.

This farm provides a clear-cut demonstration that saving the soil pays and pays well. It demonstrated that with a little help in laying out contour lines any farm operator can do the rest with available farm machinery. It demonstrates too that tenants and farm owners can cooperate in a soil-conservation program that will put dollars in the pockets of each almost from the start. Over a period of years the increased returns from soil-conservation farming over up-and-down-hill farming on rolling land would be greatly increased.

There is no good reason why Iowa cannot save her soils even on rolling land and make much additional profit at the same time. Many farmers are doing this now but many are not doing it. To conserve soil there are several habits and customs that we will have to change. The cultivated rolling or hilly farms in regions of heavy dashing rains that have stood the test employed several methods not commonly in use. They were, for example, farmed on the contour. In addition to contouring those that held under dashing rain conditions were terraced and strip cropped. A good program also calls for a rotation of crops, and the saving and applying of manures in order to build humus and soil texture. In the long run these are all money-making practices.

Our soil scientists tell us that it takes nature from 500 to 1,000 years to build an inch of top soil. We know that man by poor soil practices can destroy several inches of top soil in a very few years. We have demonstrated this fact on a large scale here in the United States. We have many millions of acres of worn out and abandoned land. Conserving soil is now a great national problem.

We know we can destroy land quickly but may it not also be true that we can build land. How long would it take to build an inch of top soil if man cooperated fully with nature. How long would it take to build an inch of top soil if we prevented soil washing and kept the soil supplied with plenty of humus so that bacterial growth would be encouraged. Perhaps by such a system of farming Iowa can not only increase crop production but also by the application of deficient minerals actually and steadily increase the productivity of the soil. These are questions upon which we need additional information as we develop our soil-conservation and soil-building program and as we look to our future security.

Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. BLATNIK. Mr. Speaker, I have received copies of two resolutions adopted by the National Association of State Directors of Veterans' Affairs at their annual convention. One resolution relates to the need for coordination of all veterans' services under one agency, and the other requests the removal of income ceilings for on-the-job training. Under leave to extend my remarks, I include these resolutions in the Appendix of the RECORD:

To the Members of the United States Congress.

GENTLEMEN: The National Association of State Directors of Veterans Affairs, in annual convention assembled in Chicago on June 21-22, 1947, adopted the following resolutions which are respectfully submitted:

"Whereas the service formerly rendered to States and communities on a national level by the Retraining and Reemployment Administration has been discontinued; and

"Whereas a definite need for this type of service still exists: Therefore be it

"*Resolved*, That the National Association of State Directors of Veterans Affairs petition the President of the United States to establish within the executive branch of the Government, or under the administration of some other agency, an office to cordinate the work of all Federal departments engaged in service to veterans; to distribute laws affecting veterans and their dependents and to make available to States and communities an informational service concerning all matters pertaining to veterans and their dependents.

"Whereas the specific limitation on compensation derived from productive labor and subsistence allowances which may be received by veterans pursuing courses of education or training on the job is that restrictive as to cause many veterans to discontinue such training courses: Therefore be it

"*Resolved*, That we urge the present Congress to repeal the proviso of Public Law 679, Seventy-ninth Congress, which imposes the said limitation, or ceiling, in favor of legislation which makes for more liberal allowances.

"Whereas on account of the increased cost of living, more and more veterans are finding it impossible to subsist on the allowances provided by Public Law 346, as amended, and still continue to pursue courses of education and training at our higher institutions of learning: Therefore be it

"*Resolved*, That the present Congress be urged to enact legislation which will provide more liberal allowances for those veterans with dependents who are taking institutional training."

Your earnest consideration is requested.

Yours very truly.

JOE DARWIN,
Secretary-Treasurer.

Fire the Disloyal, but Protect the Loyal

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of July 18, 1947:

FIRE THE DISLOYAL, BUT PROTECT THE LOYAL

In the 9 months ended last March, the United States Civil Service Commission estimated yesterday, more than 800 employees of the Federal Government were removed from their jobs on loyalty grounds. A large majority of those dismissed were charged with being members or sympathizers of the Communist Party.

This indicates progress on a vitally urgent housekeeping task, but far from enough progress. The estimate is for removals in only six of the many Federal agencies, and the War Department alone accounted for all but a handful of them.

We believe thorough investigation would disclose that, among the more than 2,000,000 Government employees, there are many others whose loyalty is not to the United States or to democratic principles. National safety demands that they all be removed. To that end, the House of Representatives has just passed what we are compelled, reluctantly, to call a dangerous bill.

Dangerous because the system it would set up for eliminating the disloyal provides wholly inadequate protection for loyal employees who might be unjustly accused.

A five-member loyalty board would be both prosecutor and final judge. The votes of three members would be sufficient to dismiss any employee from the Federal service. The accused person would have no opportunity to face or cross-examine his accuser. The Board would be required, so far as possible, to conceal from him the source of the information against him. He would have no right to appeal from the Board's decision, no recourse in any court or other tribunal.

This bill, we think, would make it possible for innocent Government workers to be ruined on information planted by Communists or other subversives. And "ruined" is not too strong a word. Dismissal on a charge of disloyalty to the Government could be a sentence of economic death, a permanent bar to decent employment anywhere, and a life-long brand of disgrace.

For the fact that a large House majority voted for this extreme measure, the Communists are to blame. Many Members of Congress, knowing that great numbers of these Red vermin and their fellow travelers have found their way into Government agencies, knowing that it is standard practice for Communists to lie to conceal their affiliations and achieve their ends, felt understandably that drastic legislation is needed to deal with a great peril.

But surely the Government can fight these tactics effectively without adopting undemocratic methods. The Senate, if it acts on this bill, should write into it adequate safeguards for the rights of loyal employees. Failing that, it would be better to leave in effect President Truman's Executive order, which requires Government departments to oust the disloyal but does not deprive Federal workers of all real opportunity to defend themselves.

Connecticut's Attitude Toward the Disabled Veterans

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the Saturday Evening Post of July 19, 1947.

The stream mentioned in the article is in the Fifth District, which I have the honor to represent.

Mr. Speaker, this is an indication of the willingness of our Connecticut citizens to aid those who were so unfortunate as to suffer disabilities in the service of their country.

THANKS, DISABLED VETERANS
(By T. E. Murphy)

The best-stocked trout brook in Connecticut is so exclusive that not even the Governor of the State would dare to throw a hook into it, even though the State does the stocking. It is near the highway, with benches at the water's edge so a man can sit as he fishes. But the admission fee is high—an arm or a leg, in most instances.

You'll be pardoned if there's a catch in your throat as you read the sign: Wheel chairs have first priority. Then you notice a young fellow in a wheel chair who can't move his legs because of shrapnel wounds. He is happy, though, for this is a stream kept brimming full with rainbow, brook, and brown trout. There are free rods and reels, donated by sportsmen, and there's young Richard Pitney, himself an ex-serviceman, to untangle lines, bait hooks—or do such things as advise that young blind fellow how far he should cast.

This grand way to say "thank you" to disabled veterans was the idea of Lyle Thorpe, aquatic biologist of the State and former Navy officer. When he was in the Pacific, Thorpe worried some about getting disabled and being unable to go fishing again. Returning home unscathed, he lost no time discussing with Dr. Russell Hunter, head of the State's fish-and-game department, a plan to cheer up less lucky anglers. In one of the State's quickest make-over jobs, roads were run to the bank of the stream, ramps were built and thousands of belligerent trout were dumped in just before opening day. Now nearly 100 regulars visit the spot frequently.

Richard Pitney, who had a 25-percent disability himself, says that they are the most patient fishermen he has ever seen. A blind boy is his favorite. "He's absolutely independent," Richard remarks. "He says, 'Just face me toward the brook and tell me how much line to cast.'" Another regular has no hands, yet does well with a special rod. Still another chap with two artificial legs goes right into the brook.

Pitney says all the men are good-humored about their disabilities. Recently a one-handed veteran, pulling in his catch with the aid of his teeth, lost both his false teeth and the fish. Pitney regained the former and the veteran soon had another fish.

Constant vigilance must be exercised to prevent the excitement of a hooked fish from causing the angler some harm. A veteran of the First World War, now suffering from a calcified spine, came there for his first fishing expedition in 20 years. He was wheeled up to the ramp by his wife. Later Pitney espied the veteran dangling perilously over the edge of the stream, his wife holding onto his belt for dear life. He had become so excited that he had lost his balance.

The other day I talked with Bob McCall, who got a bit of shrapnel while fighting with the Eighth Infantry Division in Europe. "These are electrified worms," he said, grinning. "My father sends current into the ground to drive them out." Another fisherman brought over a huge night crawler, urging, "Try this." A moment later Bob landed a 12-inch trout, and the other man remarked, "Now my day is happy. I like to see a fish caught, no matter who gets it."

Lyle Thorpe kept his fingers crossed when he opened this exclusive fishing spot. He explains. "It cost money and I wasn't sure the veterans would use it." His worry was brief. The first day and the first fish ended it. "When I saw the look on the face of that boy as he pulled in a rainbow trout." says Thorpe, "the project was paid for. He was paralyzed from the waist down." The happiness that subsequently has come to hundreds of disabled men is sheer dividends.

Twentieth Century Congress

EXTENSION OF REMARKS
OF
HON. JOE. L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an article from the Shelbyville Gazette, a splendid newspaper of the Fifth District of Tennessee, concerning a book written by our colleague, Congressman KEFAUVER, regarding the reorganization of the Congress. The article is as follows:

JUST BETWEEN US
(By John W. Weatherly)

Twentieth Century Congress by ESTES KEFAUVER, Representative from the Third District of Tennessee in Congress, is a must in reading matter for all of us. Mr. KEFAUVER clearly outlines the need for a reorganization of Congress, for closer relation between the executive and legislative branches of our National Government. Under the proposed changes expedition of the passage of bills will be expedited, filibustering will be eliminated, voting will be speeded up. Committees will be smaller, some entirely dispensed with.

How many of us know that two Mondays a month are spent by Congress making laws for the District of Columbia, which has no law-making body of its own. This has to be taken care of by Congress.

And the most important is that the Senate and the House of Representatives will be more nearly on an equal footing.

The House is more closely connected with the electors than the Senators. There are 96 Senators, 2 from each State. There are 435 Representatives, 1 from each district.

Which is more nearly representative of the people? Yet the Senate has the most power.

For those of you who want to know more about your Government, more about the affairs and where the money you pay for taxes goes, read the book which gives you an insight into the workings of the most democratic form of government in the world.

Mr. KEFAUVER has written a book which every citizen interested in the progress and survival of our country should read.

River Control as an Economy

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the Appendix to the RECORD, I wish to submit copy of an editorial contained in the New York Times, of date July 16, 1947, as follows:

RIVER CONTROL AS AN ECONOMY

In his message of last January 6, President Truman urged that "the development of the great river systems of America * * * be pushed with full vigor." The House of Representatives commented on this proposal by drastic cuts in appropriations for the already authorized long-term program for the control of the Missouri River. This turned out to be a bad year for that sort of economy. While the House economists were counting the dollars that were to be saved, the Missouri went on a rampage which may cost the country, as the President estimated in hi flood-control message of last Wednesday. half a billion dollars or more.

Mr. Truman, under these tragic circumstances, seems to have the best of the argument. As he says, we now have, under existing laws, comprehensive and detailed plans for most of the work needed to eliminate destructive floods and provide for the beneficial use of water in the Mississippi River Basin. This basin takes in more than 40 percent of the continental area of the United States. The big river into which all its water pours may discharge as little as 70,000 cubic feet a second and as much as 2,800,000 cubic feet a second. Attempts at control have been going on since 1824. They have been intensified on paper and to a large extent in practice, since the big lower Mississippi flood of 1927 and especially since the success of the Tennessee Valley Authority showed how a big stream could be tamed and put to work.

The question is how much time, how much argument, and how big a flood it will take to persuade Congress that it is worth while to spend a dollar to save ten or hundred or a thousand dollars. Do we have to wait for the grandfather of all floods which might result, as Mr. Truman said, if high water occurred simultaneously on the Missouri, Ohio, upper Mississippi, Arkansas, and Red Rivers? One hopes not.

Mr. Truman is not asking much from this session of Congress. He proposes to start a 10-year program with an initial appropriation of $250,000,000, most of which would go to the Army engineers. During the coming decade $6,000,000,000 would be spent, of which three and a half or four billions would be directly or indirectly for flood control. But the rivers must be used as well as controlled. Irrigation, power, navigation, recreation, wildlife protection, the prevention of disease-bearing pollution, all must be in the picture.

Mr. Truman speaks rather cautiously of "the ultimate establishment of valley authorities." The immediate requirement is flood

protection, which the Army plan and the so-called Pick-Sloan program can, in part, provide. Sooner or later, however, the multiple-purpose development of the rivers on regional bases will have to be considered. Next January, perhaps, Mr. Truman will be ready to make specific proposals for a Missouri River Authority. In the meantime, Congress can save the country some money by spending the $250,000,000 now requested.

World's Largest Breakwater

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. BRADLEY. Mr. Speaker, I take great pleasure in inviting the attention of the House to the fact that the harbor of Long Beach, Calif., will soon be enclosed by the world's greatest breakwater, construction of which is expected to be completed by the end of 1948.

The accomplishment of such a vast undertaking again indicates the tremendous advancement of southern California in the industrial life of the United States and the understanding of the Congress in authorizing this great work which will enclose the largest man-made harbor on the face of the earth.

The following article is from the Long Beach (Calif.) Press-Telegram of July 13, 1947:

Steadily stretching farther eastward off Long Beach is a deep-water breakwater that will be the longest in the world when work is completed.

The present contract, to complete the last 8,650 feet of a 13,350-foot detached extension of the breakwater—which actually was begun at San Pedro in 1899—was awarded by the Los Angeles District, United States Engineer Department, on June 24, 1946. The contract also included restoration of a 12,500-foot detached unit.

Involving a total Federal expenditure of about $25,000,000, the completed breakwater will provide approximately 30 square miles of sheltered anchorage for Navy vessels, many of which will make this their home port, and for other shipping. The vast area already sheltered by the breakwater construction has given Long Beach one of the few ports boasting a large protected anchorage and modern marine terminals on the ocean front, as well as docking and transit facilities on the man-made inner harbor.

When the last 8,650 feet is completed, probably by the end of 1948, the breakwater will extend to a point 1,000 feet easterly from Belmont pier. This will give a total length to the massive island structure of about 7 miles.

The San Pedro breakwater, 11,152 feet in length, constructed of cut stone superstructure on a random stone base was completed in 1912. The need for a more extensive mole system already had been felt.

Today there is agitation to continue the breakwater even farther east, to run it shoreward in the vicinity of Sunset Beach to "lock" Alamitos Bay and the harbor of the naval ammunition and net depot at Seal Beach.

SEVEN-MILLION-FIVE-HUNDRED-THOUSAND-DOLLAR JOB

The Connolly-Case-Kiewt Construction Co., with John Connolly, local superintendent, and Louis Richeter, field superintendent, is building the present extension and doing the restoration work at a total cost of $7,500,000.

Resident engineer for the Government is Robert E. Louden. O. E. Gurney is assistant to Louden and safety engineer; William J. Matthews, assistant engineer, and Irvil Dunbar, chief inspector. Col. A. T. W. Moore is district engineer.

The present work is being done in several steps. Dredges already have completed a sand core, covered with clay and quarry waste, for the entire extension. This is about 260 feet wide at the ocean floor. The depth of the water, varying from 44 to 57 feet below mean low tide, assures negligible water action and that the sand and clay will not wash away.

Pyramided above the base ridge are three separate layers of rock, each layer a different sort of material. The layers are called A, B, and C, the A being cap rock and largest.

HEIGHT 75 FEET

The only rock visible is the A rock. The B rock ends 10 feet below the surface at mean low tide. The A rock rises 14 feet above water level at mean low tide, and measures 16 feet across the leveled top. Height of the completed breakwater from the ocean floor is 75 feet. In a foot cross-section of the breakwater, the A stone weighs 80 tons, and the B and C rock each from 140 to 150 tons. The sand and clay base weighs about 100 tons to the foot. The present contract calls for approximately 2,000,000 tons of stone. Restoration of the 12,500-foot detached breakwater consists of rubble stone enrockment only.

Twenty percent of the cap rock is quarried at Catalina, brought here on barges and placed by huge cranes mounted on other barges. The other 80 percent is brought by rail from Riverside and placed on barges at pier A. No class A stone piece used weighs less than a ton, and 75 percent weigh 10 tons or more each.

Placing of the C stone is 90 percent completed, and the B stonework is 17 percent finished. Fifteen percent of the A stone has been placed.

Denver Post Strongly Urges Congress Not To Recess Before Passing Mundt Bill To Authorize Foreign Information Service

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. MUNDT. Mr. Speaker, if plans for our summer congressional adjournment are carried out, we shall be voting on a sine die adjournment motion 1 week from today. Before such a summer recess is authorized, Mr. Speaker, it is my sincere hope that both Houses of Congress will vote their approval of H. R. 3342 which several weeks ago passed the House of Representatives by a 3 to 1 affirmative vote.

H. R. 3342 authorizes the establishment of a foreign information service abroad, Mr. Speaker, and it puts this important feature of our State Department activity on a permanent basis. In his recent appearance before the Senate Foreign Relations Committee, Secretary of State Marshall urged that this legislation be approved before adjournment primarily so he would be able to attract personnel to this important activity and develop an administrative staff equipped to direct this great peace-serving and peace-preserving program.

Secretary of State Marshall rightfully and logically pointed out that it was impossible to staff this information service with the type of personnel he desired to invite in from private life while it continues in its present nebulous status without authority in law and subject to complete termination at the end of the fiscal year. No able and active American is going to be willing to leave his business or profession to take up administrative duties in a State Department foreign information service until and unless he knows it has been authorized by Congress and that it is a continuing and accepted part of our Government service. Certainly no Senator or Representative can expect Secretary of State Marshall to invite any outstanding American to become the captain of a sinking ship.

The Denver Post is rightfully concerned about this continued hesitancy of Congress to give our information service an authorized and approved status in an era of history when the failure to tell the world the truth about America may literally lead to the failure of peace and the sacrifices of war. As a consequence it urges that this so-called Mundt bill be enacted into law now.

There is yet time for action in the closing days of this session of Congress. I hope the Congress and the country will move forward shoulder to shoulder in taking the action required to equip our State Department with the essential tools it has repeatedly said it requires to build an enduring temple of peace and to ward off the forces now loose in the world which are fomenting the sentiments from which wars are made. The House has measured up to its responsibilities and passed this measure. It is devoutly to be hoped the other branch of Congress will do likewise in the next few days.

The following editorial is from the Denver Post:

OUR VOICE IS IN DOUBT

The sticky heat of the Potomac lowlands has settled upon Washington and with it has come the stuffing of congressional pigeonholes which is an outstanding symptom of adjournment fever.

Some of the measures which may languish in committee over the summer and autumn are hot potatoes which uncertain lawmakers would like to talk over with the folks at home. But others with the uncontroverted backing of both necessity and popular support may lose out simply because Congress fails to recognize their urgency. Such is the Mundt bill, which would set up a long-range program of foreign information and cultural exchange.

After long, and often annoyingly inconsequential, debate the House approved the information program by the heavy majority of 272 to 97. It has now gone to the Senate, where without positive action by the Republican leadership it will probably die in committee. The fate of the bill thus rests in the hands of Senators TAFT, WHERRY, MILLIKIN, VANDENBERG, and BROOKS.

When the House Appropriation Committee struck out funds for the information pro-

gram from the State Department allotment, the protest was quickly raised that this would leave America without a voice in the battle of ideas. Under heavy fire, the House back-tracked, passed a stopgap appropriation to continue the voice of America broadcasts, and finally completed its reversal by passage of the Mundt bill.

If the Mundt bill is pigeonholed, the United States information program will be reduced to a small-scale, temporary effort confined principally to the Voice of America transmissions. Precious months will be lost in implementing the adequate long-range program which Secretary of State Marshall pleads is vital in carrying out our foreign policy.

Professional men of the high skill needed for this program will not accept positions which offer a dubious future. Without such talent, our information efforts may be worse than nothing. That is the problem which will confront Secretary Marshall if the Senate leaves the Mundt bill bottled up during the long summer and fall.

What the adjournment-minded Congress must realize is that there can be no vacation in foreign policy.

The World's Santa Claus

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Henry Hazlitt from Newsweek magazine of July 21, 1947:

THE WORLD'S SANTA CLAUS

(By Henry Hazlitt)

More and more the strange idea is being put forward that America must make loans or gifts to foreign countries, not primarily to save them but to save itself. We are told that we must make these gifts or loans not as a humane or charitable duty but out of shrewd self-interest. Newspaper commentators in the recipient countries have more and more been interpreting our generosity to them on this theory. On June 25 Pravda declared that the Marshall plan was influenced by a desire to prolong a postwar "boom in the United States" and to "lessen the ripening economic crisis" here.

That Communist Russia should hold such a view is not surprising. It fits in perfectly with all the other claptrap that Communists have long preached about capitalism. But the theory is just as eagerly embraced elsewhere.

A year ago, in its issue of July 12, 1946, the Eastern Economist of New Delhi put it forward in its most candid form. "The United States lend-lease plan of helping the Allies in the recent war has been acclaimed as an act of unparalleled generosity," it said. "But it was also a brilliant and ingenious way of solving what would otherwise have been an intractable problem. * * * The productive power of America has multiplied itself so fast that it is now admitted that she cannot continue to give 60,000,000 jobs unless she is able to have a large export trade. * * * In such circumstances it would not be such a foolish thing (as some might imagine) to give away goods to other countries, for on balance it would be better to part with surplus goods than to create unemployment. * * * Machinery should be set up by America whose purpose would be to provide gifts of loans to countries. * * * The United States * * * will buy the goods, give them as gifts, and reimburse itself by additional internal taxation. * * * If this is to play the world's Santa Claus, the United States is both rich enough and should have sense enough to fill the role."

This idea, in both crude and sophisticated guise, now runs like a refrain through the French and British press. More surprising, it is endorsed by some American businessmen and even by some American economists. Yet it is unadulterated nonsense.

If we could create prosperity merely by making goods to give away, then we would not have to give them to foreign countries. We could make the goods to give away to our own poor. We could furnish them with free overcoats, free lunches, and free automobiles; build any amount of good new housing, which we badly need, and turn it over to them. Simplest of all, we could turn over to them direct additional money taken from the taxpayers and let them buy with it whatever they themselves wanted. Why confuse the issue by bringing in foreign nations and foreign trade?

It ought to be clear to the meanest intelligence that nobody can get rich by giving his goods away. What seems to confuse otherwise intelligent people when this proposition is applied to a nation instead of an individual, however, is the fact that particular firms and persons within the nation can profit by such a transaction while the rest of us are forced to absorb the losses. The exporter may profit because he makes additional sales. But if the foreign loan is not repaid, then the loss must be made good out of increased taxes on every American. American consumers will then have just that much less money to buy American goods. Domestic business will lose as much as export business has gained. And the country will be poorer by the amount of goods it has given away.

This would be the consequence of unsound foreign loans at any time. But the country is now in the midst of an unprecedented inflationary boom. Precisely when this inflation should be prevented from going further, a Government foreign-loan policy can only intensify it. The theory that we need to create an export surplus by unsound governmental loans would be foolish enough even if we had unemployment and wished prices to go up; it becomes downright idiotic in a period of full employment and when everyone is already complaining of high living costs.

Necessity of an Adequate Air Force

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Saturday, July 19 (legislative day of Wednesday, July 16), 1947

Mr. LODGE. Mr. President, last week we debated the matter of appropriations for the Air Force, and discussed the question of bringing it up to 70 air groups. In connection with that subject, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "First Line," from the Boston Globe, which deals with the vital question of having an adequate air force.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIRST LINE

Whatever may be the disagreements among Americans on such problems of national defense as universal military training and the unification of the armed services, on one subject they are practically unanimous. We are united in our opinion of the prime importance of air power. Few Americans would dispute the theory that ultimate victory in any future war can only be won by dominating the air.

While all our effort is directed to prevention of another war, nevertheless common prudence demands that we take steps to maintain our security in a world that is as yet far from a stabilized and peaceful community.

Seldom is victory achieved by the same weapons that won a previous war. But nearly always the most powerful weapons of a war are forecast by developments of a previous struggle. Thus in World War I air power played a minor role, but sufficient to indicate the future possibilities of fighting aircraft. In World War II the potentialities indicated 25 years earlier were realized and air power was a major factor, achieving equality with land and sea forces. The tremendous contribution of air power to final victory in World War II is a sure portent of even greater weight in the scales of combat in the future.

No belligerent in the late war developed its air forces so rapidly or so efficiently as the United States. Our conceptions of both the strategic and tactical use of air power were sound. Beyond the strictly combat function of the airplane we utilized this fast means of transport to hurdle obstructions that blocked every other means of travel. Our air routes circled the world in a transport and communications net more complete and more speedy than any other. The record of our combat planes is too conspicuous to need more than mention.

We won our place as primary air power at terrific cost. To cite only one figure, our combat losses of heavy, four-engined bombers in the European theater amounted to 8,300 airplanes. Such an extended and prodigious air force as we had in World War II can only be maintained by maximum production of both airplanes and the trained personnel to handle them.

We learned something else about air power. Only continuous, first-rate research and experiment can keep aviation equipment abreast of technical development. Starting behind other belligerents we reached unchallengable superiority by the end of the war, thanks to a number of factors that may not be present again.

Now, 2 years afterward, it is disturbing to hear that our Army Air Force is deteriorating, as compared to other air forces, both as to quantity and quality. This is particularly serious because, as usually happens following the stimulus given to such a science as aviation by wartime necessities, the postwar refinements are numerous and have already made planes of 2 years ago obsolete.

Yet only last Saturday Senator HENRY CABOT LODGE lost his effort to restore a cut of some $600,000,000 to Army Air Force appropriations. This sum was needed, Senator LODGE declared, for an air forces of 70 groups of about 4,000 planes—less than half the number of heavy bombers we lost over Europe in less than 3 years. This week the Air Force announced that owing to budget cuts, only 9,786 of 28,000 Reserve flying officers can be given the part-time training for which they had enrolled.

Fears have been expressed that lack of orders may seriously cripple key units in the airplane-building industry and cause a dispersion of trained workers. For the same reason, the production of new types of advanced planes may be slowed down, and experiment curtailed.

Training aviation personnel, either for ground duties or for flying, cannot be compressed into much less than 1 year. The production of a new airplane, even under the pressures of wartime, required 2 to 3

years, and sometimes longer. Putting a new plane into operation is one activity that cannot be done hurriedly.

Today the United States is in a different position than ever before in our history. We are now in the forefront of international affairs.

Not again may we expect the priceless 2 years' grace that was given us in the first two world wars to prepare for catastrophe. Thus the necessity for keeping our Air Force, our best and surest defense, at maximum efficiency and in adequate strength seems self-evident.

UNCLE DUDLEY.

Gambling With Security

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to extend in the RECORD the following editorial which appeared in the New York Times of Saturday, July 19, 1947, entitled "Gambling With Security":

GAMBLING WITH SECURITY

In bowing last March to the opposition in Congress to extension of selective service for another year, President Truman warned that if enlistments did not meet expectations a re-enactment of this statute might become necessary This is an issue which Congress has studiously avoided to date. Now it is approaching the stage of crisis. By next January the question will be acute.

Let us look at the record. In the first 6 months of the calendar year enlistments were 70,000 below minimum requirements of 30,000 a month. In May the totals for the Army were only 14,907. In June—traditionally one of the best enlistment months of the year because of high school graduations—the total was only 24,830. By next January, when Congress reconvenes, the indicated deficit is 140,000 men, or almost 40 percent. With the Army already more than 100,000 men below the minimum of 1,070,000 set by our military leaders, counting those men on terminal leave or in hospital with little prospect of return to service, the Army faces the probability of having less than 900,000 effectives in service next January 1. The Navy and Marine Corps, which always have found enlistment goals easier to obtain, also are said to be faced with a slump. They, too, may find difficulty—because of large indicated expiration of enlistments during the year—in meeting requirements of 571,000 men.

This is an alarming situation. At a time when certain aspects of the international situation certainly are not improving, when there has been no cancellation of the commitments which our armed services must carry through, the Army and Navy are faced with a deficit in manpower about which nothing has been done or is being done. Unification, which seems assured of passage by Congress, will do little in itself to correct the situation. No such claim ever was made for it. Congress has passed the Navy appropriation bill with only relatively minor trimmings and probably will pass the Army appropriation bill in like fashion. But dollars cannot take the place of men. A reform of military justice, such as the House Armed Services Committee has blueprinted, was needed, but it is not enough of a stimulation to enlistment to make up more than a fraction of the deficit. The Army as a career, so far as pay, food, quarters, entertainment, and other emoluments are concerned, has been made just about as attractive as it can be made, or probably ever will be made.

The least that can be done by Congress is for the House and Senate committees that are charged with the military phases of our national security to schedule a full-dress inquiry immediately into the whole problem, and especially into the basic phase of the problem—manpower. If a special session is called this fall, the spadework will already have been done. If there is no special session, a full report will be ready for the opening of the regular second session of the Eightieth Congress in January.

To ignore longer this critical situation would be reckless. If the facts are presented clearly to the American people we believe they can accept a hard choice. They always have before. They can and will accept it if the alternative is a gamble with national security. And that is exactly the way to describe the attempt to maintain by voluntary means as large a military force as we need, in view of our responsibilities.

What General Eisenhower said in April 1946, when he was pleading with Congress for an extension of selective service for one more year, is as true today as it was then. "How many young men will decide to make the Army their career or give it a whirl in the next 18 or 20 months?" he asked. "I don't know and Generals Hershey, Paul, and Texter don't know. And I say with all respect to you gentlemen that you don't know. It's a gamble any way you look at it. And gentlemen, in my opinion, any gamble with the national security of the United States at this time is a gamble with the peace and security of the world. With all the sincerity and force that I possess, I urge you, do not take this gamble."

Displaced Persons

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. DAVIS of Georgia. Mr. Speaker, Hon. Sidney Parks, executive secretary of Gate City Lodge, No. 144, B'nai B'rith, Atlanta, Ga., has forwarded to me a resolution adopted by that body at its meeting on July 9, 1947. For the information of Members I insert this resolution herewith:

Whereas the plight of displaced persons of all faiths in Europe today, victims of Nazi persecution and brutality, who continue to exist in camps notwithstanding the cessation of hostilities more than 2 years ago, is a blot upon civilization and represents an urgent claim upon the conscience of the world; and

Whereas Americans are directly concerned with the fate of these displaced persons, who have been uprooted from their homes and country as a result of events subsequent to the outbreak of World War II and are unable or unwilling to return to the country of their nationality or former residence because of persecution or fear of persecution on account of race, religion, or political opinions; and

Whereas many Americans, civic, service and labor organizations, interested in the fate of these displaced persons, as well as relatives of such persons, are interested in assisting in the resettlement of a fair share of these displaced persons in suitable American communities without having them become a charge on the United States or the community; and

Whereas under present immigration laws a system of quotas is created, the larger proportion of which quotas are unused because of their nationality distribution and the low quota available for victims of Nazi barbarism: Now, therefore, be it

Resolved by Gate City Lodge, No. 144, B'nai B'rith, That it urge Congress by House bill 2910 and other appropriate bills, to adopt emergency legislation, making available these unused quotas, admitting during a fixed and limited period of time a maximum amount of such displaced persons to the United States so as to enable the rescue and the rehabilitation of victims of war, persecution and oppression and thus maintain our proud tradition as a haven for the oppressed and a refuge for the homeless and distressed.

Judge Robert P. Patterson, Great Secretary of War and Patriot

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. KEFAUVER. Mr. Speaker, it was with extreme regret that I read this morning of the resignation of Judge Robert P. Patterson as Secretary of War.

About 7 years ago, when Judge Patterson resigned as a member of the Second Circuit Court of Appeals and came to Washington to contribute his splendid ability and services to the Nation, I had the pleasure of meeting him for the first time. A small group of Congressmen were having a meeting to discuss problems of the armed services. We had invited Judge Patterson to discuss several matters with us. He made a profound impression upon me at this meeting. His sincerity, earnestness, unselfishness, and remarkable knowledge of the overall problem of the armed services convinced me that America was most fortunate in having him in the position of Under Secretary of War.

Since that time I have followed his career with interest and appreciation. During the 7 years Judge Patterson has served as Under Secretary of War and Secretary of War we have seen the armed might of this country grow to great heights, and we have seen the orderly demobilization of a large part of our fighting might. These accomplishments have required the direction of men of great patriotism and ability such as Judge Robert Patterson. Judge Patterson made a great personal sacrifice in giving up his lifetime position on the court of appeals. However, in the best American tradition, he was willing to serve wherever he could be of the greatest benefit to his country. I know of no one who has worked harder or has shown greater patience than Judge Patterson. In his appearances before congressional committees he was always appreciative of every Member's viewpoint, and he was careful to give the fullest of explanations of all steps taken by the War Department when called upon by members of committees.

I feel that Judge Patterson is truly one of the great men of America. He is a gentleman and a patriot. I hope that the people of the Nation may have the benefit of his great capacities in some other executive or judicial position.

Veterans' Legislation

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1947

Mr. TEAGUE. Mr. Speaker, I am particularly concerned about the failure of the Eightieth Congress to enact legislation regarding benefits to the survivors of our deceased servicemen and to our disabled veterans. It is my sincere conviction that most of us have forgotten too readily the sacrifices of the dependent parents who lost a boy in the war, or the young widows and orphan children who are dependent upon their pension checks and insurance, if any, for the necessities of life.

It was, and is yet, my hope and prayer that educational benefits will be extended to these young widows and that proper provisions will be made to provide the orphans of deceased servicemen a college education. I introduced such a bill on January 21, 1947 (H. R. 1181), because I feel that since the fathers of these children have given their lives for our safety and well-being, it is our responsibility to provide their children with the education they would have wanted them to have.

The Eightieth Congress has enacted some veterans' legislation, but there are far too many bills awaiting action after being thoroughly considered by the Veterans' Affairs Committee and reported to the House. It is to be regretted, Mr. Speaker, that the Republican leadership has delayed action on veterans' legislation which in many cases was unanimously reported by the committee and endorsed by all the major veterans' organizations.

Public Law 5 of the Eightieth Congress allows veterans to reinstate their national service life insurance without the necessity of a physical examination. This will benefit millions of veterans who have allowed their Government insurance to lapse since being discharged from the service.

Public Law 34 will benefit World War I veterans who desire to renew their 5-year-level premium Government insurance as this act authorizes a fifth 5-year period policy.

Public Law 115 has increased the revolving fund from $1,500,000 to $3,000,000 in order that disabled veterans may borrow from the fund when undertaking vocational training.

H. R. 246 remains in the Rules Committee after being reported unanimously by the Veterans' Affairs Committee. This would increase the ceiling of wages and subsistence for those veterans undergoing on-the-job trainings to $250 per month for veterans without dependents, $325 to veterans with one dependent, and $350 per month for veterans with two or more dependents.

H. R. 3888 would increase subsistence payment under the GI bill of rights to veterans with one dependent to $105 per month with an additional $20 being paid for the first child and $15 for each additional child.

H. R. 4007 to provide automobiles to blind veterans in addition to amputees who are now eligible is still awaiting favorable consideration by the Rules Committee.

Other bills of equal merit have not been allowed to come before the House for debate and for a vote. I sincerely hope that the majority party leaders will allow the House to decide whether or not these bills should be enacted.

The National Health Insurance and Public Health Act

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Saturday, July 19 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement I made before the Subcommittee on Health, Committee on Labor and Public Welfare, of the United States Senate, on July 11, 1947, on Senate bill 1320, the National Health Insurance and Public Health Act of 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I should like to submit, for the committee's consideration, this statement as to why I am proud to co-sponsor the National Health Insurance and Public Health Act of 1947, S. 1320, and why I must oppose the passage of S. 545. I should like to discuss, in this statement, the bearing which these two bills have on the needs of America's farm families. We have, in the past few years, learned much about the heavy toll levied on rural America because of inadequate health services and poor medical care. S. 1320 will, I believe, correct these deficiencies in a relatively short time. S. 545, on the other hand, will aggravate the evils.

Organized preventive services are most important to the 57,000,000 Americans who live in rural areas, and 43 percent of our Nation's population live in communities of less than 2,500 persons.

Preventive services are important to farm people because by their widespread application we can most effectively combat the evils which are preventing rural America from achieving a health parity with our urban population.

For example, cities of 100,000 or more have an infant mortality rate about one-fourth lower than do rural communities. Similarly the big city maternal mortality rate is one-third lower. Diseases which are entirely preventable, such as typhoid fever and diphtheria, cause several times as many deaths in rural as they do in urban areas. It is reported that tuberculosis, long thought of primarily as a disease of the city, is becoming more prevalent among rural residents since the newer technics of mass surveys and modern treatment have been applied with vigor only in the cities.

Despite the need for these preventive services, 40 percent of the Nation's population in 1946, primarily all rural, was not serviced by district or local public-health departments, and in a third of the counties that were serviced there were no health officers. Twenty-three of the States do not have even a single local public-health unit that measures up to minimum medical experience and training standards. Instead of the one to two dollars per capita required to provide adequate preventive services, rural areas are spending 50 cents. Is it any wonder that with this lack of provision for adequate preventive health services in rural areas preventable diseases still take an inexcusable toll of life.

Title III of our bill, the title on "Development and Expansion of Health Services" would provide means for correcting these very deficiencies. The Federal grants-in-aid to the States for expanded preventive health services, for maternal and child health services would come as a blessing to those millions of rural residents who do not now have the protection of full-time adequately staffed and well-financed public health departments. Not only can programs for the control of tuberculosis and the venereal diseases be strengthened and extended, but impetus would be given to the establishment and maintenance of programs for the early detection, prevention, and treatment of mental disorders, dental disease, cancer, heart disease, and other diseases of our aging population.

In addition to adequate preventive services, our rural people are vitally interested in having access to hospital beds and in having enough physicians, dentists, nurses, and other health workers available to serve them. Congress has taken cognizance of the inadequacy of the Nation's hospital facilities by its passage of the bipartisan Hospital Survey and Construction Act. I am not sure, however, that the great disparity between rural and urban areas in this regard is generally appreciated. Generally speaking, rural States have about half the supply of hospital beds found in the highly industrialized and urban States. Moreover, rural hospitals are usually small, poorly equipped and without free beds since they are often privately owned. Large cities have a 60 percent higher rate of hospitalization than do farm areas, and this lower hospital-bed occupancy exists in those very areas that have the fewest hospital beds. This is not because farm people need or desire less hospital care, but because they are less able to afford to purchase it.

The construction of hospital facilities under the Hospital Survey and Construction Act by itself will not bring sick farmers into the hospital. As a matter of fact, even for construction to be undertaken under that act proof must be shown that the hospital can be maintained—a difficult task in a low-income rural county. A prepayment system that removes the economic barrier to hospital care and guarantees a community purchasing power to furnish the necessary maintenance is provided for by our bill. In title II there is the provision that hospitals would be paid their full cost of service. In addition, the amount of money authorized under the Hospital Survey and Construction Act is increased and the span of its authority is extended from 5 to 10 years.

The need for physicians, dentists, and other health personnel in rural areas is acute. They have 43 percent of the population but only 18 percent of the health workers of the country. This maldistribution of physicians means that there is only 1 country doctor for every 2.6 urban physicians. And the situation is growing worse since large numbers of doctors who went into the armed services from rural areas are now settling

in the cities. Many rural counties have up to 5,000 and even 10,000 persons per physician against a minimum desired proportion of 1 to 1,000. Eighty-one counties recently reported no physician at all.

The unfavorable economic status of so many rural areas means a low medical purchasing power. This has been the major reason why professional people no longer settle in these areas. By assuring adequate pay for physicians in rural communities, the national health insurance fund would attract doctors to country districts. Furthermore, section 256 of title II, Rural Areas, makes special provision to end the shortage of professional people in rural areas by guaranteeing a minimum annual income, by paying transportation expenses of physicians establishing their practices in such areas and by authorizing loans for the purchase of necessary office equipment.

We all know that up-to-date and adequate medical care is expensive. The use of insurance so as to meet this cost on a group basis is now a generally approved device. Most farm families do not have the incomes to meet the high cost of medical care on an individual basis. And voluntary health insurance plans are no help in rural areas. Insurance is no good when you have no doctor. Besides the $100 a year which is the average cost of comprehensive medical care for a family, is a sum out of the reach of about 80 percent of all farm families. The largest rural program of voluntary prepaid medical care, originally sponsored by the Farm Security Administration, has been sharply curtailed. The Blue Cross hospital plan, so popular in the cities, reaches about 3 percent of farm families and even this plan takes care of only about one-fifth of the average family's yearly medical bill. Voluntary health insurance sponsored by the State medical societies cover only about 1 percent of the rural population and usually insure only against surgical and maternity care in the hospitals.

S. 1320 mobilizes the total resources of our Nation through an insurance plan based on income. Only in this way can farm families participate in a system which provides comprehensive health services at a cost they can meet.

I should like to indicate in closing several of the implications of the Taft, Ball, Smith, Donnel bill, S. 545, which I feel will be disturbing to rural people. Farm people do not like to take charity. They do not want charity medicine as a substitute for health insurance. They want to pay their way, but they want the medical care they need. They would not willingly submit to a means test such as that required by S. 545. S. 545 is apparently designed to give over control of the program to organized medicine, a monopolistic trend in medicine which I oppose as much as I oppose monopolistic trends in investment banking and in railroads. Both the National Grange and the Farmers Union have been outspoken in their opposition to medical monopoly; to the exclusion of the people who pay for medical care in the planning and management of medical society prepayment plans. In about 20 States there is restrictive legislation which prevents the consumers of medical care from forming their own health insurance plans. Cooperative plans for the distribution of medical care have been very successful in many rural areas and our farmers will fight any attempt to prohibit the continued development of these plans in a democratic fashion.

Finally, S. 545 would set up a double standard of medical care—one for the rich and one for the poor. Since so many of our farmers are unable to meet the high costs of medical care, they will not support legislation which at best would provide medical care of an inferior quality.

Therefore, in the interests of our Nation as a whole and particularly because it is badly needed by our farmers and their families, I urge prompt and favorable action on S. 1320—the National Health Insurance and Public Health Act of 1947.

The Wool Tariff

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Saturday, July 19 (legislative day of Wednesday July 16), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter relative to the wool tariff, written by Arthur Besse, president of the National Association of Wool Manufacturers.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From American Affairs for July 1947]

CURIOSITIES OF OUR TRADE POLICY

To the EDITOR OF AMERICAN AFFAIRS:

The United States must present curious spectacle to foreign statesmen, students, and economists who seek to follow our foreign trade policy as it is expressed from time to time by people of prominence in this country.

Picture the puzzlement of the Britisher used to hearing the slogan "Buy British" when he learns that United States Secretary of Commerce Averell Harriman says that we in this country should abandon the slogan "Buy American." "Let's import," says the Secretary, firing the first gun in what seems to resemble a campaign to boycott our own products and promote the sale of items made in some other part of the world.

In an article in the Saturday Evening Post, the Secretary says, "We must import to live," but when he appeared before the Ways and Means Committee of the House on April 28, the only items he could think of which we should import in increased volume were hand-made toys and penny candy for the children. He listed some other items in his Saturday Evening Post article but most of them are raw materials imported without duty. These we are importing in such volume as we can use except for a few articles of which there is a present shortage.

Picture the astonishment of a Belgian lace manufacturer who reads that an American group called the Public Affairs Committee wants the United States to import Belgian laces at lower prices than our manufacturers can quote, saying that our citizens would buy more lace if the price were not so high. The Belgian lace manufacturer knows that we make lace in the United States and that we pay our lace workers more than three times what the same workers receive in Belgium. The Belgians themselves could buy lace more cheaply from China, but the Belgians maintain a tariff to keep out foreign laces.

Imagine the difficulty of a foreign student of employment trends in trying to understand the statement of Philip Reed, chairman of the board of the General Electric Co., that "new foreign products not produced here would create employment in the distributive and service industries." The foreign student might be stumped to discover what those new products were, but he would quickly realize that there would be much more stimulus to employment in the United States if we went further and produced the items ourselves instead of merely distributing them after they arrived here from some foreign country. The foreign student might or might not realize that when the heads of General Electric and other manufacturers of electrical equipment urge us to increase our imports, they are not referring to imports of motors, light bulbs, and switches—but to imports of the kinds of goods made by industries other than those in the electrical field.

A thoughtful foreign economist might be puzzled, too, by a sizable loan made by the United States Export-Import Bank to Finland for the sole purpose of promoting in the United States the sale of Finnish products competitive with products already being made here by our own manufacturers. Mr. Martin, the head of the Export-Import Bank, made the statement that an important factor in making foreign loans was the extent to which the loans would be used to promote the production of items which could be sold in the American market. That might help Mr. Martin to get the bank's money back, but what happens to the money invested in the American enterprises which cannot meet the competition of foreign enterprises financed with these United States Government funds?

And are the foreign economic experts able to understand the viewpoint of Mr. Aldrich, chairman of the board of the Chase National Bank and formerly president of the International Chamber of Commerce? Mr. Aldrich wants private investors to supplement our Government loans abroad, despite the fact that no foreign nation believes that the colossal sums the United States has already loaned abroad can ever be repaid. Some of the foreigners tried to be honest; they told us they could not repay a loan and asked for a gift. We make defaulters cut of them by calling the credits loans. Mr. Aldrich says, "Our imports must be brought more nearly into balance with our exports." One suspects that the more objective foreigners might figure that for a country that didn't really need the imports the way to achieve such a balance would be to put a brake on exports or, perhaps, to become realistic and label the exports honestly as gifts.

A foreigner may also be pardoned for being confused over our emphasis on having the "escape clause" in reciprocal trade agreements in view of the State Department's efforts to convince foreign nations that we are going to admit their goods to the American market in a truly big way. The "escape clause," to be included at President Truman's direction, if it means anything, means that if it develops that a tariff concession granted by the United States proves effective in giving an increased slice of our market to foreign producers the concession will be withdrawn.

Do foreigners understand our trade philosophy? If they do, they must be skeptical of our sanity.

ARTHUR BESSE,
President of the National Association of Wool Manufacturers.
BOSTON.

Are Public-Opinion Polls Fair to Organized Labor?

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Saturday, July 19 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a review of an

article entitled "Are Public-Opinion Polls Fair to Organized Labor?" by Arthur Kornhauser, from the winter 1947 issue of Public Opinion Quarterly magazine, which is published at Princeton University. The review appeared in Nieman Reports, published by the Society of Nieman Fellows at Harvard University in July 1947.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

ARE PUBLIC-OPINION POLLS FAIR TO ORGANIZED LABOR?

(By Arthur Kornhauser, in Public Opinion Quarterly, winter 1947, Princeton University.)

Newspapermen who cover labor news are well aware that the total effect of polls on labor questions is to give the reader an unfair impression of labor. This is one of the things they most often discuss and criticize in newspaper treatment of labor. If anybody doubts it the evidence is overwhelmingly detailed in this case study by a member of the board of applied social research at Columbia.

He shows how it can be corrected if those who gather and publish polls on labor want to correct it. It is obvious that not all of them do. The same forces and pressures apply here that tend to bias reporting of labor news generally. The topic selected for polling frequently implies an anti-social attitude by labor. The phrasing of the question often suggests an unfavorable answer or fails to suggest all sides of the question. The interpretation and use of the polls commonly gives labor the short end.

All the material on labor in the seven leading opinion polls was studied for 1940 to 1945, altogether 155 questions. This is a thorough test.

Of the 155 questions, only 8 deal with favorable features of unionism, such as the protection and improvement of the lot of the working people. Of the rest 66 are neutral or doubtful, 81 are concerned with union faults or propose restrictions on unions. The questions then, to begin with, run strongly against labor.

"The polls aid and abet the process of directing public attention persistently to the negative side of organized labor. Avoidance of this bias would properly seem a special responsibility of those who ostensibly represent a scientific approach to areas of public controversy.

"Why no questions on whether unions help protect the interests of the common people, whether they serve as a useful counterweight to the power of big business?"

On the wording of questions "four disturbing types of bias" against labor are found.

1. The questions which offer a choice between a recognized evil and one particular proposed remedy, usually a law. Any other remedy besides a law is eliminated as a possible answer.

2. Questions on technical or specific points which, for lack of particular information, are answered in terms of general sentiments.

An illustration from Fortune: How many labor leaders in your community do you think do a good job in representing labor? Are fair in dealing with employees? Are honest in handling union funds?

3. Questions in which biases arise from hidden assumptions and oversimplification.

An example: Which do you think is trying harder to help national defense production—labor leaders or industrial leaders?

"Is this fair? The function of business managers is to get out production. That is not the function of the union leader. Why should questions make him appear responsible for matters over which industry gives him no authority?"

Another example: Do you think that workers should be forced to stay in a union if they want to resign or get out?

"The question leaves out everything that is important about maintenance agreements and becomes a mere caricature of these plans."

4. The use of suggested or slanted phraseology, or of wording that makes it especially easy to accept the idea asked about.

One of Dr. Gallup's, for example, asked: Would you like to see labor unions change their way of handling things?

"The implication is strong that an affirmative reply is expected."

The conclusion of the study is definite: "One cannot escape the conclusion that the labor-poll material is biased. It contains many varieties of bias, but they all point in the same direction. In the choice of topics, in the wording of questions, and in the reporting of results, unionism fails to receive balanced and impartial treatment. The polls taken as a whole are clearly not fair to organized labor. Few indeed are the questions to bring out the faults of business. No dearth of questions on unions' interference with wartime production, but not one on management's hoarding of labor or its self-interested delays in accepting Government contracts. Questions on unions' blame for strikes but not on employers' blame for substandard wages or for unsafe conditions in coal mines. The contrast is striking. Even when an occasional poll touches the sensitive spots of big business, the question and the report are mild and cautious in tone compared to those on labor."

This study should be provocative to those who buy polls for public consumption.

L. M. L.

False Economy

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Saturday, July 19 (legislative day of Wednesday, July 16), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "False Economy," appearing in the Memphis Commercial Appeal on July 14, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FALSE ECONOMY

Senator MCCLELLAN, of Arkansas, a day or so ago told a Senate committee that curtailing proper flood-control projects is "extravagant waste rather than sound economy." The same idea in picture form may be found on this page today in a cartoon reprinted from the Kansas City Star, a newspaper serving a great part of the Corn Belt area recently so badly hurt by floods.

It is worth while to repeat a paragraph or two from Senator MCCLELLAN'S testimony to the committee, for it amounts to another hard smash right on the head of a nail that needs to be driven. He said:

"It is urgently essential that we do that (exercise economy in operating the Government), but the serious curtailment or withholding of appropriations actually needed to advance our comprehensive flood control in rivers and harbors programs, as authorized by Congress, in its correct analysis, is extravagant waste rather than sound economy:

"If we lose sight of this and fail to support and accelerate water resources improvement and protection, the Congress will be responsible for invoking a false economy upon the Nation that will greatly retard our economic progress and ultimately double the cost when the job is finally done, as it must be."

What Senator MCCLELLAN was saying is summed up in that old but still true maxim that an ounce of prevention is worth a pound of cure. It is often difficult to persuade people that the cost of preventive work is usually negligible compared with that of trying to save something from the wreckage after disaster strikes. The people who live in the valleys of the great rivers of this section, however, have had the lesson borne in upon them by many a tide of dirty and destructive water.

Congress ought to listen to the voice of experience and reflect that the damage and devastation caused by floods mean losses to the Nation as a whole, aside from the emergencies of those immediately in the path of the waters.

Labor's Stake in a Columbia Valley Authority

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Saturday, July 19 (legislative day of Wednesday, July 16), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by a former Member of this body, Hon. Hugh B. Mitchell, before the Washington State Federation of Labor in its annual convention at Seattle, Wash., on July 14, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is timely and appropriate for the Washington State Federation of Labor to give the Columbia Valley Authority a prominent place in the convention proceedings.

Union delegates meet here in the shadow of the most drastic antilabor law known to recent history. The uncertainties of the days ahead for labor have been fabricated by a Congress which tries to deny to the Pacific Northwest the benefits from resources bestowed by nature.

The time has come for labor to assess its responsibilities for the future and to plan a constructive course of action. A Columbia Valley Authority will have a part in that plan.

The State Federation of Labor is a steady and consistent supporter of a CVA. Not only is your president, Ed Weston, one of the vice presidents of the League for a CVA, but union locals and individual members are actively interested in furthering the objective of the league.

The goal that organized labor seeks, in common with many other citizens of the Pacific Northwest, is the orderly, democratic development of our natural resources. Union members and all thoughtful citizens wish to be stockholders in a profitable community enterprise—a governmental organization to make natural resources mean more jobs and better living for all the people.

By working hand in hand with the State Grange and other groups, for industrial growth and resource development through a CVA, the Washington State federation merits warm praise. This teamwork between organized labor and farmer is healthy evidence of progressive action for a prosperous

economy. It is a sure sign that the Grange and the unions have fundamentally common aims—sustained purchasing power for labor and decent prices for farm crops.

In working for these common aim through a broad positive regional program, organized labor gives a convincing answer to those who hope to weaken and divide its ranks. Labor has a common cause with all other groups working for a better America, and labor will not allow itself to be isolated from community life.

In the past few months people throughout the country have learned anew the simple but important lesson that our great river system must be brought under control. Raging floods of the Missouri and Mississippi have destroyed lives and property and carried precious topsoil to the sea. A Congress that puts the dollar sign before soil conservation and resource development would rather wait and pass around the hat for flood victims, would rather wait and rebuild damaged homes on depleted soil, than plan and invest now in the instruments to prevent such disasters.

Nature left to her own devices or to haphazard exploitation can and will cause havoc and ruin. Nature, wisely controlled and managed for human need, will produce in abundance.

Lawmakers who are so anxious to see injunctions issued against labor union activities, might better devote their time to ways and means of preventing the irreparable damage of raging rivers.

We who work for a Columbia Valley Authority say that the valley authority is the appropriate instrument for this task. We have before us the Tennessee Valley Authority as the greatest demonstration project in the world for conserving and developing natural resources. Flood control is only a small part of the work to be done in building up the soil and generating power for industry. But the TVA does its work well because it has a multipurpose unified program for the region and the mechanism for intelligent administration. The Tennessee, under TVA management, is the best-controlled river system in the world.

The Pacific Northwest can benefit from the instructive example of the TVA. In this area the flood problem is secondary but almost every day we are given fresh evidence of the need for an integrated program of resource development. People who attended the meetings at Walla Walla concerning an alleged moratorium on Columbia and Snake River dam construction, came away saying: "That's the best argument I've heard for a CVA."

At the Walla Walla interagency committee meeting we saw a bureau of the Federal Government announcing a departmental decision to delay for 10 years any dam construction on the lower Snake and Columbia Rivers. We learned then that this bureau decision was not the departmental decision.

Just in this off-and-on moratorium story alone we see the indecision of Federal bureaus demonstrated by bureaus which are within a single department of Government. Multiply this indecision by the fact that some 30 bureaus in 3 main governmental departments have to decide each step in the Pacific Northwest program and you have the reasons for a Columbia Valley Authority.

But what is the story of Walla Walla? Basically it is the story of an agency without legislative authority, without any formal responsibility and having no power to reach a decision trying to settle tremendously difficult problems. Such an agency can not do the job. Walla Walla demonstrated that publicly. Walla Walla forced a cabinet member to clarify a muddled situation with a public statement. In the clarification we found that a 10-year-dam-construction moratorium announced by the Fisheries Bureau was but a bureau hope and not a departmental decision.

And why all this furore? Simply because the multipurpose planning job for the development of the Columbia and its tributaries had not been done. No one and no agency had seen to it that all cogs of a great program were meshed so that publicly important gears could turn smoothly.

And because all or some of the multitude of Federal bureaus operating in the Pacific Northwest had failed in their jobs, we had a spectacle at Walla Walla which could well make one wonder at the efficiency of our democracy.

The question at issue should have been simply one of determining why fisheries planning had not kept up with irrigation, power, navigation, and flood-control planning. If the so-called interagency committee could assign blame for this failure and correct the difficulty it might serve some useful purpose. But as it is, it merely serves as a debating society to help those who would slow down the entire Columbia Valley resources development program.

Despite Congressional action over the years the salmon propagation program has been regretfully slow. The problem was known even before the first great step toward the building of Grand Coulee and Bonneville. Congress has repeatedly asked the agencies in charge what they needed. But in the face of a favorable Congressional attitude the fisheries agencies still ask for 10 or 15 years more.

Why wasn't the job done in the last 15 years? I say it was because there was no agency urging speed upon the fisheries experts. They were more interested in problems of Alaska, or of New England, or of the Gulf of Mexico.

The agency which should have been working and fighting for orderly development in the interest of the Pacific Northwest is the Columbia Valley Authority. Any CVA board sitting down to review our problems would have known immediately that a settlement of the salmon problem was one of first priority.

But there was no CVA. There was no other agency doing a Pacific Northwest program checking job. Therefore there was no one to say that the salmon propagation problem had to be settled and settled quickly.

The failures publicized at Walla Walla have been pointed out again and again by all who have made any real study of regional development problems. And among those who have done so I can name such national publications as the New York Times and Collier's Weekly.

Now a new student of our national affairs has reached the same conclusion. In his best seller, Inside the U. S. A., John Gunther wrote:

"A river does not recognize bureaucratic frontiers—any more than it recognizes State lines. Above all, the region as a whole needs systematic research, over-all research coordinated with a plan which can in turn be converted into a coordinated program under a single budget. But this is impossible under the present arrangement, with its duplication of authority and lack of integrated leadership. Each Federal agency reports individually and separately to Washington, and the result is crippling. No one knows what is going on in the other agencies and no one wants to intrude."

And Gunther wrote his book before the interagency committee debate at Walla Walla.

No, the claims and counter claims in evidence at Walla Walla did not serve to yield intelligent answers to the important problems which concern our people. The answers cannot be found by endless bickering and futile delays.

The economic development of a great region is at stake. It is a program for jobs and farms. It is a program for a better Nation by building a better Pacific Northwest.

According to the Bureau of Reclamation 238 projects are involved, 238 projects which will bring water to five and one-half million acres of land to provide some 70,000 new farming opportunities. These in turn would provide new employment opportunities for 1,000,000 people.

It's a program too of producing 55,600,000,000 kilowatt-hours of firm energy with its great job potential.

The annual cost to the Nation would be less than $300,000,000 during the 50-year amortization period but the projects would bring an estimated monetary return of more than $385,000,000 each year, even during those 50 years. Once construction costs have been paid the annual profit to the Nation would approximate an estimated $300,000,000 each year.

The feasibility of the program is based on the relationship of power development to industrialization. Once again we have demonstrated the tie-up between farm and industry. The industrial use of power at reasonable rates promises a sufficient return to help along the weaker irrigation projects. Industry helps to build agriculture. When both are healthy and strong, jobs are many and markets are good.

Such an important program cannot proceed in an orderly and efficient manner by the pulling and hauling of special interests and of overlapping agencies. We need an organization that can analyze all the problems and mesh the parts into a balanced whole. We need continuity of policy and program by an organization working for the people. In short, we need a Columbia Valley Authority.

To those who are against a CVA, we say: "The obligation is yours to come up with something better." Something better, not something worse, or just anything at all. Spurious alternatives to the CVA, whether they be interagency committees or interstate agreements, cannot become efficient instruments for resource development.

I say these alternatives are spurious because they are designed to head off the type of organization proven by experience to be most effective in regional multipurpose development. The TVA has shown how the authority, prestige, and facilities of the Federal Government can be vitalized by local initiative and brought to bear in a democratic way on a wide range of economic problems affecting an area.

The interagency committee is merely a debating team, a device for airing agency conflicts. It shoves these conflicts up to a higher plane, but does not settle them. The first loyalty of each committee member is to his own agency rather than to the long-range interests of the region. Each agency jealously pursues its own career, and its lines run back to Washington, D. C.

Likewise, the interstate agreement or compact cannot cope with the complex multipurpose features of resource development. Such arrangements bring to the fore State conflicts in place of Federal conflicts. Lacking the jurisdiction and unable to use the facilities of the Federal Government, the interstate arrangement does not provide even the skeleton of a development program.

Those of us who work for a CVA have the experience of a TVA on our side. We have yet to see a more effective instrument devised to get the resources of the Federal Government working in a democratic way, under local guidance, for the best interests of the region as a whole.

The brief but bitter experience with recent legislative policy has made us realize more sharply than ever before the danger of haphazard resource management. Ever since the present congressional majority came to office, the Pacific Northwest has been beset

by one crisis after another. I have said before, and I say again, that so long as the economic policies of the present majority hold sway the Pacific Northwest will live in constant crisis and its economy will be held back. We cannot advance when we have to work overtime to keep from going backward.

In place of crisis, conflict, and uncertainty, we need CVA as a stabilizing factor to lay out long-range plans and to move steadily forward in developing our great natural resources.

The Congress which today holds the economy of the Pacific Northwest in a political strait-jacket has given new heart and new hope not to the people, but to the enemies of CVA. Lobbyists for the giant utility combines have come out of hiding. Today they are busy advisers to eastern Congressman who drum up new bills and jokers to check the expansion of Federal public power, and to raise the rates for sale of existing power.

It would take a whole day just to describe the complex ramifications of these legislative assaults on the western economy. Just two bills sponsored by Representative WILLIAM J. MILLER, Republican, of Connecticut, would so far nullify Federal jurisdiction over streams and rivers as to make integrated river development through valley authorities impossible. It is no accident that in a parade of 24 witnesses testifying for the Miller bills in a House hearing, not less than 8 were private utility spokesmen.

If the private power lobby succeeds in getting Congress to stop dam construction and to raise wholesale power rates, the heavy burdens of economic stagnation will be lifted onto the back of labor. Low-cost power of the Columbia River is the energy base for industrial expansion—for pay rolls and jobs. In the flowing waters of the Columbia regulated by dams, lies the employment potential of the future. If there waters are allowed to flow idly to the sea, opportunities for productive labor will likewise be gone.

More than that, if Northwest industries can no longer receive the benefits of present low power rates, in their struggle to survive these industries will seek to lower costs of production by cutting wages. Higher-cost power generates a drive for lower-cost labor. Those who would vote an increase in Bonneville rates also give their approval to lower wages and a lower standard of living for the working man of the Pacific Northwest.

We work for a CVA because we desire that nature be mastered for the benefit of people. Our human resources will derive vigor and strength from intelligent organization of our natural resources. For all people we seek the creative opportunities that lead to good living and lend dignity to the human spirit.

That is why the fight for a CVA carries special significance for organized labor. The men in Congress today who are against a CVA, who do the bidding of entrenched wealth and greed, repudiate the people and make a mockery of their aspirations for a better life. The same interests that oppose the CVA rejoice in the passage of the Taft-Hartley law against labor. Those who condemn the CVA as an instrument for mastering nature, give their blessing to the Taft-Hartley law as an instrument for mastering men.

The infamous Taft-Hartley legislation is an insult to the free-laboring men and women of America. It robs labor of its dignity and would make of labor a mere commodity. The law was conceived and enacted in a spirit of vengeance and prejudice. For mutual goodwill and cooperation among workingmen it would substitute mutual suspicion and distrust. It seeks to play one workingman against another, and all against their chosen leaders.

Those who favor this law fear the collective strength of men and women joined together for mutual protection of their livelihood. They desire the wage bargain to be a one-sided affair. The effect of the Taft-Hartley law is to bring the policeman's club to the bargaining table and to put it into the hands of employers.

Does it surprise anyone that the Senator who gave his name and sponsorship to this antilabor legislation belittles the accomplishments of the TVA? Senator TAFT marshalled Senate forces against the confirmation of David E. Lilienthal as Chairman of the Atomic Energy Commission solely because of Mr. Lilienthal's outstanding record in the TVA TAFT failed in this effort because the great majority of citizens in all walks of life have a sure and steady conviction that the TVA is a constructive and democratic force for better living. They want atomic energy development to take the same course.

The final Senate vote proved that this conviction cannot be shaken by the attacks of bitter unrelenting foes of TVA. All the old hackneyed arguments against TVA, all the misrepresentation, innuendo and malicious gossip were dragged up to the Senate debates. In the end these counted for nothing except to fill up the time of the Senate and the pages of the CONGRESSIONAL RECORD with costly nonsense.

We in the Pacific Northwest who are working for more public power and efficient, democratic development of resources through a CVA, helped to get the message across in support of Mr. Lilienthal's confirmation. We realized that those who opposed him are hostile to the program for which we work, a program for spreading widely to all the people the benefits of resource development.

But we need to look no further than our own Pacific Northwest to see how attitudes against labor and against resource development are closely tied together.

For the discussion today it is important to note this relationship as exemplified by the actions of one of our Senators.

He singled out CVA supporters for a vicious attack on the Senate floor.

Just as he echoed the TAFT call for a national budget cut, detrimental to western development, just as he echoed the TAFT call for a vote against labor, so he echoed the TAFT cry that public acclaim for Lilienthal was so much propaganda. On the Senate floor he labeled our CVA support of Lilienthal as premeditated maliciousness.

This same man whose incredible explanation of his refusal to sustain the veto on the Taft-Hartley bill was, "I cannot vote to retard progress," said that CVA advocates were "unwilling to agree that any proposed further extension of the valley-authority principle should be exposed to additional study, research, and analysis, leading to a determination based on fact, need, and conclusive proof."

There you have it. Despite a decade of accomplishments by the TVA, this opponent wants more study and conclusive proof for a CVA. But he needs no more study, no conclusive proof to vote against labor. When a constructive program is proposed, he wants to wait. When an evil and destructive program is proposed, he is willing to go ahead and gamble.

This makes us wonder why the attitude can be so different when the subject is changed.

A noted industrial engineer has said—and not in jest—that there are "57 varieties" of private interests working against unified watershed developments—"57 varieties" of private interests working against the public interest.

He points out that at least 30 organizations have been created to consolidate and make more effective the opposition to valley authorities. These organizations, mainly located in the West, hold meetings at strategic times and places, and line up directed support through the press, chambers of commerce, college teachers and other amenable agencies. A few of these organizations tie their propaganda in with some legitimate social or economic objective, thus throwing some confusion and doubt into the mind of potential valley authority friends.

These back-country propaganda organizations, which are widely distributed, closely joined, and highly vocal, head up in various Washington lobbies. A lobby may be a single individual or a team, but all the lobbies opposing public power, valley authority legislation, and other important measures, work together as a well-knit group. They draft legislation for Congressmen, help to rig hearings with witnesses friendly to their side, and generally subvert the legislative process in behalf of the private interests which employ them.

The National Association of Electric Light Companies, to take one example, regards lobbying as a big, full-time job. It pays its Washington representative $65,000 a year under a long-term contract. He is the real thing—a registered lobbyist under the La-Follette-Monroney Act.

We who believe that industrialization is basic to the growth of our Pacific Northwest and that a CVA will give the needed impetus to industrial development must lay out the definite tasks ahead. First and foremost is the need to keep a watchful eye on our opposition. We must know who organizes these groups, we must study their methods and keep the public posted about their operations.

That is an important part of the work we must do in the league for a CVA. It is our responsibility to keep league members and the general public accurately and systematically informed about the basic facts of western development and the benefits that can be realized through a Columbia Valley Authority. Those who are hostile to this program for resource development are well-organized and vocal. It is up to us to become well-organized and vocal.

Labor union members have good reason to know the dangerous consequences of a public ill-informed and confused by constant publicity for self-seeking, private organizations Propaganda of the NAM type led too many people to believe that strong labor organization was a hindrance rather than an aid to economic well-being and industrial harmony. The NAM was more successful than organized labor in getting its story across to the public. Passage of the Taft-Hartley bill reflects in no small measure the prevalence and persistence of NAM-type publicity.

The Pacific Northwest cannot afford to let the opinions of the Power Trust and associated organizations prevail in regard to CVA any more than organized labor can afford to let the NAM instruct the Nation in labor law.

Our plans for CVA development work call for a full-time director of information, a systematic educational program, and a newspaper to bring to CVA league members and the public an objective account of developments affecting the economy of the Pacific Northwest.

The all-out support of organized labor is necessary to bring these plans to fruition. I am confident that this support will be forthcoming, because labor has a large and permanent stake in a CVA.

By participating actively in the work for a CVA, organized labor demonstrated its understanding of the role of modern technology in a democracy. We have the knowledge, resources, and equipment to achieve and maintain a prosperous economy. The CVA signifies an efficient means for putting these facilities to work.

Organized labor knows that the answer to fascism, communism, and totalitarianism of any kind is a dynamic democracy which takes full advantage of man's ability and nature's bounty for the good of all the people.

Liquor Advertisements

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Saturday, July 19 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the CONGRESSIONAL RECORD a news item which appeared in the Washington Post of July 6, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NCPT HITS LIQUOR ADS

The board of managers, National Congress of Parents and Teachers, yesterday advocated the prohibition of alcoholic beverage advertising at its annual conclave now in session in Chicago.

It was one of several recommendations submitted to the NCPT for inclusion in its active legislation program.

Other recommendations of the board were: Appropriations to carry on the Federal school lunch program; support of American participation in the resettlement of displaced persons; national legislation to aid in reducing juvenile delinquency; legislation to provide "equal education advances" for Indian children and Federal aid in demonstrating public library services to persons lacking it.

Mrs. L. W. Hughes of Arlington, Tenn., NCPT president, said that the school-lunch program now receiving Federal aid had been "seriously curtailed" because the Federal Government and some State governments had failed to appropriate sufficient funds.

The alcoholic beverage recommendation urges support of a Senate bill which would prohibit the transportation in interstate commerce of liquor advertisments or radio broadcasting of such advertisements.

Chinese-American Relations

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Monday, July 21 (legislative day of Wednesday, July 16), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine article on Chinese-American relations, written by two very distinguished lawyers of my home town of Seattle, Mr. John J. Sullivan and Mr. Fred H. Lysons.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

No one questions the high purpose or the good faith behind the Secretary Marshall plan for world rehabilitation. But essential to accomplishment under any proposal of such nature is that first things shall be put first.

Pertinent to that thought is this statement by a high ranking Member of Congress in 1939:

"I feel that we are making a great mistake in trying to determine our probable conduct as to future wars in Europe before we determine our present conduct as to an existing war in the Orient; we have let our excitement about what may happen to our remote interests in Europe blind us as to what is now happening to our immediate interests in the Pacific. We have no treaty in Europe comparable to the nine-power Pacific treaty that is being violated daily, with increasing effrontery. * * * I feel certain that if we solve this immediate far eastern problem first it will go far toward solving the rest of our international problems, and that until we decide this immediate problem, we cannot reach any very satisfactory conclusion on the general problem."

That is a statement of June 3, 1939, in a letter by Congressman JOHN M. VORYS to the House Committee on Foreign Affairs, of which he was a member.

Substitute Russia for Japan, as used in that letter, and it expresses precisely the situation existing today.

First, let it be said that today's talk of the coming of a third world war is an inaccuracy of expression, for in truth there has been no cessation of international hostilities since the Kaiser launched his famed defiance of a "scrap of paper" in 1914.

While that was engaging Europe, Japan saw her opportunity to take over China, which she sought to do under her notorious "twenty-one demands." This move President Wilson halted with an ultimatum of courage and statesmanship to Japan; but Japan's subtle efforts continuing, China met them with a weapon in the use of which she was skilled—a trade boycott; a boycott of such far-reaching severity that Senator Borah upbraided China for it as being the equivalent to a state of war, as to Japan.

The boycott had an unexpected result. A business depression which we were suffering, of particular severity to our agricultural economy, was found by an official investigation by a joint Senate-House committee to be due to China's boycott of Japan. We asked China to abate the boycott for our relief. Convinced by China that to do so would expose her to Japan's aggression we made a deal with her by which we negotiated, and concluded at Washington Conference of 1921, the Nine Power Treaty which obligated the signatories, including the United States and Japan:

"(1) To respect the sovereignty, the independence, and the territorial and administrative integrity of China;

"(2) To provide the fullest and most unembarrassed opportunity to China to develop and maintain, for herself, an effective and stable government."

No treaty ever concluded between nations met with higher acclaim. Hon. Henry L. Stimson appraised it as "One of the most admirable and farsighted treaties in the history of modern civilization."

Secretary of State Charles Evans Hughes, chairman of the conference, said that by the treaty the open door in China has at last been made a fact.

Baron Shidehara, Japanese Ambassador to the United States and head of the Japanese delegation to the Conference, said that the treaty had disposed of "the Chinese problem, which, it was often asserted would one day lead to world-wide conflagration."

Elihu Root, who drafted the treaty, explained to the Conference that it was "the separate obligation of each individual signatory" thus imposing upon the United States the direct obligation to compensate China for her boycott abatement in our interest.

What a different story would be world history of today had we in 1939 heeded the admonition of Congressman VORYS and given our attention to Asia as well as to Europe.

And, similarly, from now on, if we do likewise.

Our people today are pondering the query "Why are we trying to determine our probable conduct as to future wars in Europe before we determine our present conduct as to an existing war in the Orient" just as pertinent today as when posed by Congressman VORYS to his committee associates in 1939 even more so—the soundness of his inquiry at that time having been abundantly established by intervening events.

Moreover, we are in Europe today where we haven't even a pretense of obligation, other than moral, instead of in China where our obligation to be there is of combined honor under a treaty, and of consideration under China's boycott abatement. Why are we abandoning the recognized central government of China which is suffering distress of our making through nearly two decades of past indifference? The government with which we negotiated and concluded the treaty and which paid us the consideration of bolcott abatement.

We are in Europe contributing of our substance in voluntary effort of attempting to check a Communist threat there, while ignoring in the continent of Asia the fountainhead control of the world-wide Communist movement in its nefarious efforts to destroy freedom and liberty in China.

That Russia is not a party to the Nine Power treaty is immaterial, since the action here suggested is action by ourselves in regulation of our own conduct under the treaty, as contemplated by Mr. Root, the treaty draftsman, and as ratified by the Senate.

The Nine Power treaty is still our obligation, pertinently applicable to this contingency.

Russia is the fountainhead of world troubles, disturbances, and threats.

Secretary of State Marshall is reported in the press recently as July 3, to have said: "Any government which maneuvers to block the recovery of other countries cannot expect help from us."

Such has been and is today Russia's continuing policy toward China and it invokes our protection of China under the Nine Power treaty. Our failure to meet this obligation in full measure constitutes our treaty-bargain violation and reflects upon the honor and integrity of our Nation.

While commendably in Europe today voluntarily administering a salve to the fruits of a crime, why are we not likewise in Asia dutifully injecting a poison into its roots?

The course we are now pursuing is the equivalent of attempting to stamp out a contagion by administering to its victims while still cultivating the contagion.

Having reduced China to her present state of poverty and helplessness by supplying the treaty-violating agencies of her destruction, but one course is open to us today in our relations with that hepless nation: In both honor and in retribution, a course of righteousness in our treaty relations by carrying out with sincerety and effect its treaty provisions and thus help China stamp out communism and bring to its patient and suffering people the peace they so really deserve which shall inure with benefit to our Nation and the world of generations to come.

The Tax Bill

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Monday, July 21 (legislative day of Wednesday, July 16), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an edi-

torial regarding the tax bill published in the Camden News and written by Mr. Al Rose, one of the finest editorial writers of my State.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Today want to commend Senators McCLELLAN and FULBRIGHT for their vote against the politically inspired GOP tax bill when it passed the Senate this week. They knew it was certain to pass, but they expressed their opposition to it, and we are proud of them for it. Senator McCLELLAN lost his fight for the community-property clause, and Senator FULBRIGHT aided him in this fight. To show how unfair were the tactics of the GOP's, they would not agree to extend the same law to the 12 States without community-property exemption as the other 36 States now have. In other words, Arkansas, along with 11 other States, has to pay higher income taxes than do the 36 because of the law granting the husband and wife community-property exemption.

But as was mentioned here a few weeks ago and which is an unpopular topic with some, especially the selfish few who make a lot of money and want to pay less taxes, now is no time for tax reduction along the lines proposed by the Republicans. It would help the big boys far more than the little fellows and this measure was inspired purely for political motives, and to try to get votes in 1948. Why, after this bill was killed by the President a few weeks ago, would the elephantine boys try it again? Purely to try to get more votes. They have their eyes on the 1948 elections and are letting them be covered to the real condition of this country.

We have many obligations to meet. Whether you like it or not, or whether you know it or not, Uncle Sam (which means you) is way in the red. We haven't paid for World War I yet and haven't even begun to dent the payments for World War II. There are many places to put the revenue that these taxes will bring. In the first place, let us begin to retire the national debt first. There is the little matter of war bonds to be paid off, in addition to the high cost of our national defense. We can't afford to throw away our Army, our Navy, and our Air Forces, although we'll admit the Republicans are sure doing a pretty good job of scuttling all defense agencies as well as other needed services. It costs a lot to stay prepared. Do you want this country left wide open for attack? What good would your little money do you when some invader comes and takes your home, your Nation, and maybe your life?

We remember the howls raised by a few of the folks here who had made more money in the NAD boom days than they had ever in their life, when they thought the Navy might close it up. It costs money and plenty of it to operate this naval ammunition depot. It played a big part in furnishing rockets to win this recent war. It is needed badly now. This is just one of the many naval and military establishments throughout this Nation needed to keep our fighting forces in a semblance of preparedness. We have air bases and other such defense projects in this country, not to mention the occupation army and bases in the occupied countries. Those operations are not run on paper. It takes dough and plenty of it, and the only way to raise it is by taxation. If we stop the taxation levies, then we go just that much more in the red. But the ones who howled loudest about losing NAD are leading the "tear jerkers" and big mouths now for tax reduction.

If this country was poor and people were without funds, then we'd say cut taxes, but everybody has made more money in the past 5 years than they ever made in their life, despite the bloody war. The war didn't hurt the businessmen or the continental limits of the United States. There were no bombs dropped on this country. No cities were destroyed. No homes were blasted off the face of the map. No; we sat back and bought War bonds (at a fancy profit) and did without a little sugar, bacon, a new auto, and a few other things but got fatter and ate regularly. Only the families who gave up sons and daughters and the men and women who served in the various branches really made sacrifices. The bulk of the American people sacrificed very little. It was mighty hard to get enough of them to staff Red Cross centers and to roll bandages for the wounded. Don't hand me the line about how much you sacrificed. I know better. Just the group mentioned above, the parents, the families, and kin of loved ones who didn't come back and the men and women who served in some war capacity really made sacrifices.

The rest worked at good pay, and manufacturers made their biggest profits in history. Industry of all kinds exceeded all net earnings records. Business, including even the lowliest hamburger stand at Chitling Switch, made its own weight in money. Now, why not share a little of that with the Uncle who is responsible for all this? Without that Uncle Sam, none of us would be here enjoying the vast blessings of a free Nation. We hate to hear the gripers and bellyachers yelp about taxes and a few inconveniences when they have so many God-given riches thrown right in their lap for nothing. Nothing they ever did to earn any of them. The only way they can lend a hand and share in the maintenance and operation of this world-leading Nation and our richest heritage is through a few measley and paltry dollars each income-tax paying time. Now a few want to cut those down beyond the limit of solvency for this great country. Don't come around lipping to me about high taxes, brother; I won't give you any shoulder to cry on. Pay up and be proud to have a share in the greatest business on earth.

Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Tyrrell Krum:

VETERANS' AFFAIRS—AN OPEN LETTER TO ALL AMVETS

(By Tyrrell Krum, lieutenant commander, United States Naval Reserve, retired)

May I be among the first to congratulate all of you for the signal honor and the mark of distinction which has been bestowed upon the American Veterans of World War II, or Amvets as you call yourselves, by having been chosen as the first group of veterans of the second big show to be officially chartered by the Congress of the United States.

When President Truman attaches his signature to your coveted charter at the White House within the next few days, another important milestone in the endless path over which millions of American ex-fighting men and women have trod since the days of Concord and Lexington will have been passed.

From my observation of your activities since the day you came into existence as Amvets nearly 3 years ago, I have found you to be men of good standing, high caliber and lofty ideals whose only aim in life—unlike the Communist-dominated American Veterans' Committee—is to serve in a truly American manner your erstwhile comrades-in-arms who are now your partners-in-peace.

There have been times when it would have been easy and financially remunerative to have abandoned the right as you saw it, and to have drifted to the extreme left of radicalism and un-Americanism. But you stood your ground.

And so today you occupy the unique position of being the only veterans' organization made up of ex-service men and women of World War II exclusively to have had conferred upon you the supreme honor of a national governmental charter, which places you alongside the American Legion and the Veterans of Foreign Wars which emerged out of previous conflicts.

As a "retread" who served in the Second World War, I am proud to have been of assistance to you in overcoming the many obstacles which beset your path during the past couple of years in which you were getting started.

You have the whole world before you, Amvets, and I hope that, with your charter under your arm, you'll continue onward to fulfill your destiny in a manner befitting the American men and women who make up your ranks.

Hold high the torch and keep your escutcheon unblemished.

My highest salute, Amvets, my warmest wish for your continued success and the best of luck to all of you.

Aid to Foreign Nations

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. REED of New York. Mr. Speaker, the constant flow of our taxpayers' money abroad is the result of powerful propaganda of a character to create emotionalism rather than reason to bear on the solution of international problems.

Has any one of the nations to which our loans-gifts have been made and our credits extended formulated realistic programs for rehabilitation?

How long can our taxpayers support foreign purchases of our goods with American dollars advanced as gifts, loans, and credits by our own Government?

Why should American taxpayers supply dollars to those countries which are short of dollars instead of the "dollar-short" countries borrowing from their neighboring countries that have an abundance of gold and of dollars?

It appears that the spending virus has so weakened the resistance of those officials in this country who are charged with the grave responsibility of controlling the "purse strings" of our Government that nothing short of national insolvency will turn their attention to the national solvency of the United States.

Many of the men who are now in charge of the "purse strings" of our Government were less than 8 years old in 1920, and some who have cut the "purse strings" and opened the money bag of "Uncle Shylock" to all nations were not yet born in 1920. The call from abroad to "Uncle Shylock" then was "We are emotionally and politically mad. We have only sanity enough left among us to know that we are. Simply we cannot think economically. Think of a way in which we may go on here in Europe. For unless

you can we shall go to pieces. Bring us a plan."

We did so then, now in 1947 the international spending debauch is again inaugurated.

What is the plan of 1947? It is the same old plan under a new name, recently presented as a result of the same old foreign appeal that followed World War I. Did Germany pay reparations? Yes, she did, but how and with what? Germany's net payments on reparations amounted to $2,350,000,000. She borrowed from other countries at the same time the vast amount of $3,750,000,000. To be specific she borrowed $1,400,000,000 more than she paid on account. Where did Uncle Shylock, as our ungrateful European debtors called Uncle Sam, come into the transaction? He furnished practically two-thirds of $3,750,000,000. Out of every dollar Germany borrowed she paid 63 cents in reparations and kept 37 cents. Do you recall what German officials said in urging other countries to loan to her? Let me quote because it has such modern appeal:

> Responsible government has it's back to the wall in Germany. Uphold us for your own sake as much as ours, for if this government falls we shall all of us have to face communism in Germany.

What did the leaders of our debtor nation tell the German people? "Why," said they, "if the creditor nations would desist from demanding payment of reparations the wages of German workmen could go up." Yes, they were told that "only for payment on reparations, taxes would come down. Poverty in Germany would vanish."

There is such a thing between nations as an ugly debtor mentality and the creation of such a Frankenstein to the detriment of the United States is in the making right now. This time it is not one debtor but many. It will not make for peace on earth good will toward men.

It will require more than the United Nations organization to destroy this destructive war breeding ugly debtor mentality. This time our happy international spenders and wasters, who should be the trustees and meticulous stewards of our taxpayers' money, are using our money and our resources to make the nations throughout the world our ugly debtors.

Possible Foreign Relief Needs Preclude Tax Reduction for Present Year

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. HAYS. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which appeared in the column, From This Side, written by John Pruniski for the North Little Rock (Ark.) Times:

> One of the arguments advanced against the $4,000,000,000 income-tax reduction had to do with foreign relief, but this point was not stressed as much as some others in the talk which preceded passage of the measure.
>
> The substance of this argument was that the $4,000,000,000 may be needed—in fact, it probably will be needed—to foot the bill for food and other needs in war-torn countries. Food would be the tangible item in this case, but even more important than that would be the insurance against the spread of communism which the money would buy.
>
> It will be a tough break for John Q. Taxpayer as long as he does not get this cut in his annual tax bill, but it's the long haul that counts here and in the end same J. Q. T. may not suffer as much as he thinks he will.
>
> By their actions to date, Joe Stalin and his crew of Commies have not demonstrated any desire to build a firm foundation for peace. They and/or the United States must do the job. But the Soviets are ready to work on our side only when they are allowed to call all the signals.
>
> For that reason, the American taxpayers will probably have to pick up a number of checks for meals they'll never eat. However, there does seem to be some wisdom in collecting smaller ones now rather than waiting for larger checks that war or the threat of war would bring.
>
> About hunger in foreign lands, those of us who made trips across the seas on war business can tell you a few things. At some time or another during the late war, many of us saw genuine hunger and can aver that it's not a very substantial basis upon which to build order for a peaceful world.
>
> While jockeying an ambulance through the hills of Italy, this writer stored away several vivid pictures of hunger at its best—or, more properly, at its worst. The finish of our meals (and they were no gourmet's delight even when hot and fresh) was usually the signal for the rush of hungry hordes of little Italians to gather up the food that had been left uneaten—a few crusts of bread or a spoonful of margarine or perhaps some cold bully beef.
>
> The pictures which we brought back were not pretty things.
>
> Hungry foreign lands will turn to the United States—or to Russia. If nothing is offered from our side, empty stomachs will cause the bait which communism will dangle in front of them to be grabbed readily.
>
> All of us would like to have the debt reduction offered by Congress. But it will not be wise to lose sight of another important consideration—one that involves the basis for world peace. After the prodigious spending that we did to win the war, it would, indeed be foolish to become niggardly now in making provision for winning the peace.
>
> The concept of one world should not be obscured by many words about a $4,000,000,000 tax reduction for some 130,000,000 people. It is a grim fact that there is something wrong in an economy that gives one man a yacht and denies another the chance for a few square meals.

Anti-Poll-Tax Legislation

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. CELLER. Mr. Speaker, I am offering a statement in opposition to the poll tax now prevailing in several Southern States. They are Virginia, South Carolina, Tennessee, Alabama, Mississippi, Arkansas, Texas. It might be asked how important is this subject to the people of the country. "Do not seek to know for whom the bell tolls, it tolls for thee." These poll taxes are devised to disenfranchise vast numbers of voters as we shall see later in the article. The basis for the poll tax is primarily prejudice against poor white as well as colored people. The poll tax is deliberately maintained to bar them from the polls. That same prejudice is like a cloud that casts a shadow over the votes in Congress of the Representatives and Senators from the poll-tax States which ultimately affects national legislation, particularly in such legislation like the FEPC and the minimum wage increases. Naturally, therefore, the country, should watch with interest legislation concerning the abolition of the poll tax.

Because the poll-tax question is of vast national importance, I have introduced a bill to provide for its abolition.

We are told that what each State does with respect to poll taxes may be none of our business. My answer is that no State acts in a vacuum. Whatever happens, especially as to voting in our Republic, anywhere, in a poll-tax State or non-poll-tax State, particularly in a Presidential or congressional election, concerns all of us. There are States' rights, but also national rights.

Article I, and especially section 4 thereof, of the Constitution sets up national rights and gives Congress a full measure of control over Presidential and congressional elections. Congress is invested with those national rights as trustee for all voters and all the people everywhere.

Those national rights are paramount to States' rights. States like Vermont, New York, and California have as much right in the national elections as Texas, Mississippi, and South Carolina.

Is it just for the people of New Jersey, North Dakota, and Connecticut to be legislated for or have their own Federal interests administered by officials elected on any, shall I say, undemocratic basis—on a type of franchise that discriminates among the citizens unduly.

If a State can impose, say, a poll-tax requirement of $2 or $3 a year, it can impose one of several hundred or several thousand dollars. Now, a State can do that as a prerequisite for voting in a State election. It can do anything it pleases in that regard. But when it seeks to impose burdensome taxes upon the voter as a condition precedent to voting in a national election, then we Members of Congress have some concern therein and can regulate it.

Instead of a poll tax, the State can say that nobody can vote unless he be a regular church goer. The State can say that no one can vote unless he is married. Well, that is all right for State elections. But they cannot impose those conditions if Congress will say that those conditions are improper.

In other words, the State can exact any unreasonable or any capricious condition it wishes for State elections, but not for national elections. A State can burden the local franchise in any way it sees fit. The bills that have been introduced in Congress all refer to national

elections in seeking to abolish the poll tax as a condition of voting.

At some stage the Federal power must intervene to protect the republican form of government guaranteed by our Constitution. The States cannot go hogwild on the subject of imposing conditions.

That is exactly what the Supreme Court said in the United States against Classic, decided May 1941 and reported in volume 313 United States Reports, particularly page 315:

While in a loose sense the right to vote for Representative in Congress is sometimes spoken of as a right derived from the States; this statement is true only in the sense that the States are authorized by the Constitution to legislate on the subject as provided by section 2 of article I to the extent that Congress has not restricted State action by the exercise of its powers to regulate elections under section 4 and its more general power under article I, section 8, clause 18 of the Constitution, "To make all laws which shall be necessary and proper for carrying into execution the foregoing powers. * * *"

Obviously—

And this is the decision of Chief Justice Stone—

Obviously included within a right to choose secured by the Constitution is the right to qualify voters within a State to cast their ballots and have them counted at congressional elections. This Court has consistently held that this right is a right secured by the Constitution; and since the Constitutional command is without restriction or limitation, the right, unlike those guaranteed by the fourteenth and fifteenth amendments, is secured against action of individuals as well as of States. We are now concerned with the question whether the right to choose at a primary election a candidate for election as a representative is embraced in the right to choose representatives secured by article 1, section 2 of the Constitution. We think that the authority of Congress given by section 4 includes the authority to regulate primary elections when, as in this case, they are a step in the exercise by the people of their choice of representatives in Congress.

It goes on to say:

Not only does section 4 of article 1 authorize Congress to regulate the manner of holding elections, but article 1, section 8, clause 18, Congress is given authority "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or any department or officer thereof."

This provision leaves to the Congress the choice of the means by which its constitutional powers are to be carried into execution. Hence the right to participate through the primary in a choice of Representatives in Congress, clearly secured by the Constitution, is within the words and purpose of section 19 in the same manner, and to the same extent as the right to vote at the general election.

I have quoted at length this decision because I think it is decisive in the question as to the constitutionality of legislation which seeks to abolish the poll tax.

The history of modern poll taxes indicates a studied purpose to curtail voting. See the statistics of votes cast for Representatives in Congress in any one of the seven poll-tax States. Compare them with the votes cast for Congressman in New York, or in Illinois or in Maryland. It is like 5,000, 6,000, or 7,000 votes as against 100,000 votes.

The poll tax not only falls heavily upon colored people, but also upon white people. Thousands of white farmers in poll-tax States are tenants or share croppers. Payment of poll taxes, or cumulative poll taxes, is arduous and burdensome. Many of these are disfranchised; they cannot pay the accumulated debt, the poll-tax debt, that hangs over them.

We know that the poll tax may be used, and is sometimes used, as a modern tool of corruption. I refer to the statement made in the House of Representatives on October 13, 1942 by my distinguished colleague from Tennessee, Representative JENNINGS. He said as follows:

In my State of Tennessee, I speak from knowledge gained by observation and exhaustive investigation of the abuse of the poll-tax requirement. The poll-tax requirement is a pestilential source of corruption. It is the ready and powerful weapon of the boss and the mother of corrupt political machines. A band of political corruptionists pool their funds and pay the poll taxes of thousands of voters who are needy and who many times in this way are given a taste of corrupt influence. These poll taxes many times are paid in block by the thousands. In this way the outcome of a county and even a congressional or State-wide election may be determined.

To my mind, suffrage is the greatest weapon of democracy. Insistence upon payment of the poll tax as a precedent to voting so blunts the edge of democracy as to make it ineffectual.

The boast of freedom is inane when people on one side of the railroad track can vote and those on the other side cannot. Payment of a poll tax has nothing to do with intelligence, residence, sanity, integrity, or age. Many States lay down conditions concerning intelligence, residence, sanity, integrity, and age.

Payment of the poll tax is not even a property-holding qualification. As I said, somebody else can pay one's poll tax.

I wish to draw attention to a portion of the text of the speech of President Truman recently delivered at the thirty-eight annual conference of the National Association for the Advancement of Colored People.

He said, among other things:

We cannot wait another decade or another generation to remedy these evils. There is much that State and local governments can do in providing positive safeguards for civil rights. But we cannot any longer await the growth of a will to action in the slowest State or the most backward community. Our National Government must show the way.

Electors and the Electoral College Must Go

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. GOSSETT. Mr. Speaker, the Government of the United States is by all odds the biggest and most important business in the world. When a young Nation, we could muddle through more easily and could make mistakes with less injury than we can today. We have now come of age. Our domestic and foreign responsibilities are staggering. Unless we make democracy work at home, we have little chance of teaching it abroad. There is an old facetious and vulgar saying that, "God looks after sailors, drunks, and the United States of America". God has been good to us indeed, but He may not always smile upon us. In the matter of reform, we are often like the Irishman who refused to repair his roof when the sun was shining. There is at least one major repair job that should be made before our structure of Government is seriously impaired—before some storm blows our house down. This job is to abolish electors and the electoral college and to substitute an honest and democratic method of electing Presidents.

This subject is by no means new. In fact, it is as old as the Government itself. Many resolutions to this effect have been introduced in the Congress from time to time. In the Seventy-second and Seventy-third Congresses, House committees unanimously reported such resolutions, of which Congressman LEA, of California, was the author. In 1934, the Senate twice voted on a proposal by Senator Norris to do away with electors. The first vote was 42 yeas to 24 nays, and the next vote was 52 yeas to 29 nays. In both cases the necessary two-thirds vote was lacking. Senator LODGE, of Massachusetts, introduced a resolution in 1941 providing for the election of presidents by direct popular vote. He has again introduced such a resolution in this Congress.

Under the existing system, as you know, no citizen has ever been permitted to vote directly for a President. In fact, under our present system, the votes of millions of our citizens do not count in the final tally. We elect the most important officer of our Government through a hocus-pocus method called the electoral college. We vote for electors, who in turn, through a dubious, confused, and technical procedure, vote for one of the candidates for President. The candidate who receives the greatest number of popular votes in a particular State gets all of the electoral votes of that particular State, each State having a number of electoral votes equal to the number of its Members in the Congress. If no candidate gets a majority of the electoral votes of the Nation, the issue is then thrown into the Congress to be decided among the high three candidates.

The several resolutions now pending before our Judiciary Committee would do simply this: Abolish the electors and the electoral college and provide that one vote directly for the candidate of his choice for President and Vice President. We retain the electoral vote, however. Under the proposed reform, New York would still have 47 electoral votes, Pennsylvania 35, Texas 23, and so forth. We would not tamper with or change the relative voting strength of the States or the States' absolute control of the franchise and of elections. These

matters would be left to local State sovereignty and responsibility. However, a candidate would get a proportion of the electoral vote of each State in the exact ratio with his popular vote. In other words, if the Republican candidate received 33⅓ percent of the popular vote in Texas, he would get 33⅓ percent of our 23 electoral votes. You would have a direct vote on the President in terms of electoral votes. The count becomes a matter of exact mathematics. The high man wins.

Let us examine a little history of the electoral college system and see how badly it has worked. The men who wrote the Constitution, while being good and great men as a rule, and men of wisdom, were by no means commoners. There were no farmers or small artisans among them. They were the aristocracy of the day. They distrusted, and some even despised, the popular will. How to select a President was perhaps the most confusing issue to be decided by them. A dozen different plans were proposed and several plans agreed upon at one time or another, then changed. In the Virginia plan, the Pinckney plan, and the New Jersey plan, provision was made for the election of a President by the national legislature. No one seriously suggested a direct vote for President. George Mason even said that such a thing would be "as unnatural as it would be to refer a trial of colors to a blind man." Some suggestions were made that the chief executive be elected by the governors of the States. Finally, it was Hamilton's compromise plan that was written into the finished document. Our eighteenth century elders envisioned electors as men of great wisdom and intelligence who would meet together and select the best fitted individuals in the country to be the President and the Vice President; the man receiving the greatest number of electoral votes was to be President, the one running second high to be Vice President. They did not anticipate the creation and growth of political parties, nor did they foresee any of the procedures to which resort was subsequently made.

Almost immediately the idea backfired. In the very first Presidential contest in 1800, Jefferson, the man intended for President, and Burr, the man intended for Vice President, turned up with a tie vote in the electoral college. The matter was then thrown into the House of Representatives for a decision. Bickering and bitterness resulted, and had Burr exerted himself in the premises, he doubtless would have been selected President. Almost immediately the Congress submitted to the States, and the States ratified, the twelfth amendment to the Constitution which provided that electors should vote for a President and a Vice President. This cured one fatal defect in the original scheme but it left all of the others.

Twelve times Presidents have been elected with an actual minority of the popular votes; in 1824, 1844, 1848, 1856, 1860, 1876, 1880, 1884, 1888, 1892, 1912, and 1916. Three Presidents have been seated who had a lesser vote than did their leading opponents, that is, Adams in 1842, Hayes in 1876, and Harrison in 1888. In 1824, Andrew Jackson led his nearest opponent, John Quincy Adams, by a substantial popular vote and by a substantial electoral vote. However, lacking a majority over his three opponents, the election was thrown into the House of Representatives. As a result of the manipulations of Henry Clay, John Quincy Adams, the minority choice, was selected over Andrew Jackson for President. In 1876, Mr. Tilden had a plurality of over 250,000 and a natural majority of more than 78,000 over Mr. Hayes. Again the selection was left up to Congress, and again through political manipulation, if not fraud, the popular will was defeated and the minority choice, Mr. Hayes, became President. In 1888, Grover Cleveland, with a plurality of more than 100,000 votes and with an actual majority over Mr. Harrison, was defeated. The entire career of Mr. Cleveland illustrates the foibles of the electoral college. In 1884, in the State of New York, Cleveland got 563,084 popular votes, while Blaine got 562,001; with barely more than 1,000 popular votes Mr. Cleveland got all of the electoral votes of the State of New York. A change of 600 votes in New York would have elected Blaine President. In 1892, in the State of Ohio, more than 1,000 voters cast their ballots for Mr. Cleveland's elector No. 1, while not voting for the remaining Cleveland electors as they intended. The result was the success of one Cleveland elector, the Republicans winning the rest. Had the 1,000 Democratic voters registered their choice correctly Mr. Cleveland, instead of Mr. Harrison, would have carried the State of Ohio. Every election illustrates the incongruity of the electoral college. In the last campaign Governor Dewey received 2,663,484 votes in 10 States from which he received 62 electoral votes. In New York, however, he received 2,997,586 votes, considerably more than in the aforesaid 10 States combined, yet for these he received no electoral votes. In effect, nearly 3,000,000 New York Republicans had their votes counted for Mr. Roosevelt. Out of 47,000,000 popular votes, President Roosevelt received 3,000,000 more than did Governor Dewey, yet received 432 electoral votes to the governor's 99. With 54 percent of the popular vote, Mr. Roosevelt received 81 percent of the electoral vote.

Back in the first Lincoln campaign, Douglas, while receiving 74 percent of Lincoln's popular vote, received only 6⅔ percent of his electoral vote. Douglas also received three times as many votes as did Bell, yet got only one-third as many electoral votes. In the 1912 campaign, Woodrow Wilson received only 42 percent of the popular vote of the Nation, yet received 82 percent of the electoral vote. Mr. Wilson received one electoral vote for each 14,500 popular votes, while for each electoral vote received Mr. Taft got 435,000 popular votes—31 times as many popular votes per electoral vote as in the case of Mr. Wilson. In 1924, Mr. John W. Davis received 6,000,000 popular votes for which no electoral votes were received.

Now let us make some specific charges against our present system of electing Presidents, all of which would be removed under our proposed amendment.

First. Existing provisions as to the choosing of electors, the manner in which their votes are cast and counted, and the deciding of elections in the Congress is an open invitation to fraud and chicanery and unless changed will some day result in disaster. While electors are morally bound to vote for certain nominees they are not legally so bound. In the very first contested election in the Nation's history, in 1796, three electors who were supposed to vote for Thomas Jefferson voted instead for John Adams. As a result, Adams received 71 electoral votes to 68 for Jefferson. Jefferson would have been elected except for this abuse of discretion by said three electors. There are other instances where electors have not followed the instructions of their electorate. In the last Presidential campaign serious difficulties arose in Louisiana, Mississippi, and Texas over the selection and duties of electors. If and when a Presidential election is hotly contested and is close between leading candidates we are likely to have serious upheavals and defections within and between our parties. Congress itself may even throw out legal votes or count illegal ones.

Some of the record on this point is of interest. In 1857 the Wisconsin electors were prevented by a violent snowstorm from meeting at the State capitol on the appointed day to cast their votes. Had these votes been decisive in the election, the majority in Congress might have counted or have thrown them out as suited political expediency. In 1837 six persons who lacked the constitutional qualifications for electors had their votes counted on the grounds that they were de facto officials. In 1818 the votes of Indiana, in 1821 the votes of Missouri, in 1837 the votes of Wisconsin were thrown out on technical grounds, involving the electoral college. In 1869 and again in 1881 Georgia's electors voted on the wrong day and their votes were not permitted to be counted. In 1873 only half of the electors of Texas ever reached the State capitol. In 1873 also the electoral vote of the State of Arkansas was rejected by the Congress and the State disfranchised because the return certificate bore the seal of the secretary of state instead of the great seal, an article which the State did not possess at that time.

Thus from the bottom to the top this archaic vehicle is fraught with peril. Under the proposed method all these controversies would be avoided, because the States would have no electors to choose, and Congress would have no election contests to decide.

Second. The electoral college confines and largely restricts national campaigns to a half dozen pivotal States. The national campaign committees and the political strategists of both parties sit down with a map of the Nation and decide where to do their work and where to spend their money. Their job is to elect Presidents. Under modern scientific techniques of sampling public opinion and with the history of past campaigns to go by, their problem is relatively simple. The seven largest States in the Union, with their electoral vote, are as

follows: New York 47, Pennsylvania 35, Illinois 28, Ohio 25, California 25, Texas 23, and Michigan 19. Texas, being in the solid South, counts for little. Neither party would spend any money or make any effort of consequence there, so Texas is checked off. The same is true of other States of the so-called solid South. These States are solid largely because of the electoral college. California sometimes becomes a battleground. However, by and large, it is safe to say that 75 percent of all the political efforts by both parties is concentrated in five big pivotal States, to wit, New York, Pennsylvania, Ohio, Illinois, and Michigan. Any party carrying all of these States has a cinch to elect a President. Any party carrying a majority of them has almost a cinch.

Third. The electoral college greatly restricts the field of Presidential possibilities. Certainly so important an office should have the whole Nation as a field from which to select potential Presidents. The electoral college, however, narrows the field of Presidential hopefuls almost exclusively to the aforesaid pivotal States. Since the Civil War, no President has come from the South. With the exception of Herbert Hoover, none has ever come from the West. In the last 50 years, we have had three Presidents from Ohio and three from New York. In fact, to be a governor or an ex-governor of the great State of New York, gives one the inside track in the Presidential derby. Why? The answer is obvious. The change of a comparatively few votes in the State of New York will ordinarily give to a candidate 47 electoral votes and usually the election. Only one time in the last 70 years has anyone been elected President without carrying the great State of New York. No one can dispute these facts and no one can defend the result on democratic principles.

Fourth. The electoral college permits and invites irresponsible control and domination by small organized minority groups, within the large pivotal States. It aggravates and accentuates the building up and solidification within these States of religious, economic, and racial blocs. Small, definable, minority groups, organized along religious or economic or racial lines, by voting together, can and do hold a balance of power within these pivotal States. As a result, the political strategists in both parties make special appeals to these various groups as such. These groups have become more and more politically conscious. They know their power. In many instances, they have no political alinements or philosophy as such, but are simply up for sale to the highest bidder. To encourage economic, racial, and religious group consciousness and group action, is a dangerously undemocratic practice, aside from its other evil consequences.

At the danger of stepping on some toes, let us get down to specific cases. Let us take a look at the political platforms of both major parties in the Presidential campaign of 1944 and see how they were built and designed to appeal to minority groups and blocs in the large pivotal States. First, both parties wrote the FEPC into their platforms. The platform makers of both parties will tell you frankly, off the record, of course, that this was done as a bid for the Negro vote. There are enough Negroes in New York City, when voting en bloc, to determine often how the entire electoral vote of the State of New York is cast; enough in Philadelphia if cast en bloc to probably determine the result of an election in the State of Pennsylvania; enough in Detroit to perhaps decide the vote of the State of Michigan; enough in Chicago to carry the State of Illinois. Hence, a dangerous and radical proposal in which neither party believes was written into both platforms as political bait for a minority-group vote within the large pivotal States.

A second minority group that was wooed by the platform makers of both parties was the radical wing of organized labor. In the large pivotal States above mentioned, the votes controlled by the Political Action Committee of the CIO was a tremendous potential political threat. The votes allegedly controlled by this organization in the large pivotal States, if cast en bloc, would be sufficient to swing the votes of such States and perhaps elect a President. Hence, both parties wrote platitudinous provisions into their platforms concerning industrial-management relations. Both parties pussy-footed the labor question because of organized labor's power through the electoral college.

Now, with all due deference to our many fine Jewish citizens, they constitute a third group to whom a specific overt appeal was made in the platforms of both major parties. There are 2,500,000 Jews in the city of New York alone. When they vote even substantially en bloc, it means the balance of power in our largest State. The candidate for whom they vote carries New York State and probably the presidency. What did the platform makers of 1944 do? Both of them wrote into their platforms specifically and without equivocation the so-called Palestine resolution, calling upon Great Britain to immediately open Palestine to unrestricted Jewish immigration. Regardless of the merits of the Zionists' cause in Palestine, this was political demagoguery and dangerous meddling with British foreign policy in the Holy land. As a result of platform endorsements by both major parties, we passed a resolution through the last Congress calling upon England to open up Palestine to unrestricted Jewish immigration. Within a few weeks after this resolution was passed, England asked us if we were ready and willing to back up our request with the Army and the Navy if she got into war, as would have been the case had she followed our request. We stuck our noses into British foreign policy for purely political reasons and to the detriment of all of our citizens, Jewish and otherwise.

Then there are numerous other minority pressure groups within these large pivotal States to whom continuous political overtures are made by the strategists of both parties. There are more than a million Italians in New York City. There are 2,000,000 Irish, many of whom are still politically conscious where Ireland is concerned. There are half a million Poles and other large racial groups. Recently there was a great Slavic rally in Madison Square Garden, at which Tito was praised. Perhaps our concern for the votes controlled by these peoples in the large pivotal States has occasioned this tenderness for a despicable dictator. Because of the electoral college, the American Labor Party in the State of New York has power and trading position out of all proportion to its numbers, to say nothing of its merit. It is entirely possible that because of this political strait-jacket, the electoral college system, that said American Labor Party will determine who will be the next President of the United States. Of late, we have become rightly alarmed over the activities of the Communist Party in the United States. Strange to say, this party has its greatest following and influence in the aforesaid large pivotal States. This party and its fellow-travelers are shrewd political manipulators. What grim irony it would be if they should swing the balance of power and be responsible for the election of a President of the United States. Again, mention might be made of the undue power and influence given to the big city political machines through the electoral college. Through, and because of the electoral college, a few big cities have elected and will probably continue to elect Presidents of the United States. It is largely within these big cities that the racial, religious, and economic blocs are found, and in which they operate.

Now, please understand, I have no objection to the Negro in Harlem voting, and to his vote being counted, but I do resent the fact that both parties will spend a hundred times as much money to get his vote, and that his vote is worth a hundred times as much in the scale of national politics as is the vote of a white man in Texas. I have no objection to a million folks who cannot speak English voting, or to their votes being counted, but I do resent the fact that because they happen to live in Chicago, or Detroit or New York, their vote is worth a hundred times as much as mine because I happen to live in Texas. Is it fair, is it honest, is it democratic, is it to the best interest of anyone, in fact, to place such a premium on a few thousand labor votes, or Italian votes, or Irish votes, or Negro votes, or Jewish votes, or Polish votes, or Communist votes, or big-city machine votes, simply because they happen to be located in two or three large, industrial pivotal States? Can anything but evil come from placing such temptation and such power in the hands of political parties and political bosses? They, of course, will never resist the temptation of making undue appeals to these minority groups whose votes mean the balance of power and the election of Presidents. Thus, both said groups and said politicians are corrupted and the Nation suffers.

Fifth. The electoral college deprives great masses of our best citizens of the educational benefits of national campaigns and lessens their concern in national affairs. Most of our citizens outside of the great pivotal States never see a Presidential candidate or a campaign speaker, and never heard a campaign speech except by radio. Neither

the platforms nor the speeches are designed to appeal to them. Furthermore, millions in these areas refrain from voting in general elections, knowing that to do so is futile, since their votes will have no bearing on results.

Sixth. The electoral college places unconscionable burdens and temptations upon a President elected by it. A President starts out heavily obligated to the organized minority pressure groups in the great pivotal States and to the political machines, often the big-city machines, that were most responsible for his election. Again, there are those who, with great logic, contend that by keeping the political machines and the minority pressure groups of the large pivotal States in line, a President can easily reelect himself, if not actually perpetuate himself, in office. Further, the political satellites and those who benefit from his tenure of office are constantly urging him to do this very thing. Certainly, a President is constantly under great temptation to devote undue attention to, and confer undue favors upon, these strategic political areas at the expense of, and to the detriment of, the rest of the country. I certainly would not accuse any President of playing cheap politics, but no President should be subjected to the harassment of groups which, under the electoral-college system, hold such disproportionate political influence and power.

Now, let me discuss briefly some of the main arguments against our proposed amendment. While a vast majority of our political scientists, legal scholars, and serious students of government agree that our present system is dangerously defective, they do not agree upon proposed remedies. Some favor electing Presidents by direct vote of the people. A direct vote method raises all of the issues between the large States and the small States, and such an amendment could never be ratified. Again, it would destroy State sovereignty in the matter of national elections. It would aggravate rather than alleviate sectional differences. It would reduce all States to the lowest common denominator. For example, all States would have to lower their voting age to 18 to be on a parity with Georgia. Again, in a sectional controversy, New York might vote their dogs, cats, and dead grandmothers, and Texas would retaliate by doing the same thing. Each State would be accusing the other of fraud in piling up big votes, and each would probably be correct. Under our proposal, it is of no concern to Texas how many vote in New York, and no concern to New York how many vote in Texas. New York would still have 47 electoral votes, divided, however, in the exact ratio in which they were cast. Texas would still have 23 electoral votes, divided, however, in the exact ratio in which they were cast. Another argument against doing away with the electoral college is that it would destroy the two-party system. Our reply is that it would have the reverse effect, and that our major parties under the proposed amendment would succeed or fail on real merit and not upon their success in juggling or manipulating the archaic, undemocratic vehicle known as the electoral-college system. Again, some submit statistics trying to show that the proposed amendment would favor one or the other of the major parties. We submit that no truthful statistics on such a score can possibly be offered. For example, under our proposed amendment, had it been in effect during the last campaign, Governor Dewey might possibly have been passed over by the Republican Party for some other nominee. Furthermore, the Republican ticket doubtless would have polled at least a million more popular votes in the so-called solid South. Nothing could be more nonpartisan than the proposed amendment. It would be absolutely fair to all political parties. It would give our two great major parties new life and vigor. It would free them of the leeches and parasites that now cling to the backs of each. It would make them in truth and fact national parties, not sectional parties, appealing to prejudice, passion, and bias. Each party would then write its platform and make its appeal on national rather than sectional bases.

To summarize and generalize the affirmative arguments for the proposed amendment: We are convinced that the safety and welfare of this Nation demands the abolition of the electoral-college system of electing Presidents. This system now denies a majority of our people any effective voice in the election of Presidents. The proposed amendment would remove the overpowering incentive in the present system to coddle and corrupt organized minority groups in the pivotal States, since under the proposed amendment, there would be no pivotal States. The proposed change would remove the incentive to buy those who may be for sale to the highest bidder, because their votes would not mean a balance of power and the election of a President. Under the proposed change, there would be little or no compulsion or incentive for fraud and chicanery in national campaigns. Such campaigns would no longer be sectional. The general welfare would then become a party's paramount concern. Principles would then inevitably rise above politics, and statesmanship would then count for more than mere political expediency.

Let us act before it is too late.

Admission of Displaced Persons to the United States

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert L. Norton from the Boston Post of July 18, 1947:

ROBERT L. NORTON COMMENTS ON THINGS LEFT UNDONE BY CONGRESS

WASHINGTON, July 17.—There is no sound reason why Congress should not respond to the final plea of Secretary Marshall that a substantial number of Europe's 850,000 displaced persons be admitted to this country.

SEES COMPROMISE

No revision of the immigration laws is required. The opposition to the Stratton bill, calling for the admission of 400,000 over a period of 4 years could well be compromised, as suggested, by letting in 100,000 of these unfortunates during the next year.

Then we could see how it would work out, and the fears and narrow intolerance exhibited by those who have blocked consideration of the measure might be allayed or disproved altogether.

The responsibility for putting this legislation on the agenda during the closing days of the session is up to the Republicans. Their leadership has played politics from the beginning with this measure and deliberately stalled the bill in committee, preventing it from coming to the floor of both Houses for free discussion and decision.

OTHER OBJECTORS

But the blame is not altogether on the Republicans, since there has been narrow and insular objections from some of the southern Democrats, as well as from the "Bible belt" in the Middle West and from some leaders of veterans' organizations.

The case for the admission of these suffering people has been pretty thoroughly presented in all of its aspects, both human and practical.

From the human viewpoint there has been a shocking indifference to the pitiful plight of these people. They hunger not only for food and drink, but for justice and mercy. They look to the United States as an island of light in a sea of darkness.

They cannot return to their native land for reasons which are purely obvious. The greatness of America has come from just such groups and the arguments of professional Americans, interested as they allege in preserving us from alien influences, is the purest buncombe. They are all descendants of immigrants from which the greatness of America has come.

Side Lights on Unconditional Surrender

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am enclosing an exchange of letters between 14 Congressmen and Secretary of State Cordell Hull in the spring of 1944 on unconditional surrender and war aims generally.

Also included is an editorial entitled "Return to Reason," from the Brooklyn Tablet for July 19, 1947.

The whole story of the ghastly stupidity of the insistence on unconditional surrender is yet to be told. But bit by bit the whole truth about how unconditional surrender prolonged the war and played into the hands of the Communists is coming to light.

The letters and the editorial follow:

HOUSE OF REPRESENTATIVES,
March 21, 1944.

HON. CORDELL HULL,
Secretary of State.

MY DEAR MR. SECRETARY: As direct representatives of several million Americans in the Congress of the United States, we have

a solemn responsibility to these people. Especially is this true during a war in which both the lives and the savings of many of them will be destroyed by the war activities of their Government.

Many of these patriotic Americans are asking us pertinent questions about this conflict which we can answer adequately only if the executive branch will cooperate and give us the necessary factual information.

Specifically, among others, we are asked this question: "What are we fighting for?"

It is not sufficient to inform these anxious loved ones that, as they already know, we are fighting Japan because of the Pearl Harbor attack, and Germany because the responsible authorities determined the Nazi-military program a threat to our Nation. They know that our entrance into this conflict was not the time to determine the peace terms that we would eventually offer our defeated enemies.

We have been at war, however, well over 2 years. The war effort and the program for the defeat of Germany seem sufficiently advanced to determine terms for a vanquished Germany. If the declaration labelled "Unconditional Surrender" is still the official objective, some elaboration of that phrase is in order. Does it mean extermination of the German people and utter destruction of their country? If not, what does it mean?

Shouldn't the American people, who carry the burdens of this war, be advised of the conditions which the German Nation must accept to secure a cessation of hostilities?

It has been suggested that the German people, learning those terms, might possibly overthrow their war leaders.

Do not the thousands of American boys who are scheduled to die in invasions have the right to know the aims of the peace for which their lives are to be sacrificed?

We want no secret or vital military information, nor details on special problems on which the Government of the United States cannot appropriately or realistically commit itself at this time. But we do request now the answer to the question that, spoken or unspoken, is in the mind of every American today: What are we fighting for? What conditions must be brought about to secure a cessation of bloodshed and tragedy in Europe?

Our soldiers, their fathers, mothers, wives, sweethearts, and children want to know now. They are asking us these questions. What answer shall we give them?

Respectfully yours,

Wm. P. Elmer, Missouri; Wat Arnold, Missouri; Max Schwabe, Missouri; Wm. C. Cole, Missouri; Howard Buffett, Nebraska; Errett P. Scrivner, Kansas; Frank A. Barrett, Wyoming; Charles B. Hoeven, Iowa; C. A. Johnson, Illinois; Hubert S. Ellis, West Virginia; Walter E. Brehm, Ohio; Henderson H. Carson, Ohio; Edward O. McCowen, Ohio; Edward Rowe, Ohio.

DEPARTMENT OF STATE,
Washington, March 29, 1944.

Hon. HOWARD BUFFETT,
House of Representatives.

MY DEAR MR. BUFFETT: I have received your letter of March 22, 1944, enclosing a communication of March 21 signed by you and several other Members of the House of Representatives. In this communication you inquire, "What are we fighting for?" and regarding unconditional surrender.

The first question was discussed fully and answered fully in an address which I delivered some time ago entitled "The War and Human Freedom." I enclose a copy of that address, in the belief that its broad treatment will be more useful to you and your constituents than a brief reply.

On the subject of unconditional surrender, the President in a message to Congress, dated August 25, 1943, said, in part:

"Except for the responsible Fascist leaders, the people of the Axis need not fear unconditional surrender to the United Nations. I have said that we shall bring food for the starving and medicine for the sick in the areas liberated by the United Nations. We have done so, under lend-lease, in north Africa. We are doing so in Sicily. We shall continue to do so in other areas, as they are liberated, to prevent economic break-down and to aid the liberated peoples to produce and to help themselves. We shall provide these necessary civilian supplies in support of our military operations and as a matter of simple humanity. The people of Axis-controlled areas may be assured that when they agree to unconditional surrender they will not be trading Axis despotism for ruin under the United Nations."

Sincerely yours,

CORDELL HULL.

[From the Tablet of July 19, 1947]

RETURN TO REASON

The Government has decided to scrap what George Sokolsky in Wednesday's New York Sun called "the barbarous Morgenthau plan" and to endeavor to make Germany self-sustaining. Here is another example that hatred does not pay. The policy of unconditional surrender, followed by destruction of German industry and the piling of millions of people on land which could not support them, not only cost thousands of American lives and millions of dollars but has likewise prevented the establishment of peace and an opportunity for western Europe to get on its feet. And now, after spending lives and untold wealth in destroying Germany, we have decided to spend additional billions in rebuilding Germany because Germany, France, Italy, and other countries cannot prosper—and we cannot continue to support millions of Germans on the dole.

Unconditional surrender was just that, a surrender to hate and liquidation.

Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brooklyn Eagle of July 20, 1947:

SENATE'S UPHOLDING TAX VETO PUTS INTERESTS OF NATION FIRST

Since President Truman's veto of the bill to reduce income tax payments, there has been an increased justification for the rejection of a measure which would serve the interests of individual citizens at the expense of the Nation as a whole. The President has accordingly acted with wisdom and courage in returning this bill to Congress a second time without his signature. The Senate has shown sound judgment in sustaining the veto.

There are indications that the United States is going to need the money which would be lost to the Government if the tax-reduction bill were to become effective. Representative CHARLES A. EATON, chairman of the House Foreign Affairs Committee, warned yesterday that the "United States is within sight of a shooting war this minute in Greece," and that this country must either hold the fort in Greece or permit Russia to take over.

This is an unpleasant estimate of the situation in Europe at the moment and it may be slightly overdrawn. It is hardly conceivable that Russia, whose economic plight is as desperate as that of any nation, would permit her aggressive diplomacy to get out of hand to the extent of a shooting war. But the situation in Greece is, nevertheless, as tense as it is represented by Mr. EATON.

It must be met by the United States, and money is essential to this purpose. President Truman has reiterated his familiar objections to tax reduction at this time, emphasizing particularly the necessity of reducing the great public debt by substantial amounts during a period of national prosperity. The soundness of this policy cannot be questioned.

What is equally important is provision for a future which is uncertain, if not perilous. Europe is descending swiftly into economic chaos. Gradually, under the stimulus of Moscow, there is developing a desperation of spirit which, if not controlled, will serve the purposes of the Soviet Union. The United States has undertaken the revitalizing of a sick, if not dying, continent. Success is vital to Europe and to our own place in the world of tomorrow. Since the Marshall program was initiated there has arisen logically the question of the ability of the United States to provide economic sustenance for Europe without impairment of our own economic structure. The costs will be high and they are likely to run beyond even the most liberal estimates. But they can be met safely if there is no cut in tax revenues and if there is no recession.

President Truman has wisely determined that the resources of the National Government shall be conserved for purposes more important than the financial benefit of corporations and individual citizens.

The Ahoskie (N. C.) Automobile Raffle and Work Among the Navajo Indians

EXTENSION OF REMARKS
OF
HON. CARL A. HATCH
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Monday, July 21 (legislative day of Wednesday, July 16), 1947

Mr. HATCH. Mr. President, in this morning's mail I received a letter from North Carolina, which I feel I should acknowledge because it contains a delicate thrust, which I appreciate, and at which I take no offense. The letter comes to me from Mr. A. B. Stoney, of the North Carolina General Assembly, and comments on my statements made the other day on the floor of the Senate concerning the Negro man in Ahoskie, N. C., who was denied an automobile. The writer does not object to my remarks, but he rather takes me to task and calls my attention to the fact that there are some 55,000 Navajo Indians in my own State to whom I might well direct my attention.

Mr. President, I am in complete accord with what the gentleman says about the Navajo Indians. I have tried to direct my attention and efforts in their behalf, and shall continue to do so. But enclosed with the letter is a very interesting article written by the Right Reverend James M. Stoney, bishop of the missionary district of New Mexico and southwest Texas, dealing with the Navajo

problem. I ask unanimous consent that the letter and the article may be printed in the Appendix of the RECORD.

There being no objection, the letter and the article were ordered to be printed in the RECORD, as follows:

MORGANTON, N. C., *July 19, 1947.*

Hon. CARL A. HATCH,
United States Senate,
Washington, D. C.

DEAR SENATOR HATCH: Press reports indicate that you have expressed a justified indignation at the recent discrimination against a Negro of Ahoskie, N. C.

As soon as the facts become known, amends were quickly made by action of North Carolina citizens. It is reported that the matter has been adjusted to the complete satisfaction of the Negro boy and all others concerned.

We, in North Carolina, appreciate your interest in the welfare of one of our citizens, and welcome any expression of the same, be it on the floor of the Senate of the United States or elsewhere.

In view of your recent statements and activities concerning this single occurrence in North Carolina, I am sure that you will not resent the action of a public servant of North Carolina in calling to your attention the pitiful plight of 55,000 citizens of your State. I refer to the Navajo Indians.

Will you be so kind as to read the attached article from the current issue of the Southern Churchman by my brother, the Right Reverend James M. Stoney, Episcopal bishop of New Mexico? And will you advise him or me as to what, if anything, you are doing to correct this infamous situation?

No man as influential as you are in the councils of your State and Nation can escape the moral responsibility of a neglect which has isolated the Navajos in poverty, ignorance and disease in direct violation of the terms of a solemn treaty between them and the United States Government.

Many thousands of Indians live in North Carolina, as do hundreds of thousands of Negroes. We will welcome any inquiry you care to make concerning our treatment of these minority groups from an educational, political, religious or humanitarian standpoint. Senators CLYDE R. HOEY and WILLIAM B. UMSTEAD, of North Carolina, will be glad, I am sure, to furnish you with any information you may desire.

Here in North Carolina, we are facing and solving the problems of our citizens of minority groups in a manner that may well serve as a pattern for the other States of the Nation, including the great State of New Mexico which you have the high honor to represent in the United States Senate.

Respectfully yours,

A. B. STONEY,
North Carolina General Assembly.

[From the Southern Churchman]

A PAGE FROM A MISSIONARY BISHOP'S DIARY

(By Rt. Rev. James M. Stoney, bishop of the missionary district of New Mexico and southwest Texas)

FRIDAY, April 25.—Mrs. Stoney and I left Albuquerque at 8 a. m. for the Navajo Reservation. After 160 miles along the more-or-less paved highway, we turned off across the plains to St. Luke's-in-the-Desert, our Navajo outposts. Our first stop was at Carsons Post, where the missionary, Rev. George A. Stracke, lives with his wife and 13-year-old daughter, Ann. The Strackes make a wonderful missionary team. The three work beautifully together. Their living quarters consist of three small rooms attached to the community house. They have a dining room-kitchen, a living room, and a bedroom. Ann sleeps on a couch in the living room, and a bathroom really is not needed where the water supply is limited. Neither do they have electricity or gas. These are savings that make it possible for the Strackes to live on his modest salary.

At Carsons we were joined by the Venerable and Mrs. Robert Y. Davis, who had driven over from the San Juan Indian Mission. Mr. Davis is archdeacon of the Indian work in New Mexico, and Mrs. Davis works right with him.

We had to abandon our cars at Carsons, as the sand from there on was too heavy even for our desert-trained Chevvy. We piled into a Navajo's wagon for the final lap of the journey, but even that did not do the trick. On the last hill the sand was so deep that the horses could not get a foothold, and we had to pile out again, to lighten the load.

When we got to St. Luke's the congregation was already gathering. The children had come over from the nearby Huerfano School, a Government day school of 45 pupils—most of whom stay there all the time. While waiting for service, Ann Stracke and the children sang some of the simpler church hymns, and they sang as well as any other group of normal youngsters.

At 3 o'clock the service started. The mission was crowded to the doors. First, Archdeacon Davis baptized five children and two adults. This made 57 persons baptized since last June, when the Strackes came. After that, morning prayer—yes, morning prayer at 3 in the afternoon, for that is as far as the Navajos at St. Luke's have gotten. Few of them know much English and fewer still can read. The teaching is very slow as it has to be lined out, a little at a time. The difficult words of the prayer book are just sounds to most of them, but they have learned the general confession, the Lord's Prayer, the Venite, the Jubilate, the Apostles' Creed, and the General Thanksgiving. After morning prayer came my sermon. Preaching to the Navajos is the worst thing I do. My Navajo vocabulary consists of just six words, and I am not sure of them. Many of the Navajos have as sketchy a knowledge of English. Once I preached through an interpreter, and that was worse. My wife hasn't stopped laughing about that sermon yet.

When time came for confirmation, 15 Navajos were presented. There had been but one confirmation service at St. Luke's before. In the twenty-odd years of its existence, the occasional candidates went over to the San Juan Mission. There were seven girls, three boys, three women, and two men. This was a real day of triumph for St. Luke's and for Mr. Stracke. After the service we all adjourned to the community house for coffee and cookies. Later we drove over to Farmington where we spent the night.

Saturday, April 26: Mrs. Stoney, Archdeacon Davis, and I went down to the Fruitland project, where the Government has settled several hundred Navajo families on small farms of about 10 acres each—and good farmers many of them are making. The Fruitland School has about a hundred students. Many of the children were around, as they live too far to get home even on week ends. They all seem well fed and happy. Three classrooms have been set aside for dormitories. The boys have two, as the older ones and the younger ones have to be separated. The girls, however, are all crowded into one classroom. They have double-decker beds, so close together that it is all but impossible to walk between them. About 40 girls live in this one room. The beds are not very attractive, for the Government seems short on sheets and is not able to supply enough for them all. However, the children do not complain, as it is better than what they have in their hogans.

The teaching is painfully slow, as few of the children know English when they come and have to learn that before they can go much further. In this school of over a hundred students, only two are as far as the fourth grade. Attendance is purely voluntary, as school facilities are insufficient. The Federal Government has provided schools for about 25 percent of the children on the reservation. If attendance were compulsory a great many more schools would be required. We were much impressed with some of the drawings and crayon paintings of the older pupils. They do not fall behind any group in their abilities. We sang with some of them, too, when Mrs. Stoney got to a piano, and they did as well as the youngsters at St. Luke's-in-the-Desert.

There is room for only a few of the Navajos in the schools, though adequate schooling and medical service formed a part of the treaty with the Navajos when they were placed on the reservation. This treaty has been carried out only fractionally, at best. And now an economy-minded Congress is threatened further to restrict these services. In this rich and powerful Nation of ours, the Government is preserving an oasis of ignorance, disease, and poverty among our first citizens—and a fine people they are.

Sunday, April 27: The first thing this morning was a visit through the hospital at the San Juan Mission. Archdeacon Davis had just returned from a trip down the river, and had come back with 30 Navajos packed into a pick-up truck. How he did it, I do not know. It was dangerous, of course, as the roads are very rough. But until some one gives us a school bus, there is nothing else we can do. We have to use tools that we have. As usual, things were clean, bright, and cheerful in the hospital. Besides the isolation room, there are three wards—one for maternity cases, one for men, and one for women. The children go into whatever ward their ages and sex require. The missionary doctor, Michael Moran, is a brilliant and sympathetic man. For a negligible pittance, he gives part-time service, being paid for about a tenth of what he does. In addition, there is Jane Turnbull, R. N., who has dedicated her life to the Navajos. Archdeacon Davis is superintendent of it all, and his deep, warm spirituality keeps the entire atmosphere conscious of the fact that this work is done in the name of the Lord. While I was there, a woman was brought in, badly injured when her horse fell on her. The caseload at the hospital has been twice what the budget allows, but what can one do? Two patients are refused for each one that is received, and still we can't keep within the budget. There has been much sickness on the reservation this winter, and one does not say, "You will just have to go home and die in your hogan," unless it is necessary.

Soon it was time for the service. The beautiful chapel, built to seat about 30, had over twice that number crowded in. Almost as many more were in the hall outside, in the women's ward across the hall and on the front porch. There were 11 confirmed this time, maybe in spite of my terrible effort at a sermon. One lad, recently out of the Army, took this, his first chance to renew the solemn promise and vow that he had made at his baptism, before he was drafted. The Navajos are not allowed to vote, but over 3,000 of them rendered valuable war service, in the armed forces and otherwise. This trip to the reservation has been a wonderful experience, with eager faces and hearts convinced that the church cares for them, even if they are forgotten by many others.

Monday, April 28. Mrs. Stoney and I returned to Albuquerque today, and my heart is filled with both rejoicing and sadness. I am amazed that our tiny staff of two clergymen, one part-time physician and one registered nurse can accomplish so much. I am truly grateful that it has fallen to my lot to help develop this work. I rejoice at the results accomplished with so little to go on.

But I am distressed, too. This powerful church of ours can find many millions for beautiful churches and gorgeous cathedrals, but it is hard to get a few extra thousands so needed in the Navajo mission. The Federal Government can get hundreds of mil-

lions for the depressed people of other countries, and this is right. But is it not also right that they should get a few extra millions for the sake of these people who have always fared badly at the hands of the white man; who have been deprived of their lands and put on a reservation; who for 80 years, now, have been kept as wards of the Government, with little chance to improve their lot; who have been left in poverty, ignorance and disease, though they were promised many fine things when they surrendered to the Federal forces in the sixties? The Navajos have increased from about 8,000 to 55,000 in these 80 years. They are amazing everyone with their rapid growth. Until they are prepared for citizenship and absorbed into the general population, isn't it penny-pinching to handicap the Indian service even more, by making their task harder, by forcing them to make bricks with even less straw?

I am thankful that we have about a hundred Navajo children taking both week-day and Sunday religious instruction, but what are they among so many?

The Roosevelt Shrine in Georgia

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, July 21, 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Roosevelt Shrine in Georgia," published in the Atlanta Constitution of June 25, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ROOSEVELT SHRINE IN GEORGIA

Today there come men and women from many parts of the world, the Nation, and our State, to gather at Warm Springs, close by the little white clapboard house where Franklin D. Roosevelt knew and loved life, and where the final messenger of death found him.

The small, modest cottage came to be called the little White House, and Georgia was his second State. It is fitting that Georgia should take over the house and the grounds as a national shrine to the man whom destiny raised up to world leadership in the time of the world's greatest crisis.

The people loved him and trusted him.

The fact has plagued, and still plagues, a great many persons who feel that it should not be so.

But it was so. And it is so. And it will continue to be so.

His name fits well with those of Wilson, of Lincoln, of Cleveland, of Jackson, Jefferson, and of any other man who has served his country greatly and with success.

The people know some things in their hearts, and that is where they knew Roosevelt.

The measure of his service is that our country alone survived the great revolutions and profound social and military upheavals which brought great change in government and destruction and misery to the rest of the world.

So the little house to which he liked to come to rest and relax, drawing comfort and strength from Georgia pine and Georgia air as he did in the days when as a young governor he came seeking health, will become a shrine. To it will come, through the years ahead, millions of people, seeing where he lived; the rooms, the old chair in which he sat when the final messenger came for him on that fateful April 12, 1945.

Georgia, in great pride and in grateful memory, accepts this trust and welcomes today those who come to do honor to the man who led us to victory through world depression and world war, and left our institutions of freedom and government stronger and more dearly valued than before.

Need for "Uncommon" Men

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. ROBERTSON. Mr. Speaker, we read with a great deal of interest the national reaction to the appointments made by the President for the new labor board. Generally speaking, the appointment of Robert N. Denham seems to have won universal approval. He has demonstrated the ability to approach problems in a nonpolitical and judicious manner.

The appointment of Senator Murdock is challenged by the Sunday Star of this city. Senator Murdock served four terms in the House and one in the Senate, and was defeated in the last election. Throughout his career he was constantly inclined to approve and support the New Deal without general regard for the well-being of the country.

The third appointee, Mr. J. Copeland Gray, has nothing in his record which would indicate that his approach to the controversial labor problems will be either nonpolitical or judicious. Too little is known about him.

I happen to be one who believes the Wagner Labor Act, and the National Labor Relations Board created under it, might have worked had the late President Roosevelt attempted seriously to find men of judicious approach. However, appointments were made of individuals who had a prolabor, antibusiness record or were members of the private political house of the President; the primary reason for such appointments was always the coming election. We have seen how this policy worked out. The Taft-Hartley bill is the result.

While the Taft-Hartley bill has been referred to as a slave labor bill and has been subjected to the most slanderous invective in the English language, the attacks on this legislation have been weak and have appealed to emotion and prejudice and not to reason. The authors of this bill have time and time again ably countered the abuse hurled at them and their bill, and have shown that it is not a slave labor bill, nor is it guilty of the many defects claimed principally by labor bosses. Time will test this law, and I am confident that as time passes we will hear less and less of the slave labor and other epithets. The important question before the Nation today is the character and ability of the appointees who will administer the law.

For the last several years we have been hearing a great deal in high political office, both in the States and nationally, about the great triumph of the common man. I doubt very much if any individual or group of people have been so eulogized as this abstract being, the common man. This eulogy has been deceitful and dishonest. It has but one purpose—votes. Anyone with intelligence, including an abstract common man, knows that the world is made up of common men. The great problem we have is to find some uncommon men. It is very possible that the President in his appointments has failed to see through this political fog of the common man, as was the case in his veto of the tax and labor bills. The President's prolific arguments in his message vetoing the Taft-Hartley bill could not possibly stand up against reasonable argument. His argument was purely and simply political buncombe. The same is generally true of the President's statements in vetoing the tax bill.

We are beginning to hear and read many loud-mouthed commentators and poison-penned columnists that the Eightieth Congress will adjourn or recess having taken care of their own selfish interests and the wealthy class of society, with utter disregard of the common man. This will be the battle cry of the New Deal crowd. Yet today, the condition exists, which developed under the New Deal, where there is a greater concentration of wealth into fewer hands than has ever been the case in our Nation's history.

The President should think carefully as he moves forward in making appointments to the new Labor Board. We want judicious men who will approach the problems with a sound interpretation of the law, not men who think in terms of votes and elections. Yes, Mr. Speaker, most of all, the President needs uncommon men. The country needs them and the world needs them.

Under leave to extend my remarks I include herewith an editorial from yesterday's Sunday Star, published in Washington, D. C.

NEW LABOR SET-UP

It should be obvious to anyone that the new Labor Board and its general counsel—the administrative instruments for applying the Taft-Hartley Act—ought to be composed of men beyond suspicion of any anti-labor bias. Ideally, they would be men who would act exclusively in the public interest, without personal inclinations toward either the labor or industry viewpoint. But since this ideal is hardly attainable, it would seem better, especially in the early stages of this law's operation, to place its administration in the hands of men whose primary qualifications are that they believe in the law, that they think it is a workable law, and that they are resolved to enforce it to the best of their ability. The question is whether the appointees named by the President meet these standards.

The reaction to the appointment of Robert N. Denham to the important post of general counsel has been quite favorable. There are those who would have preferred a man who is better known, and there is little in Mr. Denham's record to indicate any extensive administrative experience. In other respects, however, it is a very satisfactory appointment. He has had broad experience as a trial examiner under the old Labor Board, he has shown himself to be a man of integrity and independence, and he has said explicitly that he believes in the new

law and its workability. These are important qualifications, and they should equip him to discharge his new responsibilities in satisfactory fashion.

There has been a less favorable reaction to the two men named as members of the new board.

Abe Murdock has served four terms in the House and one in the Senate, having been beaten in last year's election. His record is that of a consistent New Dealer, who has been an honest and ardent prolabor man. As a member of the House in 1940 he helped write a minority committee report vigorously opposing the proposed Smith amendments to the Wagner Act. Many of those amendments, in substance if not in form, have been adopted in the new labor law. Hence, there arises the question whether Mr. Murdock is still opposed to them, or, if he has changed his views, when did he do so, and why? This is important, because if he does not believe without reservation in the new law, then he should not be a member of the Board charged with the duty of administering it.

The other Board appointee is J. Copeland Gray, of Buffalo. Mr. Gray has served in some public capacities and also as an industrial-relations counselor. His name has been put forward as an industry representative on the Board, but there are those on the industry side of the fence who look with anything but enthusiasm on his selection. To most people, however, he is almost unknown, and it would be premature to attempt to pass judgment on his qualifications at this time.

What obviously is needed is a thorough hearing by the Senate on these two nominations. The new Labor Board and its personnel are going to play a vital part in determining whether the Taft-Hartley law becomes a success or a failure. This being so, the Senate ought not to confirm the nominations of Mr. Murdock and Mr. Gray until it is fully satisfied as to their qualifications.

Minimum Wage Increase

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brooklyn Eagle of July 20, 1947:

WHY MINIMUM WAGE BOOST IS VITAL

A short speech by the general manager of a mill that operates in Whitehall, Ga., was reported before the Hartley House Labor Committee recently. From the content of it we could write a good script for a movie short or novel. The thing would be called Why Some Americans Act Like Russians.

Here is the essence of the warning thrown at the workers in the mill:

"The company will never pay you spinners $37 for 40 hours again. If you people don't want to go back to work you won't hurt me or the owner of this mill.

"I can tell you one thing—if you don't go back to work all of you poor people can get out of Whitehall. When you get hungry don't ask me for any food, for I won't give any one of you a crumb of bread."

The report did not state whether the spokesman held a long whip in his hand like Simon Legree. He didn't need one, as a matter of fact. The control that the company held over the lives of the workers was more effective. They were promised work at starvation wages or starvation without work.

At the present time there is a bill before Congress to increase the minimum wage from 40 cents an hour to 65 or 75 cents an hour. It is aimed at conditions such as this instance reveals. There are sections of the country where exploitation of human beings for personal profit is still prevalent. Wide areas in the South could be cited. Federal legislation on the matter is imperative. Congress found the votes to override a Presidential veto on the Taft-Hartley bill. It should rise to the occasion and override those who are strenuously lobbying against a necessary, but still inadequate, floor to the wage-hour law.

We are less surprised to see American workers begin to have doubts about the free-enterprise system when things like this Georgia affair are allowed to go on. Some American workers begin to think, talk, and act like Russians because they have the misfortune to work for bosses who show them the example of how Russian commissars treat the worker.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday July 21, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article written by me entitled "The Marshall Plan." This appeared in the New Hampshire Morning Union and in the Manchester Evening Leader, Thursday, July 17, 1947. Both papers are published in Manchester, N. H. The article follows:

THE MARSHALL PLAN—MARSHALL AT HARVARD

On June 5, Gen. George Marshall delivered at Harvard University an address which has already taken its place as one of the foremost pronouncements ever made by any Secretary of State. As a result of this speech 16 nations of western Europe are currently meeting in Paris in an effort to create a plan for the economic rehabilitation of that continent. In his remarks at Harvard, Marshall said that the United States should assist in the economic recovery of the world. "Such assistance," he affirmed, "I am convinced must not be on a piecemeal basis as various crises develop. Any assistance that this Government may render in the future should provide a cure rather than a mere palliative."

"It is already," he continued, "evident that, before the United States Government can proceed much further in its efforts to alleviate the situation and help start the European world on its way to recovery, there must be some agreement among the countries of Europe as to the requirements of the situation and the part those countries themselves will take in order to give proper effect to whatever action might be undertaken by this Government. * * * The initiative, I think, must come from Europe. The role of this country should consist of friendly aid in the drafting of a European program and of later support of such a program so far as it may be practical for us to do so. The program should be a joint one, agreed to by a number, if not all European nations."

I have included in this article the above pertinent quotations from the statement made by General Marshall in Cambridge because they form the basis of the economic discussions which are now proceeding in the French Capital.

THE THREE-POWER CONFERENCE

On June 27 a three-power conference including Great Britain, France, and Russia convened in Paris. The Marshall plan was the subject of discussion. On July 2 Russia decided not to participate in this plan. Foreign Minister Molotov in a statement issued on that date said, "The Soviet Government considering that the Anglo-French plan to set up a special organization for the coordination of the economies of European states would lead to interference in the internal affairs of European countries, particularly those which have the greatest need for outside aid, and believing that this can only complicate relations between the countries of Europe and hamper their cooperation, rejects this plan as being altogether unsatisfactory and incapable of yielding any positive result. * * * It would lead to no good results."

It is slightly amusing to have concern about interference in the internal affairs of European countries come from Russia, since beginning in 1939 she has annexed territory exceeding 273,000 square miles, with a population of over 24,000,000, and has extended communism by puppet governments to at least 12 countries, with a population in excess of 165,000,000. That her control is most effective is shown by the manner in which Moscow has recently prevented her satellites from particiating in the present Paris Conference.

The Soviet Union in rejecting participation in the Marshall plan and by preventing her satellites from entering into negotiations shows that Russia wants a divided, disorganized, and a prostrate Europe. The objectives of the Kremlin have been made crystal clear. Boldly, bluntly, and baldly the Soviet Union has informed the world by statements and particularly by actions that she desires a distressed and divided Europe. Obviously, this is for the purpose of spreading communism and of continuing the program of relentless Soviet expansion, with the ultimate purpose of dominating the world.

MEANING OF MARSHALL PLAN

The Marshall plan, as outlined in the Secretary's speech at Harvard, calls for a survey of the economic resources and economic needs of Europe. It calls for the development of a program of self-help. After the survey has been made and the plan has been formulated it will be presented to the United States. We will then be called upon to assist in the economic rehabilitation of Europe as a whole. The nations of western Europe can help themselves by an exchange of their available resources. Thus, the Marshall plan will cost this country less than if we were to proceed to assist each country individually.

In my Washington report of last month I stated in my suggested sixth plank for a realistic foreign policy that economic assistance to rehabilitate the countries of Europe must be extended by the United States. I further emphasized that in connection with giving aid we should follow an important principle, namely, the principle of helping nations who receive assistance to help themselves.

THE MOLOTOV PLAN

Russia in disagreement with the Marshall suggestions has begun to develop a program of economic help to other countries known as the Molotov plan. She is endeavoring to have the European nations who are in need, particularly those in the east, turn to Moscow. The Soviet Union and her satellites have been making bilateral economic treaties. Last week Russia and Czechoslovakia concluded a 5-year treaty for the purpose of exchanging goods. It is reported that under this treaty Czechoslovakia will receive wheat and fodder from Russia and in return will supply the Soviet Union with manufactured goods. Russia and her Balkan satellites have reached a plan for the integration of the

Balkan railways into the system of the Soviet Union. The Russian plan calls for cooperation among the nations where there are communistic systems.

Thus the split between the east and west is widening. Russia asked for it and is insisting upon it. I believe the course of the United States is clear. We must stand for the economic rehabilitation of western Europe as a means of guaranteeing our security.

THE CONFERENCE FOR EUROPEAN ECONOMIC COOPERATION

On Saturday, July 12, 16 nations met in Paris to start discussions on the Marshall plan. In speeches made by Foreign Minister Bevin, of Great Britain and Foreign Minister Bidault, of France, the door was still left open for participation by the Soviet Union and other countries. Bidault said, "We still hope that seats left empty today will be occupied some day." Bevin pledged the support of Great Britain to the Marshall plan in the following words: "On behalf of the British Government, I am authorized to state that, not only its own resources but, insofar as it can influence them, the resources of the great Commonwealth will be directed as far as possible to help rehabilitate Europe. We regard that not only as our duty but as our interest, since the quicker Europe can be brought back to a state of economic health the more we shall all mutually benefit."

NATIONS PRESENT AND ABSENT

I am including data on the countries present and absent as reported by the New York Times of July 15:

"NATIONS ATTENDING

"Present at Paris are the delegates of 16 of Europe's 27 countries. They are:

Country	Square miles	Population
Austria	32,369	7,055,000
Belgium	11,775	8,400,000
Denmark	16,575	4,330,000
France	212,741	41,100,000
Greece	50,267	7,700,000
Iceland	39,709	130,000
Eire	26,601	2,955,000
Italy	119,733	46,000,000
Luxembourg	999	300,000
Netherlands	12,742	9,530,000
Norway	124,556	3,065,000
Portugal	35,424	8,275,000
Sweden	173,341	6,750,000
Switzerland	15,940	4,485,000
Turkey	296,500	19,100,000
United Kingdom	93,991	49,700,000
Total	1,263,263	218,875,000

"Absent are the countries lying east of the Stettin-Trieste line. They are:

Country	Square miles	Population
Albania	10,631	1,140,000
Bulgaria	42,741	7,000,000
Czechoslovakia	49,321	12,300,000
Finland	130,160	3,870,000
Hungary	35,911	8,900,000
Poland	120,782	22,600,000
Rumania	91,934	15,900,000
Yugoslavia	95,983	15,700,000
Russia	8,308,634	193,000,000
Total	8,886,097	280,410,000"

THE SPECIAL SESSION OF CONGRESS

Several leaders in Washington including the President seem to think that there may be no need for a special session of Congress to consider the European situation. Before the Marshall plan can come into being it will be necessary for Congress to act. As I have stated on numerous occasions I am in accord with the Marshall plan and am ready to vote now for the funds necessary to put it into effect. The Paris Economic Conference should have its report and recommendations completed by early fall. I believe that the Congress should meet in special session next October to receive the results of the conference and to deal with questions of foreign policy exclusively.

Time is exceedingly important. There is a hard winter ahead. We must move quickly to win the peace. Delay can be disastrous. If the effectuation of the Marshall plan is postponed until the second regular session of the Eightieth Congress, it will be spring before action is completed. Long hearings will be required, lengthy debate will be insisted upon and in all probability if Congress does not convene this fall the Marshall plan will not be voted upon before Easter. Therefore, my belief in the need for a special session.

THE DEPARTMENT OF STATE AND THE CONGRESS

Recently the Secretary of State has been in secret conferences with the Foreign Relations Committee of the United States Senate. Since the House of Representatives is the branch of the Congress closer to the people—because it is elected every 2 years—since the Marshall plan cannot be adopted unless and until the House agrees to approve it and since the legislation to effect and implement the plan must come before the Foreign Affairs Committee of the House, I am of the opinion that the Foreign Affairs Committee of the House should be brought into the same relationship with the State Department and the Secretary of State as the Foreign Relations Committee of the other branch of the Congress.

Since in the United States the people must support any foreign policy if it is to be effective and since in order to bring this about, there must be a thorough dissemination of full and adequate information, I believe that secrecy in the consideration of foreign affairs should end, that the State Department should place all the facts before the people and that conferences with congressional committees should be made public. I have confidence in the people. They will make correct decisions if the Department of State will furnish them with the information freely, frankly, and without fear or hesitancy.

THE UNITED STATES MUST ACT

The policy which the United States should follow is clearly obvious. We must encourage western Europe to act quickly on the Marshall proposition even though the Soviet Union will have nothing to do with it. An economically strong European continent will help guarantee the security of the United States. Twice during the past 30 years this Republic has engaged in war to prevent the march of aggression. I sincerely hope we will not stand idly by now while another tyranny bent on control of the world reaches out to grasp and to subjugate every country in its path

We have the resources and the power and the will to call the bluff of the communistic dictatorship in Russia. By extending assistance to keep western Europe independent, free and economically strong, we will be making an investment in world security. Political isolation has ended; economic isolation must also end. I am convinced that financial aid to the war-devastated countries will help us win the struggle to establish world peace.

THE RUSSIAN RECORD

I have already emphasized that Russia is bent on expansion and the spread of communism. The Soviet Union has violated the spirit of the Atlantic Charter, the Charter of the United Nations, the Potsdam and the Yalta agreements. The Kremlin has wrecked conference after conference, the most recent being the three-power conference in Paris. Again and again the veto has been used by the Soviets in the United Nations. Feverishly the Communists are trying to develop the largest military potential in the world. Ever since the end of the war the Russian Government has obstinately refused to cooperate. By their statements and more specifically by their actions we are forced to no other conclusion than that the leaders of the Soviet Government wish a world in dire turmoil so that communism can be spread and so that every nation possible can be brought under the heel of the tyranny whose head is in the Kremlin. If there is anyone who doubts the ultimate objective of the Soviet communistic dictatorship, he needs only to read the record to be convinced of the points I am making. Yes, by their fruits ye shall know them.

WHAT UNITED STATES AID MUST ACCOMPLISH

In the near future the Congress either in special session or in regular session will be called upon to make important decisions which are bound to influence the course of world history for decades to come. We must decide on the adoption of the Marshall plan and the appropriation of the money to carry it out. I believe that our aid to western Europe is necessary in the self interest of the United States. Our assistance must result in the rehabilitation of the war-devastated countries. Our aid should help these countries to help themselves. Aid from the United States must prevent the nations of Europe from going communistic. Most important of all, American assistance must check the march of aggression by Mr. Stalin, his associates, and their successors.

A stable Europe is imperative for a stable world. An economically strong Europe is essential to the security of the Western Hemisphere. I hope that the United States will rise to the present occasion and devote the same energy to winning the peace as it devoted to winning the war. We must not let this opportunity of laying the foundations for a decent world society pass without utilizing it to the utmost. If we become guilty of this grievous error, historians of the future will record our hesitancy, our lack of understanding, and our indecision as one of the most colossal blunders in the annals of mankind.

Admission of Displaced Persons to the United States

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of William F. Laukaitis, supreme president of the Lithuanian Alliance of America, to the Subcommittee on Immigration of the House Judiciary Committee:

STATEMENT OF WILLIAM F. LAUKAITIS, SUPREME PRESIDENT OF THE LITHUANIAN ALLIANCE OF AMERICA, ON H. R. 2910

Mr. Chairman and members of the Subcommittee on Immigration of the House Judiciary Committee, among the displaced persons now living in the displaced persons camps are thousands of Baltics—people from the formerly independent Republics of Lithuania, Latvia, and Estonia. They have suffered untold misery, oppression, exploitation, racial persecution, and brutalities, not only under the Nazis, but also under the Communists. These people have been filled with abhorrence for all foreign domination and for all totalitarian systems.

They refuse to return to their former homelands because of the communistic system now in force there. This system they consider totalitarian, imperialistic, antidemocratic, and totally lacking in intellectual, spiritual, and economic freedoms.

These Baltic people cannot forget their tragic experiences under Soviet occupation of their respective countries, with its deportations, imprisonments and executions. They cannot forget the suppression under the Soviets of civil liberty of religion and religious worship. These experiences and sufferings have deepened their devotion to liberty, independence, freedom, and the democratic way of life. These are the type of people who would worship at the shrine of democracy. They yearn for the American way of life, and the blessings afforded by this, our great Republic of the United States of America.

What I have just stated about the Baltic displaced persons is, of course, applicable to the other national groups who find themselves in the displaced camps of Europe. These are the type of people who would be admitted to our shores under the provisions of the Stratton bill if it becomes the law of the land. This bill would give asylum to thousands of brave souls who have steadfastly refused to be assimilated into the Soviet system.

This is my answer to those who make the assertion and argument against the bill that aliens are unassimilable and have undesirable political ideas. People who oppose totalitarianism do not possess undesirable political ideas. People who desire the four freedoms do not possess undesirable political ideas. These are the ideals for which we fought two world wars. These are the ideals for which thousands of the flowers of our manhood made the supreme sacrifice.

The history of the United States is the best evidence of the assimilability of our aliens in the past. Their contributions to the great American melting pot needs no comment. I do beg leave to bring to the attention of this committee this fact. The provisions of H. R. 2910, the Stratton bill, provide for a thorough screening of the displaced persons before they could enter this country. Nowhere in the history of our past immigration was such a screening provided for or established by law. There can be no doubt but that practically all unassimilable persons or persons possessing undesirable political ideas would be screened out under the Stratton bill.

It has been argued by the opponents of this bill that its passage would aggravate the housing and unemployment problems. Based upon some personal experience and observations with such displaced persons as have already entered this country, it is my opinion that the displaced persons, given an opportunity to work as free men in a free country, will make excellent citizens. Those who have thus far entered the country are gainfully and usefully employed.

Displaced persons comprise not only professional people, but farm hands and domestics as well. These farm hands and domestic servants could readily relieve a great shortage of farm labor and domestic servants existing in the United States at this time, and their admission should cause no labor problem. The truth of this statement is evidenced by the fact that William Green and Philip Murray, the presidents of the American Federation of Labor and the Congress of Industrial Organizations, have given their support to the proposition of the admission of a fair share of displaced persons to the United States.

The displaced persons who would come to our shores under H. R. 2910 would find sanctuary in the homes of friends and relatives. No serious burden to the housing problem would result, in my opinion. Rural settlement of displaced persons could very readily be brought about by persons interested in the problem. The fraternal societies and orders in the United States whose membership is composed of people who either originally or whose ancestors originally came from countries in Europe from which the displaced persons have fled would, I feel certain, take up the problem and task of aiding in the housing and employment problems that might be presented, if any such problems did arise. I am certain that Protestant, Catholic, and Jewish organizations, fraternal, charitable, and benevolent in their nature and scope, not only are willing but are able to house displaced persons, and thus prevent their becoming a burden on our economy. The Lithuanian Alliance of America, of which I am the national president, has already taken steps in this direction by rejuvenating one of its fraternal benefit funds, known as the immigrant fund. I feel sure that the same step is either being taken or will be taken by other societies, fraternal organizations, and groups interested in these displaced persons.

The displaced-persons problem is, in part, an opportunity for our national growth. It is in the soundest American national interest to take steps to enlarge our productive population. (We are, in population, comparatively the smallest of the great powers of the world. We need, as our history has shown, the brain and muscle of immigrants. The rate of our population growth is declining.) Opening the doors of the United States to our fair share of the displaced persons would constitute an addition to the greatest resources that our country or any country can have—that of human beings willing to work in the interest of our economy.

The displaced-persons problem now constitutes a drain of millions of dollars a year on the American taxpayer. A substantial part of the cost of American occupation in central Europe calls for the maintenance of displaced persons in camps. The solution of the displaced-persons problem, with the United States accepting a fair share of the responsibility, will be a substantial relief to the American taxpayer, and will bring to this country people who would eventually share our tax burden.

The Governments of the United States, Great Britain, and France officially declared that no people would be forced to return to their homes against their will. This principle has been endorsed by the United Nations. The United States of America, as a leader in international affairs, should take the first step in the direction of practically confirming these principles. The rest of the world will then follow, as day follows night.

Small Business

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following letter by Ernest H. Gaunt, of Lawrence, Mass., which was published in the Boston Traveler of Tuesday, June 24, 1947:

NO SUCH LIMITATION WAS INTENDED

To the PEOPLE'S EDITOR:

I was much interested in your editorial, How Big Is Business? That editorial is correct in saying that the small businessman "may be the one physical ingredient essential to civilization," and that "on this ground, if no other, he is worth protecting."

However, may I point out that the editorial seems to define the small businessman as merely the one who shines our shoes, presses our suits and washes our shirts, and runs a small retail store, etc. This definition seems to include only service businesses and those of a personal nature.

These are assuredly small businesses; but the writer of that editorial apparently slights or overlooks the very great number of independent, competitive, small businessmen who are manufacturers who use machinery, buy raw materials, and process them; also wholesalers.

This stress on small business in the editorial as applying to personal services—makes me wonder whether the writer of that editorial thinks that all manufacturing and processing of materials, must or ought to be done only by large companies. If so, there is abundant factual evidence of a reliable sort to show that small manufacturers and medium-sized manufacturers are often more efficient in operation than are large manufacturing concerns.

May I point out another sign of an inaccurate analysis and weighing by the writer of that editorial, when he mentions that there are a million more small firms today than at the dawn of the century. This statement does not seem to take into account that this country has grown by many, many millions of people since the dawn of the century.

What we need to keep in mind in connection with small business and the increasing concentration of industry into a few hands, is that 2 percent of American business establishments "wag the dog" and have attained a monopolistic, dominant position which allows this 2 percent to often control the votes of our Congress which is supposed to represent the little people, including the independent small manufacturers, independent small wholesalers, and independent small owner-operated family farms.

There is much propaganda being handed out today, or inspired by the 2 percent, of business establishments to try to lull the small, independent, entrepreneurs and the citizens into a false sense of security as to the alarming and accelerated growth of big private monopoly and cartels not only in international business but within our Nation.

A current example of the power of this dominant 2 percent is in their ability to influence our Congress to pass the Bulwinkle bill in the House a year ago, and this very week to probably pass it in the Senate.

If this bill is enacted, it will be the Fort Sumter of a new economic revolution, allowing the railroad monopoly which is the keystone of all our industry and is dominated centrally by big private banking and investment concerns to secede from our American system of competitive free enterprise, by exempting the railroads from the Sherman Act when antimonopoly cases are before the United States Supreme Court and a district court which charge the railroads with violating the Sherman Act.

ERNEST H. GAUNT.

LAWRENCE.

The Late Most Reverend Walter J. Fitzgerald, S. J.

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. BARTLETT. Mr. Speaker, it is with regret that I have to announce the death in Seattle, Wash., on Saturday last of the Most Reverend Walter J. Fitzgerald, S. J., Catholic bishop of Alaska. Thousands in Alaska of all faiths will mourn his passing. He had served as bishop of Alaska since 1945, and before

then was coadjutor, vicar apostolic, and bishop coadjutor for the Territory. Before then he had served as president of Seattle College and Gonzaga University.

Bishop Fitzgerald was known throughout Alaska. Despite poor health he made it a regular practice to visit the far-flung missions of his church, traveling by dog team and by airplane and by foot over the vast expanses of Alaska. Alaska and Alaskans will miss him. He was a great and good man.

Accomplishments and Failures of the Republican Congress

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. SABATH. Mr. Speaker, I insert in the RECORD the text of my remarks Saturday, July 19, over radio station WIND, Chicago:

Mr. Announcer, thank you for the kind introduction. Good evening, ladies and gentlemen of the radio audience. Though the Congress has been in session for 7 months, and we expect to adjourn only a week from today, I find that this Republican Congress has failed to pass any legislation which could possibly be considered to be in the interest of the American people.

It has, on the other hand, devoted itself to emasculating and amending and repealing legislation passed by the Democratic Congress under the leadership of President Franklin D. Roosevelt. Meanwhile, the Republican Congress is giving the people the same lip service and false promises as in the 1946 election campaign.

It is, indeed, amazing how the Republicans not only try to mislead the American people, but also delude themselves by claiming they were given a mandate in the last election to repeal price control, to wreck the veterans' housing program, to destroy effective rent control, and to weaken or smash the labor unions by passing the Taft-Hartley slave-labor bill.

They certainly follow the mandate of the National Association of Manufacturers, but not that of the American people.

They came to power under bland assurances that they would end shortages and black-market prices on the necessities of life.

Not only have they failed to eliminate critical shortages, but they have succeeded in forcing higher prices on every commodity.

My listeners, I am sure, are interested in what has actually been accomplished, the laws that have been passed, and the fate of legislation recommended by President Truman on which no action has been taken.

"SOAK THE POOR" TAX BILL

The Republicans have talked a great deal about reducing taxes, for that is a question always attractive to taxpayers.

But instead of passing a fair tax bill, they have passed a bill which would save a married man earning $2,500 a year 56 cents a week or $29 a year, while a man who gets $25,000 annually would save $22.65 a week or $1,704 a year, and the rich man with an income of $5,000,000 would save almost $9,000 a week or $450,000 a year.

In other words, the man with a small income would have his tax reduced by pennies but the rich man by thousands of dollars.

That was one of the reasons the President was obliged to veto both of these Republican tax bills, because he believes that instead of relieving those accumulating great profits, who can and should pay their fair share, it is our duty to aid the Government in reducing its great indebtedness and thus, while we are so unprecedentedly prosperous, preserve the national credit and protect the billions of dollars in bonds purchased and held by 30,000,000 of our citizens. In that I have wholeheartedly agreed and supported the President in his vetoes.

Ah, yes, during the last few weeks they have again been talking about imposing a sales tax on our country. This is another smooth way of transferring the burdens of Government from the shoulders of those best able to carry them to the backs of the toiling masses.

I shall enumerate some of the acts which this Republican Congress has passed.

It will be found that not a single one was in the interest of our country.

They have passed many laws, but unfortunately every one of them will add to the cost of living, contrary to the urgent pleas of President Truman to reduce prices.

The very first action of the Republican Congress was as I stated the emasculation, and then the repeal, of the Price Control Act. They promised that with OPA gone prices would be held in check and the vicious black market would be eliminated.

REPUBLICAN PROMISES NOT KEPT

I feel that it is unnecessary for me to state that the promises given to the people in the 1946 campaign have not been kept and that the avaricious industrialists, who seem to control the Republican Party, have taken advantage of their opportunity and have boosted the prices on nearly every item that goes into the cost of living.

Time will not permit me to explain again how the packers who made such a vicious fight for repeal of OPA, went on strike against the public, refusing to slaughter or to release meat from their storage, precluding the American people from getting even a small supply of meats. However, when the Price Control Act was weakened, cattle and hogs owned by the packers came into the market, many of them from feed pens in close proximity to the slaughter houses.

Yes, meats became plentiful, but at what prices! Instead of prices being reduced, they went up and up and just a few weeks ago meats were boosted from 10 to 20 cents a pound higher. Correspondingly, these excessive, high prices apply to milk, eggs, butter, cheese and, in fact, to every food and necessity of life.

YIELDED TO REAL-ESTATE LOBBY

Under the great pressure of one of the worst lobbies in the United States, working in conjunction with other lobbyists infesting the Capitol, the real-estate lobby prevailed upon the Republicans to kill housing legislation and to amend the Rent Control Act on the theory that houses would continue to be built on a large scale, and that the 15-percent increase provision in the rent control bill only called for the voluntary agreement on the part of the tenants.

But by this time the people all over the United States realize that the 15-percent-increase provision does not really allow them to agree voluntarily to an increase, but serves as a big stick or club, if they wish to have a roof over their head, and the 15 percent is now being extracted from nearly all tenants.

Where are the houses which private enterprise promised to build if the controls on building materials were removed? And if you find a few of these houses, have you noticed the prices? They were built for those who can pay $12,000, $15,000, or even $25,000 or more for a house, but not for the people of small earnings who need houses most and can pay only from six to eight thousand dollars.

The Republicans did not stop there—they passed the sugar bill that will cost the consumers from two hundred to three hundred millions a year, the wool bill, and the bill to amend the Natural Gas Act, and the enactment of these bills will further increase the cost of living, adding millions and millions in costs to the consumers.

For many months I have urged the passage of my resolution to investigate and prosecute food profiteers and gougers of the public. I am pleased that in several instances the Department of Justice has proceeded against the lumber and other combinations and interests, but the Republicans cut the appropriations of this Department to preclude a real investigation and prosecution of these avaricious industries and the collusive practices on the part of trusts and combinations.

NO CRITICISM OF LEGITIMATE BUSINESS

I am sometimes accused of being too harsh on business and industry, but anyone who will consider the enormous profits American corporations are making, which continuously impose additional burdens upon the masses, would be obliged to concede that I am not trying to hurt legitimate business but to stop excessive prices and unwarranted profits.

Only a few days ago it was reported that 228 corporations made in the first 3 months of this year 305 percent greater profit than they made during the most prosperous year of 1946. Anyone reading financial reports must be familiar with the tremendous and ever-increasing profits of nearly all of the big corporations; and still the Republican Party continues to legislate in the interests of these avaricious profiteers and against the consumers. Some representatives of these industries claim that the wages of labor have increased and it is necessary that they include these higher costs in the prices of their products.

Yes; I concede that the wages of some organized labor has increased, but such is not the case of unorganized and white-collar people and people living on small, fixed incomes. Their interests and their needs are ignored by the Republican Party, notwithstanding the pleas and appeals on the part of those who find it nearly impossible to pay these tremendous increases in the cost of the necessities of life.

WEAKENS DEMOCRATIC LABOR LAWS

But upon the persuasion of these great industries, the Republicans have passed the Taft-Hartley antilabor bill, vicious antilabor legislation which largely repeals beneficial laws passed by the Democratic Party in the interest of labor, all for the purpose of weakening or destroying organized labor, and actually has weaken the Wagner Labor Relations Act and the Norris-LaGuardia Act.

They forced this legislation notwithstanding the fact that there were less than one-tenth of 1 percent of workers out on strike and the industrialists were never so prosperous, with over 60,000,000 people employed and relations between labor and management the most friendly in the history of the country.

To frighten labor into docility they joined in the hammer chorus to Americans that depression was coming and eight or ten million people would be out of work. Even then, before the war had ended, I assured the country that such statements were not warranted; that, in fact, there would be no unemployment for many years to come and that demands for labor would increase because of the tremendous requirements for our own population and for foreign nations.

I am indeed gratified that my statements then have come true under the leadership of the Democratic administration, and in spite of every effort of this Republican Congress, under the whiplash of the reactionary old guard, to destroy our prosperity and high employment.

I am fully aware that Republican leaders feel they must hold the support of the vested interests in order to obtain unlimited millions for their 1948 campaign slush fund by passing legislation of special privilege

under which those interests can recoup manyfold what they pour into the Republican war chest.

Surely they will need the dough, for no matter how many millions roll into their pot it will not be sufficient to bribe or buy the American people.

Yes, they passed a measure called a loyalty bill, a bill which actually is disloyal to every tradition of American freedom and individual rights, and which invades the civil liberties guaranteed under the Constitution to two and a half million Government employees.

This bill would restrict every Government worker from expressing his views on any controversial subject, and reduces them to living in constant fear from any eavesdropper.

This bill does, in fact, legalize a witch hunt.

PRESIDENT'S RECOMMENDATIONS IGNORED

The President has made many recommendations for legislation—among them passage of the Wagner-Taft-Ellender housing bill which would provide homes not only for ex-servicemen, but also for homeless families in our country.

He has also recommended the adoption of the FEPC and strict antitrust and combine legislation for the purpose of reducing their great prices, and he urged and recommended revision of minimum-wage legislation and to broaden the social-security law.

Only a few days ago the President and the Secretary of State urged and recommended the adoption of a humane act to permit some displaced, suffering, and homeless people, most of them women and children, to be admitted into the United States, but the Republican Congress has not acted on any of these measures.

The Republicans have given a great deal of publicity as to how they were going to reduce governmental expenditures by $6,000,000,000 but, I am sure, when all the appropriation bill have been passed, not only will they have not reduced expenditures but, in all likelihood, will increase them above the President's recommendations.

They have done not one thing toward implementing the flood control program recommended by the President, nor the investigation of the real estate lobby, but they have passed innumerable resolutions to investigate this, that, and the other minor matter, all of which, by strange coincidence, involve expensive junkets all over the United States and even to Europe, Asia, and the South Seas.

Furthermore, they have voted subsidies to many industries in many ways. Only day before yesterday to the mining industry to the tune of $70,000,000. When all these subsidy authorizations are compiled the record will show, though we have been at peace over 2 years, they are increasing instead of reducing expenditures.

BUDGET BALANCE

Meanwhile, due to the prosperity we are enjoying, the administration for the first time in 18 years, including 4 years under Hoover and in 1 year under a Republican Congress, balanced the budget.

I shall not dwell on their failure to act on the antilynching bill. All that this Congress has done has been to legislate in the interest of those who seek greater power and profits for the large profit-making industries. They have gone on the theory that in 1946 they gained victory because of their attack on the New Deal, and consequently ignored the rights and interests of the people and seem to have followed the dictates and policies of big business.

They feel that the demands of these great interests are paramount to the needs and interests of the people.

Do not be fooled or misled by the false propaganda of the Republican publicity machine. This tax bill was of no benefit to the people, and the increased prices made possible by scuttling all price controls have taken many times more out of the consumers' pockets than the few dollars the tax bill would save.

Members of Congress will be going home soon to report to their constituents on their stewardship. I think that Republican Members are going to be greatly embarrassed as they will try to explain their sins of commission and of omission.

It is my candid opinion that they cannot fool the people as they did in 1946, and the polls so far taken indicate the people see the mistake made in electing a Republican Congress, which again has shown itself indifferent to their interests.

Aspirations of the Irish People

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, July 21 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, recently an article by Demaree Bess, entitled "Ireland Turns Away From the U. S. A.," was published in the Saturday Evening Post. The Anti-Partition of Ireland League took exception to that article and has issued a reply in which is reiterated the long-standing friendship between America and Ireland. The reply also discusses what it calls the misleading picture of the aspirations of the Irish people which Mr. Bess presented. It occurs to me that in the interest of fair play the Anti-Partition of Ireland League is entitled to have its point of view given attention and consideration. I ask unanimous consent that its reply be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REPLY TO ARTICLE ENTITLED "IRELAND TURNS AWAY FROM THE U. S. A," BY DEMAREE BESS, BY THE ANTI-PARTITION OF IRELAND LEAGUS

The Anti-Partition of Ireland League takes exception to the article entitled "Ireland Turns Away From the U. S. A.", that appeared in a recent issue of the Saturday Evening Post, and proposes to show that through ignorance or otherwise, its author, Mr. Demaree Bess, has presented a misleading picture of the aspirations of the Irish people.

To those who are familiar with the long history of American-Irish relations, and with the similarity of the national and international objectives of both peoples, the title of the article comes as a complete surprise. In the circumstances, much more convincing proof of the correctness of the author's conclusion is necessary.

The unpopularity, in the United States, of Irish neutrality in the recent war, and the unjust criticism of unanimous policy of the electorate in the free portion of Ireland on this issue, are cited as reasons for the alleged cleavage between the Irish people and the people of this country. It is true, indeed, that the Irish populace momentarily resented our attitude in that controversy. They were, in addition, bitterly disappointed at our refusal to furnish them, for cash, the weapons, ships, and other supplies they deemed necessary for the defense of the neutral portion of their country, at a time when we were extending loans and credits to Turkey and other neutrals for that same purpose. But the long-standing friendship between Ireland and the United States could not nevertheless be impaired, and already those grievances are but memories almost forgotten.

In support of his conclusion that Ireland is turning away from the United States, Mr. Bess points to the lack of Irish immigration to this country, and to the meager volume of commercial intercourse between both nations. While his statements are substantially correct, it is utterly fantastic to conclude that those conditions indicate a diminishing friendship between the United States and Ireland.

A recent statement issued by our consulate at Dublin, to the effect that lack of sufficient personnel has slowed the processing of visa applications, should be sufficient to convince Mr. Bess of his error. In the matter of commerce, the author failed to mention that approximately $2,000,000,000 worth of Irish credit has accumulated in Great Britain, which credit can be utilized only within the sterling area. "Because trade between the two countries can be so easily balanced," Mr. Bess concludes, "the present predominance of British trade here is likely to be permanent." He should be more nearly correct if he had stated that the Irish people are awaiting the dissolution of the sterling area restrictions, when their credits in Britain will become available for Irish-American trade.

Concurrently with his effort to prove a cooling off in friendship between this country and Ireland, Mr. Bess attempts to show a converse Anglo-Irish trend. In proof of this, he cites the geographical proximity of Britain and Ireland; he speaks of the many English tourists currently visiting Ireland, and displays a photograph of Mr. de Valera in conversation with Britain's Mr. Herbert Morrison.

What the author says is "the most obvious and the most permanent tie between these islands"—geographical proximity—is undoubtedly the least tenable of all his contentions. By the application of the same line of reasoning, France, which is but half the distance from Britain, should long ago have become completely Anglicized, while strife between contiguous states should be unheard of. The fact is that the geographical proximity of Ireland and England has been a major contribution to centuries of strife. Geographical proximity is a desirable condition, indeed, when the ideals of peoples are similar. In the present case they are far apart.

In the meaning of its ordinary application, the word "tourists," as used by Mr. Bess to describe the current English visitors to Ireland, is somewhat flattering. Factually, the visitors are there as a matter of dire necessity—in search of food. Here the author seems to make a slight concession by saying that the present invasion of Ireland (by the tourists) may be described as a flight from austerity—which it really is—but by his subsequent description of conditions in Ireland he renders "confusion worse confounded" by painting a picture of Irish austerity rivaling that in Britain. It seems strange that the British people should be so misinformed on the plight of their neighboring islanders.

The de Valera-Morrison photograph, presented with a caption proclaiming that "de Valera is now courting England's favor" scarcely merits serious comment. But if Mr. Bess chose to reveal the true significance of the picture, a "Made in Dublin" caption should have occurred to him. His readers then could easily determine who is courting whom, if indeed they could withstand the shock of beholding a British statesman in the Irish metropolis for the purpose of currying favor from his traditional foe But then statesmen are unpredictable individuals, and expediency covers a multitude of sins and inconsistencies. The remaining two illustrations accompanying the article are discounted forthwith: The one captioned "On O'Connell Bridge," which was very definitely not taken

there; the other depicting an unsumptuous dining room scene—a picture that is surely more typically British than Irish. As chosen and presented, however, the illustrations serve the author's purpose well.

While discussing Irish-British friendship and the alleged dependency of Ireland upon Britain, Mr. Bess completely forgot to mention that the Irish Government has repeatedly refused British requests to forgive a portion of her indebtedness.

The greatest obstacle to genuine Anglo-Irish peace and good will, however, is the existence of the partition of Ireland. While such a condition exists, neither wishful thinking, British friendship overtures, nor the conclusions of observers can substitute for international harmony between both countries. An objective discussion of this topic should, of itself, completely refute the contention that Ireland and England are drawing closer to each other. Indeed, a discussion of the general topic as attempted by Mr. Bess is of necessity partial and prejudiced if the partition background is omitted. It is unfair to his readers, many of whom are undoubtedly uninformed, albeit interested, either in a practical or an academic sense.

It should be explained, therefore, that immediately following the termination of World War I, the people of all Ireland voted overwhelmingly for the establishment of a republic. (That majority extended into four of the presently partitioned six counties.) Having officially taken part in the conflict, which was ostensibly fought for the right of self-determination for small nations, they chose to exercise that right. But the reply of the British Government was the misnamed Better Government of Ireland Act, which was enacted over the protest of Irish political leaders of every shade of opinion, all of whom refused to participate in the voting. By virtue of that act the Irish partition monstrosity came into being; the first of Europe's puppet states was created, and although many others have since come and gone, the original pattern remains, existing only by means of annual subsidies from Great Britain, and despite the persistent pleas and protests of the Irish populace. For reasons well known to Mr. Bess, the appalling economic and political conditions prevailing within the partitioned area are persistently denied the light of publicity. It is not our purpose to expose those conditions here.

By numerous modifications, the remaining portion of Ireland has achieved the status of a republic under the leadership of Mr. de Valera. Within that section of the country, in the period between 1943 and 1946, there were two general elections, one Presidential election, five byelections, and many local ones. Four political parties took part in them, and all were strongly contested. Those parties differed on almost all public questions except one. The exception was partition. Thus it is readily seen that this is not an "Irish question," as British propagandists would have it understood. It is the remnant of a British question.

Discussing Irish national defense measures, Mr. Bess makes the astounding statement that during the war "the 'Irish Free State' chiefly entrusted its defense to Great Britain." It is true, of course, that Britain protected her sea lanes as best she could (while Irish ships refused convoy protection), but the spectacle of Ireland depending on Britain for national protection at a time when Britain was unable successfully to protect herself, and was rapidly losing the war before American intervention, must have been as sorry to those who saw it in that light as was the spectacle of Polish dependency, although with less tragic consequences. The truth is that Ireland, like our own country—and Britain too—was totally unprepared for war. But when it came an Irish purchasing commission visited the United States with the results as stated above.

Why the Irish people chose to remain officially neutral in the war, we do not presume to say with authority. Neither do we presume to question their right of choice. And today, in the light of the fate of other small nations, we hesitate to question the wisdom of their choice. Considering their bitter memory of the past, their present action limited to a choice between neutrality and cooperation with atheistic communism—an evil they have never underestimated, and a menace they have never overlooked; with their traditional friend, America, drawn into the conflict despite her avowal of neutrality, it is not difficult to appreciate their dilemma. But their sympathy inevitably lay on the side of the United States. Eventually that sympathy manifested itself in the form of 200,000 of Ireland's manhood working in British factories, 250,000 serving with the armed forces (not 20,000 as Mr. Bess reports), and the remaining workers supplying food from their Irish farms. In addition, Ireland's entire fleet of nine oil tankers was made available to Britain; Allied airplanes were permitted to fly over certain areas of her territory, while approximately 70,000 homeless British refugees were sheltered by the Irish people.

It is doubtful, indeed, if Ireland's official participation in the war could have increased her effort. It might well have diminished it, since her ports, ships, and other facilities were vulnerable to attack. On the other hand, as Secretary of the Navy Forrestal wrote to the late Senator Walsh, "the Allied losses were less than they might have been, because Ireland failed to furnish affirmative assistance to the Axis nations." This is a consideration that Mr. Bess and many others conveniently ignore.

The author goes all out in his praise of the contribution made by the partitioned area of Ireland. While there is no desire to minimize it, it should not be forgotten that neutrality or belligerence was not a matter of free choice for the puppet government there. But it is almost a certainty that were it not for the existence of that regime; if Ireland were united and free under her chosen form of government, the entire country would have taken part officially in the conflict.

Mr. Bess' assertions that the partition issue involves religious and economic issues are denied by the facts which he does not present fairly. Both in the country as a whole, and within the partitioned area, agriculture is by far the largest industry. The Catholic religion is the largest single religious sect in the six-county area, although the number of its adherents is outnumbered by the combined Protestant sects in the proportion of approximately three to 2. That the religious issue is a red herring is immediately apparent to those who are familiar with the harmonious relations existing between the various sects. Oppressive discrimination and even occasional riots, mentioned by the author, are, unfortunately, a matter of record. Discrimination is perpetual, while the occasional incidents of civic unrest are the direct result of the public utterances and actions of the puppet politicians. A considerable number of British Labor Government leaders have publicly expressed their abhorrence of the conditions existing under the puppet regime, but Mr. Bess is again in error when he states that the London Government opposed the extension of wartime emergency powers to that regime. The opponents of the measure were of the opinion that the northern government did not deserve to survive if it could not maintain itself except by extreme police measures, but permission to use them was nevertheless granted.

That, then, is the story in brief, of Ireland's position. As it stands today, the country is not only economically and politically divided as a result of partition but the military defense of the western approach to Europe is rendered vulnerable. Therein should lie America's interest in the Irish grievance. If our future is linked with the welfare of Britain and the European Continent we should see to it that the coordination of British-Irish defenses is effected. In rectifying this condition we shall not only take action to restore democracy to the Irish people, but we shall, ipso facto, strengthen our own.

Mr. Bess' gratuitous advice to America to keep hands off this Irish family quarrel is short-sighted and misplaced. This is not a family problem. It is one of international moment, particularly to the United States, to whom the peace-loving peoples of the world more than ever before look for cooperation in peace, and for military aid in war. With little effort the United States can bring to a speedy end the mutilation of Ireland, and for selfish reasons, if for no other, this should be done.

Establishment of Pulp Industry in Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I desire to include letters addressed to me by Mr. Robert L. Jernberg, president of the Ketchikan, Alaska, Chamber of Commerce, and Mr. Norman C. Banfield, representing the municipalties of Juneau, Douglas, Sitka, Petersburg, and Wrangell, Alaska, and an editorial from the Ketchikan Daily Alaska Fishing News. All of these have to do with legislation now before the Congress which would make possible establishment of a pulp industry in Alaska. As all who have followed this matter know, the subject of Indian rights has proved a complicating factor. There are widely divergent views about this and I think Congress in considering this legislation should have all views, including the ones presented here.

The matter referred to follows:

KETCHIKAN, ALASKA, *July 18, 1947.*

Hon. E. L. BARTLETT,
Delegate to Congress from Alaska,
Washington, D. C.

DEAR MR. BARTLETT: I have been sent to Washington by our organization for the purpose of assisting in obtaining the enactment of legislation permitting the Forest Service to conduct the sales of timber in the Tongass National Forest. We have followed with intense interest the courses taken by House Joint Resolution 205 and Senate Joint Resolution 118 which permit the aforesaid sales, and provide for the protection of all Alaska people

In the CONGRESSIONAL RECORD, July 10, 1947, at page 8568, there appeared a statement on Indian rights, and because of the errors contained therein we feel that the purposes of the legislation are misunderstood. We would like to take this opportunity to correct the record as follows:

INDIAN RIGHTS

1. The statement advances the theory that Alaska Indians have certain property rights, based on statutes, administrative action, and Government recognition. We feel this is not a full and accurate statement.

The Circuit Court of Appeals for the Ninth Circuit, in the case of *Miller et al.* v. *United States*, ruled last spring that Alaska Indians possess only individual rights and not aboriginal tribal rights. Alaskans and Government agencies recognize these rights, but tribal rights have never been recognized as Alaskan Indians were never organized into tribes but were grouped into clans in each race or large family group such as Thlinget, Haida, or Tsimpseans. Such individual rights are definitely and wisely protected in the pending legislation.

The Department of Interior hearings mentioned in the statement were held to determine whether the Indians had any possessory rights only, with the results indeterminant until former Secretary Ickes apparently made his determination which was not in accordance with the facts recorded at the hearings.

ENCROACHMENT ON PRIVATE PROPERTY

2. There will be no encroachment on private property as the legislation protects all Indians, as well as the property of non-Indians.

CONSTITUTIONALITY

3. The ruling of the circuit court, as mentioned above, determined that aboriginal rights were extinguished by the treaty of 1867 with Russia.

We have always understood under our system that a decision of a court of last resort was the law. The opponents of the legislation do not concede the decision to be superior to Mr. Ickes' determination.

Russia, through the medium of the newspaper Pravda, a few years ago inferred that the title to Alaska did not pass to the United States because the Russian people did not participate in the drafting of the treaty of 1867. Would not a tribunal of justice determine such an issue, or would our country be bound to follow the fiat of some official?

PULP INDUSTRY

4. Several pulp companies planning Alaska pulp development have stated for the record that House Joint Resolution 205, which passed the House, gives Indians as well as companies protection.

COST TO GOVERNMENT

5. Paragraph 5 of the statement of opposition warns that if the legislation is enacted the courts will eventually protect the parties despoiled of their property and the Government will be liable for large damages. As stated above, we are under the impression that the Miller case, which was an Alaskan case involving property, held that no aboriginal rights existed, which in itself should be strong evidence that such a suit would have no merit.

Such a threat has no foundation in fact and we assume it will not be considered.

FAIR PLAY

6. The question of fair play, or unfairness to the Indians, is not involved. The recognition of any Indian rights not based on court decisions would give many valuable rights to a small group of Indian citizens at the expense of all other citizens since these large areas of Alaska land under consideration are not, and never have been, recognized as being owned by Indians.

PAUPERIZING THE NATIVES

7. Instead of pauperizing the Indians, the establishment of the pulp industry would have the effect of benefiting their economy.

The Indians have never obtained a livelihood from the lands in question, except to the extent of wild-berry picking and hunting by individuals and such activities are carried on by all citizens, including Indians.

Development of industry would furnish year-round employment for many Indians, as well as non-Indians, which would contribute much toward making the Indians self-supporting rather than relying on the short seasonal work in fisheries.

THE ALASKA INDIAN

8. Many do not know the place the Alaska Indian has in Alaska life. He is a citizen. He votes, pays taxes, and enjoys all the privileges of citizenship.

Indians attend public and Government schools.

There is no racial discrimination in Alaska. Race from our point of view is little more than cause for anthropological observation. We know that there are certain groups and individuals, most of whom have no experience or knowledge about Alaska, who, in their enthusiasm to create causes, have led many to believe each of our communities has a line dividing Indians from non-Indians. Our churches, our shows, our schools, our hotels, and all facilities are open and are used by all Alaskans. The fact that skin pigment makes no difference is taken for granted.

We have Indians holding high offices in unions, sportsmen's groups, and in our local and Territorial governments.

We know that a few Indians, encouraged by outside influences who see a chance to accumulate great wealth at the expense of the country's resources legally owned by all of us, have claimed to represent all Indians in the affected territory. A group of 1,000 Indians in Ketchikan have notified the House Committee on Agriculture and the Senate Committee on Public Lands that they wanted the pulp industry developed now because it would stabilize their economy, by providing continuous and profitable employment.

There are approximately 28,000 persons in the affected area, one-fifth of whom are of Indian extraction. The establishment of a pulp industry now would mean a stronger, healthier, and more prosperous Alaska, and it is contemplated that the Federal Government will also benefit from such installations, because it will mean Alaska can assume the expense of many things now a drain on the Treasury.

Thank you for this opportunity to answer the one-sided statement of opposition to Senate Joint Resolution 118 and House Joint Resolution 205. We feel we should be treated equally with our fellow citizens, the Indians. We ask no special privileges and do not consider ourselves a special class.

Sincerely yours,

ROBERT L. JERNBERG,
President, Ketchikan Chamber of Commerce.

JUNEAU, ALASKA, *June 18, 1947.*

Hon. E. L. BARTLETT,
Delegate to Congress from Alaska, Washington, D. C.

DEAR MR. BARTLETT: The people of Alaska are unable to understand the difficulty you are having in obtaining congressional legislation to validate the sale of timber in Alaska by the Forest Service and the Interior Department to prospective pulp and paper manufacturers. The cities of Juneau, Douglas, Sitka, Petersburg, and Wrangell, Alaska, are sending me to Washington, D. C., as their representative to assist you in securing the passage of House Joint Resolution 205 which is now pending before the Senate or Senate Joint Resolution 118 which has been approved by the Senate Public Lands Committee. Other cities and chambers of commerce are sending representatives as they realize the opportunity to start a pulp and paper industry in Alaska will be lost if neither of these resolutions are adopted.

It appears the Members of Congress fear these resolutions are designed to take land, timber, or possessory rights from the natives. Such fears are unfounded as these resolutions cannot possibly be interpreted to deprive any native or white of any land now occupied or under the control of any person. The lands involved are the unappropriated and unsettled public domain within and outside the Tongass National Forest.

The natives in Alaska are not reservation Indians and they reject all efforts to establish reservations for their exclusive use. They are, and insist on remaining, in the same status as whites, enjoying the benefits and privileges established under the land laws established by Congress for all residents of Alaska. The prominent place they occupy in all communities, industries, and local government is sufficient testimony of their ability to be on the same status as whites without special privileges or treatment.

The adverse economic conditions which have prevented the manufacture of pulp and paper in Alaska have recently been completely changed. Two large companies are anxious and ready to establish mills. Three others are making investigations but have not yet decided to enter this new field. Unfortunately, they cannot make such large investments so long as there is any doubt as to the validity of the contracts offered by the Secretaries of Agriculture and Interior, which are otherwise acceptable.

These doubts were created by a former Solicitor for the Department of the Interior and his staff of assistants, who claimed the natives were entitled to the exclusive use, possession, and title of all areas in Alaska over which the natives hunted, fished, or picked berries to the exclusion of all white residents who have enjoyed the same privileges in the same areas since the Russians first came to Alaska. Nobody ever heard of these aboriginal claims before Mr. Ickes and his assistants decided to collectivize the natives of Alaska, reserve the land for their exclusive use, disregard the treaty with Russia which abolished all tribal rights and claims, and to appropriate vast areas jointly settled and developed by natives and whites as belonging to the natives alone. The natives rejected this proposal, refused to be brought under reservations, and have consistently contended they did not want the land reserved for their exclusive use as it would then remain undeveloped. On the other hand, the glittering prospect of selling this land for fantastic sums, coupled with the agitation, opinions, and promises by these governmental officials has resulted in the natives forming organizations for the advancement of their claims to the land of Alaska, the employment of professional lobbyists, and the joining of organizations whose principal object is to influence legislation for natives.

Their attorneys know they have no chance of establishing such claims in the courts and hope to obtain from Congress the receipts from the sale of Government timber as a reward for relinquishing claims which have been denied by the Ninth Circuit Court of Appeals in Miller and others against the United States. Since these claims are made on behalf of tribes which have disbanded and scattered over the United States as well as Alaska, it is impossible: (a) to find any authority or organization capable of giving a valid relinquishment; (b) make an equitable distribution of such receipts from timber sales; (c) grant title to any organized tribe; or (d) induce the natives to return to tribal status.

The attorneys, leaders, and lobbyists for these native organizations oppose the sale of the timber until they have been granted a right to the proceeds. The resolutions now pending propose to do nothing more than validate, by the plenary power of Congress over Alaska, all contracts made for the vast timber lands in Alaska and to place the money in escrow in the United States Treasury to revert to the Treasury unless the natives can establish a claim thereto. These natives will be deprived of nothing they now possess as the resolutions do not validate the sale of any timber under the occupancy or control of a native. The resolutions leave the door wide open for the natives to prove their claims in court or to secure future legislation for the disposition of the timber

receipts as Congress shall find equitable and just when it considers the validity of these claims.

The passage of these resolutions, or either of them, would assure those companies who have made complete plans for investment in Alaska and relief of an increasing paper shortage in the States, that they will have an adequate supply of timber at a definite contract price for a period of time which will allow the amortization of their investment.

To us Alaskans who have tried to develop Alaska so it can take its place as a State, it is inconceivable that Congress should hesitate to pass this necessary and simple legislation which is of national importance.

Yours very truly,

N. C. BANFIELD.

[From the Ketchikan (Alaska) Daily Fishing News]

REPORTS OF ALASKA INDIANS AND WHITES

Four Alaskan Indians, three of them members of the Territorial Legislature, recently testified in Washington on a couple of bills now before Congress to clear the way for pulp-mill development.

While there they signed a lengthy statement setting forth their objections to the provisions of these bills. Perhaps the most astounding assertion in this statement, to the home folks at least, is that the Alaskan Indians need at least 160 acres of land each in order to provide them with subsistence.

The following is a part of the statement signed by the four witnesses:

"The resolution would deprive the Indians of land which is sorely needed by them in order to make a decent living. It provides exceptions only for 'town sites, smoke houses, gardens, hunting or fishing cabins, or other buildings and structures, missionary stations, or burial grounds, or any timber actually possessed and used.' The effect would be to bottle them up on little tracts of land only large enough to live on but not large enough to provide them with a subsistence.

"The resolution would deprive them of all means of livelihood, except fishing. This is not sufficient since it provides employment for only a few months of the year."

The statement continues:

"The tracts of land awarded to the Indians 2 years ago average only about 160 acres per capita, which, for this type of land, is barely sufficient for a livelihood. The Indians have been gradually driven off much larger tracts of land which rightfully belonged to them; they should not be deprived of this last small area that still remains in their possession. If they are disinherited in this way, they will be unable to support themselves and will have to be provided for by the Government.

"If this bill and its companion bill S. 1446, concerning fish traps, are passed, the Federal Government will tie up fish traps by 15-year leases, and all timber in southeastern Alaska by 50-year leases, thereby effectively removing from the local Territorial (or State) government any control whatsoever over these natural resources."

Now, in the pulp-timber proposals made by the Forest Service, there is nothing about 50-year leases on "all timber in southeastern Alaska." As we understand it, a pulp company would buy a certain amount of timber located in a certain area but submitting bids for that timber. The company would be allowed so many years to cut the timber, and would do the cutting under regulations issued by the Forest Service, so as to provide for reforesting.

As to State or Territorial control, large parts of most of our Western States—up to one-half of the State, in one instance—are in national forests which are controlled by the Federal rather than the local government.

In southeast Alaska, whoever heard of an Indian, or a white man either, living on and utilizing and making a living from 160 acres of land?

The Indians in southeast Alaska are not now and never have made use of the land for making a living. They have used it for their villages, which are huddled together along the beaches, and for a small garden plot, and so forth.

Did anyone ever see any tract of land that had been cleared by the Indians for agriculture, or any that was used by them for grazing their cattle or sheep or goats?

The argument that 160 acres or more per capita are needed might very well appeal to a Midwest Congressman from a wheat-raising or a grazing section, but anyone familiar with this part of Alaska will find it spurious.

As a matter of fact, the Indian has every right that the white man has to take up a homesite or a homestead, and in addition has the right to take up an Indian allotment of land as an individual. Under this latter law, he can use but cannot sell such land.

For some years the Indians, when they did not burn driftwood, used some timber for heat, but a survey of most of the villages shows that they now burn stove oil, shipped in from California.

Rather than depriving the Indians of a means of livelihood beside fishing, the development of pulp mills would give them opportunities for employment. In addition, the logging of some of the river-bottom lands in this section might open some wider areas for agricultural development.

Indians are employed beside whites in almost every industry in this part of Alaska. For the same work, they receive the same wages as a white man; they participate in the social-security program and in unemployment compensation; a great many Indians receive old-age-assistance benefits and other benefits through the Territorial department of welfare. All this is in addition to the assistance they receive from the Federal Government under the Bureau of Indians Affairs.

As one observer pointed out, about the only aboriginal right they have lost is the one to make war between tribes and to make slaves of members of another tribe.

If these four men, Frank Peratrovich, Fred Grant, Andrew Hope, and Frank Johnson, express the feelings of the majority of their race, it is apparent that although they ask for equality and have received the right of the ballot and other rights of full citizenship, the Indians are not yet ready to take their places beside the white residents to work for the development and betterment of Alaska.

Reduction of Publication of Unnecessary Opinions

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Saturday, July 19 (legislative day of Wednesday, July 16), 1947

Mr. PEPPER. Mr. President, all the practicing lawyers of the country and the judges know the great problem which today anyone seeking to know what the case law of the country is encounters when he tries to examine the vast volume of current judicial decisions. A treatise on the subject, Some Suggestions for the Elimination or Reduction of Publication of Unnecessary Opinions, was delivered by an eminent citizen of Florida, and distinguished member of the Florida bar, Mr. Francis P. Whitehair, before the Fifth Circuit Judicial Conference held in New Orleans on May 23, 1947, which I ask to have printed in the Appendix of the RECORD. An estimate from the Government Printing Office indicates that the manuscript will exceed by three-fourths of a page the two pages allowed under the rule, and the cost of printing will be $195.25.

There being no objection, the treatise was ordered to be printed in the RECORD, as follows:

SOME SUGGESTIONS FOR THE ELIMINATION OR REDUCTION OF PUBLICATION OF UNNECESSARY OPINIONS

As long ago as 1911, Mr. Justice Brandeis in one of his infrequent interviews, said:

"I have not got as much from books as I have from tackling concrete problems. I have generally run up against a problem, and painfully tried to think it out, with a measure of success, and have then read a book and found to my surprise that some other chap was before me." [1]

And, it is to this extent that I have shared, at least, one Brandeis experience; for, in tackling the problem, "Suggestions for the Elimination or Reduction of Publication of Unnecessary Opinions," I went about it, drawing solely upon experiences gained during 25 years at the bar, in an effort to develop practical methods of accomplishing procreant results. Later, with manuscript complete, I searched for written data on the subject and, "found to my surprise that some other chap was before me." A sizable bibliography was assembled in a few days and with limited facilities. It contains over 100 proposed solutions of the problem; and yet I am certain that the reference material does not begin to cover all that has been written and discussed on the subject by judges, lawyers, professors of law, law book publishers, and others.

In fact, as I perused the stacks of material on my desk and floor, a recent occasion in the Nation's Capitol came to mind. For weeks the Senate Committee on Labor had listened to arguments urging favorable consideration of pending amendments to the existing labor laws. Day after day briefs were presented and read by executives of management or their lawyers. Despite the monotony of the proceedings, the committee room remained filled with spectators. They were willing to endure the ordeal for a bushy eyebrowed labor leader was scheduled, according to press forecasts, to be "put on the spot" before the hearings adjourned. Finally the day and hour arrived. As the labor leader took the witness chair, newsreel cameras began to grind, photographers scrambled for an advantageous position, flash bulbs illumined the room like star shells over the enemy's ship at sea, and the members of the committee in statesmanlike manner proceeded to arrange pad and pencil to jot down notes. The prominent figure, once seated, looked at Senator Taft and said: "Mr. Chairman, to epitomize, organized labor is opposed to any and all amendments. That's all I have to say; I thank you."

Let it be understood that I did not expect "ruffles and flourishes" when appearing here today, but, in view of the innumerable articles and addresses on the subject, and anticipating the worst when the arena of the forum is thrown open following this effort, would that I could say: If the court please, to epitomize, the problem has been placed in repose. However, two reasons give

[1] Brandeis, Lawyer and Judge in the Modern State, by Alpheus Mason, p. 86, quoting from Ernest Poole's interview published in the American magazine, February 1911.

me fortitude to proceed: One, the honor and privilege of being here as a delegate from my beloved State of Florida, and the other, a warning sounded by the mistaken prophecy of the Commissioner of Patents in his annual report to Congress in 1843. The Commissioner wrote:

"The advancement of the arts, from year to year, taxes our credulity, and seems to presage the arrival of that period when human improvement must end." [2]

Four years later Thomas A. Edison was born. Therefore, although many of America's eminent jurists, learned lawyers, distinguished professors, and others have contributed classical articles on and irrefutable syllogisms of the evils of publishing unnecessary opinions, I shall proceed in the hope and with a desire that the open forum to follow this prelude will result in the fifth circuit adopting an efficacious, sound, and workable formula to solve its problems.

What I shall say cannot be considered original. It is, at most, no more than an earnest attempt to lift the wheat from the chaff with due respect to all of those whose written discussions of the problems have been examined and ruled out.

In 1942 a Chicago lawyer made a study of the reported decisions, Federal and State, to date, put the figures on a graph, and projected the curve into the future to 1990. The results were as follows:

Growth in the volume of reported case law

Period	Number of decisions	Total number of decisions
1790–1840	50, 000	
1840–90	450, 000	500, 000
1890–1940	1, 250, 000	1, 750, 000
1940–90	[1] 2, 000, 000	[1] 3, 750, 000

[1] Estimated.

It is evident that by 1942 the conscience of the judiciary and the bar was awakened to the necessity of meeting the deplorable condition arising from the growing multitude of published opinions. Wider interests and deeper sympathies were openly manifest. Law reviews, bar journals, and other legal periodicals had by then published, with strong endorsement, informative, piquant, and apperceptive articles dealing with the subject. The interest has increased with such intensity that by now very few judicial conferences, bar associations, or other legal fraternities as such, have failed to focus their attention on this and kindred subjects at one time or another. As a result, there is greater unanimity of opinion among the judges and members of the legal profession, on the necessity of reducing the volume of published opinions, than the most courageous and optimistic prognosticator would have predicted, in 1942, could ever exist among them on any question. And yet, despite this brotherly adhesion—that something must be done about it—little progress has been made by many of the Federal and State courts and legislative branches of government, toward a permanent and lasting solution.

The volume of case law has become a serious burden, but, it seems, the judicial opinion factory is not to be outdone in this industrial age of mass production. Five-to-four, two-to-one, and four-to-three decisions, with a liberal assortment of dissenting opinions to give solace to the aggrieved; opinions of no value except perhaps to the litigants and their attorneys; cumulative opinions; and fact-finding opinions are a few of the models rolling off the judicial assembly line in large volume. A survey [3] contained in the reports of the American Bar Association groups the opinions, as follows: On procedural points, 48 percent; construction local statutes, 23 percent; purely fact questions, 11 percent; purely reiterative, 8 percent; and new developments, 10 percent.

The judges of the fifth circuit contributed 192 opinions for the Federal Reporters published in 1926, with an average of two and four-tenths columns of legal wisdom per opinion. The deep South's subsequent ability, even under an agrarian economy, to furnish its Federal appellate judges with the essential raw material to set the pace in the number of judicial pronouncements for their brethren having conterminous jurisdiction, is shown by the fact that in 1946 the fifth circuit contributed 420 of the 2,345 published opinions.[4] Moreover, the 1926 pattern of two and four-tenths columns per opinion was increased to four and three-tenths columns per opinion in 205 of them. Hence, the fifth circuit has managed to provide the private publishers with reams and reams of salable legal merchandise which they "avidly seize upon * * * and the book shelves are full of them." [5]

The lawbook publishers, to make certain that none of the impressive utterances, prosaic writings, legal monographs, or prolix jargon of the judiciary shall be entombed, not only prints them once, but frequently twice.[6] And, when the triple pass from lawyer to judge to book publisher is complete, the wheels of American salesmanship are, with painstaking care, set in motion. Circulars are mailed to all lawyer prospects announcing a new volume and containing convincing information on the necessity of purchasing the latest model. This service is so efficient, and apparently the coverage so broad, that in my own case I had been in the States less than 60 days, after 3 years vacation in the South Seas as a guest of Uncle Sam, when someone restored my name to the master mailing list. From that time on I have been deluged with circulars detailing the library requirements to properly practice law in a village of 8,000 souls.

With an admission to the bar and a slight prewar professional knowledge as principal assets, I recently undertook to assemble a law library. Among the requirements were: First Federal, 300 volumes, period covered 1880 to 1924; Federal, Second, 158 volumes, period covered 1924 to April 1947; Federal Supplement, 69 volumes, period covered 1932 to April 1947. When I inquired what cases are now included in these volumes, the salesman replied: "All cases are published in which an opinion is written." I shall not burden you by reading the list of all books considered necessary to round out a workable library, but you may be interested to know that it contains 3,200 volumes and requires about 530 linear feet of shelving. Placed vertically, side by side, the volumes would completely encircle the largest building in my home town, and then some. As a distinguished lawyer friend of Washington, D. C., recently wrote: "I can readily see that law reports as they are now arranged present an impossible burden to the lawyer who runs a modest office." And the struggling lawyer is asking, with acerbity, how long will the opinion factory continue to produce more and more unnecessary tools for his legal workshop?

I am not unmindful of the fact that our discussion is limited, in a sense, to the reduction or elimination of publication of unnecessary opinions of the circuit court of appeals and district courts within the fifth circuit. However, it would not be amiss to briefly summarize what the several State courts and legislatures are doing or have done to regulate the writing of opinions and subsequent publication thereof.

New Mexico and Missouri provide for a commission which determines which written opinions shall be published.

Arkansas, California, Delaware, Florida, Illinois, Iowa, Kansas, Maine, New York, Texas, and Virginia leave the matter of selection of opinions for publication to the discretion of the court from whence they issued or to the discretion of the reporter with whose choice the court must concur.

Still other States, Nebraska, Alabama, Mississippi, Utah, and Rhode Island, prescribe by statute in which cases the court must issue a written opinion and then require the publication of all written opinions.

The balance of the States require that either every opinion be published or a report of some type be published in every case.[7]

Within the compass of the fifth circuit, Alabama, Florida, Mississippi, and Texas have already taken steps to reduce or eliminate opinion writing and publication under either self-imposed limitations or authority of legislative enactment. The Texas Supreme Court blazed the trail by adopting four rules, after consideration of bench and bar, and under legislative authority, one of which is quoted, in part, as follows:

"Rule 452. Opinions to be brief: Opinions of the courts of civil appeals shall be brief as practicable. * * * In every case where application for writ of error is unqualifiedly refused or is granted, the opinion shall be ordered published; in other cases opinions shall be ordered not published when they present no question or application of any rule of law of interest or importance to the jurisprudence of the State."

The Alabama law is found in section 66, title 13, reading, in part, as follows:

"The justices of the supreme court and the judges of the court of appeals shall not be required to write opinions in cases where the decisions merely reaffirm previous decisions, or relate to questions of fact only, or when the cases decided would in their opinion serve no useful purpose as precedents."

The clerk of the Alabama Supreme Court advised, under date of May 10, that "It has been the practice of this court to report practically all of the court's opinions."

In Mississippi, the Annotated Code of 1942 provides, inter alia:

"Section 9031. The reporter shall cause such of the decisions of the supreme court as may be deemed by him or any of the judges of sufficient importance to be printed and published * * *." Section 1963. "In all cases settling important principles, in cases to be remanded, and in all cases where the judgment or decree of the court below is reversed, and in all felonies where the punish-

[5] The Multitude of Published Opinions, by Hon. Samuel H. Sibley, senior judge of the U. S. Circuit Court of Appeals for the Fifth Circuit, published in vol. 25, p. 166, Journal of the American Judicature Society, April 1942.

[6] The editorial counsel of West Publishing Co. wrote under date of May 15, 1947, "* * * the members of the bar cannot be fully served by the court if the court does not publicize all of the opinions rendered by it regardless of how long or short such opinions are * * * and we firmly believe that the number of cases appealed will be less if the court publicizes its position on each question which comes before it, either by an opinion or by references to the previous decisions serving as stare decisis." The more cases the greater the business and remunerative profit sounds axiomatic, but not so according to the editorial counsel of West Publishing Co. who wrote on May 10, 1947, "* * * it would doubtless be more profitable to the publishing house if a lesser number of cases were to be reported in that a greater number of lawyers would feel disposed to purchase."

[7] Regulation of opinion-writing and publication thereof in the several States, by State Law Section, Reference Department, Library of Congress.

ment prescribed is 10 years or more, the opinion of the supreme court shall be in writing stating the reasons upon which the decision is made; and the opinion shall be recorded by the clerk. * * *"

The official supreme court reporter, under date of May 4, commented:

"As a matter of practice, the supreme court writes an opinion in any case they so desire. * * * When the written opinion is handed down by the supreme court the judges indicate thereon those opinions that are not to be officially reported."

In Florida, where we always devise a new and different way of doing things, the members of the supreme court have informally put into effect two measures, providing:

"1. Through the clerk of the court they instructed the publisher of the Florida reports and the West Publishing Co. * * * to desist in printing per curiam orders and headnotes to them, and adopt instead the short recitation naming the parties to the appeal following by 'Supreme Court of Florida,' followed by the division of the court deciding the matter if decided by a division rather than by the court en banc, the date of the judgment, denial of the rehearing if rehearing was denied, followed by the one word 'affirmed.'" [8]

"2. The members of the court agreed that in the future opinions would be written and published only in cases that involved questions that have not previously been decided, or such cases as the facts and circumstances make it advisable that an opinion be written and published." [9]

A bill has been introduced in the Florida Legislature (which is now in regular session) to provide for the procurement, preparation, publication, etc., of the reports of the supreme court of Florida * * *. The bill has passed the house and is now pending in the Senate. It is supported by the committee on law reporting of the Florida Bar Association. The bill proposes to change the present law so that the Florida reports may be printed outside the State. At least 27 States now use West Publishing Co. to print their reports, and I am advised that considerable saving thereby accrues to the lawyers. Under Florida's existing system of publishing reports, few lawyers use them with the result, according to the clerk of the supreme court, "There has accumulated and is occupying valuable space now in the supreme court, at Tallahassee, 44,000 volumes of Florida reports published from time to time through the years for which there has been no demand."

The courts of Georgia [10] and Louisiana have not seen fit to impose limitations on publication of opinions. The Legislature of Georgia has not acted on the subject.[11]

In view of the above, it appears that the good sense of the judiciary, supported by the legislative branch in some instances, is slowly but surely ridding the State court contribution to the multiplicity of opinions of a mass of written verbiage by reducing the length of opinions for publication and eliminating altogether the publication of others. Can it be that like efforts are in effect in enough States of the Union to produce the results shown by telegraphic advices from West Publishing Co. on Monday of this week? [12] I quote: "1931 reported over 28,000 cases; 1934 reported over 27,000 cases; 1944 over 18,000 cases; 1945 and 1946 under 18,000 cases."

I am not equipped to measure accurately the contribution made by the courts to the substantial decrease in the number of reported cases, as indicated above. But, when I examined the statistics furnished by the clerk of the fifth circuit and found that there has been a steady decline in the number of cases docketed [13] with the clerk from and during the court's fiscal years [14] 1940 through 1946, inclusive, it became clear that a falling off of litigation has played a part in the decrease. This decline in reported cases and cases docketed may be caused by the substantial decrease in civil litigation in which the United States is a party. However, private cases in the Federal district courts increased about one-fourth during the fiscal year 1946, "indicating a strong trend toward a return to the prewar volume in private litigation." [15] Nevertheless, whatever reasons may be found to support or explain the decreases, it does not follow that the question under discussion should be considered with less enthusiasm.

The "Prayer for general relief" of the 1,644 [16] lawyers of Alabama, 2,706 [17] of Florida, 1,322 [18] of Mississippi, and the 7,998 [19] of Texas has been duly considered and granted by their respective State courts acting with or without legislative assistance. It remains for the Federal courts and the State courts of Georgia, with 2,620 lawyers,[20] and Louisiana with 2,034 [21] to fall in line so that the bench and bar of the fifth circuit may contribute a clear and convincing share in the whole work of judicial improvement and progress in this field.

The question of pressing moment is: What do the judges of the fifth circuit intend to do about curtailing the publication of opinions? Obviously, it is a matter within their discretion and one which, as I see it, should be squarely met, without delay. In search of information on other circuits, inquiry was made of the Director of the Administrative Office of the United States Courts who, on May 15, advised that:

"I would say that none of the 11 judicial circuits (including the District of Columbia) has adopted a rule regulating the publication of opinions of the circuit, and the matter is left to the discretion of the judges and courts concerned."

The Director also remarked: "The best thing [I know] on the subject [is] an address [22] by Circuit Judge John D. Martin, of the sixth circuit, before a judicial conference of that circuit in 1942." About 10 months prior to the publication of Mr. Justice Martin's address the American Judicature Society published an article [23] on the Multitude of Published Opinions written by the senior member of the fifth circuit—the Honorable Samuel H. Sibley. So, within the space of about 10 months we have the published view of 2 of the 57 United States circuit judges condemning the ever-increasing avalanche or multitude of published opinions. But what, if anything, has been or will be done about it? That's the question.

No one will deny that the problem is one of grave importance and the courts should proceed with caution. But, surely by now, the judges who have heretofore marked time realize that the matter deserves serious and prompt consideration. No longer can minority elements call the adoption of a program to curtail publication of judicial opinions "a bold experimentation." Moreover, no authoritative spokesman is advocating the limitation in writing opinions, or in the publication thereof, to the extent of infringement upon the indispensable prerogatives of the American judge whose duty, as well as desire, is to uphold, preserve, and maintain the sacrosanct virtues of our system of jurisprudence. And above all else, I want it understood that nothing herein proposed is intended to deprive litigants, lawyers, and the public of a well-reasoned opinion in every case which justifies one.

As I reach the point of presenting suggestions, I find myself stricken with the fear of a legal tyro, for who am I to lay before this gathering of eminent jurists a plan or program designed to cure the weaknesses of a system of opinion writing and publication, which has been in use and widely discussed for decades. However, since the only return to preemptory writ of mandamus is performance, I respectfully submit the following:

1. That the United States Court of Appeals for the Fifth Circuit invite one outstanding member of the bar from each of the six States within the circuit to undertake a collective study and investigation of all programs which have been activated, tried, and abandoned, or are being followed by United States Federal and State courts to either improve opinion writing or reduce or eliminate the publication of certain opinions, or both, and report their findings with recommendations.

2. That during the study and investigation suggested in (1) above, consideration be given to the practicability of a separate publication containing all Court of Claims, tax [24] and patent opinions and all other Federal court opinions on cases originating with administrative tribunals. The specialized nature of the present-day law practice, and the growth of administrative law in the past few years, which, according to Mr. Justice Murphy, "seems destined to be augmented even further in the future" [25] is sufficient cause to justify this consideration.

---

[9] According to the clerk of the Florida Supreme Court, the members of the court have adhered to the informal agreement, supra, and this new policy has contributed very definitely to a decrease in space of published opinions.

[10] Mr. Justice Sibley, senior judge of the U. S. Circuit Court of Appeals for the Fifth Circuit, stated that the Georgia court at one time imposed a limitation on the number of published volumes per annum. He did not know whether this rule was now in effect.

[11] Telegram from Hon. Wright Lipford, assistant attorney general of Georgia, reading: "No limitation imposed on reported court opinions."

[12] The editorial counsel wrote on May 10, 1947: "The number of opinions rendered by the Federal courts has been materially decreased * * * the cases published used as precedents have already begun to work."

[13] Fiscal years: 1940, 398 cases; 1941, 406 cases; 1942, 386 cases; 1943, 350 cases; 1944, 354 cases; 1945, 329 cases; and 1946, 302 cases. Approximately 80 percent were appeals from United States district courts; about 12 percent from tax courts; 5 percent from NLRB and balance from administrative tribunals, viz: Securities and Exchange Commission, Federal Power Commission, Administrator of Wage and Hour Division, Civil Aeronautics Authority, Federal Trade Commission, Alcohol Administrator and United States Processing Board.

[14] Fiscal year begins July 1 and ends June 30.

[15] Annual Report of the Director of the Administrative Office of the United States Courts (1946), p. 6.

[16, 17, 18, 19, 20, 21] Number of lawyers, by States, listed in Martindale-Hubbell Legal Directory, 1947 edition.

[22] "The Problems of Reducing the Volume of Published Opinions" published in condensed form in vol. 26, p. 138, et seq., of the Journal of the American Judicature Society, February 1943 issue.

[23] Published in vol. 25, p. 166, Journal of the American Judicature Society, April 1942 issue.

[24] Vol. 158 of the second series, Federal Reporter, was used to make a test. There are 37 cases reported dealing with internal revenue. Only 6 of the 37 carry headnotes having to do with any other branch of the law. To the general practitioner not interested in tax cases, 31 cases could have been eliminated from this one volume.

[25] *Oklahoma Press Publishing Co.* v. *Walling* (66 S. Ct. 494), dissenting opinion.

3. That in pursuing the study and investigation the Attorney General of the United States, the chairman of and the counsel for the United States Senate and House Committees on the Judiciary, the Director of the Administrative Offices of the United States Courts, the deans of at least six prominent American colleges of law, the president of the American Bar Association, the president of the American Judicature Society, a representative of the West Publishing Co., and a representative of the Association of American Law Libraries be invited to submit their views on the study and investigation, especially on the question of the advisability of requesting Congress to enact a law authorizing the appropriate Federal courts to promulgate rules embracing any or all features of the subject.

4. That the expense of such an undertaking be borne by the respective bar associations of the several States within the fifth circuit, to be allocated on the basis of the number of practicing lawyers in each State.

5. That the foregoing suggestions, or any similar ones, which may be adopted be submitted to the bar associations of the respective States for approval before the invitations referred to in (1) above are extended.

6. That the following excerpts taken from the published articles of Mr. Justice Sibley and Mr. Justice Martin, supra, and from the court's opinion in *Huchens* v. *State ex rel Rhamey* (116 N. E. 413), be considered by the judges of the fifth circuit, as soon as practicable, for such action toward reduction in preparation and publication of opinions as may be deemed appropriate by them.

By Mr. Justice Sibley:

"Long opinions are |not| necessary."

"Courts, * * * ought to restrain the publication of those |opinions| not of general importance."

"In cases that are affirmed, we often make memorandum judgments, without opinion. This practice could be extended with some profit, where the case presents nothing new."

By Mr. Justice Martin:

"United States district judges have the means with which to make the first contribution."

"Excellent work of all the district judges in this circuit |makes| possible the omission of formal opinions in numerous appealed cases."

"In reviewing tribunals * * * cumulative opinions should not be exacted as proof of deliberation."

"The court of appeals for this circuit has, by frequent affirmance order, already contributed * * * to reduction of the number of appellate court opinions."

"The first signpost on the highway to opinion reduction points to a simple order of affirmance, without opinion, in a case in which the findings of fact are based upon substantial evidence and the conclusions of law are correctly drawn and clearly stated, whether or not the district judge has filed a written opinion. The rare exception to total abstinence from affirming opinions might well be cases of genuine first impression, presenting real rather than pseudo novelty."

On National Labor Relations Board and other administrative agencies cases:

"Abstention from long fact opinions."

In tax-litigation cases:

"When the court of appeals agrees with the reasoning and conclusions of the board, an order of affirmance * * *."

In diversity of citizenship cases involving only the pronouncement and application of settled local law:

"Refrain from writing" |opinions|.

"Where judgments below are reversed * * * if the ground for reversal can be made crystal clear by a mere order, why write an opinion."

"When a case is reversed upon the facts, what contribution to the sum total of jurisprudence is made by lengthy factual discussion in published opinion form? A purely fact opinion, resolving no conflict of law, is of no practical or authoritative importance in the adjudication of other fact cases."

"A trend to shorter opinions would be an efficient adjunct."

From *Hutchens* v. *State ex rel. Rhamey:*

"When it clearly appears that no question is properly presented for our consideration, when the questions involved relate to some question of practice which has been decided so often that it is no longer an open question, where the questions are elementary and not of public interest or of sufficient importance to justify the preparation and publication of an opinion * * * we shall in the future, as we have in the past, exercise our discretion in the matter of writing an opinion * * *."

7. That the judges of the fifth circuit court define what is considered by them to be "unnecessary opinions"[26] as regards publication and determine if the lawbook publishers will consent to desist from publishing same so designated.

Suggestions contained in paragraphs Nos. 6 and 7 are offered as a means of affording immediate relief. Suggestions contained in paragraphs Nos. 1 through 5, inclusive, require time and expense in performance. They may for that reason be ruled out. If so, and especially in view of Mr. Justice Sibley's statement: "I doubt if, without the aid of law, this activity (referring to wholesale publication of opinions by private publishers) can be restrained," in his article on The Multitude of Published Opinions, I suggest that the problem be presented to the United States Senate, of the Eightieth Congress, in the form of a proposed resolution to create a subcommittee of the Committee on the Judiciary with ample authority to make a general study along the lines above suggested.

Drastic changes must be made in the present methods of deciding and reporting cases, and as I have said before, a strong unanimity of opinion to this effect prevails among bench and bar. Moreover, I believe that the West Publishing Co. and other private publishers will cooperate with any plan which is adopted by and made clear to be the wish of the court. There are dissenters to be sure; especially among the lawyers who believe in appealing all cases, prompted, I suppose by the encouraging percentage of reversals in their favor. These litigators will never approve any plan. Litigating for the sake of litigating, is their stock in trade. However, these litigators are in infinitesimal minority who will have an abundance of precedents upon which to appeal should the 50 American courts of last resort and the numerous intermediate—opinion writing—courts reduce their output 75 percent.

Sir Francis Bacon sounded a warning by assuming the cloak of the prophet nearly 330 years ago, when as Lord Chancelor of England he recommended to King James I:

"The reducing or perfecting of the course or the corps of the common law" by omitting from the reports all "cases wherein there is solemnly and long debated matter whereof there is now no question at all"; and, cases "merely of iteration and repetition."

How many of our judges intend to continue to add opinions to the printed mass which are of little or no value to the body of the law? Must the myriad of published opinions continue to grow at the rate of several thousand each year simply because certain judges and courts refuse to exercise the discretion resting in them? If these judges and courts answer in the affirmative, I will run the chance of being classed among the puerile by predicting that their action or lack of it will exacerbate the issue to the point of resolving it into an acrimonious controversy.

Our prayer for the solution of a problem centuries old is hereby renewed.

[26] Editorial counsel of West Publishing Co. writes under date of May 10, 1947, "* * * it would be difficult to determine 'the unnecessary opinions,' and to secure a unanimous decision as to which were the unnecessary opinions."

Two Years of the United Nations

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Monday, July 21 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Two Years of the UN," published in the Atlanta Constitution of June 26, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO YEARS OF THE UN

It was 2 years ago today that the peoples of the world breathed a little prayer that the infant United Nations Organization, born that day, would be truly an instrument for preserving peace.

There were ponderous speeches by statesmen and demagogs alike hailing the United Nations into being. It would be, they promised, unlike the League of Nations, which died a lingering death from sheer neglect and malnutrition. The United Nations would grow and in a short time became strong enough to handle any threatening situation that might develop anywhere in the world.

Among the United Nations' strongest points, they said, was control by the great powers, all of whom avowedly wanted peace and any of whom were powerful enough to deal with disturbances between the smaller nations.

It has been, as we said, 2 years since that day. And as yet the United Nations has not amounted to much. It too often has been merely a sounding board for the grievances, real or fancied, of the individual powers. This is not to say the UN has failed; it is too early to say that. But it has fumbled fearfully and it has not as yet the confiedence of the peoples of the world.

Even so, there can be no denying that the United Nations contains the necessary machinery for preserving world peace as well as for maintaining harmonious relations among the sovereign powers. The UN Charter is well conceived and is utterly realistic. Much criticism has been directed against the veto power given any of the Big Five, but the framers of the Charter well understood that without the unreserved cooperation of the major powers any world organization would be doomed. All the machinery is there; it simply has not been functioning properly.

What is it, then, that is lacking? Why has the United Nations largely been ineffectual? Can the entire blame be placed on Russia, whose lip service to peace is interspersed by one power grab after another? Could the United States have acted differently and achieved a greater measure of cooperation? Have Britain, France, and China been guilty of selfish aims?

Any of these questions, we believe, would be likely to evoke answers which, however

true, would be entirely extraneous. For underlying all deliberations of the UN has been deep suspicion and distrust, particularly between Russia and the United States.

And until that suspicion and distrust are replaced with understanding and confidence, the United Nations cannot amount to much. Since understanding and confidence are built on knowledge and familiarity it behooves this country, and Russia as well, to promote any measures which will acquaint the peoples of the two countries with the problems of the other. This is among the reasons we have supported vigorously the Voice of America broadcasts. And if we thought our influence would be felt, we would just as vigorously clamor for the Soviet to lift the iron curtain and let the peoples of the world see.

Conservation Silliness

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Monday, July 21 (legislative day of Wednesday, July 16), 1947

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Conservation Silliness," published in the Farmers Guild News for June-July, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONSERVATION SILLINESS

Residents of Indiana have just undergone a pressure campaign by one of its metropolitan newspapers conducted in conjunction with its land-grant college, to stop soil erosion and save the soil of the old Hoosier State. It sounded good on paper, and seemed to serve a lofty purpose as thousands of high school students were persuaded to take time from useful projects and submit an essay on conserving the soil. Like a lot of other claptrap that proceeds from American universities, this effort lulled the populace into thinking that something was being done to conserve crop land and assure urban areas of an unfailing supply of cheap food.

In common with most college thinking, the campaign dealt with effects and not with fundamental causes. By no possible process of intellection could the directors of the campaign connect soil erosion with the farm-price problem. If the overhead expense on a farm is for example $2,000 a year, and cash corn is selling at $1 per bushel, then it is obvious that this particular farm must market the equivalent of 2,000 bushels of corn a year or become insolvent. If corn drops in price to 50 cents per bushel then the farm in question must market 4,000 bushels, and a 25-cent-bushel price demands the marketing of 8,000 bushels. In either of the latter instances erosive soil must be put to the plow to make ends meet and to give the farmer purchasing power over his production costs.

Why should any farmer worthy of the name deliberately set out to destroy his farm? Is it not his very nature to conserve? Is it not economic necessity that forces soil depletion? An Illinois clodhopper who "figgers" things out on the back 40, recently wrote us as follows:

"The University of Illinois developed the McLean county system of swine sanitation so I could raise 8 pigs per litter instead of 6, and the Government killed 6,000,000 little pigs. The university developed a new variety of wheat to produce 5 bushels more per acre than the then current variety and the Government fined me for growing too much wheat. Then, while I was being told that we had overproduction, the Government offered me free limestone and phosphate to stimulate production. The State Department cut farm tariffs to encourage importation of competing farm products so that for every acre I took out of production we imported more than an acre of foreign farm products. In exchange for my vote the Government offers me crop insurance, mortgage insurance, school lunches to the township kids to consume our surplus, loans to boost my prices, and a cock-eyed loan to my boy who came back from the war. Now I will be offered a soil-conservation payment to conserve my soil. Why does not the Government fix the factory roof for the industrialist that neglects his own property?"

All of the Indiana high school students together could not state the issue more succinctly. It all adds up to the fact that the soil-conservation campaign is a lot of silliness, launched to prove that some bureaucrat is on the job protecting the public interest. It never occurs to most people that our annual production of grains had stood at 7,500,000,000 bushels for many years in spite of bureaucratic tub-thumping about soil erosion.

Much of the responsibility for the complete misinterpretation of conditions and ignoring of fundamentals lies at the doors of American universities. The mind of the average faculty member is a cloistered rut turning out thousands of specialized thinkers highly informed about one subject, but wholly unable to coordinate that subject to the problems of society as a whole. A surefire method of ruining the Nation was demonstrated by the rule of theoretical lawyers in the OPA during the war. An alternative would be to choose an orthodox economist from any American university.

It is distressing to note the waste of billions of dollars to operate our universities during this generation. It is more distressing to note that soil conservation has come to mean merely the prevention of the erosion of dirt and not a challenge to reason from effect back to cause. The one question that could be posed to cover the situation can be simply stated: In this Nation is there a single university with sufficient moral courage to study the fundamental needs of agriculture and then publish its findings?

Time and Experience Will Prove the Benefits of or Defects in the Labor-Management Relations Bill of 1947

REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. McDONOUGH. Mr. Speaker, time and experience are two of man's greatest teachers. Time heals many wounds, changes many prejudices. Experience proves many presumed fallacies to be true, sheds light and truth on doubt and suspicion.

Time and experience will prove the true value of the labor bill recently passed by the Congress over the President's veto. Time and experience will prove whether the judgment of more than two-thirds of the House and the Senate is better and sounder in the public interest than the judgment of the President who disagreed by his veto with this large majority of both Houses of Congress.

Charges of prejudice, acrimony, discrimination, and even hatred of labor unions against those who voted for this bill is false and not founded on fact. Many of those who voted for this bill have been loyal supporters of labor for years. Many who voted for this bill voted against the Case bill last year.

It was President Truman himself who in May of last year proposed the "work or fight" labor bill which was far more restrictive and penalizing than the present labor bill, and yet he vetoed the labor-management relations bill of 1947.

I would much prefer to see labor and management settle their differences, negotiate their contracts and determine wages, working conditions, welfare funds and retirement plans with the very least, or if possible, without the necessity of any, Federal legislation at all rather than to find it necessary to pass legislation to regulate these relations between labor and management.

I believe with Thomas Jefferson that "A Nation is governed best that is governed least." But, of course, this is an ideal and presumes that all men will be fair and equitable with each other. Unfortunately this has not been true as between labor and management, and the result is the necessity of Federal laws to temporize and equalize the sharp differences that have not only affected labor and management, but especially the public at large who have become the unfortunate victims of these differences, and, in many instances, suffered because of the economic upsets resulting from the differences and misunderstandings between labor and management.

WILLING TO HELP LABOR

During the years I have been in public office since 1933, I have always had and still have a sympathetic interest in and a willingness to help labor solve its problems. My voting record in Congress and as a Los Angeles County official will prove this.

I have on many occasions voted on the side of labor, bringing criticism upon myself and sometimes jeopardizing my official position. My vote for the present labor bill and to override the President's veto was not cast because I have or have had any prejudice, acrimony, or hatred of labor unions. On the contrary my vote was cast for the bill because I believed it would help clear up many of the differences between labor and management as well as bring about more freedom and independence to the rank and file members of labor unions. If I had not believed that, I would have voted against the bill and to sustain the President's veto.

I was privileged to vote as I pleased for the best interests of my constituents and

of the Nation. I was under no obligation to any group of labor or management, or to any party obligation. I voted my convictions as I believed them, just as I voted my convictions when I opposed the Case bill and sustained the President's veto of it last year.

LABOR'S PROBLEMS ARE SOCIAL AND ECONOMIC

Labor's problems have always been, in my opinion, economic and social. I have never viewed them as political. I believe labor's problems are economic because they have a direct and great bearing upon the economic life of the community and the Nation. They affect the production of all the commodities and services that enter into the life of the Nation. They affect the cost and price of these commodities and services and their distribution and thereby affect the cost of living and comfort and well-being of all.

Labor can make the cost and price of these commodities and services high or low. They can make these things hard or easy to get and can bring great suffering or comfort to the people of the Nation. This is great power and carries with it great responsibility, greater than the average wage earner fully realizes when he blindly follows labor leadership which often uses him to promote its own ambitious political position at the expense of the rank and file of labor.

Labor's problems are social because the wage earner is entitled to sufficient wages to properly provide food, clothing, and shelter for his family, for recreation and education of his children, and retirement in old age. Labor is entitled to safe and sanitary working conditions, and to be free from the worry and fear of his position in the social and economic life of his community.

Without sufficient wages for food, clothing, and shelter, the wage earner's family suffers and becomes a social responsibility of the State and county. Without sufficient wages to give proper recreation and education to his family, the health and future of his children are adversely affected, which also affects the social conditions of the State and county.

Safe and sanitary working conditions are necessary to prevent injury and protect the health of the wage earner as well as an adequate old age retirement to give the wage earner the dignity and self-respect he is entitled to as an American citizen, and to remove the worry of becoming a charge upon the State or the county.

Labor's problems, therefore, enter into all phases of community life and are, in my opinion, of such wide scope and importance that they become greater than partisan politics and should never be tied to either of the major political parties but should be treated strictly on a nonpartisan basis. Labor itself should never for its own future benefit adhere or identify itself with one party, but should look to both parties to help it work out its problems.

CONGRESS WANTS TO HELP LABOR

I believe all Members of Congress in both parties want to help labor solve its problems with management. I sincerely believe that desire is based on the hope for industrial peace and security that will come with the solution of these problems.

I am confident that a majority of the Members of Congress would gladly support amendments to the present labor bill that need correction. No bill was ever written that was entirely perfect. I will be glad to lend my support to improving this bill as it is found necessary.

Time and experience will bring out its benefits and defects. Labor, by its negative attitude toward any legislation at all, lost an opportunity to write into this bill the kind of legislation that it knew was necessary.

Labor can, by viewing this bill objectively, reduce the misunderstanding and ill feeling to a minimum. On the other hand, labor can increase the ill feeling and misunderstanding by prejudice and misinformation.

Time and experience will give labor a golden opportunity to enhance its position in the mind of the public and to rise to a position of high respect and dignity to which it is entitled, and in fact needs for its own future. If labor does not recognize this opportunity, it will bring criticism and ill-repute upon itself by bickering, confusion, and misinformation on what the bill will do.

This bill was not designed to kill or injure labor unions, and time and experience will prove this.

WHAT DOES LABOR WANT?

Does labor want communism to remain in the unions to destroy them from within, or does it want communism removed from its ranks as this bill provides?

Does labor want jurisdictional strikes, tearing the union apart from within to the detriment of the workers and the public alike, or does labor want an end to these senseless conflicts which arouse public wrath and indignation, which this bill guarantees?

Does labor want coercion of political beliefs and union assessments which force a union member to contribute to the support of a candidate he does not approve, and in fact opposes, or does labor want individual political freedom which this bill guarantees?

Does labor, a minority group among many minority groups which make up our great Nation, seek to dominate all others and impose its will upon the Nation, or is it willing to cooperate with the will of the majority of citizens?

Does labor expect all other groups to be held responsible for their acts, to deal fairly and without prejudice, while labor refuses to assume its responsibility, or is labor willing to accept its proper place in the Nation and accept the same responsibility for its actions which it demands from others?

LABOR LOYAL TO THE NATION

I believe that American labor is loyal and willing to accept its responsibilities to the Nation. I know that, given a chance, it will recognize the true value of the labor bill and accept its benefits and its responsibilities.

If any phase of the bill proves restrictive or penalizing I know it will find its representatives in Congress more than willing to enact corrective amendments.

What Air Transportation Means to National Defense

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. C. R. Smith, chairman of the board of American Airlines, before the Western Regional Air Power Conference of the American Legion at Bakersfield, Calif., June 14, 1947:

WHAT AIR TRANSPORT MEANS TO NATIONAL DEFENSE

Every man within the range of my voice has undoubtedly served in the armed forces of the United States, or has worked in support of those forces. And the women of this country not only have served but they have worked and sacrificed in the same national emergency. All Americans, I am sure, would be willing to serve again if the progress and peace of our country were threatened. None of us are looking for another war. On the contrary, we would like reasonable assurance that we, and our sons and our daughters, will not know the tragedy of battlefields again

But our experience has made us practical; we are neither naive nor uninformed. There is no indication that human nature has changed, or will change in the visible future, so that we can be assured the threat of war has been removed forever from the horizon. We must realize, and we do realize, that war can come again. Therefore, we must not only be prepared for that eventuality but we must be prepared to win. Preparation is more than a physical thing; it is also a national mental discipline.

The will to win is inherent in the American people. However, at this time an old and dangerous impression is abroad in the land. I speak of the national conversational conviction that the United States cannot lose a war. This fallacious reasoning is rooted in just one fact, the fact that we have never lost a war. From that fact, the self-satisfying conclusion has been reached that we never will lose a war. This is shallow thinking and is a dangerous impediment to sensible planning on problems of our national security.

It is tempting for the average citizen to look back and conclude "there was never any doubt that we would win the war." That shows how quickly the Nation can forget the dark days after Pearl Harbor, and the doubtful days of the north African campaign. There were many times; as we were belatedly trying to gear our national production to war power, when the going was tough and the outlook was grim. We faced the possibility that, for the first time in American history, we could lose a war. It took stout hearts and strong minds in those days. It took an unbeatable determination to win. There are too many battle records of doubtful results and marginal victories to justify either complacency or comfort. Those of us who served in the Army, the Navy, or in the air must not be complacent or comfortable about the future.

It is our responsibility to guard against this insidious attitude of senseless self-sufficiency, this willingness to endanger the national existence, by putting off until some distant tomorrow the obligation of preparing our Nation against a threat of war which can come, either in this or in succeeding generations. Our own lives, and the lives of our

families and of our country, are too precious a possession to be risked in the intoxication of a nebulous whimsy.

Let us turn back a few pages in history and see what the words "preparedness" and "mobility" could have meant not long ago. A very small, highly mobile military force, ready to move instantly, could have prevented Hitler's return to the Rhineland. A somewhat larger, similar force, could have prevented the annexation of Austria and the invasion of Czechoslovakia. Had Hitler been stopped in those places, the holocaust of World War II might have been ended before it began. The general public does not realize the time necessary for planning and production of war materials. It is quite possible that very few people know that no airplane developed after Pearl Harbor fought during the entire war. Our airplanes spearheaded the winning of the last war simply because, by freak circumstances, we had months and years to get the massive power of the American aircraft industry into production, and we overwhelmed the enemy with numbers. These facts should be pondered deeply by those unctuous and smug blatherskites who spread the narcotic nonsense that the Nation can rise miraculously and immediately against any threat that confronts it.

That is exactly the state of mind that any potential enemy would have us hold. We all should know, since that devastating, historic day of Hiroshima, that the tempo and impact of modern warfare has changed; that the concept of future warfare has been completely revolutionized. There will not be time again to prepare after we have been attacked. We must be ready to strike with blinding and victorious strength, and strike instantaneously.

As General Eisenhower recently said, "The decision in the future conflict would be determined by our ability to act and react in the first 60 days, rather than the twelfth, eighteen, or twenty-fourth month, as in past wars." It is not necessary to be a military expert to visualize our position in this uncertain world. Military science is not one of my capabilities, and I have an understandable impatience with anybody who, solely because he or she has served in the armed forces, becomes an armchair strategist, and is ready, "at the drop of a hat," to view with alarm. However, all of us have gained much useful experience in the recent war, and we should utilize that experience in planning for the future safety of our Nation.

One thing we learned in the armed forces was that each should do the job for which he or she was best equipped, by ability, specialization, and training. And if we are to be of real value to national defense, each of us should stick to the thing for which we have been trained. It happens that my specialty is air transportation, and I began that specialty in 1928, including the years spent in military air transportation. Therefore, I would like to discuss with you some of the requirements for the maintenance of America's premier position as the greatest air power the world has ever known.

Air transportation is a most vital element of that air power. The Greeks had a word for it—logistics or supply. Air power cannot exist without air logistics. That theory has become a fact. The definition of air power was not clear to all of us at the beginning of the recent war, but experience, and hundreds of millions of miles of it, has dispelled most of the uncertainties. We have now a definition of national air power which is undisputed by informed people, and we have also learned that we must maintain the peace power for America by the maintenance of its air power.

The war has taught us that air power is a total of three elements:

1. A striking element of the combat forces.

2. The productive capacity, including research, training, development, and production of the manufacturing establishments.

3. Air transportation to guarantee the necessary modern mobility for transport and supply.

You cannot have air power unless you have these three elements each in adequate capacity and each of proven capability. Other nations of the world had some of these three elements in the recent war, in varying degrees of capability and strength, but only the United States had adequate, balanced air power, and air power was an American contribution to the side which won the war—our side.

The first of the three elements, striking power, is an element which depreciates rapidly in effectiveness, unless it is continually modernized and sustained. The science of aerodynamics moves forward with lengthening strides, and it has nothing except contempt for those who willingly lag behind. We have recently been idly adding numbers, proving by sheer numerical strength that American air power is as capable today as it was when it dominated the skies of Europe and the Pacific. But many of the aircraft which we include in our totals are aircraft of yesterday, aircraft of the war of 1944 and '45. But our job is to provide air power for the war of the future, not the war of the past. The P–51, which streaked past you in the war of 1944, seems slow and cumbersome by the standards of 1947. There is an urgent requirement that we modernize our air forces, and that we continually keep them modern.

All of that requires the will to keep ahead, and the will to provide funds with which we can keep ahead. Our experience indicates that funds wisely expended in timely preparation will save lives, and greater sums, if and when the day of requirement arrives. It is in the interest of the national economy, as well as the national security, that we keep ahead in research, development, production, and utilization.

The Congress is now considering the national appropriations. I believe that they are convinced that the American people will pay, and pay with willingness, for a program sensibly designed to keep American air power strong. If that be so, the Congress will appropriate sums sufficient to assure American air power, and the people of the United States will say well done. The details of the requirement for an adequate striking force we shall leave to the good judgment of our military and naval airmen and to the Members of the Congress charged with providing for the national security. The Congress should be aware, and is, that the American people believe in air power, believe in its utility and its requirement, believe that they are entitled to and shall have the best, and are willing to pay for it. On that basis, I am sure that the Congress will provide for the reasonable requirements of American air power.

The second member of the team of air power, productive capacity, has been and is having difficulty. Three years ago our airplane factories were capable of producing 10,000 airplanes a month, and constituted one of our great American industries. Yet, at the beginning of the recent war, airplanes, of all types, were so scarce that the commanding officers could recognize each airplane by serial number. We had too little productive capacity at the beginning of the war; we ended the war with greater capacity than the peacetime economy could or should support. It is obvious that we must maintain a sensible structure of aircraft productive capacity, both in being and in reserve. But we cannot support in peacetime all factories which gained the technique of wartime production. We must, therefore, choose the most capable of the group, and we must have a program which will insure their continued maintenance, without doubt and without reservation.

The aircraft manufacturers have been expending their resources, awaiting the time when a formal program for the maintenance of aircraft productive capacity, as a part of national air power, could be decided, announced and made effective. This program cannot be longer delayed, for the resources of the manufacturers are limited and they cannot maintain operation indefinitely. I am hopeful, as you are, that as soon as the measure of available appropriations is known, both the Army and the Navy will announce to the manufacturers the types they will require, the numbers they will require, the time schedule of production and the factories they will depend upon. The number of factories, establishments, or companies should be, must be, limited to those of superior capability, and the number must be a number which we can and will undertake to support in reasonable volume. You cannot win a war without air power and you cannot have air power without productive capacity, and you cannot have productive capacity in time to do you any good unless you maintain in readiness a capable nucleus from which to expand.

Air transportation was not an accredited member of the air power team at the beginning of the recent war. I doubt that even the professional military airman realized its inherent capabilities, or realized the need for transportation mobility in a war which covered a substantial proportion of the area of the world. The mobility which we required could be supplied only by the transport airplane and by the end of the war the Army's Air Transport Command, its Troop Carrier Commands, and the Naval Air Transport Service had gained full admission to the team of air power, on the basis of the requirement for air transportation and on the basis of capability in supplying it.

There is no need to go into the details of how Kenney used the transport airplane to supply the troops of MacArthur, how Naval Air Transport Service supplied the distant bases of the Naval Forces, how the Troop Carrier Command and the theater transport units supplied the mighty march of Patton's troops. There is temptation to live over again the days of the "Hump" operation, between India and China, where in any ordinary day you could find a thousand transport flights going over the Himalayas to keep China in the war. All of that is history, glorious history, but well known to you. You do not require the refreshment of detail to reinforce your conclusion, and the conclusion of the public, that you do not have air power unless you have air transportation capacity. But here, in reminiscing over the days of several years ago, we are discussing the air transportation requirements of a war which has been concluded. Our real job is to make sure that air transportation capacity is hereafter available in sufficient quantity and is of sufficient capability, to warrant the conclusion that we have adequate American air power.

We began the war with less than 100 military transports and we ended the war with more than 10,000. In between, there were days and weeks and months of heartbreaking insufficiency. We used the time available to us well, but that much time will not again be available; we must, next time, be better prepared.

In forming plans to maintain the strength of American air power we readily discover, as we did in the recent war, that there is an essential element of difference between the composition of the "striking" element, and the "air transport" element. The striking element, for reasons which are obvious, is composed of aircraft, airmen, and air facilities assigned to the military and naval services, or else assigned to the reserve strength of those establishments. But, the air transport element of air power is, and will continue to be, for reasons which we will discuss, composed of the strength in air transportation capacity available both in the military, naval, and civilian establishments.

On the basis that we employed 10,000 transport aircraft in the recent war, it seems advantageous to plan that we shall have on hand, ready for employment, something approximating half that strength. We may well require in the next war a transport strength of more than 10,000 planes, but some of the total requirement may be produced during the war, provided we have before the war a number sufficient to give us great relative and immediate strength.

It is idle to believe that we can justify in the armed services a fleet of 5,000 transport aircraft, for there is no way that number can be usefully employed in the services during time of peace, and the national economy will not permit them to be maintained in idleness or in nonproductive storage. For that reason, we must plan that the services will continue to have available a number sufficient for its peacetime military requirement, and a nucleus transport corps capable of transport operation. But the great bulk of the transport which we should maintain "ready" must be numbered in the civilian air transport organizations; the air lines and others engaged for livelihood in air transportation. In that way, and in that way only, can a substantial proportion of our air power transport fleet be maintained on basis of minimum drain upon the national Treasury, for most of the fleet can thereby be maintained in self-supporting service.

We, in air transportation, are making progress, substantial progress, in building up our fleets. Already the transportation capacity of the civilian transport fleet is many times that of prewar days. But, in spite of a remarkable expansion, the civilian fleet of transport aircraft of appropriate types numbers somewhere in the neighborhood of 1,000 airplanes. Add to that the several hundred still available in the Army and Navy transport fleets, and you still have a number very inadequate for the potential airpower requirements for air transportation.

This part of the job, like that of maintaining our productive capacity, requires better planning and sounder augmentation. If we decide that 5,000 transports should be available, and that as many of them as is possible should be in self-supporting service, then new and different methods of employing transport aircraft in our national transportation system must be devised. The only alternative to employment of the fleet in civilian service is to provide the services with the fleet which the national interest requires. That, everyone agrees, is the expensive way of doing the job. The over-all cost to the public is lowered by a plan to employ the fleet in civilian service. The planes would be capable of performing a civilian service of transportation and communication, and always available to the armed services in case of necessity.

We in civilian air transportation recognize that we contribute to national air power by augmentation of our fleets, and the fact that the air-carrier fleets are being augmented and modernized is proof of that fact. But, in the national interest, the rate of augmentation is too slow. The country requires a program, a sound, sensible, definitive program for the provision of the air-transport element of national air power, and until we have such program we will not be making the progress which air power reasonably requires.

The Army and the Navy should, by joint action, determine:

1 What air-transportation capacity is required in order to insure that the air-transport element of natjonal air power shall have adequate strength?

2. How many airplanes, and what types c airplanes, are necessary in order to fulfill that requirement?

3. How many of those airplanes will be assigned directly to the services, and how many will the Nation depend upon the air carriers to provide?

4. What is the time element, the schedule, for the provision of that number of transport aircraft?

When this decision has been made, a national program should be drawn up by the Army and Navy, the Civil Aeronautics Board, the Civil Aeronautics Administration, the Department of Commerce, and the Post Office Department. These Government agencies, working closely with the air carriers, should enforce the plan which will insure that the number of aircraft to be provided from civilian sources will be provided, at times scheduled for their provision, and under the arrangements made for their continued maintenance and operation. Frankly, everyone agrees we must have air power, and that we must have strong air transportation, as an essential element of national air power, but the industry has not yet been told what strength is reasonably required, and no program has been proposed that will insure its provision.

We made plans for air transportation, with readiness during the war, for we had to provide air transportation quickly in order to win the war, but plans for the requirements of the future have lost the tempo of 1944, and we either need again to get going or we need to confess that we have no appropriate program for the air-transport element of air power. Many useful programs to expand the usefulness of civilian air transport have been suggested, such as transporting first-class mail by air, transportation of air parcel post, and increase in air-freight schedules, but the rate of progress in putting those programs into effect is too slow for national comfort.

There are other individual elements in the broad element of air transportation which require our continuing attention.

The basic requirement for a national system of Federal airways is the potential defense of the United States. In peacetime it is the civilian operator, including the private flyer, who makes most extensive utilization of the Federal airways. But in wartime the ferry flights of military aircraft take first precedence, and the Federal airways are essential for that purpose. If we come, at some future time, to the requirement of defending the country on our own soil air power will be our first line of defense, and the Federal airways will give our aircraft mobility, the ability to fly day or night, and in any kind of weather. Like all other elements of national air power, the backbone of requirement of Federal airways lies in its potential contribution to national defense. For that reason the airways must be maintained on modern basis, always equipped with devices of latest type and effectiveness. And in the maintenance of our airways the civilian operators, Federal Government, and the military services have mutual responsibility.

Our national airport system also is a basic necessity for national defense and for adequate air power. The same detailed interest must be taken in the provision of adequate airports during peacetime as was necessary during the days of the war. Sufficient funds must continue to be available for the construction and maintenance of modern airports on the basis, and on this basis alone, if necessary, that a modern airport system is essential for national defense requirements. Reasons for the airport system, beyond the necessities for civil air transportation, are obvious, especially for air-forces training and for airborne-troop training. A modern network of airways and airports throughout the Nation is a fundamental requirement for American preparedness and security.

I have outlined some major constructive aspects of a national program that seems to me an integral part of the purpose of our meeting. It is of primary importance for each of us to make sure that our constructive efforts are not offset by negative efforts coming from well-meaning but uninformed persons or organizations. I cannot overemphasize the necessity that we work closely with State and municipal departments on behalf of the national objective. Your motto is "air power is peace power." And, national air power can only be maintained through a sound national policy.

With that policy in being, the States and municipalities and the individuals should hold the national welfare above local and personal considerations. Although the airplane has manifold local uses, it is a most important instrument of national interest. I urge that the State and civic bodies consider carefully any legislation or regulation that might restrict the fullest development and use of this transport instrument. An airplane, even at the present transport speeds of 300 miles per hour, has difficulty in recognizing State boundaries. At military attack speeds of 600 miles per hour, our Nation separates the Atlantic and the Pacific by a scant 4 hours.

Failure to recognize the essential attributes of the airplane, many States, even counties and municipalities, have ventured toward the regulation of the interstate air commerce. Nothing will so quickly or effectively handicap the capacities of the airplane, or cripple its contribution to national air power. The air age requires air-age education. I think those of you who have seen the actual impact of air power have a definite obligation to carry that message to State and municipal officials so that this country may avoid the pitfalls of State and municipal regulations which duplicate or approximate those which should be left in the hands of the Federal Government. By onerous State taxation and regulation, we nearly destroyed the utility of highway transportation for a long time. And that was a form of transportation averaging less than 50-miles-per-hour speed. Imagine the confusion, needless and expensive, involved in operating airplanes according to the individual regulations of each State over which the airplane passes. One State, for example, has suggested that airplanes using the air space over the State, and not even landing in the State, be taxed. That type of legislation is obviously dangerous to any conception of efficient interstate air transportation.

The amazing miscellany of proposed and pending legislation and regulation throughout the States and municipalities of the country is a jigsaw puzzle without an answer. I believe that these must be coordinated into a program that will permit air transportation to operate effectively for the benefit of the Nation. We have obligations to pay taxes in each of the States in which we operate, but we should pay taxes on the same basis as comparable business institutions for the privilege of that operation. Taxation should be governed by broad principles and no taxes should be assessed that duplicate charges already levied against the taxpayer in some other form. We have an obligation, also, to observe the regulations of the States we serve, but no State regulation should handicap the air carrier in the performance of its national functions. I would request you, ladies and gentlemen of the Legion, as well as all citizens, to think of air transportation as an essential element of the national air power, and air power as the most vital element of this country's security.

You, as citizens, and citizens with experience in the defense of your country, should contribute your strength and influence to a national program which will:

1. Insure that the striking force is maintained in adequate strength, with aircraft of latest type and greatest capability. Lend your support to the Congress in insuring appropriations for that purpose. Support the Congress by maintaining an informed public at home, a public which knows why we require air power and how we can best maintain air power.

2. Insist upon a program which will assure that the production-capacity element of national air power is maintained, under a formal sensible program and with adequate appropriations for its sustenance.

3. Insist that the third element of air power, air transportation, shall be given due recognition in the national plan. That the Government decide and announce what is required, and produce a plan to provide it.

In conclusion, I would ask that you undertake a most important mission. Urge upon your State legislators that the basic national reason for air transportation is, in wartime, to become an integral part of air power, and in peacetime, to provide transportation and communications between the communities of the Nation. Emphasize to the States and the municipalities that their requirements from air transportation must not sap its strength by restrictive legislation and taxation. Because air transportation is a part of our everyday lives, we are likely to overlook its tremendous potentiality in the national-defense program. That is why the significance of our air-transport system should be constantly in the minds of legislative and civic officials. When jet fighters flash over the sky and the mighty bombers thunder on their missions, remember that these are helpless without the thousands of transports necessary to maintain and supply the combat forces. Neither could we have airborne armies, nor flying hospital ships, nor many other essential movements of modern war without air transports.

I would like to leave these thoughts with you as you consider national defense. The United States lives in a sorely troubled world. We are to a great degree the guardians of the future democratic way of life. The American way is no high-sounding phrase. It is a fact visible in the faces of your families, as well as in the privileges of our laws. The air power of the United States is the greatest guarantee of world peace. That is why you must unceasingly remember and work unceasingly under the words of your motto, because it is an enduring truth that air power is peace power.

Importing Voters

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. REEVES. Mr. Speaker, current discussion of a resolution pending in the other body with respect to questionable elections and their investigation prompts me to include in the RECORD an editorial which appeared in the Chicago Tribune on April 29, 1947. It is a reminder that elections are ofttimes influenced by artifices more subtle than the brazen theft and miscount of ballots. The editorial to which I refer reads as follows:

THE PENDERGAST MACHINE IMPORTS SOME VOTES

The Bureau of Internal Revenue has announced that its processing division will move from the Bronx to Kansas City by July 1. Paving Blocks Flynn apparently couldn't stand up against the three Missouri stalwarts, Messrs. Truman, Snyder, and Hannegan.

The location of the bureau in Kansas City should prove something of a boon to the revived Pendergast machine. Some 40 small fry of that organization have been indicted for vote-fraud activities in the primary election purge last spring of Congressman Slaughter by the Pendergast candidate, Enos Axtell. (Axtell fell by the wayside in November.) If the Pendergast boys can't steal votes any more, there is no law to stop them from importing them, in the form of loyal New Deal pay rollers.

The processing division verifies individual income-tax returns against employers' reports of taxes withheld from wages. "Experience has proved," says the bureau's publicity release, "that a more central location is necessary." Inasmuch as the division handles its business by mail, it probably could do just as good a job in Key West, Fla., or Fairbanks, Alaska, as in either the Bronx or Kansas City.

The decentralization of Government bureaus is sound in principle. Washington would be a healthier place politically if more of the detailed work of government were done throughout the country, where the pay rollers would be in the minority and the taxpayers could keep an eye on them. If this were done, Members of Congress wouldn't be under such tremendous pressure from the pay rollers, and their landlords, to keep unneeded people in Government employ.

On the other hand, the New Deal has frequently used decentralization as an excuse to colonize the Democratic voters in politically critical States. The suggestion is sometimes made that Government employees be required, in return for the protections of an honest Federal civil-service system, to surrender their franchise in congressional and Presidential elections. Much can be said against this proposal, but if it were adopted decentralization could proceed on the basis of efficiency without the temptation to use it to carry doubtful States.

Antitrust Laws Must Be Strengthened

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include an address which I delivered on Station WWDC in Washington, D. C., on Saturday July 19, 1947. This program was sponsored by the National Federation of Small Business, Inc. It is one of a series of programs sponsored by this Small Business Association, in which the things that must be done to assist small businesses are discussed. The address is as follows:

Ladies and gentlemen, the National Federation of Small Business, Inc., is devoted to preserving the traditional American system of free enterprise and of helping create an economy in which small businesses have a chance to grow and prosper. In carrying out this purpose, the organization has properly decided that the prevention of monopolies is absolutely necessary. I am glad to have a part in this program because I believe in the purposes and goals of the National Federation of Small Business and I am particularly interested in that part of the program having to do with the prevention of monopolistic mergers.

CURBING MONOPOLY NOT PARTISAN ISSUE

This is not a partisan issue. President Hoover and the late President Roosevelt and President Truman all recommended a tightening up of the Sherman and Clayton Acts. The Federal Trade Commission has informed Congress from year to year of the tremendous number of unhealthy monopolistic mergers which have been made possible by the existence of this loophole. The Temporary National Economic Committee studied the defects in section 7 of the Clayton Act and strongly recommended an amendment to remove the present loophole.

We must decide very quickly what sort of country we want to live in. This Nation was founded and built by men who believed in individualism. It has grown great under a system carried on largely by individual capital. The increased concentration of economic power is dooming free enterprise. The present trend of great corporations to increase their economic power is directly contrary to meritorious competitive development. It is no accident that we now have big Government, big labor unions, and big business. The concentration of great economic power in a few corporations necessarily lends to the formation of large Nation-wide unions. The development of the two necessarily lends to big bureaus in the Government to deal with them. The inevitable result is statism of one sort or another. Local economic independence cannot be preserved in the face of consolidations such as we have had during the past few years. The control of American business is steadily being transferred from local communities to a few large cities in which central managers decide the policies and the fate of the far-flung enterprises they control. Millions of people depend helplessly on their judgment. Through monopolistic mergers the people are losing the power to direct their own economic welfare. When they lose the power to direct their economic welfare they also lose the means to direct their political future.

LOOPHOLE IN CLAYTON LAW MUST BE PLUGGED

This brings me to the major point of my discussion. What are we doing to prevent this steady rise in monopolistic mergers? You may ask why isn't the Federal Trade Commission stopping these mergers and acquisitions. You may say that the Federal Trade Commission was given the power to prevent acquisitions of stock of competing companies by the Clayton Act way back in 1914. Actually, after this law was passed, clever corporation lawyers discovered that although it prevented acquisitions of stock—which at that time was the current and prevailing method of effecting mergers—it said nothing about assets. As a result of Supreme Court decisions, the loophole was enlarged until the law became a nullity. Today, whenever the Federal Trade Commission tries to stop a stock acquisition, the intent of the law is easily circumvented by the purchase of assets plant, buildings, etc. Moreover, when acquisitions are made in the first instance through the purchase of assets, and no stock is involved in the transaction, the Commission has never had any authority to take action. In other words, the Commission is completely powerless whether or not stock is involved. Yet the intent of Congress in passing the Clayton Act—and I quote from the report of the Senate Committee on the Judiciary of January 22, 1914—was "to arrest the creation of trusts, conspiracies, and monopolies in their incipiency."

The Commission itself has been fully aware of this glaring loophole in the antitrust laws, and since 1927 has recommended that it be plugged. Year in and year out the annual reports come to Congress from the Federal Trade Commission; year in and year out they urge the Congress to take action which would make the present law effective; and year in and year out we do nothing. It is true that lengthy hearings have been held in both houses of Congress; it is true that voluminous testimony has been taken; and it is true that practically no logical opposition to the bill has developed. Yet action has not been forthcoming.

During the second session of the Seventy-ninth Congress, the Judiciary Committee of the House of Representatives held extensive

hearings on a bill designed to plug the loophole, which I filed. The small business organizations strongly supported the bill, as did numerous independent small businessmen. The House Judiciary Committee voted to approve the bill and it was sent to the Rules Committee of the House—where it died.

JUDICIARY COMMITTEE HAS REPORTED BILL

Again, this session the House Judiciary Committee has approved the bill, H. R. 3736. In a report No. 596 dated June 17, 1947, by Representative GWYNNE of Iowa, the majority of the Judiciary Committee stated:

"The history of legislation previously adopted to prevent monopoly, the great increase in recent years of competition-destroying mergers, the damage to small business, the blighting of opportunity for our young people—all cry out for the enactment of legislation to stop the rising tide of monopoly."

The report concludes with these words:

"In adopting the Sherman Act and later the Clayton Act, the Congress, without partisan division, gave expression to a virtually unanimous demand that our competitive economic system be protected against those forces of monopoly which would destroy it. The platforms of both major political parties have consistently carried planks approving the course thus charted. Both President Hoover and the late President Roosevelt recommended tightening up of the Sherman and Clayton Acts. President Truman has specifically recommended this amendment to the Clayton Act."

I must say that at the present time it appears that history is going to repeat itself. In the last session of Congress we held extensive hearings, the Judiciary Committee approved the bill, but the Rules Committee killed it. This session we have again held hearings, the Judiciary Committee has again approved the bill, but the Rules Committee will not give the House a chance to consider the measure.

One of the most forceful statements made in support of this bill before the Judiciary Committee was by Edward Wimmer, vice president of the National Federation of Small Business. Mr. Wimmer has been devoting a great part of his time to this monopoly question for many years and his statement made a deep impression on the members of the committee.

PRESENT CONCENTRATION PICTURE

What is the present concentration picture? As a result of a long-term, 75-year trend, economic concentration has reached dangerous heights, even before the outbreak of World War II. Thus the 200 largest nonfinancial corporations increased their relative importance from ownership of one-third of the assets in 1909 to 48 percent in 1929 and to 55 percent in the early thirties. In specific industries, the increase was even more dramatic. The four largest steel producers in 1880 owned 25 percent of the country's rolling-mill capacity; by 1938 they held 64 percent. Similarly, the three largest automobile companies accounted for 42 percent of the total output in 1909 and for more than 90 percent in 1938. And in copper, the four largest producers increased their share of the industry's output from approximately 50 percent in 1910 to 82 percent in 1937.

As a result of this sweeping rise of concentration, the role of the self-employed enterpriser has steadily dwindled. We are becoming, more and more, a Nation of people who work for others rather than for ourselves. Owning your own business and being your own boss appears to be going the way of the horse and buggy. Thus, while self-employed enterprisers constituted 37 percent of all the gainful workers in 1880, the proportion had fallen to only 19 percent in 1939. The only way to halt this decline in the area of individual enterprise is through measures such as H. R. 3736, which will arrest the increase in monopoly. There are few greater dangers to our free democratic way of life than a continuation of this trend toward working for others.

Although concentration had reached extreme heights even before the war, the conditions of war production gave it a further boost. Whether justified or not, contracts for war production were largely centralized in the hands of a few giant corporations. The 100 largest corporations received no less than 67 percent of all prime war contracts. This figure would undoubtedly have been even higher had not Congress established a special agency for small business, the Smaller War Plants Corporation, which assisted in obtaining for small business nearly 60,000 prime contracts, with a value of some $6,000,000,000.

UPWARD MONOPOLY TREND SINCE WAR

With the end of the war, it was hoped that the level of concentration would turn downward and sink at least to the prewar levels, which, themselves, were much too high. But this was not to be. Big business emerged from the war with immense amounts of funds. At the end of 1945 the 62 largest manufacturing corporations held enough net working capital to purchase the assets of nearly 90 percent of the total number of all manufacturing corporations in the United States. Big business lost no time in putting this immense amount of money to work. Almost as soon as the outlines of victory appeared on the horizon, the merger movement turned sharply upward. Since 1940 over 1,800 formerly independent, substantial competitive firms in the manufacturing and mining industries alone have disappeared as a result of mergers and acquisitions, most of which have disappeared since 1943. On the basis of a 40-hour week, this averages about one every day!

The value of the concerns acquired amounted to nearly 5 percent of the total asset value of all manufacturing corporations—truly a sizeable chunk of the economy to fall out of the competitive picture in such a short period. Moreover, most of these acquisitions have consisted of the the purchase of small companies by big concerns. Nearly three-fourths of the total number of firms acquired have been absorbed by larger corporations with assets of over $5,000,000. More than a quarter of the total acquisitions have been made by companies within the Nation's top 200 manufacturing corporations. The other half of this picture of larger corporations taking over small firms is indicated by the fact that fully 70 percent of all the firms bought out have held assets of less than $1,000,000.

These are the inevitable conclusions from the undisputed testimony.

STATE CONTROL WILL RESULT UNLESS TREND IS CHECKED

(1) Economic concentration leads straight to State control and collectivism. There is not a single other highly industrialized nation in the entire world today which has not succumbed to one form or another of collectivism. And the invariable forerunner of state control has everywhere been the same—private monopoly. The reason for this is obvious. Under the capitalistic system as we know it, the public interest is supposed to be protected by competition. But when monopolies take over then the public interest must be protected in some other way. And the only "other way" available has been state control. If, then, we wish to prevent the emergence of collectivism in this country, we must take a leaf from the page of history and direct our efforts at the root cause of collectivism—private monopoly.

BIGNESS DOES NOT NECESSARILY MEAN EFFICIENCY

(2) Bigness does not necessarily mean efficiency. Several of the witnesses from small business emphatically denied the widespread belief that big organizations are always more efficient than small concerns. They emphasized the fact that the mere bringing together of separate independent concerns under common ownership contributes little, if anything, toward greater efficiency. In fact, several of them contended the reverse was true, that big corporations are actually less efficient than small firms, that they are vast bureaucratic organizations in which it is frequently all but impossible to "get things done," that in order to be independent from outside suppliers the big outfits often purchase expensive machinery and equipment which they actually use only a small part of the time, and that this idea that bigness is always better is nothing more than sheer propaganda of, by, and for monopoly.

PRESENT LAW IS ABSURDITY

(3) The present law regarding mergers is an absurdity. It is nothing short of ridiculous to prevent acquisitions of stock but to remain silent on acquisitions of assets. This type of loophole makes a mockery of the law. Either the law should prevent both types of acquisitions or it should prevent neither. But no one has suggested that the power to prevent stock acquisitions, which dates back to 1914, should be repealed. Consequently, if for no other reason than to make the law consistent with itself, the bill should be passed.

SHALL WE MAINTAIN FREE ENTERPRISE?

(4) The economic effect of the loophole in the law has been to create a striking contradiction which should be removed. Because of the loophole a premium has been placed upon the attainment of monopolistic ends by the completely final method of consolidation, as against the weaker and more vulnerable methods of cooperation among different firms. In other words the weaker, less effective methods of eliminating competition are clearly prohibited by the antitrust laws, but the permanent and more effective method of consolidated ownership under a single management is permissible. Moreover, the more effective is the enforcement of the law against collusion among competitors, the greater is the incentive to achieve the same ends through purchase, consolidation, and merger.

If we are going to maintain a competitive system, H. R. 3736 should be passed quickly. If the present tendency toward mergers continues we will be confronted soon with the choice of having the economic life of the country managed by private groups and by public groups. Nothing can be more important for the preservation of our way of life than the passage of necessary legislation to stop the march of monopolies.

Air Power

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered at Bakersfield, Calif., during the western conference of the American Legion on air power:

We are gathered here today because a grave cloud hangs over our country. In these troubled times, so soon after World War II when the need for adequate national security is bitterly obvious, America is losing the race for air power.

There is no better evidence of this fact than the intensive Nation-wide campaign which the American Legion has launched to help America regain its leadership in the air and to educate the American people on the importance of air power as the spearhead of our national defense and security.

You are a wise audience, well schooled in the ways of war. Some of you served in the First World War as I did. A large portion of you here today have even a fresher memory of war because you served around the globe in the conflict that ended less than 2 years ago. As a consequence I know there is no need to point out to you the value of preparedness and the place of the airplane in our national security. You know what the airplane is, what purpose it serves in war and how much our Nation depends on military and naval air power for its defense. We of California have a greater awareness of air power than any of our sister States.

I think you will agree with me that the foremost mission of air power is to guarantee the air security of the United States and its air approaches, and to enable America to fulfill its role of leadership in achieving a peaceful world. You know full well that there is a better role which air power plays. It is the best and most forceful preventive of aggression that exists.

Our United States has been caught in two consecutive world wars in a position of complacency and extreme military weakness. In both these conflicts in which we played a part, our military and industrial machines were inadequately organized and staffed to cope with emergency mobilization. Only by virtue of time we didn't earn, and because of our immense reserves, because of the ingenuity of our industry, and the will of a frightened people and because of the years of grace won by our grimly fighting allies, were we able to prepare in time to finally bring the force to bear that helped win those two wars.

It has been true that America, always late to arm, has always decided the war.

The vital element, however, has been time. It took years to perfect the weapons for the Air Forces. Not until war jabbed us into activity did we overtake our enemies in the quality and quantity of our equipment and the size of our forces.

In this age of atomic air warfare which has come upon us so swiftly we can be dead certain that if there is a next time we will not have the luck and the time to prepare that we have had in the past. We will be the first target of a lightning mass attack by weapons of fantastic speeds and range and accuracy.

There will be no time to design and build masses of aircraft and to train crews to fly them. When a single bomber can wipe out a city and kill 100,000 people, the first 24 hours of any future war could see this Nation knocked out of action if we are again caught unprepared. We would have no warning. It would be Pearl Harbor all over again on a fantastic and sickening scale.

I am not being a warmonger nor an alarmist. I am merely stating the facts as I see them. The day of the 10,000-mile range bomber is here. Any city anywhere in the United States is a closer and easier target for a future aggressor than Pearl Harbor was to the Japanese in December 1941.

I'll tell you exactly what I mean. Last fall we Americans were patting ourselves on the back because of a flight over the North Pole. You know the facts. The B–29 called *Pacusan Dreamboat* took off from Honolulu and made a 9,000-mile flight over the North Pole to Cairo, Egypt. We were very proud of that flight. It was our first nonstop venture over the broadest military highway in the world—the polar region.

That was in 1946. That B–29 was the first plane we had with which we could attempt such a military flight. But here's something I don't want you to forget when you start measuring our prowess in the air. Nearly 10 years before the B–29 made its flight over the polar region someone else flew the polar region, only they came the other way.

On July 15, 1937, while our first long-range bombers were still a dream, three Russian airmen established a world's nonstop distance record over the polar air highway.

Mark this well, you who live here in California: Three Soviet airmen, Gromov, Danilin, and Yumashev flew their plane from Moscow to San Jacinto, Calif., in 62 hours and 2 minutes. They flew nonstop 6,262 miles from the heart of Russia right into our own back yard.

I don't think it is necessary to elaborate further on what that flight, made nearly 10 years ago, means in the annals of world air power today.

I want you to remember that Russian nonstop transpolar flight when you hear a lot of foolish chatter about what Russia can't do with its military air power. The same people who starved our air forces in the years before World War II are the same people who are telling us today that we have nothing to worry about and nothing to fear from any nation, because we can outfly and outfight them all and always have.

Less than 2 weeks ago the papers here in California and those across the country made a great to-do about the new-type airplanes which were previewed for the aviation writers convention in Los Angeles. The jet bombers produced by North American, Douglas, and Convair, and the jet fighters by Bell and Douglas, were thrilling things to watch in the air.

But to place our faith in one single handful of test models could be typically American

There are undoubtedly people here today and others across the country who saw pictures of those new planes in the newspapers and went to bed feeling fat, smug, and satisfied with themselves and with their country.

Let me tell you that those who did are doping their minds with delusions of grandeur and with air power that is still in the incubator stage. One experimental plane, though essentially important in itself for what it represents, cannot make a striking force nor win any air battles. These new plane types that you hear so much about are good omens of good intentions, but they are only tokens of the air power we need to defend this country in a troubled world. They do not constitute an air force in being.

Let me give you another example of how easy it is for the American people to delude themselves about the strength of our air power. About a month ago our eastern cities were raided by more than 100 B–29's. They made a great to-do about these raids in the papers. But what they failed to emphasize, and what you and I fail to realize, is that those 130 B–29's constitute the entire United States strategic air force.

Think that over. They represent, I repeat, every B–29 that the Army Air Forces could fly at this time. More than that, they had weeks to prepare for the raid. They wouldn't have 1 day's preparation if war struck us as it did at Pearl Harbor. But, keep this in mind, those 130 B–29's wouldn't make a good little finger in 1 day's aerial fist. We put thousands of planes in the air in 1 day over the beaches of Normandy and we thought nothing of sending 500 or more B–29's on a single raid against Japan Today all we can put in the air as a strategic air force are those 130 airplanes.

As you have heard from the other speakers today the entire picture of American air power is a sad and discouraging one. I want to add another segment to that story. It is one with which I am personally familiar.

Just 2 weeks ago on the floor of the House, the Army Air Forces appropriation bill for 1948 was brought up for approval. The amount that was finally submitted by the President to the Congress for a vote was less than half the security minimums originally recommended by the Army Air Forces. Their request for a 70-group striking force as the barest essential to defend our country had been thoroughly slashed by the War Department and by the Bureau of the Budget before it was sent to the Congress.

I can say, fortunately, that although our Congress is in a budget-cutting mood at the moment, the House of Representatives voted every cent that the Air Forces was given by the Bureau of the Budget because, during a last-minute rally from the floor we were able to restore a $40,000,000 cut for new planes.

The point I want to make is this. The AAF appropriation now allows a grand total of 749 new planes for the Air Forces. That means not all jets and B–36's but 749 new planes of all types. Most of these planes, the big ones, will not be delivered to the Air Forces for service until about 1950.

That total of 749 planes added to the 575 planes which were allowed by the Congress to naval aviation adds up to the staggering sum of 1,324 planes. Even the combined figures for the two services are less than the 1,700 planes which General Spaatz of the Army Air Forces asked for in his testimony and in the initial Army Air Forces budget request alone.

The fact that our military air services have been granted 1,324 planes for 1948 is a sad commentary in itself. However, when one realizes that this total is less than one-half of the number of military planes recommended by the President's Air Coordinating Committee as the rock-bottom minimum necessary for an aircraft industry upon which we could depend in time of emergency to produce the planes we need.

The Air Coordinating Committee after a 2-year study made the flat recommendation that if the aircraft industry, the core of our air power, is to be of any value in a national emergency it must produce a very minimum of 3,000 military aircraft and transports each year. That recommendation was based on the condition that the United Nations was thoroughly functioning, with a police force of its own and that the world was pretty much at peace. That isn't the case today, as you well know.

A critical world situation, such as we now have, would require an annual output of not less than 5,780 planes a year according to the Air Coordinating Committee. In other words, we have allotted sufficient funds to produce less than one-fourth of the planes absolutely essential to the minimum existence of both our aircraft industry and our Air Forces. That means that you and I as Americans have a long, hard way to go before we can regain our leadership in the air.

In these days of economy in government those who are aware of the significance of air power take little heart from the fact that the House did restore that $40,000,000. As far as our national air power security is concerned that budget restoration and the entire budgets voted for Army and Naval air power are far below the security minimums which you and I need to protect our homes and families and our country. The best we can expect under current operating conditions is a second- or third-rate air power. Let me warn you again A second-rate air power is like a second-best poker hand. When the showdown comes, it can't win.

Thus far we have spoken of military air power and the fact that our United States is losing the race for military air power to at least two nations we know of—Great Britain and Russia.

Air power as it relates to our national security is a far broader thing than the air striking force.

One of the finest and most comprehensive concepts of air power is contained in the

American Legion program. The Legion lists the six segments of air power as follows:

First. Public air-mindedness: A complete public understanding of the singular importance of air power to our national security, to world peace, and to the United Nations is the vital requirement for American leadership in the air age.

Second. Intensive aeronautical research: An intensive program of aeronautical research and development is a basic, urgent requirement for American leadership in the air.

Third. Sound industrial preparedness: The air battles of World War II were as much contests between Allied and Axis industries as they were between air forces. For this reason, our future national security in the air depends equally upon both military and industrial preparedness.

Fourth. Healthy air-transport system: A sound and growing air-transportation system, competent to assume its role in the movement and communications of any future war, is of vital importance to American air power.

Fifth. Alert aircraft industry: As World War II proved, a strong aircraft industry, capable of rapid expansion in any emergency, is the bulwark of an adequate air force and, consequently, of our national security.

Sixth. Strong air forces: In this age of lightning warfare and increasingly terrible weapons, America has no defense or no security unless they are spearheaded by strong, permanent air forces which have superior equipment and adequately trained personnel.

These six segments of air power cannot be tackled as individual entities on a haphazard, piece-meal, year-to-year basis. For instance, we can't suddenly decide that all our money should go into aeronautical research and let the other factors lag while we try to catch up in research, simply because research cannot be considered as a separate item. It is only one of the integrated components of air power.

We cannot regain leadership of the air by making starts and spurts. It must be an integrated and continuous over-all effort. The root of the entire problem, to my mind, is a national aviation policy. Such a policy group would encompass a continuing study of and getting action on all the integrated phases of air power as they affect this Nation and the world, militarily and economically.

In these days of continual and even revolutionary progress in aviation, it might amaze you to know there has been no governmental review of commercial and military aviation policies leading to positive national action since the survey conducted by the Morrow Board in 1925. The legislation directly resulting from the Morrow Board survey—the Air Corps Act of 1926 and the Naval Air Corps Act of 1926—is now more than 20 years old. Even the Civil Aviation Act of 1938 is nearly a decade old.

The net results of this lag in our national thinking and policy is comparable to handling a jet plane by the same rules that we did the horse and buggy. There is little need to remind you that there have been extraordinary changes in the techniques and in the economics of air power since the days of the Morrow Board. Top air speeds in those days were around 175 miles an hour. Today we have planes that are probing the transonic at nearly 700 miles per hour. Guided missiles and rockets are moving at speeds three to five times that figure and we are entering a period of commercial aviation of traveling at 300 or more miles per hour.

As we discussed earlier the mightiest lesson of World War II was the advent of air power as the greatest striking force in the world. When that happened, as it did in the final months of World War II, it gave this and every other nation in the world a new prime instrument of national policy. Today air power is the instrument for maintaining world peace and our own national security. During the reign of British and American sea power the great navies of the world were the instruments of national and international policy. Today there is no argument that air power has superseded sea power although we can make good use of both when the situation warrants.

It is certainly evident that air-power policy must have a severe and immediate overhauling in all its aspects so that it can be reshaped to meet the crying need today for American strength and world leadership both at home and abroad.

I am happy to report here today that a bill which I had the pleasure of introducing into the House of Representatives to formulate such an air policy has been passed by the House and is now in the hands of the Senate. This bill H. R. 3587 would set up a National Aviation Council charged with charting a coordinated Federal aviation policy covering all aspects of air power. This Council will replace the Air Coordinating Committee which was established in September 1946. The National Aviation Council would include representatives of the State, War, Navy, Commerce, and Post Office Departments, and the Federal Communications Commission and the Civil Aeronautics Board. The Council would be advised by a 10-member board drawn from the ranks of the aviation industry.

As stated in the bill itself, the Council's duties would be "formulating, unifying, and clarifying national policies relating to or affecting national aviation, including policies related to maintenance of an adequate manufacturing industry and of monitoring and harmonizing the pertinent activities of the affected branches of the Government in accord with such policies."

Here and now I would like to thank the American Legion, and in particular the Aviators Post, No. 350, of Los Angeles, for the strong resolution in which they endorsed a national air-policy board. The terse and sound reasons which that post cited in its resolution are precisely the ones which urged me to introduce the air-policy bill. As I understand it, this resolution has now been adopted by the national executive committee of the American Legion and has become a cornerstone in its air-power program.

I sincerely hope that, as the first comprehensive attack on the problems in air power that this Congress will pass a national air-policy bill which formally establishes such a group as a Government agency and which requires regular surveys and reporting of the facts to the Congress so that new challenges and new problems can be coped with before it is too late. Once such a group is established, it will need the heartiest possible support of the American Legion, of all aviation supporters, and of all clear-thinking, security-minded Americans. Without such an air policy we can never regain world leadership in the air.

The facts are hard and obvious. We have let American air power dwindle from a world giant to a pigmy. In doing it we have torn our air defenses from the skies and left our homes and cities open to attack from any direction, particularly from over the polar regions. We are inviting attack and disaster even as we did in 1941. When I say that we are responsible, I mean every American has it upon his conscience. This critical situation in air power is almost unbelievable in the face of the world situation, which hardly improves by the hour.

A big stick in Moscow and a palsied hand in the United States are not compatible. Either we are unbelievably impractical in going before the world with a definite stand for democracy and self-determination for small nations or downright stupid in destroying our air power, which first and foremost could prevent totalitarianism from running wild on the face of the earth. In short, the United States stands in the world picture with a first-rate responsibility and a third-rate air power. Instead of having a big stick and a soft word to get results on the international scene, we Americans carry a twig and sing basso profundo. If this strange combination adds up to world peace or hope of freedom or our own national security, then all of history is a perjured witness.

The Fears of Transition

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mrs. BOLTON. Mr. Speaker, under unanimous consent granted me to extend my remarks in the Appendix of the RECORD, I include a speech made by Oveta Culp Hobby at the May meeting in Boston of the Advertising Federation of America. The subject is The Fears of Transition:

Madam Chairman, members of the Women's Council, and guests, for 22 solid months, we have been quaking in our boots—terrified of our own creation, atomic energy.

No Dr. Frankenstein could be more pitiably afraid of the monster he made, than we have been and are of potentially the most marvelous discovery man has ever produced.

It is high time—it is imperative—that we straighten up, look our terror in the face, and master our attitude toward the new force which we have unleashed.

It is exactly as though Benjamin Franklin had caught lightning with his kite—and then raced home and hidden under the bed from fear.

It is as though James Watt—after expounding the theory of steam—had then called in all his neighbors to help him bury the teakettle, and had spent the next 2 years worrying himself to a shred for fear a Spaniard or a Frenchman across the channel would make the same discovery by watching their teakettles.

Steam can blast a man to bits, scalding his flesh and wrecking his boiler room. But harnessed by men, it has been our domestic animal which has pulled our railroad cars across the continents, which has carried oil to China, silk to San Francisco, coffee and/or tea to Boston, and travelers to every port of the seven seas.

Lightning can kill without the benefit of the science of man, and electricity is used to give the most gruesome and sizzling deaths to murderers in the electric chair. But do you live in constant dread of it? It powers our streetcars and our telephones. It lights our bedlamps, our primping mirrors, and our reading rooms with far less danger and far greater obedience than the old-fashioned candle could.

And we have harnessed it to our washing machines, our deep-freezes, our lawn mowers, and even—this is a painful thought—even to our alarm clocks.

I knew a newspaperman once who went on a hunting trip in the mountainous backwoods of Alabama. He ran across a 12-year-old boy who had never been out of his backwoods home and forest in his life. He had never seen a paved road, much less a town. The man, really touched by the boy's lack of experiences, took him back to Birmingham for a visit. They parked the car in front of a cafeteria, but before they could get inside a streetcar rattled by. The little boy, startled as a woodland creature, fled across the sidewalk and cowered terrified in a door-

way, convinced that this clanking, jangling monster meant his death.

Only a superstitious mountain child would fear electricity. Yet we are being as frightened of the whole idea of atomic energy as that 12-year-old mountain boy was of a streetcar.

It could be tolerated—this flight into fear—if the results of our fears were not so stultifying.

A minister recently preached a muchly bruited sermon on Men of Science—the New Evil.

Science is not evil—unless we turn it to evil purposes. Splitting the atom is not in itself evil—it is potentially the most glorious single event in human history.

After 22 months of quaking, the time has come for us to stand up and hail atomic energy for what it is—the instrument of a new world, courageous or callow.

Taming atomic energy is admittedly not an easy job. Breaking a wild horse from the range wasn't easy either. But only the man who had the courage to tackle the beautiful and powerful animal ever achieved a fine saddle horse.

Unless we begin to bridle this great new power now, we cannot expect to enjoy the limitless beauties and thrills of its use.

Controlling atomic energy before it conquers the spirit of mankind and decimates him as a specie is a dangerous job—a thrilling and a challenging job, with everything to gain and nothing to lose.

It means that we as people must vault to political maturity.

In his remarkable document Modern Man Is Obsolete, Norman Cousins has analyzed man's ability to reach this new greatness.

"Modern man is obsolete," he said, "a self-made anachronism becoming more incongruous by the minute. He has exalted changes in everything but himself. He has leaped centuries ahead in inventing a new world to live in, but he knows little or nothing about his own part in that world. He has surrounded and confounded himself with gaps—gaps between revolutionary technology and evolutionary man, between cosmic gadgets and human wisdom, between intellect and conscience.

"Given ample time, man might be expected eventually to span these gaps normally, but by his own hand he is destroying even time. Decision and execution in the modern world are becoming virtually synchronous. Thus whatever gaps man has to span, he will have to span immediately.

"Man is left, then, with a crisis in decision. The main test before him involves his will to change rather than his ability to change. That he is capable of change is certain. For there is no more mutable or adaptable animal in the world."

Reducing it to flat terms, Mr. Cousins has said that before man can master atomic energy he must first master his own fears.

That he must transform himself from the national man into the world man.

That—and this is the point to which all others are leading—we men of all nations must find and establish our self-government on a world basis before we can enter the new era. America obviously cannot live in the atomic age, leaving other nations behind in the obsolescent machine age, and at the same time she scarcely dares turn atomic energy loose in anything but a unified one world.

"Man is a world warrior," Mr. Cousins says. "It is time for him to grow up and become a world citizen. He will have to recognize the flat truth that the greatest obsolescence of all in the atomic age is national sovereignty.

"It is a tribal instinct * * * We have invested it with nonexistent powers. We assume that it stil means national independence, the right to get into war or stay out of it. We even debate the question of surrendering some of our sovereignty—as though there is still something to surrender. There is nothing left to surrender. There is only something to gain. A common world sovereignty."

Do you remember when you were a child studying history in grade school? Do you remember the passage about the American Revolution, when the Redcoats—finest troops of the time—marched down a dusty American road just as they would have marched to battle on the Continent. That was the custom of war as they knew it.

But American woodsmen, hardened to alertness and guile in Indian warfare, worked from behind trees and simply mowed down the correctly marching troops.

The Americans were smart, the Redcoats pathetically stupid in their excellent training and outmoded convention.

But those Redcoats were no more stupid in 1776 than was the United States of America in 1941. Powerful, well trained in all the so-called rules of war, we were amazed when the Japanese attacked Pearl Harbor. We called it a sneak attack. We felt that they should have sent us a formal declaration of war, that they should have said "Hold still, America, we are going to hit you."

The Japanese were amused at our child-like faith in the rules by which war should be fought.

National sovereignty today is another of those naive rules. As a nation, we can grow up, mature, use our minds and intelligence to find the way to a new era in history. Or we can cross our fingers in that childish "king's X" which we call national sovereignty. If another nation violates our "king's X," we can try to shout "That's not fair"—if we are still alive to shout. But the gamble on the security of rules and phrase doesn't look too sure.

If on the other hand, we used the United Nations forum as a meeting hall to which all nations may be called, in order that we may lay before them a plan for world federation, then we have placed our chips on the side which loses us nothing, and gains us a chance at life.

War has never gained any man or any nation a lasting achievement. For one moment, stop and think. Forget that you are a New Yorker or a Bostonian, or a Presbyterian or an Episcopalian, forget that you are an American—remember only that you are a part of all mankind.

As a human being, part of a single species, do you desire peace, or one last final smashing war which will destroy all the major part of your kind? The answer is obvious—a matter of simple gumption.

So long as the world is divided into parts—even two parts—the chance of war remains. But if all mankind is fused into a single government—just as Texas and Massachusetts and California and Florida are fused—there are no two forces between which war can exist.

The will to unite, to become one people, the decision of man to become cooperative rather than competitive on this one small world, is now up to mankind.

Mankind is not a great anonymous "they"—it is you and I and all like us.

And let us be completely honest—the job is really more ours than it is for most men on earth.

For two reasons—we are literate and we are American.

On the first count, look at the educational statistics of this country alone: In the 1940 census, of 85,000,000 persons over 20 years of age quizzed, almost 3,000,000 had never gone to school at all, and another 8,000,000 had had only between 1 and 4 years of school. Still another 28,000,000 had never gone beyond elementary school.

This makes a total of 39,000,000 Americans who cannot be counted upon to understand their own Government, much less to help plan so vast a thing as a world government. Half of these probably can't read their daily newspapers, and not many of the other half could analyze the ideas expressed in the newspapers even if they were to read them.

There are not many men who, on 2 or 3 years of schooling, gain sufficient impetus to go ahead with their reading and their self-education. I know of one man who became a millionaire and a Member of Congress on only a few months of grade school. But the fact that he is remarkable enough to mention, proves his rarity.

You know from your own business experience that the average man or woman who had only 1 to 3 years of school has lapsed back into functional illiteracy by the time he is grown. The selective service turned down thousands of men because though they could read and write their own names—and technically should be labeled literate—they could not use reading and writing with enough intelligence to function in modern mechanized warfare.

Thus—simply by being a high-school graduate—one goes among the select few. And any citizen who has had college training has had a privilege so rare that he automatically receives a responsibility of civic leadership, of active citizenship in self-government of man by man.

Simply by being sufficiently literate to be a business woman or man, to attend this meeting today, you have proven your obligation to society.

Second, as Americans—that point is obvious. America, for a time at least, is top nation in the world. We are not hungry—and most of the world is. We are not cold—and most of the world was so this winter.

We have reached a certain maturity as an industrial nation—which much of South and Central America has not—but we are not yet past our prime and crippled by war, as much of Europe and Asia is.

Therefore, America as a nation has the responsibility to lead among nations.

This means that the brunt of world leadership falls upon educated Americans. On you.

And what are educated Americans doing? Sitting fearfully at home behind the strong line of General Marshall's diplomacy—as far behind it as we can shrink—but still apparently sure that doom is inevitable.

If anything is un-American, that is. Timorousness, caution, self-doubt—they are against everything we mean when we say "American." The great American tradition has been the self-confident, the cocky, the surely shrewd. With all the world numbed by two wars, this is no time for America to lose its esprit.

Out of fear, for 2 years we have been pandering to expediency. We have had international palsy since VJ-day.

The time has come for us to take command of our own souls and our own destinies.

The hour of decision approaches. Shall we stick our heads in Henry Wallace's sand, or shall we take our medicine manfully? The strong member of a family assumes responsibility. The strong members of a good community assume leadership. Strong nations must assume leadership. Leadership of any kind is not easy, cheap, or comfortable.

Bigness, productivity, resources carry responsibilities and the hardest of these is the decision to carry the load of leadership.

Henry Wallace knows this. He recognizes our strong desire to live alone and like it.

He is planting the seeds of discord in an attempt to destroy the effectiveness of our announced foreign policy. Unfortunately, some of these seeds will fall on receptive soil—but God grant that thinking Americans will pick up the pack of leadership.

The next decade may be the proving ground of peace or the prelude to war. We must live dangerously. So, if we must—let us live fearlessly for peace rather than fearfully for war.

The Rubber Problem

EXTENSION OF REMARKS
OF

HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. SHAFER. Mr. Speaker, the Subcommittee on Organization and Mobilization of the Armed Services Committee is charged with the task of preparing legislation which will assure a permanent synthetic-rubber industry in this Nation. As chairman of that subcommittee, I feel that the Congress should be informed of the progress that has been made with respect to the development of this legislation. However, before discussing the various proposals that have been made and the problems involved, I would like to submit briefly the reasons that make necessary a permanent synthetic-rubber industry in the United States.

In time of peace, rubber is as necessary to our economy as coal, food, and oil. In time of war rubber is so essential to the Nation that without it victory is impossible. It requires 75 tons of rubber to commission a battleship. One ton of rubber is needed to produce each tank. Airplanes, jeeps, submarines—everything with which we fight modern war requires rubber.

When we entered World War II our total natural-rubber stock consisted of 533,000 long tons with an additional 100,000 tons afloat. This was less than 1 year's peacetime consumption and considerably less than the 700,000 tons per year required for military and essential civilian needs. When Singapore fell to the Japanese in 1942, 90 percent of the world's natural-rubber supply was denied the United Nations. From January 1, 1942, to VJ-day, the United States imported only 315,000 long tons of natural rubber, or less than one-half of the prewar average annual imports. So serious was the rubber supply in the Nation that in September 1942 Bernard Baruch reported to the President:

> We find the existing situation to be so dangerous that unless corrective measures are taken immediately this country will face both a military and civilian collapse.

Immediate steps were taken. Gasoline rationing, tire inspections, maximum speed limits, and other efforts were undertaken to conserve our limited supply of natural rubber. Scrap rubber collection drives were inaugurated which were successful in obtaining 900,000 tons of scrap rubber, but this could not be substituted for new natural rubber in many cases. A substitute for natural rubber had to be found. When we entered World War II, only a small start had been made in the production of synthetic rubber. In 1941, 8,000 long tons of synthetic rubber were produced in small privately owned plants throughout the United States. But this was woefully inadequate. Thus, in order to supplement our small supply of natural rubber, we expended over $700,000,000 to build the synthetic-rubber industry to a point where we were able to produce, in 1944, more than 1,000,000 long tons of synthetic rubber.

With the end of the war a natural-rubber supply of limited quantity was reopened to world trade. But during 1946, natural rubber was in short supply and it was necessary for Congress to continue allocation, specification, and inventory controls as it had done during the war. Due to a continued shortage, in March of this year Congress enacted Public Law 24 which extended these controls to March 31, 1948. In addition, that law states that it is the policy of the United States that there shall be maintained at all times in the interest of national security and common defense a technologically advanced and rapidly expandable rubber-producing industry, of sufficient productive capacity to assure the availability in times of national emergency of adequate supplies of domestically produced rubber to meet the industrial, military, and naval needs of the country.

I think we all agree that we must never again be in the precarious position we were in after Pearl Harbor. We can no longer be dependent upon foreign supply for a product as essential as rubber. Thus, in order to assure the continued availability of rubber, it is necessary that we prepare and pass legislation which will not only provide for the continuous operation of synthetic plants but will also provide sufficient stand-by capacity to adequately fill the essential needs of the country in time of war. In addition, we must assure the Nation of a continued technological development in synthetic rubber. Synthetic or domestic rubber is in its infancy and it is felt by many that in the not-too-distant future domestically produced rubber will be superior in all respects to natural rubber. Even now synthetic rubber is far superior to natural rubber in certain respects. For example, synthetic rubber is far superior to natural rubber in the production of rubber fuel hose. Inner tubes made from butyl are in many respects far superior to those made from natural rubber. Still there is much improvement necessary. We cannot yet make a satisfactory truck tire using a substantial amount of synthetic rubber. Airplane tires still must be made with natural rubber. Even the inner tubes to which I referred cannot compete with natural rubber tubes in exceptionally cold climates. There is much room for advancement in domestic rubber. We have only scratched the surface. But we must continue to advance and we dare not allow the plants and know-how we now possess to be lost.

Thus, on May 8 of this year, the subcommittee conducted an informal meeting with many representatives of the rubber industry and the various Government agencies. At that time, it appeared possible that industry and Government could agree on at least an acceptable working outline for proposed legislation. We requested the Army-Navy Munitions Board to meet with industry and to prepare these recommendations. At the same time we asked industry to consult freely with members of the committee and to feel free to offer any constructive suggestions that they might have with regard to this legislation. We did this because members of the subcommittee felt that legislation so far-reaching must have the support and cooperation of industry. We felt that this was highly desirable since this legislation must inevitably affect the entire future of the rubber industry in this country. Since the rubber industry must live with the legislation, we felt that it should have a large part in the framing of workable legislation.

Pursuant to the subcommittee's request of May 8, the Army-Navy Munitions Board prepared recommendations for a proposed rubber program. On July 9 of this year, the Army-Navy Munitions Board presented an outline of proposed legislation which met with the majority approval of the Government agencies involved but did not meet with the majority approval of industry.

In effect, this proposed legislation would establish a National Rubber Council consisting of the Secretary of Commerce as its chairman, the Secretary of State, Secretary of War, Secretary of the Navy and such other Cabinet members as the President might designate. In addition, it would establish within the Department of Commerce a rubber administration under the direction of an administrator appointed by the Secretary of Commerce with the approval of the council. It is proposed that the council should promulgate regulations with respect to the mandatory use of synthetic rubber in articles and products manufactured in the United States as it determined to be necessary to carry out the general policy of maintaining a domestic rubber-producing industry. Such regulations would only be issued after consultation with an industrial advisory committee appointed by the council. The council, under the proposed legislation, would report to the President and Congress at least once each year.

The proposed legislation also would limit the mandatory amount of general-purpose synthetic rubber that must be put into tires and tire-retreading materials to not more than 85 percent of the entire mandatory use of general-purpose rubber. In this connection, it is important to note that the Board recommended that Congress should determine that the total active and stand-by capacity of the United States to produce general-purpose synthetic rubber should be 600,000 long tons per annum and that one-third of the total of general purpose and natural rubber consumption should be general purpose synthetic rubber and 4 percent of the estimated total of new rubber consumed should be synthetic rubber suitable for the manufacture of automobile inner tubes.

As for disposal of existing plants, the legislation suggests that the RFC request offers in writing from private industry. Such offers would be submitted to the Council for the formulation of an overall disposal plan. But, until such plants are disposed of, they would continue to be operated by the RFC. The stand-by facilities not disposed of would be placed under the jurisdiction of the Council but would be maintained by the Federal Works Agency as directed by the Council.

In other words, these recommendations provide for the consumption of synthetic rubber, mandatory usage of synthetic rubber, a governmental agency to administer the act including a rubber council and a rubber administration in the Department of Commerce, and an over-all assurance of the production of at least 600,000 long tons of general purpose synthetic in the event of a national emergency.

Industry has already made known to the subcommittee its opposition to these recommendations. It opposes the creation of a new agency to regulate the controls of consumption of rubber and it opposes, at present, a program that does not terminate within a short period of time. Some rubber manufacturers state that in the near future synthetic rubber may be able to stand up competitively with natural rubber. Thus, some feel there is no need for any long-range policy involving the creation of a new bureau. Why it is not easy to obtain unanimity in this project is obvious.

The United States is the largest importer of natural rubber in the world. Were we to manufacture domestic rubber entirely and no longer import any natural rubber, we would affect disastrously the economies of many nations. It is not our desire to do that. In addition, since there are still many products made of rubber that are superior to those made from synthetic, we do not desire that the American consumer should have to unduly suffer as the result of this legislation. We must determine how much synthetic rubber should be produced annually in this country. The estimates in that respect run from 100,000 tons a year to one-third of all the rubber consumed in the Nation in any one year. This involves the actual production and ultimate consumption of synthetic rubber. We must determine how much stand-by capacity should be preserved. When we have determined this amount we must decide how we are going to keep these stand-by plants in preservation.

Assuming that we have determined the amount of synthetic rubber that will be produced in this country and the amount of potential synthetic rubber that can be produced in the event of a national emergency, we must then determine how this rubber will be consumed. Should we make its use mandatory under end-use-specification control or should we subsidize the manufacture of synthetic rubber? After these questions have been satisfactorily answered we must then determine what types of synthetic rubber should be manufactured and what types should be protected and what types should involve required consumption.

Unfortunately, Mr. Speaker, when I use the term "synthetic rubber" I cannot confine that to a single rubber. There are various types of synthetic rubber. By far the largest amount produced during the war was GRS or general-purpose rubber, out of which most of our passenger tires were manufactured. That type of synthetic rubber can be mixed with natural rubber and today passenger tires use a high percentage of synthetic rubber. There is another type of synthetic rubber known as butyl which is used in the manufacture of inner tubes. This synthetic rubber cannot be mixed with natural rubber. Then there is neoprene, which is used in the manufacture of such things as fuel hose. Therefore, it is necessary to determine what types of synthetic rubber must be protected by the Government in order to insure their continued availability. We are told by some that butyl can stand on its own feet in competition with natural rubber. Others say that it cannot stand against natural rubber either in quality or in price competition. Some say that neoprene is so far superior to natural rubber that it needs no protection. Others say that the better part of discretion would be to protect at least a small amount of neoprene production.

Even after we have found a solution to all of these problems, Mr. Speaker, we must then determine what effect our synthetic-rubber program will have upon the world markets. There can be little doubt that the very fact that we are preparing legislation which will assure the production and consumption of synthetic rubber in this Nation has had a salutary effect upon the price of natural rubber in the world markets.

Since Government purchasing ceased in March of this year under Public Law 24, the price of natural rubber has fallen more than 6 cents per pound and today it is selling at approximately 14½ cents a pound. This may be attributed either partly or wholly to the fact that the Government ceased being the sole purchaser of all natural rubber for American consumption after March 31 of this year, or it may be due in part to the fact that we are going to continue the production of domestic rubber.

After we have solved the question of the international effect of our synthetic-rubber program, we then come to the most perplexing question of all. How should we dispose of the synthetic plants now owned by the Government? Should we lease them at high or low rentals? To whom should we lease the plants? Should we sell them to the highest bidder? Even after we have decided upon the method of disposal, we are still faced with the problem of who will purchase or acquire these plants. At present, synthetic rubber is selling for approximately 18½ cents a pound. This is 4 cents more than natural rubber. During the period when natural rubber sold for more than synthetic rubber, the purchasers of synthetic rubber were relatively happy to buy domestic rubber, at a price less than that charged for natural rubber. At that time there was a market for synthetic rubber based on price alone. Now, however, the price of natural rubber is 4 cents less than synthetic, and those who must purchase synthetic, in effect, pay a premium. If we require the consumption of a certain percentage of synthetic rubber, we will in effect be granting a monopoly to those who operate the synthetic plants.

On the other hand, if we do not assure a market, no one will assume the risk of operating the plant. Having found the solution to these problems, we must also provide in our legislation for the assurance of technological development in production and use of synthetic rubber and then we must protect our own American producers from foreign importations of all-natural-rubber products. After having solved this we must then determine how the act will be administered.

Speaking for myself and for other members of the subcommittee, I can assure you that we do not desire to establish a Government bureau that will control the rubber industry with volumes of red tape and regulations, necessitating expensive bookkeeping and endless reports. It is our conviction that this legislation should involve the barest minimum of Government control.

These are some of the perplexing problems that face us, but with the benefit of the views of the Army-Navy Munitions Board and with the advice of industry, the subcommittee is confident that it can present to Congress in January a workable, efficient bill which will accomplish the purposes desired. The subcommittee will meet during the congressional recess and hold hearings on the entire rubber situation.

Veterans' Insurance

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

Gen. OMAR N. BRADLEY,
Administrator, Veterans' Administration, Washington, D. C.

MY DEAR GENERAL BRADLEY: As a result of the discussion of veterans' insurance participated in by you, Mr. Harold W. Breining, Assistant Administrator, the Honorable Dayton Phillips, chairman of the Subcommittee on Insurance, Col. Victor C. Cole, and I, on July 16, 1947, and from information secured during the recent survey of veterans' insurance procedures made under my direction, we make specific recommendations for changes in Veterans' Administration insurance procedures and practices which it is believed will result in improved insurance service to veterans and their dependents.

We are aware of the fact that the recommendations contained herein are not new. They have been made before by procedures experts both within and outside of Veterans' Administration. The usual reasons given for failure to adopt or put into effect such procedural changes heretofore have been lack of time to properly organize the VA insurance operation, lack of time to train personnel, the existence of large backlogs and an inadequate number of personnel in the Insurance Division.

We have been sympathetic to these conditions. We believe, however, that sufficient time has now elapsed since VJ-Day to make it imperative that the VA insurance operation be established on a permanent and modernized basis at the earliest possible date and that services commonly provided by commercial insurance companies be included in

the insurance services rendered by Veterans' Administration.

It is believed that the limit has about been reached as to the number of people Veterans' Administration will be permitted to employ. It is pointed out that the Insurance Division of VA now employs more people per policy in force than any of the commercial insurance companies. It is believed that the matter of training and the time necessary to accomplish training has been overemphasized, particularly with respect to clerical employees performing routine tasks. If backlogs have not been liquidated after 2 years of operation it is probably because methods employed on current work continue to create new backlogs.

We believe that the present VA insurance procedure, including the premium billing and accounting system, which may have been adequate for the requirements of World War I, does not meet today's requirements and that the entire system needs overhauling and modernization. This conclusion is supported by the failure of the present system to provide services which are standard practice among commercial insurance companies. Among such services are:

Prompt issuance of insurance policies to all holders of insurance, term or otherwise.

Prompt payment of dividends when surplus is accumulated.

Mailing of premium notices a few days prior to due date rather than at the convenience of the office.

Mailing of warning notices to unpaid accounts after due date but prior to expiration of the grace period.

Prompt replies to letters and prompt action on requests for changes.

There is no valid reason why the veteran should receive any less efficient insurance service for his dollar when he spends it with his Government than he would receive if he spent it with a commercial insurance company.

The Assistant Administrator for Insurance has indicated that his time is largely consumed on matters concerning Government insurance law, precedent, and history and that he has, therefore, been unable to devote any appreciable time to methods and procedures. Certainly the important subjects of Government insurance law, precedent, and history on which the present Assistant Administrator is so eminently qualified constitute, of themselves, a full-time assignment. In the face of this situation, it is apparent that the Assistant Administrator has lacked capable assistance in the function of business management of the VA insurance operation.

The following recommendations, therefore, are submitted for your consideration. It will be greatly appreciated if you will advise me not later than September 1, 1947, what action if any, has been taken or is contemplated on each of these recommendations at that time.

RECOMMENDATIONS

It is recommended that:

1. The present Assistant Administrator for Insurance be appointed to a position where the Administrator may have the benefit of his full-time counsel on the important subjects of Government insurance law, precedent, and history and that the business management of the VA Insurance Division be delegated to an experienced business executive, not necessarily an insurance expert, who will be responsible for management, methods and procedures, personnel, and service in the VA Insurance Division.

2. The Administrator assign a procedures expert, preferably from within Veterans' Administration but not an employee of the Insurance Division, to make a procedural study of the Insurance Division and submit to the Administrator recommendations for speeding up VA insurance actions and providing commonly accepted insurance services which are not now available under present methods, with special consideration being devoted to the following possible procedural changes:

Organize the correspondence sections of the insurance division in each branch office so that form letters and form paragraphs will not be used in cases where they do not provide an intelligent reply to letters, inquiries and applications which justify and require a personally dictated reply. The use of dictating machines should be encouraged and, where necessary, directed in these correspondence sections in order to speed up production, reduce cost of dictation, and utilize available clerk-typists.

Print in bold-face type on the address side of the premium notice-remittance envelope the phrase "Please mail your remittance in this envelope to avoid error."

Redesign the present premium-account card to include horizontal lines.

Microfilm, then destroy premium-remittance envelopes and transmittal envelopes as received.

Adopt the cycle billing system which will provide for mailing premium notices to the insured a few days before premium is due.

Provide for a warning notice to insured after due date and prior to expiration of grace period.

Strip miscellaneous correspondence from open mail remittances before routing to posting clerks to speed up posting.

Eliminate posting of postmark date on timely remittances.

Adopt negative posting for all remittances covering exact amounts.

Destroy all NAN correspondence.

Develop a plan and method for the early issuance of policies to all insured veterans, including holders of term insurance.

Develop a plan and method for early payment of dividends from accumulated surplus.

Reinvestigate thoroughly the advantages which may accrue through the adoption of punch-card-accounting methods in the insurance operation with special attention to: faster operation, better controls of funds, and reduced costs. (Investigate combination punch card-Pollard Alling addressing system used by Fortune-Time-Life.)

3. The Administrator request the General Accounting Office to make a preaudit of VA insurance funds.

We know we can expect your continued cooperation on these important matters which directly affect the welfare of veterans and their dependents.

Yours very truly,

EDITH NOURSE ROGERS,
Chairman.

DAYTON E. PHILLIPS,
Chairman, Subcommittee on Insurance.

Another Injustice to Enlisted Men Corrected—Terminal Leave Controversy Started by Leib

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. GILLIE. Mr. Speaker, last Saturday the Senate sent to the White House legislation authorizing approximately 9,000,000 veterans to cash their terminal-leave bonds.

This ends a controversy that has been waged in the halls of Congress and throughout the Nation for a number of years. I am proud of the fact that I assisted in this great cause.

It would be timely and interesting at this point to bring to the attention of the Congress the history back of this most important piece of legislation.

How did it originate?

What were the issues and the circumstances that made this law necessary.

Here is the story of its origin.

It started late in 1943. Soon after J. H. Leib, free-lance writer, received a medical discharge from the armed forces he heard former officers discuss their terminal leave pay.

Looking into the matter Leib found that the Army and Navy were granting dismissed officers paid leave that they had accumulated while in the service, but that these same privileges were denied enlisted men.

He called upon the War and Navy Departments but got no place fast. No one seemed interested to do anything about it.

So Leib got out his typewriter and began asking embarrassing questions, Why was this discrimination permitted?

He joined Costello Post, largest American Legion unit in the District of Columbia and made a number of speeches on the subject.

Word started to get around and interest began to crystallize. Soon Leib became vice commander and later service officer of the post. He hammered away at the "caste system" terminal leave exclusively for officers, and the Veterans' Administration.

Other veterans' posts throughout the Nation began to take up the cudgel. Congress got interested and legislation was introduced.

In October 1945, Leib brought the matter to the attention of the first AMVET national convention. Later as legislative director he flooded the Nation with speeches demanding fair play for the enlisted men.

After a bitter fight a law was passed by the last Congress giving GI's accumulated leave in bonds, cashable 5 years after date of issuance.

Now the new law, awaiting only the signature of the President, permits the enlisted man to cash these bonds after September 1, 1947.

On April 1, 1946, Representative BARRETT, of Wyoming, placed in the CONGRESSIONAL RECORD, page A1829, a statement by Mr. Leib showing the basis of the original terminal leave Army and Navy regulations.

In order to understand the complete story I desire to include part of that statement in these remarks, as follows:

At this point AMVETS would like to cite the history, background, as well as the unfairness of the terminal pay as it is now constituted. Research shows that this caste-system compensation is based on a weather-beaten law that dates back to August 3, 1861 (10 U. S. Code, No. 841 Rev. Stat., sec. 1265), and reads as follows:

"Officers when absent on account of sickness or wounds, or lawfully absent from duty and waiting orders, shall receive pay; when

absent with leave, for other causes, full pay during such absence not exceeding in the aggregate 30 days in 1 year, and half pay during such absence exceeding 30 days in 1 year. When absent without leave they shall forfeit all pay during such absence unless the absence is excused as unavoidable."

In addition to the foregoing there is another moth-eaten statute, dated July 29, 1876 (10 U. S. Code, No. 842), which says:

"All officers on duty shall be allowed, in the discretion of the Secretary of War, 60 days leave of absence without deduction of pay or allowances; provided, that the same be taken once in 2 years; and provided further, that leave of absence may be extended to 3 months, if taken once only in 3 years, or 4 months, if taken once only in 4 years."

Attention is directed to the fact that no mention whatsoever is made relative to enlisted men, and no amendments to these statutes have been adopted as of this date.

GI's are entitled to 30 days' furlough leave per year, but they are not permitted to accumulate this time, if it is unused. Such a privilege is given only to officers, and for that reason the following bills have been introduced in the Congress to correct the mentioned discriminatory laws that now appear on the statute books of this Nation.

Even more astonishing is the fact that the Congress enacted Public Law 226, Seventy-ninth Congress, signed by the President on November 21, 1945, to allow officers who are receiving terminal pay to secure jobs in the Government service, and thus draw an additional salary. Obviously, this was done under pressure from the brass hats in the War and Navy Departments. Yet the Congress refuses to take up for immediate action legislation to benefit the enlisted men.

The bills now pending in the Congress follow:

The Key to Next Year's Campaign

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. Samuel B. Pettengill, former Representative from Indiana:

THE KEY TO NEXT YEAR'S CAMPAIGN

When Mr. Truman vetoed the tax bill, he used a word that shows the inside of his mind as plainly as a machine in a doctor's office shows the safety pin the baby swallowed.

Here it is, and it fortells next year's campaign. It is the word "inequity."

If you have wanted to believe that the real Truman is a follower of Jefferson and not of Karl Marx, read on.

Truman says it is inequitable to reduce taxes on the top incomes 10 percent, on the middle incomes 20 percent, and on the lower incomes 30 percent. That is sinful, immoral, and inequitable. It offends the law laid down by the prophet, Karl Marx. In short, the tax on the top incomes should have been reduced only 5 percent, or not at all, or, perhaps, increased. So, Truman vetoes the bill saying that if it became law, "the inequity of these provisions (proposed reductions) would be frozen into the tax structure."

This can mean just one thing. If it is inequitable to reduce top income taxes 10 percent while reducing low income taxes 30 percent, then it is "inequitable" for the top man to ever have the income in the first place. That is Truman's logic. It shows the socialist trend of his thinking. According to him, the taxing power should be used to level off the "inequities" of income and do so regardless of whether any man's higher income represents value given to society by superior ability, skill, and sweat, or, on the other hand, the gain from cracking a safe, or robbing a labor union's treasury. Both are taxed alike.

If larger income, honestly earned, is no longer equitable to have and to hold, then differences in the holdings of property, land, houses, or Government bonds are inequitable also.

Under the Truman doctrine, States and local governments should begin to tax homes at graduated rates rather than at the same rate per $100 of value. If, as he implies, it is inequitable for someone to have a $50,000 income when others have only $2,500 inomes, then it is wrong for anyone to have a $50,000 home.

The worst thing the Republican Party ever did to this Republic was to pass the sixteenth amendment, authorizing the taxing of incomes without any limit or ceiling whatever. Government, in time of peace, should have no more absolute power over a man's property than over his life or liberty.

Now look at a prophecy made 50 years ago by one of the greatest judges who ever sat on the United States Supreme Court, Justice Stephen J. Field, in a famous income-tax decision in 1895. Read it. And then read Truman's veto again. Here it is:

"The present assault upon capital is but the beginning. It will be the stepping stone to others, larger and more sweeping until our political contests will become a war of the poor against the rich, a war constantly growing in intensity and bitterness."

Most everybody pooh-poohed Justice Field 52 years ago. But was he right or wrong? The "beginning" he spoke of was a tax of only 2 percent levied on only a few. The "larger and more sweeping" tax which Mr. Truman refuses to reduce now reaches 77 percent. Justice Field went on to say that a majority may fix the amount of income exempted from tax "so as not to include any of their own number."

Between Truman's belief that the power to tax should be used to redistribute wealth and level life's rewards and Justice Field's effort "to hold the shield of the Constitution between the citizen and despotism" there is a great gulf. It is the difference between Jefferson and Marx. Jefferson said, "To take from one, because it is thought that his industry * * * has acquired too much in order to give to others who have not exercised equal industry" is to violate the principles which made America. Mr. Truman did not quote this at Jefferson's home last Friday, the Fourth of July.

SAMUEL B. PETTENGILL.

Marine Hospital, Chicago, Ill.

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by North Shore Post, No. 21, the American Legion, Chicago, Ill.:

Whereas the Government of the United States of America owns and operates a large, well-equipped and capably staffed hospital, known as the Marine Hospital, at 4141 Clarendon Avenue, on the north side of the city of Chicago, Ill.; and

Whereas there are at all times many empty beds in this fine hospital, which is equipped and staffed to accommodate a large number of patients; and

Whereas many veterans could be accommodated at this hospital, except that the Veterans' Administration refuses to permit them hospitalization there, except for a relatively small quota; and

Whereas on account of its location, this hospital, and its excellent facilities, would be far more convenient for veterans who live on the north side of Chicago, and Cook County, than other veterans' hospitals in and around Chicago; therefore be it

Resolved, That we, the Members of North Shore Post, No. 21, the American Legion, in regular meeting assembled, urge either that the Veterans' Administration take over this hospital from the bureaus now making partial use of the same, or else that the quota of veterans to be treated there be increased so that this hospital, with an office of the Veterans' Administration on the premises, will henceforth operate at or near its capacity; and be it further

Resolved, That we recommend the passage of this resolution by the seventh district, and thence through channels to and by the Department of Illinois, with the insistence that all possible pressure be exerted until its objective is met; and be it further

Resolved, That a copy of this resolution be mailed to our distinguished member, the Honorable THOMAS L. OWENS, Member of

Congress from the Seventh District of Illinois, and later to any other officials in Washington, D. C., as it may appear advisable.

Unanimously passed by the members of North Shore Post, No. 21, the American Legion, in regular meeting assembled this 23d day of June 1947.

LUDWIG H. BEHREND, *Commander.*

Attest:

WM. J. BALLOU, *Adjutant.*

Wonderful Wisconsin's 1948 Centennial

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22 (legislative day of Wednesday, July 16), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement I have prepared on the subject of the forthcoming centennial of the admission of Wisconsin into the Union as the thirtieth State.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AN INSPIRING OCCASION FOR BADGER CITIZENS AND ALL AMERICAN VACATIONERS

I warmly invite the attention of my colleagues and of all America to the fact that on May 29, 1948, the Badger State—56,000 square miles of "heaven on earth"—will celebrate the one hundredth anniversary of its admission to the Union as our thirtieth State. During the whole of next year all of the three and one-fourth million souls in America's Dairyland and the State's countless sons and daughters who have made their marks in the far-flung corners of the world will rejoice on the completion of the Badger State's first century of statehood.

Splendid plans are being made throughout our State for the celebration of this unforgettable occasion. Every citizen is pitching in with typical Badger enthusiasm.

CENTENNIAL PLANS

An outstanding State centennial committee of distinguished citizens and officials has been working tirelessly under our late, revered Governor Goodland and under Acting Governor Rennebohm to help fulfill the highest expectations of our people.

There will be an initial series of celebrations on January 5 at the State capitol, opening centennial year. On May 29 our actual birthday, a gala celebration is scheduled in Madison. Then between August 7 and August 29 there will be a festive centennial exposition at State Fair Park. This promises to be the most unforgettable exhibition ever held in our State, which has a magnificent record of State fairs.

The centennial committee's subcommittee on religion has received the splendid cooperation of the spiritual leaders of our State. They will assist in appropriate centennial observances in churches of every denomination during the early part of January and on May 30. In addition, county centennial committees are enlisting the eager aid of our citizens in planning local celebrations in every on of the State's 71 counties.

COOPERATION IN WASHINGTON

It has been my pleasure to cooperate in every possible way with the centennial authorities. On January 10, 1947, I introduced the original centennial coin bill, for the purpose of having 500,000 Wisconsin commemorative coins prepared by the United States Government mint. With the grand aid of my fellow Members in the Wisconsin congressional delegation, this legislation was finally enacted by the Senate on July 17, following passage in the House. Unfortunately the President chose to veto the bill—an ill-advised action which shocked our State. This coin would have been sold by the mint to our State treasurer at cost for resale to the public at a premium, with the proceeds being used to finance the centennial celebration.

Along the line of other centennial plans, I have been glad to make arrangements with (a) the Post Office Department for the preparation of a special centennial stamp, and (b) with the Library of Congress for the holding of a 3- to 4-month exhibition in that great institution in Washington, commemorating the Badger State's progress. At my request, there was also prepared Senate document 76, which lists all of Wisconsin's representation in the Senate and House of Representatives during our century of statehood. A copy of this document is readily available to every interested citizen upon request to my office.

I may add that the various foreign embassies in Washington, D. C., have been keenly interested in my report to them of our State's centennial plans, and many fine expressions of cooperation have already come to me from them.

CENTENNIAL'S ECONOMIC MEANING

Every citizen of Wisconsin knows that the 1948 centennial, inspiring itself in its patriotic meaning, is important economically to our State.

Wisconsin knows that, through the means of the centennial, the Nation will become more fully acquainted with the incomparable economic opportunities provided for new industries and the expansion of old industries in the Badger State—"God's country." Although we are thirteenth in population, we are already first in harmonious balance between farming and industry.

OUR INDUSTRY

Let us remember that the value of Wisconsin war production in prime contracts alone reached in excess of $5,000,000,000. Subcontracts added several billion dollars to that figure. Our Badger industries received over 175 awards of Army-Navy E flags, ordnance flags, Maritime Commission M awards, and Navy E awards.

Now this magnificent industrial and business potential, with outstanding manpower, is rolling in high gear to beat all previous peacetime and wartime records of production.

One-third of our Wisconsin people are working at or living from Wisconsin industry. Seven thousand corporations are located in cities and villages throughout our territory. With incomparable Badger manpower, they make shoes and rubber footwear for us and the Armed Services. They make fur clothing, automobiles, trucks, automobiles and truck frames, auto and truck tires, tractors, paper, lumber products, aluminum ware of all kinds, furniture, agricultural machinery, castings, forgings of every size and kind, road-building machinery and excavating machinery, plumbing equipment and supplies, air conditioning and chemicals, ships for inland waterways. We now rank first in the production of marine engines, generators, and turbines. Our production machines and tools are among the best and largest in the Nation.

Each year Wisconsin mines produce 1,250,000 tons of iron ore, more than 1,000,000 tons of lead and 7,000 tons of zinc.

At Madison there is located the Forest Products Laboratory in recognition by Uncle Sam of Wisconsin paper, pulp, lumber, and veneer importance.

OUR AGRICULTURE

The 30 percent of our people on farms produce 100,000,000 bushels of wheat, 86,000,000 bushels of corn, one-third of all the vegetables which are canned in America and 17,000,000 bushels of potatoes. We are first in the production of milk, casein, tame hay and peas, and stand second in production of cranberries. Eighty percent of the farms handling this magnificent produce are individually owned, while in other States 42 percent of farm dwellers are tenants. Every fourth Wisconsin farm has a tractor and 9 out of 10 of our farmers have their own automobile.

American vacationers this year, next year, and every year will particularly want to see many of our 125,000 dairy farms which, for example, produce more nutritious, delicious, aromatic cheese than is produced by all the other 47 States combined. In the summer season, out of juicy grasses, sweet-scented clover, luscious alfalfa, and cool spring water, the greatest chemist in the world—the milk cow—makes the milk for vitamin-rich, delectable cheese and butter. In the wintertime, out of silage from the nut-brown corn, ground wheat, and oats, hay, and alfalfa, the milk cow makes this perfect food.

TOURIST PANORAMA

Yes; Wisconsin is all this, and a lovely natural paradise too, blessed by the Creator with a cool, comfortable climate, with ideal location, with incomparable scenic beauty. Through the centennial, millions of vacation-hungry Americans will learn anew the peerless beauties of the little bit of heaven which is known as Wisconsin. They will learn anew of the 170,000 acres of our State's parks and forests, of our 7,000 lakes and hundreds of miles of rivers and streams, ideal for fishing, canoeing, motorboating, sailboating, rowing, swimming. They will learn the unparalleled facilities for summer sports and winter sports easily reached by car or bus over our 80,000 miles of model highways, by our railways and planes and steamships. With the aid of our efficient State American Automobile Association, they will have the time of their lives.

Yes; hundreds of thousands of tourists will learn of our beautiful cities and our thousands of villages and towns, nestling alongside breath-takingly lovely streams and lakes.

All of Wisconsin is vacation land; the green, rolling dairy country with its purebred cows, No. 1 in the Nation; the cool lakes of southeastern Wisconsin; the hills and valleys of the southwestern part and the Green Bay region, rich in historic lore; the ever-changing glories of the lands and beaches bordering Lake Michigan and Lake Superior; the sportsman's northwoods region, with its thousands of spring-water lakes; the lordly Mississippi on its west border.

Everywhere in these regions are abundant and well-kept hotels and resorts, large and small, together with forest lodges and lakeside cabins, modest cottages, and cabins in the pines, available for inexpensive rental. They are managed by folks who pride themselves on their high standards as gracious hosts, and who take pride in their State's national reputation for unexcelled hospitality.

OUR PEOPLE

There is a little bit of all the world in Wisconsin. We have absorbed the best of the Old World culture, blending it with the freedom and fraternity of the New World.

From our rich blend of pioneer stock came Wisconsin's servicemen, and from their ranks came our 12 Congressional Medal of

Honor winners, including our late Ace of Aces, Maj. Richard Ira Bong. It is to Wisconsin that America's magnificent soldier-statesman, Gen. Douglas MacArthur, will return from Japan.

CHALLENGE TO WISCONSIN

Our citizens know that the centennial can mark the beginning of a new and more prosperous era than ever before for our State's farmers, for its workingmen, its businessmen, its lumbering industry, its mining industry, its fisheries, and its other important economic fields.

Our State has always been a leader in the Nation in sane, orderly, and clean government.

The name of Wisconsin and the fame of Wisconsin will spread throughout America to a greater degree than ever before in the Wisconsin Centennial. And it will be up to each of our citizens to add new luster and glory to that name and fame by individual efforts to make of Wisconsin a still greater, more prosperous State in the century which lies so challengingly before us.

SEAWAY BILL

It will indeed be appropriate if in 1948, our centennial year, there will be finally enacted the Great Lakes-St. Lawrence seaway project, which has been the cherished dream of the people of Wisconsin ever since it conception so many years ago. It was my privilege this year to serve as chairman of the subcommittee of the Foreign Relations Committee which reported the seaway bill (of which I am a cosponsor) without dissent to the full committee. Thereafter, in spite of strong opposition, the full committee voted in favor of the resolution. I will certainly continue to do everything within my power to bring about the passage of the resolution on the seaway as early as possible in 1948. We in Wisconsin are located at approximately the very heart of America, 1,000 miles from the Atlantic Ocean, 1,000 miles from the Gulf of Mexico, 2,000 miles from the Pacific Ocean. Through the seaway, Wisconsin will be able to achieve yet unforeseen heights of advancement.

FORWARD WISCONSIN

Moreover, I will do everything else within my power to further our centennial plans, not only because it is my privilege and honor to represent Wisconsin in the Senate, but because every national legislator, I believe, must back up the State governments. We must help add new honor and new importance to our States. Therein is the salvation of our Republic—establishing strong and independent States to act as a check and a balance on our Federal Government.

The people of Wisconsin have always felt a great pride in their State and in their State government, and I trust and believe that through this centennial, they will feel more closely than ever the ties that bind them as members of the great Badger community.

Forward, Wisconsin.

Wool Imports Make a Large Contribution to United States Custom Receipts

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. D'EWART. Mr. Speaker, the following official table shows the weight, value, and duties collected on wool, and the total duties collected on all dutiable items:

Raw wool: Imports, duty collected, and total duties collected, 1935–46, inclusive

Year	Imports, all dutiable wools			Duties collected		Percent of total from wool
	Actual weight	Clean content	Value	Raw wool	Total dutiable items	
	1,000 pounds	*1,000 pounds*	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*	*Percent*
1935	45,924	29,746	8,449	9,437	357,241	2.6
1936	118,632	75,558	20,671	24,096	408,127	5.9
1937	155,358	94,253	49,476	30,836	470,509	6.6
1938	32,641	20,991	8,869	6,536	301,375	2.2
1939	99,453	59,529	22,339	19,155	328,624	5.8
1940	221,181	117,253	51,545	39,035	317,711	12.3
1941	603,352	327,913	155,806	109,805	437,751	25.1
1942	525,795	306,928	150,301	99,351	320,117	31.0
1943	624,627	380,813	190,962	126,901	391,304	32.3
1944	529,722	332,532	158,174	107,326	347,326	30.9
1945	657,115	406,090	201,057	133,863	378,075	35.4
1946 [1]	807,472	468,920	228,731	150,341	482,578	31.2
Average, 1941–46	624,080	370,533	180,805	121,264	393,067	30.9

[1] Preliminary.

NOTE.—The duties collected include duties on small quantities of specialty hair, the imports of which are not included in this table.
Source: Official statistics of the U. S. Department of Commerce.

What does this table show? First that over the years from three hundred to four hundred million dollars has been the average custom receipts. Second, please note that during the past 6 years that the duty collected on wool imports has been from 25 to 35 percent of the total custom receipts from all imports.

Then consider how 30 percent of these custom receipts set aside as section 32 funds—what have these section 32 funds been used for? One, to subsidize wheat and cotton exports, though these crops enjoy the benefit of embargoes on imports of their product. Second, for subsidizing new uses for cotton. Third, for relief and institutional distributions. Fourth, for school lunches. Fifth, For subsidizing fertilizer made from tobacco; for subsidizing tobacco insecticides and for subsidizing tobacco exports. Surely the lowly sheep has been a great provider of funds to be used for worthy purposes and for some purposes that are economically and agriculturally questionable.

It is regrettable that the American sheep industry has had to contend with an administration attitude that evidently will entirely liquidate the industry. The sheep numbers in the United States have been reduced over one-third the past 4 years.

And then the people wonder why there is not any lamb and mutton at the market place. The Members of this Congress do not want to assume the responsibility of legislatively liquidating the sheep industry of the United States. The section 32 funds of one hundred to one hundred and fifty millions per year has been a blank check to the Secretary of Agriculture. Its use has demonstrated how unwisely it has been spent. It would make more sense to subsidize wool or the sheep by the head than it does to obtain funds from the sheep industry and dissipate the funds.

Over $1,000,000,000 of these section 32 funds have been used by the Secretary of Agriculture under the guise of removing surpluses when more of many of these over-subsidized crops were imported than were purchased for distribution. This procedure does not make sense, nor can it be justified by any legislative yardstick.

Do you believe an appointed Federal officer should be given a one hundred to one hundred and fifty million dollar blank check each year and subjected to the sectional as well as political pressure incident to its use? The answer is "No."

A Bill To Encourage the Purchase Abroad of Works of Art for Donation to Museums and Public Art Collections in the United States

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mrs. BOLTON. Mr. Speaker, pursuant to unanimous consent granted me I am inserting into the Appendix of the RECORD a few remarks relative to a bill I am introducing today. This bill is as follows:

A bill to amend the Tariff Act of 1930, as amended

Be it enacted, etc., That paragraph 1547, chapter 4, title 19, United States Code be amended as follows:

At the end of paragraph 1547 (a) strike out the period and insert a comma and the following: *"Provided*, That such works of art imported for the sole purpose of donation to museums or to other public collections for display free of charge, shall be admitted free of duty."

Strike out parenthetical language in paragraph 1547 (b). At the end of paragraph 1547 (b) strike out the period and insert a comma and the following: *"Provided*, That such works of art imported for the sole purpose of donation to museums or to other public collections for display free of charge, shall be admitted free of duty."

One of the great crises of our times is the dollar crisis, the short supply of dollars in the hands of foreign nations. The crisis remains, although the United States, since VE-day, has sent abroad the stupendous sum of $20,000,000,000 in the form of loans, grants, gifts, and other kinds of aid. No conquering nation in

the history of mankind has ever done so much to relieve the postwar distress of its allies and enemies. Yet the end of the dollar crisis is not in sight. The damage done to the economies of other nations by the war is far greater than anyone had calculated when the shooting stopped.

Thus, our recent loan of $3,750,000,000 to Great Britain is being exhausted at a rate far greater than anticipated; and this is true, too, of her Canadian loan of $1,250,000,000. Canada herself, now our largest customer, is facing a dollar shortage as she buys more from us than she sells us. Latin America, not long ago plentifully supplied with dollars as the result of wartime sales to us, is now scraping the bottom of its dollar bin. France, Italy, the Netherlands, Scandinavia—all the nations of western and northern Europe with the sole exception of Switzerland—are painfully short of dollars. This year we are exporting more than we are importing at the rate of $1,000,000,000 a month. The deficit is being made up by loans, gifts, sales to us, gold and securities by other nations, remittances to foreigners by their American relatives, and tourist expenditures.

We alone can supply most of the world's needs for goods. Therefore, most of the nations must buy heavily from us, while they can sell us far less than they must buy. Hence their shortage of dollars. This goes to the heart of the world problem of recovery. It is related to all that we must do in terms of world rehabilitation and vigorous expression of the democratic ideal. The gap between the world's needs and its dollar supply widens every day. We can close it by buying more goods abroad. But we cannot buy as much as we sell, because other nations are not yet in a position to produce fully, and they themselves need many of the things we might buy from them. We can export more dollars in the form of tourist expenditures. But Europe is not ready to receive tourists on a large scale.

There is another course of action open to us. It is to put more dollars in the hands of foreigners by stimulating the purchase of works of art by American citizens.

Everybody knows that our art museums are no longer mausoleums, as many of them once were, but are a part of the life of the communities to which they belong. Thousands of people, drawn from all walks of life, constantly visit such great museums as the Metropolitan, the Whitney, and the Museum of Modern Art in New York; thousands of others delight in the museums of Worcester, Boston, Cleveland, Kansas City, San Francisco, Chicago, Washington, and other cities. It is conclusive evidence of the widespread popular interest in art that popular magazines with mass circulations running into millions of copies a week—as, for example, Life—devote dozens of color pages annually to reproductions of paintings by foreign and modern masters. Other magazines—for instance, Time and Newsweek—have regular art departments, while dozens of newspapers devote regularly allotted space to discussions of painting and sculpture. These activities prove that art is of immediate interest, not to a few cultists but to the body of the American people.

Similarly, art galleries and department stores sell thousands of excellent reproductions of paintings by ancient and modern masters that hang in American homes. So, too, interest in the crafts is high in the United States; interest in glass, wood carvings, rugs, tapestries, silver, copper, and iron works. It is the expressed interest not of a few connoisseurs but of millions of everyday Americans. It is an interest indicative of our coming of age culturally; of the advance of our education; of the constant growth of our taste. It is reflected in the excellent taste displayed in millions of American homes, and in the demand that even utilitarian articles, such as washing machines and refrigerators, should be not only efficient but, so far as possible, beautiful. No one knows better than American business that beauty pays, while for the individual beauty is always a source of pleasure and delight.

What has all this got to do with the world-wide shortage of dollars? The answer is simple. During the 10-year period 1937–46 we imported works of art to the value of $104,254,091. These are considerable imports despite the fact that the flow of works of art into this country was slowed, and then almost stopped, by the outbreak of war in Europe in 1939, and our own entrance into the war at the end of 1941, while hostilities came to an end only a little more than 2 years ago.

I propose, therefore, as one method by which we can ameliorate the dollar crisis, this: Whenever an American citizen buys works of art abroad for donation to a public institution, he shall be permitted to deduct sums expended for this purpose from his income tax.

This would cause an unascertainable but not devastating loss of revenue to the Treasury. But assuming that philanthropic citizens, stimulated by this incentive, should spend large sums of dollars abroad, these dollars would be spent here for American goods and services. Consequently, whatever losses the Treasury might sustain in one quarter, would be recouped in another quarter. Furthermore, to the extent that private dollars are sent abroad, the need for Treasury or public dollars is diminished; and this, in turn, diminishes our tax burden.

If this proposal seems novel, we must bear this in mind. It has always been the policy of our Government to encourage the dissemination of knowledge and extend the Nation's cultural boundaries. Original works of art therefore enter this country duty-free, while other objects, such as furniture, silverware, and so forth, enter duty-free when they are more than 100 years old and may be legitimately classified as antiques. So, too, scientific apparatus and books for the use of our institutions of learning come in duty-free, while not long ago, in order to stimulate the sale and reading of books, Congress sharply lowered the postage rate of books.

It is, then, merely an extension of our principle of encouraging the dissemination of knowledge, to propose that special incentives be offered to our citizens to import works of art for donation to public institutions. But in our times, this proposal put into action, would also serve the purpose of helping to put the world on its feet by making more dollars available to it.

I want, however, to be clear on one point. I regret the necessity for proposing the step that I have outlined. I wish the state of the world were such as to make it unnecessary. It is not evidence of a desire to gobble up everything in sight, simply because others are in distress. It is, rather, evidence of a desire to be helpful even when to help in the manner suggested is not without painful aspects. Yet, this, too, must be said. Works of art have always been for sale in the markets of the world. Some of them pass through many hands for centuries before they come finally to rest in public museums. They then become part of the patrimony of the nation. But we want nothing to do with purchases of art from governments. We are not scavengers. We do not want to strip any nation of a fraction of its cultural patrimony, even if a nation hard-pressed should be tempted to part with it. What I propose therefore has to do only with the course of the art business as it has been pursued for centuries with an incentive given to the American citizen who would enrich the culture of his country by donating his purchases to a public institution of his own selection.

To this end I have introduced legislation which in the regular procedure will be considered by the Committee on Ways and Means as it amends the tax laws which are to be given careful study in the coming months.

An Analysis Concerning Alien Property

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an analysis in regard to certain types of alien property. This analysis was prepared for me by the Office of the Alien Property Custodian:

ANALYSIS OF DEBT CLAIMS FILED WITH THE OFFICE OF ALIEN PROPERTY

The primary objective of this analysis is to determine to what claimants or groups of claimants the largest amounts of money may be paid under the debt-claim program of the Office of Alien Property.

The analyst is seriously limited by three factors: (a) The short time available to make the analysis; (b) the fact that debt claims have been received by the Office during the past 3 months in such great volume that it has been impossible to compile statistical card records; (c) the lack of information on the validity of the claims and, frequently, on the eligibility of the claimants.

Within these limitations it is possible, however, on the basis of information collected on claims filed through March 1947, and on the basis of spot checks of claims recently received, to arrive at conclusions that should prove useful in indicating the

general nature of the debt-claims program. In addition, the Office has the advantage in making the study of a detailed knowledge of most of the cases in which large sums of money were vested, including frequently some knowledge of the types and number of claims that could be asserted.

GENERAL STATISTICS

It is estimated that the Office will receive a total of approximately 24,000 debt claims with respect to vested German and Japanese property from persons eligible as to nationality to receive payment of their claims under existing legislation. (Another 2,000 or 3,000 unsecured debt claims are expected from foreign nationals resident outside of the United States, who are ineligible for payment on unsecured claims.) Under these claims it is estimated that a minimum of $150,000,000 will be claimed.

The total amount claimed is, however, of limited significance. Often a claim for $1,000,000 or more is received against the account of a debtor from whom only a few thousand dollars have been vested. Since the Office is authorized to pay the debts of a particular national only out of property vested from that national, many claims obviously cannot be paid in full.

After allowing for these insolvent accounts, it may be estimated that the gross amount payable by the Office from assets vested from debtors, if all 24,000 debt claims are found valid, will amount to approximately $55,000,000.

For statistical purposes it is obviously necessary to regard all claims as valid since no legal opinions with respect to their validity are available. It is possible, however, that invalid claims may run as high as 30 percent.

This $55,000,000 is classified in table I (appended hereto) according to the major claimants and classes of claimants.

The nature of the claims asserted under each item of table I is described item by item in the succeeding sections.

A. Claims by one vested property against another

In numerous instances one vested property may have a claim against another. For example, one vested bank may be owed money by another as a result of transactions that took place prior to vesting. Under such claims, if all are found valid, vested properties could pay each other $13,000,000.

Payment of these claims would not directly reduce the amount of vested property but would involve merely the transfer of money from one account to another. Such payments could, however, indirectly affect, in certain cases, the total amount of debt claims payable by the Office to private persons. For example, if account A is rendered insolvent by the existence of a claim by account B, private claimants would receive less from account A than if the transfer between accounts had not been made; conversely, if account B is rendered solvent by payment to it of funds from account A, private claimants would receive more from account B than if the transfer between accounts had not been made. The net result, insofar as total payment to private claimants is concerned, should prove immaterial.

B. Secured debt claims

A secured debt claimant is one who asserts a direct interest in a specific piece of property as pledgee, lienholder, mortgagee, etc. Secured debt claims are, therefore, in the nature of title claims and may be payable in accordance with section 32 of the Trading With the Enemy Act (Public Law 322) rather than section 34 (Public Law 671). Thus, secured debt claims may be asserted not only by United States citizens and noncitizen residents, as in the case of unsecured claims, but also by nonhostile foreign nationals eligible to recover property and property interests under Public Law 322.

1. Claims listed and described: Six of the claims, all involving large amounts, are listed and described below (the descriptions of individual claims contained in this analysis are based upon statements in the notices of claim received from claimants. The amount claimed will not necessarily be the amount payable by the Office if a claim is allowed since it may be allowed only in part or there may be insufficient property vested from the debtor to make payment in full):

Claimant: Swiss Bank Corp. (Switzerland). Alleged enemy debtor: Chemical & Pharmaceutical Enterprises, Ltd. Amount claimed, $1,236,652.

Claim No. 4195 asserts that $1,236,652 is due and unpaid on a loan made by claimant to Chemical & Pharmaceutical Enterprises, Ltd., for which claimant took as collateral security therefor, together with other property, 43,994 shares of common stock and 2,225 shares of preferred stock of Schering Corp. (New Jersey), 10 shares of common stock of Schering Corp. (New York), and 100 shares of common stock of Sherka Chemical Co., Inc. (New York), all of which are now vested in the Attorney General.

Claimant: Sjo-Ooh Brandforsaktiebolaget "Svenska Veritas" (Sweden) Alleged enemy debtor: Muenchener Rueckversicherungs Gesellschaft. Amount claimed, $215,781.

Claim No. 4037 asserts interest, right, and title in 3,753 shares of Pilot Reinsurance Co. stock which were allegedly transferred to it by the Muenchener Rueckversicherungs Gesellschaft of Munich, Germany, as security for unearned premiums and outstanding losses and for claims and liabilities arising out of reinsurances ceded by the claimant. The liability of the German reinsurers is stated to have amounted to $215,781 plus interest on December 31, 1942, and the claimant seeks the liquidation proceeds of the stock (now vested in the Attorney General) in satisfaction of the liability.

Claimant: Aterforsakringsaktiebolaget (Sweden). Alleged enemy debtor: Muenchener Rueckversicherungs Gesellschaft. Amount claimed, $201,230.

In Claim No. 4036 claimant asserts that it entered into an agreement with Muenchener Rueckversicherungs Gesellschaft, Munich, Germany, whereby the latter transferred 5,000 shares of Pilot Reinsurance Co. stock to the claimant as security for unearned premiums and outstanding losses and for claims and liability arising out of reinsurances ceded by the claimant. The liability of Muenchener is stated to have amounted to $201,230 on September 30, 1942, and the claimant now asserts an interest, right, and title in the 5,000 shares of stock (now vested in the Attorney General) which were allegedly pledged by Muenchener to secure its liability.

Claimant: Forsakringsaktiebolaget "Atlantica" (Sweden). Alleged enemy debtor: Union Rueckversicherungs Gesellschaft. Amount claimed, $176,250.

Under claim No. 4038 the claimant asserts interest, right, and title in 3,750 shares of Pilot Reinsurance Co. stock which were allegedly assigned to it by Muenschener Rueckversicherungs Gesellschaft, of Munich, Germany, for the purpose of securing liabilities arising out of reinsurance ceded to Muenchener by the claimant. When the war broke out Muenchener transferred all reinsurances in force, ceded by claimant, to the Union Rueckversicherungs Gesellschaft, of Zurich, Switzerland. The arrangement with respect to the Pilot Reinsurance Co. shares remained unchanged and the claimant now seeks satisfaction of liabilities of $176,250, plus interest, out of the liquidation of the stock (now vested in the Attorney General) allegedly held as security.

Claimant: James E. Egan, public administrator, New York County. Alleged enemy debtor: August Diehn. Amount claimed, $250,000.

Under claim No. 1264 the claimant asserts the right to the interest of August Diehn, who died intestate, in a syndicate or group managed by Hope & Co., which syndicate alleges on behalf of itself and its members a collateral security interest in approximately 465,000 shares of stock of American Potash & Chemical Corp. The 465,000 shares have been vested and sold to American citizens.

Claimant: Hope & Co. and Continentale Handelsbank. Alleged enemy debtor: Winterschall A. G. and Salzdetfurth A. G. Amount claimed, $5,000,000.

Claim No. 1137 asserts a secured debt claim of an estimated amount of $5,000,000, based upon loans by claimants to a Dutch syndicate of which they were members for the purchase of 475,000 shares of stock of American Potash & Chemical Corp. and for commissions, profits, interests, and costs due claimants pursuant to a contract with the syndicate for management of the shares and other services. Claimants state that the syndicate and its members have a lien on 465,000 shares as security for payment of the amount claimed. The 465,000 shares have been vested and sold to American citizens.

Since all of the above claims are asserted by or on behalf of foreign nationals residing outside the United States, they cannot be paid as unsecured claims if the claimants fail to establish recognizable security interests or fail to prove themselves nonhostile nonenemy nationals within the standards of Public Law 322.

2. Other claims: A large proportion of the remaining 200 secured debt claims arise from mortgage bonds issued by Nippon Club, Inc., an organization whose assets were vested by the office and from attorneys' liens. The remaining claims assert lien and mortgage interest of various kinds. If it should be determined that these claims are not secured claims, most of them may be reconsidered as unsecured claims since the claimants are mainly United States citizens and residents.

C. Preferred claims

1. Wages and services: No claims for wages and services under which substantial amounts might be payable were found. The 4,750 wage and service claims involve an average amount payable of less than $2,000.

The greater proportion of wage and service claims involve:

(a) Claims for wages and salaries by employees of enemy nationals, particularly employees of enemy-owned United States enterprises whose assets have been vested.

(b) Claims for services by attorneys who prosecuted patent applications for enemy nationals, represented enemies in probate matters, provided legal services for vested enterprises, etc.

(c) Claims for telephone and utility services supplied to vested enterprises or enemy nationals.

(d) Claims for fees by United States agents of enemy nationals for caring for their American property (including claims for reimbursement for maintenance expenses in connection with buildings, etc.) or for representing enemies in business transactions.

2. Rent: The only known sizable rent claim is that of 61 Broadway Corp. against the Hamburg American Line. Sixty-one Broadway Corp. asserts a claim for $623,000 under a rental contract on a building in New York occupied by Hamburg American Line-North German Lloyd. This claim, if valid in full amount, could probably be paid at no more than 50 percent owing to anticipated insolvency of the account. Other rent claims are relatively insignificant in amount.

3. Steamship ticket refunds: All of the steamship ticket cases are small, and the average amount claimed is about $350. Most of the claims are against Hamburg American Line and North German Lloyd. The claims against Hamburg American can probably be paid only in part; with respect to North German Lloyd, after payment of taxes it does not appear that there will be sufficient vested assets to pay debt claims. A few steamship ticket cases involving Japanese lines probably could be paid in full.

4. Other refund claims for goods and services not received: A few claims have been filed asking for the return of amounts paid for goods and services (other than steamship transportation) not received by claimants. None of these claims involve significant amounts.

5. Materials.

(a) Claims listed and described. Two large claims have been filed for payment of the unpaid purchase price of goods delivered to enemy nationals. These claims are listed and described below:

Claimant: General Petroleum Corp. of New York. Alleged enemy debtor: Mitsui & Co., Ltd. Amount claimed, $878,782.

Claim No. 122 is for balance due with interest as payment for merchandise (oil) allegedly furnished to Mitsui prior to December 7, 1941, pursuant to contract dated July 29, 1937.

Claimant: Tidewater Associated Oil Co. Alleged enemy debtor: Mitsubishi Shoji Kaisha, Ltd. Amount claimed, $138,325.

Claim No. 302 is for value of merchandise, consisting chiefly of oil, allegedly delivered to Mitsubishi Shoji Kaisha.

(b) Other claims: Other claims for payment for materials delivered to enemies are relatively small. A number of them seek payment for goods sold to United States enterprises whose assets have been vested; in these cases the specific goods to which the claims relate (or their cash proceeds) are among the vested assets.

D. Unpreferred claims

1. Bonds: The largest group of unpreferred claims was filed by American residents who hold bonds and similar securities of the German and Japanese Government or of German and Japanese corporations and other organizations. These bonds are frequently held in small amounts as investments by trustees and by persons of limited financial resources. Some, however, are held in large amounts by American financial institutions and other substantial investors. The largest claim of this kind received to date is by the Bank of America, which holds $2,284,000 of German Reich treasury note participation certificates. Owing to insolvency in the German Reich vested property account, probably not more than 10 or 15 percent of this amount can be paid.

Similarly, the Office can make only limited payments on most other bond claims owing to the insolvency of the accounts.

2. Deposits in vested banks: Approximately 8,000 claims are being received from depositors in vested banks in Hawaii. Most of these claims are small since the principal of most deposits has already been paid pursuant to the laws of Hawaii governing banks of deposit. The total amount payable under these claims, if all are allowed, is estimated at $700,000.

3. Other claims.

(a) Listed and described: A number of analyzed unpreferred claims on which large amounts may be payable are listed and described below (the descriptions given are frequently limited as to details because of the absence of such details in the notices of claim received by the Office):

Claimant: International Silk Guild, Inc. Alleged enemy debtor: Bank of Chosen, Ltd., and others. Amount claimed, $578,426.

The International Silk Guild, Inc., an organization of all branches of the silk industry in the United States to further the interests of the silk industry, was financed in part by assessments levied against silk shipments originating in Japan. The levy was collected in Japan and billed to and paid for by United States importers. Remittances covering the amount of the assessments collected were made to the International Silk Guild, Inc., until May 1940, when they were suspended because of Japanese Government interference in the transfer of funds. Following that date the assessments continued to be collected in Japan but were not remitted to the Guild. The Guild now claims $578,425.60 in collected assessments, which it alleges have been deposited in various Japanese banks and United States branches thereof and were never forwarded to the Guild in the United States.

Claimant: National City Bank of New York. Alleged enemy debtor: Mitsui Bank, Ltd. Amount claimed, $329,944.

Claim No. 1566 requests payment of $354,637.42 less offset in amount of $24,693.77, or a net amount of $329,943.65. Claim is based upon balances allegedly owed by Mitsui Bank, Ltd.

Claimant: National City Bank of New York. Alleged enemy debtor: Sumitomo Bank, Ltd. Amount claimed, $29,311.

Claim No. 1563 requests payment of $236,080.85 less an offset of $206,769.92, or a net amount of $29,310.69 (less possible additional offsets). Claim is based upon balances allegedly owed by Sumitomo Bank, Ltd.

Claimant: Eugene T. Singer (as assignee of Standard Vacuum Oil Co.). Alleged enemy debtor: Yokohama Specie Bank, Ltd. Amount claimed, $1,495,061.

Claim No. 2011 requests payment of $937,500, constituting the balance of the account of Standard Vacuum Oil Co. (claimant's assignor) in Yokohama Specie Bank in Yokohama. Claim No. 2012 requests payment of $557,561, representing yen allegedly transferred by Standard Vacuum (claimant's assignor) to Yokohama Specie Bank in exchange for dollars to be paid in New York.

Claimant: Federal Reserve Bank. Alleged enemy debtor: Mitsui & Co., Ltd. Amount claimed, $208,215.

Claim No. 29 asserts that Mitsui & Co., Ltd., of New York is liable as endorser of acceptances of Yokohama Specie Bank, Ltd., of New York, drawn to claimant, account Commonwealth Bank of Australia.

Claimant: John Woodson, executor. Alleged enemy debtor: Bank of Taiwan. Amount claimed, $119,709.

Under claim No. 5246, executor (John Woodson) of estate of Joseph Rice, deceased, claims above amount which was allegedly deposited in two Philippine Islands banks and transferred to Bank of Taiwan by order of the Japanese Government during occupation.

Claimant: Guaranty Trust Co. of New York. Alleged enemy debtor: Fried. Krupp A. G. Amount claimed, $338,587.

Under claim No. 2237 claimant asserts that it accepted trade acceptances drawn and endorsed by Krupp A. G., Essen.

Claimant: Mrs. C. Herter. Alleged enemy debtor: Gustave Herter. Amount claimed, $200,000.

Claim No. 4909. The basis of the claim is a note in the amount of $200,000, dated November 8, 1919, made by Gustave Herter to Clarence S. Herter, deceased husband of claimant. It is alleged that no part of the note, now held by claimant, has been paid.

Claimant: Manufacturers Trust Co. Alleged enemy debtor: Berliner Handelsgesellschaft. Amount claimed, $984,230.

Under Claim No. 4934 claimant states that it seeks payment of indebtedness in the form of 90-day drafts representing advances made by Manufacturers Trust Co. to finance exportation of merchandise under the guarantee of Berliner Handelsgesellschaft, Berlin, Germany.

Claimant: Manufacturers Trust Co. Alleged enemy debtor: Reich-Kredit Gesellschaft A. G. Amount claimed, $845,793.

Under Claim No. 4928 claimant states that it seeks payment of indebtedness of Reichs-Kredit Gesellschaft A. G., Berlin, Germany, in the form of 90-day drafts representing advances made by Manufacturers Trust Co. to finance exportation of merchandise under the guaranty of Reichs-Kredit Gesellschaft A. G., Berlin, Germany.

Claimant: Bendix Aviation Corp. Alleged enemy debtor: Robert Bosch, A. G. Amount claimed, $74,335.57.

Under Claim No. 826 claimant states that it seeks payment of unpaid royalties due claimant from January 1, 1941, to June 30, 1941, amounting to $74,335.57, under certain license agreements; and all royalties, if any, which have accrued or may be accruing to the claimant's account since June 30, 1941.

Claimant: Edward L. Murphy. Alleged enemy debtor: I. G. Farbeindustrie, A. G. Amount claimed, $294,399.58.

Claim No. 1941 is brought by Edward L. Murphy as an assignee of Kleinwort Sons & Co. The notice of claim states that the latter firm advanced moneys for the acceptance and payment in England of certain bills of exchange issued by I. G. Farbenindustrie, for which neither Murphy nor Kleinwort Sons & Co. was ever repaid. In June 1941, the claimant brought suit against I. G. Farben in the Supreme Court of the State of New York, and a warrant of attachment was issued against the property of I. G. Farben. Warrants of attachment were served against a New York bank account of I. G. Farben and several debts owing to I. G. Farben by United States firms. Judgment by default in the sum of $294,399.58 was entered in the office of the clerk of the county of New York in September 1941.

Claimant: Manufacturers Trust Co. Alleged enemy debtor: Dresdner-Leipziger Schnellpressenfabrik, A. G. Amount claimed, $53,702.

Claim No. 1924 is asserted against Planeta Druckmaschinenwerke A. G., Radebuel, Germany, successor of Dresdner-Leipzinger Schnellpressenfabrik A. G., Coswig, for payment of an alleged past-due indebtedness "in the form of 90-day drafts representing advances made by Manufacturers Trust Co. to finance exportation of merchandise for account of the debtor."

Claimant: National Shawmut Bank. Alleged enemy debtor: Berliner Handelsgesellschaft. Amount claimed, $605,970. Claim No. 4667 arose through obligations allegedly due the National Shawmut Bank of Boston by the above-named bank, to which the National Shawmut Bank of Boston had granted credits, never paid, and carried for some years under the "German Standstill Agreement."

Claimant: National Shawmut Bank. Alleged enemy debtor: Hardy & Co., G. m. b. H. Amount claimed, $107,560. Claim No. 1441 arose through obligations allegedly due the National Shawmut Bank by Hardy & Co. and carried for some years under the "German Standstill Agreement" and still unpaid.

Claimant: Standard Security & Casualty Co. Alleged enemy debtor: Kawasaki Kisen Kabushiki Kaisha. Amount claimed, $341,200. Claim No. 2219 is composed of various claims and contingent claims for "indemnification and exoneration of claimant as surety on certain bonds * * * and payment of premiums on such bonds until finally discharged." The bonds referred to above are various "judicial financial guaranty" or "court" bonds, executed by the claimant for Kabushiki Kaisha Kawasaki Zosenjo and Kawasaki Kisen Kabushiki Kaisha.

(b) Other claims: Other unpreferred claims consist of a wide variety of different types of claims. The bases of these claims are, among others, the following:

1. Insurance premiums owing to United States insurers by enemy nationals.

2. Insurance benefits owing by enemy insurance companies.

3. Dues and assessments of nonprofit organizations.

4. Unpaid drafts, checks, and other instruments.

5. Loans and advances.

6. Balances between banks arising out of foreign exchange and other financial transactions.

7. Balances owed under German standstill agreements.

8. Deposits in enemy banks located abroad.

Most of these claims are in small amounts. Many, however, are for large sums but can be paid only a few cents on the dollar, since the property vested from the particular debtors involved is worth far less than the aggregate amounts claimed.

CONCLUSIONS

Under the Office's debt-claim program a total of 24,000 claims relating to alleged debts of German and Japanese nationals from whom property has been vested are expected from claimants eligible as to nationality.

Under those claims a total of $55,000,000 can be paid if all claims are valid.

About $13,000,000 of this $55,000,000 would represent transactions among vested properties and would not reduce the Office's holdings of vested property. Another $9,000,000 might be payable as secured claims; under these claims, persons assert property interests in specific assets.

Thus, the total amount that might be payable to unsecured private claimants would be about $33,000,000, or less than $1,500 per claim.

A large number of claims may, however, be found invalid when the Office examines them at the time they are considered for payment. Hence, total payments to unsecured debt claimants should be less than the $33,000,000 estimate.

While most claimants will receive only small amounts, a few may receive large payments. This analysis shows that, under 19 large claims, a total of $5,000,000 may be payable.

It is, of course, possible that other large claims, not studied in this analysis, are among the claims currently being received by the Office. Such claims would not necessarily, however, increase the number of claimants to whom large amounts would be payable. In fact, they should have the opposite result. Large claims are generally concentrated against particular accounts, which become more insolvent as additional claims are received. Thus, if new large claims are received against already insolvent accounts, the result will be a decrease in the amounts payable to other claimants seeking payment of substantial sums.

TABLE I.—*Distribution by type of claim of estimated number of debt claims and estimated amounts payable under debt claims*

Type of claim	Estimated number of claims	Estimated amounts payable if all claims are valid
A. Claims by one vested property against another	300	$13,000,000
B. Secured debt claims:		
1. Claims listed and described	6	7,080,000
2. Other claims	200	2,000,000
Subtotal	206	9,080,000
C. Preferred claims:		
1. Wages and services	4,750	8,500,000
2. Rent	150	700,000
3. Steamship-ticket refunds	1,500	250,000
4. Other refund claims for goods and services not received	150	500,000
5. Materials:		
(a) Claims listed and described	2	1,017,000
(b) Other claims	300	2,500,000
Subtotal	6,852	13,467,000
D. Unpreferred claims:		
1. Bonds	6,000	6,500,000
2. Deposits in vested banks	8,000	700,000
3. Other:		
(a) Claims listed and described	17	3,989,000
(b) Other claims	2,500	8,000,000
Subtotal	16,517	19,189,000
Grand total	23,875	54,736,000

Percentage classification of wage and service claims by principal types

Type	Percentage of sampled wage and service claims	Average amount payable per claim
General attorney fees. These fees are for legal services rendered, disbursements made, and expenses incurred in representing the former owners of vested property.	30.2	$2,398
Attorney fees for prosecution of patent applications. These fees are for legal services and expenses rendered in connection with the filing and prosecution of patent applications for enemy nationals.	29.0	464
Salaries, allowances, and deductions. These claims were filed by former employees of enemy nationals for services rendered, retirement allowances and bonuses allegedly due them, and for bond and pension deductions which had been made from their salaries.	13.2	3,443

Independence Day Declaration of the Free Representatives of Eastern European Nations

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following: Independence Day declaration of the free representatives of eastern European nations, made public at a press conference held by Mr. Ferenc Nagy, former Hungarian Premier and leader of the Smallholders Party, and Mr. Georgij M. Dimitrov, leader of the Bulgarian Peasant Party, on July 3, 1947, in Washington, D. C.:

In felicitating the American people and its democratic institutions on this one hundred and seventy-first anniversary of American independence, the undersigned representatives of the peasant parties of eastern Europe—at this fateful moment when in our countries democratic movements are being crushed, self-government is being suppressed by force and independence is being obliterated—deem it to be our duty to make known to the enlightened world our faith in the dignity of man, in the freedom of the individual and in representative government. We are in complete agreement as to the community of our aims.

First. As leaders of the peasant parties in our countries we have fought for the realization of these aims, which are the aims of the overwhelming majority of the peoples of eastern Europe. Our organizations represent the interests of more than 100,000,000 human beings. We hold our mandates from these millions of citizens, now deprived of their inalienable rights. We, and not the present subservient dictators who were trained by and are imposed on our nations by a foreign force, are the real representatives of the people. We do not believe in vengeance against those who have been misled. We know only too well that our exhausted people need reconciliation. The historical responsibility for the moral and material destruction of our people rests with the present oppressors and their masters.

Second. From the ideological point of view our movements have stood for and continue to stand for political and economic democracy. The four fundamental freedoms of the Atlantic Charter and the principles of the United Nations Charter for international unity and collaboration have been and remain the basis of our programs. We have been and continue to be decided opponents of all ideologies with totalitarian and dictatorial tendencies.

Third. The social, political, and economic structures of our countries are predicated upon the ideas of individual liberty and private ownership based on productive labor. These are fundamental elements of our conceptions of freedom, human integrity, and democracy. It is for these that our followers have fought and destroyed feudalism in the past; they have resisted nazism and fascism at the price of heavy sacrifices, and continue to resist the forces which tend to efface the individual and to transform self-government into the dictatorship of a political clique. We are agreed that the necessary reconciliation of the individual and social interests is attainable only by free cooperativism, and therefore we are categorically opposed to general collectivizations and cooperatives imposed by force and carried to the point of reducing the population to slavery and pauperism.

Fourth. The individualistic and industrious peasants, who are behind us, are the backbone of democratic institutions in our part of the world. True to our trust and enlightened by our recent experience, we repudiate the practices of discrimination on account of social status, creed, race, political beliefs, or occupation. We are guided by the recommendations of the agrarian organizations of the eastern European countries concerning economic and political collaboration, contained in the declaration of the International Agrarian Conference of July 1942 held in London.

Fifth. We hold democracy to be one and indivisible. The recent events in our countries have clearly proved that the so-called eastern democracy is but a dictatorship of Communist minorities, imposed by foreign military force which endeavors to perpetuate its authority by means of civil strife and terrorism, thus adding new destructions to the already accumulated ruins. Bending all our efforts toward the realization of these principles, we are contributing to the cause of lasting peace, international understanding and cooperation, and to the general rehabilitation of Europe. In the past our hopes were centered in the League of Nations. Now we place our reliance for the future on the United Nations. At a time when trusteeships are being created for the preparation of dependent peoples for independence and self-government, we strongly believe that the democracies will not permit the subjugation of nations which have posssessed independent existence and cultural attainments for centuries.

On this Fourth of July, we raise our voices on behalf of those who cannot speak. When free people everywhere are commemorating the birthday of this great and humane nation, we appeal to the United Nations and to the American people and its Government for their generous support and assistance in the realization of these noble aims. We

remind them of the fate of those who are being deprived of the most elementary human rights, in order to afford evidence to our peoples, who are fighting for their freedom and independence under most trying circumstances, that they are not being abandoned to their cruel fate and that they will be upheld in their efforts to become masters of their own destinies.

We appeal to the democratic peasant parties of other countries, which so far have not had the possibility to associate themselves with our efforts, to join with us in the creation of a democratic international peasant union and the eventual realization of the United States of Europe, with the ultimate aim of establishing world-wide democratic unity.

Our isolated attempts have met with failure—our joint efforts will succeed.

FERENC NAGY,
Former Hungarian Premier, Leader of the Hungarian Smallholders Party.
DR. VLADKO MACEK,
Former Vice Premier of Yugoslavia, President of the Croatian Peasant Party.
DR. MILAN GAGRILOVIC,
Former Member of the Yugoslav Government, President of the Serbian Peasant Party.
Dr. GEORGIJ M. DIMITROV,
Former Member of the Bulgarian Parliament, Leader of the Bulgarian Peasant Party.

WASHINGTON, D. C., *July 4, 1947.*

The present declaration was framed with the participation of the representatives of the Rumanian and Polish Peasant Parties.

BACKGROUND MATERIAL—EXCERPTS FROM THE PEASANT PROGRAM

The declaration of the International Agrarian Conference, the so-called peasant program referred to in the above declaration (in point 4), was signed in London on July 9, 1942. The signatories of the program were:

Bulgaria Dimitre Matzankieff (at that time on the executive committee of the Bulgarian Agrarian National Union).

Czechoslovakia: Dr. Ladislav Feierabend; Ján Lichner (members of the Czechoslovak Government in exile).

Greece: Dr. Vrasidas Capernaros (attached to the Greek Ministry of Finance in London).

Hungary: Arnold Dániel (worked at the Czechoslovak Academy of Agriculture, and in March 1939 left Prague for England); Count Michael Károlyi (president of the Hungarian committee in London).

Poland: Stanislav Mikolajczyk (Deputy Prime Minister of the Polish Government in exile); Witold Z. Kulerski (secretary to the Polish National Council in London).

Rumania: Dr. Pavel Pavel (at that time close collaborator of Maniu).

Yugoslavia: Dr. Rudolf Bicanic (deputy governor of the Yugoslav National Bank in London); Rev. Francis Gabrovsek (connected with the Yugoslav Government in exile); Dr. Milan Gavrilovic (Minister of the Yugoslav Government in London).

(Note: Dr. Bicanic expressed later the view that, if the conditions prevailing in May 1944 had existed in 1942, he would not have signed the program.)

The program stated inter alia:

"We declare that we remain opposed to dictatorship in all its forms and heartily associate ourselves with the United Nations.

"We endorse the general purpose of the Atlantic Charter. * * *

"The Nazis regard central and eastern Europe as the booty which they hope to extract from this war.

"After victory we must be relieved from the grip of the German taskmaster; and this can only be achieved by opening new markets for us in Britain and western Europe, and by a closer all-round association between us and the United Nations. The permanent subjection of this region by Germany would mean German domination of the whole Continent; and this would involve not merely the final suppression of liberty in the nations concerned, but insecurity for all, including the great powers themselves.

"We proclaim our faith in the principle of democracy and the "four freedoms" proclaimed by President Roosevelt. We believe that the right of the people to choose and to interpret their own destiny is essential in human destiny.

"The main basis on which a sound and progressive agricultural community can be built up is that of individual and peasant-owned farms. We do not, however, believe that the peasant can live in isolation, and we recognize the desirability of voluntary cooperation in land cultivation.

"Experience of the past 20 years proves that land reforms alone are not sufficient. They must be followed by further constructive measures. The peasants themselves should control marketing, credit, and the supply of agricultural equipment by their own institutions, democratically organized. This method of combined action, being the practical expression of the cooperative principle, should be extended to factories for processing agricultural products, to the markets of the products thus made, to village communities engaged on special types of production, and to the promotion of agricultural education.

"The exaggerated nationalism of the nineteenth century gave us a legacy of national strife. We desire in the twentieth century to serve better cause. We are all fighting for our nations against Nazi tyranny; but when, with the aid of Britain, America, and the Soviet Union, we have won our freedom once more, we are determined to bury past feuds and to show the world that we have a common purpose."

Passenger Transportation in the North Atlantic

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. BRADLEY. Mr. Speaker, in one or two instances in the past I have mentioned to the House the thoroughly disgraceful conditions of passenger transportation on wartime-built transports now used for passenger transportation in the North Atlantic.

The following article, published in the Washington Daily News of July 21, is, to the best of my belief, an accurate account of conditions now existing on many of these ships and illustrates most forcibly the need that the Congress shall soon take some action toward the construction of suitable passenger vessels for service under the American flag in the North Atlantic:

SOMEBODY OUGHT TO CLEAN UP OR RENAME THE STEAMSHIP "ERNIE PYLE"

(By Theodore Andrica)

BREMEN, GERMANY, July 18.—Friends of the late Ernie Pyle should start a concerted action to remove his name from the former troop ship which is now bearing it.

Conditions on this ship make one marvel that the Government, owner of the vessel, allows American citizens to travel on it.

There were about 890 passengers. Women with children were given berths in cabins holding from 6 to 12 beds. The other women and all men, except a few privileged ones, were given bunks in the hold. By chance, my "room" had only 35 other passengers in it. Other rooms housed from 60 to 100 each.

The beds were canvas bunks, tied to steel tubing by rope. I slept on the lowest bunk of the tier, and the space between my face and the back of the man above me could not have been more than 2 inches. Every time I turned, my nose got an involuntary massage.

To describe the inadequacy of sanitary facilities would require several articles. Pools of water on the washroom floor were so permanent that one wondered if the floor was ever dry. There was plenty of hot water to wash with, except that it was scalding hot.

Men paid $135 for the passage. Some women paid the same amount, but a great number paid $195, on the pretense that they would be given berths in the smaller cabins and that they would eat in the dining room and not in cafeteria style; that is, standing in line for food.

I met plenty of women, however, who paid $195 but who slept in bunks in the large rooms and who ate their meals in cafeteria style.

No effort was made to make the trip as pleasant as it might have been. There were only a few public rooms and they were uncomfortably crammed with people.

The quietest group aboard consisted of 31 pro-Nazi repatriates whom the United States Government was sending to Germany after holding them in internment camps in America for the past 5 years.

I became acquainted with the peculiar mode of thinking of several German repatriates. One spent 21 years in the United States but when the ship was nearing Bremen, he said, "Well, at last I am going home." Another German, apparently annoyed by the indiscreet reference to "home," angrily snapped, "Shut up."

Army-Navy Unification Bill

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of July 22, 1947:

MILITARISM RIDES HIGH

Something that looks suspiciously like a supergovernment of militarists has been established under the so-called Army-Navy unification bill. This legislation was approved Saturday by the House with shockingly thoughtless dispatch. It had previously been passed by the Senate. Although a few minor changes were made in the language, the bill now goes to a conference committee in virtually the form it was originally written.

It is a complex piece of legislation. Very few Members of Congress seemed capable of appreciating its dangerous implications, and certainly the country at large is almost wholly ignorant of its provisions. In a gen-

eral way, the people probably were induced to believe that the bill was intended to establish some sort of unity of command over the Army, Navy, and Air Forces, to simplify the problem of national defense, and to achieve economy in the procurement of material and supplies.

These supposed objectives, however, were merely a smoke screen for what the bill actually does. First, it is fatal to hope that the Regular Army and Navy can be subordinated in defense plans to an army of civilian soldiers, organized around the National Guard. The bill is predicated upon the continuing existence of an immense regular military and naval establishment. The pending conscription bill, already approved by a House subcommittee, alone would produce this result, for upwards of 100,000 officers and men, at the very least, would be constantly required for training the draftees.

Second, the bill injects the Army and Navy into fields which were hitherto considered to be solely of civilian concern. Through the supersecretary of national defense, and the subsecretaries of Army, Navy, and Air Force, they are to have a voice—and probably a controlling voice—in foreign policy, in obtaining access to raw materials in foreign lands by whatever means are required, in regimenting industry for war, in directing scientific research, and in running a spy service at home as well as abroad.

Third, the executive order by which President Truman proposes to implement the legislation provides for the use of "such missions and detachments for service in foreign countries as may be required to support the national policies and interests of the United States." Language so vague is subject to alarming constructions. There is no authorization here that Congress is to be consulted if the President is persuaded by the Army and Navy to get into military adventures and nondeclared wars anywhere on earth.

Not content with this, the President, in a companion bill now pending, asks the further authority to send troops to put down internal disorders in foreign countries, to police them, maintain the open-door policy, manage waterways, and advance American economic interests. The only restraints are that the foreign government concerned must ask for the troops, and that the President must judge intervention to be in the national interest of the United States. Again there is no recognition that, constitutionally, Congress alone has the war-making power.

The unification bill isn't going to mean a smaller and less expensive Army and Navy, but a bigger, better, and more arrogant pair of services. It gives the militarists power in spheres hitherto closed to them. It constitutes an ex post facto ratification of Mr. Roosevelt's one-man commitments to illegal wars. Such wars now become perfectly permissible.

Congress, if it permits this legislation to stand, will live to rue the day, for it has established the means of destroying the Republic.

Justice for Senior Citizens

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. SMATHERS. Mr. Speaker, as this, the first session of the Eightieth Congress, comes to a close, it occurs to me in reviewing what has happened during the past 7 months that there has been a gross and grievous omission. There has been much said and done in behalf of veterans, displaced persons, Government employees, the laboring man, business executives, the white-collar worker, and the farmer, but with few exceptions there has been little if anything said or done for the old people of this country. It is interesting to note that with the improvement and growth of medical science, the percent of our population over 60 years of age is steadily and rapidly increasing. According to the Social Security Board the percent of our population over 60 years in 1930 was 8.6 percent. In 1945 it was 11 percent, and in 1950 it is estimated to be 12 percent and by 1970 20 percent. We recognize the importance of the problem when we observe that all employers without exception insist on youth when hiring new employees and are always looking for opportunities to replace an employee 60 years old with a younger one.

My district of south Florida, by reason of its warm climate and favorable living conditions, is rapidly becoming the residence of more and more people who have passed the age of 60, and who are attempting to live out the balance of their lives on meager old-age benefits, small savings, and insurance payments. By reason of the high cost of living, many of these people are finding it next to impossible to make ends meet and are forced to become subjects of charity against their wishes. You may ask, "Well, what about old-age assistance?" But how is it possible to live on monthly payments of $33.06? That is what old-age assistance is providing to the old people in my district. It is absurd even to think that they can live on such a small sum.

This problem, however, is not one that is peculiar to Florida or California even though the need has become more pressing in those two States because of the number of their old people. The problem is Nation-wide and affects with increasing pressure every district in every State in the United States. The time has come when we can no longer ignore this growing problem, and this Congress should start making plans to meet it now.

The gentleman from Oregon [Mr. ANGELL] and the gentleman from Florida [Mr. PETERSON] introduced a bill known as H. R. 16, which attacks the problem boldly and affirmatively. The bill not only recognizes the desirability of providing for the welfare of everyone over 60 years of age, but in so doing it insures a stable purchasing power which is so vital in keeping the wheels of industry turning. Unfortunately, the bill has been pigeonholed by those who are not aware of the magnitude of the problem nor of the provisions of the bill. For that reason there has been placed on the Speaker's desk a petition to discharge the committee and bring the bill before the House. I am happy to state that I have signed that petition as have all the Members of the Florida delegation, and I urge others to do so. The sooner we can start consideration of this bill and the sooner we can acquaint the Members of Congress, as well as the general public, with the ever-growing importance of the problem, the sooner the remedy will be arrived at, and the sooner the old people will be saved from the ignominy of charity. When we stop to consider that one-fifth of our population will soon be over 60 years old, nonproductive, and in need of assistance rewarding them for previous years of hard work, we can appreciate the urgency and the dire necessity for the Congress to begin moving toward a solution to the problem.

It would be easy to make flowery and sentimental speeches about the old people and our filial duty to them. Much time could be consumed in pointing out the great contribution which they have previously made to the development and growth of this country, but I do not like to approach this problem from that level, as I think the problem of assistance for old people is not alone sentimental, but practical and realistic. The problem is basically an economic one which is vitally and inextricably bound up with our whole economic structure and one which, if not met now, will in the future plague and weigh down our entire economy. The logic presented by a consideration of the facts and the figures is persuasive enough. It should be met on that basis and it should be met immediately.

Section 32 Funds Used for Cotton

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the section 32 funds made available to the Secretary of Agriculture by setting aside 30 percent of the custom receipts has provided a fund of one hundred to one hundred and fifty millions of dollars per year. This is a huge sum of public funds to be turning over to any public official. I say this without any personal reference to the present Secretary of Agriculture. The set-aside was provided to furnish funds to dispose of Agriculture surpluses, sectionism and crop favoritism could be expected. It is one proposition to start a new-use program for a product but it overreaches a new-use program when it is extended to a million dollar yearly subsidy to a few manufacturers using cotton for insulating purposes.

Here is one more example of oversubsidizing soil depleting crops. An embargo was erected on cotton imports to secure funds for the oversubsidizing of a soil-depleting crop like cotton, the New Deal reduced the duty and invited the importation of livestock and livestock products. Then 30 percent of the custom receipts was set aside as section 32 funds to be used to oversubsidize a soil-depleting crop. Then we hear talk about soil conservation with more demands for more appropriations.

The official table showing the subsidizing of cotton with funds obtained by taking 30 percent of the custom receipts

even though there is an embargo on cotton imports. This shows how far and how comfortable some groups have been sitting and are trying to continue to sit on the New Deal gravy train.

A total of $153,000,000 of section 32 funds has been used for cotton under many programs. Cotton has enjoyed many other legislative assists. Funds for the export subsidy on cotton has been provided for example under the general surplus disposal program since this law was passed by the Seventy-eighth Congress. In other words cotton while a peacetime surplus became a wartime surplus.

TABLE II.—*Cotton domestic diversion programs (sec. 32 funds)*

[All figures in thousands]

The Kansas City Democratic Scandal

EXTENSION OF REMARKS
OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

Mr. BENNETT of Missouri. Mr. Speaker, for over a week now the Democrats in another body of the Congress have been filibustering a resolution to investigate the whitewashing of the 1946 vote-fraud scandals in Kansas City, Mo., by the Attorney General and the district attorney. If there is nothing they seek to hide by these tactics, it is difficult to imagine why they are resorted to. The American people are demanding favorable action on the Kem resolution to throw the light of inquiry on this national scandal which reaches so near the White House.

The New York Journal-American yesterday carried the following article, by Charles Finston, giving the background of the amazing series of events which have led to Missouri's hour of shame:

WHAT'S BEHIND KANSAS CITY'S POLL SCANDAL

(By Charles Finston)

WASHINGTON, July 21.—A year ago President Truman summoned to the White House young Jim Pendergast, heir to the political throne of Kansas City ruled for years by his late notorious uncle, Tom Pendergast.

Truman curtly ordered young Jim to purge Roger Slaughter, rebel Democratic Congressman from the President's home domain in Jackson County, Mo.

Truman complained Slaughter had opposed many White House policies in the powerful House Rules Committee.

CALLS IN HIS WARD HEELERS

It didn't matter that the Pendergast machine already had endorsed Slaughter for renomination at the August 6, 1946, primary elections for Federal and State offices. Slaughter was running in the Fifth Congressional District.

Truman was the boss.

Young Jim returned to Kansas City and called in his ward heelers.

He pointed to a framed $6 White House check hanging over his desk. Dated December 7, 1945, it signified that Harry Truman was a member in good standing in the Pendergast-operated Jackson County Voting Club. And he was still the club's vice president, too.

Attached to the framed check was a letter to "Dear Jim," declaring:

"I hope the outfit is still doing good." It was signed, "Sincerely yours, Harry."

Shortly after—on July 8, 1946—Pendergast announced the machine had thrown Slaughter overboard. The outfit would now support attorney Enos Axtell, 38. Axtell was picked by Truman, who knew the young lawyer as a boy. The elder Axtell's farm adjoined the Truman farm.

Truman's purge order unleashed a sordid chain of events, including a murder, dynamiting, and wholesale ballot thefts, which have shaken Kansas City to the roots.

The repercussions have been felt throughout the country. It is shaking the faith of the average voter in the "sacredness of the secret ballot and the fundamental principle of universal suffrage."

Recently, on the Senate floor, Missouri's own Senator KEM exclaimed:

"The vital issue is none other than that of free elections, the bedrock of our free institutions."

It will become one of the major issues in the 1948 Presidential campaign.

The new Pendergast outfit went to town.

What happened since last August overshadows the scandals of the 1936 Kansas City vote-fraud inquiry which sent 259 boys of the old Pendergast gang to the penitentiary.

It should be told here that all of the old gang were out of the big house before last August, what with Presidential pardons and other clemency potions passed around.

The machine-controlled precincts delivered, all right. They rolled up anti-Slaughter majorities like 88–0, 145–1, 200–2, 60–0, and 374–5.

"The outfit was still doing good" as Truman hoped.

WITH STRINGS TIED TO THEM

After it was over, Democratic National Committee Boss Hannegan hailed the results as "a strong vote of confidence in President Truman."

But the lopsided vote started many tongues wagging and by September 28 the Kansas City election board and city council demanded that Attorney General Clark open a full and complete investigation of vote frauds.

Clark agreed. He sent FBI agents into Kansas City on October 17 with strings tied to them. His orders were to restrict the inquiry to interviews with four election board members and two newspapermen.

Even so, the FBI did a thorough but limited job and compiled a 355-page report after spending 7 days in the Missouri city. The report began to gather dust.

Axtell, Truman's protégé, lost in the November general elections to a Republican, Albert L. Reeves, Jr.

The Republican victory did not still the cries for a complete probe of the vote frauds.

While Attorney General Clark dawdled, a State grand jury went to work last March. Two months later, in May, this body returned indictments against 71 Pendergast lads.

Less than 12 hours after the indictments on May 27, vaults of the election board were dynamited. The thieves took with them 7,965 ballots from 32 of the worst precincts.

ORDERS FULL-DRESS INQUIRY

On the following day Attorney General Clark became "so incensed" he ordered the FBI to start a full-dress investigation, what the citizens of Kansas City had been crying for 9 months earlier.

The outfit, however, had done its job good. All the evidence was gone against all but 3 of the 71 persons indicted.

To top it off, a housewife was killed with a shot-gun blast in front of her delicatessen on July 12. Her name was Mrs. Mary Bono.

Clark told the FBI she was a possible witness in the investigation, and ordered her murder investigated.

On Capitol Hill, however, lawmakers cried: "A hasp and a lock to the well-known empty barn."

Red Reptiles

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. REED of New York. Mr. Speaker, I find there are pinks, reds, and so-called border line "liberals" who resent any reference to communism, yet to patriotic Americans the penetration of Communists into the Army, Navy, State Department, and into every key position of Government is of vital consequence to the welfare and safety of our Republic. The exposure of the various hidden dens of reptiles causes loud hissing when the sunlight finally penetrates the hiding places of these subversive elements.

Under leave to extend, I am inserting an article by Mr. Fred Brenckman, Washington representative of the National Grange Monthly:

COMMUNISM IN AMERICA

THERE ARE TERMITES IN THE TIMBERS OF OUR NATIONAL STRUCTURE TODAY, AND THEY SOMETIMES IMPEDE THE WHEELS OF PROGRESS

(By Fred Brenckman)

When the House Committee on Education and Labor, after hearings and an investigation, reported on May 31 that the 76-day strike at the plant of the Allis-Chalmers Co., near Milwaukee, in 1941 was called under the direction of the Communist Party because of the important work being done there for the Navy, it placed the seal of official verification on a conclusion that many well informed people already had reached themselves.

Soviet Russia had a nonaggression pact with Germany at the time of the strike and was opposing as imperialistic the war with Germany then being fought by the Allies with the aid of materials from the United States. As matters then stood, American Communists were opposed to our preparedness program. But the moment Hitler attacked Russia, they experienced a change of heart, and when the United States was drawn into the war as a belligerent by the Japanese assault on Pearl Harbor, the Communists of this country were among the most vociferous advocates of the opening of a second front in Europe. This clearly shows that the Communists of this country bear allegiance to Russia, and not to the United States.

PUBLICATION DEFERRED

Publication of the full report of the committee to which reference has been made has been deferred at the request of the Department of Justice, to which the document was turned over as evidence of false testimony by Harold Christoffel and Robert Buse. Mr. Christoffel was president of Local 248, United Automobile Workers, CIO, when the Allis-Chalmers strike of 1941 was called. Mr. Buse, now president, directed the 329-day strike at the same plant which ended on March 23 this year, and which has also been called Communist-inspired.

The Allis-Chalmers plant, which had defense orders aggregating $45,000,000, was singled out by the Communist leaders as a focal point in 1941 because of the work it was doing for the Navy, according to the report of the congressional committee. In calling the strike, it is charged Christoffel used 2,000 fraudulent ballots and betrayed his employer, his country, and his fellow workers. It is also alleged that both Christoffel and Buse perjured themselves during hearings on labor control legislation held by the Committee on Education and Labor last March. Both denied to the committee that they were Communists.

This story is typical of the way that Communists work to achieve their ends. They are the sworn enemies of our American system of free enterprise, and their purpose is to overthrow the Government of the United States.

UNDER COMMUNIST BANNER

The whole country was shocked to learn that in the May Day parade in New York City this year thousands who wore the uniform of the United States marched under the Communist banner. The Daily Worker, Communist Party publication, boasted that the largest group of veterans in the parade were members of the Communist Party.

"Men and women from all the armed services," said the Daily Worker, "soldiers, sailors, marines, Wacs, Waves, and Spars, made up the Communist contingent of 4,500 veterans. The Communist vets—men and women—marched by in spick and span uniforms and smartly dressed lines and shouting recruiting slogans together. Join the Communist Party! Fight for freedom, they shouted. Join the Communist Party! Fight for peace!"

Representative J. PARNELL THOMAS, chairman of the House Un-American Activities Committee, called on the heads of the armed services to take action against uniformed persons who took part in this parade, which he termed a "treasonable demonstration" which provided "flagrant evidence" of infiltration by Communists into the armed forces.

In 1942 Francis Biddle, then Attorney General of the United States, in reviewing the deportation proceedings of Harry Bridges, found that the Communist Party from the time of its inception in 1919 believes in, advises, advocates, and teaches the overthrow of the Government of the United States by violence.

ON FEDERAL PAY ROLL

Nevertheless, many Communists have held important positions under the Government during recent years. According to J. Edgar Hoover, Director of the Federal Bureau of Investigation, since July 1, 1941, his organization has investigated 6,193 cases under the Hatch Act, which forbids membership on the part of any Government employee in any organization advocating the overthrow of the Government of the United States.

The Attorney General has ruled that a number of organizations, in addition to the Communist Party, are subversive under the Hatch Act because of Communist influence. Over 100 Federal employees were discharged as a result of these investigations, 21 resigned, and in 75 cases administrative action was taken by the various departments. A total of 1,906 individuals with communistic affiliations are no longer employed by the Government, while more than 120 cases are presently pending in various Federal agencies. While this sounds somewhat impressive, the feeling is that the surface has merely been scratched. Those who are best qualified to judge are of the opinion that there are still plenty of Communists on the Federal pay roll, and a systematic campaign must be waged to drive them out.

INFILTRATING UNIONS

Nobody in the United States knows more about the workings of the Communists than J. Edgar Hoover, who has already been mentioned. He declares that the Communist tactic of infiltrating labor unions stems from the earliest teachings of Karl Marx, which have been reiterated by party spokesmen down through the years. They resort to any means whatsoever to gain their ends and often succeed in getting control of labor unions and taking them over before the rank and file of the members are aware of what has happened.

The American Federation of Labor has done its best to keep Communists from entrenching themselves in the unions affiliated with the federation.

Philip Murray, president of the CIO, is a member of the Catholic Church, which abhors the doctrines of communism, which are based on atheism. But the fact remains that many Communists hold key positions in unions that come under the CIO. Occasionally Murray announces his determination to throw the Communists out, but they are like termites in the timbers of a house. It is difficult to eradicate them.

Communists are well schooled in the tactics of propaganda. They are past masters in stirring up hate, discontent, and sedition. They know how to worm their way into key positions where they can poison the fountains of truth, practice deception, divide the people against each other, and demoralize society in general.

It has been noted that Communists are prolific letter writers. Some of the most energetic follow the practice of directing numerous letters of protest to editors, but signing a different name to each. Members of Congress know immediately when the Communists are launching a campaign by the flood of mail that follows the party line.

Nor is the motion-picture industry overlooked. Communist influence at Hollywood is a force to be reckoned with. It is said that the party is content and highly pleased if it is possible to have inserted into a picture a line, a scene, or a sequence conveying the Communist lesson, and more particularly if they can keep out anything that would injure the Communist cause. It is reported that some producers and studio heads realize the possibility that the entire industry faces serious embarrassment because it might become the springboard for the dissemination of Communist propaganda.

SEEK RADIO CHANNELS

The party no longer depends upon the printing press alone to spread its propaganda. Communists and their sympathizers have taken to the air, and they are today making efforts to secure radio channels.

America's Town Hall of the Air, which is a fine institution, recently devoted one of its programs to a debate on communism. It was rather surprising to hear a prominent Episcopal clergyman, speaking in the most cultured accents, proclaim his belief that the church and communism could get along together splendidly. No wonder that Dorothy Thompson, one of the speakers opposing communism, remarked that the fellow travelers sometimes succeeded in seducing even preachers. We might as well think of being happy with snakes in our boots as to delude ourselves with the idea that communism is not incompatible with all that every decent American holds most dear.

According to the best available information, there are about 75,000 enrolled members of the Communist Party in the United States. New York leads, with 30,000 members, followed by California, with 8,500; Illinois, 6,500; Ohio, 3,800; Oregon, 3,600; Washington, 2,750; New Jersey, 2,487; and Michigan, 2,135.

However, the Communists themselves claim that for every party member they have, there are 10 others who are ready and willing to do the party's bidding. Quite a proportion of these are self-styled liberals and intellectuals, who appear to have been born without the saving quality of common sense.

The Poll Tax

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, I will vote against H. R. 29, a bill to make unlawful the requirement for the payment of a poll tax as a prerequisite to voting in a primary or other election.

Because of the importance of this legislation, I wish to make my position absolutely clear.

I am opposed to the payment of a poll tax as a requirement to be met before qualification as a voter. It is outmoded, unfair, discriminatory, and undemocratic. I am opposed to the type of political systems that have been built up in several of our States largely because of this unfair voting qualification.

I believe the poll tax should be abolished.

Why, then, do I cast my vote against this bill?

I do so because this bill, while striving to correct an admitted evil, encourages a still greater one—the usurpation of the basic rights of the several States, in this case, the right of the States to determine the qualifications of their voters, within the limitations laid down by the Constitution.

That right is carefully written into that document. Can we take away that right by congressional action? Can we take away that right without obtaining the permission of the States through the regular constitutional process?

I do not believe we can; I believe this bill is unconstitutional. If I am wrong, if the Supreme Court upholds this law, then we have broken, by that process, the right of the individual States to determine the qualifications of their voters. If that happens, if we can lawfully say to the States, "You can no longer qualify your voters by this means," then can we not, just as lawfully, by passage of another law, say to the States, "You must now qualify your voters in such and such a manner"? If that is the full import of this bill, it is a sickening blow at our Federal system of Government. It is for that reason that I strongly oppose it.

If we cannot, or should not, do it by statute, how then can we do away with this undemocratic institution?

There is only one way, of course. That is by the legal way. That is by asking the consent of the States to take from them a portion of a certain right which we guaranteed to them in a document which they signed in order to make the Union of the States possible. It can be done by the submission of a constitutional amendment, such as is proposed in House Joint Resolution 73, which would forbid any State to deny the right of any citizen to vote because of his failure to pay a poll or property tax.

I am confident that such an amendment would pass the House. I am equally certain that it would succeed in the other body. I have no doubt it would be quickly ratified by two-thirds of our States. There would be no question then of the desire of the people to have this particular right—the right to levy poll taxes—taken away from them.

We should then have legally and constitutionally accomplished our purpose. Even more important than that, we should have kept faith with the spirit and intent of our Constitution by preserving the right of the States to determine the qualifications of their voters, within the limitations which they themselves have agreed to accept.

Mr. Speaker, early in this session, realizing the importance of this issue, I asked the Library of Congress to prepare a summary of the arguments, both for and against relief by statute. I ask unanimous consent that this summary, prepared by Mr. Frank B. Horne, of the Federal Law Section, Library of Congress, be included as part of my remarks:

THE POLL-TAX QUESTION

I. INTRODUCTION

The controversy over State poll taxes which has engaged the attention of the Congress in recent years has revolved largely around a single question: Is the requirement of the payment of a tax as a condition precedent to voting a "qualification" within the meaning of that term as used in the Constitution?

One school of thought reads article I, section 2, in the light of the historical background of Constitution and court decisions and concludes that the poll tax is a qualification, the destruction of which will require an amendment to the Constitution. It therefore opposes an attempt at abolishment by means of an act of Congress on constitutional grounds.

The other school of thought contends that the poll tax is a pretended qualification bearing no relationship to the real qualifications of a voter; that it is merely a device whereby a large segment of the population is disenfranchised. This school reads article I, sections 2 and 4, together throughout their constitutional development and interpretation concluding that an amendment is unnecessary, in fact that it is undesirable in that such an amendment would lend respectability to other schemes for disenfranchising segments of the population by means of pretended qualifications.

In both schools are found outspoken advocates of the abolishment of the poll tax as a prerequisite to voting.

II. CONSTITUTIONAL PROVISIONS INVOLVED

The controversy over the poll tax, insofar as the Constitution of the United States is concerned, revolves about the application, meaning, and intention of the following provisions:

1. Article I, section 2

The House of Representatives shall be composed of Members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for the electors of the most numerous branch of the State legislature.

2. Article I, section 4

"The times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators."

3. Article I, section 8, clause 18

"The Congress shall have power * * * To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

4. The fourteenth amendment

"Section 1. * * * No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States. * * *

"SEC. 2. * * * But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the Executive or Judicial officers of a State, of the members of the legislature thereof, is denied to any male inhabitant of such State being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

"SEC. 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article."

5. The seventeenth amendment

"The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years * * * The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures."

6. The nineteenth amendment

"The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex."

7. Article X

"The powers not delegated to the United States nor prohibited by it to the States are reserved to the States respectively or to the people."

III. THE POLL-TAX STATES

There are at present six poll-tax States: Alabama, Arkansas, Mississippi, South Carolina, Texas, and Virignia. Poll-tax laws appear to have sprung into prominence following the certification of the ratification of the fifteenth amendment in 1870 in the following order: Virginia, 1875; Mississippi, 1890; Arkansas, 1892; South Carolina, 1895; Alabama, 1901; and Texas, 1908. (See p. 65, hearings on H. R. 7, 78th Cong., before Senate Committee on the Judiciary.) (The Tennessee poll-tax litigation is now before the United States Supreme Court. See 15 L. W. 3184.)

Poll taxes were not unknown to the members of the Constitutional Convention. New Hampshire had a provision in its constitution requiring the payment of a poll tax, while in Massachusetts the requirement was statutory. (Hearings, pp. 102–103.)

IV. STATUTORY RESTRICTIONS RELATING TO READMITTED POLL-TAX STATES

The point has been raised that the poll tax contravenes the prohibition contained in the readmissions acts following the Civil War which prohibited constitutional changes whereby the right to vote would be abridged (see for example 16 Stat. 62).

Without entering into this phase of the controvery, it has been suggested that where statehood is tendered it cannot be specifically qualified so as to deny to the prospective State the equal rights of sovereignty enjoyed by the several States. (See *Coyle* v. *Smith* (1911) 221 U. S. 559).

V. BASIC ARGUMENTS

A. As voiced by proponents of statutory relief (see Poll Taxes, hearings on H. R. 7 before Senate Committee on the Judiciary, 78th Cong.):

1. If the poll tax, as we claim, is clearly an abridgment of the constitutional right of citizens of the United States to vote for

Federal officers, then Congress can clearly legislate to protect the Federal right. If the poll tax is not a legitimate qualification for Federal suffrage in the constitutional sense, Congress has the power to protect the rights of national citizenship. A constitutional amendment is not necessary to achieve a result within the existing power of Congress. (Pressman, p. 38.)

2. Since the right of American citizens to vote for Federal officers is protected by the Constitution of the United States, Congress has the clear authority to protect the integrity and the free exercise of such a right.

3. Congress has ample power to pass H. R. 7. This power is available to Congress regardless whether the poll-tax statutes of the various States are unconsitutional or not. (Pressman, p. 34.)

4. The States do not have any authority to impose any and all types of conditions upon the exercise of the right of American citizens to vote for Federal officers merely by terming such conditions "qualifications" of electors. Where such conditions actually have no reasonable relationship to the qualifications for discharging the obligation of citizenship by voting, Congress may, in the interest of protecting the integrity of the Federal constitutional right, veto such conditions.

There are those who urge that article I, section 2, leaves entirely in the hands of the States the uncontrolled power and discretion to decide who may or may not vote. It is true that the State may prescribe qualifications but in this connection it should be recalled that the basic right to vote for Federal officers is one which is given by the Constitution of the United States.

5. The fifteenth and nineteenth amendments of the Constitution do not establish any precedent that States may be prohibited from creating qualifications for electors only through such constitutional amendments.

These amendments merely took note of the fact that the conditions such as race, color, or previous condition of servitude, and sex had been historically recognized as appropriate qualifications. The amendments decreed that thereafter the right to vote should not be denied on account of these conditions either by the United States or by the States. (Pressman, pp. 37-38.)

6. The record of the constitutional debates and subsequent statements of the framers of our Constitution demonstrate conclusively that the Federal Government was vested with the supreme authority to protect the all-important Federal right of suffrage. Further, these records disclose that the very issue now under discussion had been considered and disposed of in a manner as to assure Federal protection against arbitrary action by States to deny the people their right of suffrage. (Pressman, p. 38.)

7. Congress has recognized its authority to legislate regarding the qualifications of electors for Federal officers in recent enactments.

On September 16, 1942, Congress passed a statute which provided that: "No person in military service in time of war shall be required, as a condition of voting in any election for President, Vice President, electors for President or Vice President, or for Senator or Member of the House of Representatives, to pay any poll tax or other tax or make any other payment to any State or political subdivision thereof."

It would be interesting to hear from one who challenges the constitutionality of the proposed bill as to how Congress had the authority to enact H. R. 7416 which contained the quoted provision.

8. The poll tax is not a revenue measure, it has no relationship to the qualifications that American citizens should have before exercising their right to vote, but is simply a legal trickery to favor a particular class of candidates in success of elections. As such it not only can be but must be condemned by Congress if the integrity of the constitutional right to vote is to be protected. (Pressman, p. 37.)

9. The right to vote for Federal officers is a right protected by the United States Constitution; it is a privilege and immunity of citizens of the United States protected by the Constitution: it is not a privilege to be conferred or withdrawn at the whim of any State. For this reason Congress has the obligation to protect the exercise of this fundamental right. In discharging this duty, Congress cannot be restricted by any narrow and stultifying interpretation which would prevent adequate protection being afforded to citizens in the exercise of their right to vote. (Pressman, p. 32.)

10. The Federal power of affirmative action being thus clear, the sole determination that this committee has to make is a factual one: Does the poll tax produce consequences which in effect impede the proper exercise of the constitutionally guaranteed right to vote? If this committee answers that factual question in the affirmative, Congress has ample power to take action to remove the effects of the poll tax by this bill. And in so doing, the committee need make no determination as to whether the poll tax is constitutional or not. (Pressman, p. 36.)

11. The power of Congress to enact this bill does not depend necessarily on the constitutionality of the poll-tax law. As in many other instances, the State poll tax may or may not be constitutional but Congress may nevertheless ascertain whether the existence of the poll tax presents an evil falling within congressional remedial power and if Congress so finds and acts on that finding, any inconsistent State legislation will fall.

"Does the poll tax then present to Congress a situation in which there exists an evil within the power of Congress to remedy and which affects Federal rights in such a way as to require congressional action? It is not an answer to say that the poll tax is simply a qualification prescribed by the State within the meaning of article I, section 2, and that therefore Congress must find in the poll tax no evil consequences which require congressional action." (Pressman, p. 35.)

12. One final thought should be presented on this question of constitutionality. Neither this committee nor Congress can usurp the powers of the courts of this Nation. It is the duty of Congress to enact legislation in accordance with the policy necessary for the welfare of the Nation. Congress may act within the scope of its constitutional powers. But it is for the Supreme Court and not for Congress to decide close questions as to constitutionality. Had Congress usurped the powers of the Supreme Court to the extent of never enacting any legislation as to which there was any constitutional doubt, there are many statutes which would not today be on the books of the country. Had Congress been swayed by the views of some 58 prominent names in the legal profession, Congress would have concluded that it had no power to enact the National Labor Relations Act. The Supreme Court acting within the scope of its functions later made the final determination.

But whether the committee will agree completely on this proposition or not, the members of the committee must agree that there is far more than a reasonable foundation for believing that the Supreme Court would uphold congressional power to enact this statute. That being so, it is the duty of this Congress to act in the light of the Nation's needs and to leave to the Supreme Court the final determination. (Pressman, p. 39.)

13. James Madison, in No. 57 of the Federalist: "Who are to be the electors of the Federal representatives? Not the rich, more than the poor; not the learned, more than the ignorant; not the haughty heirs of distinguished names, more than the humble sons of obscurity and unpropitious fortune. The electors are to be the great body of the people of the United States."

14. Alexander Hamilton, in Federalist No. 59 and No. 60: "Nothing can be more evident than exclusive power of regulating election for the National Government, in the hands of the State legislatures, would leave the existence of the Union entirely in their mercy. They could at any moment annihilate it by neglecting to provide for the choice of persons to administer its affairs. It is to little purpose to say that a neglect or omission of its kind would not be likely to take place. The constitutional possibility of the thing without an equivalent for the risk is an unanswerable objection. Nor has any satisfactory reason been yet assigned for incurring that risk" (p. 38).

B. As voiced by proponents of constitutional amendment:

1. There is no right of national citizenship to vote. * * * The right to vote for Members of Congress is given only to such United States citizens as possess qualifications for voting in the States for the most numerous branch of the legislature (Warren, p. 79).

2. In arriving at this method of disposing of the question of the right to vote in the Federal Convention of 1787 there was a threefold contest. The contest was between those Members who wished a uniform qualification for electors (freehold property or otherwise) to be prescribed in the Constitution itself; there was another group of Delegates who wished the power to prescribe to be vested in Congress, and there was still a third group who wished the Constitution to prescribe qualifications—not uniform qualifications but qualifications such as the respective States prescribed for their own people.

It was the last group who prevailed, and after 2 days of active debate, they left the Constitution in this respect as it now stands in this much-read section—section 2 of article I.

You notice that that is not a grant of power specifically to the Congress of the United States. In fact, it is not a grant of power to anyone. It is a requirement of the Constitution for the formation of the new Government. The first part of it is a requirement that the people of the several States shall choose Members of the House of Representatives every second year. That was no reliquishment or delegation of power from the States. That was a constituent part of the formation of the new Government and was a command to the States to elect their Members of Congress every second year. That was a command. It was neither a delegation of power nor was it a prohibition. It was a command and is so referred to in the recent cases in the Supreme Court.

The second thing that section 2 did was: It vested a right in the electors in each State who have the qualifications requisite for electors of the most numerous branch of the State legislation—a right in those persons in the State and those only who were entiled to vote for Members of Congress. (Warren, p. 80.)

3. The members of the Constiutional Convention knew that acting under these constitutions, several of the States had also statutes prescribing certain qualifications which were allowed by the legislatures. They had all that before them, and yet it is asked now, "Why didn't they describe what they meant by 'qualifications'? Why wasn't there some debate on the use of that term?"

Answer is, of course, that every delegate from every State knew what his State constitution meant by "qualifications" or what his State legislature meant by "qualifications" and they certainly were not giving power to this new Government to define what

their own State constitutions meant or to define what the State legislatures meant.

That was a matter for the State exclusively. No legislature can define the meaning of a word in its constitution, no one can define except the people of the State or the State judiciary, as to everything in connection with the construction and interpretation of section 2. There is an absolute absence of any right granted to Congress to decide or define what a State by its constitution or legislature could demand of one of its inhabitants in order to qualify him to vote for a State legislature. (Warren. p. 85.)

4. Section 2, of course, contains no power, specifically, of Congress to prescribe to the States who they shall qualify to vote for the members of their State legislatures and you have got to find such a power implied if anywhere under the necessary and proper clause. * * *

Before 1787, the States had absolutely full and unlimited power to lay down any requirements which the people of the States, through the constitutions or legislatures of the States in their absolute discretion and judgment, desired in order to qualify any one of their inhabitants to vote for members of the most numerous branch of the legislature.

There was no limitation whatsoever. The State had the power, either in its constitution or its legislature as the case may be, to say to whom it desired to grant the vote for members of the legislature or from whom it desired to withhold the right. (Warren, p. 83.)

5. How could the Federal Convention get behind that action of the people of the States through their own constitutions? They did not attempt to meddle with the constitutions of the States in any explicit powers given in article I section 2 and I can see no implied power under the necessary and proper clause which gave to the Congress the right to say to the people of the State who had already before devised and established their own constitutions, to say to the people of a State, "You shall not have the right to grant or to deny the right to vote for your own legislatures." Imagine that proposition put up to the members of the Federal Convention, that they were embodying in section 2, a denial to a State of its right through its own States constitution to establish the requirement of a State voter to vote for a member of a State legislature. (Warren, p 84.)

6. First, Congress undoubtedly has power to legislate (under art. I, sec. 2) so as to see to it that the States do elect Members of Congress every second year. Congress undoubtedly has the power to protect the right which the Constitution vested in such persons in the States as had the qualifications requisite to vote for members of the State legislature. Congress undoubtedly has that power; and since Congress has, under the necessary and proper clause, power to legislate so as to see that the States make the same provisions for qualifications of electors of Members of Congress as they do for electors of their own legislature. (Warren, p. 81.)

7. Section 2 contains undoubtedly an implied prohibition on the States against fixing for electors of the Members of Congress and different requirements for suffrage from those which they fixed for the electors of their own most numerous branch of their legislature, i. e., any qualifications which were not those requisite for to render an inhabitant of their own State elegible to vote. (Warren, p. 81.)

8. To define a word, any word, in the Constitution of the United States is purely for the court. Congress can no more define a word than it can insert a word. (Warren, p. 87.)

9. Not only is it not within the power of Congress to interpret the legal meaning of that clause (art. I, sec. 2)—it must also be absolutely true that if you cannot interpret a clause of the Constitution through the exercise of congressional power, you certainly cannot insert something into the section. Of course, if Congress can insert the word "reasonable," it can insert the words "except poll-tax requirements" or any other words that it desires. (Warren, p. 85.)

10. When the fourteenth amendment was adopted * * * it was claimed that that privilege and immunity clause of the citizens of the United States denied to the State the power to restrict the right of suffrage, and when, in 1868, the fifteenth amendment was under consideration, Mr. Boutwell and some others thought it was not necessary to pass the fifteenth amendment in order to give the Negro the right to vote because they said it could be done by a simple act of Congress under the privilege and immunity clause, that is, by an act of Congress enforcing the privilege and immunity clause. That attempt was soon dropped. That bill was debated in the House but it was soon dropped, and the fifteenth amendment was adopted in order to establish the power by the Constitution.

* * * The idea that the privileges and immunities of the citizens of the United States denied in some way the right of the States to control suffrage, that idea prevailed for a number of years until, in 1875, there came along the Slaughterhouse cases; and in those cases there was laid down * * * for the first time, the distinction between the rights of a citizen and a State and the rights of a citizen of the United States, as such, that is, the rights which grew out of some peculiar relation of an inhabitant of a State to the United States Government (Warren, p. 93)

11. When what is now the first section of the fourteenth amendment was reported to the House, it was drafted by John A. Bingham, a Republican Member of the House from Ohio, and in answering it on May 10, Mr. Bingham made these statements (this is on page 2542 in the Congressional Globe if anyone wants to look it up). Mr. Bingham said:

"This amendment takes from no State any right that ever pertained to it. The amendment does not give, as the section shows, the power to Congress of regulating suffrage in the several States."

And in the second section—that was the section, you remember, that reduced the representation of the States in case they denied to any person the right of suffrage—Bingham said:

"The second section excludes the conclusion that by the first section suffrage is subjected to congressional law."

In the Senate, this first section was discussed by Senator Howard, who was heading the committee in the absence of Senator Fessenden; and he states (May 23, p. 3165, et seq.):

"The first section of the proposed amendment does not give to either of these classes the privilege of voting. The right of suffrage is not, in law, one of the privileges or immunities thus secured by the Constitution. It is merely the creature of law. It has always been regarded in this country as a result of positive local law."

As to section 2 (on p. 2766), Howard said:

"This section does not recognize the authority of the United States over the question of suffrage in the several States at all. Nor does it recognize, much less secure, the right of suffrage to the colored race. It leaves the right to regulate the elective franchise still with the States and does not meddle with that right."

In closing the debate, June 8, and just before the joint resolution was passed upon by the Senate, Senator Howard said (p. 3039):

"We know very well that the States retain the power which they have always possessed of regulating the right of suffrage. It is the theory of the Constitution. That right has never been taken from them; no endeavor has ever been made to take it from them; and the theory of this whole amendment is to leave the power of regulating the suffrage with the people or legislatures of the States and not to assume to regulate it by any clause of the Constitution of the United States." (Warren, pp. 88–89.)

12. Then arose that very heated condition (after 1865) growing out of the situation at the end of the war and if there was ever a time in our whole history, and especially in our whole legislative history * * * that a claim should have been made that the United States Congress had any power to regulate the question of suffrage in the States, that claim would have been made during the debates over the civil-rights bill of 1866 and the debates on the fourteenth amendment in 1866. * * * With the exception of one Senator, there was not a single Senator on the floor of the Senate who claimed or contended for 1 minute that the States did not have full control of the suffrage. (Warren, pp. 87–88.)

13. There is no pretense to say that the power in the National Government can be used so as to exclude any State from its share in the representation in Congress. Nor can it be said with correctness that Congress can, in any way, alter the right or qualification of voters. (Storey's Commentaries (1933), vol. I, sec. 820.)

VI. COURT DECISIONS

A. As cited by proponents of statutory enactment:

1. *U. S.* v. *Classic* ((1941) 313 U. S. 299): The Classic case raised this very issue. It was contended in that situation that Congress could only determine the time, place, and manner of the final elections, which did not include any authority over primaries. In other words, the attempt was made to limit the authority of Congress as against the so-called all-embracing sovereignty of the States to legislate regarding Federal elections.

The United States Supreme Court dismissed this specious argument and held that the Constitution of the United States, which created this basic and fundamental right for American citizens and delegated to Congress the authority to protect such right, could not be interpreted in such a narrow fashion. (Pressman, p. 33.)

2. The Classic case applied: "While, in a loose sense, the right to vote for Representatives in Congress is sometimes spoken of as a right derived from the States, see *Minor* v. *Happersett* (21 Wall. 162, 170); *United States* v. *Reese* (92 U. S. 214, 217-218); *McPherson* v. *Blacker* (146 U. S. 1, 38–39); *Breedlove* v. *Suttle* (302 U. S. 277, 283); the statement is true only in the sense that the States are authorized by the Constitution to legislate on the subject as provided by section 2 of article I, to the extent that Congress has not restricted State action by the exercise of its powers to regulate elections under section 4 and its more general power under article I, section 8, clause 18, of the Constitution 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers' (p. 315). See *Ex parte Siebold* (100 U. S. 371); *Ex parte Yarbrough* ((1884) 110 U. S. 651)."

In the Yarbrough case the Supreme Court had held:

"The States in prescribing the qualifications of voters for the most numerous branch of their own legislatures, do not do this with reference to the election for Members of Congress. Nor can they prescribe the qualification for voters for those eo nomine. They define who are to vote for the popular branch of their own legislature, and the Constitution of the United States says the same persons shall vote for the Members of Congress in that State. It adopts the qualification thus furnished as the qualification of its own electors for Members of Congress."

The conclusion, we submit, that is to be drawn from this exposition of the constitutional provisions governing the privilege of voting is, that, to the extent the voter proposes to cast his ballot for State officers he is acting as a State elector and is subject to the laws of the State; the Federal constitutional provision respecting qualifications being inapplicable. But to the extent that the voter proposes to vote for Federal officers he acts as a Federal elector in the particular State and his privilege to vote, although delineated in the first instance by the State itself, emanates from the Federal Constitution and is a privilege protected by that Constitution. Accordingly, the fourteenth amendment withdraws from the States any prerogative they may have theretofore asserted to abridge as they saw fit such privileges when attempted to be exercised by citizens of the United States. (See *Wiley* v. *Sinkler* (179 U. S. 58).)

3. *Ex parte Yarbrough* ((1884) 110 U. S. 651): "But is it not correct to say that the right to vote for a Member of Congress does not depend upon the Constitution of the United States" (p. 663).

4. *Missouri* v. *Holland* ((1920) 252 U. S. 416): "The (constitutional law) case before us must be considered in the light of our whole experience and not merely in that of what was said a 100 years ago" (p. 433).

5. *McCulloch v. Maryland* ((1819) 4 Wheat. 316): "No trace is to be found in the Constitution, of an intention to create a dependence of the Government of the Union on those of the States, for the execution of the great powers assigned to it. Its means are adequate to its ends; and on those means alone was it expected to rely for the accomplishment of its ends. To impose on it the necessity of resorting to means which it cannot control, which another government may furnish or withhold, would render its course precarious, the result of its measures uncertain, and create a dependence on other governments, which might disappoint its most important designs, and is incompatible with the language of the Constitution" (p. 424).

B. As cited by proponents of constitutional amendment:

1. The Supreme Court has held for 40 or 50 years that the right to vote for Congressman was a Federal right secured by the Constitution, but the question is: The right of whom to vote for Congressman (Warren, p. 79).

2. *Ex parte Yarbrough* ((1884) 110 U. S. 651 : "The States, in prescribing the qualification of voters for the most numerous branch of their own legislatures, do not do this with reference to the election for Members of Congress. Nor can they prescribe the qualifications for voters for those eo nomine. They define who are to vote for the popular branch of their own legislature, and the Constitution of the United States says the same persons shall vote for Members of Congress in that State. It adopts the qualification thus furnished as the qualification of its own electors for Members of Congress" (p. 663).

3. *Wiley* v. *Sinkler* ((1900) 179 U. S. 58): Judge Gray quotes the Yarbrough case: "They define who are to vote for the popular branch of their own legislature, and the Constitution of the United States says the same persons shall vote for Members of Congress in that State. It adopts the qualification thus furnished as the qualification of its own electors for Members of Congress" (p. 63).

4. *Minor* v. *Happersett* ((1874) 21 Wall. 162): "Certainly, if the courts can consider any question settled, this is one. For nearly 90 years the people have acted upon the idea that the Constitution, when it conferred citizenship, did not necessarily confer the rights of suffrage. If uniform practice long continued can settle the construction of so important an instrument as the Constitution of the United States confessedly is, most certainly it has been done here. Our province is to decide what the law is, not to declare what it should be" (pp. 177–178).

5. *Guinn* v. *U. S.* ((1915) 238 U. S. 347): "It says State power to provide for suffrage is not disputed, although, of course, the authority of the fifteenth amendment and the limit on that power which it imposes is insisted upon. Hence, no assertion denying the right of a State to exert judgment and discretion in fixing the qualification of suffrage is advanced and no right to question the motive of the State in establishing a standard as to such subjects under such circumstances or to review or supervise the same is relied upon, and no power to destroy an otherwise valid exertion of authority upon the mere ultimate operation of the power exercised is asserted" (p. 359).

6. *Pope* v. *Williams* ((1904) 193 U. S. 621): "A State, so far as the Federal Constitution is concerned, might provide by its own constitution and laws that none but native-born citizens should be permitted to vote, as the Federal Constitution does not confer the right of suffrage upon anyone, and the conditions under which that right is to be exercised are matters for the States alone to prescribe, subject to the conditions of the Federal Constitution, already stated; although it may be observed that the right to vote for a Member of Congress is not derived exclusively from the State Law. * * * The question whether the conditions prescribed by the State might be regarded by others as reasonable or unreasonable is not a Federal one" (p. 633).

VII. THE TERM "QUALIFICATION"

1. To say that Congress has the duty of enacting legislation prohibiting a limitation which it determines not to be a qualification, would be to say that Congress has the power to define the term "qualification" which is purely a judicial function. (See Warren, pp. 86–87.)

2. We must come to the conclusion then that the term "qualification" does have limits—limits determined by the proper definition of the word. The restriction which the State seeks to place upon the right to vote must be a restriction which can reasonably be determined a qualification of a voter. (Pressman, p. 37.)

As the poll tax is not a legitimate "qualification" for Federal suffrage in the constitutional sense, Congress has the power to protect the right to vote and a constitutional amendment is unnecessary to this end.

VIII. LEGISLATIVE PROPOSALS

Without attempting an exhaustive search of legislative proposals to abolish the poll tax, it should be noted that the question has been before the Seventy-sixth, Seventy-seventh, Seventy-eighth, and Seventy-nine Congresses. Bills which proposed a statutory solution were:

Seventy-sixth Congress: H. R. 7534.

Seventy-seventh Congress: H. R. 970, 1024, 6654, and S. 1280.

Seventy-eighth Congress: H. R. 7, 52, 642, 651, 987, 1017.

Seventy-ninth Congress: H. R. 7, 193, 308, 406, 657, 2183, 2324.

Eightieth Congress: H. R. 7, 29, 66, 230, 779.

Resolutions which proposed amendments were:

Seventy-eighth Congress: House Joint Resolutions 126, 284 and Senate Joint Resolutions 132, 284.

Seventy-ninth Congress: House Joint Resolution 54.

Eightieth Congress: House Joint resolution 73.

Of these bills and resolutions, two (H. R. 1024 and S. 1280—77th Cong., H. R. 7—78th Cong., and H. R. 7—79th Cong.) passed the House; were reported favorably in the Senate, but failed of passage.

How Not To Fight Communism

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. ROONEY. Mr. Speaker, last night I read with great interest the following article entitled "How Not To Fight Communism," by Eugene Lyons, published in the Liberty magazine for August 2, 1947. I feel that it is as illuminating an article as I have ever read on the subject of Red fascism and accordingly ask unanimous consent of this House that it be printed in toto in the Appendix of the CONGRESSIONAL RECORD. I commend its reading to many Members of this House who are not as familiar with the methods which must be used to defeat communism in this country as they might be. The article I refer to reads as follows:

HOW NOT TO FIGHT COMMUNISM

(By Eugene Lyons)

The pendulum of American public opinion is swinging violently against the Communists.

On the official side, the President has ordered a systematic purge of disloyal elements from the Government pay rolls. A Supreme Court decision has strengthened the hand of timid bureaus and agencies in this long-overdue job of national house cleaning. A start is being made in the exposure of Soviet spy masters. State and Federal legislators are probing the Communist infiltration of American life and studying laws to curb the process.

In short, after a decade of political color blindness Uncle Sam has begun to see red. What he was inclined to dismiss with characteristic smugness as a nuisance, he suddenly recognizes as a menace. It has dawned on him that there is a crucial difference between a political party, however extreme its views, and a foreign conspiracy, however skillful its disguise as a political party.

Fighting the Communists, their stooges, and fellow travelers has already become respectable. It threatens to become highly fashionable.

I happen to be among the hardy, or perhaps foolhardy, few who fought the Communists when it was neither fashionable nor comfortable. In a book called the Red Decade, I exposed their methods of worming into our free institutions. As editor of a monthly magazine, I tried to warn my countrymen against the wartime illusion that Stalin had been miraculously changed into a freedom-loving Democrat.

The comrades and their muddled liberal dupes have abused me with great vigor and relish, and I flatter myself that I have earned their every unflattering adjective. Under these circumstances I might be expected to don an I-told-you-so smile, now that the average American has caught up with the facts of life on the left. Instead of which, alas, I wear a worried expression. And here's why—

It seems to me that in the sudden upsurge of anger at the Communists and their works, there are disturbing overtones of hysteria. Yesterday's complacency has given way, in certain quarters, to a case of jitters. There is an up and at 'em boys impatience which endangers the innocent along with the guilty. They seem exasperated by the Constitutional and traditional obstacles to an all-out man hunt of Communists and Communist collaborators.

Most alarming of all, anti-Communist sentiment is being used by some unscrupulous or bigoted people as a convenient cover for racist obsessions, anti-labor bias, dislike of foreigners, and other assorted prejudices. They think they can serve any dish of malice if they douse it with anti-Communist sauce. Unless that trend is stopped, unless common sense prevails, the cure for communism may prove as pernicious as the disease itself.

Our justified determination to unmask and neutralize the Stalinist conspiracy in our midst must not degenerate into know-nothing persecution. If it does, we shall be playing into the hands of the Communists and all other enemies of democracy.

We abhor the totalitarian way of life because it violates our concepts of justice, decency and human dignity; because it dismisses with contempt the individual and his "unalienable rights." We shall be destroying those very values, however, if we put mob passion rather than democratic restraint in command of the anti-Communist drive now shaping up in our country.

Obviously the task of exposing and defeating the Communists, native and imported, would be easier if we were not hampered by our deep-rooted respect for civil liberties—if we adopted their own ruthless code of conduct. The temptation is to force their own medicine down their throats.

But it is a temptation more dangerous to ourselves—and to our cherished political morality—than to the Communists. To destroy the Bill of Rights in the process of safeguarding it against totalitarian enemies would be like curing a headache by decapitation.

I recall once in Moscow posing a moral problem to a bright little Soviet playmate of my daughter. "Supposing," I said, "that a hundred people were arrested for treason to the U. S. S. R. You knew that one of them was guilty but did not know which one. What would you do?"

"I'd shoot them all," the youngster replied without hesitation.

The answer came so glibly because it was part of his indoctrination in school, in the Young Pioneers, in the books he read. What are 99 innocent lives when the safety of the enthroned state is at stake?

An American child would rather take a chance on freeing one guilty man than punishing the guiltless. Such are our democratic and Judeo-Christian prejudices. It is precisely this strict sense of justice, this respect for the individual, that we seek to salvage from the cyclone of totalitarian terror now ravaging the mind of mankind.

The American people are getting a lot of advice these days on how to fight the Communists. That's all to the good. But in the interests of balance and sanity we need some advice on how not to fight the Communists. By way of a starter, here are a few common-sense "dont's" that seem to me basic:

1. Don't confuse Communists with honest liberals and radicals.

Radicalism has a rich and honorable American tradition, from Tom Paine, Andrew Jackson, and John Brown to Eugene V. Debs and Norman Thomas. Our country was born in revolution and has flourished on social experimentation. Its history is replete with extremist movements—abolitionism, populism, muckraking, socialistic colonies, technocracy—some of which do not seem the least bit crackpot in retrospect. Even anarchism, which has such an ominous "foreign" sound, has strong home-grown roots in American literature and philosophy.

Under the American concept a man has as much right to be a radical or liberal as a conservative or reactionary. Our political framework is wide and pliant enough to withstand the clash and pressures of conflicting ideas, theories, and programs, from extreme right to extreme left and back again. No one in his senses wants to prevent change and reform; criticism and opposition are the lifeblood and the pulse of a democracy.

We do not quarrel with the Communist about his economic or political beliefs, but about his traitorous loyalty to a foreign power. In sober fact he has no beliefs, but merely a fixed foreign allegiance. He is the blind agent of a Soviet-directed conspiracy, following one policy "line" today, its opposite tomorrow, as ordered.

One of the Communist's most cynical techniques of confusion is to put the label "Fascist" on anyone who disagrees with him. We shall be helping him to deepen that confusion in which he thrives if we put the label "Communist" indiscriminately on all those whose views we dislike or fear. In making martyrs of innocent liberals and radicals we would be enabling the guilty Communist also to masquerade as a martyr.

The most effective work against the Stalinist ideological invasion of America has been done by the left rather than the right. Liberal, Socialist, and labor publications have been more conscious of the threat, and more intelligent in meeting it, than any other one group.

2. Don't, in your just anger at the Communists, fall for their ideological brethren at the other end of the scale, the assorted Fascists and near-Fascists.

The distemper from which our generation is suffering is totalitarianism. It finds many and various expressions, of which communism is today the most menacing. But let us not forget that we have just fought and won a war against its other and no sweeter expressions, the Italian Fascist and the German Nazi brands.

When a Communist attacks fascism in any of its forms, he is not protecting democracy but promoting his own red brand of Fascism. By the same token the anti-Communist rantings of people obsessed by race hatred, anti-foreign phobias, and other typical symptoms of the totalitarian mind and heart are merely peddling their own antidemocratic line of goods. The Communist-Fascist rivalry is at the bottom a family quarrel in no way related to your fight and mine against totalitarianism in any guise.

3. Don't tell the Communists to "go back where they came from."

Propaganda to the contrary notwithstanding, the vast majority of them "came" from the 48 States of this Union. True, the rank and file of the official Communist Party are in large measure drawn from our immigrant population. Not yet fully adjusted to the democratic environment, often trailing hangovers from political struggles in their native countries, they are especially vulnerable to the blandishments of hatemongers, whether Communist or Nazi.

But our proudest, most American traditions are summed up in the melting-pot idea and the right of political asylum. Our job is to wean the tiny pro-Communist element among the foreign-born away from their leaders, rather than to punish all foreign-born for the sins and the stupidities of a handful.

The most effective part of the Communist fifth column in our country is in its fellow-traveling contingent, in literally scores of false-front organizations. The membership, at times totaling millions, is drawn almost entirely from native Americans—from professors, preachers, society ladies, movie actors, and the like. The top leaders of the Communist Party, too, are natives. If you sent them "back where they came from," William Z. Foster would be exiled to Massachusetts, Earl Browder to Kansas, Eugene Dennis to Washington, Robert Minor to Texas.

4. Don't let your hatred of communism overflow into attacks on organized labor.

The Stalinist crowd admittedly has enjoyed notable successes in capturing a number of large labor unions. Its methods have been of the same order as those of gangsters who hi-jack control of a union here and there. Neither one group nor the other is representative of the mass of the union membership. The rank-and-file members are in every instance innocent victims of a clever and unscrupulous mob.

What your views on organized labor, they have no reference to the problem of Red infiltration. To blame trade-unions for their Communist termites would be about as reasonable as blaming education or journalism, because in those areas, too, the Communists have made deep inroads.

Organized labor, particularly the American Federation of Labor, has been every bit as active as the United States Chamber scourge. Within the CIO, the Communist-controlled unions have always been a minority and today it is a shrinking minority. Some CIO leaders have been remiss and ill advised in tolerating this minority. That is a commentary on these men, not on the principle of unionism. Complacency toward communism of the same general order can be charged against our Government, the churches, and cultural organizations.

5. Don't fall for the once-a-Communist-always-a-Communist line.

A notion, propagated by some writers and agitators, that the stain of sympathy for communism is indelible, ignores the fact that thousands of well-meaning and high-minded Americans have been lured into the Communist fold by glittering phrases and humanitarian pretensions. Warm-hearted young people, impatient to set the world straight, are readily trapped by propaganda baited with idealistic verbiage. It takes time for these victims to cut through illusions. When they do they are likely to become the best equipped opponents of Stalinism.

The "turn-over" in the American Communist Party is so great that a member of 2 or 3 years' standing is almost a veteran. It is estimated that less than 3 percent of the present membership dates back to the founding of the organization in the early 1920's. This means that the Communists are more successful in duping people than in keeping them duped. To treat former Communists or sympathizers with their cause who are now actively fighting communism, as if their sin in ineradicable, is ungenerous, narrow-minded, and mischievous nonsense.

6. Don't automatically denounce the people and causes the Communists may be defending, or vice versa, defend the things Communists are attacking.

Red Fascists, like Fascists of other hues, have a great talent for making propaganda capital out of suffering and discontent wherever they may find it. One recalls, for instance, how energetically they exploited popular distress in the depression years, among share croppers, "Okies," the unemployed, and the scared middle classes. One marvels at the skill with which they can blow up some local case of injustice into a campaign of national dimensions, or exploit the bitterness of homeless veterans, or play on the emotions of some mistreated racial minority.

The fact that Communists use good causes for their own bad purposes, however, does not make those causes any less worthy. On the contrary, in the measure that decent, patriotic Americans take the initiative on good causes they will cut the ground from under the totalitarian gentry. By the same logic, men and movements may be utterly bad despite the fact that the Daily Worker also attacks them.

7. Finally and most important, don't let the anti-Communist drive get out of hand in hysteria.

Americans old enough to remember will agree that the frenzied "Red scare" after the first World War, with its rash of raids, deportations, and mob violence, was entirely self-defeating. Public opinion in the end re-

volted against the excesses of overzealous officials and self-appointed vigilanties. Let's not have a repetition of that sorry episode.

Former Ambassador William C. Bullitt summed it up simply and well when he said, in testifying before a congressional committee: "The last thing we want is to make martyrs of anybody and throw away the Bill or Rights."

Lucian Hunter, Jr., Elected Commander of AMVETS House of Representatives Post

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. ARENDS. Mr. Speaker, it was announced last night that Lucian O. Hunter, Jr., Leitchfield, Ky., popular House employee, was elected without opposition to the commandership of the House of Representatives Post of the AMVETS—the veterans' organization of World War II that won a congressional charter several days ago.

Hunter, who is 25 years of age, is now employed as legislative aide in the Speaker's Lobby.

Allan M. Ames, Ellicottville, N. Y., Assistant Doorkeeper of the House, was elected first vice commander.

William E. Brady, Evansville, Ind., House Gallery Doorkeeper, elected second vice commander.

Karl Standish, Lowell, Mass., clerk of the House Veterans' Committee, was elected third vice commander.

Richard G. Jefford, Philadelphia, Pa., Assistant Sergeant at Arms, was made adjutant.

Jack W. Watson, Council Bluffs, Iowa, clerk to the House Administrative Committee, finance officer.

S. A. Morichetti, Hurley, Wis., House gallery doorkeeper, sergeant at arms.

W. HOWES MEADE, Paintsville, Ky., Member of Congress, chaplain.

J. H. Lieb, Arlington, Va., chairman of the legislative committee.

Hunter served in the Army for over 2½ years until he was injured in a tank accident. After 10 months in a military hospital, he was given a medical discharge, returning to the House of Representatives, where he was employed prior to his war service.

Upon arriving in Washington, Hunter was appointed clerk to the Postwar Military Policy Committee. It was this committee that held the initial hearings on the unification of national defense and submitted the plans that were adopted by the House at this session.

As a member of the Costello Post of the American Legion, District of Columbia, Hunter served as chairman of the committee on postwar problems and contributed much to the success of the organization.

Hunter has an A. B. degree and expects to receive his master's in law at George Washington University. He is the son of Mr. and Mrs. L. O. Hunter, Leitchfield, Ky.

On Friday, July 27, 1947, Commander Hunter will present an honorary life membership in AMVETS to Speaker MARTIN.

The Minimum Wage

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the New York Times of July 6, 1947:

THE MINIMUM WAGE—ADEQUATE ADJUSTMENT IN RATE IS URGED TO MEET LIVING COSTS

To the EDITOR OF THE NEW YORK TIMES:

At long last it appears likely that Congress will act in the matter of raising the Federal minimum wage from the pitifully inadequate level of 40 cents per hour. Although welcome no matter what its motivation, the last-minute decision to add this to the category of must legislation is obviously intended to sweeten somewhat the bad taste resulting from the Taft-Hartley battle.

It is to be hoped that the action to be taken in the remaining days of the present session will result in a realistic adjustment of the minimum wage, not in an immaterial gesture toward solving the problem. Hearings are currently being conducted on the Landis bill which would raise the 40-cent minimum to 60 cents, with no extension of coverage.

It is probably too much to expect favorable action at this time on wider coverage but is it too much to hope that a higher wage will be recommended?

On the basis of thousands of pages of expert testimony, the Senate Labor Committee recommended on February 14, 1946, that the minimum be raised to 65 cents at once, and stepped up to 70 cents and 75 cents in 2-year intervals. On June 11 the House Labor Committee voted out a bill recommending an immediate rise to 65 cents. No law, however, was enacted last year because of failure to get the House bill released for floor debate.

FACTOR OF HIGHER LIVING COSTS

Are we not taking a significant step backward today in talking about a 60-cent wage? Between the date of the Senate committee's decision and today, living costs have risen more than 20 percent and average hourly earnings for all manufacturing employees have increased by 19 cents. If 65 cents was the proper recommendation then, today's recommendation should be at least 75 cents.

From every conceivable angle there is a powerful case for a substantial raise in the legal minimum. When the Fair Labor Standards Act was first enacted in 1938, the average wage for all manufacturing employees was 65 cents; the national income was at about $64,000,000,000, and the cost of living was just about normal for the prewar period. Today, the average wage for manufacturing employees is at $1.19, national income is at the rate of over $180,000,000,000, and the cost of living is higher by 55 percent for moderate income groups; probably about 75 or 80 percent higher for the lowest income groups with which we are here concerned.

Is any elaborate evidence needed to establish the need for a 65- or 75-cent hourly wage to assure the barest subsistence level? How much of the absolutely essential needs can be supplied at $26 or $30 a week? Where such a wage is earned by the third or fourth wage earner of a family, such a wage might possibly cover the extra financial costs of maintaining the individual. But where such a wage is received by the head of a family, or even by a single person living alone, the arithmetic of the situation is just too obvious. A private in the Army who has two children receives higher total cash payments.

FEDERAL ACTION AS CORRECTIVE

The last few years have seen significant wage changes for millions of American workers, organized and unorganized. Only Federal action, however, can extend these wage gains to the relatively few workers who have been left out. It is the only guarantee that an inequity will be corrected. It is estimated that no more than 1,250,000 workers would be affected by a 65-cent minimum wage at this time. The cost would come to about two-tenths of 1 percent of the pay roll in manufacturing industries, and less than one-half of 1 percent of all profits before taxes.

The overwhelming majority of American employers want to, and do in fact, pay wages substantially above any minimum wage that would conceivably be set by Congress. The textile and apparel industries, at one time the most sweated industries in America, today pay at least a 65-cent minimum wage, and in most cases even more. Why should a relative handful of employers, however, be permitted to take advantage of an immobile labor market and pay anything less than 65 cents in 1947?

The history of minimum-wage legislation for the Nation and for the individual States is replete with dire predictions of the effect of such legislation. Yet industry has always found the way to accommodate itself to such changes.

DISTASTEFUL TO SOME

It is quite discouraging to find some Americans—Congressmen among them—who still find the very institution of minimum wage legislation distasteful and even "un-American."

At one of the hearings last week before the special committee conducting hearings on the Landis bill, one Congressman found that the logic of his opposition led him to State that the "right to pay starvation wages" was part of his basic economic philosophy. Fortunately, the overwhelming majority of Americans have long given up this eighteenth-century philosophy.

Through minimum-wage legislation, State or Federal, we are recognizing a minimum responsibility to the individual wage earner, whose economic situation is tied up more with the success of the complete economic system of which he is a part than with his own resourcefulness or capacity.

The first hearings have also revived a frequently voiced but not proved claim that lower living costs in the South warrant a differential for that region. The error here flows from the confusion between standards of living and costs of living. Every study on the subject has demonstrated that the cost of buying equivalent goods and services is almost identical as between North and South.

It is, of course, quite obvious that lower incomes in the Southern States have created a lower standard of living, but who among us, northerners or southerners, wants to see a perpetuation of this condition?

The Nation can stand, and in fact must have, a substantially increased Federal minimum wage. It is as simple as the proposition stated by Senator WAYNE MORSE in a famous case before the National War Labor Board, of which he was then a member: "American labor should not be asked to subsidize American industry by working for wages below the level of health and decency."

HYMAN H. BOOKBINDER,
Assistant Director of Research for the Amalgamated Clothing Workers, CIO.

NEW YORK, *July 2, 1947.*

Development of Medical Program of the Veterans' Administration Relative to Tuberculosis

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mrs. BOLTON. Mr. Speaker, all too little is accurately known of the splendid work done by Gen. Paul R. Hawley, Chief Medical Director of the Veterans' Administration, in reorganizing the veterans' hospitals in such wise as to give these veterans the benefit of the best in medicine, surgery, nursing, and rehabilitation at amazingly low cost. I will let Dr. Hawley tell us in his own words a part of the story:

Mr. Chairman, ladies, and gentlemen, it gives me great pleasure to join you in a celebration and a commemoration of four decades of solid work that is so happily joined with laying of new plans for the future, and a determination to complete the job. In no other four decades has there been such progress in the tasks that you set for yourselves. It is no accident that such great leaders should have assigned themselves these tasks, nor that you should have elected such men as Homer Folks or that he should have attracted such able staff workers. I am glad that some of his staff are our consultants and that as consultants to us and members of your staff they have helped us bring our tuberculosis hospitals in your State out of their magnificent isolation as Government institutions.

We have attacked the problem of isolated hospitals in several ways. We have refused to locate hospitals except near medical centers. We have released our existing staffs from old restrictions. We have recruited new blood and sent our doctors to medical meetings and post-graduate courses. We have invited in such groups as yours and taken on outside consultants both as lecturers and as part-time staff members. These parts of the program may be endangered by a false search for economy. The entire consultant program in our tuberculosis hospitals has cost us but 12 cents a day per patient. Yet as a result of it we have increased from 5 to 37 the number of hospitals that may safely do such extensive surgery as removal of a lobe or an entire lung. These 37 thoracic surgery centers are strategically located geographically and result in an actual money saving in avoiding expensive transfer of patients, as well as giving the patient the enormous medical and human advantage of being operated upon by those who are near him and know him. As this audience well knows, prompt surgery improves the patient's chances of recovery and shortens his period of invalidism and economic waste. In one of our hospitals in your State, veterans remained chronic invalids for years because 40 percent refused the surgery that was offered them, and what is worse, many eventually died of their diseases. The percentage that refused operation (40%) had remained constantly at that figure for a number of years. Since we adopted the twelve-cents-a-day consultant program the refusals have been reduced to zero, and I pray it remains there. These results speak for themselves, and the economy of paying the price of good medicine instead of suffering the price of cheap medicine is obvious. In no other field can false economy reap such a toll in the human resources of our Nation. The veteran who refuses needed surgery remains in our hospitals longer and so costs the Veterans' Administration more, but he also goes home against advice as well. There he sets up a chain of infections that remain a cost to you and to the Nation. Inevitably we are in this game together and we shall share the results of either good or bad medicine.

Part of the so-called expense of good medicine is in the intelligent use of adjunct and related fields of work. Social service and medical rehabilitation are as much responsible for the reduction of refusals of surgery as are good medicine and good surgery. They are all of one team and move forward together. In recognition of this we have increased the number of social workers in your State alone from 19 in January 1946 to 91 in April 1947. Though this adds to the pay roll and to the personnel ceiling, we intend to add more, as they become available, for we have no doubt of the real economies they produce in the Nation's human resources. Further, in recognition of our efforts in this field the three schools of social work in New York are placing their students at a number of our clinics and hospitals for their field work. Medical rehabilitation boards or teams are at work in two of our tuberculosis hospitals in New York and rehabilitation in the Veterans' Administration really got its first start in one of our hospitals here. Col. Esmond Long, our consultant in tuberculosis, as one of his first duties, with Mr. Lowell Iberg, visited the hospital and determined that a rehabilitation program was most necessary to help correct the rather notorious drunkenness which had existed there for years. When this team with its social workers moved in, the manager of the hospital was soon able to secure the cooperation of the community, the service organizations, the police department, and the taxi companies, in a new program of self-discipline and bed rest for the patients. The best evidence I have of the result is a report that the taxi company has been able to retire one cab and the owner of the saloon across the road wants to sell out. No one hospital manager could have accomplished that—it took the resolution and the determination of a whole community of interests, and, foremost among them, the patients themselves. Courageous and sympathetic leadership brought this about and it deserves and will get our firm support.

The Medical Rehabilitation Service of the Veterans' Administration is a new service. During the past war the experience we received with the reconditioning and rehabilitation programs in the European theater of operations proved that a great many injured servicemen could be returned to duty by means of such programs. I felt that such a rehabilitation program would be helpful in accomplishing two objectives in the Veterans' Administration. First, to help the sick and injured veteran to get well faster and, secondly, to learn to care for himself and even to start to learn a job—so providing a motivation for the severely handicapped to leave our hospitals.

With these objectives in mind, the Physical Medicine and Medical Rehabilitation Service was established. It now includes physical therapy, occupational therapy, corrective physical rehabilitation, educational therapy, and manual arts therapy. The veteran patient can receive not alone acute care from the Physical Medicine Section, but he is also supplied a motive to leave the hospital when he is physically able.

It is our wish that every veteran through the Physical Medicine and Medical Rehabilitation Service will be given every opportunity for physiological, psychological, social, and economic adjustment. A good example of this occurred in one of our larger general hospitals which has an 80-bed neurological ward filled mainly with World War I veterans. The majority of them had been flat on their backs for periods up to 10 years. For 6 months the Neurological and the Medical Rehabilitation Services have been bringing to bear every facility in the hospital on these patients. Some of them at the start had to be carried on stretchers to the Physical Therapy Department.

The results at the end of 6 months were astonishing. In this 80-patient ward, 35 patients had become able to care for themselves, to dress themselves, feed themselves, to be ambulatory, and were able to be discharged from the hospital. Some of them were able to work again. Of the remainder all but 5 percent were able to be up and around and to care for themselves within the hospital. The 35 patients who were discharged from the hospital would have a life expectancy of at least 5 years. At $10 a patient-day cost these 35 patients represent a savings of a half million dollars alone. We of the Veterans' Administration are firmly convinced that a sound Physical Medicine and Medical Rehabilitation Service pays off.

The 18 months in which we have had to organize the Department of Medicine and Surgery have been all too short, but even so we can report some gains. These gains were often costly but had to be accomplished to keep pace with the ever-increasing load of an Army demobilizing at an unpredictable rate, with an unpredictable quota of tuberculous veterans. In this time we more than doubled the number of tuberculosis beds to 15,000. The number of tuberculosis hospitals has increased from 14 to 19 and the number of tuberculosis services in general medical and surgical hospitals has increased from 12 to 29. We have recruited 213 physicians trained in tuberculosis to increase our staff in tuberculosis hospitals and regional offices from 178 to 355. These are now augmented by 176 ASTP and V-12 physicians, but these will soon leave us. In almost every tuberculosis hospital we have men with experience as clinical teachers of tuberculosis and on these we must depend to train our future staffs. It is not proposed that we enter into an unending competition with other Federal and non-Federal agencies for the recruitment of the small trained pool of tuberculosis specialists in any field—medicine, surgery, nursing, social service, or rehabilitation. We must actively train our own. We propose to train our tuberculosis specialists in internal medicine and our internists in tuberculosis.

We shall rotate our general surgeons through thoracic surgery and our sanatorium surgeons through the surgery of nontuberculous pulmonary lesions. Our acute hospitals will be paired or teamed with chronic hospitals and the staff will be trained through each to the benefit of both. Such a program is being arranged between our hospitals at the Bronx and Castle Point. Other special fields will share in these rotations. Some of the neuropsychiatric residents in the metropolitan area will rotate through the Castle Point tuberculosis hospital, where they will prepare clinics for the visiting consultant psychiatrist from New York. In this manner we will attempt to broaden the training of each specialty—to the strengthening—not the weakening of any specialty—and to the advantage of all classes of patients. With this aim psychiatrists have been sent to the Trudeau School of Tuberculosis and a special study is being arranged on the role of the emotions in tuberculosis, through Dr. Karl Binger of New York and Dr. James Waring of Denver. These are only some of the opportunities and the challenges represented by the task and the privilege of rendering the best medical care to our veterans, who are confronted at one and the same time with chronic illness and with readjustment to a torn civilian life.

The preparation of veterans' hospitals for the training of nurses in the care of tuberculosis has proceeded with a speed that no one had a right to expect. Within a year of the

appointment of our Nurse Specialist in Tuberculosis, we have begun receiving affiliate student nurses in two of our tuberculosis hospitals. It has been with the greatest gratification that I read a letter from Miss Anna D. Wolf, Director of Nursing at the Johns Hospital, in which she states that of seven students sent to our Oteen, N. C., hospital for cadet training six have expressed the desire to return to the Veterans' Administration and to tuberculosis nursing. I think that is something of a triumph. Your Veterans' Administration hospital at Sampson, N. Y. has just been approved for cadet nurses though it has opened so recently that it has scarcely got its feet on the ground. These accomplishments are not only new to the Veterans' Administration, they are somewhat unique in the tuberculosis field. It will be foolish economy if we cannot proceed with the modernizing of all our tuberculosis hospitals so that they all may be training centers for the benefit of all veterans and all tuberculous patients. I need not tell this audience what a boost to patient morale it is to have these ambitious young student nurses appear on the wards. The whole face of the place changes just as it does when you introduce teaching in any department of a hospital. Teaching means competition among the students, and on competition our American system has distinguished itself throughout the world. Our veterans know this and appreciate it.

It is gratifying when one can point to a Federal economy and still more so when this can be found in Federal research. It pleases me also that this particular research has yielded byproducts almost as important as the research itself. I refer to our work with other Federal agencies on streptomycin. The important byproduct here is in the heightened morale of both patients and staff in every hospital in which the study has been conducted. Fortunately for the world at large, it may also be reported that by far the majority of the patients treated have been improved. Though most have suffered some damage from the drug, this damage is not important in view of the serious nature of the disease in the patients selected for treatment. While over 700 veterans have been treated in some 20 Veterans' Administration hospitals and $1,300,000 have been spent for the drug, the purely administrative cost of this study has been largely confined to the salaries of one secretary and one and one-half doctors. Yet in spite of this, the effectiveness of the study has recently been threatened by the absence of funds for the necessary travel of the investigators.

You will all be interested in case finding and follow-up. All hospitals and clinics are authorized to conduct both activities up to the limit of their resources. Only one branch office has so far consolidated its results and reports a total of 40,762 cases surveyed during the period September 15, 1945, to September 15, 1946, of which 519 or 12.91 per thousand were found to have active tuberculosis. These 519 newly discovered cases represent an additional load upon our hospitals in that branch—an additional load that we had been unable to predict. Due to the peculiarities of the veteran population—highly screened by previous X-rays and so much prolonged exposure abroad—we are unable to forecast our total needs in beds. All we know is that 12,000 are now hospitalized at Veterans' Administration expense, that 22,000 are receiving checks for disability due to tuberculosis, and that 35,000 were discharged from the services because of tuberculosis. We are setting up case registers in both central and branch offices, of the 35,000, in the hopes of finding all these veterans and determining their need for care. Through this same mechanism we expect to restudy the 22,000 on compensation rolls, to be sure that all are deserving of a place on such rolls.

For this last purpose we have set up in Washington the largest X-ray file ever known. Here there are already 38,000,000 X-rays so filed that they are available for day-to-day study and comparison with subsequent X-rays. We are still filing them at the rate of 35,000 a day and 10,000,000 are still in their cases awaiting filing. Though this file is an invaluable storehouse of research material, a thorough study of the compensation cases alone will pay for the file and still save the Government untold sums.

Now don't let me give you the impression that as Chief Medical Director of the Veterans' Administration, tuberculosis is my only problem; but I have been asked to pay especial attention to it at this meeting and I have a deep concern and sympathy for this tragic aftermath of battle. Tuberculous patients have, over the years, accounted for only about 10 percent of all Veterans' Administration hospitalized patients. It has, however, a certain irritant value far outweighing its 10-percent load. Of course they stay longer with us and have time to find out all our faults. They are also highly vocal and we hear much from them. Furthermore, they are, due to your efforts, well tutored in the disease and its treatment, and are represented by highly organized and powerful groups such as this, and the National Tuberculosis Association, that are capable of arousing public opinion and action. As a matter of fact I have been somewhat surprised that you should have allowed me 18 months in which to develop my program without storming my office with your impatience at our progress. That we have made good progress I have tried to indicate, but I must confess that I have never been more vulnerable to attack than over the past few months. During these months I have had to suspend many of the promises that I made to the hospitals and their staffs, both old and new. My plan of clinical supervision of these hospitals is now in abeyance through lack of travel funds for the branch office staff. A splendid course of lectures and clinics by a visiting faculty is postponed. Registration of our doctors at two regional postgraduate meetings had to be canceled. Eight of our doctors and nurses cannot be sent to the National Tuberculosis Association meeting to fill their places on the program. The studies on streptomycin were endangered through lack of funds for a conference. A personnel freeze prevents my opening much-needed tuberculosis beds, and lack of funds for conversion and remodeling prevents the use of a splendid medical-school faculty in a tuberculosis hospital. In spite of these immediate and serious shortages, however, General Bradley has promised that he will not ask me to operate hospitals with inefficient and inadequate staffs. The serious question then arises that, since we do not have enough beds for all tuberculous veterans—do you as communities take care of the excess, or do we close general medical and surgical hospitals in order to take care of the tuberculous? Whether or not one of these courses becomes necessary, of one thing I am certain—in that General Bradley gives me his full support—"I shall not be a party to any retrenchment that might threaten to drag this agency into the backwaters of American medicine," nor shall I countenance any reduction that might imperil our medical program" or "endanger the results we have obtained."

The Egg and I—and You

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, there has been much discussion in regard to the use of section 32 funds that are obtained by setting aside 30 percent of the custom receipts supposedly to be used for the disposal of surplus agriculture commodities.

The following official table shows the section 32 funds used in connection with eggs:

Use of sec. 32 funds for the purchase and distribution of eggs—fiscal years 1936–45

Year	Food stamp plan, shell eggs		Purchases for direct distribution						Total value
			Shell eggs		Dried eggs		Frozen eggs		
	Dozens	Value	Dozens	Value	Pounds	Value	Pounds	Value	
1936			644, 160	$198, 604					$198, 604
1937			8, 628, 630	2, 136, 766					2, 136, 766
1938			8, 088, 330	1, 726, 868					1, 726, 868
1939	161, 959	$38, 415	3, 230, 910	532, 134					570, 549
1940	12, 210, 000	2, 655, 000	67, 378, 560	12, 834, 520					15, 489, 520
1941	46, 440, 000	11, 534, 000	15, 265, 380	3, 213, 263					14, 747, 263
1942	59, 250, 000	20, 327, 000	22, 168, 230	5, 650, 967					25, 977, 967
1943	21, 829, 000	9, 014, 000	591, 660	220, 327	2, 200, 000	$2, 661, 498			11, 895, 825
1944			15, 925, 557	5, 883, 402					5, 883, 402
1945			3, 688, 456	1, 479, 016	873, 193	1, 178, 635	1, 170, 480	$414, 382	3, 072, 033
Total	139, 890, 959	43, 568, 415	145, 909, 273	33, 875, 867	3, 073, 193	3, 840, 133	1, 170, 480	414, 382	81, 698, 797

From 1936 to 1940 before the war, $4,732,787 of Federal funds were used to dispose of surplus United States eggs, though during the same period and same years, there were $5,398,000 worth of eggs imported. In dozens the relation of imports to the number used under section 32 funds was much greater, somewhere near twice as many no doubt. In other words, we did not distribute the imported eggs. The duty on egg imports has been reduced so that the future egg picture may make the surplus problem even more complicated.

To obtain the egg picture in full, I am inserting tables from the official agricultural statistics showing the United States production of eggs and the prices received by the farmers of the Nation:

Eggs: United States production and price, 1910–48

Year	Production	Price
	Million dozen	*Cents per dozen*
1910	2, 475	20. 9
1911	2, 695	17. 5
1912	2, 594	20. 2
1913	2, 576	19. 4
1914	2, 558	20. 5
1915	2, 741	19. 4

Eggs: United States production and price, 1910–48—Continued

Year	Production	Price
	Million dozen	*Cents per dozen*
1916	2,640	22.1
1917	2,539	31.8
1918	2,567	36.0
1919	2,796	41.3
1920	3,248	43.5
1921	2,823	28.3
1922	3,025	25.0
1923	3,208	26.5
1924	3,171	26.7
1925	3,207	30.4
1926	2,644	28.9
1927	3,541	25.1
1928	3,544	28.1
1929	3,476	29.8
1930	3,581	23.7
1931	3,532	17.6
1932	3,327	14.2
1933	3,255	13.8
1934	3,156	17.0
1935	3,081	23.4
1936	3,166	21.8
1937	3,443	21.3
1938	3,424	20.3
1939	3,561	17.4
1940	3,629	18.0
1941	3,828	23.5
1942	4,430	29.9
1943	4,972	37.1
1944	5,305	32.4
1945 [1]	5,060	37.7
1946 [1]	5,030	37.6
1947		
1948

Source: Agricultural Statistics, Bureau of Agricultural Economics, Department of Agriculture. 1946 data from Livestock and Poultry Division Department of Agriculture.

To complete this egg information, I include the official table from the United States Department of Agriculture showing the exports and imports of eggs and value each year from 1940 to 1947:

Eggs and products: United States imports and exports—quantity and value, 1910–46

Year	Imports		Exports	
	Quantity (shell egg equivalent)	Value	Quantity (shell egg equivalent)	Value
	Thousand dozen	*Thousand dollars*	*Thousand dozens*	*Thousand dollars*
1910 [1]	3,300	167	5,683	1,264
1911 [1]	5,141	257	13,276	1,792
1912 [1]	7,965	152	18,962	3,425
1913 [1]	11,263	243	17,669	4,460
1914 [1]	19,010	1,564	21,019	3,782
1915 [1]	16,819	1,237	22,323	5,093
1916 [1]	26,482	1,032	28,266	6,345
1917 [1]	40,268	2,001	19,886	7,641
1918	28,775	2,823	20,938	9,146
1919	48,845	8,865	38,789	18,944
1920	50,084	7,852	26,842	13,879
1921	52,397	4,090	33,291	10,967
1922	53,803	5,558	34,620	9,225
1923	30,995	6,755	30,659	8,479
1924	41,193	5,788	28,117	7,514
1925	57,666	8,988	24,999	7,579
1926	52,923	7,289	26,634	7,758
1927	36,216	5,174	28,707	7,849
1928	35,353	6,779	20,192	6,222
1929	53,293	8,584	12,075	4,143
1930	44,490	4,869	18,579	5,105
1931	33,563	1,812	7,684	1,778
1932	10,026	813	2,319	511
1933	9,609	537	1,866	391
1934	7,483	443	1,928	478
1935	22,495	1,679	1,812	555
1936	26,664	2,023	2,098	604
1937	31,679	2,468	2,376	697
1938	6,408	524	2,092	621
1939	4,957	383	2,697	695
1940	6,714	548	4,571	1,133
1941	15,064	2,138	73,411	46,751
1942	3,430	613	461,477	163,278
1943	912	295	697,092	270,070
1944	509	126	730,790	302,592
1945	4,181	894	429,642	188,944
1946	668	434	364,294	154,048

[1] Year ending June 30.

Office of Foreign Agricultural Relations. Compiled from Foreign Commerce and Navigation of the United States.

What facts do our analysis of these official tables reveal? They are—

First. That $81,698,797 of section 32 funds have been used for disposing of eggs through various channels.

Second. That dollar value of exports or of imports of agriculture products do not furnish a real factual picture. For example in 1926 there were 52,923,000 dozens imported showing 7,289,000 in dollars as imports while the same year in 1926 only about half as many or 26,634,000 dozens were exported showing an export value of $7,758,000 or showing more in dollars than was shown by the 52,923,000 dozens of imports. People do not eat dollars, they eat pounds, bushels, and tons. All imports and exports in dollars must be considered in this light, though on many commodities there is not the wide difference as shown in the example above. It does show however that the 1946 agriculture imports of $2,300,000,000 may have in pounds, bushels and tons exceeded the $3,000,000,000 of 1946 agriculture exports. Official tables by the Commerce Department showing the volume of imports and exports indicates that from 1925 to 1942 the volume of agriculture imports exceeded the volume of agriculture exports. In fact in 1944 more food was imported than exported in pounds, bushels, and tons according to the Commerce Department's reports and charts. We may have been feeding the world so to speak so far as wheat is concerned, but the world has been feeding the United States to a greater extent when it would appear it would be the best world food policy to keep their food for their own dire needs. Food imports from Italy for example show this situation. The dollar exchange no doubt causes this situation, because they surely have great need for their own supply of food.

Third. That every year from 1917 to 1941 or for a 24-year period we were on an egg import basis. In the 1920's we imported many more eggs than we exported and some years twice as many. In 1935, 1936, and 1937 when we were spending millions of dollars for not producing American foodstuffs and borrowing money to pay for not doing it, we imported 10 to 12 times as many eggs as we exported.

Fourth. That an enormous increase took place both in United States production of eggs, and in egg exports during the war.

Fifth. That in the prewar period as in 1936, there was a net import ($2,023,000 exports minus $604,000 of egg exports) of $1,419,000 worth of eggs, and $198,604 of Federal funds were used to dispose of surplus eggs. The $198,604 used for surplus disposal was only 13 percent of the dollar imports and much less percentage in dozen imports.

Sixth. The egg industry is a great industry. It has stood on its own feet. It has not succumbed to New Deal economic medicine. The egg producers of the Nation have demonstrated time after time that they did not ask for special legislative preferences.

While many people thought that the large consumption of eggs during the meat shortages of wartimes might reduce the domestic demand for this great animal protein product, the present consumption and demand has demonstrated that the consumers of America continue to appreciate this great food product.

Seventh. The duties collected on egg imports have been from $76,000 to $913,000 per year from 1910 to 1920; from $798,000 to $3,046,000 from 1920 to 1930; and from 1923 to 1947 the receipts from duties collected were, as follows:

1923	$1,491,000
1924	2,265,000
1925	3,411,000
1926	3,023,000
1927	1,793,000
1928	1,947,000
1929	3,043,000
1930	2,608,000
1931	2,024,000
1932	616,000
1933	749,000
1934	805,000
1935	1,911,000
1936	2,227,000
1937	2,613,000
1938	417,000
1939	367,000
1940	787,000
1941	1,145,000
1942	317,000
1943	62,000
1944	23,000
1945 [1]	143,000
1946 [1]	36,000

[1] Preliminary. U. S. Tariff Commission, June 1947.

Eighth. There were large imports and exports of eggs in the 1920's. In the 1930's, especially 1935, 1936, and 1937, there were large imports, but the exports had dived to 1,866,000 dozens in 1932, and these exports had increased to only 2,697,000 dozens in 1939, when the war demands changed the picture. In the 1940's the exports have been from 73,000 dozens in 1941 to 730,790,000 dozens in 1944. The expansion of egg production was one of the great achievements of the wartime food products.

Ninth. The following agencies in Wisconsin received eggs under the program of food distribution from the section 22, funds:

Direct distribution of shell eggs to State and county hospitals, children's orphanages, old folks homes, school-lunch feeding programs, welfare families.

Direct distribution in 1941: Milwaukee County institutions, Sauk County Asylum.

With the bulk going to eligible schools, public-assistance cases (those not eligible under the food-stamp plan).

Direct distribution in 1942: Milwaukee County institutions, Ashland County Old People's Home, Fond du Lac County Asylum; with the bulk going to eligible schools and public assistance cases.

Source of information: Mr. Blood, Extension 2335, Agriculture.

It should be noted that none of these surplus eggs were distributed in the Seventh Congressional District of Wisconsin. A total of $81,000,000 of section 32 funds has been used for egg distribution from 1936 to 1947. The total section 32 funds used was $1,056,788,924 for all uses.

Colorado River Controversy Should Be Settled in the Courts

EXTENSION OF REMARKS
OF

HON. NORRIS POULSON
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. POULSON. Mr. Speaker, any measure relating to the use of the waters of the Colorado River at once attracts the close interest of the people of the seven great States which lies in the basin of that River. For a reason which I shall discuss, that is particularly true in the coastal plain of southern California, where live over 4,000,000 of the American people, a greater number, as it happens, than reside in the other six States of the basin combined.

The Colorado River is controlled by an interstate compact, called the Colorado River Compact, by the Boulder Canyon Project Act, under which the great Hoover Dam was built, and by other statutes, court decisions, and contracts, all of which, taken collectively, are sometimes called the "law of the River." Unfortunately, each of these documents has been challenged as containing ambiguities and uncertainties, with the result that for many years controversy has raged through the basin, and particularly between Arizona and California, as to the true meaning and intent of these documents. This controversy relates particularly to how much water of the river each of these two States can rely on for its permanent development. There is not enough water in the great Colorado to satisfy the legitimate aspirations of the two States. There is far more land in each of them which could be irrigated and made fruitful than there is water. And by a most regrettable treaty, which, strangely, Arizona supported, though California opposed it, there was granted to the Republic of Mexico an unnecessarily and unfairly large share of the waters of the river. Thereby, the struggle between the States for the remaining water was intensified and made more acute.

But Arizona, after vigorously supporting the Mexican treaty, is not willing to stand the consequences of her generosity. She is desirous of improving her economy, even though, to get more water from the Colorado put to use within her borders, she must invade the water supplies long set apart by contracts made by the United States for projects in California, and even though those projects have been planned for over a quarter of a century, have been placed in operation and have been financed by California communities which depend on them, to a total cost of over half a billion dollars.

Arizona has indicated the course she would follow, by introducing in the Seventy-ninth Congress two bills, one for reauthorization of the Gila project, and another for authorization of a grandiose power and water scheme called the Central Arizona project. Neither bill was acted on by the last Congress, and the bills have been reintroduced in the Eightieth Congress.

The bill before the House, which relates to the Gila project, as introduced in the Seventy-ninth Congress, would have increased the claims of Arizona to Colorado River water to such a point that water which is needed by California communities, and to which they are entitled, would definitely have been taken from them. In this Congress, the bill has been amended so that it is hoped that this result will not take place.

As a result of these amendments, the Gila bill is, of itself, of comparatively minor importance. It provides for cutting down the area of one section of the Gila project and adding and initially authorizing another section. The quantity of water to be used on the resulting acreage is definitely limited to an amount, 600,000 acre-feet, which is probably not greatly in excess of that to which Arizona is entitled. Were the bill standing alone before the Congress, it would arouse little concern.

But the Senate Subcommittee on Irrigation and Reclamation of the Committee on Public Lands has, in recent weeks, been holding hearings on another bill, S. 1175, which would authorize the central Arizona project. From the economic viewpoint this project is simply fantastic. It would ultimately cost $1,000,000,000, five times the cost of the great Hoover Dam project. It would furnish a water supply, for land that is worth $200 to $300 an acre, at a cost of over $2,000 per acre. The farmers, according to the financial analyses of the Bureau of Reclamation could not afford to pay $1 of the construction of the irrigation features of the project. In fact, says the Bureau, they could not contribute even as much as one-half of the cost of operation and maintenance of the irrigation features of the project. Such a wildly profligate use of money of the taxpayers of the United States has never before been dreamed of.

Neither the Bureau of Reclamation nor the Department of the Interior has approved the central Arizona project. They have not even submitted to the Congress a final report on its cost, its justification nor its engineering details. It is sponsored by Arizona alone. But enough can be gathered from preliminary investigations by the Bureau to see plainly that the cost of the irrigation project can be borne in only two ways, either by a staggering outright capital subsidy from the Treasury of the United States, on the order of $450,000,000, or by selling the power from the project to the only substantial market which exists, namely the power users of southern California, at a price which would be loaded with enough surcharges to pay for the entire cost of the irrigation works, plus more than half the cost of operating and maintaining them, forever.

Experts in this field in California consider that Arizona is not entitled to enough water from the Colorado River to provide any water at all for the new central Arizona project. The project can have water, according to their view, only by taking it away from existing, authorized and operating projects, chiefly in California. And the bitter irony of the scheme emerges to view, when it is realized that the people of California are blandly supposed to pay for a project in Arizona which would take their own water away from them. Of course, they would do nothing of the sort. The Federal Treasury would stand the loss.

I have spoken of the long-standing controversy between California and Arizona. Until it is settled, further development in the lower basin of the Colorado cannot proceed. The Gila project will, in the opinion of California, exhaust the last drop of water that remains for Arizona projects. The two States have, times without number, attempted to settle their differences by agreement. This laudable purpose has not been achieved, for a basic reason that I have mentioned, namely, that there is not enough water in the river to satisfy the legitimate aspirations of both States.

In the belief that the controversy should be set at rest, California's Governor, Earl Warren, recently addressed identical letters to the Governors of Arizona and Nevada, suggesting that they explore the possibilities of disposing of the dispute by any of the three avenues which are possible, that is, by negotiation of a compact, by arbitration, or by seeking a court determination. The replies which he received are interesting. Governor Pittman, of Nevada, replied that the experience of the past had convinced him that negotiation would not lead to a result, and that he favored a determination by the Supreme Court. Governor Osborn, of Arizona, replied that he was convinced that there is no controversy; that all issues have been settled by the compact, statutes, and contracts in favor of Arizona. This remarkable position is obvious sophistry. Each of the States still stoutly maintains that its interpretations of the basic documents are correct and the two sets of interpretations are as far apart as the poles.

With the matter in this position, the Gila bill, H. R. 1597, came on for hearing before the Subcommittee on Irrigation and Reclamation of the Public Lands Committee of this House. Eminent engineers and lawyers from California appeared and explained the facts to the subcommittee. After full deliberation, the subcommittee unanimously adopted and the full Public Lands Committee approved and placed in its report the following statement:

> It is the intent of the committee that nothing in this bill is to be construed as affecting the rights of the States of Arizona or California as to the use of the amount of water in the lower Colorado River Basin, that each State is entitled to under the existing compact, contracts, or law. The committee feels the dispute between these two States on the lower Colorado River Basin should be determined and settled by agreement between the two States or by court decision because the dispute between these two States jeopardizes and will delay the possibility of prompt development of any further projects for diversion of water from the main stream of the Colorado River in the lower Colorado River Basin.

Therefore, the committee recommends that immediate settlement of this dispute by compact or arbitration be made, or that the Attorney General of the United States promptly institute an action in the United States Supreme Court against the States of the lower basin, and any other necessary parties, requiring them to assert and have determined their claims and rights to the use of the waters of the Colorado River system available for use in the lower Colorado River Basin.

This recommendation of the committee is as plain as words can make it. It is the judgment of your committee that the controversy between Arizona and California should be settled. Unless the States are able, immediately, to settle it themselves, the committee recommends that an action be commenced by the Attorney General in the Supreme Court against the States, which would require the matter to be brought to a head and disposed of. Finally, in the committee's judgment, the existence of the dispute will delay, until it is settled, the development of any further projects for diversion of water from the main stream of the Colorado River in the lower Colorado River Basin.

In saying this, may I emphasize that the committee's statement has nothing to do with the authorization of projects in the upper Colorado River Basin. The upper basin's water supply appears ample for considerable development.

To bring it to a point, the committee has, in effect, gone on record that until there is a determination of the grave uncertainty as to whether there is any water supply for a central Arizona project, it will not consider such a project possible.

The committee's conclusions are sound and logical. I heartily commend them. Indeed, no group of men who are responsible for the integrity of Government investments in reclamation projects could well come to any other result. I bring the committee's statement to the attention of the House so that the record may show without equivocation that the Committee on Public Lands has closed the door against the authorization of further irrigation projects in the lower basin of the Colorado, until the all-important question of water supply has been determined.

Acreage Limitation in Reclamation Projects

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Rev. William J. Gibbons, S. J., associate editor, America, board of directors, National Catholic Rural Life Conference, before the Subcommittee on Irrigation and Reclamation of the Senate Committee on Public Lands, May 12, 1947:

INTRODUCTION

On behalf of the National Catholic Rural Life Conference I wish to express appreciation for this opportunity to express the conference's views on the subject of acreage limitation in reclamation projects, the repeal or modification of which is proposed in several bills now pending before the committee.

The National Catholic Rural Life Conference is an organization of Nation-wide scope, comprised of bishops, priests, and lay persons, whose objective is to further the religious and the socio-economic welfare of those living by agriculture or simply residing in the rural areas. In matters affecting the land it expresses the interests of 83 dioceses, practically all of them predominantly rural in character. Official relations with these dioceses are maintained through the diocesan directors designated by their local bishops. Within the dioceses actively affected by the program of the conference are 24,570 priests, 91,700 religious, and over 13,000,000 lay Catholics. The conference headquarters is located in Des Moines, Iowa.

AGRICULTURAL TRENDS

The position taken by the National Catholic Rural Life Conference on the subject of acreage limitation is based upon its concern for the future of our American families and its conviction that the needless concentration of productive capital will seriously affect the social and economic life of the Nation in the years ahead.

The conference takes a long-range view in considering the land and is therefore more interested in the net effect of present trends in agriculture upon the Nation as a whole than in the prospect of immediate financial gain for a minor portion of our population. It takes the position that any small savings effected in the price of food for urban dwellers through unregulated agricultural development will be more than canceled out by the social and economic loss incurred.

In the colonial period of our history and during the early years of the Republic large farms, with resulting concentration of productive capital, were fairly common in certain parts of the eastern seaboard. First, indentured servants and later slaves were used in great numbers to cultivate these semifeudal estates. In New England, however, and in the upper Middle Atlantic States the family-type farm was the rule. At first it was on the subsistence-homestead pattern but as the years went on these farms were integrated into the rest of the economy.

During the nineteenth century the American people, convinced that wide distribution of ownership among families living on the land is more in accord with our democratic ideals, progressively rejected the semifeudal pattern and accepted the family-type farm as the norm. When the West developed this ideal was kept in mind. At this point I would like to quote from the report of the House Special Committee on Postwar Economic Policy and Planning:

"Agriculture is the cornerstone of our economy. The independence of the Nation was won by the stubborn resistance of the subsistence farmers who made up the greater part of the population in the early years. American agriculture, throughout its development, was characterized by individual family-sized owner-operated farms. This contributed greatly to the independent spirit and the moral character of the entire population and was the backbone of our political and economic democracy as they developed in America." (Tenth Report of the House Special Committee on Postwar Economic Policy and Planning: Postwar Agricultural Policies (August 6, 1947, 79th Cong., 2d sess.; H. Rept. No. 2728).)

CONCENTRATED LANDOWNERSHIP

The corporate and semifeudal patterns of farming, to the extent to which they persist, have been a constant source of trouble to our Federal, State, and local Governments. Associated with the large-scale farms are abuses requiring Government intervention and the expenditure of public funds. In this way the Nation as a whole has been called upon to subsidize their claimed efficiency. If public moneys are to be spent for the benefit of agriculture—and the National Catholic Rural Life Conference has no objection to their wise expenditure—it should be directly for the widest possible number of our rural people and rather than indirectly to remedy conditions resulting from corporate exploitation of the land for expanding profits.

Among the abuses arising from the unregulated exploitation of the land may be counted: Impoverishment of the soil and the preparing of the way for serious erosion and floods; land speculation; exploitation of agricultural workers and the encouragement of a migratory class of seasonal workers; the importation of persons from other countries with no other purpose than to secure cheap agricultural labor. The over-all outcome of large-scale commercial farming has been the tendency to cut production costs without regard for the consequences upon our natural resources, our people, or upon the legitimately competing family farmer.

While the plight of our own rural proletarian class of agricultural workers, by and large, has not been as bad as that of such workers in other countries, we must not close our eyes to the dangers. Looking abroad, we see that the growth of great landed estates and large commercial farms has long since harmed such countries as Germany, Hungary, Poland, Spain, Italy, certain Latin-American nations, Japan, the Philippines, much of the Orient and Middle East. In these countries the concentration of landownership has been accompanied by underdevelopment of agricultural resources, the withholding of land from cultivation, and the proletarianization of many rural people, with resulting restiveness on their part. When this situation is accompanied by industrial underdevelopment the whole economy is endangered, for in such case productivity does not keep up with population. Even when there is sufficient industrialization to absorb excess rural population and to forestall the full effects of concentrated landownership, the general effect of such concentration has been the loss of a sense of ownership among more and more of the people, and the growth of a corresponding willingness to accept radical socio-economic reforms. Widespread ownership in agricultural land is the surest safeguard against the threat of collectivized agriculture and the best means of forestalling popular demands for governmental expropriation of land and its redistribution after the concentration has become an accomplished fact. The land policy of the United States should be directed toward preventing the evil of excessively concentrated landownership from arising. This is much simpler than attemptin, to cure the abuse once it has taken root. Our country is not immune to the disease even though in our highly technological society it may take somewhat different forms than it has elsewhere in the past.

Of more than passing interest is the attitude of our Government toward the correction of land abuses abroad. In Germany we have looked with favor upon the plans of reconstituted political parties to effect proper distribution of land. In Japan a memorandum to the Japanese Government from the General Headquarters Supreme Commander for the Allied Powers, under date of December 5, 1945, treated of rural land reform. Point 3 ordered the Japanese Government to submit a plan for correcting

abuses. Certain of the provisions are especially noteworthy:

This program shall contain plans for:

(a) Transfer of landownership from absentee landowners to land operators.

(b) Provision for purchase of farm lands from nonoperating owners at equitable rates.

(c) Provisions for tenant purchase of land at annual installments commensurate with tenant income.

(d) Provisions for reasonable protection of former tenants against reversion to tenancy status. (AG 602.6 (9 Dec. 45) CIE.)

ACREAGE TRENDS IN UNITED STATES

The January 1947 issue of Agricultural Situation presented a factual summary of contemporary land trends within the United States. Without entering into a sociological discussion it provides us with facts of interest to all concerned with the welfare of our rural population. The statistics provided in the summary show that—

1. The number of larger farms is increasing substantially throughout the country. Large commercial enterprises are progressively taking the place of family-size farms, although in many places the size of this latter type farm is also increasing.

2. Over half of the farm land in the country is in units of over 500 acres, and units over 1,000 acres now account for 40 percent of the farm land compared with less than one-fourth after the First World War.

3. Well over two-thirds of the large farm units of over 1,000 acres are in 11 Western States. In that region the increase in such units has been 90 percent within the last quarter century.

4. In 1920 farms between 10 and 500 acres made up two-thirds of all farm land, today only half.

5. The moderate-size farm, 100 to 260 acres, is on the decline. The percentage of farms falling into this category is lowest in the far West, and greatest in the East where the traditional family-type farm pattern has been maintained better than elsewhere. The decline in the number of such moderate-size farms has been most persistent in the regions settled by homesteading.

These facts, as well as others readily available from the censuses of agriculture and the general census, lead to certain conclusions not drawn in the survey in Agricultural Situation referred to above. These conclusions are:

1. American land policy, although favoring the family-type farm in the era of settlement of the West as evidenced in the homestead acts, was not sufficiently vigorous in restricting acreages. The institution of fee simple ownership stood in the way of Federal restriction upon acreage once title to the property had been secured. Yet even in the period of original settlement our Federal land laws allowed too much room for speculation in newly entered lands and did not resist strongly enough those who wished to engage in agriculture as a business on an absentee-ownership basis.

2. The unit size of an economically efficient family-type farm is not the same in all localities. The 160-acre norm is merely an approximation. Although in semiarid regions large units are needed, in more fertile and productive regions smaller units are quite satisfactory and therefore, from the family-farm viewpoint, more desirable. Much of the land in the areas being reclaimed through irrigation is of such a character. Where larger units are found within the irrigation and reclamation projects, it is usually evidence of a trend toward land speculation or large-scale commercial farming.

3. The time to forestall the evils of land concentration and land speculation is at the time of original acquisition and during the period when the original settlers are developing family-type farms on moderate acreages.

From past experience it should be evident that we are entering a crucial period for the family-type farm. If positive steps are not taken to keep commercial agriculture within bounds and to prevent speculation in land, we can only look forward to an increasing number of factories-in-the-fields, employing hired labor often of a migratory kind and exploiting our soil resources solely for purposes of profit. There is no purpose in proclaiming the ideal of the efficient, owner-operated family-type farm if we do not take steps to protect it from the inroads of land monopoly. The alternatives which confront us are discussed summarily in an article appended to this testimony. (Farmer's Future—a Real Concern, by William J. Gibbons. America, November 9, 1946.)

THE FAMILY FARM

Let me say at the outset that in advocating the family-type farm the National Catholic Rural Life Conference is not unaware of the economic problems facing American agriculture. It realizes that upward of a third of our farms as at present constituted are marginal or submarginal in character and therefore not adequate income for a farm family. The conference believes that these farm units should be improved by assisting the owner-operators to improve the quality of the soil where possible, to acquire larger acreages if that is a feasible solution, or to resettle elsewhere if necessary. When new land is being made available through reclamation and irrigation, family farmers desiring resettlement should be given first choice provided they are prepared to learn new farming techniques necessary for the operation of an efficient unit.

The conference realizes also that the productive capacities of modern American agriculture are today so great that fewer full-time farmers are necessary to provide our people with adequate food and fiber and to engage in export than was the case a half century ago. Yet despite this fact, or rather because of it, the conference does not see why corporations and large landowners should be permitted to take over our agricultural production when family farmers are perfectly able to do the job. This they can do, given the necessary education and the equipment adapted to the needs of family-size farming operations.

The relationship of the family to the land has been well expressed in a statement issued jointly by rural leaders of the Catholic, Protestant, and Jewish faiths during 1945. The statement reads in part:

"Since the family is the primary institution, access to the land and stewardship of land must be planned with the family unit in view. The special adaptability of the farm home for nurturing strong and wholesome family life is the reason for the universal interest in land use and rural welfare. A unique relationship exists between the family and the vocation of agriculture. The farm is the natural habitat of the family. The family's welfare must therefore have the first consideration in economic and social planning. Throughout the history of the United States these fundamental principles have been worked out through National and State legislation, and they have been upheld by court decisions and popular acclaim.

"Efficiency in land use is not to be judged merely by material production but by a balanced consideration of the spiritual, social, and material values that redound therefrom to person, family, and society. The land is not to be a source of benefit to a favored few and a means of servile labor to the many."

Second only to making land available to the family is the responsibility of society to encourage and to educate the land stewards in the proper and efficient use of the land and in such techniques as will make them masters of their own economic destiny (Man's Relation to the Land: a statement of principles which shall underlie our National, State, and individual actions).

Three of the methods suggested in this statement for practical application of the principles are especially worth noting:

Make the family-type farm operated by the owner a major objective of legislation and planning.

Discourage large land holdings as undemocratic and unsocial.

Where large-scale production is necessary and advisable, encourage the use of cooperative techniques with local ownership and management.

In contrast to the reasonable economic security of a family operating an efficient farm unit is the insecurity of seasonal agricultural workers, whose existence makes possible large-scale farming operations. The hundreds of thousands of seasonal workers who may rightly be called migratory, form a definitely depressed class within our economy. These migratory workers traditionally receive a wage only a fraction of the going wage in nearby industry. As often as not, they are exploited because of their race or foreign origin and rarely do they or their families have the economic, educational, religious, and social advantages of families living a more stable kind of life. But even apart from the migratory workers, large-scale farming operations presuppose readily available quantities of cheap labor at the proper seasons. It is all part of the pattern. During the week ending September 11, 1943, for example, 75,000 people were employed in seasonal work in California's Sacramento and San Joaquin Valleys alone. The picture is the same wherever unduly large commercial operations replace the family farm unit. In view of our American traditions of economic and political democracy, it hardly seems necessary to emphasize the undesirable character of such insecure agricultural employment. (Seasonal Farm Labor in the United States, by Harry Swartz. Columbia University Press, 1945, p. 35.)

EFFECTS OF DIVERGENT FARM PATTERNS

Ownership of productive property lends stability to the family. When this ownership is in land it gives it additional security even in times of depression. While our agricultural people suffered much during the depression of the thirties, few of them were without food. In fact many additional families took to the land and rural living just to tide themselves over the depression. An owner-operator farm unit gives a family, in addition to relative economic security, the light, space, and air which the family needs for its proper development. Add the benefits of satisfactory rural education, improved roads, rural electrification, and the improvements modern farm and dwelling buildings can have, and it can be readily seen that family living on the land can be made a genuine bulwark of the family and of democracy. On the other hand propertyless workers, especially without roots in any one community, are the natural breeding ground for collectivism.

The study of the towns, Arvin and Dinuba, within California's Central Valley, provides good examples of the two types of farming community which can evolve. The results of the study were included in the report of the Senate Small Business Committee made last December and are well known to everyone interested in rural welfare. An article comparing these towns appeared in the New Republic for February 3, 1947. I quote from the article:

"These two towns prove that a small-farm community is a good place to live in and that a large farm one is not. When a farmer owns 50 acres they make a home for him and his children, but when he owns a 2,000-acre farm it becomes a money-making factory and deprives 39 other families of real homes. It boils down to this. Is it better to have 39 wage-labor families with no homes and one owner who only wants to make a killing, or

to have 40 families living on 50-acre farms making good livings and providing good homes for their children? (New Republic. Two Towns, February 3, 1947.)

The supposition is, of course, that 50 acres is sufficient for an efficient family unit. In some irrigated spots this has already been demonstrated as adequate, but normally larger units are required. In any case the point is clear. For every undue expansion of an individual's or corporation's land holdings, there is a corresponding restriction of opportunity for widespread private ownership by families.

The position of the National Catholic Rural Life Conference is, briefly, that economics has for its end the providing of man's material needs, not the accumulation of profits. Any system of production is to be judged in the last analysis upon its respect for man's inherent rights and its capacity for producing the goods needed and distributing them to the largest number of persons. The family-type farm system does just that. Acreage limitations provisions are directed to the same end.

One of the arguments brought forward by those who favor repeal of the acreage limitations is that the restrictions hold up production of agricultural products and hence mean higher food prices for urban dwellers. In their minds the disadvantages flowing from corporate exploitation of the land are offset by certain economic gains supposed to occur. The goal they set up as the end of economic life is the maximization of national income irrespective of its distribution. The effect upon our natural and human resources is either disregarded or accepted as the inevitable consequences of economic laws.

This approach to the land question is obviously inadequate. Concern for the welfare of the family and for the distribution of private property must also be taken into consideration. If they are not we will drift gradually but surely into collectivism, under private auspices it is true, but nonetheless collectivism. Such a situation—the logical outcome of encouraging large-scale holdings in land as in other productive resources—is but a step from governmental collectivism and state capitalism. Far from being socialistic and communistic the acreage limitation provisions of our reclamation laws are bulwarks against communism. On the constructive side, they are aids in building the moral, physical, and economic health of our American families.

The Poll Tax

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. LANHAM. Mr. Speaker, I am opposed to H. R. 29, known as the anti-poll-tax bill, because I think its adoption would be a violation of the right of each State to fix the qualifications of its own voters. In my opinion, the bill is unconstitutional.

My own State, Georgia, has abolished the poll tax entirely and has amended its Constitution so that even if the poll tax were reimposed, its payment could not be made a prerequisite for voting. I voted for the constitution which contained this provision and personally think the State of Georgia acted in accordance with democratic principles in abolishing this tax as a prerequisite for voting.

But I am unalterably opposed to this effort on the part of the Republican majority in Congress, purely for political reasons, to interfere in the internal affairs of the States which still have the poll tax.

Disposition of Revenues From Reclamation Bureau Power Projects

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday July 21, 1947

Mr. POULSON. Mr. Speaker, it may come as a surprise and a shock to Members of the House that an attorney for an executive department has ventured to advise that department that the common understanding of the act of Congress governing the disposition of revenues from Reclamation Bureau power projects should be set aside and that a dollar of those revenues, which is required by the act of Congress to be paid as interest on power investment, may be credited as such interest and also, by this attorney's fiat, be credited as a dollar of repayment of irrigation construction cost.

Yet the opinion I have mentioned has been rendered and the Department of the Interior has taken stock in it; enough stock so that it has, on certain recent projects, made up reports relating to feasibility of the projects on the theory that the attorney's opinion is correct and that the same dollar can be used to pay two separate debts. The Department has also taken enough stock in the opinion that it has in recent years kept the so-called interest component on the Grand Coulee project in a suspense account, awaiting a time when it might carry the opinion into action, thus, in effect maintaining two sets of books on this project. But it has not been sure enough of its ground to make the actual application of the money on that project in the way the opinion would suggest.

Needless to say, ever since this attorney's opinion became known to Members of the Congress, in the year 1944, a deep-seated resentment at such incomprehensible trifling with the will of Congress and with the revenues of the United States has grown up. This feeling has not been limited to Members of the Congress. The National Reclamation Association, a comprehensive organization of those concerned with reclamation throughout the 17 Western States, adopted a strong resolution condemning the unsoundness of the attorney's opinion and set up a committee for the express purpose of drafting and submitting to the Congress legislation to set the Department of the Interior on the course which Congress has always intended it should follow. It is plain that this association fears that the cause of reclamation will suffer unless it is placed on a sound and honest financial basis.

Advocates of public power development also have been alarmed by the proposed scheme of accounting, by which the same dollar would be used to pay two debts. At its recent meeting held May 23, 1947, the American Public Power Association, which comprises all the leading public power agencies in the country, adopted a resolution demanding that the accounting practices of the Bureau of Reclamation be corrected, to protect the best interests both of public power and of reclamation.

In my own State, general and widespread opposition to the attorney's opinion has required me to participate actively in the support of the main feature of the bill under discussion, H. R. 2873. I have before me, and ask that there be printed in the RECORD at the conclusion of this statement, together with the resolution of American Power Association, resolutions or communications opposing the double application of interest on power investment, from the following:

First. The Irrigation Districts Association of California, the 115 members of which include virtually all the operating irrigation districts in California.

Second. Colorado River Board of California, a State agency created by law to represent the interests of California in the Colorado River.

Third. The Department of Water and Power of the City of Los Angeles, the largest municipal water and power utility in the United States.

Fourth. The cities of Pasadena, Glendale and Burbank, which, like Los Angeles, distribute Hoover Dam power.

Fifth. The Metropolitan Water District of Southern California, which includes 17 cities in southern California, extending from Los Angeles to San Diego.

Sixth. Imperial Irrigation District, which is the largest irrigation district in the United States and distributes both water and power.

Seventh. The Central Labor Council of Los Angeles, embracing all labor organizations affiliated with the American Federation of Labor.

Eighth. The California State Chamber of Commerce, Agriculture and Industry, a comprehensive State-wide organization.

Ninth. The Colorado River Water Users Association, which comprises over 70 percent of the actual water users of the Colorado River Basin

My position in support of legislation which would put the intention of the Congress as to accounting for the "interest component" beyond dispute is, therefore justified by the most important interests of my State and I am proud to have been of service in this cause.

RESOLUTION OF THE AMERICAN PUBLIC POWER ASSOCIATION

Resolved, That the American Public Power Association favors the continuing development of the West through Federal reclamation, and the construction of the multiple-purpose projects upon which such development depends. But in view of the heavy subsidies to irrigation which are carried by power on those projects, the following safeguards for the power users are deemed essential:

1. Power developed on Federal multiple-purpose projects should be disposed of in such manner as to encourage the most widespread use thereof at the lowest possible

rate to consumers consistent with sound business principles.

2. The burden supported by power in a multiple-purpose project should not exceed the amount which power would have to pay if the project were constructed as a single-purpose power project.

3. Inasmuch as the irrigator pays no interest and the power user does, the interest rate which enters into the calculation of the power rate should be as low as can be justified, and there should be no discrimination between projects with respect thereto. A rate of 2 percent is recommended.

4. Inasmuch as the purchaser of power from a Government reclamation project pays rates sufficient to return to the United States the capital invested in power facilities, plus interest, he is entitled to an accounting by the Government which makes it clear that he is repaying capial, plus interest, and is not receiving power at a rate subsidized by the United States Treasury. It is difficult to make this clear answer to the critics of public power under he Reclamation Bureau's present practice of applying the interest paid by the power user as though it were capital being returned, with resulting confusion as to whether a subsidy is thereby extended to irrigation, as intended, or to power, as contended by some critics of public power. The accounting practices of the Bureau should be corrected, in the best interests of public power and the reclamation program.

I certify that the foregoing is a true and correct copy of a resolution duly adopted by the American Public Power Association at its meeting in Cleveland, Ohio, May 23, 1947.

CARLTON L. NAU,
Secretary and Manager.

SACRAMENTO, CALIF.

RONALD HARRIS,

Association today approved in principle S. 539 and H. R. 1886 with amendment as in your telegram.

IRRIGATION DISTRICTS ASSOCIATION
OF CALIFORNIA.

APRIL 29, 1947.

Hon. RICHARD J. WELCH,
Member of Congress,
Washington, D. C.:

The Colorado River Board of California, representing the State with respect to the Colorado River and the six public agencies of southern California having rights to the use of water and power from the Colorado River upon the continued integrity of which depends the irrigation of over 1,000,000 acres of land and domestic and industrial water and power for a present population of over 4,000,000 people opposes the principle in the Lemke bill of using the interest component on power investment for repayment of capital cost as being economically unsound and hence detrimental to the best interests of western reclamation.

COLORADO RIVER BOARD OF CALIFORNIA,
RAYMOND MATTHEW, *Chief Engineer.*

DEPARTMENT OF WATER AND POWER,
Los Angeles, Calif., May 7, 1947.

Hon. NORRIS POULSON,
House of Representatives,
Washington, D. C.

MY DEAR MR. POULSON: This is written in response to your request for comment as to the proper treatment to be accorded interest earned upon the capital invested by the United States in power facilities at reclamation projects, and upon the bills referred to above insofar as they bear upon this much-disputed question.

The present practice of the Reclamation Bureau is to set power rates sufficiently high to repay to the United States all capital allocated to power, plus interest on that capital. This is a perfectly sound and businesslike basis for fixing rates.

However, the accounting for that portion of the power revenues properly applicable to interest on the power capital (frequently referred to in the testimony on these bills as the interest component of power rates) is, to say the least, unorthodox. A single dollar of revenue is accounted for once as a dollar of interest earned and again as a dollar of capital repaid.

In reporting upon anticipated power revenues and in determining the economic justification of proposed reclamation projects, the Bureau follows this same anomalous accounting theory. Power rates are proposed at a level sufficiently high to return power capital, plus interest. But the interest component of these anticipated revenues, amounting sometimes to tens of millions of dollars, is accounted once as an interest earning and again the same revenues appear as a return of capital.

Upon this point, the issue before the committee is simple and direct: The Lemke bill (H. R. 1977) approves the present practice of the Bureau; the Rockwell bills (H. R. 1886, 2873, and 2874) squarely reverse the Bureau's practice.

Upon this issue we believe that the principle of the Rockwell bills is sound and should be supported.

As I have pointed out above, the purchaser of power from a reclamation project must pay rates sufficient to return to the United States the capital invested in power facilities plus interest. Having paid these rates, the power purchaser is entitled to a clean accounting by the Government which makes it clear that he is repaying capital plus interest; in other words, that he is not receiving power at a rate subsidized by the United States Treasury.

But we know that so long as the present accounting practices of the Bureau are continued, there will be many Members of Congress, and of the public generally, who will remain honestly and sincerely of the belief that the public power program is being subsidized by interest-free Government money. Upon this point there can be no doubt after observing the hearings upon these bills. Witnesses before the committee testified directly and earnestly that this diversion of interest constituted a subsidy to the power users. Other witnesses stated flatly that it did not constitute such a subsidy. Members of the committee, after hearing the testimony, appear to be divided in their belief as to whether the present practice of the Bureau does, or does not, result in a subsidy to power users.

This confusion is inevitable, since every citizen who has ever loaned or borrowed money knows that you cannot, by the payment of a single dollar, pay off a dollar of accrued interest and also pay off a dollar of debt. Finding that on reclamation projects a single dollar is being credited as interest on power capital and also as return of irrigation capital, the citizen is convinced that one of these credits is unreal and represents a gift or subsidy from the Government. But, once entangled in the accounting and the attendant argument, he may well become (and remain) confused as to whether the beneficiary is the power user or the irrigator.

I believe that this accounting practice does a great disservice to the reclamation program in general, and particularly to public power.

First, it casts doubt on the soundness and reliability of all the accounts of the Bureau and all reports and estimates based on those accounts. I believe that in the reclamation program, as in every other large enterprise, public or private, accounts must always be kept on a basis which commands complete confidence.

Second, as you know, the public-power program in the United States has never lacked able and aggressive opponents. If reclamation project accounting creates any element of confusion or doubt as to whether public-power facilities are subsidized, we may be sure that the situation will be exploited fully by opponents. Nothing could be more detrimental to the future of public power in the United States than a widespread belief among the Members of Congress and of the citizens generally that public-power projects owe their apparent success to a subsidy from the Federal Treasury; that their stability and economic soundness rest not upon fact, but upon accounting sleight of hand.

Since, as I have emphasized above, the purchase of power from reclamation projects pays rates sufficient to reimburse the Government's investment in power facilities plus interest, and enjoys no subsidy in the form of interest-free money it is unfair, to customer and to the Bureau alike, that any such question should exist. Yet I believe that the Bureau's treatment of interest invites just that question and that the charge will never be put completely at rest until that practice is changed. In other words, the Bureau's power rates are sound and can be defended anywhere. But their practice in accounting for interest is wholly unsound and inevitably creates doubt as to the validity of the rates themselves, and the economic soundness of all power projects under the jurisdiction of the Bureau.

A question may arise in your mind, as it has in mine, "If this accounting practice is so wrong and so detrimental, why is it so valiantly defended before Congress?"

The answer, I believe, lies in the fact that the diversion of interest earned on power capital to repayment of irrigation capital affords a very large subsidy to some irrigation projects, and affords this subsidy in such an ambiguous and elusive manner that, as you know, many members of your own committee who have been considering the matter actually believe that the subsidy, if any, is being given to the power customers. Without arguing the merits of subsidy grants to irrigation projects, it is clear to me that provision for any such subsidy must be cleanly divorced from the accounting for principal and interest on power capital repaid in full from power rates. I am not prepared to see the long-range interests of a sound and economically justified public-power program sacrificed to provide an unobtrusive subsidy for irrigation projects.

In conclusion, I wish to remind you that each of these bills is deficient in that it prescribes no ceiling for power rates. Each bill is careful to require that power pay enough, but no one of the bills makes any attempt to guard against power being required to pay too much. On reclamation projects power is frequently called upon to bear a share of the irrigation costs. This practice is perfectly proper so long as it is within reasonable limits but I believe that a definite limit should be prescribed by statute. Mr. Tillman, of our legal division, in testifying before the committee, proposed a formula for a ceiling on power rates. I believe this formula is sound and I hope that you will attempt to get such a provision incorporated in any bill approved by the committee. In addition, I commend to your attention the language of the Flood Control Act of 1944 (58 Stat. 890), which prescribes that power developed on flood-control projects be disposed of "in such manner as to encourage the most widespread use thereof at the lowest possible rates to consumers consistent with sound business principles."

Sincerely,

SAMUEL B. MORRIS,
General Manager and Chief Engineer.

PAUL L. BROWN,
Mayor, City of Burbank, Calif.

COLORADO RIVER WATER USERS' ASSOCIATION RESOLUTION NO. 2—ADOPTED AT THIRD ANNUAL MEETING, LAS VEGAS, NEV., MAY 1-2, 1947

Resolved, That the Colorado River Water Users Association urges the Subcommittee on Irrigation and Reclamation of the House Public Lands Committee to approve Congressman Rockwell's bill denying the Bureau of Reclamation authority to divert the interest on power features of multiple-purpose projects to apply on the costs allocated to irrigation features of such projects, and to disapprove Congressman Lemke's bill authorizing such diversion of funds.

LOS ANGELES, CALIF., *May 9, 1947.*

NORTHCUTT ELY,
American Security Building:

Following wire sent WELCH with copy to POULSON: "The Metropolitan Water District of Southern California is a public corporation and one of the major allottees of energy from Boulder power plant. The board of the district desires to record with you its disapproval of the practice of diverting interest component in rates for energy in multiple-purpose reclamation projects to subsidize irrigation. Under the practice advocated by the Bureau of Reclamation, power users are properly charged with interest on money allocated to power development, but the interst component in the power rate is applied as though it constituted repayment of principal on investments allotted to irrigation. This creates an unfortunate misunderstanding and has even been interpreted as a subsidy to power users. This practice is believed to be against the interest of reclamation in the West and against the interest of public development of power. This board respectfully requests that legislation be enacted requiring the return of interest to the Treasury or the reclamation fund and prohibiting the application of such interest to retirement of principal allotted irrigation except as such moneys may be specifically appropriated therefor by the Congress."

BOARD OF DIRECTORS.
JOHN H. RAMBOZ.

EL CENTRO, CALIF., *April 30, 1947.*

Hon. RICHARD J. WELCH,
Chairman, Public Lands Committee,
House of Representatives,
Washington, D. C.:

The board of directors of this district indorses the principle of Rockwell bill, H. R. 2873, with amendment offered by Mr. ELY. We believe that the interest component of repayment of money advanced for public-power development must be used to pay interest on money advanced and not applied on payments of principal of money advanced for any purpose. In the best interest of western development and sound principle of public power, we believe this principle must be clean-cut.

EVAN T. HEWES,
President, Board of Directors, Imperial Irrigation District.

LOS ANGELES CENTRAL LABOR COUNCIL,
Los Angeles, Calif., June 2, 1947.

Be it resolved, That the Central Labor Council of Los Angeles is opposed to the practice of diverting interest component in rates for energy in multiple-purpose reclamation projects to subsidize irrigation, as set up in the Lemke bill, H. R. 1977. That the practice of charging power users with interest on money allocated to power development be approved, but that the interest component in the power rate should not be applied as though it were repayment of principal on investment allocated to irrigation. The practice of so diverting interest is believed to be against the best interest of reclamation in the West, and against the interest of public development of power; be it further

Resolved, That legislation be approved requiring the return of the interest component in power rates to the Treasury or to the reclamation fund, as provided in the Rockwell bill, H. R. 2873, and prohibiting the application of such interest to the retirement of the principal allotted to irrigation, except as specifically appropriated therefor by Congress; be it further

Resolved, That copies of this resolution be transmitted to the chairmen of the Public Lands Committees of the Senate and House of Representatives in Washington, and to the Members of the Congress from California.

W. J. BASSETT,
Secretary.

CALIFORNIA STATE CHAMBER OF COMMERCE, AGRICULTURE AND INDUSTRY,
San Francisco, Calif., June 2, 1947.

Hon. RICHARD J. WELCH,
Chairman, Public Lands Committee,
House of Representatives,
Washington, D. C.

DEAR MR. WELCH: The California State Chamber of Commerce is interested in the passage of H. R. 2873 amending section 9C of the reclamation law to set aside the opinion of the solicitor of the Bureau of Reclamation and forbid applying the interest component on power and municipal water features to repayment of irrigation capital investment on reclamation projects.

We favor the principles of H. R. 2873 and oppose the principles of H. R. 1977 which would justify what we consider to be false reasoning. On April 12, 1946, the Board of Directors of the California State Chamber of Commerce adopted the following policy which we believe is involved in these two bills:

"That the State chamber of commerce oppose any substantial changes in the provisions of the National Reclamation Act of 1902, and acts supplementary thereto, insofar as they may relate to the economic feasibility, repayment, and local control provisions of the act."

We wanted you to know that we would like to see H. R. 2873 passed and H. R. 1977 defeated.

Very truly yours,

JAMES MUSSATTI.

Enforcement of Loyalty by Law

EXTENSION OF REMARKS
OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22 (legislative day of Wednesday, July 16), 1947

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in today's Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE OTHER HAND—CONGRESS MAY DO THE UNFORGIVABLE IN SEEKING TO ENFORCE LOYALTY BY LAW

(By Lowell Mellett)

In an attempt to do the impossible, Congress may do the unforgivable. The House already has done its worst—but lack of time is likely to prevent the Senate from following suit immediately.

The House seeks to enforce loyalty by law. The Members who voted to do this will tell you this is not quite true, that all they seek to do is to make sure that no disloyal persons shall have employment in the Government.

To this end all persons about to be employed, as well as the hundreds of thousands already employed, would be given searching examinations as to their loyalty. The business would start with the Civil Service Commission looking over its own files and fingerprints and then proceeding to the records of the FBI, the Army and Navy, the House Committee on Un-American Activities, local law-enforcement agencies, and any other sources that might occur to anybody.

If somewhere along the line something derogatory should be turned up—such as somebody making serious but unsupported charges against the man or woman under consideration—the name would be certified to the FBI for a full-fledged investigation. The result of this investigation would be presented to a Federal Loyalty Board, created by the act. This board would decide whether the employee or candidate for a job was loyal. If not found loyal, he would be fired or not hired.

DEFENSE HOBBLED

The board would make its decision on evidence—but the accused person would not see or hear the evidence. He could have counsel, but the counsel could not confront his accusers, subpena witnesses or cross-examine any witness.

The man or woman found guilty of disloyalty through this utterly unfair and un-American process would be branded for life. He would find it difficult, if not impossible, to obtain other employment. The man or woman found loyal would, in many instances, be in no better situation. The very fact that he or she had been subjected to suspicion and dragged through such proceedings would leave its stigma, a smear that would stick.

That is the unforgivable thing the House is willing to do. And as said, it is also attempting the impossible.

Loyalty is a state of mind and heart. It is a matter of the spirit. The same is true of disloyalty. Overt disloyalty or treason is a crime and punishable as such. Like every other country, we have plenty of law for that. But only the Japanese, in the heydey of their military men, could conceive of thought police as a means of reaching the impure mind. Only the Japanese—until the present strange hysteria hit the House.

It is to be hoped that this hysteria will subside before Congress comes back in Janu-

ary. If it doesn't get better, it may get worse. We may find Federal employees compelled to take new and fearsome oaths, written in their own blood, as a requisite for serving Uncle Sam.

TO HARM INNOCENT

Yet, loyalty will remain a matter of spirit, with no man able to say who does and who does not possess it. You may feel that any man who volunteered in the last war and offered his life in defense of his country had loyalty beyond questioning. But it won't be beyond questioning if he applies for a Government job.

You may have other odd ideas about loyalty. You may think the Members of the House owe a certain amount of loyalty to these same veterans—owe them some loyal assistance or protection in the matter of housing, for example. Many Members, however, including some who voted for this loyalty bill, have a different notion on that subject. Their loyalty has gone instead to the real-estate interests.

Loyalty is, indeed, a thing difficult to get at. The House is attempting to get at it in the worst possible way. And, in the process, it is certain to do grievous harm to many innocent persons.

Hernando de Soto

EXTENSION OF REMARKS
OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22 (legislative day of Wednesday, July 16), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very scholarly paper on Hernando de Soto, presented by Herbert Lamson before the Jacksonville Historical Society, at Jacksonville, Fla., on February 12, 1947.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

HERNANDO DE SOTO

(Paper presented by Herbert Lamson to the Jacksonville Historical Society, February 12, 1947)

Ladies and gentlemen, on May 30, 1939, the four hundredth anniversary of the landing of De Soto in Florida, the monument commemorating that event, given by the National Society of the Colonial Dames of America in the State of Florida, was unveiled at Shaw's Point near Bradenton, Fla. For it is the consensus of the best informed opinion of the present day, that it was there at Shaw's Point, at the southern extremity of Tampa Bay, that the followers of that peerless leader of men first set foot upon the soil of Florida,[1] on the 30th day of May, in the year of our Lord 1539, now nearly 408 years ago. In describing his arrival, in a letter to the Secular Cabildo of Santiago de Cuba, dated Espiritu Santo, Fla., July 9, 1539, De Soto said: "I left Havana with all my fleet on Sunday, May 18. Although I wrote that I would leave on the 25th of that month, I forestalled that day in order not to lose a favorable opportunity we had. When we were entering the gulf, the weather changed into a calm for us, yet not so continuous a calm that it kept us from coming to anchor on this coast within a week's time, namely, on Sunday, the feast of the Holy Spirit. Having fallen 4 or 5 leagues below the port, without any of my pilots knowing where the port lay, it was thereupon determined that I should go in the brigantines to look for it. We took 3 days to do this and to enter the mouth of the port. Also, since we had no knowledge of the channel—a bay which extends for 12 or more leagues to the sea—we were so greatly delayed that I had to send Vasco Porcallo de Figueroa, my lieutenant general, with the brigantines to seize a town which lay at the head of the bay. I ordered all the men and horses to land on a beach, whence with great difficulty we went on to meet Vasco Porcallo on Sunday of the Most Holy Trinity."[2] In recounting these same events, the gentleman of Elvas says: "On Sunday, May 18, of the year 1539, the adelantado left the Havana with his fleet, consisting of nine ships, five vessels with topsails, two caravels, and two brigantines. For 7 days, they sailed attended by good weather. On Whitsunday, May 25, they sighted the land of Florida, and for fear of shoals anchored a league from shore. On Friday, May 30, they disembarked on the land of Florida, 2 leagues from a town of an Indian chief called Ucita. They disembarked the 213 horses which they carried, in order to lighten the ships so that they would need less water. All the men landed and only the seamen stayed aboard, who in a week, by going up with the tide for a short distance daily, brought the vessels near to the town."[3]

In his letter of July 9, 1539, De Soto goes on to say: "The Indians of the land, because of certain fears they conceived of us, abandoned all the land, for in a distance of 30 leagues no man stayed behind. On my arrival here, I heard of a Christian who was held by a cacique. I sent there Baltasar de Gallegos with 40 horsemen and a like number of foot soldiers in order to try to get him. Gallegos found him a day's journey away from here together with eight or ten Indians whom he brought to my hands. We rejoiced not a little on seeing him because he knew the language of the Indians. He had lost our language, although he soon regained it. His name is Juan Ortiz and he is a native of Seville and a nobleman. After this I went in person to this cacique, and brought him back in peace."[4] This Juan Ortiz was a most valuable addition to De Soto's company, and rendered faithful and efficient service as interpreter until his death 3 years later. His loss was greatly felt.

The date, May 30, 1539, marked the beginning of the realization of De Soto's dream. Of that day he had thought long, for it he had planned well, and on it he began the long and perilous marches, fraught with danger, suffering, and woe, that he thought would lead to further fame and fortune, but that led instead to disappointment, disaster, and death. That date now nearly 408 years ago, marked the high tide in De Soto's hopes. Up to that point his fame and fortune had been advancing steadily ever onward and upward; but from that date his fortune was to decline, and, from his viewpoint, his life was to end in failure. Yet, after all the suffering and hardships he was to endure, he was destined to gain immortality, and to go down in history for an achievement whose very meaning was hidden from him, in his discovery of the Mississippi River, which was likewise to be his burial place. For while we know him best as the discoverer of the Father of Waters, he had gained both fame and fortune on many a hard-fought field, before coming to Florida. Indeed, so great was his reputation in Spain, in 1538, that when it was known that he was fitting out an expedition for the conquest of Florida, many flocked to his standard, and besought him to take them with him. Elvas says: "From Salamanca, Jaen, Valencia, Albuquerque, and other parts of Spain, many persons of noble family gathered in Seville; so much so that many men of good condition, who had sold their estates, remained behind in San Lucar because there was no ship for them, although for other known and rich countries it was usual to lack men. Thus they passed in review, and those who were to the liking of De Soto and whom he wished were counted and enrolled and went with him to Florida. Those who went numbered in all 600 men."[5] They sailed from San Lucar on the 6th day of April 1538 in seven large ships and three smaller vessels.[6]

The commander of this expedition was born in the year 1500, at Jarez de los Caballeros, a town in the Province of Estramadura, in southwestern Spain, near the border of Portugal.[7] Although his family was distinguished, it was in very straitened financial circumstances. It is said that he was unusually handsome, and grew up tall, well-formed, and with remarkable muscular strength and agility. When he was a young man, de Soto attracted the attention of Don Pedro Arias de Avila, better known as Pedrarias Davilla, the notorious governor of Darien. It is said that Pedrarias sent de Soto to one of the Spanish universities, probably that of Saragossa, and maintained him there for 6 years; that later de Soto was received as a member of his family, and fell in love with his daughter, Isabella; and that when Pedrarias found out about this love affair, he was greatly incensed; and to separate the lovers, took de Soto with him to Darien.[8] At any rate, it seems clear that whatever the cause, de Soto went with Pedrarias, in 1519, at the age of 19 years.[9] There he remained in the service of Pedrarias for the next 10 or 12 years. The Spanish colony of Darien, located on the isthmus of that name, better known to us by its modern name of the Isthmus of Panama, was, like all Spanish colonies of that day, a hotbed of intrigue, cruelty, and malice. While de Soto undoubtedly in the performance of his duty as a soldier, had a hand in some of the cruelties inflicted on the natives, he seems to have kept his name clear of any particular outrage; which, considering the nature of his surroundings, was no mean achievement, in itself, and speaks well for his character. Many exciting incidents of his service in Darien might be related, but time will not permit of it. One story, which illustrates both his fearlessness and his sense of justice, is that of his punishment of the murderer of his friend, M. Codro. It is said that this friend had carried a letter from de Soto to Isabella de Bobadilla, daughter of Pedrarias, on a visit to Spain, and had brought back one from her to de Soto in return. Pedrarias, because of this, had M. Codro brutally murdered on shipboard by a band of cutthroats. It happened that nearly a year later de Soto took passage along the coast of Darien to

Leon in a small vessel, commanded by one Valanzuela. De Soto, unaware of the doom that had befallen his friend, happened to hear the captain bragging to the crew about how he had tied M. Codro to the mast, had had him doused with sea water for 2 days, until he was almost dead, and how, just before his death, M. Codro rallied his strength and said: 'Captain, your treatment has caused my death. I now call upon you to hear the words of a dying man. Within a year from this time I summon you to meet me before the judgment seat of God." Interrupting the captain's derisive laughter at the recollection of this remark, de Soto asked him when the year would expire. "In about 2 weeks," the captain replied. "But I have no fear but that the prophet will prove to be a liar." He shall not," said de Soto. Whereupon he drew his sword, and, with one blow, cut off the captain's head before them all, so that it rolled upon the ship's deck among his nefarious crew. Turning to the crowd assembled, de Soto said: "Gentlemen, if any of you are disposed to hold me accountable for what I have just done, I am ready to answer you according to your desires. But I consider myself bound, in reason and in courtesy, to inform you, that M. Codro, the man whom this villain murdered, was my friend; and I doubt not that he was condemned to death for doing me an important service." This satisfied the crowd, who were used to such scenes of bloodshed.[10]

Accounts differ as to whether or not de Soto fell out with Pedrarias. According to one account, de Soto and Pedrarias came at last to the parting of the ways to such an extent that, for the last 3 years of his stay in Darien and vicinity, de Soto held himself altogether aloof from the governor, under an oath he had taken never again to draw sword under his command.[11] Another account omits all mention of this estrangement.[12] Be that as it may, when Francisco Pizarro determined upon his final raid upon Peru, he sought the services of de Soto, and was so eager to assure his presence that he promised him the post of second in command of the expedition. De Soto accepted Pizarro's offer, and decided to go to Peru; but, when he arrived at Pizarro's camp on the island of Puna, off the coast of Peru, from whence the invasion was to begin, he found that Pizarro, with his customary duplicity, had awarded the place of second in command to his brother Hernando Pizarro, leaving de Soto the post of third in the leadership of the expedition. De Soto, although naturally incensed at such treatment, concealed his disappointment, and proceeded, by his skill and daring, to win such a place for himself in the esteem of his men, that he became second in command in fact, if not in name. While the conquest of Peru is generally credited to Francisco Pizarro, de Soto took a major part in whatever fighting it required; so much so that it is hard to discern how the expedition could have succeeded without him. He had no part in the treachery displayed by Pizarro toward the Inca, Atahualpa, in taking him prisoner, nor in his subsequent execution. He was the friend of the Inca, and it was through de Soto's influence that the ransom of a roomful of gold was paid by Atahualpa for his release, which release was denied by Pizarro after the ransom had been paid. For his share in the Peruvian conquest, which engaged his energies from 1532 to 1534,[13] de Soto received immense treasure. Maynard says: "His share of the ransom of Atahualpa had been enormous, and he had added to it—out of the spoils of Cuzco and during his other campaigns—until it reached the gigantic figure of a hundred thousand pesos. Allowing for the increase in the value of money, Peru had made him a millionaire.[14] But he had enough of the perfidy and quarrelsomeness of the Pizarros; and so left Peru, in 1534, and returned to Spain, after an absence of 15 years.[15]

He had left Spain an unknown, penniless soldier of fortune. He returned, a renowned commander, possessed of fabulous riches. He received a royal welcome; he married Isabella de Bobadilla, his boyhood sweetheart, who had waited faithfully for his return, and who, in turn, had been reduced from riches to poverty during his absence; honors were showered upon him, and he began to live in lavish style, the life of a Spanish grandee. But adventure was in his blood, and when Cabeza de Vaca, who had escaped to Spain, one of the few survivors of the ill-fated expedition of Panfilo de Narvaez to Florida, painted in glowing terms the wonders and riches of that fabled land, DeSoto decided once again to fare forth in search of further fame and fortune; [15] obtained authority of the king who made him governor of Cuba and adelantado of Florida; [16] and set sail from San Lucar, on the 6th day of April, 1538, for Cuba, and from thence to Florida, which he reached on May 30, 1939.

And so he set out, the leader of a splendid force, in full panoply of war; upward of 150 horsemen, clothed in heavy armor, and some 350 foot soldiers likewise clad in armor, with equipment and supplies in abundance, to seek for gold and treasure, and with priests to convert the Indians to Christianity.

As he hoped to establish a colony as well as to find gold and convert the natives, de Soto took along other things besides arms and armor. Irving says: "As a leading object with the governor, also, was to found a Colony, he was encumbered with many things that embarrassed the march of his army. Among these are particularly noted 300 swine, with which he intended to stock the country when he should settle, having been found the most advantageous stock for the sustenance of new colonies. These animals were placed in charge of a company of horse to keep them to the line of march, and guard them in traversing the swamps and rivers.[17] A garrison was left at Ucita to guard the stores and ships left there.[18] His route, according to good authority, ran northerly to Lake City, through Limona, Zephyrhills, Dade City, Inverness, Hernando, Orange Lake, Micanopy, Alachua, and Guilford; westwardly from Lake City to the neighborhood of Tallahassee, through Live Oak, Ellaville, Greenville, Aucilla, and Lloyd.[19] This ground was covered in about 3 months, the first winter being spent near the present site of Tallahassee. In constant contact with the Indians, his way from Tallahassee took him into Alabama; thence northeasterly to Silver Bluff, on the South Carolina side of the Savannah River, about 20 miles below Augusta; thence into the mountains near Franklin, N. C.; on into Tennessee, Alabama, and Mississippi, and on to the Rio Grande, as Elvas calls it—the great Mississippi River itself, which he saw for the first time—the first white man ever to lay eyes on it—on Saturday, the 21st of May, 1541. The exact spot where de Soto first saw the great river is shrouded in uncertainty.[20] But wherever that spot may be, to him unqualifiedly goes the honor of the great discovery. Crossing the Mississippi, de Soto l·d his men on to the west, ever in search of gold and treasure. But the search was fruitless. The only thing resembling treasure, that they encountered in all their wanderings, were the pearls given them by the Indian princess of Cutifachiqui, at Silver Bluff, on the Savannah River; [21] and even those were lost in the fatal battle of Mabilla, in which many Spaniards were killed, and in which they lost everything they possessed, even to their very clothing, when they themselves burned the town in an effort to defeat the Indians.[22]

For a year after his great discovery, De Soto bravely led his men, in aimless wanderings, ever hoping to discover gold, constantly at war with hostile Indians, and in hourly danger of death. Gradually his hope faded. His iron resolve upheld him, and he kept his men in line. He showed indomitable will, and would not give up the search. In May 1542, he fell ill with a fever, which confined him to his bed. His illness lasted 7 days. When convinced that death was near, he called his men in and bade them farewell, asked their forgiveness for any wrongs he might have done them, appointed his successor, Luis de Moscoso, commended his soul to God, and died on the 21st day of May, 1542, exactly 1 year from the day he discovered the river.[23]

Such, briefly, was Hernando de Soto. In an age of cruelty, he was distinguished for his moderation. In an age of adventure, he was distinguished for his initiative. In an age of military prowess, he was distinguished for his strategy. In an age of hardship, he was distinguished for his patience. In an age of brave men, he was distinguished for his great courage. In an age of leaders, he was distinguished for his splendid qualities of leadership. In an age of discovery, he was distinguished for his great discovery. In an age of religious fervor, he was distinguished for his faith in God. Through more than 400 years, his fame has come down to us; and so long as the doings of mankind are recorded, his name will be honored as typifying the best of the many fine qualities of the Spanish cavalier.

Columnar Collusion

EXTENSION OF REMARKS
OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Columnar Collusion", appearing in the Washington Post for July 15, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COLUMNAR COLLUSION

In attacking the Messrs. Lowell Mellett, Marquis Childs, and Tom Stokes as the dupes

of a Government propagandist—because they happened to write on the same subject on the same day—Representative MILLER of Connecticut was guilty, we think, of injustice not so much to the columnists as to some of their colleagues whom he ignored. Also on the same day there appeared in the pages of our contemporary, the Washington Daily News, a devastatingly lucid analysis of the Miller bills under the by-line of Miss Ruth Finney. And in the same paper, same edition, same day, there appeared an editorial titled "Don't Let Utilities Backslide" which, by clear implication at least, referred to the Miller bills when it warned: "The utilities are backing half a dozen bills in Congress designed to put them back where they were in the 20's."

Such unanimity may well be deserved. We are glad to join, though belatedly, in condemnation of measures which would remove most of the utility companies, now subject to Federal regulation, from the jurisdiction of the Federal Power Commission and subject them merely to the inadequate supervision of State regulatory bodies; which would drastically limit the FPC's licensing power by posing an absurd definition of navigable streams. These proposals of Representative MILLER seem part and parcel of a concerted attack in which his Republican colleagues, Representatives ROCKWELL and DONDERO, have joined with companion measures designed to subvert and reverse the established power policy of this country.

Whether this attack was inspired by some utility company propagandist we are not prepared to state. If so, we presume that Members of Congress have a right to listen to the lobbyists of their choice and even simultaneously to reflect his views if they choose to do so. On the whole, however, it seems to us rather more remarkable that a sheaf of bills, all designed to advance the interests of the utilities, should be brought forward in a single session of Congress than that several alert and public-spirited commentators should simultaneously expose the iniquities of those bills.

Construction of Dams on the Snake River

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 22 (legislative day of Wednesday, July 16), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter from the Oregon State Grange and statements by the Washington, Oregon, and Idaho State Granges at a public hearing on July 9, 1947, before the Army engineers, on the construction of certain developments on the Snake River.

There being no objection, the letter and statements were ordered to be printed in the RECORD, as follows:

OREGON STATE GRANGE,
Portland, Oreg., July 15, 1947.

Hon. WAYNE MORSE,
United States Senate, Washington, D. C.

DEAR SENATOR MORSE: I am enclosing for your information the following:

1. The statement of the Oregon State Grange before the Columbia Basin Inter-Agency Committee at its hearing at Walla Walla on June 25, 1947 with reference to the construction of new dams on the Columbia and Snake Rivers.

2. The statement of the Oregon State Grange before the Army engineers at its hearing at Lewiston, Idaho on July 9, 1947 in connection with the construction of dams on the Snake River.

3. A joint statement by the Washington, Oregon, and Idaho State Granges before the Army engineers at the Lewiston, Idaho, hearing.

In the fish versus dams controversy the Grange takes the position that we can have both fish and dams. We suggest the expansion of both the State and Federal programs to make the rivers more habitable for fish and also the scheduling of dams which may be authorized in the future in such a manner as to permit the fishing interests the maximum time to adjust their industry to the new conditions.

In connection with the Snake River development, the Grange takes the position that Hells Canyon Dam should be constructed at an early date. We feel this is necessary in order to assure early development of our much needed supply of low-cost electricity.

We appreciate that there is no congressional action pending which involves these questions. However, we wanted to keep you advised as to what the Oregon State Grange has done in this connection.

Sincerely,

MORTON TOMPKINS,
Master, Oregon State Grange.

STATEMENT BY THE WASHINGTON, OREGON, AND IDAHO STATE GRANGES AT THE PUBLIC HEARING ON JULY 9, 1947, BEFORE THE ARMY ENGINEERS ON THE CONSTRUCTION OF MOUNTAIN SHEEP, HELLS CANYON, AND OTHER DAMS ON THE SNAKE RIVER

The Granges of Washington, Idaho, and Oregon have a common interest and a real stake in the immediate development of Hells Canyon Dam on the Snake River, for such development is a condition precedent to the production of phosphate fertilizer from western phosphate resources, to development of cheap power for irrigation pumping, and for industrial uses. We therefore favor this project on the assumption that it will never interfere with existing priorities on water for irrigation use.

The National Grange, as well as the 100,000 Grange members in the Northwest States, have asked the Federal Government to undertake the dam and transmission-line construction program necessary for the development of our western phosphate resources.

NATIONAL GRANGE ENDORSEMENT

The National Grange, at its 1946 convention, adopted the following resolution covering the national need for development of a western phosphate fertilizer industry.

"Commercial fertilizers are essential for the efficient production of high-quality nutritious crops and for soil improvement. They are basic to good farming and a sound agricultural program. A national fertilizer policy, therefore, should be such as would assure farmers an ample quantity of high-grade fertilizers at as low a cost as is consistent with efficient production and distribution with due allowance for a reasonable profit. Furthermore, a national policy should provide for the exploration and development of natural resources, research in fertilizer production and use, an educational program to secure the widespread adoption of improved fertilizer practices, and the enforcement of modern fertilizer-control laws by States. To achieve these objectives, the National Grange recommends:

"1. The Federal Government should encourage and assist in the exploration of phosphate and potash resources, and further the development of western phosphate resources by assisting in process development, the extension of electric-power lines of sufficient capacity to transmit an adequate supply of low-cost power from Federal dams to the phosphate deposits, and assembling information pertaining to the selection of plant location. Potash and phosphate resources on the public domain should be leased to industry with preference to farmer-owned or controlled cooperatives under terms assuring efficient development and safeguarding the public interest."

The reasons for the Grange's concern over the development of the western phosphate resources is apparent when the western farmers' need for phosphate fertilizer, his source of supply, and the price he pays for such fertilizer are considered.

PHOSPHATE FERTILIZER NEEDED

The advances in the science of agronomy and the intensified cultivation of farm lands during the war has made widespread use of phosphate fertilizer a must in farming. There is a widespread realization of the fact that the West should not repeat the errors of the East, but rather that it should replace soil nutrients as they are used instead of waiting until the soil is exhausted.

Phosphate is the one basic soil element which cannot be created or replenished by cultivation and crop management. It must be replaced through the application of processed phosphate fertilizer. There is, therefore, a present need for substantial amounts of phosphate fertilizer in the West and this need is rapidly increasing.

WESTERN DEPOSITS UNDEVELOPED

The other side of the picture is this: More than 60 percent of the Nation's phosphate resources are located in southeast Idaho and the adjoining sections of Montana and Utah. These deposits are virtually undeveloped. There is no concentrated phosphate fertilizer (20 to 37 percent available) and only a small amount of low-grade phosphate fertilizer (12 to 18 percent available) produced in the West from these deposits.

The result has been that the West, despite the fact that it has the largest and richest phosphate deposits in America, pays the highest price in the United States for phosphate fertilizers. The West will continue to pay the highest price so long as western production of phosphate fertilizer is less than half of its needs because prices will continue to be fixed on the basis of costs of eastern production plus transportation costs across the United States. (Baltimore is the phosphate fertilizer basing point.) Moreover, the West will continue to pay the highest price so long as the major portion of the phosphate fertilizer produced is low-grade, for this compels the farmer to pay freight and handling costs on as much as 90 percent useless filler.

MIDDLE WEST NEEDS WESTERN FERTILIZER

The adverse effect upon farmers of the Nation's failure to develop its western phosphate resources is not limited to the West. It affects all farmers west of the Mississippi River. The development of the western phosphate resources through electric processes which produce concentrated fertilizer would increase the supply and decrease the price everywhere west of the Mississippi River. This fact is recognized in the National Soil Fertility Act of 1947 (S. 1251), which is sponsored by Senators HICKENLOOPER, WHERRY, HILL, CAPPER, THYE, STEWART, AIKEN, BUSHFIELD, YOUNG, and WILSON. It calls for the immediate study of our western phosphate resources and provides that a preference be given to cooperatives which would borrow funds to construct western phosphate-fertilizer plants.

The economics of the phosphate-fertilizer industry are such that power must be taken to the area where the phosphate rock is mined. It is for this reason that there is an urgent need for the immediate development of the large power-producing projects on the Snake River, such as Hells Canyon. These are the dams closest to the phosphate beds.

HELLS CANYON DAMS SUPPORTED

Either Hells Canyon or Mountain Sheep dams would supply the needed electric power. However, from the information at hand, it

appears to us that Hells Canyon should be the first to be built for it is not only one the largest power projects, but it is also the only one with a large storage reservoir. The development of up-stream dams with usable water storage will benefit both navigation and power production on the lower river, and will provide additional flood control.

It is, therefore, respectfully urged that steps be taken to obtain authorization for the construction of Hells Canyon Dam at the earliest possible date.

SUPPLEMENTAL STATEMENT BY THE OREGON STATE GRANGE AT THE PUBLIC HEARING ON JULY 9, 1947, BEFORE THE ARMY ENGINEERS ON THE CONSTRUCTION OF MOUNTAIN SHEEP, HELLS CANYON, AND OTHER DAMS ON THE SNAKE RIVER

The Oregon State Grange wishes to make the following additional statement in support of its advocacy of the immediate construction of Hells Canyon Dam on the Snake River.

EASTERN OREGON POWER SHORTAGE

There is a serious power shortage in eastern Oregon which adversely affects the area's development. Moreover, power rates in eastern Oregon to REA coperatives are too high to permit farmers to make use of electricity for irrigation pumping. The area, therefore, needs not only additional power supply but power at a price that will permit its use for irrigation.

It is the grange's view that the solution to this problem lies in the immediate development by the Federal Government of Hells Canyon Dam.

OX BOW DAM

Another fact should be mentioned. Early this year the Idaho Power & Light Co. announced that it would develop the Ox Bow Dam site if the Oregon Legislature would amend the part of the Oregon hydroelectric law relating to the amortization of the investment in hydoelectric projects and also the part relating to the right of the State to take over such projects upon payment of the owners' net investment. Despite a gubernatorial veto these amendments were approved by the Oregon Legislature.

The Oregon State Grange last week filed with the secretary of state of Oregon the necessary signatures to refer this law to the voters. Since the announcement that the grange would invoke the referendum, the Idaho Power & Light Co. has announced that it will construct the Ox Bow Dam even though the law is not amended.

Hells Canyon Dam will completely submerge the Ox Bow Dam site.

The Oregon State Grange considers the Idaho Power & Light Co. proposal to develop Ox Bow Dam as an attempt to create a road block to retard if not prevent the development of the Snake River program. There is no comparison between the benefits to be derived from the projects.

DAMS COMPARED

Hells Canyon Dam is almost 10 times larger (1,330,000 kw.) than the Ox Bow Dam (135,000 kw.).

Hells Canyon Dam will provide 3,500,000 acre-feet of usable water storage. This storage will increase the power productivity of all the dams below Hells Canyon on the Snake and Columbia Rivers and will also benefit navigation. It is in many respects like Grand Coulee Dam on the Columbia River for it will provide the stream control on the Snake River that is necessary for full utilization of the downstream power and navigation projects.

Hells Canyon Dam will create a navigable lake more than 100 miles long which will open for exploration and development the mineral resources of hitherto inaccessible areas in the Snake River Canyon.

The Ox Bow Dam provides none of these advantages. Its construction would only serve to delay and increase the cost of Hells Canyon Dam.

It is therefore urged that Hells Canyon Dam be constructed now, thereby settling this issue and getting under way the program for the development of the Snake River.

The Oregon State Grange is also mindful of the fact that the planning of any one dam on the Columbia or the Snake River acquires coordination of those plans with the plans of the entire river development. We recently filed with the Columbia Basin Inter-Agency Committee a statement of our views concerning the development of the Columbia Basin. A copy of that report is attached for your use and is made a part of this statement.

Respectfully submitted.

MORTON TOMPKINS,
Master, Oregon State Grange.

STATEMENT OF THE OREGON STATE GRANGE BEFORE THE COLUMBIA BASIN INTERAGENCY COMMITTEE AT ITS JUNE 25, 1947, HEARING ON COORDINATED DEVELOPMENT OF THE COLUMBIA RIVER BASIN

The Oregon State Grange has more than a passing interest in the development of the Columbia River. Our interest antidates by many years the present fish versus dam controversy or even the building of the first Federal dam on the Columbia River. The Grange's interest has sprung from a realization that the Columbia River was our greatest permanent wealth-producing resource and that in its orderly development lay the Oregon farmer's hope for a western market for his products.

PRIOR GRANGE ACTION

The Oregon State Grange does not appear on behalf of its 31,000 members as a special pleader for fish or dams or reclamation or navigation. That would be contrary to its tradition.

It was the Grange which, more than two decades ago, successfully urged the outlawing of fish wheels on the Columbia River to protect our fishing industry.

It was the Grange which was a consistent and outspoken advocate of the development of the power resources of the Columbia River when such a program was considered by many to be tingued with radicalism.

And during its 75 years the Oregon State Grange has planned and worked toward the day when the Columbia River would irrigate a vast acreage of arid land and be fully developed as an artery of commerce.

TYPE OF PROGRAM NEEDED

The present controversy between those whose primary interest is in fishing or power or navigation is of deep concern to us. Such proposals as that of the navigation group that there be a 10-year moratorium on salmon fishing or as that by the fishing interests that there be no more dams constructed on the lower Columbia and Snake Rivers are ill-conceived and harmful to the welfare of this region.

The Columbia River is not the exclusive preserve of the fishermen. It is not a waterway for the primary benefit of the barge and ship owners. Nor is it a place where power or irrigation can be developed without regard for other interests. The greatness of the river is in its ability to produce many types of wealth.

Therefore, we must plan the program for the development of the Columbia River around the concept that all the river's wealth-producing abilities must be protected and developed simultaneously.

GRAND PROPOSAL

Accordingly, the Oregon State Grange proposes and urges the adoption of the following program for the development of the Columbia River:

First, fish: There must be a frank recognition that dams are not the sole or even the chief cause for the decline in the salmon runs. There must be immediate and effective State action to prevent pollution of the river and there must be joint Federal-State action to remove obstructions, screen diversions and provide better fish ways at all barriers along the river.

Secondly, there must be an intensification of our research and experimentation program to provide artificial propagation and the reestablishment of spawning beds closer to the ocean. The easy-going and complacent research and experimentation of the past must be replaced by research that has the sense of urgency which developed the atomic bomb. Furthermore, it is the responsibility of all groups to see that adequate appropriations are made available immediately to carry on this work.

In addition, the fishing interests must exercise self-restraint. Fisherman must learn the lesson which is fundamental to good farming, namely that their first concern should be the protection and development of the breeding stock. There must be longer closed periods or less fishing gear in the river and offshore during the fishing season if adequate fish runs are to reach the spawning beds.

And lastly, where possible without committing a greater injury, new power and navigation construction which is not now authorized should be scheduled so as to permit this new fish program to be fully developed.

2. Dams: The fact that the destiny of the Northwest lies in its hydroelectric resources cannot be denied. Only those who are uninformed, or deliberately misinformed, will assert that no additional power developments are necessary. Presently authorized dams, with one possible exception, must be constructed immediately. These include McNary, Foster Creek, and Hungry Horse. Dams like McNary should have incorporated in their design and construction the latest and best fish ways that can be devised.

An effort should be made to obtain immediate authorization for the construction of Hells Canyon Dam on the Snake River and to substitute it for the four dams presently authorized for construction on the lower Snake. This would provide the power needed to develop western phosphate resources and at the same time minimize for the time being the number of barriers which the salmon runs returning to the Salmon River must traverse.

Future dam construction should be scheduled so as to provide the maximum time for the fishing industry to accommodate itself to the new conditions.

And last, it should be recognized that where the construction of dams make necessary the flooding out of Indian fishing grounds or of long-established and profitable fishing businesses, that the owners of these grounds or businesses should be adequately and even generously compensated. Legislation authorizing the dams should recognize this problem and make provision in the initial appropriation for this compensation. Equity and fair play should be the guide in determining who is entitled to compensation rather than legal technicalities.

3. Irrigation and navigation: The major irrigation projects along the Columbia River lies in the upper-river regions. The deferring of irrigation projects on the river below the confluence of the Snake River until adequate provision has been made for the fishing industry is one of the compromises inherent in the program which we propose.

Navigation cannot be overlooked in the scheduling of the river-development program. However, navigation is a service that prospers only if the area it serves prospers. We recognize that there can be no abandonment of the ultimate navigation program. However, the scheduling of future dam construction so as to permit the fishing interests time to make the needed adjustments should be agreeable to navigation people.

CONCLUSION

It is folly to propose or consider a plan for the development of the Columbia River that advocates the abandonment of the power, navigation, or irrigation programs or the cessation of salmon fishing. Cooperative and joint action by the interested groups can provide a plan which meets the needs and aspirations of all concerned.

Respectfully submitted.

MORTON TOMPKINS,
Master, Oregon State Grange.

Poland Betrayed—Former Ambassador Lane Tells the Real Story

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, in the July 14 issue of Life magazine the former Ambassador to Poland, Arthur Bliss Lane, wrote a most informative article in which he points out just how Russia rules Poland. The State Department and former President Roosevelt must share the responsibility for what has happened in that unfortunate land. As part of my remarks I am including the article in question:

HOW RUSSIA RULES POLAND

(By Arthur Bliss Lane, United States Ambassador to Poland, 1944–47)

This is an account of a diplomatic assignment to a puppet state, Poland. I was appointed Ambassador to the Polish Government in exile in London, of which Stanislaw Mikolajczyk was then Premier, in September 1944. In July 1945, after we had recognized the Lublin government, I flew to Warsaw, where I lived for 20 months. In March 1947, after the travesty of free and unfettered elections held on the previous January 19, I resigned so that I could talk and write publicly about the perpetration of an international fraud which has effectively condemned the Polish people to loss of freedom and independence.

The process of destroying Poland from within was well advanced before my arrival there. The Communist-controlled stooge government had been set up in Warsaw. Further, the core of the Polish resistance movement had been liquidated by the Russians only a month after the Yalta Conference when 15 leaders of the underground, all non-Communist, were tricked into an ambush near Warsaw by an invitation to a political meeting and then taken to Moscow for trial. The fate of some of them is still unknown to the outside world. From the Kremlin's viewpoint its aims had been virtually attained. All that was needed was to conduct elections under the guise of legality, thus giving final proof to the world of the holiness of the USSR's aims.

I did not wish my appearance in Poland, as a representative of the United States—one of the Yalta guarantors of Polish independence—to be interpreted as whitewashing Soviet methods. On the other hand one avenue of constructive diplomacy was still open to us: to let it be known to the Poles that the United States was ready to help them not only with economic relief but with sympathetic support; that we still stood for ideals of freedom and independence.

In my last meeting with President Roosevelt before leaving for my assignment, I stressed the great importance of our insisting to the Soviet Government that the independence of Poland be maintained. I said that if we were not going to be strong in our attitude at a time when we had the largest Army, Navy and Air Forces in the world, and at a time when the President had just received another mandate from the American people, I did not know when we ever could be so strong. The President asked somewhat sharply, "Do you want me to go to war with Russia?" I replied that there was no such thought on my part. It was my feeling, I added, that if we took a strong line and did not deviate from it we would accomplish our objectives, I said that the Soviet view, however, of an independent Poland was quite different from ours. The President replied that he had entire confidence in Stalin's word and felt sure he would not go back on it. I said I regretted that I could not agree with him, as Stalin's previous actions had shown him not to be dependable regarding Poland. I had in mind that, despite the existence of nonaggression pacts, Stalin had attacked Poland in September 1939 and had annexed Estonia, Latvia, and Lithuania in 1940.

Our diplomatic party, in the three C–54s, landed at Okecie Airport (7 miles from Warsaw) on July 31, 1945—the first American airplanes to land there in 7 years. The field was knee-deep in grass and pitted with weed-filled holes. Our only welcome was wind and rain. In that wasteland there presently materialized a solitary human figure, an unkempt and taciturn soldier who had heard nothing of plans for receiving the American Ambassador's party. (It later developed that the telegram announcing our arrival, dispatched 5 days before from Paris, had not reached Warsaw.) Almost an hour later Lt. William Tonesk, who was to be assistant naval attaché and my interpreter at all important conferences, arrived in a jeep. He was followed by the Minister for Foreign Affairs, the Soviet Ambassador, and the chief of protocol. The car of the Foreign Office, which bounced over the ruts of the airfield, turned out to be a former Berlin taxicab, the only means of conveyance available to the Ministry of Foreign Affairs.

I had last visited the city in 1937, when it was one of the most beautiful capitals in Europe. But best of all I remembered it from 1919, when as a very junior secretary I served in the first American legation. At that time the armistice with Germany had been signed; the Treaty of Versailles was about to be concluded; Poland had risen as a free nation from the period of subjugation that had followed the third partition of Poland in 1795. The Warsaw of 1919 had plenty of troubles; food was scarce; accommodations were difficult to obtain; there was a frontier crisis with Czechoslovakia and a latent threat from the Bolsheviks, culminating in the attack on Warsaw itself in 1920. But one sensed in the Warsaw of 1919 a gaiety of the soul, an intoxicating sense of freedom after nearly 125 years of servitude. General Pilsudski was chief of state, the beloved Paderewski was prime minister. Whatever their limitations, they were Poles and masters in their own house.

But this time as we drove from the airport to Warsaw, I sensed the chill of deep depression. I looked in vain for a familiar square or building, until in the center of the city on Jerusalem Street I spotted two tottering towers of twisted metal and recalled that this was once the luxurious railroad station. Warsaw had been burned, block by block and house by house, by the Nazis. If rubble is the measure of a nation's suffering, the rubble of Warsaw speaks more eloquently than that of any other large city in Europe. When former President Herbert Hoover saw the acres of debris and crumbled brick in the Ghetto, destroyed in the spring of 1943, he said quietly, "It should be left like this forever as a monument to Nazi bestiality."

In Stare Miasto, or the "old city," there is another monument of rubble, a monument as much to Russian perfidy as to Nazi ruthlessness. Here it was that a band of Polish patriots in August 1944 rushed out from the swift-flowing sewers and attacked the Nazi army. They were crushed after 63 days of fighting. But they were crushed because their expected aid from Russia did not come. The Russians just across the Vistula, lured the Poles to their destruction by exhortations to attack and by the implied promise that they would attack simultaneously. Instead the Red Army, only 10 miles away, made no move when the insurrection began and thus allowed the destruction of an ally whose existence would have been a threat to the Kremlin's plans for expansion toward the west. Had General Bor-Komorowski and his underground army succeeded in liberating Warsaw they would surely have been the heroes of all Poland, the saviors of the nation and the nucleus of the government within Poland. "It would have been most difficult under such circumstances," a Communist official explained to an American private citizen of note, "for the Soviet Government to have maintained the Lublin-constituted Polish Government in power."

My wife and I found ready for us in the Polonia Hotel a suite consisting of a double bedroom and bath and a large living room which was also to serve as my office. With its modernistic, overstuffed chairs, its metal, circular Turkish table, its imitation fireplace and its very fine antique pieces as well, it was sumptuous. It was not homelike but we had no right to complain, for many times the incongruity of our position assailed us. Inside the hotel, which had been spared by the Germans because it housed the Wehrmacht, we had comparative physical comfort, plenty of food and usually running water and heat. Outside were ragged men, women, and children, hunger, illness, and that heartbreaking phenomenon of a broken Europe—dozens of one-legged children.

The view from our window westward across the railroad tracks was a study in despair. The place was inhumanly silent. There were no streetcars, scarcely any automobiles, only a few horse-drawn carts and bicycle-propelled pushcarts to serve as taxicabs. Lines of people with pails formed every morning in front of the faucets on the main boulevard to obtain water for drinking and washing. The two arc lights in front of the Hotel Polonia were the only street lights at night.

The funereal emptiness that had depressed me on my arrival deepened as time went on. During my first summer the Red Army that had surged into Germany began in part to return to Russia through Poland. Day after day horse-drawn convoys, guarded by armed cavalry, poured through the city—carts laden with furniture, sewing machines, crockery, bed linen, bicycles, plumbing fixtures. Even this loot did not satisfy the Russian soldiers' acquisitiveness. Almost every night shots and screams were audible to us in the hotel, as Russians quarreled with Poles over Polish property.

It was not so much the ruin of Warsaw as the ravagement of the Polish people that depressed me. Various people, chiefly of the government, came to my office to plead for American assistance in the form of clothes, food, trucks, and machinery of all sorts and descriptions. Other kinds of people came also—timid, lonely, frightened people. They did not ask for food or money, although they had little or none. They desired protection from arrest or deportation, some means of escape from Poland.

The sham of present-day Poland is that the outward facades of constitutional and representative government are to the uninitiated observer intact. But behind this front the state is a collection of automatons who follow the bidding of Communist masters. The tragedy is that this sham takes place in a nation that is technically a victor in

World War II. When I made my first official call on Mr. Vincent Rzymowski, the scholarly-looking minister for foreign affairs, he murmured the usual amenities. But it was soon apparent that he was only nominally in charge of his own ministry. At his elbow at almost all times was the vice minister, a short, spare, erect figure; a keenly intelligent face, with bright, shifty eyes, one Zygmunt Modzelewski. This man made the decisions. He is now the foreign minister.

STATESMEN WITH SHIFTY EYES

President Boleslaw Bierut, to whom I presented my credentials on August 4, had his office on the second floor of the Belvedere Palace, the former official residence of Marshal Pilsudski. The windows look out over the beautiful Lazienki Gardens, laid out 2 centuries ago. The haziness of a conspirator's past obscures Bierut's background. Of Polish origin he is reputed to have turned Communist at some point during World War I, became a Soviet citizen and to have been arrested by Pilsudski as a Russian agent. He later was released and went to Russia. He is now 55, has a small, Hitlerlike mustache, affects a deceptively polite manner and has a disconcerting habit of never looking one in the eye. In fact if he and the men around him show a single common trait, it is shiftiness of the eye.

Bierut's Communist colleagues, like himself, were almost unknown in Poland; intriguers and conspirators, rather than statesmen and administrators, cruel and cynical men, untrammeled by sentiments such as patriotism. None publicly opposed Nazi-Soviet spoliation of Poland in 1939. Many of these Polish officials were trained in Russia. Twice while I was in Bierut's office the telephone rang. Both times he spoke extensively in Russian, an anomalous practice for the head of a professedly sovereign state. Some of these people are able—Modzelewski for one, and Hilary Minc, Minister of Industry, the economic and financial boss, for another. At the Potsdam Conference in July 1945, Minc favorably surprised United States representatives with the amount of economic information about Poland stored in his head. One could do business with Minc—unless the proposition ran counter with the Soviet line.

None of these men appears to be the real boss of Poland, however. In the innocuous post of Under Secretary of State of the Council of Ministers is a quiet, dignified man with a mobile, sensitive mouth, an elegant but forceful manner of speaking—Jakub Berman. His hands are delicate in shape and gesture. His appearance gives no indication of brutality or coarseness. At public functions he always slips into an inconspicuous position. He materialized, along with other Lublin men, out of the Soviet revolutionary machine. He is, I am reasonably sure, one of the Kremlin's prime agents in Poland, one of the men who gives the orders. How can one be sure? There is a fairly reliable test. If, in the course of seeking action upon a delicate matter, one is referred from official to official, sooner or later one comes finally upon a key person who knows how to get things done. That was how we found Berman. The puppets turned to him for instruction. We often turned to him for action.

Beyond and apart from these men of Lublin stood a man of calmness and strength, stocky and massive, with blue eyes which look directly at one—the leader of the Polish Peasant party. Mikolajczyk. In commending his fine qualities to me in November 1944, President Roosevelt said, "He is the most outstanding of all the foreign statesmen who have visited me." Succeeding to the prime ministership of the government in exile on General Sikorski's death in 1943, Mikolajczyk directed the underground home army. Then, after the formation of the provisional government of national unity in June 1945, he returned to Poland as vice premier and minister of agriculture.

"Why did you come back to Poland?" I asked him. "It was my duty to do so," he answered. I recalled the fate of the 15 underground leaders. "You are a brave man," I said, "the bravest I know."

THE YALTA STRATEGY

From the moment the Lublin puppets descended on Poland their energies were exerted principally on one big task—concocting the sham elections. At Potsdam Bierut had promised Mr. Bevin that general elections would be held in Poland early in 1946. Less specifically, the Polish Ambassador in Washington, Dr. Oscar Lange, promised the State Department in April 1946 that the elections would be held "in 1946." Partly on the strength of Dr. Lange's promise, a credit of $90,000,000 was made available to Poland by the United States Government. But as time ran out on these two promises a typical Soviet stratagem became discernible. The method usually employed in settling political differences between states is to negotiate, perhaps with difficulty, an agreement in principle. When such an agreement is reached the details can easily be worked out in harmony with the principles agreed upon. Playing upon the human desire to accept as a diplomatic victory the token of a seemingly easy solution, the Soviet tactic is to agree at the outset upon general principles, thereby giving the impression that the most critical phase has been amiably concluded, then, step by step, to frustrate and hamstring their opponents on the details.

These tactics worked for Stalin at Yalta, where President Roosevelt and Mr. Churchill were seemingly satisfied with his guarantee of "free and unfettered elections." Similarly, Bierut and his cabinet ministers, in their preliminary dealings with me, were all warmth and cordiality. An American commercial airline into Poland? That should present no particular difficulty. American scholarships for young Polish scientists, doctors, engineers? An excellent idea. Compensation for nationalized American property? Yes, of course. Protection of American citizens arrested for political reasons? Of course.

Weeks have become months and months have become years, and none of the understandings in principle has ever been consummated in practice. Commissions have been set up to evaluate American-owned property and to determine whether or not claimants to American citizenship are Polish or American citizens. But as yet there has been no definite assurance as to method of compensations nor have we, with one exception, been able to visit claimants who are in jail.

Since Bierut and his Russian masters had no intention of holding elections until they were sure of the result which they required to remain in power, the game from the start was to procrastinate while they perfected the ideal instrument for putting down opposition: penetration by the secret police into every city, village, and farm. The preparations for the free and unfettered elections took nearly 2 years. It is all painfully familiar, so much like Hitler's plebiscites, even to the government's overwhelming majority of more than 80 percent and to the swaggering bands of the Citizens' Militia Reserve Corps who, with their red and white arm bands, rifles slung over their shoulders and their methods of breaking up opposition party meetings, revived memories of the brown shirts.

TRIAL RUN FOR THE ELECTIONS

In August 1945 President Bierut carefully explained to American representatives that the elections could not be held the following winter because of the deep snows which would make it impossible to transport the voters in the countrysides to the polling places. Mr. Bierut was convincing and Polish records bore him out: seldom had elections been held in the winter. Then, in November 1946, the government reversed itself and ordered elections to be held on January 19, 1947, in the dead of the Polish winter. The important fact was that the secret police by then were well organized. Moreover the government's controlled machinery had been given a trial run in the national referendum of June 30, 1946, and had fully met the Moscow specifications of victory, at all costs, for the Lublin government.

The referendum itself had no direct relationship to the Yalta decision. So far as our immediate interest was concerned, it was important only because the procedure to be adopted in the referendum would give a line on the methods to be employed in the general elections. The government was not merely satisfied with its control over the referendum result through censorship of the radio and press, the beating and arrest of opposition leaders, and the voting of government employees en bloc. It also arranged for the votes in key districts to be counted not at the polling places but at police headquarters. These districts were given in advance the figures to be publicly announced. Understandably the government won by more than 80 percent, the approximate figure already decided upon.

The United States and British Governments criticized the procedure as prejudicing the coming elections. The notes went unanswered. Mr. Bierut resented being reminded that his government, no less than ours, the British and even the Russian, had solemnly agreed that in the elections "all democratic and anti-Nazi parties shall have the right to take part and to put forward candidates." When it suited his purposes he could give an almost convincing portrayal of a Polish patriot. "I never knew before," he once said to me softly, his eyes squarely fixed on his shoes, "that a foreign government has any right to make suggestions about the internal affairs of another country."

Thereafter Bierut turned cold and aloof in his diminishing dealings with me. The puppet press criticized American policy with rising boldness. Its omissions and distortions followed the Russia lead. President Truman, Secretary Byrnes, and Senator Vandenberg were pilloried as "Fascists."

By 1946 the eastbound Russian convoys had come to an end. Fewer and fewer Russian uniforms were seen on the street and more and more Polish ones. The Red army strength was reportedly cut from 300,000 to 100,000 men. But the wags observed that the new Polish Army was remarkably fluent in Russian. Moreover, the Vice Minister of National Defense and many commanding officers of the air force and the armored corps had been trained in the Red army. There was no question of the Russian control of Polish armed forces. The Minister of Public Security himself, Stanslaw Radkiewicz, on one occasion admitted to me that his security police were being trained by 200 Soviet NKVD instructors. These secret police were heartlessly efficient in the pre-election period: Murder, imprisonment, threatened loss of homes and jobs, torture (some men were made to stand 3 days knee-deep in icy water), censorship of the opposition press and radio and the outlawing of the Polish peasant party in a quarter of the country.

The elections were held on a bitterly cold Sunday. We sent observers to all parts of Poland. To see for ourselves what was going on, my wife and I visited several polling booths on the outskirts of the city. Instead of listing the candidates on one ballot, each party or group of parties had its own ballot. The government ballot consisted of a square piece of paper marked with a large black "3." Many of the voters, we observed, picked out No. 3 ballot and, making a show of disdain-

ing the envelope provided for secrecy, consigned it ostentatiously to the ballot box. But others—mostly nuns, priests, housewives, and peasants—quietly claimed the envelopes and inserted secretly the ballot of their choice, despite the fact that Government observers watched the polls and took notes of everything.

Shortly afterward the results were announced: for the Government, 87 percent. Out of 444 seats in parliament, Mikolajczyk's majority party received 28 percent. Mikolajczyk's exit from the Government, although he retained his seat as a deputy in the Sejm, signified the practical extinction of the Polish democratic state. A few remnants of the resistance organizations still prowl the Polish forests and occasionally hold up automobiles and beat up Communists. Their very persistence has caused many observers to suspect that the Government finds these guerrillas useful as an excuse for attacks, both physical and in the press, on imaginary Polish "reactionaries" or "Fascists." In any case these undisciplined bands cause the Government little inconvenience.

In fact there has been little inconvenience from any quarter. In the new "democratic" Poland an old and distinguished statesman rose to his feet in Parliament and cried that the elections which brought the Government to power were fraudulent. On the next day he rose again to protest that the official gazette in its account of his speech had expunged the essence of his criticism. On the third day he rose once more to complain bitterly that his second speech had been omitted entirely. When later he complained about the inordinate budget for the Soviet-controlled armed forces in Poland the Government deputies shouted him down as a Fascist.

KEY MINISTRIES WENT TO COMMUNISTS

Following the elections, Premier Osubka-Morawski was replaced by a member of the same Socialist Party, Josef Cyrankiewicz, who had been the leading Socialist agitator for a united bloc between the Communist and Socialist Parties. All of the key ministries went to Communists: Foreign Affairs, Industry, Public Security, and Western Territories—which in effect put the Kremlin in direct administration of the added German provinces. To convince the public that the Government was no longer provisional, a formal diplomatic reception was held in the President's palace. For the first time the President and his closest associates appeared in cutaway coats and striped trousers as if through the fraudulent elections they had all suddenly come of age.

Although Bierut's administration made praiseworthy efforts to rebuild Warsaw and to restore the agricultural output of a devastated country, the machinations of the police state discouraged incentive. There stands in the medieval city of Lublin an enormous prison with bleak, gray walls, where enemies of the people are lodged. Visiting day is once a week. On that day we have seen thousands of people, with tiny food parcels in their hands, lined up before the massive iron gates at 8 o'clock in the morning. So long were the lines that 10 hours later, when the gates clanged shut to remain closed for another week, hundreds who had waited in vain all day were forced to leave.

The Soviet system of double surveillance extends into the foreign office, where it is reported that double sets of clerks decipher and encipher all messages as a safeguard against foiling Communist policy. The puppets, however, have in addition their own security police—at least 118,000 by their own figures. It goes by the name of Urzad Bezpieczestwa. Like the Gestapo and the NKVD upon which it is modeled, the UB is a force against which no man has recourse. It is the dreaded footfall in the night; the terrifying knock on the door; the black abyss awaiting the individual—prison; concentration camps; firing squads; a repetition of the nightmare which Poles endured under Hitler. Director of the UB is the sleek, obsequious Public Security Minister, Stanislaw Radkiewicz. His headquarters in 1945 was in a dingy building on the outskirts of Warsaw on a short cross street, closed to traffic by wooden barriers and patrolled by soldiers armed with submachine guns. (It has since moved to a more impressive building.) On my first and only call on Mr. Radkiewicz I inquired whether any Americans were under arrest. Although we had conclusive evidence that 30 American-born citizens were in prison at the time, I was assured that there were none. Radkiewicz never received me again. Whenever I called he was always out of town, in conference, or indisposed. By last February the claimants to United States citizenship in his custody had, by our estimates, increased to 100.

One case involved an Embassy employee, a Mrs. Dmochowska from Chicago, born in the United States and hence in our eyes an American citizen. She had gone to Poland prior to World War II and remained in Warsaw throughout the Nazi occupation. On the reopening of our Embassy she was employed as translator and was authorized a passport by the Department of State. On the morning of August 23, 1946, she failed to come to work. The day passed without word from her. An officer of the Embassy, thinking she might be ill, went to her apartment. She was not there. The UB had taken her away during the night.

In its good time the Polish Government furnished the Embassy with its case against Mrs. Dmochowska: possession of a revolver, contrary to law; knowledge of a murder which had not been divulged to the authorities; assisting enemies of the government to escape from Poland. In November Mrs. Dmochowska was given a public trial in a Warsaw court. Under the Soviet type of prosecution which appears able to induce defendants to confess whether guilty or not, she not only admitted all the accusations but went on to name others as having knowledge of forbidden activities. She was sentenced to 5 years' imprisonment but later was released under the amnesty of March 1947.

Toward the end of our stay in Poland I could feel an invisible wall closing around the Embassy and our apartment. Our Polish friends stopped coming to the hotel. World came to us that it would be dangerous for them to be seen entering our apartment. Many of the hotel employees were UB spies. UB girl employees watched the manual telephones in the hotel corridors on each floor and reported the conversations. The servants proved to be ignorant of the most elementary duties but seemed childishly inquisitive about callers and the contents of wastebaskets. Our friends had reason to be apprehensive, as was proved by the unfortunate incident involving the British Ambassador, Mr. Victor Cavendish-Bentinck, and his friend, Count Grocholski. Their two families had known each other for 35 years and it was natural that the Ambassador, upon his arrival in Warsaw, should seek out his friend. The UB, taking a different view of the relationship, arrested Grocholski, accused him of supplying information to a foreign power and then, after a public trial in which he "confessed," had him shot.

In Poland as elsewhere the essence of Communist policy is to break up all nationalist elements so that a Communist minority government may be imposed. This explains the betrayal of the Warsaw insurrection, the deportation of the 15 Polish leaders and the liquidation of the opposition parties from the government. The danger for the future is that the Russians are endeavoring to control Polish youth. I fear that the Communists, through the inculcation of their doctrines in the schools, universities and in all government-controlled establishments and industries in the country, will persuade the Polish youth that the brave stand of the resistance movement was folly. And a Communist-dominated government within Poland may well mean that future generation of Poles will be imbued with devotion to Communist principles, or lack of principles.

There is no way for these young people to learn the truth except by word of mouth from their elders. No mention is ever made in the government-controlled press that eastern Poland, including the beloved cultural center of Lwów, was forcibly separated from Poland by the U. S. S. R.; nor is Stalin's cooperation with Hitler in the 1939 partition of Poland ever mentioned publicly. But let the United States Secretary of State suggest that the terms of the Potsdam decision be carried out with respect to the Polish western frontier (i. e., referred to the peace conference for settlement), and the press will erupt with violent abuse of the "fascist" policy of a capitalistic government.

Under the pressure of Soviet power the Polish spirit is subdued and weary, but it is as inherently strong as any in Europe. The Polish people are homogenous in race, language, and religion. Poland's very topography makes for unity. These elements impel me to believe that Russia will have a hard time swallowing Poland. The Polish spirit is well illustrated by the behavior of a bishop after the recent elections. He was asked by the government to offer a mass celebrating the government's victory. His answer was, "I shall offer Mass on Sunday as I would on any other Sunday. If any of my communicants wish to give thanks for any event, it will be a matter for their own conscience."

It is easy at this late date, when decisions involving strategy may still not be understandable to the layman, to criticize mistakes of United States policy of 2 or more years ago when a war was being fought. But it is obvious today that the present plight of Poland and other nations is due partly to our appeasement tactics at Tehran and Yalta. This policy encouraged the U. S. S. R. to proceed on its expansionist march through Poland, Hungary, and the Balkans and may later tempt the Kremlin to drive through western Europe and to the Atlantic.

In the face of a deliberate Soviet policy of communizing Europe and of aping Hitler's policy of world domination, by conquering nations one by one, it is essential that we should maintain the closest contacts with all peoples who yearn for the independence which we have promised them. We should, therefore, continue diplomatic relations with all puppet governments even though their anti-American attitudes may be irritating and humiliating. By maintaining our mission in Warsaw, for example, we will present steady proof to 23,000,000 Poles that a land of freedom friendly to Poland exists in the West. We will be encouraging the Poles, as well as the peoples of Europe who are also in political slavery, that there is hope in the future, however far distant it may be. This is the least we can do to atone for our tacit acquiescence at Yalta to the selling of Poland and Yugoslavia down the river.

I have always felt that in matters of this sort, which may eventually involve our own security, the greatest frankness is necessary. On March 1, 1946, long before the elections were held in Poland but at a time when the repressive measures of the Soviet-controlled security police were already evident, I wrote to a high official in the Department of State, partly as follows:

"We should give publicity to what is going on in Poland and other nations in an analogous position. The solution of the Polish question boils down in the last analysis to a decision as to what our policy is going to be toward the Soviet Union. We may

be criticized that by making known the unpleasant facts regarding Communist domination of the countries of eastern Europe (and perhaps later of western Europe) we are creating difficulties with the Soviet Union. I emphasize, however, that the American public has a right to know the truth; that unpreparedness nearly cost us the last war; that appeasement would be just as dangerous today as it was at the time of Munich; and that we run far more risk of war if we ignore the dangers of aggression than by honestly facing the facts."

It is, therefore, the American people themselves who can exercise their great influence in the interest of peace. This influence can be effective if the people appreciate fully the crisis which faces them; if they will support their Government and their representatives in Congress wholeheartedly in the maintenance of a strong policy for the protection of American rights and prestige, and if they will condemn any policy of appeasement or inertia which in the long run will spell disaster for us all.

Conservation and Development of Basic Resources

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Tuesday, July 22 (legislative day of Wednesday, July 16), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have inserted in the RECORD a statement by C. Girard Davidson, Assistant Secretary of the Interior, before the Valley Authority conference, on July 18, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Today as never before this country must concern itself with the vital problem of conserving and developing its basic resources. The full utilization of our resources is necessary for the progressive development of our economy and the achievement of higher standards of living for our people.

Many countries of the world are also depending upon the basic resources of the United States to assist them in bridging the gap until they can support themselves through the development of their own resources. At the direction of the President, two committees of Government economists and experts and a committee of private citizens are studying this problem. They are trying to appraise the effects of a comprehensive program of foreign aid and reconstruction on our own resources and the impact of such aid on our economy.

Despite the prodigal fashion with which we have exploited our resources in the past, this country is still basically very wealthy. There are vast areas in the country, particularly in the West, where we have barely scratched the surface in the development of our resources. In addition to providing this country and the world with the materials and supplies they require, the full development of these underdeveloped areas will provide millions of additional jobs, business and farm opportunities for our citizens.

As the President said in his State of the Union message to Congress, "The major opportunity of our generation to increase the wealth of the Nation lies in the development of our great river systems." Of course, he meant the construction of multiple-purpose dams that will harness the waters of our rivers for flood control, irrigation, navigation, fish and and wildlife propagation, and recreation. But he also meant when he spoke of increasing our wealth that these river systems should produce cheap and abundant supplies of hydroelectric power. As he said at Kansas City last month, "We have a long-standing policy that public-power resources should be developed for the benefit of the people."

I do not want to minimize the need for flood control and other benefits of water development in the Missouri Basin and on other river systems in the West, but I want to emphasize that such flood control and other benefits must be achieved without sacrificing the productive benefit—the creative benefit—of hydroelectric power.

Just as a century ago the railroads opened up the West, so cheap power will develop its resources. But the difference will be that instead of making the West a colonial empire of the East by carrying away its movable assets, cheap power, if we maintain our present public power policies, will bring a balanced development and a prosperity based upon a diversified economy.

Advancing technology places increasing reliance upon power for the production of the things we use and for processing the raw materials of our mines, our fields, and our forests. The electric furnace and the electrolytic cell are our means of overcoming the depletion of our high-grade mineral reserves because through them a large variety of our low-grade mineral ores can be made to yield their metals and chemicals, if cheap power is available. Electricity today is an indispensable raw material of production.

Even though these last 100 years have seen us skim the cream of our western minerals and forests and land resources, we have the tools whereby those resources that remain can be made to continue the enrichment of the American economy. For instance, the application of cheap power to our forest resources opens up vast potentialities for economic activity in plastics, alcohol, and other chemicals. We can make the full tree become a producer of wealth, instead of one-third lumber and two-thirds waste. This development is already well under way in the Pacific Northwest where a variety of products are now being processed from what was once wood waste.

The same principle applies to our fishing industry. At the present time we discard at our fish canneries almost as much value in vitamins and proteins as we process. Given adequate research and the application of cheap power, we will some day be producing synthetic fibers, artificial leather, and a variety of pharmaceutical substances from the scrap of the fishing industry.

The availability of abundant cheap power means not only the conversion of resources, now wasted or untapped, into useful products, but the diversification of the raw material economies of our underdeveloped areas. As an area begins to process some of its own raw materials, its prosperity increases and it becomes a better market for the goods manufactured in the other regions of our country. The diversification of industry reduces the reliance of a region upon the exploitation of its basic raw materials. Consequently, there is more opportunity for the conservation of the region's basic resources without impairing its prosperity.

The same dams which produce the power so important to the economic progress of our underdeveloped areas, store the water and make it available for irrigating arid lands. Through land reclamation, we can provide additional acreage to grow the food needed, in ever greater quantities, at home and abroad.

In addition to increasing our supply of arable land by irrigation and reclamation projects, we must conserve our soil resources and restore the fertility of land already under cultivation. For this purpose farmers are demanding ever greater quantities of phosphate fertilizer.

In the Northwest there is almost an infinite supply of phosphate awaiting development by the fertilizer industry. Through the electric-furnace process developed by the TVA, we believe that low-grade phosphate shale may be used as effectively in the production of plant food as is the high-grade rock under the other methods. Here again the availability of the abundant supplies of cheap hydroelectric power can assist in the development of a mineral vitally needed for conserving one of the Nation's most valued resources.

In recognition of the importance of the development of our western phosphate reserves, the Department of the Interior undertook to develop a coordinated program involving most of its 12 bureaus and divisions. Our phospate program involves the surveying and testing of western phosphate deposits, the study of commercial feasibility, the transmission of power to the areas slated for development, adjustments in our mineral-leasing policy to facilitate development, the study of transportation, market and other factors influencing the production of phosphate and the coordination of the agencies responsible for those various functions. We are also working cooperatively with the Department of Agriculture and the TVA on this project.

The coordination of Interior agencies involved in the program was facilitated by the Pacific Northwest Coordination Committee which had been established by the Department to pull together and correlate the programs of the several bureaus in that region. The execution of the phosphate program in proximity to the people of the region affected has given added impetus to the development.

This kind of approach to the problem of resource development has demonstrated the value of intensified efforts to coordinate existing agencies of Government in the area within which the work is to be done, both within and between the several departments.

I am not citing this example of an effective attack upon a resource problem in order to lead this conference away from its subject. Nor is this an attempt to prove what you already know—that competent, earnest people working on the solution of a problem for the public benefit will do a good job irrespective of organizational difficulties and administrative hurdles. I am aware that the problem to which this conference addresses itself is not whether we should have coordination in the development of our rsources or why we should have coordination, but how this can best be done.

We are seeking the most effective, efficient, and economical method of doing our resource conservation and development jobs. We are seeking the most competent vehicle for the planning and administration of these programs. We are seeking a method that will not depend merely upon the goodwill of a few good people. We want machinery that will facilitate not frustrate the good work of good people.

I have been fortunate in having had a rare opportunity to observe the various approaches we have used in developing our resources. I was employed by TVA for several years, during which much of the initial planning and construction were under way. I then went to work for the Bonneville Power Administration and had an opportunity to observe the problems of resource development in the Columbia River Basin. The Bonneville Power Administration, as you undoubtedly know, is the power marketing agency for dams built and operated by the Corps of Engineers and the Bureau of Reclamation on the Columbia River. Currently, I am working in the Department of the Interior and, as I have indicated, we have at-

tempted to coordinate the bureaus and divisions of the Department to achieve our conservation and resource development objectives.

Out of this experience has come a conviction that the planning of resource development should be on a river-basin basis; and that the most speedy, efficient, and economical method for carrying out both the planning and execution of the program is by a regional development agency which has ultimate authority and responsibility for the total job to be done. The budget process through which our national resource agencies must operate is such that it is well nigh impossible to achieve the dovetailing of plans and programs of work in a given river basin. Even if the agencies should submit budgets which are properly related to common objectives in river basins, there is no guaranty that the various congressional committees which will consider the programs and requests for funds of the several agencies will coordinate their actions. Moreover, national agencies have broad interests in relation to which the problems of any one river basin are relatively less important. Consequently, responsibility must be concentrated in a regional agency which is solely concerned with the development of the resources of that basin.

The establishment of a valley authority does not require the replacement of the Federal agencies with special competence, which perform those functions in the area which are clearly a part of a general national program. But under the unified planning of a valley authority which is responsible for the results achieved and is vested with the ultimate authority to get the job done, the timing and scope of these agencies' respective programs would conform to the requirements of the valley's development.

A good example of the lack of such unified attack on a river basin is represented by the Rio Grande Valley, which constitutes one of the most acute problems in the country. In this valley the water supply is inadequate and irregular. From time to time spring or summer floods cause extremely heavy damage to rural and urban properties and transportation facilities. The flood danger is steadily becoming worse, due to the rising level of the river bed caused by the ever-increasing deposits of sediment. The river bed is already several feet higher than the adjacent valley land over long stretches of the river. It is at least several feet higher than the main business and industrial section of the city of Albuquerque. The present levee system becomes less and less effective as the bed of the river rises.

The aggrading river bed is causing the water table underlying the adjacent valley land to rise and is rendering the present drainage system more and more ineffective. Irrigated farmlands are being abandoned as they become waterlogged or are covered by sediment brought down by the floods.

To put an end to the devastation and property damage caused by soil erosion, floods, and deposits of sediment requires a completely integrated valley program. The developments on the main river for downstream flood and sediment control, irrigation, and power must be related to the developments for upstream erosion control and the rehabilitation of the resources on the watershed. Plans for the downstream program are the primary responsibility of the Bureau of Reclamation, the Corps of Engineers, and of several other cooperating agencies. Plans for the upstream and watershed development are the primary responsibility of the Department of Agriculture. Funds were approved by Congress for carrying forward the reclamation and downstream flood-control investigations and plans during the war. Appropriations and work on the upstream flood-control or watershed investigations by the Department of Agriculture were suspended during the war.

The reports and plans of the Bureau of Reclamation and the Corps of Engineers were scheduled for completion July 1 of this year. Investigations of the upstream phases of the problem by the Department of Agriculture have not been resumed as of this date, and reports and plans will not be completed short of 2 years or even longer if funds for this purpose are not made available for the fiscal year 1948. All three reports should have been prepared, been fully coordinated and presented at the same time so that there may have been laid before Congress a complete over-all plan for the Middle Rio Grande Valley.

Similarly, other rivers are broken up into special problems and attacked upon a piecemeal basis.

Only the development of the Tennessee Valley stands out in sharp contrast to the development of our other great river basins. While the Rio Grande Valley problem still awaits a solution, the Tennessee Valley has achieved watershed control in step with dam construction so that the river now runs clear and the soil in that valley stays on the land.

If we have learned the lesson of the intimate relationship between natural resources that permits their unified development, it is largely because of the example of the Tennessee Valley and the TVA. It would be extremely dogmatic to assert that a river could not be developed except by a valley authority modeled after TVA. But it is irrefutable that despite the long years of effort by our other resource development and construction agencies, and the millions of dollars of expenditures, the Tennessee is the only river that has been completely harnessed and controlled in the interests of the people.

Compare the Tennessee Valley with its neighbor, the Missouri. In the past few weeks we have witnessed some dramatic contrasts between the two regions—the one devastated by floods; the other secure from such depredation and ready to benefit from the storage of the waters derived from heavy rains by releasing them through turbines to generate electric power.

There are other significant, if less dramatic, bases for comparing the Tennessee and Missouri Valleys. During the 10-year period 1930 to 1940, the Tennessee Valley gained 12 percent in population; the Missouri Valley lost one-half of 1 percent of its population. The value of manufactured goods produced in the seven Tennessee Valley States increased 27.7 percent, and industry expanded; in the Missouri Valley during the same period the number of manufacturing plants decreased from 20,000 to 17,000, representing a loss of employment for 110,000 wage earners. Land values which had been on a parity in the two valleys in 1930 increased from about $39 per acre to an average of $46.30 per acre in the Tennessee Valley and decreased to $25.28 in the Missouri Valley. In other respects the economic well-being of the people of the Tennessee Valley improved during the 10-year period with resulting benefits to the entire Nation. The Missouri Valley, which comprises one-sixth of the land area of the United States and is vastly richer in other natural resources, does not carry its proportionate weight in the national economy.

These comparisons demonstrate that it is important not only that we make the necessary investments in the development of our basic resources, but that we do it in such a way as to achieve a balance of interests. The active participation of the people of the region in the planning for the development of the resources, on which their future well-being depends, helps materially in formulating and crystallizing the common purpose in relation to which conflicts can be resolved in the public interest.

Most of us have agreed upon the desirability and even the necessity of developing our river basins through valley authorities. But just because this is the most sensible plan doesn't mean that it will be easy to achieve. All of us remember the years it took the late Senator Norris to secure the passage of the lame-duck amendment which made good sense and hurt no one. In addition to being right, he had to work at it. We can do no better than to follow his example. We should do no less.

Modernize Our Presidential Election—VII. Geographical Distribution of Electoral Votes

EXTENSION OF REMARKS

OF

HON CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

Mr. LEA. Mr. Speaker, 435 electoral votes, or 82 percent of the 531 total, are allotted to States under uniform rules in proportion to their population. The variations in administering these rules are so insignificant and so widely distributed as to sections, as to be substantially inconsequential.

They raise no notable question of unfairness, inequality of treatment, or sectional advantage.

The remaining 96 electoral votes, or 18 percent of the total, are allotted to the States regardless of population. Manifestly, the award of these votes has no balanced relation to population nor as to popular votes as between the different States.

These votes were allotted on an area basis as a special concession to the smaller States to increase their influence and prestige for their protection against the larger States. In part, this allotment to the smaller States was to allay their fears against anticipated conflicts between the interests of the large and small States.

Now we have a greatly expanded country and a greatly increased number of smaller States. Experience has not demonstrated conflicts between large and small States to the extent once feared.

The possession of these votes, however, does add to the influence of the smaller States.

Now we must consider the distribution of these votes allotted regardless of population, from the sectional standpoint rather than that of conflicts between the small and large States.

I have prepared table III as a means of concretely illustrating the geographical distribution of electoral and popular votes, both from the State and sectional viewpoints.

One conclusion to be drawn from this table is that any possible inequality or sectional advantage due to this allotment of votes is substantially minimized by their widespread distribution, and especially when these different sections are considered by groups. This large block of votes, instead of being segregated in groups of small States, consolidated in support of economic, political, or sectional issues, is more likely to be allied with groups where both large and small

States are combined. The influence of these particular votes, therefore, to a greater or less degree, tend to counteract each other.

Manifestly, 96 electoral votes is a large number to be allotted regardless of population, but the areas which particularly gain an advantage from these votes are so dissociated as to greatly reduce their consolidated influence as against the rest of the country. The greatest beneficiaries of the 2-vote assignment are the New England and Rocky Mountain sections. The whole Rocky Mountain group has only 32 votes, 16 of which are due to the 2-vote assignment. New England has 12 of its 40 electoral votes due to the 2-vote assignment.

Fortunately we cannot reasonably visualize any situation in which the little States would be completely arrayed against the larger States.

Table III divides the country into six geographical sections designated as New England, Central Atlantic, Mid-Continent, Southern, Rocky Mountain, and Pacific Coast groups.

This table gives the number of electoral votes in each of these groups and the population represented by one electoral vote in each of these areas. In the final column, the table gives what would be the population represented by one electoral vote, in case the two electoral votes, allotted regardless of population, were eliminated; based on the election of 1944.

If these votes, allotted regardless of population, were awarded proportionately everywhere, they would constitute 18 percent of the total electoral vote in each State. A State with three electoral votes would have two-thirds of its electoral votes due to its allotment of electoral votes regardless of population. In a large State, say a State with 20 electoral votes, the 2 electoral votes so allotted would represent only 10 percent of its vote. By aggregating the electoral votes of these groups, we find that the 2 vote allotments represent percentages of these sections as follows:

New England	30
Central Atlantic	10+
Mid-Continent	15+
Southern	17+
Rocky Mountain	50
Pacific Coast	15

Thus we find that 12 percent of the electoral vote of New England, and 32 percent of the Rocky Mountain section, are in excess of the average percentage of these votes accorded the country generally.

The groups having less than the average of 18 percent are as follows:

The Central Atlantic with 10 percent plus, or less than 8 percent of the average in the country.

The Midcontinent with 15 percent, or less than 3 percent of the average of the country.

Southern with 17 percent, or less than 1 percent of the average of the country.

The Pacific coast with 15 percent, or 3 percent less than the average of the country.

It will be observed that the Southern States have practically an even balance of electoral votes with its population, as compared with the average of the whole country—only 1 percent less of the benefit due to the two-vote assignment than the average of the country.

The only section whose population would substantially vary from the other five areas of the country if the two electoral votes were omitted from each State would be the Rocky Mountain and New England groups.

I draw two main conclusions from table III. The first is that the possible evil in the two-vote assignment regardless of population is substantially minimized by the geographical distribution of these votes.

The second is that any injustice, or sectional or political advantage that might otherwise occur, would be greatly minimized by the division of the two-vote allotment in each State according to the popular votes of the candidates in that State, as proposed in House Joint Resolution 124 and others now pending before the Judiciary Committee.

TABLE III.—*Geographical distribution of electoral votes*

States by groups	Population, 1940	Electoral votes	Population for each electoral vote in the election of 1944	If 2 electoral votes omitted from each State
1. NEW ENGLAND				
Maine	847,226	5		
New Hampshire	491,524	4		
Vermont	359,231	3		
Massachusetts	4,316,721	16		
Rhode Island	713,346	4		
Connecticut	1,709,242	8		
Total	8,437,290	40	210,932	301,331
2. CENTRAL ATLANTIC				
New York	13,479,142	47		
New Jersey	4,160,165	16		
Pennsylvania	9,900,180	35		
Delaware	266,505	3		
Maryland	1,821,244	8		
West Virginia	1,901,974	8		
Total	31,529,210	117	269,480	300,278
3. MIDCONTINENT				
Ohio	6,907,612	25

Contradiction Is Seen in Truman Pledge for Tax Cut Equal to Rise

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

CONTRADICTION IS SEEN IN TRUMAN PLEDGE FOR TAX CUT EQUAL TO RISE

(By David Lawrence)

Either somebody who prepares President Truman's messages made a slip or else Mr. Truman really has made an extraordinary promise in his veto message last week on the tax bill which contradicts everything else he said in the same message.

The President said:

"When the time comes to lessen this wartime tax burden, it is only fair that we should follow a pattern which is the reverse of that under which the burden was imposed. That is to say, this wartime tax burden should be reduced on a basis that is fair to low-income groups as well as to high-income groups."

Actually if the pattern of the wartime tax rates is followed in reverse, it would mean that higher incomes should have bigger cuts in taxes, because everybody knows that when the wartime schedules were imposed the middle and higher brackets received a much more drastic percentage increase in tax rates than did the lower incomes.

If Mr. Truman's words are to be taken on their face, it would mean that he favors bigger reductions for the higher incomes than were contained in the bill he vetoed. This seems to be at variance with his whole argument against signing the tax-reduction bills presented to him by an overwhelming majority of both Houses of Congress.

THREE ILLUSTRATIONS MADE

The President mentioned three illustrations—the taxes for the married man in the $2,500, and the $100,000, and the $1,000,000 classes, respectively. Here is how the 1939 taxes were raised to their wartime peak in

1945 and then slightly reduced in 1946, and what they would have been under the 1947 tax-reduction bill that Mr. Truman has vetoed twice:

Net income	1939 tax	1945 tax	1946 tax	New tax
	Percent	*Percent*	*Percent*	*Percent*
$2,500	None	6.4	3.8	2.7
$100,000	32.0	68.6	62.3	49.9
$1,000,000	67.9	90.0	83.9	72.8

The foregoing is figured on the basis of a family of husband and wife and two children.

Obviously, the persons with the high incomes took the deepest cut. Hence, the proposed tax-reduction bill which was vetoed did not remove the high tax rates in the same way that they were imposed. For if that had been done, the taxes of the $100,000 man would have been reduced to what they were before the war, namely 32 percent of net income.

Does Mr. Truman mean that he believes the $100,000 man should have his taxes reduced downward in exactly the pattern of rates that sent them upward in wartime? His language can be so construed, for he speaks of reversing the patterns of rates as imposed in wartime.

CONTRADICTION IS SEEN

But if that is the President's idea what can he possibly mean by arguing that the Knutson-Millikin bill that he vetoed gave proportionately more reduction to middle and high incomes than to the lower incomes?

Actually the proposed tax law represented a reduction from a rate of 3.8 percent to a rate 2.7 percent on $2,500—from a tax of $95 to a tax of $67.50. This is a total reduction in taxes of about 29 percent.

Now the $100,000 man would have had his taxes reduced from $62,300 to $49,900 or a saving of $12,400, which is a reduction in taxes of about 19 percent.

How can Mr. Truman say that the taxpayer in the lower brackets who got a 29-percent tax reduction is being treated inequitably as against a $100,000 taxpayer who is getting a saving of only 19 percent under the proposed bill?

Maybe Mr. Truman means that the Knutson bill that he vetoed did not go far enough to help the wealthy taxpayers or else he made a mistake in his statement that he wanted to reduce wartime taxes so that the man who took the deepest cut in wartime would be given the biggest saving now.

There is no way short of confiscation by which the incomes of $100,000 and $2,500 can be equalized by legislation. If the Truman program is to equalize incomes by Government order, then the end of the system of initiative and incentive is at hand and a communistic philosophy is to become the Democratic campaign doctrine in 1948.

Industrial Wastes and Stream Pollution—Scientific Approach to a National Problem

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

Mr. McDONOUGH. Mr. Speaker, the problem of stream pollution in the United States is of vital interest to the health and welfare of all Americans, and it is time for Congress to act upon adequate legislation for the control and elimination of stream pollution.

Several bills are now pending before the Public Works Committee of the House for such control, and these bills should receive careful consideration and attention. No informed person can fail to recognize the danger to health from the present gross contamination of rivers, lakes, and tidal waters. For the past 50 years attempts have been made to pass legislation which would control pollution, but to date none has been successful, and with growing problems of industrial waste, sewage disposal, garbage, and so forth, the situation is becoming critical.

The scientists of America are eager to give their time and skill to solution of the problem of stream pollution. To this end, Industrial and Engineering Chemistry, the official publication of the American Chemical Society, recently published a symposium on the subject of industrial waste disposal which was presented to the Members of Congress for use in their study of stream pollution. This symposium provides accurate authentic reference material, and the American Chemical Society and the editors of Industrial and Engineering Chemistry are to be highly commended for the publication of this work.

The following article on stream pollution appeared in a recent issue of Industrial and Engineering Chemistry. It is an interesting and informative commentary on this problem and the need for immediate control.

American chemists and chemical engineers are anxious to participate more directly in political, social, and economic problems. They wish to abandon the traditional ivory tower of the past and join with others in concerted efforts to find solutions to the pressing questions that confront all. The dawn of the atomic age with its social, political, and economic implications has served to stimulate the somewhat latent desire on the part of the chemist and chemical engineer to enter more actively into the life of the Nation. This desire is built on the premise that a mind highly trained along scientific lines can contribute to problems that are not strictly associated with the natural sciences. Today the natural sciences are inexorably interrelated with social, economic, and even political questions, and this relation will be accentuated in the future. We are ready to serve. Into what channels should we direct our efforts? Scientists have exerted tremendous influence in shaping legislation in such matters as the control of atomic energy and a national science foundation. What else can we do?

One such field is that of steam and air pollution caused by manufacturing operations. Indeed this is an ideal field to which we may direct our energies, for the chemist and chemical engineers possess technical skills which are essential to a proper understanding and solution of the problem.

Few national questions have so consistently received congressional interest as has the pollution of the Nation's watercourses. During the past 50 years more than 100 bills have been introduced into Congress relating to Federal regulation and control of stream pollution. None of those bills has been enacted into law. No informed person can fail to recognize the need for correcting the present gross contamination of rivers, lakes, and tidal waters, but so far groups fostering regulatory measures have been unable to agree upon the nature and extent of Federal control. An adamant position has been taken by both advocates and opponents of Federal regulation. Those favoring drastic Federal control claim that the States, individually and collectively, have failed to solve the problem, and that adequate corrective measures may be effected only through Federal legislation. This viewpoint is held largely by sportsmen's associations and by recreational and similar groups. Opposed to this viewpoint are individuals and the collective membership of certain State and national technical societies and associations.

The latter have strongly opposed bills placing the direction and control of stream pollution regulation under the Federal Government. In general, those opposing Federal control have favored Federal legislation which limits the activities of Government agencies to fact finding and to aiding as an intervenor to coordinate Federal and State activities. Whether Federal funds should be allocated to support waste-abatement projects is another question which is inseparably involved in the questions of State against Federal control.

Extensive hearings were held during the last session of Congress by the Rivers and Harbors Committee, and voluminous testimony was taken in an effort to guide legislative action. This resulted in the introduction into the House of Representatives of the Mansfield bill (H. R. 6024), which was approved by the committee and finally reported to the House. Although this bill was a compromise measure, it was vigorously criticized in many quarters. Since no action was taken during the session, it died on adjournment of Congress.

The failure to pass any of the bills introduced last year has not lessened the activity of groups desiring Federal control of stream pollution. On January 3 Congressman MUNDT introduced H. R. 123, which is nearly identical to the Mansfield bill. Other measures have been sponsored, including the Barkley-Taft bill (S. 418) which is said to have powerful bipartisan support. Hearings began on April 22 on this and other proposals before a Senate Public Works Subcommittee.

The struggle for stream pollution control will continue as in the past, with little hope of constructive legislation until the opposing factions can meet on some common ground of understanding. Without attempting to prophesy, it appears that Federal legislation may be enacted during the present session of Congress. The best interest of all groups will be served if such Federal legislation is critically examined with but one purpose in mind: What is best for the country as a whole? If unbiased and intelligent analyses are made of the proposed legislation, and sufficient guidance along these lines is rendered to the legislators by reliable groups, worthwhile and constructive laws can be passed. If not, the problem of stream pollution will remain muddled and uncontrolled for years.

Last summer the editors of Industrial and Engineering Chemistry decided that they could perform a public service by publishing a symposium on the subject of industrial waste disposal, in which facts could be presented in an unbiased manner. It was felt that surveys by industry would disclose the special problems of each and would also indicate what has been accomplished so far and what remains to be done. Certainly an exhaustive study would demonstrate the gaps in our present technical knowledge. Obviously it is impossible for any individual author to survey an industry adequately in a report of this type, and it was not the intention that the articles propose a solution of the Nation's industrial stream-pollution problem. However, these papers do show how certain industries have met the problem in specific localities. All who have been associated with such work realize that there

can be no standardized procedure, and the solution of each problem must be guided by local conditions. The editors think that heavy emphasis on a chemical engineering approach will prove effective. Through the use of chemical engineering techniques they believe that manufacturing processes can be modified further to eliminate much of the waste at its source. In this way the volume of material requiring disposal in our lakes, rivers, and streams might be reduced until it could be assimilated by the purifying capacity of the stream itself. Furthermore, chemical engineering techniques may so change the wastes that they will be relatively harmless when ready for discharge.

The objects of the American Chemical Society as set forth in its Federal charter provide ample justification for the publication in one of its journals of a symposium of the character presented in this issue:

"To encourage in the broadest and most liberal manner the advancement of chemistry in all its branches; the promotion of research in chemical science and industry; the improvement of the qualifications and usefulness of chemists through high standards of professional ethics, education, and attainments; the increase and diffusion of chemical knowledge; and by its meetings, professional contacts, reports, papers, discussions, and publications to promote scientific interests and inquiry, thereby fostering public welfare and education, aiding the development of our country's industries, and adding to the material prosperity and happiness of our people."

In planning one of the most important issues in the 39 years of the existence of Industrial and Engineering Chemistry, the editors enlisted the aid of Sheppard T. Powell, widely known consultant in the field of industrial wastes, and wish to express their indebtedness to him for selection of subjects and authors and assembly of papers. When the officers of the ACS divisions of water, sewage, and sanitation chemistry, and of industrial and engineering chemistry were advised of the plan for the symposium, they requested that it be presented under their cosponsorship at the one hundred and eleventh meeting of the society at Atlantic City. The editors were delighted to cooperate although it caused a delay in publication from February to May.

Every Congressman and Senator is receiving a copy of this issue, not with any thought of influencing legislation, but to make available scientific and technical data and information. Reprints at nominal cost will also be made available to others who are interested.

Industry generally, we believe, is now recognizing its responsibilities in the matter of industrial wastes. The chemical industry, for example, through the Manufacturing Chemists' Association, is attacking the problem vigorously through its special committee on stream-pollution abatement. This committee is headed by R. W. Hess, of the national aniline division of Allied Chemical & Dye Corp., and author of the bibliography of references which is part of this issue. Other members of the committee are: I. F. Harlow, of Dow Chemical Co.; G. A. Yocum, Monsanto Chemical Co.; Lyman Cox, du Pont Co.; R. M. Taylor, American Cyanamid Co.; H. D. Lyon, Carbide & Carbon Chemicals Corp.; and Warren N. Watson, secretary of the association. The purpose of the committee is to work toward reduction or elimination of trade waste in the effluent waters of the chemical industry. Recognition of industry's primary responsibility has now reached the stage where, frequently, selection of a manufacturing process is strongly influenced by the waste material which will occur; enlightened companies are insistent that the waste-disposal problem be solved before any process enters the commercial-production stage.

This is the more favorable side of the picture. As George D. Beal, of Mellon Institute, pointed out at a recent symposium on the chemist's responsibility in the control of industrial wastes, held by the Pennsylvania Chemical Society, unfortunately industry has not yet fully recognized that disposal of waste from a plant "is just as much a manufacturing cost as sweeping scraps from around a machine." The speaker then went on to say that, although we have accepted the need and expense of facilities for removing waste ashes and garbage from our homes, we have not always considered that waste disposal from plants is actually a part of the manufacturing cost.

We are mostly concerned with wastes in our streams, but we must recognize the problem of air pollution as well. One paper was included in the symposium to discuss industrial atmospheric pollution.

If the problem of stream and air pollution is attacked on a scientific basis, if it is recognized that a long-range project confronts us, and if all interested groups will pull together for the common good, American ingenuity and American scientific and technological attainments will provide adequate answers.

How To Sell America to the Americans

EXTENSION OF REMARKS
OF

HON. EDWARD J. ELSAESSER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1947

Mr. ELSAESSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Henry C. Link, Ph. D., vice president of the Psychological Corp., as published in the United States Investor for June 28, 1947:

HOW TO SELL AMERICA TO THE AMERICANS

(By Henry C. Link, Ph. D., vice president of the Psychological Corp.)

The profitable sale of services and products is, we know, the immediate concern of every private business. However, every day it is becoming more obvious that the underlying concern of every business is not the sale of its products, not the sale of the company as a public institution, not the sale of an entire industry, but the sale of that one great institution which makes all these others possible, that is, the American system. This unique American system has been rapidly dying from neglect. America, for some years now, has been living on the momentum of her great past.

No less a person than Dr. Conant, president of Harvard University, recently gave broad expression to this situation. Speaking at the conference of the New England Council last November, he said: "It is my contention that the social structure of the American Nation is unique; it is something the world has never seen before." Then, observing that he had found many well-educated foreigners unable to understand the unique structure of the American system, he said: "But do we understand it ourselves? Do we realize how important it is for our future to nourish those elements of strength in our chaotic democracy which, like taproots, reach back into our history?" One would like to ask Dr. Conant whether the great universities in recent years have not done more to starve than to nourish those taproots.

CONSCIOUS OF FAULTS, NOT OF MERITS

In one of our community and plant surveys last year we found that many of the townspeople were displeased with a certain plant because of the smoke nuisance. As a matter of fact, this plant, within the past 5 years, has spent enormous sums to reduce the soot content of its smoke by over 70 percent. People were simply not aware of this great improvement. This survey finding illustrates the situation regarding free enterprise and the American system generally. People have become more and more conscious of its faults and less and less conscious of its merits.

Some people claim that the Americans are already so completely sold on America that it is foolish to speak of selling it to them again. To be sure, they are sold on her comforts, her pie à la mode, her radios, automobiles, refrigerators, but they are not sold on the principles, the taproots, which make those comforts possible. The real America lies not in her present wealth, her present luxuries, but in the system which produced them. It is not merely so important for Americans to know that one in every five has a telephone, as compared with one in every 125 in Russia as to know the reasons why.

Today we find many Americans not only unconscious of the foundations of the American system, but even believing certain things which are definitely untrue. Our Nation-wide surveys and those of other research organization have revealed highly erroneous beliefs in respect to wages and profits, advertising, the advantages of Government control of business, of Government grade labeling, and in other areas. To give but one example:

Last year we asked a cross section of 5,000 people this question: "If the Government owned and managed industries, would you get more or less for your money than you do now?" The results were:

General population, October 1945	College students, October 1945	General population		Comments
		May 1946	May 1947	
Percent 43	*Percent* 63	*Percent* 33	*Percent* 34	Said they would get as much or more under Government ownership.
38	26	35	36	Said they would get less under Government ownership.
19	11	32	30	Were uncertain.

When asked why they could get more under Government ownership, the two principal reasons given were "Government ownership would eliminate profits," and "would eliminate unnecessary advertising." In short many millions of Americans believe that socialism or state capitalism would be more efficient than the American system of private capitalism.

Where do people get these beliefs and how can they be dealt with? One of the popular answers in recent years has been that they grow out of the failures of free enterprise and can be dealt with only by improving that system. As one writer put it, quite typically, "If we are afraid of communism in this country, let us work to make our own system better. Then standards of honest comparison will leave little doubt as to the relative merits of each."

THE AMERICAN SYSTEM IS UNIQUE

What have we been doing for 300 years, if not improving that system? While still not perfect, there is today little or no comparison between the American system of private capitalism and any socialist or communist system in the world. As Dr. Conant said, the American system is unique. Never in all history have the great masses of a nation achieved so high a level of economic equality and freedom. As compared with

the common man in Europe, Russia, China, and in fact most of the world, the common man in America, even the man on unemployment relief, is a bloated plutocrat. Therefore, to say that the best or the only way to stop communism or socialism is to improve our present system is not only naive, it is sheer nonsense. The one point at which socialism and communism has excelled Americanism, with all its faults, is in its promises, its propaganda, its missionary zeal, its education. We Americans have practically stopped indoctrinating the youth of America in those principles which made America unique, which Dr. Conant referred to in such nostalgic fashion.

CAPITALISM FAILS IN EDUCATIONAL REALM

No, it is not in the economic or material realm that American capitalism has failed—even including its depressions—but in the realm of ideas, in the educational realm. It has almost completely failed to develop its own ideology. It has distributed wealth, but not the principles and morals which made that wealth possible. It has educated people in slogans about its products, such as "Ask the man who owns one," "When better automobiles are built, Buick will build them," but it has not educated the public in the moral significance of such slogans. The thousands of brands and trade-marks of American business are the very promises men live by, promises far more reliable than those in the fields of politics, government, or international relations. Its surplus wealth supports the largest, I will not say the greatest, educational system in history, but its lack of an adequate ideology encourages that system to turn out more and more socialists who would destroy the very system which made their education possible. That is one reason why I have described the American educational system in some of my writings as "The most elaborate plan ever conceived for obscuring and even denying the elementary facts of life." But let us not blame the educators, let us blame ourselves, because while we have supported education with our dollars, we have neglected to guide it with our principles.

Within the past year there have been the first important developments of concerted activity to educate Americans by direct methods. The United States Chamber of Commerce, the Association of National Advertisers, and the American Association of Advertising Agencies, through joint committees, have developed a basic outline for an educational campaign through national advertising and also through local activities. The chamber of commerce launched its part of the program at the national session in Washington in April, under the excellent slogan "American opportunity." The outline of this program is available through local chambers and the Washington office. It is primarily a program for local application to which the banks could contribute enormously—not in money but in cooperation.

A FEW PRACTICAL SUGGESTIONS

The greatest problem is not whether or not such education should be undertaken, but how to do it. Therefore, it is my purpose here to concentrate on a few practical suggestions, or "do's" and "don't's" in connection with this program. These suggestions grow out of a series of studies we have been making since 1945 in what we call the "Techniques of Communicating Ideas" as contrasted with products. As you know, some of the Nation's leading companies have been conducting large educational and advertising campaigns in defense of free enterprise. Our studies in "Communicating Ideas" included many tests with national and local advertising campaigns, tests of articles in plant or employee magazines, tests of financial statements or advertisements, and tests of pamphlets and booklets. I shall not burden you here with the details of these tests except to say they were tests of three main points: 1. Was the material interesting enough to be read? 2. If read, was it understood? 3. If understood, did it have the desired effect?

Some of the materials tested we found excellent on all these points, but much, far too much, we found neither readable nor understandable. Sometimes it even influenced people to believe the exact opposite of what was intended. In general, it was quite obvious that industry was not nearly as good in selling the principles of free enterprise as it was in selling its products. As we analyzed our results, here are a few of the practical conclusions to emerge.

AVOID POLYSYLLABICAL PROFUNDITIES

First, many advertisements, booklets, and employee publications are written far above the educational level of the people addressed. In a recent labor dispute, the president of the company wrote a lettter to all the employees. When we analyzed that letter, we found it to be written on an eleventh-grade reading level so that only about 20 percent of his employees could readily grasp its meaning. The letter was rewritten so that it would be readable by at least 90 percent of the employees. Much has been said in recent years about the importance of increasing one's vocabulary. The real problem for many executives and their highly educated assistants is to shrink their vocabularies so that they can eschew verbose and esoteric philosophical multiplicities, and sedulously avoid all tautological and polysyllabical profundities. In short, so that they can speak simply, clearly, and without double-talk.

Second, giving people the correct facts will not necessarily correct their misunderstandings. The current facts are important, to be sure, but even more important is the manner of their presentation. Advertisers are bombarding people these days with facts and statistics. It seems as though the academic disease which has blighted much education has now invaded industry. The disease I refer to is the theory that facts are the cure-all for personal and social problems. As with sex, for example. We are told that more education will eliminate many of its problems. Accordingly, via the schools, the magazines, and other media we have provided the facts of sex to an unparalleled extent. Yet, what do we have? The highest rate of social disease, the highest rate of sex crimes, of juvenile delinquency involving sex, the highest divorce rate, and the lowest birth rate in our recorded history.

The belief that if children or even adults are given the unbiased facts, covering both sides of an argument, they will then make the correct decisions, is one of the fatuous fallacies of our time. The simple truth is that facts, without elementary morals or standards, are likely to create confusion rather than understanding. People are not automatic calculating machines. They have hearts as well as minds, passions as well as brains. When they do read one of the many ads or pamphlets thrust upon them, they interpret the facts in terms of their emotional attitudes and moral standards.

A BANKER'S LIFEBLOOD

Therefore, to present the cold facts is not enough. The facts about sex are at least interesting, which is more than can be said of many of the facts about banking and free enterprise. The most interesting of all facts to the president of a bank or a company is his financial statement. Its details are more than cold facts to him. They are his lifeblood. But to the great majority of people, all financial statements are a deadly bore, no matter how they are dolled up with pictures and charts that are supposed to make them easy to read. Aside from the stockholders, the point at which such facts may become important is among the employees of a particular company. Even there the mere presentation of the facts is not enough. The employees must be led to absorb and understand them. A personal presentation of earnings and expenses by an officer of the company may be one effective method. Another is to offer cash prizes to the employees, their wives, and especially their school children, for the best 50-word essay on "What one figure in this financial statement means most to me, and why?" The company officers, who know the problem, would naturally be the judges of the essays chosen and published.

PRESENT MATERIAL TOO PEDANTIC

Therefore, we say, emotional appeals should be used even if this means a decrease in the number of facts which can be presented. Do you remember the prize contests of Old Gold, and many other products? A hundred thousand dollars in prizes, fifty thousand, ten—for the best 25-word description of the product? This represents an effective use of an incentive or emotional appeal. On a modest scale, it could be used by local companies and chambers to good advantage in selling the facts and principles of the American system. Our experiments in the "Techniques of Communicating Ideas" show that much of the present material is too factual, too pedantic. Instead of preaching to the public about free enterprise, why not stimulate it to preach to itself?

POWERFUL EMOTIONAL APPEALS

When we examine the reasons for our great success in selling goods or material things as against ideas and principles, what do we find? We find besides the extensive use of prize contests, many other powerful emotional appeals. For example, "Always a bridesmaid, never a bride." What should that mean to free-enterprise advertising? How about, "Always a dues payer, never a boss?" or, "Always a yes-man, never on his own," referring to the man who always runs with the gang, the crowd, the mob, instead of acting independently. And again, "The man who never took a chance," referring to the person who relied on social security and Government aid instead of striking out for himself. These and many other ideas could be used to give an emotional impact to the concept of American opportunity.

It is now apparent that our discussions of free enterprise in recent years have been entirely too factual, too statistical, too self-centered. Therefore, it is not surprising that research men should have found that the term "free enterprise" meant very little to the general public. In a study made in 1942 we found that the terms "free enterprise," "capitalism," "competitive business," "independent industry" were little understood or had little appeal to the average man. However, during 1945 we discovered that "free enterprise" and "Americanism" meant much the same to people. But, whereas "free enterprise" had no emotional impact, "Americanism" had a terrific emotional impact.

Because of this situation the choice by the chamber of commerce of the term "American opportunity" for its share in the program of selling America is most appropriate. The term "American opportunity" expresses the very essence of Americanism, which is to provide opportunity not merely for big business or even little business but for every individual regardless of race, class, or present status. America has offered and today offers more opportunity to every individual, regardless of race or creed, than any other nation. These opportunities are made possible by the basic principles or ideals which make the social structure of America the unique thing it is.

OWN FAMILY INDEBTED TO AMERICAN OPPORTUNITY

One of the most powerful emotional appeals in driving home the full meaning of American opportunity is to point out individuals or families who have made use of that opportunity. These families exist in every

city and every town, and there is no reason why the local chambers of commerce or associations cannot from time to time select individuals or families who represent the fruits of American opportunity. I feel strongly on this subject because my own family is so deeply indebted to American opportunity. My parents came to the country as almost penniless immigrants when they were about 25 years old. My father went to work in a planing mill, 10 hours a day, 6 days a week, $12 a week. At night he studied English and mechanical drawing in the free public school, and after about 12 years became a foreman. There were six children and, as we have just learned in recent years, we were distinctly of the "underprivileged third." Fortunately, we did not know it then. We were taught, at home and in school, that America was the land of opportunity for those who had the ambition and the self-reliance to make use of it. Our privileges included a free grade-school and high-school education. With help from home, part-time work, and a few scholarships from capitalistic colleges we were even able to get college degrees.

What happened in our family was not unique. It happened among our neighbors, our friends, in the large German population, among the Poles, the Italians, the Irish, not to mention the native Americans. In fact, this process has become so general among Americans that we no longer appreciate it. Therefore, if communities all over the country were to select, periodically, concrete cases of families who had made use of their American opportunities, who had improved their position, gotten an education, purchased their own home, started their own business, assumed responsibility in the community, and were to extend public recognition to such families, the appreciation of American opportunity would be rapidly increased.

A "NATURAL" FOR THE BANKS

This type of publicity or education is what might be called a "natural" for the banks. The banks are so full of human-interest stories about people who were helped out of difficult circumstances or who were helped to develop new business opportunities, that bankers tend to become inhuman about them. It would be more accurate to say that bankers become so accustomed to these adventure stories that they take them as a matter of routine. Just because of the powerful emotions involved in these incidents, the banker naturally has to cultivate an unemotional and objective point of view.

If I may be excused another personal reference, during the late nineties, when my father was laid off for 12 weeks in a period of depression, he was able to borrow from a bank a thousand dollars, merely on his character. He used this money to buy lumber and materials with which he built a small house on a lot he had bought some time before this. This was our first home. At the age of 45 he began building houses for himself, again with the help of the banks. During the depression in 1931, some of his friends urged him to take his cash out of the bank. He considered the matter pretty carefully, but his final answer was "No." "The banks," he said, "have always been good to me. Why should I desert them now?" That remark produced a profound change in my feelings for the banks as institutions. But the banks are full of stories like this and these stories are infinitely more interesting and educational than many of the formal statements about mortgages, trust funds, safe deposit boxes, and other services.

Naturally, the stories, the incidents should be selected according to certain specifications so as to illustrate clearly the basic principles which make American opportunity possible. We must demonstrate again and again that the essence of American opportunity lies not in its material wealth or material success, but in its spiritual heritage; not in its automobiles, refrigerators, washing machines, radios, and houses but in its principles and ideals.

PRINCIPLES ABOVE PROFIT

Every coin of the realm still bears the slogan, "In God we trust." What does it mean, or rather what did it mean? It points to the very cornerstone of Americanism, which is to put principles above profit and God's moral order above economic order. Today when anyone talks about spirtual or moral values, people tend to shy off as from someone impractical or even slightly unbalanced. When one mentions the dignity of the individual, however, there is immediate assent that this is a fundamental characteristic of Americanism. And yet, the dignity of the individual is strictly a spiritual concept. Dignity is not something which the individual acquires with a new pair of pants or an inside toilet. The dignity of the individual is made possible by a set of ideals and laws such as the Ten Commandments. What would man's dignity mean without the Commandments. Thou shalt not steal, Thou shalt not kill, Thou shalt not bear false witness? These moral laws are the very foundations of American opportunity and the dignity of the individual. That is why communism has to get rid of religion and its morals, because they are the bulwark of individual freedom and opportunity. Socialism, including so-called Christian socialism, cannot even get started until it steals the property and freedom of its citizens, of course by legal means or by the democratic vote if possible.

There are many liberals today who believe that if the majority votes to rob the minority, it is perfectly moral. Their slogan is that prize piece of doubletalk, "Human rights are more important than property rights."

No, it is not Russia that constitutes the great threat to America, as the President and many high Government officials have only recently begun to preach. It is the moral obtuseness of Americans themselves. Increasingly, we Americans, regardless of class, have repudiated the moral heritage which made America possible. We have done so formally as well as informally. The highest court in the United States, in a series of decisions, has declared that stealing is legal when committed by certain labor unions; that violence is legal when committed by labor unions; that bearing false witness is legal when committed by labor unions. In short, this court has declared that the moral law is illegal. No wonder that the respect for law generally has been so extensively undermined throughout this country. No wonder that the opportunities of American workers are being progressively restricted by organized coercion and by violence to persons and property.

FALLING BEHIND IN THE RACE

Industry, above all, has paid so much attention to the laws of physical science, the laws of matter, and so little to the laws of ethics, the laws of human relations, that we have fallen far behind in the race against socialist and communist materialism. Your chairman was kind enough to refer to my recent book The Rediscovery of Morals. In it I have tried to reinterpret the moral foundations of the American Creed in respect to our present industrial conflicts. However, the daily statements and actions of business leaders are far more important than any one book or collection of books. According to our most recent surveys, the public today is unusually receptive to the statements of business executives. However, there is little sense in talking to the workers about free competition, free markets, and private property, unless we are willing to defend the rights and opportunities of the workers themselves. Employers who enter into agreements which restrict the freedom of those who want to work are destroying American opportunity at its very source.

During the strikes a year ago, we were making surveys including this question: Do you think that company executives should or should not negotiate with the unions while pickets are preventing the company officers and office workers from entering their plants? This was the condition in several cities, and a substantial majority of the citizens interviewed answered, No, they should not negotiate. Those businessmen who made an issue of their legal rights and those of their nonstriking employees were reinforcing the very foundations of American opportunity. In the days ahead, and regardless of new laws, these issues will probably be tested again and again, and increasingly in the banks. Each test is potentially as good or better than an expensive advertising campaign. Businessmen simply cannot afford to sacrifice the basic freedoms of their workers, no matter what the temporary effect on their profits.

We seem to have gotten away from education but, as we have tried to point out, education in the facts of American opportunity, if not founded on the basic principles of American opportunity, is bound to fail. The most important factor in resurrecting the American faith is a more searching reappraisal of the principles which have made America possible. If we are not to smother what remains of free America in a plethora of verbiage and propaganda, we must act on these principles. Great principles make many words unnecessary, and action based on these principles makes fewer words count.

No Moratorium on Inventions—We Cannot Block Progress

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Worcester (Mass.) Sunday Telegram of July 20, 1947:

NO MORATORIUM ON INVENTIONS; WE CANNOT BLOCK PROGRESS

Some days ago a worried individual called for a halt on all new inventions. Late in his career, Thomas A. Edison suggested a moratorium on inventions himself. He said that Americans required new inventions far less than they needed to learn how to use the existing ones intelligently. In 1938 a few subordinate officials in Washington proposed that labor-saving machines should be taken away from people. This, they believed, would quickly increase the call for manual labor and so would solve the problem of unemployment.

Inventions do create problems as well as solve them. For example, the automobile brought traffic congestion and peril on street and highway, in addition to enjoyable and profitable transportation.

Labor-saving machines do destroy jobs as well as save work. But they also create new jobs. Nearly 20 years ago Henry Ford argued that when a worker was displaced by a machine, then another worker was required to help build that machine. His theories were vindicated. Labor-saving machinery, mass production, furnished more and more employment.

Statistics have been cited, but they are not necessary to prove the point. Mere observation, common sense, and logic will do it. Labor-saving machinery cannot arrive by magic. It is manufactured—by work, and with the aid of machines and machine tools. Parts and materials must be made, and machines must be repaired and occasionally replaced. All of this results in work, by many persons in many places throughout the world.

The housewife turns a faucet and gets hot water. She no longer lifts a huge boiler onto a hot stove. It's easy for her now. But the water-supply system and the heating equipment do not run themselves. Their installation and maintenance call for much work and provide many jobs. She turns a knob on the electric range. She no longer brings in chunks of wood and keeps the kitchen fire going. It's remarkably convenient and effortless. But men are working at the power plant which supplies the electricity, and men fix the wires after a thunderstorm has brought damage.

The radio listener turns the dial and relaxes. But the programs are not presented without work, and the broadcasting requires the employment of many engineers and technicians. A piece of farm machinery may do the work of 20 men, but it has to be manufactured by the work of many nonfarmers.

It is true that a man replaced by a machine cannot always find a new job immediately—particularly a job near home and to his liking. When sound films arrived and orchestras were no longer necessary in movie theaters, violinists did not immediately find jobs in factories where sound-film machinery was made. Neither did they quickly obtain new jobs as musicians. But readjustments did come. Those musicians are not roaming the streets today, jobless on account of sound films.

Anything radically new always brings dire predictions. Many persons instinctively hate change. Some New Englanders once called the automobile a mere "fad, with no future." The Wright brothers were ridiculed. There were groans of dismay when horses were replaced by trolley car and auto. Motor busses, it was said, would never compete with the trolley, and could never be practical for long trips.

The hostility toward new inventions is an old story. Not only are there fears of change and anxieties about jobs but sometimes interest in a profession or pride in a skill may suffer. The typewriter was not a boon to the expert penman.

Yet there is no widespread desire for a return to the simpler days. People would not like to be without the telegraph, the telephone, the sewing machine, the electric ice box, the gas stove, the movies, the radio, the airplane, and countless other inventions. They would not care to ride in an old-time train, with its gloomy cars, uncomfortable seats, stuffy air, grime, and cinders. After an invention has become commonplace, people look back and say, "How did we ever get along without it?" Readjustment is fairly rapid.

Moreover, the revolutions are not always quite so complete as predicted. The automobile and motortruck did not destroy the railroad; the motion picture did not destroy the stage, and the radio did not destroy the motion picture or the newspaper. We still have both synthetic and natural rubber. Despite plastics, with all their satisfactoriness, things are still being made of such old-fashioned materials as wood and steel. Despite electricity and gas and oil, we still depend upon coal mines—to our sorrow, at times.

Nobody denies that inventions at first bring confusion and uncertainty in spots. But their total effect is progress—greater productivity. This total increase in productivity is sometimes higher than is assumed, at first thought. For the amount of labor which is required to build a labor-saving machine must be deducted from the amount of labor which the machine saves when it is used. That is, when a labor-saving machine creates jobs, it also creates the necessity to work. The over-all release from toil is far from 100 percent.

Thus machinery provides no path to universal wealth and effortless ease for all. But it does mean progress. We are steadily forging ahead, and what is good for the people as a whole will finally be good for each individual.

When the National Machine Tool Builders' Association met in Worcester in 1932, speakers declared that technological unemployment could be avoided by careful planning. That is still true today. There are, at times, a few displaced persons who are the temporary victims of inventions.

They are refugees from the sweep of progress.

They can be helped, but a moratorium on inventions is not the way to do it.

Flood Control

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Tuesday, July 22 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Flood Control," published in the Washington Post for July 15, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FLOOD CONTROL

It is estimated that in the course of the current year alone, floods have swept away close to a quarter billion dollars' worth of property in the Middle West. These same floods have washed out irreplaceable topsoil valued at no less than half a billion dollars. The bill presented by the Midwest's rampaging rivers in a single season comes, then, to almost the same amount as the total cost that has been involved in the entire Tennessee Valley Authority undertaking—$782,000,000. And the TVA, it should be remembered, has been paying dividends to the Federal Treasury from its sale of power amounting to about $10,000,000 annually as well as rendering incalculable benefits to the people of its region in the form of soil conservation, increased farm prosperity and industrial enterprise, improved navigation and recreational advantages.

These benefits have grown out of TVA because it was a carefully planned undertaking, designed to develop the entire resources of a region in addition to providing primary protection from disastrous recurrent floods. TVA was an experiment—an experiment which has proved of immense value in itself and which can have immeasurably greater value for the Nation if we give heed to the lesson it has taught. That lesson is that the water and soil and forests and power potentialities of a great river system ought to be treated, to use Mr. Lilienthal's apt term, as a unity.

We have not done this in the past with the Mississippi and Missouri Rivers. We have applied patchwork remedies to particular spots—often with the result of confining the river at one point only to enhance its rampaging at another. We have built dikes and levees only to have them overrun. It is time to look at the river problem of the Midwest in its totality. This is what we hope the President will do in the special message he is expected to send to Congress this week. This country needs to harness its river systems, not merely for the sake of keeping them under control but also for the sake of utilizing them for the general welfare. No doubt such an undertaking would entail a great financial investment. It would also afford the promise of great economic gains.

Flood Control

EXTENSION OF REMARKS
OF
HON. HARVE TIBBOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Johnstown Tribune, Johnstown, Pa., on July 19, 1947:

FLOOD CONTROL

The floods of the Middle West have made the public flood-conscious again. It happens each time some major inundation occurs, but the enthusiasm unfortunately dies down almost as rapidly as the water ebbs back into its natural channels.

President Truman has asked Congress for an appropriation of $250,000,000, above appropriations heretofore made or considered for the fiscal year, to get a flood-control program of major proportions under way. He isn't likely to get it in the closing stages of Congress; and he is undoubtedly aware of that. The National Rivers and Harbors Congress, in a plea for additional appropriations, notes that the House has authorized projects totaling about $40,000,000 less than requested in the President's January budget. The amount approved for flood control on the Mississippi and its tributaries, however, was higher than that requested for the purpose last January.

In this same connection, Mr. Truman last August recommended to the Secretary of War that he keep his work plan for flood control under $95,000,000 for 1947 and $110,000,000 for 1948; and the New York Herald Tribune observes caustically that last year there were no devastating floods but there was "instead a Nation-wide desire for governmental economy." It isn't necessary to go that far back, however. The Budget Bureau, which is responsible to the President alone, this year cut back the appropriation request for the Conemaugh Dam to $3,200,000, although Army engineers estimated the amount needed for the year's work at $5,200,000. Western Pennsylvania leaders went to Washington to make a direct plea for the additional $2,000,000 for a flood-control project that Pittsburgh considers imperative.

We shall get nowhere with flood-control enthusiasm that rises and subsides along with the floods. What is needed is a steady, sustained interest in the subject. Whether those who must be entrusted with the work can obtain the necessary equipment, labor, and materials for a $250,000,000 program in the next year is a matter which Congress must determine. Although the time is short between now and adjournment, Congress would be well advised to make financial provision for whatever can reasonably be done until it meets again.

Student Division of Americans for Democratic Action Submits a Suggested Student's Bill of Rights

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. KEFAUVER. Mr. Speaker, on June 17, 1947, Students for Democratic Action, the student division of Americans for Democratic Action, submitted a comprehensive report on civil liberties in American colleges and universities to the President's Committee on Civil Rights. The report, based on a detailed questionnaire to over 600 American colleges, stressed the necessity of the adoption of a series of standards whereby college administrations could both protect their own legitimate rights and guarantee the greatest amount of freedom of action to political associations on American campuses. Under leave to extend my remarks, I include the following statement which is an abstract of the report of SDA to the President's committee:

We wish to call to your attention the very considerable extent to which restrictions are placed on the rights of American college and university students to engage in political activity and discussion and to participate in organizations for that purpose. We realize that in the legal sense this is not a question of civil rights, since the only penalty for violating such restrictions is expulsion or academic discipline. But in practice, it is just as important to guard the student in a school in the enjoyment of the right of free expression as it is to guard the citizen in the community.

COLLEGE REGULATIONS

While in school a student's freedom of thought and action can be just as effectively restricted by college regulations as can that of the citizen by an arbitrary government. Usually the campus is the student's world. If he disagrees, he cannot go elsewhere unless he is willing to sacrifice or interrupt his education, so that he almost always falls into any pattern set by the administration. In the absence of free discussion, particularly of political and economic issues, he even falls into the pattern of thinking set for him.

It would seem particularly important, if the truth democracy seeks is to emerge from the free contest of ideas, that this free climate should be maintained in the schools in which our ideas become set and from which much of the Nation's leadership comes. Academic freedom, as regards teachers, has, after a hard fight, been pretty generally accepted as a fundamental American tenet. But no matter how free the faculty, the students are still too often left with only the single choice of the faculty's opinion or no opinion at all. A student opinion or discussion of opinions is still regarded as either socially undesirable or downright illegal.

FAIR STANDARDS

We are discovering that the present drive to eliminate the Communist-front American Youth for Democracy from the campus is being reflected in greater restrictions on all organizations. We know from experience that communism cannot be defeated by suppression. The danger is that suppression will extend to other groups, that all discussion will be stopped, while communism will be merely driven underground, gaining additional support as the victim of unjust oppression. We feel that this situation is developing into a crisis, so far as the rights of students and freedom of opinion in American education are concerned.

We realize that institutions must have some regulations to protect them from irresponsible use of the institution's name, liability for debts of student organizations, and interference with classes and study. What we are asking is that college administrations accept a set of fair standards which will at the same time protect these legitimate interests of the institutions and guarantee to their students reasonable freedom of opinion and action.

In drafting our set of standards, we have kept in mind the legitimate interests which colleges do have a right to protect in dealing with student organizations. First, the institution has a right to demand that its name will not be used off the campus irresponsibly or in such a way as to identify the institution with the partisan views of any person or group. Second, it has a right to see to it that student organizations do not incur financial or other liabilities for which the institution would be responsible. Third, it has a right to see to it that student organizations do not interfere unduly with regularly scheduled classes and college functions. All of these legitimate interests of the institution make certain rules necessary and mean that there must be some latitude in the administration of the rules. In all cases the administration of such rules should be in the hands of a body which includes regularly elected student representatives.

The students, on the other hand, have the right to expect every freedom which does not conflict with the legitimate interests of the institution. It is again necessary to have a set of rules protecting this freedom. When questions of interpretation arise, the body responsible for decisions on student activities should feel the same responsibility for enforcing the latter rules as for enforcing those mentioned in the first paragraph. It is for this reason that elected student representatives are particularly important. But the most important thing is that the rules protecting student freedoms are actually stated and accepted as the policy of the institution.

STUDENT "BILL OF RIGHTS"

The set of standards which we recommend here is based on "A Student 'Bill of Rights,'" published in 1945 as part of a pamphlet entitled "What Freedom for American Students," by the Committee on Academic Freedom of the American Civil Liberties Union. We have departed somewhat from the ACLU version.

1. The policy of every college in relation to student activities outside the classroom should be set forth in definite terms, and accepted by the college community. Interpretation of this precise policy should be in the hands of a body which includes elected student representatives. To leave complete discretion in such matters solely to a college president, executive officer, or faculty committee is to risk putting the determination of critical issues in too few hands influenced by the accidents of the moment, or by the pressure inevitably surrounding a particular crisis when it arises. Democratic decisions require representation of all interests involved, with authority and responsibility clearly fixed.

2. A college's stated policy should make clear that students are free to organize associations for political, religious, social, and other purposes, and to maintain any opinions not contrary to law. Student organizations may properly be required to register with the college authorities their names, purposes, bylaws, officers, and activities. Disapproval of any of these shall not be grounds for interference by the college, unless they in some way are contrary to another of these rules. Secret societies may, of course, properly be prohibited or regulated.

STUDENT ASSOCIATIONS

3. Student associations should be permitted to take the name of the college and to use their names in all activities on college property consistent with the aims of the various organizations. Restrictions may fairly be placed on the use of the college name by any association when its activities extend beyond the college campus, such as participation in picketing and in demonstrations and parades; but such restrictions should be administered only by the representative body specified in paragraph 1.

4. The use of college property outside its primary use for instruction should be made available to any registered student organization carrying out its stated purpose, in accordance with the regulations for the use of college property. Students should be free to post material on bulletin boards. Such restrictions should be imposed by the representative body specified in paragraph 1. Student organizations should not be disciplined for meeting off the campus.

5. No control should be exercised by college authorities over the subjects or outside speakers chosen by student groups.

FACULTY ADVISERS

6. In institutions where it is thought desirable to have faculty advisers for student organizations, such advisers should be chosen or approved by the student organizations themselves. In no case should advisers have authority to regulate or veto the activities of a student group. Nor should student groups be forbidden to function because no faculty member will consent to serve as their adviser.

7. No disciplinary action should be taken against students for engaging in activities off the campus such as campaigning for political candidates, picketing in labor disputes, participating in public demonstrations, etc., provided such students do not claim to be representing the college. Every precaution should be taken against misrepresenting the college to the outside public and to impress on students their obligations to their institution's repute, as suggested in paragraph 3. The activities described in this paragraph should also be permitted on the campus, except insofar as they result in the destruction of property or interfere with regular classes or college functions. Again, decisions of this nature should be in the hands of the representative body specified in paragraph 1.

PRESS CENSORSHIP

8. College students should be permitted to publish such newspapers or magazines as they wish, subject to the provisions for registering with the college authorities the name, purposes, and editors No censorship in advance by the college authorities should be exercised over the contents of any publication. If student editors should abuse their responsibility by improprieties or indecency, or fail to live up to responsibilities accepted, disciplinary action should be taken by the representative body specified in paragraph 1.

9. The boards or committees of students responsible for each publication should be free to select editors without control by the college authorities or faculty. A student editor should be removable only by the student board or by the representative body specified in paragraph 1.

10. Every college should have a system of genuinely democratic student government as the agency for student activities and opinion. But experience has shown that freedom of organization on the campus is no safer in the hands of a student council than in the hands of any other person or body. Consequently, whatever regulation student government exercises over student organizations should be subject to the same

safeguards, as suggested in this set of standards, as regulation by the college administration.

Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waterbury (Conn.) Republican of June 18, 1947:

THERE ARE TOUGH ECONOMICS SURROUNDING TRUMAN TAX CUT VETO

Although the Presidential veto of the tax reduction bill actually killed all hope for whittling down income taxes this year, there is at least room for some rather justifiable rationalization.

For one thing, we are being told that if we are to prevent the rest of the world from being sucked into the vast orbit of socialism, we are going to have to tax ourselves to the limit and pump American greenbacks into Europe's moribund economy on a scale that staggers the imagination.

It is hard to see how we can cut taxes and buy off Europe at the same time. It's hard to see how we can do it without increasing taxes, as a matter of fact.

Then there's the matter of our national debt. Somewhere in the back of our minds is the suspicion that both our major political parties are trying to make an asset out of this thing. The GOP can always blame the Democrats for accumulating the debt. The Democrats can always call our attention to the fact that Republicans aren't really serious about paying it off because they're talking about lower taxes.

The fact remains that we can't talk that debt out of existence. Sooner or later, one way or another, this money and the interest we pay on this money is going to come out of the taxpayers' pockets.

We also have the question of tax reduction and inflation. Prices are still rising. Looking at the situation objectively, it seems reasonable to support a policy of higher taxation in times of inflation and tax reduction in periods of deflation.

And, lastly, a good many people didn't think the tax-reduction plan which the President vetoed was a very good plan anyway. Critics of the plan maintained that the 30-percent tax reduction for the little fellow wasn't going to work out as well as it sounded. He would actually get an increase in his net income of only 7 percent at the outside.

It was pointed out likewise that the 10.5 percent tax reduction for the big-money incomes was far from being the small and innocent figure that it sounds like. Some men who received tax reductions of only 10.5 percent would nevertheless be getting increases up to 46 percent in their net incomes.

These arguments, of course, were countered by the reasoning that men in the upper brackets have been vastly overtaxed for many years and that this plan would restore them money which is at present being taken away by completely unfair and arbitrary taxation. It is also pointed out that the present high tax rate on large incomes sends money into the national Treasury which would much better be invested in the creation and expansion of American business enterprise, thus creating jobs and contributing to national wealth and prosperity.

It seems a little doubtful, however, if either one of these arguments fully offsets the other. For this reason a better plan might be one which would give all taxpayers a more or less uniform percentage increase in net income.

With the presence of both inflation and new needs for Government spending, tax reduction is a questionable measure. It becomes even more questionable when the plan proposed would not appeal to the majority of the taxpayers as a fair and equitable one. A better tax-reduction plan may be possible at a later date, when and if we can really see our way clear to tax reduction at all.

Congress Must Act on Resource Conservation

EXTENSION OF REMARKS
OF
HON. HENDERSON H. CARSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. CARSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the February 1947 issue of Sports Afield:

CONGRESS MUST ACT ON RESOURCE CONSERVATION

With the exigencies of the war past, the Eightieth Congress must now concern itself with rehabilitation and restoration of the vast damage done to our natural resources. It is committed through the public statements of its leaders to a program of economy. Will it be dollar wise and resource foolish? The budgets of the various governmental agencies may expect to feel the sweeping strokes of scalpel-edged pens as the lawmakers exercise their constitutional power. In such assiduous effort, let reason rise above the expediency of the moment, and may wisdom and vision consider the future to strengthen that on which the life of this Nation will depend.

Were it not for the greatness of our natural resources, the fertility of our soil, the wealth of our minerals, the storehouses of our forests and the bounty of our waters, this Nation and this Congress might not exist today. And as these resources, once thought boundless, racingly continue to disappear into the greedy maw of ill-considered use and short-sighted waste that cares not for the morrow, the Congresses of the future will need not be concerned with the saving of dollars. Like the poverty of other nations who lived too freely on their natural resources of piercing problem will become the sustenance of life itself.

As the exact appearance of a stellar body which science predicts to the moment a century hence, the signs by which the course is charted are evident. It cannot happen here must also be the scoffer's echo to the dry winds parching sands across the once great richness of civilization's forgotten, dust buried ruins. While it considers ponderously the immediate problems of this Nation, and orators dream of the golden age of the atom, the specter of decline stalks with greater strides to gain quality on resource waste, to gain stature on puny restoration plans.

We can already count on the fingers of one hand the years of supply left for certain of our minerals. Our depleted forests are moving to the mills faster than nature can produce its crop, while insistent voices cry for more. Our rivers are so polluted that industry begins to find it cannot use their waters. And with water tables falling, nearly one-third of this Nation, including the Congress must drink that which has been flushed through at least one bathroom while science taxes its knowledge to restrain disease from moving nearer to human lips.

In the next 2 years that Congress meets, it is estimated that 4,000,000,000 tons of life-sustaining top soil from an already too thin surface will muddy American rivers on its way to total loss. Since the First Congress met, one-half of the fertile top soil of this Nation has been lost, and millions of acres of land abandoned as useless to food production while we now stand on the brink of our last frontier.

Will this Congress prove itself wise enough to pause for the treatment of symptoms and courageous enough to seek for the cure of causes? Will it continue to spend billions of dollars to dredge American farms from the bottom of rivers and harbors, to spend billions to build vast impoundments that will defeat their own purpose through siltation? Will they begin to refute spectacular political expediency that pours concrete against already formed flood waters to begin more consideration for the restoration of the watersheds on whose bosom the floods are borne? Congress may legislate the laws for human behavior, but it cannot veto the laws of nature.

It is not presumptuous for these words to appear on the pages of an outdoor publication. The 17,000,000 sportsmen of this Nation, whose numbers are growing, are awakened to the urgent need for resource conservation and restoration through their love of the outdoors and their concern for their recreation.

By their consistent loss of outdoor opportunities, they see first hand the infallible signs of resource waste and depletion. The polluted water does not sustain fish, and the wasted soil, the barren forest land does not sustain wildlife. These are barometers for human life, which also depends on the basic resources. We are selfish to fight for the restoration of soil, water and forests for its proven direct benefits to fish, wildlife and for the constant improvement of our fishing and hunting. But in a larger sense, it is the pioneer fight to protect existence of all life.

The time is urgently here to plan for a vigorous and implemented conservation policy. The Congress must awaken to the vast restoration needs.

Governor Stassen, Governor Dewey, and the New York Communists

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. DEVITT. Mr. Speaker, on yesterday our colleague the gentleman from Montana [Mr. MANSFIELD] voiced sincere and strenuous objection to a recent statement of Governor Dewey offering to give Montana 50,000 New York Communists to add to its population. Although it would appear that Governor Dewey was probably speaking in a facetious vein, I can well appreciate the indignation felt by the gentleman from Montana. Neither Montana nor any other State in the Union should be designated as a depository for unwanted New York Communists. New York should take care of its own Reds.

Former Governor Stassen, of Minnesota, is responsible for pointing up the

necessity for taking some immediate action with reference to our American Communists, most of whom are in the State of New York. In an address broadcast over the National Broadcasting Co. on July 14, 1947, Governor Stassen pointed out that New York is the center of Communist activity in the United States. Mr. Stassen stated that Government records reflected the fact that 40 percent of the known Communist members of the United States are in New York, and that most of the serious inroads into organized labor by the Communist Party have taken place there.

Governor Stassen recommended 12 specific steps to be taken as the most effective way of clearing communistic infiltration in this country. He especially urged a vigorous, coordinated, comprehensive, and bipartisan program developed and put into effect through the cooperation of the President and the Attorney General of the United States, the Governor, and the attorney general of the State of New York, the mayor and the prosecutor of the city of New York.

Since Governor Stassen's talk is probably responsible for initiating the exchange of comments between Governor Dewey and Representative MANSFIELD, I think it would be fitting if we examined Governor Stassen's proposed solution to the Communist problem in New York and in the United States. During his tenure as Governor of the State of Minnesota, Mr. Stassen was eminently successful in driving the Reds and fellow travelers out of Minnesota. His recommendations are deserving of our consideration. The talk referred to follows:

ADDRESS OF HAROLD E. STASSEN OVER THE NATIONAL BROADCASTING SYSTEM, WASHINGTON, D. C., JULY 14, 1947

AMERICA VERSUS COMMUNISM IN ONE WORLD

Good evening fellow citizens, today in Paris 16 of the nations of Europe are meeting at an economic conference. Eight of the nations of Europe, all located on Russia's doorstep, turned down the invitation to the conference. Russia rejected the request of England and France that she join in calling the conference.

Obviously this development is of major and grave postwar significance. The conference is being held as a direct result of an address by Secretary of State Marshall on June 6 at Harvard University. He stated that America would continue to assist in rebuilding Europe but that Europe itself must get together and agree on a plan, including their own self-help, and present a proposal and statement of needs to the United States.

The split is there because of Russia's refusal to join in such a proposal. As a result it is more clear than ever today that there will be a continuing major competition and clash of economic systems and of ideologies between Russia and the United States. It is the greatest competition of systems of all history. It is of basic importance that we recognize this fact and that we seek to understand just what it means. The hope of mankind is that a decision may be reached on a basis of a competition of economic systems and of ideas and not through a resort to force.

I have abiding faith in the rightness and the strength of the fundamental concepts of our American system with individual freedom of men and women, economic freedom as well as social and civil and religious freedom, and with respect for the individual dignity of a human being.

I have deep confidence in our modern American capitalism and in our representative form of government of free citizens as together constituting an excellent system to give expression to these basic concepts.

But I can also understand, at least partially, from the history of Russia and her czars and her revolutions and from the nature of her present form of government and economic system, why the rulers of Russia do not now share that faith and that confidence.

I do not believe that there will be a major change in Russian policy for the better until the members of the all-powerful Politburo, including Generalissimo Stalin, become convinced of two things: First, that notwithstanding the strains of war and postwar conditions, our economic system can continue to function with high production and high standards of living and without a major economic crash and devastating depression; and second, that the Communist Party cannot successfully infiltrate and dominate or sabotage this country or any other one of the major powers of the world.

If they become convinced of these two things, both of which I am confident are true; and if at the time they reach that decision America is strong and resolute in its military position; then there is grounds for hope of a major favorable change in Russian policies; and her friendly, vigorous people, who want peace as badly as any of us do, will then take their place in sharing constructive leadership in a peaceful, progressing world.

On the basis of this analysis there are three fundamental developments of our American policy I urge tonight. First: That we move promptly and effectively to assure the success of the European program developed at Paris. Second, that we do not abandon the eight nations of Europe who did not accept the Paris conference invitations. Third, that we proceed promptly with an intelligent, coordinated program, to clear up Communist infiltration in the United States.

Clearly our first priority now must be the success of the economic group that is being formed in Paris. It is good news for us and for the world that the Administration is moving in the direction of a continued helping hand in the rebuilding of this war-torn area. It was dark news when statements were made in early May that no more was to be done this year. It was bright news when the indication of the change of policy came forth in June. Action is urgently needed for their future and for ours before another grim winter sets in over Europe.

Speed is essential. The administration should confer with the leaders of both parties in Congress to see whether preliminary authorization cannot be given to an appropriate agency of the Government to place advance orders for the articles that will be critically needed. Our American manufacturers can then expand their production of these items, such as coal-mining machinery and equipment, farm implements, hydroelectric installations, and transportation facilities. Authorization to place a half-billion-dollar order for this type of equipment, extended before this session of Congress ends, can make a major difference in the success of the economic program being developed in Paris, and can also ease the ultimate strain on the American economy, which is home base for the success of our entire future. If these orders are not placed early, later when the plans are finally complete sudden heavy orders will place a sharp burden on already crowded manufacturing facilities in America, without proper time for expansion, will increase our shortages of these same items and will delay the reconstruction of Europe. The actual delivery of these supplies should properly await the deliberated major congressional decision, probably at a special session in the fall, after the European plan is presented. But a beginning now on our production-for-peace program is of major importance.

It is my view that the majority of the peoples of every other nation of the world prefer to move in the direction of a system of individual freedom and human dignity, and yearn for opportunities and means and methods to do so. The peoples of Finland and Poland and Czechoslovakia and Yugoslavia and Rumania and Hungary and Bulgaria and Albania do not want to turn away from us, do not want to turn further and further away from individual freedom. But is it not equally clear that these small nations located as they are cannot defy Russia? It would be a major world tragedy if because of our request for a joint European program, and the declining of invitations by these countries, it would be interpreted now that we abandoned them. The reply that the division was actually caused by Russia's refusal to join and by her insistence that these countries decline, is not a sufficient excuse. Clearly the peoples of these eight nations did not cause the decision by Russia. If our original proposal took this particular form to cause Russia to show her hand, that has been accomplished, and we should now continue our economic program with due humanitarian regard for all the peoples of the world.

We should also keep in mind that the economies of these eight countries are not entirely socialized and collectivized, the land is still peasant-owned, the merchants are nearly all individual operators and not state-possessed, and the people do not wish to move toward a complete, socialized, regimented economy, and if these peoples do not move further in the regimented direction, the ultimate working out of our world economic and ideological relationships will be easier to attain.

I consider it to be imperative in this world-wide competition of ideas and economic systems that we immediately make it clear that we do not turn our backs to these eight countries, that we do not foreclose the probability, under proper conditions, of extending to them desperately needed economic assistance.

The conditions of such aid clearly must include that the press and radio be able to report to the outside world without censorship what is happening within the country, that the assistance should reach the people for the purposes for which it is intended, that it should not be used to decrease their individual freedom or to clamp down additional socialization upon them, and that the people should be given the facts of the aid program.

As one specific example, the peasant farmers of Poland desperately need farm machinery. Their own was almost entirely destroyed or taken away as the grim tides of war swept their homelands over and over and over again. These peasant farmers are on their own farms. They are not collectivized. Europe desperately needs the food they could raise. If their Government will agree that the farm equipment we would send them would go to the peasants themselves and would not be held by the Government as a lever for collectivizing their agriculture, if they would agree that our press could report without censorship the developments, and that they would announce to the people the amount of aid delivered then I would be in favor of granting aid in farm machinery to Poland.

We must ever make it clear that we are not narrow or selfish or bigoted, that we sincerely desire the advancement of mankind, that we want others to share the freedom and the plenty that we enjoy, and that we believe that the best way for them to so share is to be set free within their own countries to work and to trade, to manage and invest,

to speak and to assemble, to vote and to worship.

We should constantly make it equally clear that to attain these objectives they do not need now or ever to subjugate themselves to us, that we believe basically that men should be free, that they should not be slaves to other men either within or without their own borders.

As the third phase of our prompt action, I consider it to be imperative that we do develop and place into effect a well-thought out, effective program, to not only decrease the infiltration of communism in America, but also to make it very clear to Russia that this infiltration cannot succeed. If we permit the Politburo to miscalculate the extent of the effectiveness of Communist infiltration in America, this could be almost as serious to future world developments as an actual dangerous infiltration. With their very limited numbers Communists have already caused a disproportionate disruption in labor relations and in false propaganda within our country.

The center of Communist activity in the United States is New York. This is the location of their publication, the Communist Daily Worker. It is their headquarters. It has been revealed that it was the scene of the activities of Gerhart Eisler, recently convicted key Communist. Known facts that have been reported show that a disproportionately high percentage of the known paid membership of the Communist Party is in New York. In fact, according to official Government reports, 40 percent of the known enrolled Communist members of the entire United States are in New York. Most of the serious inroads in organized labor by the Communist Party stems from New York. It should be recognized, of course, that the fact that New York is a news and communication and trade center and a gateway from and to Europe has made it especially attractive for concentrated effort by the Communists.

Needed, and needed badly, is a vigorous, coordinated, and comprehensive bipartisan program developed and put into effect through the cooperation of the President and the Attorney General of the United States, the Governor and the attorney general of the State of New York, the mayor and the prosecutor of the city of New York, to clear up this center of Communist activity.

I suggest these 12 specific steps as the most effective way of clearing Communist infiltration:

1. Expose thoroughly the identity of all known Communists and fellow travelers. Give the exact evidence of their connection. Some of the press have made an excellent start.

2. Insist that they stand up and be counted and speak out in their genuine capacity, that they do not hide behind false fronts, false names, or false issues.

3. Prosecute them vigorously for their violations of law with the effective cooperation of Federal, State, and local governments, making certain that the people understand the nature of the violations so that they are not made martyrs.

4. Have basic faith in the American working people and keep them fully informed of the facts.

5. Meet squarely through frank discussion on the merits, the issues the Communists raise.

6. Move continually to correct deficiencies, maladjustments, or evils which they point out in our American social, economic, or political rights.

7. Expose the unsound and disruptive proposals that they make.

8. Urge our fellow citizens to refuse to associate with them in organizations, insisting that they either be expelled to form organizations of their own, or else the citizens who do not wish to follow their line withdraw and label the organization as a definite front.

9. Do not lightly use the charge of "Communist" against anyone unless we are certain of the evidence, then present the evidence with the charge.

10. None of them should be permitted on public pay rolls—Federal, State, or local.

11. See to it that the members of labor organizations have a chance to vote by secret ballot on their own officers so that the workers can themselves remove union officers who are exposed and proven to be Communists.

12. Take all these actions with complete respect for civil liberties and for legal rights.

By this approach I am confident that not only the influence of Communists in America would be sharply decreased but it will also soon become evident to the members of the Politburo in Russia that Communists cannot successfully infiltrate or subvert or sabotage the American political or economic system.

I am confident of the effectiveness of this 12-point approach because it worked in Minnesota. In 1937 and 1938 Minnesota had one of the centers of Communist activity in the United States. Minnesota then had more than its share of labor violence due in part to their influence A third political party captured State control and Communist fellow travelers moved into key positions. Our Republican Party took a direct position in the first campaign of November 1938 that we would clear them out, would not permit them on public pay rolls, and constructively would seek the cooperation of the working people to decrease their influence in organized labor. With the cooperation of Federal and local Governments we were able to make a sharp change in their whole disruptive practices in labor and in political and social events. The third political party was defeated and eliminated. Within a few years, with the active assistance of the loyal organized labor men of the State and of an alert citizenry, the situation was greatly improved and now for years Minnesota has had less than her share of the national Communist difficulties.

I emphasize emphatically that this program should not be approached on a basis of any hysteria and should be carried on with full recognition and respect for civil rights and liberties. But it is important, not simply because of the dangers of their activities, but because of the even greater dangers in the world situation if we do not make it clear to the Politburo in Russia that Communists cannot successfully infiltrate in America.

I emphasize these major developments of our policy in the world economic field and on the domestic subversive front because I believe prompt action is needed, and I have confidence in our ability to move upon them. We must constantly keep in mind that physically and geographically and scientifically this is one world, and that while there is and there will be sharp competitions and conflicts and clashes of ideas, and of economic and social systems, the world cannot be successfully divided. If we consistently and fairly present and advocate our dynamic ideas of individual freedom and human dignity on which our America is based, then I have a sober optimism that we can win peace and plenty and freedom for ourselves and for others in the years ahead.

The House of History

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

Mr. LeFEVRE. Mr. Speaker, on last Saturday afternoon, July 19, the House of History at Kinderhook, Columbia County, N. Y., represented by me here in the Congress, was formally opened as a museum with appropriate ceremonies. Acting Gov. Joe R. Hanley spoke after which members of the county's historical society entertained in the square spacious rooms of this mansion. Red damask curtains, designed and woven by Franco Scalamandre hung at the long parlor windows again. Hostesses, wearing last century's finery from a collection in the house, served tea from a dining table made by Duncan Phyfe to guests seated on original Phyfe settees. Many fine old furniture pieces were on view for the first time.

Guests of honor at the dedication of the House of History were descendants of its several owners. Great great grandchildren of the original Vanderpoel include Mrs. Stephen C. Clark, Cooperstown, and Mrs. John W. F. Treadwell, Albany. Mrs. Frank McNamee is a great niece. Mordecai Myers, second owner, was represented by a great great grandson, Peter Van Buren Hoes. Also present were Mrs. Stuyvesant Morris, Southampton, and Martin Van Buren Morris, great great grandson of the eighth President.

The House of History will remain open as a museum for the rest of the year. Visitors are free to enjoy its picture of the past and are encouraged to use an upstairs reference library of about 2,000 volumes, most of them dealing with the county's history and personalities.

Built about 1810, this House of History reflects the great prosperity and leisure of the community around it as well as the fine American taste of the period. Barnabas Waterman, a Hudson, N. Y., architect, put it up for James Vanderpoel, who, appointed circuit judge of the supreme court 20 years later, found commuting to Albany too much for him and sold the House of History to a second owner.

Mr. Waterman managed a graceful combination of Hudson Valley and New England architecture for the outside of the house, which stands about 100 yards back from the town's main street. It is square built, with brick walls of the soft, rosy shade characteristic of only Hudson River kilns. Details over the doorways—pineapples for hospitality and eagles to reflect the coming 1812 war fever—are of delicate white iron, after the manner of bullfinch. The back door is as elegant as the front, because carriages rounded the long driveway and deposited Kinderhook society there.

Inside, four square rooms on each floor open from a center hallway. A flying staircase, smaller than average and delicately carved, climbs in an almost perfect ellipse. Mantelpieces are carved to match the woodwork over doors, and the cornice carvings of each room are individual.

Bought by the Columbia County Historical Society only after it had descended to being a two-family residence, the house has come back little by little to its present perfection. It began with a few Duncan Phyfe pieces, given by James E. Leath, the society's president, and filled in with loans of old Hudson River pieces. During the war its ground floor was used to show trophies sent home to Columbia

County families by veterans all over the world.

This year Mr. Scalamandre has specially woven and presented to the House silk damask draperies for three of its rooms. The draperies reproduce authentic fabrics of the period and were worked out in cooperation with Miss Nancy M. Clelland, whose old wallpapers make part of the restoration.

In the formal parlor two cane-seated settees made by Duncan Phyfe now flank the carved white mantelpiece. Red silk damask draperies looped up at the windows are inspired by an old letter describing a party given in the room. Among its other treasures are globes, made by E. Wilson, the country's first globetrotter.

The dining room holds a Duncan Phyfe mahogany table with matching chairs. Green and gold silk damask draperies are topped with new possessions of museum importance—cornices of American pine, intricately hand-carved and gilded. A dinner service made and monogrammed for Martin Van Buren, born in Kinderhook, and later President, add to the room's lived-in look.

A smaller room on the main floor has its walls covered in shield-patterned paper and blue damask draperies to match. Here 257 old glass paperweights, composing what is said to be the world's largest collection, are on view. The earliest dates from about 1840 and the group includes many rarities, like a large one in which a green lizard is carved.

Upstairs a front bedroom is all old-time feminine charm, with mauve and white wallpaper and white embroidered Swiss muslin curtains. Big carved four-poster bed and dressing table are by Duncan Phyfe.

Immigration

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. MILLER of Nebraska. Mr. Speaker, I am still greatly concerned about the situation in this country, in regard to immigration. I called this matter to the attention of this House on January 29, 1947, after I had made unsuccessful attempts to get information on the subject from several Government agencies concerned with the operation and enforcement of our immigration laws. Although I was unable to get a clear picture I became convinced that a veritable flood of immigrants were coming into this country legally and illegally. Since then a great deal has been said and written on the subject but I am sure we still do not know the full story nor have we taken the proper steps to stop this flood of illegal immigration. That my fears are shared by others who have the welfare of our country at stake is evidenced by the opening remarks of Paul H. Griffiths, national commander of the American Legion in his address before the Fifty-sixth Congress of the Daughters of the American Revolution in Washington on May 22. After remarking on the common interest of these two great patriotic organizations in the welfare of our country he said, "Immigration in 1947 has run amuck. It has become a lawless torrent that is undermining the very foundations of our American way of life. It is robbing the returned veterans of his opportunities. It is building up a fifth column in this country that may well be the margin by which we may meet disaster in the next war."

The strong pressure now being exerted to get the Congress to let down the bars in immigration convinces me more than ever that the Congress and the people should know the whole truth about this matter.

This country was built by immigrants from western and northern Europe and by their descendants. Their ideas of personal liberty, individual responsibility and initiative, and of government as a servant of the people rather than their master, who plans their lives and looks after their welfare, has been built into the framework of our Nation. These people spread out over this vast land, carved out its farms, cut its timber, and worked its mines. They established its great transportation systems and built its business enterprises great and small. They were animated by the desire to get ahead under the system of free enterprise. They took no stock in socialistic ideas.

When, in 1924, the people and the Congress became concerned by the changing character of our immigration and the tendency of the new arrivals to crowd into our large cities and industrial centers, the national origins provision of the Immigration Act was passed, setting up a quota system. The primary purpose is to preserve the traditions and political system of the United States by giving preference to those who, because of their characteristics and history, would be readily assimilated into our national life, customs, and views of the Government. The provision has worked fairly successfully, although immigrants continued to crowd into our cities and great industrial centers. In his able speech on this subject on July 2, the gentleman from Texas, Congressman ED GOSSETT, Democrat, a member of the Committee on the Judiciary, stated that last year less than 1 percent of the immigrants who entered legally went to the farms; at least 95 percent poured into our big and overcrowded cities.

As long ago as 1940, when our Government in the interest of national defense, required the registration of all aliens, over half of the 5,000,000 registered were resident in 7 eastern seaboard industrial States. There is little doubt that the hoard of illegal entrants have followed the same course. The census figures show that 35,000,000 of our 140,000,000 population are of recent immigration origin. The report further shows that in 6 cities of over 500,000 population only 40 percent are of native birth. In 1940, there were 1,047 foreign newspapers printed in 38 foreign languages and read by an estimated 15,000,000 foreigners. The last report shows nearly 5,000,000 aliens in the United States who have not taken steps to become citizens of this country.

There is every reason to believe that the quota provisions of the law were fairly well enforced before World War II, but every indication points to the fact that carelessness, if not downright collusion to evade it, has characterized the administration of the Immigration Act since the war began. I base the above statement on facts that have been reluctantly revealed by Government agencies when pressed by committees of Congress. In my investigation I have found much evidence of irregularities in the issuing of visas to foreigners. I am convinced that there is more than just a finger of suspicion pointing to several of our consulates and officials who have not been above bribery and other irregularities. At least two individuals have been arrested with several thousand fake passports in their possession. They of course were being sold at fancy prices to foreigners who desire to flock to this country. I am further convinced that there are several hundred thousand individuals who came to the country under the nonquota provision which has no limits and they have now overstayed their visits or official business visas. No attempt is being made to send these people home. They enter into direct business competition with their own citizens which is a direct violation of the immigration laws. Our Government agencies have been entirely too lenient under the nonquota provision of the law.

The directive issued by the Attorney General on May 2, 1939, banning the divulging of any information on immigration by any one in the Department of Justice, including United States district attorneys, the Federal Bureau of Investigation, United States marshals and Federal penal and correctional institutions without the consent of the Attorney General has had much to do with keeping the Congress and the people in the dark about what has been going on. Gradually, however, the truth is being forced out into the open. Legal immigrants entering this country per year are variously estimated at from 100,000 to 154,000. These include those who come in under the quota provisions. Nonquota persons such as husbands, wives, and children of citizens, ministers and their wives, professors and their wives and children and women who have been citizens are admitted outside the quota provisions. In addition there are great numbers who enter this country as visitors or students and manage to stay here for a long time if not permanently. In February of this year, I called the attention of the State Department to the fact that airplanes were being chartered by organized groups in this country to fly individuals into the United States from southern Europe and northern Africa. At first they denied this arrangement, but when later confronted with photostatic copies of the passenger list and manifest by Skyways International, they were forced to admit that such an arrangement for flying these

foreigners from Cairo, Egypt, and Tel Aviv existed. This is still being carried on at increased tempo.

These are a mere trickle of the people who are pouring in over our borders. The Baltimore Sun on July 19, 1946, credits Attorney General Tom Clark with the estimate that 60,000 per month are entering this country illegally. They come in over the Canadian and Mexican borders and from all the Western Hemisphere countries which are not under the quota system. The island of Puerto Rico is another gateway for illegal entry. Some are apprehended and returned but many of them hide away in our great industrial centers. The great majority of these illegal entrants can by no stretch of the imagination be considered desirable as future citizens of this country. They come here because they think this is a land of plenty and they expect to be taken care of. They bring with them their foreign ideologies and habits of acting as groups under orders of powerful leaders. These foreigners generally settle in the congested areas of our large cities. These settlements resemble foreign countries. Many of them are plague spots and are saturated with crime and undesirable individuals. These newcomers do not easily adjust or affiliate themselves into our society.

In the face of this serious situation great pressure is being brought on the Congress to further weaken our immigration laws by admitting 400,000 people in the next 4 years from the displaced persons camps in Europe. Who are these people and why should they be brought to this country? Mr. George Meader, investigator for the Mead committee, has this to say about them:

> These persons are, for the most part, penniless and do not desire to work, but expect to be cared for and complain when things are not as well done as they think they should be. Mr. Goldman, the UNRRA director of the camp, said that he had not been able to get more than 400 of the 3,000 to do any work, even fixing up their own dwelling space. When he did get any work out of them it was because of offering special inducements such as extra cigarettes.

Hearings before the committee that held hearings on the Stratton bill developed the facts that since the war over 7,000,000 displaced persons have been repatriated. Ninety percent of some 800,000 persons in some 300 displaced persons camps still under our supervision could and should have been repatriated. To be a displaced person in an American camp has long been a preferred status since the most of them have been much better fed and clothed than have others. Most of them are overweight. Seventy percent of them were not displaced before the end of the war but have displaced themselves and flocked into our camps.

While a few good people remain there the most of them are undesirables, even criminals, and black-marketeers, who have changed their names and gone from one camp to another and repeated the performance. Major General Rooks, Director General of UNRRA, in a statement appearing in the Christian Science Monitor on June 4, 1947, said that of the 7,000,000 repatriated since the end of the war, not one substantiated instance of persecution or reprisal has come to his attention. Before supporting the well organized and heavily financed drive to get these people admitted to the United States one should ponder the facts that are stated above.

If our country is to remain strong amidst the upheaval that has followed World War II it is necessary for us to give first place to our problems at home. We are faced with a serious housing shortage that is bearing hardest on our veterans. While employment has reached an all-time high in this country there are still several million unemployed. For the next few years our veterans who are now in school will be seeking jobs and we have no assurance that we are not faced with a recession if not a depression.

I believe it is time to have a full-dress investigation of this immigration muddle. Only in this way can we impress the country with the seriousness of the situation and stop the flowing illegal entry into the United States. It will focus the spotlight of law enforcement agencies in every town, city, and State and help to stop the flow of these foreign-born individuals to the United States who have ideas and ideals of human rights and human freedoms, alien, and hostile to those of America. Indeed this whole immigration problem needs close scrutiny and a thorough investigation. We cannot afford to let any undesirable individuals who have communistic tendencies and who will not make a contribution to our way of life, enter the United States.

Danger of Transportation Monopoly to Our Entire Economy

EXTENSION OF REMARKS

OF

HON. JOHN H. FOLGER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

GOOD-BY ANTITRUST LAWS

Mr. FOLGER. Mr. Speaker, there can be no question as to these bills exempting railroads, trucking companies, air lines, and other interstate carriers from prosecution under the Sherman antitrust laws.

This legislation is sought and sponsored by officials of the American Association of Railroads, abetted by other freight forwarding interests.

I guess every Member of Congress knows this. The lobbying for this bill has been notorious and complete.

From an economic point of view, this is the worst bill offered to Congress in the past 25 years. It means economic slavery, and opens wide the door to monopolies of the worst sort, with regional cartels in every business in the United States, binding hand and foot the business of the Nation. If enacted into law, we shall be at the mercy completely of the United States transportation systems: railroads, trucking companies, water carriers and pipe lines who would be authorized to agree on rates—railroads with railroads, railroads with trucking companies, water carriers with other common carriers. They could discriminate against areas and sections of the United States at will.

The antitrust laws are the bulwark of free enterprise.

They guarantee the freedom of the market place, and against the restraints and evils of monopoly, and trust agreements.

The antitrust laws insure the freedom of all men, wherever, in the United States, they may reside and engage in free private enterprise, to feel safe and be safe in these undertakings and businesses, so far as dangers of monopoly and cartels might adversely affect their legitimate activities. In the language of Theodore Roosevelt, these laws would guarantee to every one "a square deal."

To enact legislation, under any pretext, that would insulate or eliminate any one from the application of these laws, is monstrous. And yet we have, in H. R. 221, section (8), page 4, the following:

> Parties to any agreement approved by the Commission under this section (meaning section 5a (b) with subsections (1), (2), (3), (4), (5), (6), (7), (8), and (9), and other persons are, if the approval of such agreement is not prohibited by paragraph (3), (4), or (5), hereby relieved from the operation of the anti-trust laws with respect to the making of such agreement and with respect to the carrying out of such agreement, etc.

And in the Senate bill, S. 110, a little more adroitly put, the following:

> (9) No agreement approved by the Commission under this section (meaning Section 5a (b), subsections or paragraphs (1), (2), (3), (4), (5), (6), (7), and (8), and no conference or joint or concerted action pursuant to and in conformity with such agreement, as the same may be conditioned by the Commission, shall be deemed to be a contract, combination or conspiracy, or monopoly in restraint of trade or commerce within the meaning of the anti-trust laws.

And antitrust laws are aimed at, and make unlawful, contracts, combinations, conspiracy, and monopoly in restraint of trade and commerce.

By these bills, such contracts, combinations, conspiracies, and monopoly are blessed and made legal, if entered into or carried on by transportation companies.

Why should one ask to be relieved from the operation or application of laws against monopolies and conspiracies in restraint of trade and commerce? Why should such a request be granted?

This is a dangerous bill. It ought never to pass.

Business and free competitive enterprise have the right to be protected by law against monopolies, trusts, conspiracies, and combinations by carriers or anybody else.

I am not willing to make these things lawful on approval by any person or body of persons, agency or commission or bureau.

The transportation systems constitute America's biggest business; and this system—transportation—substantially controls every other business.

Already discrimination in freight rates has made or retarded business in different sections of the United States. Under this area discrimination some have thrived and grown great, while those in other sections have suffered and dwindled away; or in more instances have been unable to proceed at all.

Why this haste in passing this far-reaching legislation, whittling away the Sherman antitrust law and the Clayton Act? And this at the spot most vital to business and enterprise throughout the country.

Railroads have already been found guilty of these violations of fair play, even though we have all along had standing by the Interstate Commerce Commission. This is not particularly an indictment of the Commission or its personnel; but shows the impossibility of their exercising control over the transportation system of the country; and the necessity of retaining our antitrust laws, applicable to them as fully as to any.

Through the device of a hierarchy of associations, headed by the Association of American Railroads, the transportation monopoly in combination with monopolies in other basic industries, such as steel and oil, has so fixed transportation charges as to maintain the industrial status quo and stifle free enterprise and competitive business, resulting in monopoly practices and prices to the exclusion or suppression of fair competition, attended by high prices to the consumer.

Resort to the antitrust laws has been and will continue to be the only forum for redress or correction of these evils.

The arbitrary rail rate structure established by the illicit monopoly has prevented the southern and western regions from developing industries.

To concentrate these industries makes for unjustified long hauls, stifles the growth of industries, and unreasonably concentrates population, to the over-all detriment of the Nation. The bill would legalize and perpetuate the coercive power and control by the railroad association of all transportation.

Section 5 of the House bill is an illusion—a snare. It feigns a provision that the Commission shall not approve any agreement establishing a procedure for determination of any matter through joint consideration, unless it finds that under the agreement, opportunity to act contrary to the determination arrived at through such procedure is afforded to each party to the agreement which did not concur in the determination.

What could a small or one large road, or truck line, or water carrier do independently of a determination made by the association? Nothing. Freight that originated on one of these carriers could not move over lines within the association. They just would not get any interstate business.

Competition between the various forms of transportation—railroads, trucks, barge lines, pipe lines, has been effectively curtailed through joint action between the organizations of these various modes of transportation, which have agreed and conspired, successfully, to raise the level of rates in each form to the highest point. This notwithstanding the fact that the Interstate Commerce Commission has been existent.

The proposed legislation would facilitate the strengthening of these combinations in each mode of transportation as amongst the several forms, and as well between and within the various forms with each other.

This legislation would make lawful all such combinations intra and inter the various modes of transportation.

Section 11 of S. 110 would approve whatever may be the judgment of the Supreme Court in Georgia against Pennsylvania Railroad Co. and others, but only so far as any announced principle relates to the parties to that suit.

This may help some—but, even so, not much—only the parties to that particular action.

The bills comprehend agreements to fix rates, to limit services, to control the construction and utilization of equipment and facilities and other matters connected with the transportation industry. It excludes nothing from the conspiracy, made lawful, but pooling, division, consolidation, merger, purchase, lease, acquisition.

Under specific provisions of both bills, the transportation industry could set up and perpetuate a private government which would have the power, through combination and concerted action, to control rates, facilities, and all else affecting transportation in every form, in every part of the United States, limited nowhere, except possibly as any such combination might relate to the parties in the Georgia case and there restricted very little.

The immediate origin of this legislation was likely the exigencies of World War II, when the Government was the principal shipper, in an emergency, and such legislation was only defensible to meet the temporary emergency situation.

Now it has been seized upon as a permanent machinery for the control of transportation rates by the transportation companies, acting in concert to the lasting detriment of the public. It ought not to be allowed.

The phrase "agreement between two or more carriers concerning or providing rules, and so forth, for consideration, initiation or establishment of rates, fares, charges, including charges among or between carriers, classification divisions, and so forth, or the promotion of adequacy, economy, or efficiency of operation," is so broad as to authorize agreements, combinations, conspiracies, and concerted action comprehending every phase and activity of the transportation field. It could hardly be broader. The shipper will have no recourse in law.

Now, the antitrust laws apply to "protect independence of action by individual carriers, and to preserve the area of competition within the zone of reasonableness."

Enact into law either of these bills and that public protection is gone.

As the law is, the several carriers are in competition for business; they may, within the zone of reasonableness, acquire business by the adjustment of rates and fares so as to retain the desired traffic for their own lines; but under this proposed law, these charges are fixed by combined agreements, and no one of them would dare breach such agreement, or even refuse to enter into it.

The power to fix rates, and so forth, is not vested in the Interstate Commerce Commission now, but it is in the power of this Commission to say whether rates and fares of carriers are within the zone of reasonableness.

Our antitrust laws say they shall not be fixed by concerted action, in restraint of trade or commerce.

The power to fix each rate is too vast and complicated to be exercised in detail by a responsible agency or regulatory body. The several carriers, individually, may prepare their schedule of rates, charges, and fares, and submit these to the Commission for approval or modification.

But to grant the carriers the power to get together some dark night and agree on fares, rates, charges, and everything pertaining to transportation, including all forms of transportation, is bestowing on them the control of the entire economy of this Nation, affecting every man, woman, and child in it, and those unborn.

To say this vast, complicated machinery is subject to the approval of the Commission is mockery and without force or assurance.

Not even 10 Solomons in all their wisdom could do such a job.

The Commission can operate in single cases, and within the zone of reasonableness to each; if fortified by our antitrust laws against combinations in restraint of trade.

Please do not allow this legislation. It is bad. It menaces, not only areas and sections, but the entire Nation.

Separate Peace Treaty With Germany and Japan

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, July 23 (legislative day of Wednesday, July 16), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the RECORD a digest of a debate on the subject Should the United States Make Separate Peace Treaties With Germany and Japan? which was broadcast on CBS People's Platform on June 1, and in which I participated.

There being no objection, the debate was ordered to be printed in the RECORD, as follows:

SHOULD THE UNITED STATES MAKE SEPARATE PEACE TREATIES WITH GERMANY AND JAPAN?

(Senator ELBERT D. THOMAS (Democrat), of Utah, a ranking member of the Senate Foreign Relations Committee, and James Burnham, professor of philosophy, New York University, debated on a CBS People's Platform, June 1.)

Senator THOMAS. The United States is legally bound not to make a separate peace

with Japan or Germany. On January 1, 1942, the United States joined with the other principal allied and associated powers in the United Nations declaration, by the provisions of which each government pledged itself to cooperate with the governments signatory thereto and not to make a separate armistice or peace with the enemy. Certainly, this obligation cannot lightly be brushed aside, and it would seem to me that it would be difficult to justify a separate peace, unless we had exhausted every effort to negotiate satisfactory terms with Russia and other Allied and associated powers. We made a separate peace with Germany after the last war, but only after Germany had made peace with all the other countries that fought her and only after Germany had a government that could negotiate such a peace.

Mr. BURNHAM. But don't you think that before going too exhaustively into the legal side of it, we ought also to look at the facts? First of all, we're in the ridiculous position of paying heavy reparations to the nations that we have defeated; second, we are keeping Japan and Germany in a situation where they are plague spots, infecting the entire world. Japan and Germany, in a healthy condition, are essential to the health of the world, and it should be our aim to make them so; and third, we are allowing the Soviet Union to carry on its policy of sabotaging all of the world which it does not control. If we don't take the leadership and responsibility for stopping that, far from bringing about a situation that will be in accord with the United Nations declarations, we'll let the world go to pieces. I've always understood it to be a legal principle that when one party to a contract violates its provisions, not in some minor way, but in the major way in which the Soviet Union has broken all of its contract and treaty provisions during these past several years, then that contract becomes null and void.

Senator THOMAS. The trouble with that is that there are more than just the United States and Russia parties to a contract. Assume that we made a separate treaty with Germany or with Japan, what about the condition of the rest of the world? The rest of the world hasn't made peace with either country. Therefore it becomes necessary for us to sustain what agreement we've made with Germany and Japan, and that puts us more than ever against the whole world in sustaining two new governments.

Mr. BURNHAM. But the question is not our going alone, but our willingness to take the leadership. Now, take Japan, for example. I'm convinced that if once we gave the word, the British Dominions, France, and China, who are the main other parties concerned, would be only too glad to go ahead with us.

Senator THOMAS. Yes, that may be true, but see what happens to your world organization, the United Nations. You're back again into a bloc system. You're back exactly where we were after we organized the League of Nations and the United States refused to go along.

To judge from the standpoint of history and the speed with which we move on now the United Nations is not doing very badly; Japan is not doing very badly, when you realize that she was a completely crushed nation in a war which she herself brought on herself, and Germany herself is not doing badly. It seems to me that if you read the charges against the German war criminals and find that practically every charge ends up with the breaking of a covenant, the breaking of a treaty, and that Russia, the United States and other nations were represented on the court that tried those men, the worst moral stab we could give to the whole world would be to forget our pledged word.

Mr. BURNHAM. But the problem is not the question of breaking a treaty. The Soviet Union has already broken every treaty of importance in which she is engaged, including the Potsdam Conference agreement, which is supposed to cover the German question. Now, Germany at the present moment is living at the lowest economic level conceivable, lower than even after the last war. I'm basing myself here in part on the figure which the Hoover committee has presented in its formal reports to the President. Furthermore, it isn't a question of whether we like the Germans or whether we think they deserve to starve or not. The problem is that they now have become a plague spot that infects the rest of the world.

Senator THOMAS. By making a separate peace, you merely bring conflict into the picture.

Mr. BURNHAM. The conflict already exists. The Soviet Union already goes ahead with its own policy in eastern Germany; it's integrating it into its own territory. It's enlisting the Nazis into the Communist Party. It's using the German factories to build up Soviet war potential. Instead of that, it seems to me, we've got to begin with what we have. We've got to get together with England and with France, integrate the remaining zones of Germany; permit the Germans to work for the well-being of Europe.

Senator THOMAS. Accept your own thesis—make a separate peace with Germany. Are we going to make a peace with Russia's Germany separately?

Mr. BURNHAM. We will have to begin with what we have.

Senator THOMAS. In other words, we've got to drive Russia out of Germany. Is that your proposition? That isn't making a separate peace; that's starting another war.

Mr. BURNHAM. But you cannot be in favor of the present policy we are following in Germany. That policy is independent of Russia. It isn't a question of being against Russia; it's a question of whether we allow Russia to be a millstone around our neck.

Senator THOMAS. If one believes in the concept of one world, he cannot fail to agree that the making of a peace is decidedly a joint enterprise. If we were to conclude a separate peace now, it would be an admission of failure, a recognition that all hope for peace through collective security and cooperative action has been lost. While we may reach that point eventually, surely we do not want to admit failure until we have exhausted every effort.

Mr. BURNHAM. But no one is proposing—Mr. Hoover hasn't proposed and certainly I would never propose—to make peace next week or the week after next with Germany. The problem is the direction that we are to take—whether we are to take an independent direction, together with our friends in the democracies, in the British Dominions, France, and England; whether we are to go ahead without waiting to find out whether Russia is going to sabotage further, as she sabotaged consistently for the past 2 years; whether we are going to try to build up Germany in a way that would guarantee that it could never again be a military menace, but at the same time can integrate itself into the well-being of the rest of the world? In my own opinion, this policy should be adopted in such a way as to look forward to a United States of Europe, a Europe united both economically and politically.

Senator THOMAS. Now you're getting right around to my own camping ground. I have a resolution with Senator FULBRIGHT before the Senate of the United States calling for the creation of a United States of Europe. I've been standing for that ever since the days of Briand.

Mr. BURNHAM. I certainly agree with you a hundred percent on that resolution and I hope it's going to come to discussion.

Senator THOMAS. We can go ahead with that, but not if we break promises, because you cannot build up any respect for a United States of Europe if, for instance, we forget our pledged word in every other part of the world.

Mr. BURNHAM. Well, it seems to me that, not only with reference to the United States of Europe, but with reference to the goal of a world government, you and I are completely in accord. Our debate really is on how to get there. How long are we going to wait for the Soviet Union to build up its own Fortress Eurasia as a bastion from which it plans to attack the rest of the world? How long for it to sabotage all the world outside of the iron curtain—to prevent recovery in Germany, to use its Communist Party, perhaps before the end of the year, to try a coup to take power in France, to use it to prevent anything getting done in Italy, to use it throughout South America to carry on anti-United States propaganda there, to refuse to come to any agreement in any conference since the war, unless that agreement is entirely on its terms? Are we going to wait till the November conference of this year and then a conference a year from that November and 2 years from that November—meanwhile, the world steadily going downward, perhaps into a catastrophic economic depression and perhaps into the opening stage of a new war?

Senator THOMAS. Russia has got to reform herself, unless she is completely immobilized or completely destroyed by war. Now, it seems to me that the best thing is to take the study of Russian history and see how much progress she's really made and then see how we're coming along. I surely don't want to stand in favor of the single-will state anywhere in the world; I do not like communism, but I do like to deal fairly with people, and I think if the United States remains in its great moral sphere and leads the world, she will gather support from all sides to such a place that you'll find Russia coming along in due time. That is slow, but that's the only way in which the world has ever been changed, and it's the only way in which the world can ever be changed in a lasting way. Let's put our faith in morals first—and Russia will come along, you'll see.

Mr. BURNHAM. But you can't divorce faith and morals from facts.

Senator THOMAS. Let's try in some constructive way to build up the economy of the world and the political sensibilities of the world. Let's not suggest, the minute discouragement comes in, to turn our backs on all the promises we made.

Mr. BURNHAM. How are you going to rebuild the economy of Europe without getting the German economy to work—not to work just to raise the level of the German people to a luxurious standard, but to work for Europe as a whole and thereby for the world as a whole? In considering a separate treaty with Japan, I think the situation is far more developed in Asia than in Europe. In the case of Japan, you now have a functioning government. You now have a reasonable development along the lines that we had planned from the beginning, in introducing a number of democratic reforms and achieving some stability, in beginning to get the Japanese people back to work. You do not have any underground in Japan. So far, the problem of the Communist Party there has been handled admirably by MacArthur. At the same time, the Japanese food supply is insufficient to feed its people. Moreover, the industry is operating at only a small percentage of its potential capacity. The export industry of Japan is working only at about 3 percent of the prewar level. For the sake of Asia, for the sake of the American taxpayer, to eliminate the drain of more than a half a billion dollars, it seems to me we have to make up our minds and let the Japanese people know what they can expect; again, preserving military guaranties, making sure that we retain a position in which we will be able to guide Japan from now on, we ought to let them know, so that they could

get back to work, so that they could reestablish their export industry, so that they could aid in building up China and the entire Pacific area.

Senator THOMAS. Now you're talking along the right direction. A separate peace with Japan, though, would certainly not give Japan the things she needs in the way of a permanent peace settlement. It would not end the state of war between Japan and the countries other than the United States. It would not make Japan's entry into the United Nations possible. It would not result in any effective boundary settlements, nor would it result in a satisfactory solution of the reparations problem or the demilitarization of Japan.

Mr. BURNHAM. But there are already indications that China, France, England, and the British Dominions are quite prepared to go along with a Japanese settlement.

Senator THOMAS. That's fine—and we want to do it under United States auspices. But the United States and Japan cannot, by any stretch of the imagination, make a peace that will mean very much to anybody except the United States and Japan.

Mr. BURNHAM. Why not, if France, England, Australia, and the other Dominions come in with it?

Senator THOMAS. Are you going to ask France, England, Australia, and the other Dominion countries to break their word in the United Nations Covenant? Don't you want to build up respect for it?

Mr. BURNHAM. Precisely. And the only way to build up respect for it is to show people that we can really build up a democratic world order, where people can be free, free politically, free to do the world's work and to build up the world's economy. No one has proposed that the United States in and by itself tomorrow sign a peace or impose a peace on Japan and Germany. What is proposed here, what I understand to be proposed, is that the democratic nations of the world, the United States and its friends, under the leadership of the United States, with the United States accepting responsibility for that leadership, as it must, because of its power, go ahead and make the world start to function again—that they stop the sabotage of the world by the Soviet Union's unilateral policy, that they stop the absurd economic policy that prevents the recovery of Europe, not only in Germany, but in France, in Italy, in England, and everywhere else that is going to drag us into another depression within a year or two, if the world doesn't get back to something like normalcy.

Senator THOMAS. That is not the proposition that was laid down at all. The question was: Shall we make a separate peace with Japan and Germany? And I can only discuss that question. I'd like a world quite different from the one in which it is.

Mr. BURNHAM. How are you going to get it then? So far, you've made no concrete proposals whatsoever, except living up to an outworn and violated treaty, in 1942. It seems to me it would take more than that to make the world work. You have to get the industries going; you have to get countries removed from this terrible pall of fear that is over them now; you have to be willing to take the responsibility of the power that we have; you have to reestablish export and import trade throughout the world.

Senator THOMAS. I'm willing to do all those things. I'm willing to go ahead, under American leadership, and carry on with every nation in the world that is willing to carry on, build them up under a system of dollar democracy, if you want to use that term. I'm perfectly happy to try the Truman experiment in Greece and I'm perfectly happy to make loans to Italy, but I will not under any circumstances agree to any kind of a scheme which will cause the United States to break its pledged word to the world.

Mr. BURNHAM. It seems to me that this empty ideal of a pledged word, which has already been upset by the events of history, which has been negated by the actions of the major other party to the contract, is now merely a millstone around our neck, which, if we do not shake it off and get rid of it and adopt an independent course, is going to drag us and the world along with us, down to the bottom. It's time for the United States to see what its responsibility is, to be ready to act. That is what the people of the world are waiting for—not only the people outside of the iron curtain, but the people already inside it. And once they are convinced that the United States is ready to move under its own steam, to take that leadership openly, we will find that the democratic peoples of the entire world and the peoples now oppressed within the nondemocratic parts of the world, will come along with us and build a genuine democratic world order.

False Economy

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I desire to include in the RECORD an editorial which appeared in the Illinois State Journal, Springfield, Ill., on July 16, 1947. This editorial well describes the folly of false economy.

OUTRAGEOUS FALSE ECONOMY

Congress should take heed of facts herein set forth. They relate to what is termed governmental economy, but which makes the United States Government a party to tax evasion and the perpetrator of an outrage.

In the Springfield-Peoria, or eighth United States revenue collection district, 62 thoroughly trained, efficient field deputies have been dropped from the employment rolls.

Because of inadequate appropriations these essential employees have been removed from office to save their relatively small salaries.

This same form of economy is being carried out not only here but in other districts. It is vitally important, therefore, that Congress heed this exhortation to examine the facts.

In this district alone, the 62 employees dismissed from their position have a record of delinquent-tax collections during the last year of $2,306,170

Those are astounding figures, and they are official.

In other words, that production of delinquent taxes by those small-salaried men who collected an average of approximately $40,000 in delinquent taxes last year per man, has suddenly been suspended.

Some men on the list of discharged employees accounted for collection of delinquent taxes in the sums far in excess of $100,000 each per annum.

Not only that, but the field organization in this collection district is disrupted and the Treasury Department's policy of equalized taxation is temporarily abrogated.

Under this peremptory order of false economy not only is tax evasion encouraged, but the burden of taxation which tax evaders should be compelled to share, is placed entirely upon the shoulders of honest taxpayers.

Furthermore, those underpaid and overworked, thoroughly efficient, conscientious employees have devoted liberally of their time giving assistance to taxpayers in preparation of returns. Curtailment of the force involves proportionate curtailment not only of delinquent-tax collections, but of courteous and capable assistance to taxpayers.

The State Register makes these revelations after careful inquiry. Facts and figures here given are respectfully but forcefully called to the attention of Members of both Houses of Congress and more particularly to the Senators and Congressmen from Illinois.

The outrageous false economy should end and end now.

France's Fear

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by William Philip Simms which appeared in the Washington Daily News of July 23, 1947:

FRANCE'S FEAR

(By William Philip Simms)

PARIS, July 23.—According to high French officials, France neither will wreck the European recovery plan over the Ruhr issue nor unduly retard its operation. But, they say, she will not buy temporary assistance—desperately needed though that may be—at the price of her national security.

France, as the cornerstone of continental democracy, must be fitted into the jigsaw puzzle of European recovery if recovery there is to be.

Her position is this: Three times within living memory France has been invaded by Germany. She does not intend it shall happen again if she can help it. And the best way she can think of to prevent it is to destroy Germany's war potential at the source—in the Ruhr.

France has no objection to increased coal production in the Ruhr. On the contrary, she would like a lot more Ruhr coal for herself. She does object to German use of that coal to make Germany again Europe's principal steel producer. Given Ruhr coal, peace-loving France, Belgium, and Luxemburg could be the continental steel center instead of warlike Germany. If Germany is allowed to rebuild her heavy industry, chemicals, etc., France feels it is only a question of time before history repeats. Every French man, woman, and child shivers at the thought.

It is all right for the great powers to talk glibly of the United Nations, of British and American friendship for France, of democratic solidarity against aggression, etc. France had the Triple Entente with Britain and Russia, but that didn't save her in 1914. She was a charter member of the League of Nations, but Germany ravaged her just the same in 1940.

France sets great store by her friends. She has great hopes for the UN. But she says now is the time for her to insist on certain safeguards with regard to Germany. And, in her opinion, the best way to begin is to see that this time Germany is not allowed to dominate Europe through a combination of steel, coal, chemicals, and other war materials.

Once this is understood in Washington and London, I am informed, there should be no further serious obstacles in the way to an understanding about Germany insofar as France is concerned.

Some here feel that since France's collapse in 1940 certain international circles are too

inclined to ignore her claims to a place among the great powers; too ready to become impatient with her stubborness, too prompt to shrug off her demands for security. But, they add, it ought to be clear by this time to those who are trying to save Europe that without France they will never succeed. In any European council, therefore, her voice should get the same attention and her views carry the same weight as those of any present.

Nut-Marketing Problem

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. NORBLAD. Mr. Speaker, I have several times before called the attention of the House to the plight of the filbert growers in the Pacific Northwest. May I again emphasize the dangerous situation confronting this valuable segment of American agriculture. The following editorial written by Phillip Bladine, who is extremely well informed on this subject, should be of interest to every Member of the House. Under unanimous consent, I include this editorial from the McMinville (Oreg.) Telephone Register of July 17, 1947, in the RECORD:

NUTS!

Whatever other people may think of the situation, the nut-marketing problem in the United States is just plain "nuts" to growers in Yamhill County.

Cause of complaints is the forecasted importation of around 30,000,000 pounds of filberts from the Mediterranean area into this country this year. From September 1946 to May 1947 total shipments reported were 24,682,433 pounds of filberts, representing in the neighborhood of $3,600,000 loss to domestic growers. The loss will be greater this coming season.

Importation of filberts is figured as a direct loss by local growers in this way: Prices paid for filberts early last season were as high as 28½ cents a pound. After Mediterranean nuts moved onto the market, local growers were forced to cut prices to as low as 17½ cents a pound in order to move approximately one-third of last year's crop. Had this cut in price not been made, it is believed that growers would still have over 30 percent of the 1946 crop on hand.

Indications now point toward a bumper crop of filberts this year; consequently, the marketing situation will be more acute, come fall, than it was last year unless something constructive is done. However, even growers apparently cannot suggest any remedy so long as the present administration "continues to carry out the policy formulated by Cordell Hull and fostered by the Roosevelt administration to encourage foreign importations of goods even at the expense of domestic production."

Unfortunately nut growers are not in the same picture at all with producers of some of the other foods. Europe as a whole will be needing large quantities of American-grown foods, insuring a substantially high price for those foods for months to come. Just why filberts from the Mediterranean area could not be routed in larger numbers to feed hungry European mouths is a complicated problem—perhaps more political than gastronomic. Persons cannot be expected to live wholly on nuts; nor can impoverished nations be expected to pay cold cash on the line as can Americans.

Basically, there is only one real solution to the problem; and that is protection of the domestic market by establishing tariff barriers. So long as the administration will not entertain thoughts of erecting those barriers, "there is," as John E. Trunk, manager of the Northwest Nut Growers Association states, "nothing we can do about it until we have a change in administration; and this won't be for another year and one-half." Trunk has some sound advice to give to growers. He says "hold on if possible. Keep up the orchards by cultivation and pest control, or grub them out and go back to prunes. An unkept orchard soon means no orchard at all."

This problem is vital with filbert growers, but close to every Oregonian. This State produces nearly 21,000,000 pounds of nuts annually. That figure represents a sizable revenue and, especially in Yamhill county, a large portion of the agriculture income of the region.

Industrial Nationalization: America's Threat

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. KNUTSON. Mr. Speaker, under permission granted, I am inserting a most timely address delivered by W. G. Vollmer, president, Texas & Pacific Railroad Co., before the American Farm Bureau, Southern Regional Training Schools, San Antonio, Tex., on July 14.

I wish it were possible to place a copy of this informative address in the hands of every American as it presents a phase of our national development that is too often overlooked by the Congress in legislating on our transportation problems.

The address follows:

INDUSTRIAL NATIONALIZATION: AMERICA'S THREAT—IS INDUSTRY'S UNINVITED GUEST, PUBLIC OWNERSHIP, MOVING IN ON OUR NATION, THE WORLD'S LAST MAJOR PORT OF INDIVIDUAL FREEDOM?

For more than 100 years, a working partnership has existed between the railroads and the farmers of the Nation.

This partnership, of course, is unofficial. Nevertheless, it is utterly real. The farmers and the railroads were the ones who slowly rolled back the sparsely inhabited and hostile Western frontier. That was a task which required determination, stamina and courage.

Therefore both industries—farming and railroading—are fundamental and basic. And there always has existed between the farm and the railroad a dependency of one upon the other throughout this historic partnership period. Both have suffered adversity and enjoyed prosperity side by side. Indeed they represent a firm cornerstone of our national economy.

Because of this long and close relationship, I believe you will be interested in examining with me a situation mutually grave to the future existence of railroading and agriculture. It now not only confronts your old partner, the railroads, but subsequently may confront you and every basic industry in the United States—coal, power, steel, communications. It is the threat of public ownership.

I consider this a definite long-range probability, not an immediate one. And in the instance of the railroads, one of public ownership's chief encouragements is that under present restrictions they are experiencing great difficulty in making both ends meet. To do it, they must be permitted to earn a rate of return that will attract private capital in volume.

To offer a plain illustration—if you as a private citizen have money to invest you probably are not going to invest it in the railroads whose current earnings on invested capital is slightly less than 3 percent. To attract your money in volume, the railroads must rise at least to the 6-percent-earning-power level on capital investment which industry in general offers.

When a basic industry such as the railroads reaches a point where its earning power is so low that it ceases to attract such venture capital, then the Government, of necessity, must step in and run things on the taxpayers' money. The Government would have to step in because the economy of the Nation would collapse without the mass transportation which only the railroads provide.

So the Nation is going to have to have the railroads, whether it be under the competitive system of private ownership or the noncompetitive system of Government monopoly. It's the country's choice to make. And even though the actual nationalization of railroads is in the distance, symptoms like their subpar earning capacity are already here and must be fought. It is true that major economic change comes slowly, sometimes imperceptibly, and thus does not attract public attention until a crisis is reached. But then it is usually too late for corrective action. The damage has been done. And therein lies the danger of this, the gradual drift toward public ownership of basic industries.

Such a trend is one of today's uninvited isms moving in on our Nation, the world's last major port of industrial freedom.

Here is an example of what I mean by industrial socialism moving in on us:

At a meeting in Chicago a few weeks ago, directors of the Progressive Citizens of America with great solemnity and zeal demanded the immediate nationalization of the coal mines, railroads, and electric power in the United States.

You cannot sell an organization like this short. It has some prominent citizens of this country enrolled as members—and they mean business.

So let me repeat, America is the last great fortress to stand between world socialism and the free-enterprise system. Russia, France, and Mexico, to mention a few of the leading powers, already have succumbed. Great Britain is on the way, with government ownership and operation of transportation effective January 1, 1948.

We in the United States now stand virtually alone on the battle line. The question which we must consider, and ultimately reach a decision upon, is what are we going to do about it? Are we going to be maneuvered into accepting nationalization of basic industries, beginning with the railroads? Or are we going to reject it as a false economic concept and begin to strengthen our competitive system?

That question is neither presented nor designed to arouse fear. Instead, it is meant to direct attention to this subtle and insidious movement and kindle a desire to fight it.

Certainly the followers of agriculture are well qualified to join in the fight against the nationalization of basic industry. The farmers of the Nation are grounded in the rudiments of resourcefulness, ingenuity and courage. And this representative farm group,

in particular, knows what it means to use those attributes in cooperative effort to fight a common enemy.

Wasn't it the boll weevil as a common enemy to the southern cotton farmer which lent impetus to the formation of this Farm Bureau Federation 20 years ago?

We need that sort of combined offensive to defeat the onrush of industrial socialism. It is eagerly waiting outside to put its foot in the door. After first seizing the railroads, an expansion of the movement to take over other basic industries will be a comparatively simple matter.

I therefore appear before you today to solicit earnestly the consideration and support of this regional convention of such measures as are deemed necessary to place the railroads of the Nation on a sound and solvent basis.

The idea is to stop the public ownership boosters cold. And I hope you will want to enlist the help of your 1,000,000 fellow members in the Federation.

Let's take a look at the facts and see what has happened to the railroads of the world. With a few minor exceptions here and there, the 137 class 1 railroads in the United States and one in canada, the Canadian Pacific, are the only privately owned and operated class one railroads in the world. All the rest are run as a government monopoly with public tax money footing the bill, usually a deficit bill.

This condition today compares with 35 years ago when 67 percent of the world's railway mileage was owned by private companies. You can thus see that the trend toward public ownership and operation is obvious and definite.

It is worth while to take a short excursion into some of the places where the public operation of railroad exists. That way you can see for yourselves just how it is working.

In the country south of us, there are approximately 8.000 miles of railroads government operated. To run them requires 56,000 employees—a ratio six times greater, for instance, than the 9,500 persons needed to operate by private management the Texas & Pacific.

O. M. Stevens, an American transportation consultant, made this comment upon seeing those lines in operation: "No man short of death ever left the railroad pay roll once he climbed aboard."

Better than anything else this example illustrates the political plaything railroads become whenever government operated. And you can imagine what kind of service you, as a shipper, would get if that ever happens in our country.

To go on with this actual example of the government-operated railway system:

At the start of the Second World War, 75 percent of the locomotives were over 25 years old.

One third of the 30,000,000 crossties were defective.

Rails generally were the lightweight, 80-pound variety.

To alleviate this condition, an American study commission recommended the expenditure of millions of dollars to rehabilitate the system. However, the hitch is that the taxpayers will have to meet the bill, as is always the case with publicly owned and operated properties.

Now suppose we take a look at the 55,000 miles of nationalized railroads in Soviet Russia. As I sketch a few of the high lights of the Government enterprise, compare it with the services provided by the railroads of the United States.

To operate this 55,000 miles of Russian layout, approximately 1,500,000 employees are required, which compares with an estimated 1,350,000 employees needed to operate the 237,000 miles of railroads in the United States. Their equipment compares with the old wooden cars which were discarded by the American railroads over a quarter-century ago. A trip on a Russian train is an ordeal, not a pleasure.

And on Soviet railroads, passengers are frowned upon for traveling a distance comparable, for example, to that from San Antonio to El Paso. To make sure no one travels too far, passenger fares are set higher for longer distances than for short ones.

Another interesting practice on the Russian railroads is their peculiar method of bolstering the morale of the employee. A shock corps constantly tours the system to encourage efficiency and loyalty by use of the persuasive strong-arm method.

Although the British Government does not take over the railroads, barges, trucks, busses, and other modes of transportation until next January it is interesting to see how the shipping and traveling public is going to be affected.

Under the British transport bill, the right of the shipper to select the kind of transportation best suited to his needs is drastically curtailed, if not wiped out entirely. A wholesaler, for example, cannot operate his own truck in competition with the State-operated trucks. He will be forbidden to drive his trucks more than 40 miles from its base of operation. A San Antonio dealer would be unable to make a delivery to a customer beyond the radius of 40 miles. Nor would you gentlemen who operate farms be permitted to deliver your products in markets located more than 40 miles from your base of operation.

That gives you a general idea of what real nationalization of transportation means and how it circumscribes and shackles the freedom of action of the shipping public. It is an experience which a majority of Americans do not care to share with their British cousins.

Some of you may recall that we in this country had a painful example of Government operation of our railroads during the First World War. It was not only painful, it was expensive.

Despite the fact that the Government increased freight rates 25 percent and hiked passenger fares 50 percent back in 1918, the railroads lost money under Government operation. To be specific, the experiment cost the American taxpayers $2,000,000 a day in 1918–19, even with the rate increases.

In World War II the railroads were privately operated at no loss whatever to the taxpayer. In fact the railroads during those 4 years 1942–45 paid an average of nearly $4,000,000 daily in taxes to the Federal Government.

From our own sad experience in governmental operation of the railroads and from what we can learn about the public operation of railroads in other countries, I am confident that a majority of Americans are opposed to the nationalization of our transportation system.

But more than passive resistance is needed to repel public ownership in this country. This is one instance where the easy-going American will have little opportunity to undo a wrong by simply passing a new law in Congress. This industrial socialism is no ordinary enemy to be treated in an ordinary way. It requires planned, effective antidotes applied in liberal doses by interested organizations such as yours and the railroad industry.

One of those effective antidotes is a strong railroad public relations program.

Proof of its importance to industries battling public ownership comes from a British railway official. He was asked during a visit to the United States what, in his opinion the British railways should have done but did not do to prevent legislation for government ownership. His reply was that the greatest mistake had been in not carrying on an adequate campaign of public relations.

I am a strong follower of those who believe that to defeat a problem is to learn it.

In that vein, let us look at several of the major factors, progressively, confronting the railroads today and which tend to provoke public ownership.

1. Since 1939 the average increase in wages and prices of materials have risen 61 percent, while the average increase for hauling a ton of freight has risen but 15 percent.

2. The Federal, State, and local governments, through the expenditure of taxpayers' money, provide airports, highways, and improved inland waterways. This is done without making an adequate use charge, although these modes of transport are engaged in business for a profit. Preferential treatment gives these transport agencies a definite advantage over the railroads.

A third condition leading to public ownership of railroads is a rate structure that is inadequate. It does not provide the revenue required to meet the increased cost of operations and at the same time provide a reasonable return to the private investor who has loaned the capital.

Exactly what is that return? For the past 25 years, including the boom decade of the 1920's and the tremendous traffic years of the war, the average return has been only 3⅔ percent. In 1946 when the railroads handled the heaviest traffic in peacetime history, they earned only 2¾ percent on their investment. And for this year the outlook is for a rate of return around 3 percent.

This dismal earning record is not due to excessive capitalization, or debt, or fixed charges, or salaries to officers, or to the payment of improved dividends. All those have been reduced or have stayed practically the same over the past few years. For example, the railroads have retired financial debts in the shape of bonds held publicly in the amount of $1,000,000,000, largely during 1944–46. They have reduced their over-all debt by $2,000,000,000. And the railroads have slashed interest charges on their debt by more than $150,000,000.

The simple truth is that in all those years, the railroads gradually have been hemmed in by restrictive legislation, vastly increased operating costs, and subsidized competition which lumped together have created low earnings and have cast the railroads in the role of a poor relation.

It's time steps were taken to reverse the trend. Won't you join us in doing that? Now, to sum up the situation which is the essence of the railroad problem—and no less the farmers' problem:

1. Adequate and low-cost railroad service is an essential element in carrying on the business of agriculture as it is known and conducted in the United States.

2. Adequate and efficient railroad service for the future depends upon continued investment in improved railroad plant and equipment.

3. Continued investment in improved railroad plant and equipment depends to a large extent upon the prospect for investors earning a fair and adequate return upon the money invested—something they now are not even approaching.

In the final analysis, whether the railroads are permitted to earn the 6 percent commonly accepted as standard in other industries is a question to be determined by the public authorities who regulate transportation and by the people which the railroads serve.

If anything, by rights the railroads should be permitted to earn more than the standard 6 percent, purely in light of the costly nature of operating an industry whose plant is not stationary. Fortune magazine brings this factor down to earth when it shows that $4 worth of railroad plant is needed to produce $1 worth of revenue. It takes $22,000,000 in plant facilities to produce $800,000,000 in airplane equipment, whereas it requires $1,000,-

000,000 in railroad plant to get $360,000,000 worth of transportation.

Well, these preceding remarks give you an idea of the mountains to scale in halting the trend of industrial socialism to the United States. And in any event you gentlemen and your fellow members of the federation are influential components of the American public. What you have to say upon the question will have an important bearing. Because that is so, I commend to you several suggestions for your earnest consideration:

1. Go on record by resolution, or some other suitable instrument, opposing any organization or legislation which encourages public ownership and operation of industry in the United States.

2. By a program of speeches and written material, acquaint the membership of your organization and farmers in general with the evils inherent in the nationalization of any basic industry. This should get special attention through vocational agriculture classes where nationalization of farming could be shown in actual practice as an example.

3. If you believe that an adequate return is needed to attract private capital to the railroads, then support the application of railroads for increased rates.

4. If you believe that a sound and solvent railroad system, privately owned and operated, is essential to our national well-being, talk to your friends about it, and enlist their support in behalf of the railroads' applications for increases in freight rates.

What happened during the war and what has happened since clearly show that this country must have adequate rail transportation. Adequate rail transportation costs money, but inadequate transport costs far more. The way to better transportation, and cheaper in the long run, is through giving the railroads a chance to make adequate earnings now. Such earnings should not be less, as an average for railroads as a whole and over the years, than the 6 percent which 9 out of 10 persons think is no more than a fair profit for any business.

The only way to have adequate rail transportation is through continued investment in improved rail facilities. The only way to insure this needed investment in the future is to allow railroads to earn not less than 6 percent on what is already invested in their properties. Six percent is approximately double the rate which railroads are expected to earn in 1947.

In conclusion, let me emphasize that the railroads seek no special or preferred treatment. All we seek is equal treatment and the opportunity to survive as a privately owned and managed industry.

Tobacco and Section 32 Funds

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the section 32 funds are obtained by setting aside 30 percent of the custom receipts to be used according to law to dispose of agricultural surpluses. However, this has developed in a blank-check assignment to the Secretary of Agriculture to be used for various and sundry purposes.

The custom receipts have been from three hundred and fifty-seven millions to four hundred and thirty-seven millions each year from 1935 to 1945; 30 percent of these custom receipts provide the section 32 funds. These are rather large sums to be giving anyone to allocate who is not elected by the people, and I say this without feeling toward the present Secretary of Agriculture, who did not hold this office at the time of the enactment of the legislation.

Here is an official report on the use of these section 32 funds for tobacco:

TABLE IV.—*U. S. Department of Agriculture Production and Marketing Administration*

SECTION 32—TOBACCO PROGRAMS

Year	Diversion to byproducts and new uses				Exportation	
	Fertilizer experiment		Nicotine insecticide			
	Hundredweight	Value	Hundredweight	Value	Hundredweight	Value
1936			150,647	$1,090,213		
1937			179,645	1,716,756	3,469	$3,881
1938	35,000	$487,616	111,301	1,068,222		
1939	93,996	260,092	42,178	140,805		
1942			90,173	367,361		
1943			233,435	2,092,965		
1944			248,888	2,708,475		
Total	128,996	747,708	1,056,267	9,184,797	3,469	3,881

The fertilizer experiment program was designed primarily to relieve the market of surplus low-grade dark tobacco. Fertilizer produced under this program was distributed largely to institutions.

The nicotine insecticide program was originally an attempt to remove burdensome surpluses of certain types of low-grade dark tobaccos, and to assure production of needed quantities of nicotine sulfate for use in insecticides. Later, the war cut off imported materials such as derris root, and limited the availability of critical domestic materials—copper and arsenic—formerly used in the manufacture of insecticides. Nicotine sulfate, a tobacco byproduct, was used as a substitute in part for these scarce materials.

We have all heard our tobacco friends state on the floor that tobacco had not cost the United States Treasury a dollar. Maybe not directly, but the above is a way it was done. You will note that these funds were used, first, to subsidize tobacco fertilizer made I presume from the lower quality tobacco. Grind it up and subsidize the sale as fertilizer. Let United States taxpayers pay for it; second, the subsidy of using tobacco for insecticide; third, the use of the section 32 funds to subsidize the exports of tobacco.

Incidentally our tobacco friends have had erected for their avowed protection a bill to prohibit the exportation of tobacco seed. This was the worst trade barrier ever erected by any administration in the history of our country.

The 30 percent of the custom receipts on wool were over $45,000,000 in 1946. Will it not be wonderful to use these funds by inviting more and more imports of livestock and livestock products and furnish more blank checks to the Secretary of Agriculture to subsidize soil depleting crops like tobacco and cotton? It will be of interest to note what use of the section 32 funds will be made in 1947. There are too many political and sectional pressures, and the Secretary should not be subjected to them. Anyway, now you have the official information as to where over $9,000,000 has gone, and the next time you see the tears in the eyes of the pleaders, you will at least have official evidence as to exactly where some of these section 32 funds have been distributed. I expect to add on a few of the other "special privilege" groups that have been enjoying special consideration by the use of these section 32 funds.

Of course this crop provides large amounts of funds for the Federal Treasury, through the many domestic taxes. However, do you think it is a desirable public policy to secure funds by importing one group of agricultural products and submit to sectionism, and crop preferences in its distribution of section 32 funds?

Imperialism Dies Hard

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HON. WARREN R. AUSTIN,
United States Representative
to the United Nations,
Lake Success, N. Y.

MY DEAR MR. AUSTIN: Dutch imperialism is on a rampage against Indonesia. Native Indonesian troops are being used to spray with machine guns their fellow Indonesians. For three and a half centuries the Dutch have ruled the Netherlands Indies, and the pickings were always good. There were precious metals, petroleum, sisal, and the patroons of the House of Orange were the main beneficiaries.

The war changed all this and the Indonesians demanded their independence. They wanted a share of their own productivity, resources, and labor.

It is contended by the Dutch Colonial Government that the Republic of Indonesia had not lived up to the agreement signed on March 27. Actually, the attack by the Dutch was begun while negotiations on different provisions of the agreement were still going on. There seems to be little doubt in well-informed quarters that the Dutch took an arbitrary, high-handed attitude and most certainly made no attempt to exhaust the machinery of arbitration provided for in the very agreement it is alleged the Republic of Indonesia breached.

In this day and age the tactics employed by the Dutch are amazing and shocking.

This situation is a threat to the peace and security of the world, and it is thus imperative that it be considered by the United Nations with proper dispatch to prevent the conflagration from spreading and to prevent further bloodshed.

Very truly yours,

EMANUEL CELLER.

Europe's Displaced Persons

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tacoma (Wash.) Times of July 17, 1947:

DECISION ON THE DP'S

President Truman once again has appealed to Congress for legislation which would permit some of Europe's displaced persons to come to this country. There are, according to Mr. Truman, nearly a million homeless people existing in European camps. They survived the persecutions of one type of totalitarianism, and now refuse to go home and live under another type.

There are many Members of Congress who share these displaced persons' dislike of communism. Yet, oddly enough, much of the opposition to the DP's admittance is found among the strongest congressional anti-Communists.

The argument is that the United States today is overcrowded and underemployed. European refugees, it is said, would take the homes and jobs that rightly belong to veterans. It is also said that there might be subversive elements among them—though it is hard to understand why European opponents of nazism and communism should be feared in this country.

Let us look at these arguments again. There are a million European DP's or about 2.5 percent of our population. But this country is not asked to take all of them. The bill most likely to be considered calls for admitting 100,000 a year for 4 years. A hundred thousand persons are about seven-hundredths of one percent of our population. Can anyone seriously think that such an increase would work a hardship upon the American people?

If Congress should decide to allow their admittance, the displaced persons would have to pass the regular immigration examinations, as Mr. Truman pointed out. They would be screened to eliminate those who had criminal records, those who were likely to become public charges, and other undesirables, including—let the fearful legislators take heart—those with records of subversive activities or sympathies.

Many of these Europeans who want to come here have relatives or friends in America. All have fellow countrymen. They are people, as the President said, with a wide variety of professions, crafts, and skills. On the basis of our past history, they would be more likely to enhance than to injure our national life.

Congress' decision, however, will be much more important and far reaching than the question of whether some of these persons are to be permitted to come here and live among us. The decision will reveal to the world some answers to questions which must puzzle many, both here and abroad.

Will the Government of the American people raise a hand to help all those who stand for democracy and individual freedom, or are those blessings to be reserved for American citizens? Are the basic issues of a war in which a quarter million Americans gave their lives to be so quickly forgotten?

Will a prosperous America, untouched by war, refuse to risk the shock of increasing its population by 0.07 percent in a year?

The displaced persons survived nazism and outlived it. Today they prefer the restrictions of a concentration camp to the restrictions of communism. They were on our side in the war and they are still on our side. Are we on theirs? That is the real question that Congress must answer before the world.

Medal for Merit

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. KEOGH. Mr. Speaker, now that World War II and its epics of valor have gravitated to the realm of the historian, and due homage has been bestowed on our military heroes, the Nation, through its Government, has begun to assess the equally vital deeds of home-front leaders. It takes none of the glory from the combat soldiers who stormed Tarawa and the beaches of Normandy to acknowledge that they could not have done it alone—not without the technical and scientific wizardry of industrious men and women who labored out of uniform, far from the danger zones.

Among the military, it is a centuries-old custom to reward with symbolic recognition the courage and heroism of soldiers who respond before the enemy in a manner that is above and beyond the call to duty.

This past war was an all-out war. Never before in history were the men who shouldered arms so gravely dependent upon their brothers of the nation whom they set out to defend. The problem of devising newer, superior armament, the maintenance of troop health and morale in all quarters of the globe, the science of military logistics—these reached an apex in complexity. To solve them, a civilian army struggled mightily within its own realm.

Thus, as a tribute to men heralded for their exceptionally meritorious conduct in the performance of outstanding services, a grateful Nation has created the highest award which the President of the United States can confer upon a nonmilitary person—the Medal for Merit.

Wearers of the Medal for Merit are a heterogeneous group, with backgrounds as diverse as the Nation itself. It is noteworthy that the over-all contribution of each medalist had a profound effect upon the successful prosecution of the war; in fact, that is the very measure by which each candidate for the award is judged.

They are representative of the varied skills and professions which, in concert, have built this Nation into a towering world leader. They are physicists, diplomats, and scholars; chemists, engineers, and entertainers; industrialists, bankers, and lawyers. They stem from the roots of America.

Some earned their measure of glory while serving in the Government—among whom were the notable dollar-a-year volunteers who staffed the War Production Board. Indeed, the activities of the War Production Board members in organizing our unprecedented industrial output were so significant that 17 of them—top score for any Government agency—were singled out for the award. Other medalists were rewarded for their unsurpassed achievements in private industry, on the production front and in research laboratories.

Every Medal for Merit represents an achievement which materially shortened the war, made it less costly in casualties and human suffering.

Consider:

Research in atomic energy, climaxed by the invention and production of the atom bomb.

Development of the radio proximity fuse, regarded as the second greatest ordnance discovery of the war.

Research in and the perfection of radar.

Development of lifesaving antisubmarine devices.

And among achievements equally solid, if less spectacular, one might recall laboratory work in medicine and communications, in aircraft design, and in electronics; political intelligence that paved the way for the successful invasion of North Africa; maintenance of troop morale by volunteer workers through the Red Cross, United Service Organizations, and similar agencies; and unpublicized drudgery behind countless office desks where tasks of momentous importance and decisions of grave responsibility were resolved.

Wearers of the Medal for Merit comprise a company unique in world history. Never before have so few civilians contributed so much to the success on the battlefield and in the defense of freedom.

The Seventy-fifth Congress was responsible for establishing the Medal for Merit. Conscious of the decisive role of civilians in modern war, that body on July 20, 1942, passed Public Law 671 creating the award to honor individuals whose achievements merited national acclaim. The Medal for Merit has been recognized by the President of the United States as being equal in rank to the Distinguished Service Medal. As such it is the third highest among national awards, surpassed only by the Congressional Medal of Honor and the Distinguished Service Cross, both awarded for unusually valorous conduct against an armed enemy.

Award of the Medal for Merit is made by the President of the United States and, significantly, the engraved certificate presented, together with the medal, is signed in the President's own hand; it, the President's Certificate of Merit—the next lower civilian decoration—and the Medal of Honor are the only awards given by the Government of the United States which rate this distinction.

To assist and advise him in screening individuals recommended for the Medal

for Merit, the President has as a unit of his executive department a Medal for Merit Board. The first board to perform the function of investigating, reviewing, and reporting to the President on the qualifications of nominees included the "War Cabinet"—the Secretary of State as chairman, the Secretary of War, and the Secretary of the Navy. In October 1945 it was succeeded by a new board composed of the Honorable Owen J. Roberts, former Associate Justice of the United States Supreme Court, as chairman, and Lt. Gen. William S. Knudsen and Mr. Stephen T. Early. General Knudsen has since resigned, to be replaced by the Honorable D. Lawrence Groner, Chief Justice of the United States Court of Appeals for the District of Columbia. Justice Richmond B. Keech is secretary to the Board.

Any citizen of the United States is eligible for the Medal for Merit provided that he has performed exceptionally meritorious services to the United States. A further restriction, added by Executive order, is that activity must have been part of the integrated war effort. Acts of heroism and courage are not, save in the case of civilian foreigners, considered as qualifications for the award.

The Medal for Merit may be awarded posthumously. Among those honored in this manner were Joseph B. Eastman, wartime Director of the Office of Defense Transportation; labor leader Sidney Hillman; Secretary of the Navy Frank Knox; and Ernie Pyle, the GI's beloved war correspondent.

The Medal for Merit itself is a striking symbol cast in gold bronze. It was designed by Brig. Gen. R. Townsend Heard, United States Army, retired, and selected by the Secretary of War from among several entries indicated as suitable by the United States Commission on Fine Arts.

General Heard developed his design from the obverse and the little known reverse of the great seal of the United States. Thirteen white stars on a blue field form a new constellation depicting the birth of our Nation. Dominating the emblem is the American eagle perched on a sheaf of arrows banded together to signify the solidarity of the Union. The arrows are pointed downward, however, to denote the noncombatant nature of the award.

Inscribed on the face of the medal is the motto "Novus ordo seclorum"—"A new order of security." The laurel wreath, from which the medal is suspended, represents the traditional symbol for highest achievement. On the reverse of the medal is written "The United States of America" and "For Merit." A blank space is left for the name of the medalist.

As is the custom with military awards, a Bronze Oak Leaf Cluster is presented in lieu of a second medal when an individual again performs services worthy of the honor. The Honorable Cordell Hull is the only Medal for Merit winner to be so distinguished. He received his first medal for extraordinary wartime service, as Secretary of State and the Oak Leaf Cluster for his memorable accomplishments as father of the United Nations.

Historical precedent for the Medal for Merit—as it is for all awards and decorations given in the name of the United States Government—dates back to a proclamation by George Washington on August 7, 1782. The Continental Army had scored its climactic triumph at Yorktown and General Washington was encamped with his victorious troops at Newburgh, N. Y.

From headquarters overlooking the lordly Hudson, General Washington publicly proclaimed his desire to confer honorary badges of distinction on his gallant men. He created the Badge for Military Merit, designed as a purple heart. (The Purple Heart Medal was reestablished by the War Department in 1932 as an award to troops wounded in action.)

It is noteworthy that in his proclamation General Washington made specific reference to the propriety of rewarding all manners of achievement. He wrote:

Not only instances of unusual gallantry, but also extraordinary fidelity and essential service in any war shall meet with due award. The road to glory in a patriot army and a free country is open to all.

There are 263 recipients of the Medal for Merit, including one Bronze Oak Leaf Cluster in lieu of second medal. To date there have been forwarded for presentation 292 awards of the medal, 29 of which have not been reported to the Medal for Merit Board as having actually been presented to the recipients.

The Medal for Merit awarded by the President to civilians only for exceptionally meritorious conduct in the performance of outstanding services to the war effort of the United Nations and of other friendly foreign nations, is considered by him to be as important as the Distinguished Service Medal is to the military who contribute behind the field of battle to the winning of a war.

The Medal for Merit stems from the Badge for Military Merit, America's oldest decoration, established by George Washington in 1782. The Badge of Merit awarded by him was originally issued in the form of a purple heart. The decoration now known as the Purple Heart was reestablished by the Army in 1932, but it was only in part a revival of George Washington's original order for it is now awarded only to persons who, while serving in any capacity with the Army of the United States, are wounded in action against an enemy of the United States. The Legion of Merit, awarded to military personnel, and the Medal for Merit, awarded to civilians only, were authorized by Public Law 671, Seventy-seventh Congress, approved July 20, 1942, for the purpose of rewarding outstanding and meritorious conduct in the performance of duties in furtherance of the war efforts of the United Nations, and serve to cover, with the Purple Heart, most of the general objectives of General Washington's order of 1782 to reward services in a position of responsibility, honorably and well performed.

The names of the recipients of the Medal for Merit follow:

Acheson, Dean
Adams, James S.
Adams, Philip F.
Aldrich, Winthrop W.
Alexander, Henry Clay
Allison, Dr. Samuel King
Amberg, Julius H.
Anthony, George A.
Appleton, Sir Edward Victor
Appley, Lawrence A.

Total Imports and Duties Collected

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following table is computed from United States Tariff Commission statistics:

Total value of United States imports and duties collected, by years, under specified tariff acts

[Value in thousands; i. e., 000 omitted]

Fiscal years 1910-18; calendar years 1919 and succeeding years	Imports for consumption	
	Declared value of total imports	Duties collected
Payne-Aldrich law, effective Aug. 6, 1909:		
1910	$1,547,109	$326,562
1911	1,527,945	309,966
1912	1,640,723	304,899
1913	1,766,689	312,510
Annual average	1,620,617	313,484
Underwood law, effective Oct. 4, 1913:		
1914	1,906,400	283,719
1915	1,648,386	205,747
1916	2,179,035	209,726
1917	2,667,220	221,659
1918	2,864,894	180,590
1918 (July-December)	1,452,961	73,854
1919	3,827,683	237,457
1920	5,101,823	325,646
1921 [1]	2,556,869	292,397
1922 [1]	3,073,775	451,356
Annual average	2,871,479	261,279
Fordney-McCumber law, effective Sept. 22, 1922:		
1923	3,731,769	566,664
1924	3,575,111	532,286
1925	4,176,218	551,814
1926	4,408,076	590,045
1927	4,163,090	574,839
1928	4,077,937	542,270
1929	4,338,572	584,837
1930 (Jan. 1-June 17)	1,705,998	269,357
Annual average	4,023,570	561,615
Hawley-Smoot law, effective June 18, 1930:		
1930 (June 18-Dec. 31)	1,408,079	192,528
1931	2,088,455	370,771
1932 [2]	1,325,093	259,600
1933	1,433,013	283,681
1934 [3]	1,636,003	301,168
1935	2,038,905	357,241
1936	2,423,977	408,127
1937	3,009,852	470,509
1938	1,949,624	301,375
1939	2,276,099	328,034
1940	2,540,656	317,711
1941	3,221,954	437,751
1942	2,769,285	329,117
1943	3,389,951	392,294
1944	3,877,895	347,286
1945 [4]	4,074,784	378,675
1946 [4]	4,817,873	482,278
1947 (January-March) [4]	1,395,503	118,236

[1] The Emergency Tariff Act became effective on certain agricultural products on May 28, 1921, and continued in effect until Sept. 22, 1922.
[2] Subsequent to June 21, 1932, certain commodities which had previously been on the free list were made taxable, and since that date have been reported as dutiable commodities. The principal commodities affected were petroleum, copper, lumber, and coal.
[3] Trade Agreements Act passed as amendment to Hawley-Smoot law June 12, 1934. Under it many rates of duty have been decreased from time to time. First agreement effective Sept. 12, 1934, with Cuba; 26 agreements in effect June 10, 1947.
[4] Preliminary.

Source: Compiled from statistics received from the U. S. Tariff Commission, Statistical Division, June 1947.

What does this table show?

First. That the total import duties collected has averaged from three to four hundred millions per year. This is a huge sum of money each year, but when compared to present-day appropriations it does not appear so large.

Second. A large portion of these duties are collected on agricultural products. The imports in volume of agricultural products increased very rapidly beginning in 1934 and there was a very marked decrease in exports.

Third. The duty collected on livestock products makes up a large percentage of the funds collected. For example, the duty collected on one livestock product alone, like wool, has accounted for from ninety-nine million to one hundred and fifty millions of dollars collected. This is a rather high percentage of the total duties collected the past 6 years. The wool alone provided 25 to 35 percent of the total custom receipts from all imports from 1941 to 1947. Of course, there has not been much of any duty collected on soil-depleting crops like cotton and wheat because the New Dealers put an embargo on imports of these products. Tobacco, another soil-depleting crop, has trade barriers around it higher than the Washington Monument.

Fourth. The section 32 funds obtained by setting aside 30 percent of the custom receipts you can see come largely from duties collected as the result of importation of livestock products. The use of these funds is subject to justifiable criticism. Though obtained through duties on livestock products largely, these funds have been used to oversubsidize soil-depleting crops. For example, tobacco has been ground up and subsidized and sold as fertilizer. Export subsidies on soil-depleting crops like tobacco, wheat, and cotton have been paid from these section 32 funds. These funds are also used to subsidize cotton for insulating purposes, cotton for bats for auto seats and cotton for paper making.

While this has been taking place we find in the 10 years $5,000,000,000 have been appropriated in the name of soil conservation. Fifty-three cents worth of lime and 40 cents worth of fertilizer per acre of cultivated land was used for the whole 10-year period from 1937 to 1947.

Fifth. The soil-conservation and fertility problem is a large problem. It will require more than the expenditure of 40 to 53 cents per acre to make any showing in regard to soil fertility and to lime needs in a 10-year period.

While this has been taking place, the hog numbers in the United States have been reduced by 40 percent, sheep numbers by 35 percent, and cattle numbers by over 4,000,000 head during the past 4 years. Then, we hear complaints about meat shortage and meat prices when the economic rug is pulled out from under the livestock industry and special-privilege legislation is continually fostered for soil-depleting crops.

Sixth. The constant demand for special privilege legislation is apparent. The manufacturer of many commodities wants high duties on imports of the finished products that compete with their products, but they seem eager to obtain raw materials without any protection to the producer of the raw material. This is not altogether partisan by any means, because certain prominent members of both parties support this position.

Across the board formula that is based on equality to each group of our society should be our objective, and not special privilege legislation for the few. There have been more vicious trade barriers erected since 1935 than ever before in the history of our country. Regardless of this fact, our New Deal propagandists continue to deceive the League of Women Voters and other groups with their honeyed words about a reciprocity and a good-neighbor policy.

Seventh. The present custom receipts, though large in dollars, are a much less percentage of the national income than in the 1920's and 1930's.

A New Approach to Russia

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial by David Lawrence, which appeared in the United States News of today, under the date line of July 25, 1947:

A NEW APPROACH TO RUSSIA

(By David Lawrence)

The Truman doctrine did not improve the relations between the United States and Russia.

The Marshall plan failed to win the confidence or cooperation of Russia. Instead of stringing along and sabotaging the plan by stages, Russia has bluntly turned it down because of distrust of its true purposes.

Russia's decision and her directness of action is of extraordinary significance. It clears the air. For it reveals unmistakably the real barrier to agreement in all past or future conferences—mutual distrust.

The cleavage between Russia and the United States has unsettled the entire world. Reconstruction waits. Economic stability waits. Fear of war and even the talk of inevitability of war grows on all sides.

Such a situation challenges the ingenuity of responsible statesmen and calls for a searching study of fundamental causes.

When we are agreed on the diagnosis, we can prescribe the remedies.

It is oversimplification to say that Russia has one ideology and we have another and that what is involved is merely a rivalry of systems. If this were all that was at stake, the matter of negotiating agreements would be relatively easy. Separate economic areas in which one would not impinge on the other could be delineated and an adjustment of one economic system to the other could be developed.

But the basic trouble is not just ideological. It is deeper and hence more dangerous.

MUTUAL DISTRUST

The basic cause of the failure of the United States and Russia to agree in international conferences is mutual distrust.

Two persons suspicious of one another cannot write a contract that will last very long. Every phrase, no matter how carefully written, can be construed with actual or potential suspicion.

America distrusts the present Russian Government.

Does anybody think at this time that the Congress of the United States would ever hand over to the Moscow Government the secrets of the atomic bomb? Of course not. The people in America have been led to believe that the totalitarian government in Russia would not hesitate to make a sudden attack on us with any weapon at its command if the provocation were present.

Russia distrusts the United States.

Does anybody think the present Russian Government believes the professions of unselfishness and the many expressions of disinterested purpose which the spokesmen for the United States utter?

We in America believe our own spokesmen. We cannot understand why any other government or people should fail to see that we are speaking the truth and that we are sincere in our altruistic endeavors to help the world to its feet.

But the inescapable fact is that the Russian leaders do not believe us or trust us.

NO SOLUTION IN WAR

Is the answer, then, a war of decision?

Wars settle nothing. They merely change the personnel of governments and a few boundaries. They promote economic chaos, multiply controls, and deprive individuals of rights and liberties. They do not conquer peoples except for a short time. Then there is a resurgent nationalism and a stimulated hope for revenge which breed new fears and new distrust.

When will statesmen learn that the problem of avoiding war and healing the wounds of war is a problem of learning to live with other peoples on a basis of fairness and equity, on a basis of mutual trust?

To understand the attitude of the present Russian Government, one must know the background of the Russian regime of today. The Russian revolution was a reaction against the despotism of the Czars. The standard of living was so low and the people were so cruelly exploited that the revolution came as a welcome relief to the masses.

Fear of the Bolshevik menace after World War I led the western democracies to intervene in the Russian internal situation in an effort to help the counter-revolutionists. This mistake is now acknowledged, but it has left scars.

Even during World War II, when we were allied with Russia, the Moscow government distrusted all its allies. Cordial conversations between the late President Roosevelt and Marshal Stalin were based on expediency. Concession after concession was made by us to win Russia's aid against Japan.

Russia kept her word. She did enter the war against Japan. Had the atomic bomb not been discovered, Russia would have played a vital part in keeping the vast Japanese army in China and Manchuria busy while our forces invaded Japan itself.

Then came VJ-day and the beginning of friction between allies. Russia distrusted Britain and considered us 100 percent behind any purpose London might manifest. The British and American representatives, on the other hand, in nearly every conference evidenced distrust of Russia.

SECURITY PARAMOUNT

An important fact soon emerged. Irrespective of ideology, the Russian policy reverted to that of the czars. We observed Russian patriotism stimulated by the war's achievements. Plans for expansion were advanced to gain security. It was instinctive, deep-rooted. Soon the security argument overshadowed all else. It was reminiscent of the bickering in 1919 when the French cried out for security and were denounced as nationalistic and as blocking progress.

There would, of course, be no need for security demands if there were no distrust.

Russia today considers eastern European countries within her realm or orbit for security reasons. If she cannot control those countries through occupying armies, because it is too expensive or too difficult, she seeks to control through political and ideological instrumentalities. Russia wants to dominate eastern Europe as the United States, in her opinion, dominates Latin America, and as Britain has exercised a paramount influence in Italy and the Mediterranean in decades gone by. We fear the effects of such expansion—we regard it as a threat to world peace.

Whenever we propose economic solutions, therefore, the Russians see political schemes

lurking therein. The Russians do not trust our statements.

We have tried the political approach and failed. We have tried the economic approach and failed. There are many who think the military and physical force approach is the only thing left. This is a counsel of despair, for there is another approach.

It is to find a way to win the confidence of the Russian Government and the Russian people.

Let us agree that many of the problems are now unsolvable and put them aside. Mere recognition of this fact means progress.

Let us then agree—if on nothing else—to try to know each other better. Can we not ask the Russian Government to permit a series of missions of understanding to be sent from each country to the other? Can we not send a group of our foremost citizens to talk with Russian groups and study the problem of Russian-American relations from a new angle?

Let us ask Russia to send to us missions of the same kind to tell us what must be done to bring trust where there is now distrust.

PROVING OUR GOOD FAITH

War is not inevitable between our two countries. War is a confession of the failure of man to use moral force effectively.

We must not be impatient. We will not overnight remove the germs of distrust which have been creating fears and suspicions for more than 25 years.

The problem is not one of accepting or agreeing with Russia's ideology or condoning in any way her totalitarian discipline in dealing with her own people. It is recognition, however, that the Russan people are in a stage of internal development which is being complicated by the bogey of international war.

It would be expedient for the Department of State meanwhile to clarify points of agreement and disagreement and to consummate what the diplomats used to call a "modus vivendi." This implies a means of understanding—an agreement directly between Moscow and Washington. Some method of living together must be found, if only on a temporary or transitional basis, until a more solid foundation can be built. It must transcend all other previous agreements or conference resolutions.

We must prove our own sincerity and our own good faith and make every sacrifice to that purpose. Then we can successfully negotiate Marshall plans and help with all our resources to rehabilitate the world and bring real peace to mankind.

Record of Death and Damage in Missouri, Mississippi Floods

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a table of facts published in the St. Louis (Mo.) Post-Dispatch on Sunday, July 20, 1947, about the loss of life and damages in major floods on the Missouri and Mississippi Rivers.

What is the answer to this problem, growing more and more serious? The same weapon that succeeded in the Tennessee Valley—a Missouri Valley Authority.

RECORD OF DEATH AND DAMAGE IN MISSOURI, MISSISSIPPI FLOODS

Facts from Weather Bureau-Army engineer records about loss of life and tangible damages in major floods on the Missouri and the Mississippi Rivers—not including loss of soil—follow:

MISSOURI AND UPPER MISSISSIPPI

1902–3 (fiscal year): 100 lives, $40,425,000 damages.

1908–9 (fiscal year): $15,631,000 damages, no deaths reported.

MISSOURI

1935: 125 lives, $38,957,091 damages.

1943: 17 lives, $62,630,405 damages, 50,000 persons evacuated, 2,400,000 acres inundated.

1944: 14 lives, $50,000,000 damages, 50,000 persons evacuated, 2,400,000 acres inundated.

1945: 8 lives, $46,000,000 damages, 40,000 persons evacuated, 1,900,000 acres inundated.

1946: 3 lives, $9,000,000 damages, 20,000 persons evacuated, 700,000 acres inundated.

1947: 26 lives, $111,000,000 damages, thousands of persons evacuated, 3,000,000 acres inundated, almost half of this area being flooded twice or more.

UPPER MISSISSIPPI (ABOVE THE OHIO)

1927: $19,611,863 damages, no deaths reported.

1943: 16 lives, $42,097,371 damages.

1944: 13 lives, $32,883,500 damages, 20,600 persons evacuated, 1,050,000 acres inundated.

1945: $14,938,000 damages, no deaths reported, 12,400 persons evacuated, 461,000 acres inundated.

1946: 7 lives, $18,233,500 damages, 8,200 persons evacuated, 316,000 acres inundated.

1947: 12 lives, $52,530,000 damages, 56,400 persons evacuated, 955,000 acres inundated, of which 37 percent supposedly was protected by levees.

LOWER MISSISSIPPI (BELOW THE OHIO)

1911–12 (fiscal year): $70,000,000 damages, no deaths reported.

1927: 100 lives, $133,898,468 damages.

1944: 2 lives, $11,000,000 damages, 2,000 persons evacuated, 6,000,000 acres (largely uncultivated) inundated.

1945: 15 lives, $45,840,000 damages, 65,700 persons evacuated, 6,059,000 acres inundated.

1946: $21,700,000 damages, 1,000 persons evacuated, 3,625,000 acres inundated, no deaths reported.

1947: $1,000,000 damages, 1,600,000 acres inundated, no deaths reported, few persons evacuated, if any.

RECORD CRESTS

Mississippi at St. Louis (flood stage 30 feet): 1844, 41.39 feet; 1853, 37.21; 1903, 38; 1908, 34.95; 1909, 35.5; 1922, 33.95; 1927, 36.1; 1929, 34.6; 1943, 38.9; 1944, 39; 1947, 40.3.

Missouri at Hermann, Mo. (flood stage 21 feet): 1844, 35.7 feet; 1881, 23.7; 1903, 29.5; 1908, 25; 1909, 26.1; 1915, 25.9; 1927, 26.8; 1935, 29.2; 1943, 31.1; 1944, 30.9; 1947, 31.

Agriculture Department Budget

EXTENSION OF REMARKS

OF

HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1947

Mr. ARNOLD. Mr. Speaker, a great deal of opposition has been registered to the cutting of appropriation bills. Much of this opposition has come from particular groups that have benefited in a large measure by the spending of the taxpayers' money through the various Federal-aid programs that have spread like an octopus and if allowed to continue may constitute a dangerous foe to our free-enterprise system.

In this connection I wish to extend my remarks and include a radio address I made recently having particular reference to the Agriculture appropriation bill, which follows:

There is an urgent need for everyone to get the facts about just what this Congress is doing here in Washington.

There is even a greater need for the correction of many erroneous statements that are being handed out by groups and special interests that have little regard for the welfare of their country. I have been quite disturbed lately by some of the vicious propaganda I have seen appearing in the public press about the effect this Congress' actions will have on the farmers of the Nation.

The most flagrant violations of the truth have occurred in connection with two proposals of the Agricultural Department budget. These two sections of the budget are the appropriations for the Rural Electrification Administration, and the appropriation for the soil-conservation program. I have no intention to evade the vicious propaganda that is being circulated. On the contrary, I intend to meet the criticism head-on, and I want to give you people the facts concerning both the REA and the soil-conservation budgets for the coming year as passed in the House. Here are the facts about both of these issues taken from hearings before Congress and recorded for everyone to read at will.

The Rural Electrification Administration has been in existence for 12 years. When it was established, only 11 percent of the farms of the country had electricity. REA has increased that percentage until it now stands at 57 percent. That is a good record, and no one denies that a good job has been done. Now, as the Republican Congress set to work appropriating money for the coming year, after straightening up the budget of the Nation to where we came out with the first surplus in 17 years, critics popped up everywhere overnight and spread the word that Congress was withholding funds from REA, cutting back the work it could do.

This is the truth of the matter. In reality, REA last year got more money than it could spend. It could not spend all the money because it could not get the materials that are still in short supply. As a result, on July 1, the REA had $325,000,000 over and above last year's left-over funds. This year a request came to Congress for $250,000,000 more in spite of the statement by the Secretary of Agriculture that it will be at least 20 months before sufficient transformers, conductors, and other materials will become available to take care of all applicants. The truth of that matter is, that requests now being handed to manufacturers for transformers will not be filled for another 8 months to a year. Conductors cannot be obtained for at least 2 years when ordered now. There are other bottlenecks, as you all know, in steel and copper. Neither the Government nor private manufacturers are able to get these things because enough are just not being produced.

Nevertheless, the House cut the REA 1948 request by only $25,000,000, leaving a total of $550,000,000 available for the agency on July 1. That is 90 percent of what REA asked for, and actually more than they expected to get. The REA lobby in Washington, however, gave the people the impression that REA was virtually eliminated. The truth is that the only thing that was eliminated was waste and inefficiency, something Congress has had to eliminate from all of these overgrown, fat bureaucracies in order to protect the taxpayers' money from being squandered.

The hearings before the Appropriations Committee of Congress show that REA has

employed many persons who are singularly unqualified to hold their jobs in an organization as large and complex as the REA. In one instance a top policy man in the agency turned out to be a man who had started out in the agency as a chauffeur. There are other cases that demonstrate the lack of qualifications of persons now heading the REA, whose job it is to serve the farmers of the Nation. Those are the things your House Appropriations Committee has cut out of REA for you, the taxpayers.

Congress has stated flatly, and you will find it in the record of the hearings, that REA work will be permitted to move ahead just as fast as materials are available for the work. That statement still stands. REA this year has the money to do a maximum of work with the available materials. To believe anything else is to fall hopelessly for some vicious propaganda aimed at you for the purpose of getting you to agitate for more funds.

As for the soil-conservation program, there again much propaganda has been spread at large throughout rural areas. This time the industries which would lose the pocket money coming from the Treasury are complaining loud and long, and not always truthfully. Large newspaper advertisements telling farmers in bold letters, "Your AAA program has been stopped," are, to me, shameful and misleading. Facts about farm appropriation cuts are being distorted by interests that are all for themselves, and no one else. Such advertisements are, on their very face, admissions that these interests would rather see the taxpayers' dollars poured back into their own pockets than to see those dollars go into the Treasury in these good times to build up our Government financially so that it will be in a position to help the farmers when, and if, bad times should return.

Meanwhile, your Government is staggering beneath a debt of $258,000,000,000—$7,000 for every family in the Nation—a debt that could mean chaos for us all if not handled carefully. This Congress came to Washington with a mandate to do something about the horrible state of the Nation's finances. We have been doing something about it, and the way is being cleared for a smoother road ahead that will permit tax reductions and debt reductions and balanced budgets. Yet, despite this bright fact, there are still groups and interests in this country that care less for their own Government than for themselves.

There was never a time in history when it was so vital for us all to take the "me" out of economy, as now. Most everyone is in favor of reducing spending, cutting out waste and all nonessential services. Congress is being praised until some of this budget cutting begins to touch these specially favored folks.

When these interests begin to feel the pinch of a little economy in Government activities and services, after an era of some 13 years of record-breaking governmental mismanagement of the taxpayers' money, then we begin to get telegrams and letters making all sorts of howls and hollers.

I wish everyone of this Nation could understand that to fail to cooperate in the current scaling down of these huge Federal budgets is to invite chaos. An invitation to this sort of financial ruin is an invitation for the Communists to take over our country.

Soil conservation is admittedly one of the most important programs this country can continue. The Government began it when farmers could not afford to institute the soil-saving practices on their own, and plunged itself into debt to pay for such things, and to begin such a program on the farms of America. Now, that debt has been increased by billions more representing the cost of the war. The Government cannot go on spending like this and expect to survive. It must cut back somewhere and this Government has faith in the people of the Nation, just as all Americans have faith in their Government. For that reason, farmers all over America should, and I am sure do, understand this situation when they are given the real facts.

To the farmers of my district, and to everyone there, I say, support your Government now in its efforts to get back on a sound financial basis, and your Government will still be here, ready and able, to support you when you might need it.

Do not fall for the propaganda of special groups and interests who try to undermine the Government by seeking all the advantage for themselves.

This ends my radio talk.

Since giving this address the agriculture appropriation bill has gone through the Senate where some items were put back in; then to the Senate and House conference committee where the conferees agreed to disagree on certain items. It therefore required special House action, and this time I decided to go along and help restore some of the funds for the farm program, as I feel that if huge sums of money are going to be spent for aid to foreign countries our own farmers might as well have some of it.

During the heat of the discussion in the Appropriations Committee the following article appeared in the Farm Journal for June 1947, which I consider good advice, not only to the farmer but to all citizens of our country:

THINK BEFORE WIRING

You may be asked any day now to "write or wire your Congressman."

The agricultural appropriation bills are before committees and will shortly be on the House floor. Everybody has a pet appropriation or so. Farm organizations and other groups will be asking their members and friends to tell Congress not to cut their favored items. They are for economy, but not that much.

We have a pet appropriation or so of our own—new crops research for one. But we are sending no wires.

More important than any single appropriation or any single activity of the Department of Agriculture—more than the Department of Agriculture, we might say—are these: That the Government of the United States and the American dollar keep their strength; that the mammoth debt be reduced; that taxes be lowered so that men have incentive to produce.

These things can't be accomplished unless Federal expenses are sharply lowered. Expenses can't be lowered except by cutting appropriations and cutting them hard.

Before any citizen sends his wire to protect some favored activity let him ask himself whether the reduction of expenses and taxes will not serve him and his country better.

American agriculture managed fairly well for a good many years while the funds of the Department of Agriculture were only one-fifth as much, or even less. Crops will still be harvested, and little pigs will still make pork, whether the Department has two billion or two million to spend. We believe in the usefulness of the Department of Agriculture, but right now we shall demand no more services from it than a financially bent Nation can afford.

Here is one place where farmers can take the lead to reduce Federal expenses. If we must write or wire the Congressman, why not tell him to keep on whittling the figures down?

Naming of Antarctic Geographical Features

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, July 23 (legislative day of Wednesday, July 16), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement which I have prepared on the subject of the naming of various geographical features of the Antarctic in honor of explorers and others who have materially assisted in expeditions there.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NAMING OF ANTARCTIC FEATURES

Today, I learned of the issuance of a release by the Department of Interior's Board of Geographic Names listing some 850 names of geographical features in the Antarctic. These names were based on the names of the individuals who had first discovered those features or who have materially assisted in expeditions there. On inquiring as to Wisconsin individuals included in this list, I secured some interesting information which I should like to relate now as a measure of appropriate recognition and lasting record.

One of the features is known as Kohler Range in honor of the late manufacturer and distinguished Governor of Wisconsin, the Honorable Walter J. Kohler, who was one of the supporters of the second Antarctic Expedition and who helped furnish the seaplane from which Admiral Byrd observed the range.

BOARD'S WORK

The naming of these features is under the jurisdiction of the Board which is directed by Dr. Meredith F. Burrill. Statutory authority for this activity which has been carried on previously by Executive orders was recently given by the Congress in S. 1262 which was just enacted on Monday by the House.

According to the description of the work of this Board, it is serving to bring a rational and relatively standard nomenclature for the first time to areas and features of the Antarctic, thus ending the long bitter controversy and confusion as to names there.

It is most fitting, I believe, that the brave men who withstood the worst fury of the elements should receive immortal recognition for their exploits by having features named for them. It is appropriate too that those far-sighted individuals who supported the expeditions should receive a similar honor.

The Antarctic is, of course, a region of immense strategic importance both because of its location and because of the yet almost undreamed of mineral wealth there.

KOHLER RANGE

Kohler Range to which I have referred is an extensive mountain range rising to around 7,000 feet above sea level above Walgreen Coast, at approximately 74° south and stretching from around 102° west to 114° west. The range was discovered on February 24, 1940, by Rear. Adm. Richard E. Byrd, commanding officer of the United States Antarctic Service Expedition in a flight from the vessel *Bear*. The range bears the revered name of former Gov. Walter J. Kohler, of the Badger State.

EKLUND ISLAND

To cite another instance, we may note Eklund Island, a small rocky island rising through the ice of the western end of George VI Sound to a height of around 1,000 feet. It is off Robert English Coast 73°, 10 minutes south, 72° west. It was discovered in December 1940 by Finn Ronne and Carl R. Eklund, of the United States Antarctic Service Expedition, in the course of their laborious 1,264-mile sledge journey through the sound.

Mr. Eklund was the ornithologist and assistant biologist of the expedition. I might also add that he is a very young man, 38 years of age, formerly a major of the Army Air Corps, who has performed very valuable services to his country, both in that capacity and in his discoveries on magnetic influence in flying. Carl Eklund is the son of a humble Swedish immigrant, John Eklund, a carpenter of Tomahawk, Wis. Major Eklund is a graduate of Tomahawk High School and of Carlton College.

RESEARCH WORK

I may note finally that a major part of the extensive research into the work of the various expeditions and other background material for the activity of the Board of Geographic Names was performed by Dr. Kenneth J. Bertrand of Green Bay, Wis. Dr. Bertrand secured his doctorate of philosophy from the University of Wisconsin and I understand is now head of the department of geography of Catholic University. He was formerly assistant director of the Board of Geographic Names.

Utah Centennial

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, July 23 (legislative day of Wednesday, July 16), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Utah Centennial," published in the Washington Evening Star, July 21, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UTAH CENTENNIAL

Their gentile neighbors as well as the descendants of the original Mormon settlers are celebrating the centenary of the arrival of Brigham Young and his followers in the valley of the Great Salt Lake. It was on July 24, 1847, that the company of Latter Day Saints and their president completed the long and wearisome march from Florence, Nebr. One hundred and forty-three men, three women, and two children finished the trek. Some members of the party wanted to continue westward to California. It was the personal decision of their leader to remain in the desert. "This," he declared, "is the place."

But more than a firm definition of purpose was needed to establish the empire Young had visioned. Fortunately, he realized the magnitude of the task. His example was contagious enough to serve the need of the colonists. Courage, hard labor, wholehearted cooperation went into the enterprise. The alkaline flats around America's dead sea were plowed and planted. Water from the mountains was brought to nourish the crops. A made-to-order city was designed and gradually built. Hundreds of smaller communities were organized. The hostile Indians of the area first were fought and then systematically placated. A policy of isolation slowly but effectively was abandoned. Young created the State of Deseret and was its governor from 1849 to 1851. Thereafter for 6 years he was head of the territorial administration under Federal control. When the telegraph line came in during the autumn of 1861 he sent to Washington as a greeting the announcement: "Utah has not seceded."

Now, a century after the disciples of Moroni inaugurated their experiment in the sun-baked wilderness, the success of the endeavor is acclaimed universally. If the trials and tribulations of the past are not forgotten, they at least are comprehended as the growing pains of an undertaking of world-wide significance.

Nothing accomplished by Young and his immediate adherents was easy to do, and nothing currently being attempted by the heirs of their genius is easy. Stalwart toilers, filled with faith in themselves as well as fidelity to the Lord, kept the desert blooming. The praise of alien visitors is an honorable portion of their reward.

Potato Price-Support Program

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 23 (legislative day of Wednesday, July 16), 1947

Mr. JOHNSTON of South Carolina. Mr. President, much has been said and written in criticism of the Department of Agriculture's administration of the potato price-support program by persons with little or no real knowledge of agriculture or agricultural marketing problems.

One of the most enlightening articles on this subject yet published was written by J. M. Eleazer, extension-information specialist of the Clemson A. & M. College, Clemson, S. C. Born on a farm, reared a farm boy, graduated from an agriculture college as an agricultural scientist, he worked for more than 20 years as a county farm demonstration agent. For the past year he has served as extension-information specialist for the South Carolina Extension Service, and is generally recognized as a writer of some of the most readable and accurate agricultural journalism in the country today. His writings on agricultural subjects are read by more persons in the South today than those of any other man. I think his explanations of and observations on the destruction of Irish potatoes which was so widely criticized by the ill-informed press of this country is worth the attention of every Member of this body. I therefore ask unanimous consent to have printed in the RECORD his article from the Greenville, S. C., News of July 20, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

In June I saw Irish potatoes being dumped in old fields in the low country.

Not just bushels of them, but carloads of them—many carloads—and at many places.

On one piece of wasteland we visited, they had started dumping the day before. Fine potatoes then covered about a quarter of an acre waist deep. Purple dye was sprayed on them so they wouldn't buy the same ones again next day.

They were graded and packed in new sacks with attractive labels—ready to roll to the markets. And inspectors were there to see that they came up to grade and quality. The No. 1's brought the grower $2.17 per 100 pounds, the B grade $1.08, and the farmer got his sacks back.

I saw all of that on June 12. Now hardly a stink remains.

Much was written about the shame, the criminality, the utter stupidity of this spectacle.

Folks forget so soon.

Why was this thing done?

Simply to make sure that you and I ate, and ate abundantly. That's all.

We can't keep the horn of plenty full without its running over a bit at times. It did that last month.

During the war Congress played safe, and we all applauded. It takes months to make a crop. Farmers could not be asked to produce for war and then let them be ruined by prices when peace came. Nor could they change their plants from full wartime production to peacetime needs on short notice. So Congress promised at least 90 percent of parity price for potatoes for at least 2 years after the war was over. And farmers did the seemingly impossible by giving us abundant war-food crops with shortages of everything except the determination that went into the making of crops.

Then in the good years 1946 and 1947 the horn of plenty overflowed a bit. And that small portion of the crop had to be liquidated. Not to make high prices but to avoid disastrous ones.

Why were outlets not provided?

How could you plan an outlet for something you didn't know you were going to have? And these potatoes are highly perishable. To give them away would destroy your purpose—the maintenance of a fair price level.

Now, folks, that is the part of the story that has not been adequately told. It was a mean thing to handle at best. And let's remember this; you and I want the Nation to see to it that there is plenty of food at all times. If we are to keep the horn of plenty full, we may just as well get ready to see it run over a bit at times, and when that happens something has to be done or crippled agriculture might not be able to keep it filled in the future.

Strengthen the United Nations

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

MIDDLETOWN, OHIO, *July 22, 1947.*

Hon. WALTER JUDD,
Washington, D. C.:

Congratulations on your sponsorship of the inspiring resolution for the strengthening of the United Nations. We wholeheartedly agree that there is no surer way of determining whether Russia will go along with other nations in creating a United Nations which would guarantee her own as well as our security. Frank recognition of the present defects of the UN should only strengthen our resolve to make it the strong organization

which we have all worked and hoped for. We shall stand firmly behind you in your continuing efforts to push this resolution through Congress and we shall give you, through our organization, all possible support in this most vital cause. If we are to prevent World War III we must make the UN effective at once so that it can become the instrument of all nations to prevent war and maintain world peace.

MIDDLETOWN CITIZENS COMMITTEE FOR STRENGTHENING THE UNITED NATIONS.

Our National Security

EXTENSION OF REMARKS
OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1947

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address made by me upon the occasion of the celebration on the twenty-fifth anniversary of the organization of the Finger Lakes Post of the Veterans' of Foreign Wars, at Ithaca, N. Y., on Friday, July 11, 1947:

My greetings to the members of the Finger Lakes Post of the Veterans of Foreign Wars of Ithaca which is now celebrating the twenty-fifth anniversary of its organization My respects to those of your comrades who have passed along the pathway of life a step in advance of those of you whom they left surviving. Together, you and they, formed and nurtured this organization for the purpose of more effectively centering your common interests in the welfare of those gallant soldiers and sailors who had shared the toil and pain of battle on foreign soils and waters and for the further purpose of concentrating your efforts as American citizens toward the fulfillment of America's dream of an enduring peace among the nations of the world. Their task is finished, those who now rest in the comforting arms of eternity and whose memory we revere; but yours is not. The burden still rests heavily upon you, the living, to a degree probably greater than ever before, in the common quest of a solution for the settlement of internal disputes upon a basis of mutual respect, confidence and justice. Our goal requires the best of thought, talent, patience, understanding and determination that all of our citizens can muster if it is to be effective and enduring.

If for no other reason than the momentary restfulness which a fleeting reverie brings to a tired and troubled soul, pause for a moment and reflect upon the state of the world when this post was first organized in 1922, a quarter century ago. The war to end all wars had been fought; the principle of freedom for self-determination by the people of all nations, both large and small, had been established; military machines throughout the world had been dispersed; a new family of nations had been formed for the avowed purpose of providing the mechanism by which international accord and justice could be attained; a disarmament conference had been called which was later to place a limitation upon the size of the military establishments of the world, destined to endure but for barely a decade; and America, the great colossus of the West, who had suddenly grown into full international stature because of her unexpectedly tremendous contribution to the outcome of the war, withdrew herself from the association of nations, insisted that the price of her membership was upon her own terms and without any sacrifice of her sovereignty. The world was told that we would have none of the troubles which had harassed the old world for centuries and we convinced ourselves that the way to stay out of wars was to mind our own business and to live alone and away from the rest of the world. Having won the war, a League of Nations having been established, procedures for the limitation of armaments having been set, we decided our task was finished.

What a happy outlook that was, 25 years ago—our responsibilities in foreign affairs was over and we were free to concentrate our energies in a frenzy of material prosperity. As a result the other nations continued the organization and development of the League of Nations with the same degree of determination for its success in the program to put an end to wars as has been characteristic of the vast majority of nations which organized and are now developing the United Nations organization. It has frequently been charged and with considerable justification that had we become a full and participating member of the League of Nations, the work of that organization would have been more effective and the likelihood of World War II would have been averted. The fact remains that we did not become a member of the League of Nations and the League failed to avert war.

In many respects the condition of the world today is similar to that which existed 25 years ago. Another great war has been ended and the nations today are groping desperately for some pattern of joint action by which this scourge of mankind can be stamped out for good and all. As was the case then, an old nation has arisen in greatness and power with vast and unknown material and manpower resources. Although much of its fighting and effectiveness was due to the military equipment it obtained from our Nation, Russia now stands as the colossus of the East. Its aims and purposes are uncharted and unknown. It is an enigma in the family of nations.

Once more the people of the world have set up an organization for international peace to which all nations have joined, even Russia. Although the organization has been in existence for barely 2 years a sufficient time has elapsed during which the sincerity of the member nations has been tested and the success of this joint endeavor has been given an opportunity to be made apparent.

In spite of the patient, continuous and determined efforts of the nations to make a go of the enterprise, this one nation, the colossus of the East, has thwarted every effort for the fulfillment of the purposes of the organization. Her membership in the international organization has been in form only and not in substance. The net result is exactly the same or probably even more damaging than as though she were not a member at all as was the case that other time when we failed to join the League. By being a member and participating in UN deliberations and decisions through her wanton exercise of the veto right she has been able to completely sterilize the effectiveness of the organization. Her purposes in pursuing such a policy cannot be credited with a fear of her territorial security. Genuine offers have been made by the other responsible powers to guarantee this to her. The only purpose which can be seen for this course of conduct is that through the failure of the United Nations a complete political and economic chaos for the greater part of the world will result and through that chaotic condition she will be able to engulf the world under the banner of the sickle and hammer. This is a harsh and disappointing conclusion to draw from her conduct and attitude, but one which is entirely realistic.

What then is the wise course for us as a nation to pursue? The world looks to us for guidance and leadership—we must not fail. Our recent experience with facism of Europe is too fresh in our minds to tempt us with a policy of appeasement of Russia. As it was with fascism or nazism so it is with any "ism" which sets as its goal the political and economic conquest of other people; greed, narrowness and selfishness are the meat upon which they thrive. The more they acquire, the greater the concessions made to them, the more they desire and the greater their demands. Appeasement inevitably leads to conflict or capitulation. Both of these pathways are unthinkable for us to follow. Certainly we cannot resort to arms, the very thing which we seek to effectively outlaw as an instrument of national policy. Just as certainly, we cannot capitulate.

There is an avenue of procedure available to us which has every hope and possibility of averting both conflict and capitulation, and which will bring about the degree of international security and accord which is the next best to a complete and unanimous international cooperative effort.

The course which the world followed in that similar effort nearly a generation ago points the way for us in our present dilemma. Just as they decided then to go ahead with their plans, hopes, and aspirations with the League of Nations as the instrumentality for the removal of international discord without the membership of the United States, the colossus of the west, so should we now assume the leadership of the willing nations in the formation of a new league or federation permitting those who are not yet ready to fully perform their responsibilities to humanity and civilization to carry on as best they can outside this organizaton. The outcome of such a venture, though supported by the fervent determination of the cooperating nations, would be hazardous and uncertain, but it would be far less indefinite and dangerous than the course of nations as it exists today.

Whatever course we follow, one fact should be constantly and permanently uppermost in our hearts and mind: The road to everlasting peace is not an easy road. We tried the easy road a generation ago, and it lead us sharply into an abyss. Until such time as an effective and unanimous cooperative effort is made by the family of nations to insure peace, until the nations of the world come to regard human life as the treasure which it is, and until all peoples realize the futility of war, it will be necessary for us to preserve our own security by the maintenance of a strong military establishment. This does not necessarily mean the maintenance of a vast standing army and floating navy, but it does mean that all our people should have a greater understanding of and training in the mechanics of war. Such a program, though abhorrent to our peaceful thoughts and historic practices, in spite of the fact that it has been urged upon us from the very beginning of our country by many of our most honored leaders, is inevitable so long as the world continues in its presently seriously disturbed condition. Our national safety and security require that it be done.

Furthermore, we must expect to share a portion of our riches and resources with the much less fortunate people of the world. The degree of this sharing can be determined only by the extent of our willingness to endure some sacrifices of material pleasures for the reward of peace.

It is not enough that our political and economic leaders devote their thoughts and energies to the dangerous pitfalls that beset us nor that they devote themselves to the discovery of the proper solution or course of action; that responsibility must be shared by all citizens whose love of country and desire for peace dominate their consciousness. Upon no group of citizens does this

responsibility fall more heavily than the veterans' organizations of all sizes, types, and kinds. Representing as they do the greatest segment of our population; having themselves felt the pain of battle, they are in a better position to urge greater sacrifices but ones which are much less than those which are a part of war. Nobody knows better than they that the security of any country stems primarily from the hardihood and strength of character of its people and from the soundness of its government both financially, economically, and politically. Their desire for the improvement of their own lot and that of their comrades must always be tempered by an ample consideration of the consequences upon our national economy. In this connection, the responsibility cannot be left exclusively with the leaders of the veterans' organizations; it must be sensed and met by the individuals themselves.

I am confident that the members of the Finger Lake Post of the Veterans of Foreign Wars realize the full implication of much that has been said here today and are ready to perform their part in the fulfillment of their continued obligation to themselves, their comrades, and their country. Let us all work unceasingly and enthusiastically to the end that when those who follow us are celebrating the fiftieth anniversary of this post they can point with pride and gratitude to the product of our endeavor.

Disparity in Prices

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. KNUTSON. Mr. Speaker, the other day I received a letter from a farm constituent of Minnesota wherein he presented an angle to present farm prices that should be called to the attention of the President and Congress, and I have therefore asked to insert the letter in the CONGRESSIONAL RECORD. It follows:

Now that the coal miners have got a nice fat raise, how about doing something for the forgotten farmers.

We are mostly dairy farmers in this community selling skim milk and butterfat. For some time now we have been getting 35 cents per hundred pounds for our skim milk and 15 cents of that goes for hauling, leaving us a clear profit of 20 cents. For that 20 cents we can't buy a gallon of gas for our tractor and we buy in the bulk. If we want to buy a drink of whisky the cheapest grades cost 30 cents and it takes just a hundred and fifty pounds of skim milk to pay for that drink, and a bottle of beer costs 20 cents. A package of cigarettes costs 18 cents so that takes a hundred pounds of skim milk to pay for those, with 2 cents in change.

All repairs for farm machinery have been raised and will no doubt be raised still more now that the coal will cost more, due to the raise the miners get.

Most people have the mistaken idea farmers got rich during the war years, but most of us paid off our debts and were just getting on our feet when the slump came.

A hundred pounds of skim milk is supposed to have the feed value of one-half bushel of corn. Where is the comparison with corn selling at $2.21 a bushel? How many of you would like to work for such small potatoes as a farmer does?

Government Seizure No Cure-all of Labor-Management Problems

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. McDONOUGH. Mr. Speaker, the Labor-Management Relations Act of 1947 was passed because a fairer method of settling labor disputes in the United States was urgently needed; and, if some regulation had not been applied to strikes which were crippling the entire economy of the Nation, it would have been necessary to continue the policy of Government seizure of industries involved in such strikes, a policy which leads down the road toward Government ownership. Personally, I would prefer that labor and management negotiate and settle their differences without the necessity of Federal legislation, which, of course would be ideal.

We in America do not want government ownership of our industries. We want freedom of enterprise with adequate Government regulation to curb inequalities and to protect the best interest of labor, management, and the general public.

The record of Government seizure of plants during the war has proven that this method of settling strikes actually tends to prevent true collective bargaining, which is one of the fundamental rights cherished by labor. Graham Patterson has carefully analyzed the effect of Government seizure of plants in his recent article in the Pathfinder Magazine entitled "Government Seizure No Cure-All." I believe his conclusions are worthy of special attention.

TALKING IT OVER
(By Graham Patterson)
GOVERNMENT SEIZURE NO CURE-ALL

During the war, the Government was given authority to seize and operate vital industries when labor disputes threatened to halt their operation. When these special war powers expired, the question of the advisability of renewing them was raised. But is Government seizure of strike-threatened industries a good thing?

In the ordinary labor dispute, Government seizure is unnecessary. The emergency strike provisions of the recently passed labor act should be effective in most cases. Government seizure should be considered as a national policy, not merely in relation to coal mines. If adopted as a national policy, it could too easily be used in shipping, railroads, steel, oil, auto manufacture, public utilities and other fields.

The principal weakness of Government seizure as a means of settling labor disputes is that it tends to prevent true collective bargaining. We've seen what happened in the coal industry from 1943 to 1947 under the Smith-Connally Act. Militant labor leaders can force the seizure of industries at will, merely by making greater demands than the owners can meet.

Government seizure of an industry can prove a boomerang, for once it takes place, the Government can find it difficult to end. Unwise labor authorities usually resist return of the properties to their private owners except under conditions satisfactory to them. And this means surrender to those who are usually responsible for the seizure by the Government.

An industry that has been taken over by the Government can prove a "white elephant." The Government does not have the trained personnel necessary to administer seized properties efficiently, nor can it train them under emergency conditions. As a result, huge losses could be built up, even in prosperous times, and in a situation where competition is strong, the losses to the public treasury could be staggering.

A very significant point, and one that is too often overlooked, is this: Government seizure as a permanent policy can lead to Government ownership. This applies to all major industries as well as to natural resources such as coal. Government ownership would inevitably lead to lowered production, less efficient distribution, destroying competition, higher costs, growth of statism, loss of personal freedom for both labor and management, and even eventually destruction of the whole system of representative government upon which our Nation was founded.

The American people do not want and cannot afford policies leading to those results. England has had a painful demonstration of the benefits of Government ownership of important industries. Greater production, lower prices, and better service are always a result of competition. With important industries in the hands of politicians, this incentive is removed, and improved service to the public becomes less important than the bureaucrats' own political welfare.

The recently passed labor bill was a result of public insistence on a fairer method of settling labor disputes and controlling unwise labor leaders' use of their authority. The principle of Government seizure works in the opposite direction. With the Government authorized to seize industries stopped by strikes, labor leaders who are inclined to be arbitrary can force the Government to take over an industry and dictate their own terms to the Government.

It is a reflection upon the sincerity and intelligence of labor organizations as well as management to accept the idea of Government seizure as a means of settling their disputes. That is not even paying lip service to the merits of collective bargaining.

Personal Patronage

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of July 22, 1947:

PERSONAL PATRONAGE

The disclosure that career Government employees, some of them with 15 or 20 years of service, are losing their jobs while other workers hired on a wartime basis are being kept on the pay roll as the beneficiaries of a sort of "personal patronage" system in some of the agencies calls for prompt corrective action.

When Congress resorted to appropriation cuts to force reductions in Government personnel it did not intend that long-time career employees should be the first victims of this retrenchment policy. On the contrary, it

was made perfectly clear that the so-called war-service employees—those hired on a temporary basis during the war—should be the first to go. It was expected, of course, that thousands of these would be retained in Government service after they had taken and passed examinations for permanent jobs. But in those cases where someone has to be dropped and the choice must be made between a career employee and a temporary worker, it was and is the plain intent of Congress that the latter should be the one to be dropped.

According to a report just issued by Chairman REES, of the House Civil Service Committee, however, this congressional policy has been circumvented in some agencies through the operation of a "personal patronage" system. This means, in other words, that some officials, desiring to keep on the pay roll personal friends among the war-service employees, have been staying within their reduced budgets by firing career workers. This can and should be stopped.

One way of stopping it is provided by the bill which has just passed the House and which provides that, in reductions of force, permanent-status employees are to replace any war-service workers doing comparable work within an agency. A still better method—if it is made to work—lies in the new Civil Service Commission plan to extend preference to career employees on a Government-wide basis. This means that the career employee, instead of enjoying preference only within the agency which employs him, would have the same preference as against any temporary worker doing comparable work in any agency.

Presumably the House bill has been passed because of doubt that the Civil Service Commission policy will be enforced. But the latter is the better approach, and it can be, and ought to be, enforced. For if the career employees are not given maximum protection, they will become the victims of grave injustice and the civil-service merit system can be expected to revert to the spoils system of 70 years ago.

Friendly Interchange With Latin America

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mrs. BOLTON. Mr. Speaker, a few years ago the Board of Education of the City of Cleveland passed a resolution sponsored by Mrs. Norma Wulff, now president of the board, establishing an international relations curriculum center in Lincoln High School of our city under the leadership of Prof. Guy F. Varner who was named coordinator. Since then the center has taken part in numerous programs of understanding and of international significance. They have established a junior council of world affairs patterned after the Cleveland council with three divisions, the European, the Far East, and the inter-American. Each of these divisions is meeting twice a month and sponsoring assembly programs once or twice a semester. This forward-looking program of our Cleveland Board of Education is commendable.

I feel Members of Congress will want to know that some of our future citizens will devote themselves to a realistic and worth-while good neighbor program of understanding. I should like to include the story of a delightful episode of free interchange between this country and our Central and South American neighbors inaugurated by Lincoln High School. The students and faculty of the school prepared, printed, and sent the following words of greeting to the Ministers of Education in the 20 Latin-American nations:

Geography has made us neighbors in the Western Hemisphere.

Education for greater Inter-American understanding has made us friends and good neighbors.

Education for greater international understanding will make it possible for the American family of nations to work together in building one world of good neighbors.

GEORGE HNATH,
President, Inter-American Division, Council of World Affairs.
RUTH E. DORSEY,
Sponsor, Inter-American Division, Council of World Affairs.
E. G. BRYANT,
Principal, Lincoln High School.
GUY F. VARNER,
Assistant Principal and Coordinator, International Relations Center.

Typical of reactions to such friendly gestures is the following article which appeared in the daily newspaper Novedades of Managua, Nicaragua:

On occasion of Pan-American Day, the famous institution, the Lincoln High School of Cleveland, Ohio, United States of America, has sent to the Minister of Public Education, Dr. Mariano Valle Quintero, this diploma that we take pleasure in reproducing which says, among other things, "Geography has made us neighbors in the Western Hemisphere, education has made us friends and good neighbors." Dr. Valle Quintero is one of the greatest Americanists in Nicaragua and the message that has been sent to him in form of a diploma is recognition of his achievements toward the mission of consolidating the unity of one hemisphere.

It is these little things, Mr. Speaker, that make for true friendship. We of Cleveland are proud of sponsoring such activities and we are fortunate to have in charge of this school program of international study and understanding a man of Mr. Varner's understanding. His genuine interest was responsible for his visiting 12 of the Latin American countries last year at his own expense. He plans to visit the remaining countries next year.

Who knows how far-reaching the activities of these "unofficial ambassadors" may be?

Conservation of Our Natural Resources

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. WELCH. Mr. Speaker, I am the only chairman of a legislative committee in the House who resides west of Kansas. I have been a Member of the House of Representatives for 21 years. When my party was returned to power last fall, due to my seniority rating I had the choice of one of three committees—Merchant Marine and Fisheries, Public Lands, or Labor. I selected the Committee on Public Lands which, under the Congressional Reorganization Act, includes six former legislative committees, namely, Insular Affairs, Territories, Mines and Mining, Irrigation and Reclamation, Public Lands, and Indian Affairs.

The merger of these six committees into one, under the title of Public Lands, gave to it the responsibility of nearly all of the Nation's natural resources which are principally in the Western States. In selecting this committee I did so in the hope I could help conserve our fast-dwindling natural resources, particularly our irreplaceable oil reserves and our forests.

CONSERVATION OF OUR FORESTS

Shortly after the turn of the century, as a member of the California State Senate, I was a leader in the good fight to save the Big Basin grove of redwoods in the Santa Cruz Mountains from the woodman's ax and the big lumber interests. These giants of the forest are known only to certain sections of California. As I have stated before on the floor of this House, they are the oldest and largest living things in the world—they were there when Moses was a baby in the bulrushes and when the Saviour was carrying His cross up Calvary Hill. But, Mr. Speaker, these historical facts have no appeal to those who are permitted to slash, slaughter, and destroy the remaining forests in this country.

At the present time there is being cut yearly one and one-half times more timber than is being replaced by natural growth. Last year over 1,000,000,000 board feet of lumber was shipped out of the country. Add to this the loss by devastating forest fires, also the terrible losses due to forest diseases, particularly to young trees, and it can readily be seen that it is only a matter of limited years when this country will be completely denuded of its forests. The States of Michigan, Minnesota, and Wisconsin offer gruesome evidence of what is sure to happen to the great forests of California, Oregon, Washington, and Montana, and to other States that still have stands of timber.

Congress owes it to the generations to follow, in the years and centuries that lie ahead, to follow the wise policy of Belgium, Norway, Sweden, and Germany, by passing mandatory laws providing for selective removal of trees on a sustained-yield basis, followed by immediate reforestation. We should ignore the seemingly plausible pleas of those who speak for the selfish interests which would slaughter and slash, without discretion, for profit, every remaining stand of timber left in the United States.

OIL CONSERVATION

Oil and electrical energy are two of the greatest assets in our national economy and our national defense. Our national petroleum resources are limited and every barrel of oil we take from the ground is gone forever. During the past

year our petroleum resources were diminished by 36,000,000 barrels of oil used in the production of electrical energy.

The American Petroleum Institute estimates that the oil reserves from known petroleum deposits in the United States at the end of 1946 amounted to slightly over 20,000,000,000 barrels of crude oil. Consumption is now at the rate of 1,750,000,000 barrels per year. This means our known reserves will be exhausted in 12 years.

HYDROELECTRIC POWER DEVELOPMENT

Hydroelectric power is inexhaustible. Every reclamation project developing hydroelectric power conserves just that much of our oil reserves for future use and extends the life of those reserves. Money advanced for irrigation and conservation projects from which hydroelectric power can be developed is not a Government subsidy. It is an investment in the future of America, every dollar of which must be repaid.

There is no honest objection to the development of hydroelectric power by private capital. On the other hand, private power interests have no moral or proper right to interfere with public development of great hydroelectric power projects beyond their scope or with infant projects which are made economically feasible by Government participation.

The great Central Valley conservation, irrigation, and power development project could not be financed under the terms of H. R. 2873 as originally introduced in the present Congress. The Committee on Public Lands, after most careful study, amended this bill and recently reported it favorably to the House of Representatives in a form making possible the continued development of this and other self-liquidating conservation projects.

It is readily apparent from the several bills now pending before the House of Representatives that private power interests are making a concerted drive to thwart the development of power by any other means than their own. These same interests have historically not shown any desire to cooperate in the conservation of national resources that are lost by use. I have particular reference to the use of oil for power development to which I have already referred.

By the short-sighted policy written into the appropriation bill by the Appropriation Subcommittee for the Department of the Interior the completion of hydroelectric power-producing projects would be delayed for years. The Grand Coulee project would not be completed for 39 years; the Hungry Horse project in Montana would be delayed 30 years; the Palisades project in Idaho, 33 years; the Colorado-Big Thompson project, 19 years; and the Great Central Valley project would not be completed until 17 years from now.

Reclamation is no longer limited to the simple reclamation of land. Out of it has grown one of the most vital products necessary to our whole economy—the generation and transmission of hydroelectric power. One of the finest examples of this work is the great Central Valley project in California.

The Central Valley project embraces a vast empire equal to the combined area of Massachusetts, Connecticut, Rhode Island, and one-half of New Jersey. One of the primary objects of that project has been to save over a million acres of the most fertile land in the world from salt-water infiltration. Before the Federal Government undertook this project more than 50,000 acres of land had already been destroyed.

To carry out this project it was necessary to build two large dams—the Shasta and the Keswick Dams—capable of developing 450,000 kilowatts of hydroelectric power. These dams, with their power development, are an integral part of the entire project designed as a soil-conservation measure, but also of tremendous importance from a national defense standpoint as well as our peacetime economy.

AAF: Almost Grounded

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

AAF—ALMOST GROUNDED

How can the American people look on the disintegration of the Army Air Forces without angry, resounding protest?

How can citizens watch that great security safeguard, so recently a national pride, fade away to a mere shadow of itself without counting the almost certain consequences?

Every few days brings further evidence of the dissipation. Consider the latest news of this sort. Some 28,600 Reservists have enrolled for part-time flying. They want to keep up their aviation skills, and the country should be even more eager to keep them in trim.

Yet only 9,700—barely more than a third—can be accommodated. A small number is made even much smaller. Why? Because of the heavy trimming of the Air Forces' budget.

But this is only one detail in what General Eaker, representing General Spaatz, AAF commander, recently told the National War College was a vast "wrecking job." When VJ-day came, the United States had 2,500,000 men in its Air Forces, 230 groups, and 85,000 planes.

With our enemies whipped into submission, extensive reductions in our fighting forces of all kinds were to be expected. The AAF went along with this reduction program. It proposed a postwar force of 400,000 military and 225,000 civilians. It asked for 12,000 active planes and 14,000 wartime-built planes in stored reserve. This was a plane force, counting the stored reserve, of less than a third the number on hand when the war ended.

Almost overnight contracts involving more than $12,000,000,000 were terminated. Property valued at $25,000,000,000 was disposed of as surplus. This property included more than 100,000 airplanes of a wide variety of types.

With the redeployment and discharge of personnel went the closing of air stations. More than 600 air stations were folded up in the United States and more than 1,000 shut down overseas. Air stations that were not removed or abandoned were turned over to foreign governments, as, for example, the $5,000,000 field at Dhahran, in Saudi Arabia, and magnificent Payne Field at Cairo, Egypt.

As its wartime establishment literally fell apart, the AAF tried valiantly to interest Washington and the country as a whole in maintaining a reasonable peacetime organization and program. It asked for a direct appropriation of $1,850,000,000. The first cut was made by the War Department's own Budget Advisory Committee—under pressure from Congress. General Eisenhower, well aware of the great importance of the air arm, restored part of the cut.

The Bureau of the Budget, an agency of the executive department, cut the request an almost even 33⅓ percent. In Congress, the already much-reduced figure became the object of another tug-of-war. There were cuts and partial restoration, and then more cuts and still more restorations, until everyone became dizzy. How the appropriation came out in the end is only too well indicated by the fact that only one Reservist in three can engage in part-time training. The Army Air Forces has been all but grounded.

If war should come, we can be sure the first thing we would turn to would be the Air Forces. Those who would then cry out the loudest about inadequacy of our air power would be the very people who are cutting it far below the safety point or who are blindly sitting by telling themselves it is of no immediate concern.

Americans will wake up to what has happened to the Army Air Forces or pay the price some day for their slumber.

The West Against Itself

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. WELCH. Mr. Speaker, I make this further statement in order to keep the record straight with reference to H. R. 2873 as unanimously reported by the Committee on Public Lands and approved by the Department of the Interior:

It will be recalled, Mr. Speaker, that Monday when this bill, amending certain provisions of the Reclamation Project Act of 1939, was called up on the Consent Calendar, Mr. MCDONOUGH, and Mr. PHILLIPS opposed its immediate consideration obtained permission to extend their remarks in the RECORD at that point. Their remarks appear in the RECORD for July 21. Both of these gentlemen argue that the 78-year period which the Committee on Public Lands finally decided upon, as a reasonable period within which costs attributable to the power features of Federal reclamation projects should be returned, was too long. In brief, their argument appears to be that 78 years is too long because the period fixed for return of the reimbursable costs of the Boulder Canyon project is 50 years; because, so they maintain, the Reclamation Project Act of 1939 now prescribes a 50-year period for the return of power costs; and, finally, because, in any event, 50 years is too long a period. Mr. Speaker, these gentlemen are wrong on all three counts.

In the first place, no analogy should be drawn between Federal reclamation projects governed by the Reclamation Project Act of 1939 and the Boulder Canyon project, for there is no similarity between them. The Boulder Canyon project has always been recognized by the Congress as a special case and the Reclamation Project Act of 1939 specifically excepts the Boulder Canyon project from treatment under it. Thus, for instance, section 18 of the Reclamation Project Act of 1939 now provides:

> Nothing in this act shall be construed to amend the Boulder Canyon Project Act (45 Stat. 1057) as amended.

In the second place, neither of my colleagues is correct in asserting that the Reclamation Project Act of 1939 now provides for a 50-year period within which power costs are required to be returned to the United States. On the contrary, the only requirement in the 1939 act governing the period in which power costs shall be returned to the United States is that they shall be returned within a reasonable period of years not exceeding in any event the useful life of the project. That is a reasonable construction of the existing law; and I defy anybody to quote me from the Reclamation Project Act of 1939 any provision specifically fixing a 50-year period within which such costs shall be returned to the United States.

Finally, it is said by the gentleman from California that 78 years is a period which was "picked out of thin air." I submit, Mr. Speaker, that that is wholly inaccurate and wholly unfair to the committee over which I have the honor to preside.

In arriving at the 78-year period for the return of these costs to the Federal Government, the Public Lands Committee of the House sought to achieve two principal objectives: One, to establish a definitive period for the return of such costs in order to meet points that have been raised from time to time in the Appropriations Committee, which has been anxious to have written into the Reclamation Project Act of 1939, a definitive period of years for the return of power costs, instead of the provisions of existing law which provide merely that such costs shall be returned within a reasonable period of years not exceeding the useful life of the project; second, to fix upon a period of years that would not handicap the Government in disposing of the important resource, to wit: Hydroelectric power at reasonable rates, bearing in mind that rates must be sufficient not only to return power costs but also to return a large portion of the irrigation costs of reclamation projects. It became necessary, first, then to consider what is the average useful life of Federal reclamation projects. In this connection the Committee on Public Lands determined, after mature consideration of expert testimony on the subject, that the average useful life of Federal reclamation projects is in excess of 100 years. It determined, nevertheless, to proceed on the basis that such useful life does not exceed 100 years. This it did for the purpose of applying a most conservative measure to its deliberations on the question of the period that ought to be fixed for the return of the power investment and because it had in mind, the gentlemen from California have pointed out in part, that allowance must be made for such intangibles as physical, economic, and social changes which cannot, of course, be predicted with certainty. I hope that, as my colleague Mr. McDONOUGH has pointed out and as my colleague Mr. PHILLIPS has hinted, we are on the verge of the development of electrical energy through some application of atomic power. Not being, however, as expert on the subject of atomic development as my colleague Mr. McDONOUGH appears to be, I would hesitate greatly to say to this House, as he has said, that it is a 'virtual certainty that energy will be generated on a large scale by atomic plants before this 78-year period has more than one-third run its course." My colleague Mr. McDONOUGH would have us believe that in 26 years from now electrical energy will be generated on a large scale by atomic power plants. I hope he is right, for I know that there is a great shortage of electrical energy in this country, a shortage which is being met in part by the wasteful use of our petroleum resources. I have spoken on that point from time to time in this body. I hope that through the further development of hydroelectric plants, and if you please, through the development of atomic plants, we shall find a way to stop the wasteful burning up of our rapidly dwindling petroleum resources. I am not prepared to say, however, that atomic power plants will be producing on a large scale 26 years from now. I am prepared to say that, even if they are producing such energy 26 years from now or at any time, the demand for electrical energy is such in this country that we can absorb that energy as well as all the energy that can be produced at Federal reclamation projects in the West.

To sum up, Mr. Speaker, there is no basis for analogy by my colleagues between the Boulder Canyon project and Federal reclamation projects governed by the Reclamation Project Act of 1939. The Reclamation Project Act of 1939 does not now prescribe a 50-year period within which power costs should be returned. The 78-year period arrived at by my committee, after extended consideration, is a conservative period which every Member of this House ought to approve.

Mr. Speaker, the question resolves itself as to whether the byproduct of great public works should inure to the benefit of all the people as provided for in H. R. 2873. As it is primarily a western question it is one for the West to decide.

United States Civil Service Commission Retirement System

EXTENSION OF REMARKS

OF

HON. EDWARD J. DEVITT

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. DEVITT. Mr. Speaker, this week the Congress has before it several commendable bills which affect the Civil Service retirement system and the lives of thousands of present and retired Federal employees. While consideration is being given these bills, I urge that the Members read the following analysis of a plan for more efficiency and economy in Government by improving retirement information and services to field service employees, prepared by Joseph J. Tepley of St. Paul, Minn., a constituent of mine. Mr. Tepley should be commended for his efforts and research in devising this plan. It should be adopted by the United States Civil Service Commission in the administration of the present or any new civil-service laws. The analysis follows:

UNITED STATES CIVIL SERVICE COMMISSION
RETIREMENT SYSTEM

FOREWORD

A prevalent lack of understanding of regulations governing the retirement system administered by the United States Civil Service Commission for the benefit of Federal Government employees has resulted in numerous instances of loss of benefits or delay in adjustments which worked to the disadvantage of present or former civil-service field workers. Investigation through contact with personnel in various Government agencies has disclosed a universal lack of interest in the retirement system because of ignorance of how the regulations apply to the individual employee. Documentary evidence and interviews developed case histories of employees who have suffered financial loss. Supervisory personnel could give no effective assistance because even highly placed administrators in various agencies and field branches lack the required information and authority to implement required action. In many instances direct contact with the Civil Service Commission has failed to produce results to the advantage of the employee because the Commission lacks facilities for disposal of the large volume of cases and the absence of an organizational structure extending to the local level to permit efficient clearance of a multiplicity of detail and prompt, decisive action. Numerous other functions of the Commission are performed efficiently and Government employees are kept fully informed as to the regulations and are assisted in conforming advantageously to the requirements. By some misadventure, however, dissemination to the field-service employee of essential information concerning the retirement system is lacking. It should be borne in mind that the retirement fund is accumulated from payments made by Federal employees and since this is their money, the employees are entitled to prompt, courteous, and accurate information service. An efficient and economical method of enabling the employee to obtain full benefit from the retirement system, and an attendant betterment of morale, is provided by the plan herein submitted.

JOSEPH J. TEPLEY.

ST. PAUL, MINN., *July 1947.*

THE RETIREMENT SYSTEM

The civil-service retirement law of August 1, 1920, with subsequent amendments, is administered by the United States Civil Service Commission. The Handbook for Commission Employees, on page 52, lists ten principal activities of which two pertain to the retirement system. These are: "Maintain service records of Federal employees," and "administer the Civil Service Retirement Act."

In describing the organization and functions of the Commission, the handbook on page 51 cites details of the location and types of agencies and jurisdiction over field branches of Federal agencies, 5,000 boards of examiners and rating boards of Navy yards, arsenals, and similar Federal establishments, of the Commission's 14 regional offices. It

states that each regional office, in addition to other functions, shall disseminate civil-service information.

Conspicuous by its absence is any mention of the retirement system as being involved in any of the functions of the regional offices which act an an integral part of the Commission's decentralized field organization for serving effectively, economically, and expeditiously the various field branches of Federal agencies.

(NOTE.—The inability of field-service employees to readily obtain official information and service locally obviously is due to the lack of provision for such service. It is a logical assumption, therefore, that the root of the trouble afflicting administration of the retirement system is due in large part to restricted service on the local level and to the lack of clear channels to higher levels of administration where the authority for decision and effective action is possessed.)

CURRENT STATISTICS

Provisions of the retirement law authorize the establishment of a fund, held in custody by the Federal Government, for the payment of benefits to civil-service employees and for the allocation to that fund of 5 percent of the employees' salaries.

As of the close of 1946, more than 2,000,000 Federal employees were covered by the law. More than 200,000 employees have retired in accordance with provisions of the law since 1920, and currently approximately 105,000 are on the retirement roll. The retirement fund now amounts to more than $2,250,000,000.

The system as now constituted is most liberal in its application and extensive in its coverage. The magnitude of the task of administration is indicated by the following comparison of claims processed:

Type of case	Processed, 1940	1946	
		Processed	Pending
Annuity	8,083	18,508	5,319
Refund	15,629	1,534,533	75,407
Death	6,711	23,461	5,886

NOTE.—Sharp reductions in Federal employment increase the number of refund cases and consequently the problem of administration.

THE PROBLEM

Ours undoubtedly is the most liberal and far-reaching of any retirement system, but it can be truly beneficial only insofar as every employee may enjoy equal advantage under it. Unfortunately many employees fail to avail themselves of the maximum benefits because they have not been informed as to how the regulations apply to them. Their ignorance, due to no fault of their own, occasions indifference. Adequate information service simply does not exist, as a study of case histories emphasizes. All too many employees do not know what they are missing and all too many times when they do find out, they cannot learn how to proceed to obtain benefits or avoid unnecessary loss.

Private insurance companies have trained specialists who advise their clients by local contact. The Federal Government does not give such service. The 14 regional offices of the Civil Service Commission do not keep the employees informed as to the retirement regulations. They have not been delegated such duty. Mandatory dissemination of pertinent information to awaken the employee to his opportunity to take advantage of beneficial provisions and changes in regulations has not been required.

It is a fact that many employees in numerous Federal agencies have worked for years without receiving ltitle more information about the retirement system than that the 5-percent deduction from their salaries goes into a fund from which they are eligible to benefit after separation from Government service. They are not informed that if they do not make certain applications, file certain documents and act within certain time limitations dependent upon various, and frequently varying, conditions of their employment they may suffer loss of benefits.

It is noteworthy that this lack of affirmative action to keep employees informed concerning the retirement system does not apply to numerous other phases of civil-service employment. The administration of civil service down through the local level is uniformly excellent.

The tremendous turnover in Federal employment both of officials and subordinate employees throughout the various Government agencies is an important contributing factor. This condition was especially bad during the depression and war years. Officials too frequently had insufficient time in which to inform themselves and the working forces under their supervision as to the retirement system. But still, today, the employee generally is not being given the necessary information and no provision under any systematic procedure has been made to give such service.

Regional civil-service offices have available only very general retirement informaton. They exercise no jurisdiction over the retirement system in the various field branches of Federal agencies within the region comparable with the supervisory authority delegated them relative to other civil-service activities.

There are no mandatory programs for local instruction of employees relative to their retirement rights or obligations. Field agency administrative personnel is not trained to disseminate such information. Employees are not being furnished with written guides or bulletins, or informed through agency-initiated interviews, group meetings or otherwise.

The employee also is hampered, even when fairly well informed as to a specific situation, by the absence of smooth channeling of pertinent official records relating to the individual. Some agencies have not been required to maintain employee retirement salary deduction basic records and transfer of the employee to one or more other agencies as a result frequently causes confusion and delay, and too many times loss of benefits. The basic records could be made available in Civil Service Commission headquarters but time and expense would prohibit the vast majority of employees from presenting their case in person in Washington, D. C.

War veterans know they have certain employment priority rights. Few of them have had an opportunity to learn of disability benefits under the retirement system. Total disability annuity after 5 years of service is provided for but claim must be made before separation from civil-service employment or within 6 months thereafter, cases of mental incompetency being the only exception to the rule. Neither do veterans generally know that a disability pension from the Veterans' Administration does not necessarily bar civil-service retirement disability benefits. Five years of creditable service may include honorable service in the armed forces. Few know that retirement rights of a civilian employee entering military service are protected.

Numerous other obscure instances of retirement benefit rights could be cited but the average employee does not have easy access to such information. The Civil Service Commission pamphlet on the retirement system contains general information and the law itself covers the subject. An expert study and interpretation of the regulations would be required, however, to permit the average employee to apply the provisions accurately to his own case. Lacking adequate guidance, therefore, the employee's potential benefits are in jeopardy and since the essential information is not available locally, the employees prevailing indifference is understandable. And even when the employee does become aware of potential benefits, the task of developing the case through the existing clogged channels to higher jurisdiction in all too many instances becomes monumental. Then discouragement often results in abandonment of the claim.

Employees in private industry covered by the Social Security Act have official information service easily available locally. The Veterans' Administration insurance and other divisions have been decentralized to branch and regional offices to improve efficiency and effect economies and better service to the individual veteran. Readily available information on the retirement system as well as on insurance problems is vital to the 800,000 veterans now in civilian Federal service. The Government, in fairness, is obligated to provide them with adequate information on retirement benefits for which they are eligible comparable to that relating to Government insurance and to that afforded industrial workers in social-security status.

Employee morale is an all-important factor contributing to efficiency in any type of employment. An employee who is investing in retirement protection but who is unable to learn essential facts about his investment, his status, and his privileges is bound to be uneasy, unhappy, and dissatisfied in his Federal job, especially if he loses benefits through failure to take advantage of many very desirable privileges under the law because he is uninformed.

CASE HISTORIES

A study of case histories discloses the extreme difficulty encountered by employees in their attempt to ascertain their status under the retirement system, available plans for their benefit, alternatives which can be exercised on separation from Government service, voluntary contributions to their retirement-fund accounts, and other problems. In numerous instances decisive action was not obtained, employees became discouraged, and claims were abandoned.

Several facts are outstanding in a large number of field-service workers case histories. No helpful information pertaining to individual accounts was secured from the Civil Service Commission. Answers from the Commission consisted of form letters, pamphlets containing only general information, various blank forms, etc. Also significant was the delay in answering inquiries. Employees who had worked for several Federal agencies ran into a blank wall when they attempted to ascertain their status under the retirement system, based on total creditable service.

The following summaries are typical of numerous case histories studied:

1. A woman employee at Fort Snelling, Minn., resigned from service on November 17, 1945. Thirteen months passed without determination of her claim, and in desperation she telegraphed her Congressman on February 24, 1947, stating: "Resigned from civil service Fort Snelling, Minn., November 17, 1945. No action taken on refund of retirement fund. Husband passed away recently. Need money desperately."

2. World War II veteran, Department of Agriculture employee before and following military service; later transferred to Veterans' Administration, where presently employed; career employee; wrote Civil Service Commission April 30, 1945, indicating desire to make deposits for previous creditable service for which salary deductions were not made; requested retirement status during military service, and asked for statement of cost to bring his retirement account to date. On August 15, 1945, received mimeographed response instructing him to forward an enclosed application form "through official channels." There being no local official with whom he could discuss

his case, he abandoned the adjustment attempt.

3. Woman career employee, Office of Price Administration, wrote Commission January 10, 1946, inquiring concerning her designation of beneficiary, and for information on total creditable service. On January 23, 1946, received unsigned reply typed on reverse side of her letter. Her request concerning designation of beneficiary was completely ignored. Instruction to contact the administrative office of her agency was confusing, since at least one of the former agencies where she had been employed had been abolished. Having been separated from service three times, she was bewildered at being told the Commission maintained no record of her deductions, while at the same time the reply stated such records were forwarded to the Commission in cases of separation from service. She abandoned her effort.

Other case histories studied disclosed the inability of the Commission to forward individually prepared replies; individual retirement account cards not available in Commission files; omission in Commission replies of answers to specific inquiries; lack of provision for obtaining information locally; and the exhaustive flow of correspondence required to obtain even incomplete information. The study produced forceful evidence of the urgent need for revision of the retirement-system regulations to provide field employees, by means of mandatory agency-initiated interviews, with easily understood information and by making easily available at all times complete and specific information relative to the status of the employee's individual account, total creditable service, and priviliges or options the employee might exercise in order to obtain maximum benefits and protection under the Retirement Act.

THE SOLUTION

Establishment of information and advisory service at the local level with a grant of authority to civil service regional offices to originate action and clear cases for final decision and disposal by the Civil Service Commission would provide a solution of the operational problem which is harmfully handicapping field service employees in their efforts to benefit fully from the retirement system.

Underlying and outstanding in all of the difficulties encountered by the employee in attempting to obtain equitable application of Retirement Act provisions to individual cases is the appalling lack of readily available, personally explained and easily understood information pertaining to the individual account. There is a way to provide this vital and urgently needed information effectively, economically, and expeditiously with equal advantage and availability to each employee.

The method recommended is reorganization in such manner that the Civil Service Commission would decentralize retirement system operating functions and services to each of its 14 regional Civil Service Offices throughout the country and thereby provide clear channels for expeditious disposition of cases easily developed at the local level through comprehensive information and advisory service.

The regional offices for many years have acted as "integral part(s) of the Commission's decentralized field organization for serving effectively, economically, and expeditiously the various field branches of Federal agencies," as stated on page 51, Handbook for Commission Employees, in all phases of the Commission's activities except the retirement system. These functions of the Commission and its 14 regional offices—authority to recruit, classify, promote, hold examinations, etc. for civil-service employees—were further decentralized recently to the countless field branches of Federal agencies by Executive Order No. 9830 issued February 24, 1947, and effective May 1, 1947.

Inasmuch as the Commission has decentralized most of its operating functions to improve services other than retirement to field agencies and their employees, it seems appropriate and logical that the Commission should apply the same principle of decentralization to administration of the retirement system.

This essential improvement could be made with only slight modification of existing retirement system regulations. Such changes would be fundamental in solving the problem existing by reason of inadequate and unequal retirement information and case-processing service now available to field service employees.

Following is an outline of a decentralization plan providing for more efficiency and economy in Government through adequate dissemination of information and advisory service for field service employees:

Administration and general policy-making authority for the retirement system should remain with the Commission headquarters in Washington to insure uniform Nation-wide performance and service to all Federal employees. Operating functions and services decentralized to each regional Civil Service office should include mandatory programs and procedures, promulgated by the Commission, for more widespread dissemination of official retirement information.

Each of the Commission's 14 regional offices, which are located in principal cities, would have jurisdiction over field retirement-system activities and be responsible for dissemination of retirement information throughout the geographic area of the region, and act as an integral part of the Commission's decentralized field organization for serving the various field branches of Federal agencies thereby effectively, economically, and expeditiously.

Each regional office would be required to:

Conduct a continuous retirement-system instruction and training program for administrative officials in the various field branches of Federal agencies in the region to enable such officials to advise their employees and keep them fully informed, through mandatory agency-initiated interviews and meetings, concerning the status of individual accounts, creditable service, alternative privileges or options they might exercise to obtain maximum benefits and protection under the Retirement Act;

Maintain (1) files of beneficiaries designated by annuitants and employees; (2) a retirement-record system of service records of employees in the executive civil service within the region; (3) records of individual accounts of voluntary deposits, and (4) retirement accounts of separated employees;

Enforce revised regulations requiring employing agencies to (1) maintain complete individual retirement accounts (Civil Service Commission form 2806) for employees on retirement-fund rolls in active service at such levels of the agency's organizational structure within the civil-service region as to make such records available at all times to their employees, and (2) issue annual statement to each employee of his total creditable service and equity in the retirement system;

Process appeals, maintain liaison and conduct negotiations with regional, area, and local officials of other agencies relative to furnishing specific information on individual accounts, and hold conferences with administrative, personnel and other agency officials for improvement of retirement-system information and advisory service for each employee of such agency;

Distribute retirement-fact literature to agencies for redistribution to all employees, and release new information to the press and radio;

Conduct interviews with individual employees upon request; and

Perform other work essential to the proper administration or Federal field retirement-system activities under its jurisdiction.

(NOTE.—Before the decentralization plan is put into operation and regional retirement officers are charged with these responsibilities and duties, they should be given intensive instruction and training so that they are thoroughly conversant with every phase of the Commission's administration and operation of the retirement system. To insure efficient operation, the Commission should appoint full-time regional retirement officers, rather than permit assignment of retirement system duties to personnel distracted by other work and responsibilities.)

Existing regulations would require only slight modification to remedy present deficiencies.

Part 29, Retirement, of the Commission's present regulations contained in the March 7, 1947, supplement to the Federal Personnel Manual provides in part: "* * * The administrative offices of the departments and independent agencies shall initiate and maintain * * * a retirement record system which will furnish all required information for each employee subject to the provisions of the Civil Service Retirement Act * * *. The individual retirement account, Civil Service Commission Form 2806, shall be established for each employee * * * and shall be maintained by the employing department or agency. The retirement account * * * shall be the basic record from which the rights of individuals under the Retirement Act shall be determined * * *. Immediately upon the separation of an employee from the service of any department or agency, the retirement account shall be completed to date, and the cause and date of separation recorded. The account shall then be certified as to its correctness * * * and forwarded at once to the Civil Service Commission. * * *"

The existing regulations are a basis for action but do not extend sufficiently to fulfill each employee's urgent need of readily available retirement information and service, as for example, whenever changes in his personnel status occur and for other reasons.

Agencies should be required to currently maintain complete individual retirement account cards (Form 2806) at levels in their national organizational structure within the civil-service region near or at the place where the employee works so that official information pertaining to his retirement account is readily available to him at all times. These account cards should be forwarded to the regional office when the employee is separated from service rather than to the Commission in Washington as now required. All essential information relative to retirement could be furnished Washington headquarters by the regional office as now is the practice in connection with all other personnel activities.

The employing agency should be required to keep the employee advised as to his retirement status in order that the employee's benefit rights, options, and privilege of selection as to one of several provisions may be protected against loss which could result from the mere expiration of a specified period of time during employment or following separation from service. Likewise since many employees are transferred from their original agency to one or more agencies, the individual account record should be consolidated in the regional office nearest his place of last employment so that the complete and accurate record would be easily accessible for ready reference and for prompt final disposal action.

The primary objective of the decentralization plan, therefore, is seen to be cohesion of administrative action for the protection of the employee with the principal addition

of the information and advisory service emphasized.

As stated previously, the mandatory programs and procedures suggested in the decentralization plan should be instituted for the same reasons and principles which made it necessary and feasible for the Civil Service Commission, Veterans' Administration, Social Security Board, and other Government agencies to decentralize principal activities to their regonal and branch offices throughout the country.

Were these new retirement system programs and procedures now in effect and all field employees aware of them, as they are of functions and services of the regional civil-service offices other than retirement, most of the difficulties, confusion, and misunderstanding would be eliminated. The Commission headquarters in Washington also would be relieved of the bulk of the tremendous volume of correspondence which it admits its inability to cope with on the basis of individually prepared replies.

If this decentralization plan is adopted, the writer believes the Civil Service Commission can more effectively, economically, and expeditiously fulfill its moral obligation to furnish the pertinent facts pertaining to the retirement system to every employee, thus affording equal opportunity to enjoy the benefits provided by the Civil Service Retirement Act.

H. R. 2744

EXTENSION OF REMARKS
OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

Mr. BROOKS. Mr. Speaker, I especially want to address myself to the explanation of title III of H. R. 2744. It is this section of the bill which constitutes a departure from the past in the handling of the Reserve components of our armed services. This section is intended to offer an incentive to add to the number of both enlisted and officer personnel of all branches of our Reserve components as well as to increase efficiency by inducing them to a longer period of service.

By way of introduction, I wish to say that this Nation must build up its trained reserves. This is of urgent importance to every one of us. We cannot continue to reduce the size of our Regular Army, Navy, and Air Establishments without providing for a larger and more efficiently trained reserve. In the Army, our enlisted strength has dropped to 1,000,000, which is somewhat below the authorized strength agreed upon by Congress. In the next 2 years, it is expected that this will fall further to the level of about 877,000 persons. As the size of our regular establishments fall, the demand to supplement them with trained reserves increases proportionately.

I might say that our recruitment program for the Army Reserve components has not brought the result for which we had hoped. In the National Guard, the figures show that we have recruited some 80,000 members to date out of a total estimated need of 681,000. In the Reserve proper, recruitment of officer strength is proceeding rather well; but I am sorry to be forced to report that the program of recruitment of enlisted personnel for the reserves has hardly begun. It is very apparent that a further stimulus is needed if we are to build up our National Guard to the required size and if we are to bring into existence full units of Reserves—not just paper units as we had before the war—and by this I mean organizations with both enlisted personnel and officers as are required by the tables of organization.

HISTORY OF LEGISLATION

Mr. Speaker, because of the difficulties in maintaining proper Reserves and National Guard men in the past, a number of years ago a committee was formed, consisting of representatives of the Regular Army, National Guard, and Organized Reserves for the purpose of working out a program of retirement benefits which would be large enough to become an incentive to retain personnel in the Reserve components and at the same time small enough to permit this Government to finance such a program. At a later date, representatives from the Navy were added to the committee. Over a period of years, the suggestions outlined in H. R. 2744 were evolved. I myself have been working continuously upon such a program for some 5 years; and I am glad to say today that this plan, worked out after much painstaking effort, which required compromises and sacrifices from all branches of service, has the support of all of our Organized Reserve units as well as the support of all interested patriotic and reserve organizations which are dedicated to the maintenance of a proper defensive posture for this country. A similar bill to this one was approved last Congress by the House but it died in the Senate.

H. R. 2744, TITLE III

H. R. 2744, title III, provides a retirement system within the grasp of members of the National Guard and Army and Navy Reserves. As an inducement to continuous service, we provide a retirement program for the members of the Reserve components at the age of 60 years provided they have at least 20 continuous years of service. Our plan is to provide these retirement benefits based upon a system of credits which can be earned by both officer and enlisted personnel. For active Federal service—I mean full-time service with the armed services—the plan allows a credit each year equal to 2½ percent of the base and longevity pay at the highest grade, either temporary or permanent. In addition, the plan provides for an annual credit for each year of inactive Federal service equal to one-half percent of the base and longevity pay. In no case can the total credits exceed 75 percent of the base and longevity pay.

To illustrate, if an enlisted man should serve in the National Guard for a period of 20 years, 5 years of which shall be with the Army in camp or in the field, that man shall be entitled to a credit upon his retirement benefits equal to 12½ percent for his active Federal service and a credit of 7½ percent for his 15 years of inactive Federal service, making a total credit of 20 percent of his base and longevity pay. To arrive at the exact amount of his retirement benefits when he reached retirement age of 60 years, we have but to multiply his pay by 20 percent.

You may inquire just how does the individual earn the active-duty credits necessary for retirement—for H. R. 2744 provides a schedule of the minimum amount of active duty necessary to retirement. Active-duty credits are earned by war, by attending summer training camps, taking summer cruises with the Navy, calls from the Reserves to temporary active duty, and by attending the minimum number of monthly drill periods and study periods. In reference to the latter, this plan provides that every member of the Reserve components shall be entitled to a credit of 30 days' active Federal service for his work of attending the minimum number of drill and study periods during the course of the year. This 30 days' credit, together wtih 2 weeks' summer camp training program, will guarantee a minimum of 1½ months' active-duty credit to everyone maintaining the satisfactory rating as a member of any one of the Reserve components.

One of the phases of this matter which has given all interested persons most cause of study and concern was the establishment of a fair minimum active-duty requirement. Specifically, how much credit should be allowed for active Federal service performed in the past? In reaching the schedule which you will find in the report on this bill, the committee in effect compromised this matter. It sets forth a schedule requiring either 3 or 4 years of active Federal service of which a definite part of this service must be in the future. Only in the case of the veteran reservist with as much as 20 years' service in the past, of which over 4 years shall be active Federal service, is the requirement for future active Federal service waived.

Of course, Congress wants to know the costs of the program which we present to you. Fortunately, I have figures of the War Department covering the entire nondisability retirement costs estimated for the next 10 years. I find that the nondisability retirement costs for the next 10 years with the Regular Establishment begins at $1,500,000 as of next year and continues to the sum of $5,118,000 10 years hence. On the other hand, the costs of nondisability retirement of the Reserve components begins next year at the figure of $51,000 and continues for 10 years, at which time it will cost the Government $1,455,725. This means that the entire retirement plans as we present them to you today will cost at the end of 10 years less than $1,500,000 per year. It is not possible to estimate the costs of this program beyond the 10-year period. Too many variable factors enter into the situation to permit any accurate forecast beyond this period.

In conclusion, I urge the adoption of H. R. 2744 as the means of building up our Reserves. I believe now as I have always believed that a democracy is best defended by a reasonably small standing Army and by a well-trained and well-equipped civilian reserve. The Nation is depending upon at least 1,000,000 persons, both officers and men, in the Reserve components of our armed services;

and I can tell you we are a long way from this figure at the present time. Equally important as are numbers is the need for preventing rapid turn-over in the Reserve personnel and it is my belief that H. R. 2744 will provide one of the very best means of preventing rapid turn-over and will provide for continuing service.

Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. FRED A. HARTLEY, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 22, 1947

Mr. HARTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the United States News of July 10, 1947:

EXTRA: "WAGNER ACT NOT DESTROYED"—A. F. OF L.

(By David Lawrence)

NATIONAL UNION'S GENERAL COUNSEL ADMITS THAT PROTECTIONS AGAINST UNFAIR LABOR PRACTICES ARE LITTLE CHANGED FROM ORIGINAL WAGNER ACT—OBLIGATIONS UNDER NEW LAW RECOGNIZED IN NEW COAL CONTRACT

Last week the American Federation of Labor issued through its general counsel three bulletins giving legal interpretations of the new labor law. And what do we find? A careful statement of advice to members as to what the law permits or prohibits.

Most revealing in the third A. F. of L. bulletin is the frank admission that the Taft-Hartley low does not destroy the Wagner labor relations law at all. Here is the exact language of the first sentence in the bulletin:

"The five employer unfair labor practices contained in section 8 of the original Wagner Act are repeated in the same language in the new act."

This is something the A. F. of L. and CIO did not tell their members during the recent controversy in Congress over the Taft-Hartley bill. Nor did the A. F. of L. convey to the public any declaration similar to the one quoted above. Instead the bill was attacked as a "slave labor" bill and one that allegedly destroyed collective bargaining and the Wagner Act—the great Magna Carta of labor.

Continuing, the A. F. of L. bulletin's next sentence reads:

"However, there are other provisions added to section 8 which serve to whittle down the protections previously existing."

What is meant here, of course, is not that the original language of the Wagner Act has been amended or altered, but that certain interpretations issued on its own by the National Labor Relations Board have been nullified as being contrary to the intent of Congress.

"Protections" lost? But are these provisions substantial? The A. F. of L. bulletin resumes:

"For instance, the protections against interference and discrimination through discharge or demotion are weakened by not permitting the Board to consider employer anti-union statements (unless involving actual threats) as background evidence, so that it will now be more difficult to prove antiunion bias. Furthermore, it may be that the employer will be excused from a discriminatory discharge if he can show there was a cause for the discharge other than union membership. Finally, the requirements in respect to bargaining in good faith are diluted by a new definition of collective bargaining which does not require either party to make a concession.

"With the foregoing exceptions, the protections against unfair-labor activities of employers remain much the same as they were under the original Wagner Act, and the previous Board decisions are applicable."

Belated truth: What a manly confession of truth that last sentence contains. Here we have the general counsel of the A. F. of L. telling its unions in straightforward language that the protections against unfair-labor activities of employers remain much the same as they were under the original Wagner Act.

First of all, it will be noted that the previous Board decisions are applicable. This is important because all these cases of discharge or discrimination are largely questions of fact and the National Labor Relations Board has built up several volumes of decisions which deal comprehensively with alleged efforts of employers to discharge or discriminate for union activity.

The protections that are lost, of course, were not lost out of the original law. They were not protections at all but interpretations in which the Board stretched the law to exercise strange powers of mind reading.

If the Board, for instance, found an employer had once upon a time, even years before, made an antiunion statement either in a speech or in a conversation and if some worker who was later fired for incompetency charged that he was being dismissed because he was a union man, the Board leaned heavily on the previous statements by the employer as background evidence of bias. The new law requires the Board to stick to the facts of the case. If it finds that a particular individual was threatened by a talk or statement showing antiunion bias, the evidence on that point is to be considered on its merits without bringing in something that could really be proved only by mind reading. Certainly, antiunion bias hereafter will not be as easy to establish capriciously, but the Labor Board is still to be the judge of the facts adduced and actual discrimination can be penalized.

Most startling is the argument that the "requirements in respect to bargaining in good faith are diluted by a new definition of collective bargaining which does not require either party to make a concession."

Where in the original Wagner Act can anyone find such a requirement? The Senate, before passing the Wagner law in 1935, debated this point and assurance was given by its proponents that the collective-bargaining obligation did not compel concessions. Likewise, the Supreme Court of the United States, in its famous decision in 1937 upholding the constitutionality of the Wagner Act, said explicitly that collective bargaining did not mean compulsory agreement.

Unfortunately, many labor unions have spread the impression that it is an unfair-labor practice to reject a union's demands, and many a weak employer has been bludgeoned into agreement by this device. It has been responsible for more friction on the industrial front than any single factor in collective-bargaining negotiations. The labor unions would be the first to cry out "fascism" or "slave labor" if any law compelled either a union or an employer to make concessions, for this would be compulsory agreement ordered by law. It's surprising to find the A. F. of L. now going on record in favor of such a requirement.

A quick vindication: The Taft-Hartley law has been vindicated sooner than anyone dreamed. The Lewis contract recognizes the obligations of the new statute and mentions them specifically. The coal agreement says that all matters relating to work stoppages and disputes shall be "settled and determined exclusively by the machinery provided in the 'Settlement of Local and District Disputes' section of this agreement; or, if national in character, by the full use of free collective bargaining as heretofore known and practiced in the industry."

Is this a loss of confidence in the collective-bargaining process? On the contrary, it is an effective way of conceding that collective bargaining is here to stay.

The Taft-Hartley law, in several paragraphs, spells out what "collective bargaining" means. It puts on labor unions and employers certain obligations to refrain from work stoppages during the life of a contract. "No strike" clauses are not needed in union contracts now. While encouraging mediation and settlement of disputes by the parties themselves, the law points out that an individual who quits work without regard to the contract need not be rehired and that a union which by concerted action encourages or initiates a work stoppage during the period of a contract in an attempt to deviate from its provisions, commits an unfair labor practice and can be punished.

Legal work stoppages: The new coal contract specifically recognizes these obligations in a clause relating to termination which says: "The foregoing termination provision shall not be construed to limit or affect in any way the obligations of the parties relating to the termination of contracts under the Labor-Management Relations Act, 1947."

These very obligations in the law concerning termination of contracts include also obligations not to attempt modification by one party without the consent of the other during the life of the contract. There can be inserted in a contract, of course, lots of language about employees working only when they are "able and willing to work." These are superfluous phrases because the law says the same thing and specifically guarantees the rights of the individual to quit work when he pleases. No union, however, can lawfully issue instructions for concerted action by workers to quit at any time.

While the new statute doesn't compel a worker to labor against his will, it prevents a labor union as such from ordering a strike at will. An orderly procedure and compliance with certain steps is required before there can be a legal strike.

The Nation is slowly getting the truth about the meaning of the new law.

A Universal Approach

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, July 23 (legislative day of Wednesday, July 16), 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article prepared by me entitled "A Universal Approach," which appeared in the Arizona Stockman, issue of July 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A UNIVERSAL APPROACH

(By ELBERT D. THOMAS, United States Senator, Utah, member of the Senate Committee on Labor and Public Welfare)

The basic problems confronting westerners are the same as those facing all men throughout the world. While it is true that we have situations peculiar to our geographic area and to the culture which has taken roots among us, our fundamental wants are not so limited by artificial or accidental barriers. Those of us who call the western

United States home have this in common with all men: We must find solutions for the three constant menaces to our welfare—poverty, ignorance, and sickness.

Those things which we often think of as most directly concerning our region, the need for reclamation, conservation, freight rate adjustment, basin development, to name a few, are not ends in themselves. Their purpose is the promotion of human betterment through the raising of standards of living. The specific projects, important as they are, are directed toward cures for more basic ills. Essentially, the universal struggle of man is to supply his economic wants, rid himself of disease, and conquer what Jefferson described as "every form of tyranny over the mind of man." These hopes for the better life are reechoed in the hearts of thoughtful men everywhere.

A realization of the common aims of men, and the substitution of a universal rather than a regional approach to their common problems, must be developed in connection with the idea of world unity. Because of its relatively recent popular acceptance, the one-world concept might be called a peculiarly twentieth-century notion. It is, in fact, not a recent idea at all, but it has only become vogue during the last few years. It is often said, not without rhetorical ornamentation, that the world is a unit, geographically, economically, socially, and politically. Unfortunately, however, there has not been a sober contemplation of the significance and ramifications of what is generally accepted, as a general proposition, to be indisputable. In reality, the fact that the world is a unit—the one-world idea—is so big, so comprehensive, that it need never become trite. It does not mean simply that travel around the world has been reduced to the minimum of 65 hours, that a week end can be conveniently spent in Habana, that radio listeners in Kansas City can pick up the London stations, that an antitrust suit brought in New York brings protests to the American consul in Paris or Berlin. Speed and technological developments have implications of their own. They make clear the fact of global interdependence. But the one-world notion contains the elements of ideas broad enough to change our entire ways of thinking about a variety of things which we have taken for granted so long that we seldom bother to ponder them at all. It presses for a realization that events of social, economic, or political interests in far-away places have direct effects upon our lives. It demands the abandonment of a provincial attitude and the acceptance of the outlook of a world citizen.

How often do we realize, for example, that a plague in China may result in a plague in Europe or America? Do we consider the effect upon living conditions in other countries which may be brought about by raising a tariff in the United States and that standards of living abroad affect our own? Do we think that the price of wheat in Chicago is related to starvation in Greece? And yet it is inescapable that because we do live in one world, an important occurrence in the most remote corner has its chain reactions for the rest of us. Tuberculosis in India is related to the health of the vacationer in California; cancer in China is of concern to the factory worker in New York; hunger in Athens is not without its implications on one who dines at the Waldorf-Astoria. In short, sickness, poverty, and ignorance—the three ills of mankind—anywhere in the world, constitute a menace everywhere in the world, whether man is found in a highly civilized state or in the most backward surroundings. The alleviation of such ills wherever they may be is, therefore, a challenge to men everywhere.

The solutions to questions of common concern should be pointed toward the focal source of the problem. This principle was recognized and applied not long ago by the Congress in a way that is of particular interest to stockmen. The dreaded foot-and-mouth disease had spread to Mexico and was threatening to invade the stock-raising sections of the United States. It was pointed out by cattlemen in both countries and by other witnesses before the committee that endeavoring to stamp out the disease after it had come as far as the United States border was useless; the only reasonably effective method of control was to get at its source, or as close to its source as it was practical for our Government to go. Accordingly a bill was enacted to authorize the Secretary of Agriculture to cooperate with the Government of Mexico in carrying out operations and measures to eradicate, suppress, or control, or to prevent or retard, foot-and-mouth disease or rinderpest in Mexico where he deems such action necessary to protect the livestock and related industries of the United States." Rather than waiting until the disease spread to the valley of northern Mexico, and eventually to our own country, we took action to get to the source of the difficulty and there plan such preventive measures as were necessary to protect ourselves. How different is this approach to the one of a generation ago. A neighbor's sick cow is of concern to us.

In the passage of the Greek and Turkish aid bills there is similar recognition that what happens outside our borders is not without its repercussions in our own land. Gradually, sometimes unconsciously, appreciation is being developed for the relationship of human suffering in other parts of the world to our own economy and our way of life. Can it be doubted that such appreciation is one of the great lessons of our age?

For more than a quarter of a century, the International Labor Organization has been growing strong on the theory that as war anywhere is a concern of all, so also is the welfare of an individual anywhere. The thesis of this important organization has been that world-wide peace can come only through social justice and that social justice can be attained only by raising the standard of living. Just as raising standards of living in America benefits the entire world, an increased living standard anywhere else will be reflected in American life. Are these ideas startling? If they are, it is because we have not fully accepted the concept of world unity.

This parable has been related elsewhere, but its learning has particular application here and hence it bears repetition. In China, the partnership relationship confers certain exclusive right to each partner. If four men were to purchase a safe, each would have a key to a different lock, and the safe could be opened only in the presence of all four. Four partners once bought a large stock of cotton in bales and stored them in a warehouse. It was not long before rats were gnawing away at the bales, so it was determined that a cat should be purchased, each partner owning one leg of the cat under the agreement. One day the cat burned one paw while sleeping too close to the fire. The partners conferred and decided that the care of the injured leg was the entire responsibility of the partner who owned it. So the partner promptly treated it with ointments and applied a huge gauze bandage. Once again the cat came too near the fire, and the dressing burst into flames. It became panic-stricken, ran toward the cotton, and soon the whole stock was set afire and destroyed. The three partners took the fourth to court for the recovery of their investment, arguing that the burning bandage on the paw owned by the fourth had been the proximate cause of the property loss, and that the fourth should be held liable for damages. The judge listened with solemn gravity to the evidence and arguments and after due deliberation delivered his decision. It was true enough, he said, that the burning dressing on the injured paw had set fire to the bales of cotton. It was also not disputed that the paw belonged to partner No. 4. But, he concluded, he was unable to award any damages. All were responsible and all must bear the loss. One leg had been the original sore spot, but the other three legs had carried the cat, and therefore the fire, to the cotton.

The nations of the world may attempt to shove the blame for world ills to the sore spots. But if we all go up in flames, either in a liberal or figurative sense, we will be in no sounder a position than the three disgruntled partners. Only with constant effort can we in the United States, and especially the West where there has been developed a culture of unrestrained individualism, develop that attitude of mind which accepts world unity as a fact. Honest skeptics may view the effort as a worth-while end, but not capable of being attained. And no one realistic in his approach would deny that the process will be slow and at times discouraging. But not until we can make effective that system of thought which relates the parts of the world to the whole can we expect to find solutions for our common problems.

Is Congress Neglecting Our Merchant Marine?

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. BRADLEY. Mr. Speaker, the following short radio program given over station WINX and WINX-FM, Washington, D. C., on July 20, 1947, presents in a conversational way the real importance of an adequate merchant marine to the people of the United States:

IS CONGRESS NEGLECTING OUR MERCHANT MARINE?

ANNOUNCER. WINX and WINX-FM presents the seventy-ninth consecutive program in the series: Is Congress Doing Its Job?

Each week at this time a controversial subject is discussed on this nationally famous forum. Today, the issue under consideration will be: Is Congress Neglecting Our Merchant Marine?

Mr. Ed Hart, the Forum moderator, has as his guests Frazer A. Bailey, president of the National Federation of American Shipping, and Walter Oakes, executive board member and Washington representative of the Marine and Shipbuilding Workers of America, CIO. And now, Mr. Ed Hart.

Mr. HART. This is Ed Hart speaking from Washington.

If we are to maintain our No. 1 position in world trade, we will need an adequate, well-balanced merchant marine, second to none. Do we have such a fleet today? Is Congress seeing to it that we have such a fleet?

After World War I, you will recall, our merchant fleet was shamefully neglected. Are we going to make the same mistake this time?

To explore the answers to these questions, we are going to hear from Mr. Frazer A. Bailey, president of the National Federation of American Shipping, and Mr. Walter Oakes, a member of the executive board of the Marine and Shipbuilding Workers of America, CIO. Mr. Oakes is the Washington representative of his union.

Now, Mr. Bailey, as a representative of American ship operators, just what is the status of our merchant marine today?

Mr. BAILEY. Before the war, the United States operated 127 passenger ships. Today, due to war losses, we operate only 41. Our merchant marine is greatly unbalanced. Vital troop transports and naval auxiliaries are not available if another emergency occurs. Due to high construction costs, air transport competition, and unfavorable action by the Civil Aeronautics Board, we find ourselves today with only one-third of our prewar passenger fleet and none are being built in American shipyards.

In 1940, when there was great need of shipbuilding in this country and when the disturbed conditions in Europe made inoperative the existing provisions of law, Congress passed special emergency legislation authorizing maximum Government aid to private American shipbuilding. Similar conditions and a real crisis exist today. We are desperately short of passenger and certain other type vessels. Building contracts in American shipyards will be completed in the first quarter of 1948. If we are to stimulate the building of the vessels so urgently needed, if we are to preserve our American shipbuilding facilities, organizations, and skilled workmen, Congress must act again in a similar manner to what was done in 1940. We cannot wait. This must be done immediately. The hour glass is running out. Our merchant marine, our shipbuilding industry, and our national defense are imperiled.

Mr. HART. Thank you, Mr. Bailey. Now we are going to hear from Mr. Oakes of the Shipbuilding Workers Union, CIO.

Mr. OAKES. The first thing Congress must do is to recognize the obvious fact that America must have an adequate shipbuilding industry for the sake of our prosperity and for world peace. Without American ships and shipbuilding, we can't have either prosperity or security. Yet, unless legislation is passed by this Congress, shipbuilding in the United States will be stopped almost completely in less than a year. There will be no new ships built; 200,000 highly skilled workers will be lost to other industries or out of jobs; shipbuilding organizations will dissolve and all shipbuilding communities will be terribly hard hit by unemployment. Failure of the Congress to act pomptly will mean that the shipbuilding industry will collapse after World War II just as it did after World War I, with the same disastrous consequences. Can't we learn anything by experience?

Remember, gentlemen of the Eightieth Congress, we cannot and must not depend on foreign countries today for our shipping needs as we have in the past. Almost every foreign country today is controlled by a totalitarian economy. Their ships will be used as industries of foreign policy, not as neutral carriers of American goods. Once Congress realizes these facts, I hope, I pray, it will pass the national legislation so desperately needed.

Mr. HART. Thank you, Mr. Oakes. Now, Mr. Bailey, what do you think will happen if Congress fails to act?

Mr. BAILEY. Well, Mr. Hart, we will simply continue to have an unbalanced merchant marine, due to the lack of high-speed passenger-carrying steamships to operate over the principal trade routes, and we will be short of troop transports and naval auxiliaries in the event of another emergency, but what is more critical at the moment, our shipyards will run out of work and practically all of the large shipbuilding plants will be slowed down to almost complete stoppage. This will threaten the maintenance of these facilities and their organizations, together with the skilled workmen. All of these would be desperately needed should war again threaten us.

Mr. HART. Gentlemen, suppose we do not have enough ships of the right type. We built ships practically every hour on the hour during the war. So what are we arguing about? Just why do we need more ships, Mr. Oakes?

Mr. OAKES. Yes; we did build the greatest merchant fleet in history during the war, but those ships were built for war, not for peace. They are very slow, very uneconomical and wholly unbalanced for our needs in postwar trade.

Mr. HART. If we can get the right type of ships, and Congress makes this possible, just what would this mean to the average American citizen, Mr. Bailey?

Mr. BAILEY. Well, on a long-range basis, if we are to take our proper place in international affairs as a nation, we must have first-rate transportation and communication to all principal world areas. This cannot be accomplished without American passenger and other special-type ships and without communication and transportation to these principal world areas. It means commerce, it means national defense, and it also is the very lifeblood of such shipbuilding communities as Quincy, Kearney, Camden, Baltimore, Newport News, and many others.

Mr. HART. Mr. Oakes.

Mr. OAKES. Most Americans have no idea how much their jobs depend on foreign trade and how this trade is absolutely dependent upon our having modern American ships to carry the goods. If our foreign trade falls off, we cannot escape a depression in this country, Why, more than 1 out of 10 jobs in America depends directly on our exports alone.

Mr. HART. You mentioned foreign competition, foreign shipping. How does our merchant marine stack up against those of other nations, Mr. Bailey?

Mr. BAILEY. Well, adding to the surplus war-built vessels we have sold to foreign purchasers, plus the ships they are building today in foreign shipyards, their fleets in the aggregate will be in excess of their prewar capacity. In 1939, just prior to the war, we were carrying less than 30 percent of our own commerce. Now that is American commerce. We should do better than that hereafter, and we should not build up our competitors by selling them ships to put them in a stronger position. There is just so much international business. If foreign-flag ships, because of low wages and cheap operating costs, can offer lower freight rates, it will simply mean less American carriage of our own commerce and less ships when we need them for national defense.

Mr. HART. Well, don't these foreign countries need shipping? Shouldn't they render us the ship services so that they can obtain dollars? Their factories are all shot to pieces. They don't have surpluses of raw materials. Don't they need shipping in order to get dollars so that they can buy American merchandise, Mr. Bailey?

Mr. BAILEY. Now bear in mind, Mr. Hart, we are only talking about American commerce. The whole world commerce and trade between other nations is open to foreign ships, but if we were to adopt a philosophy of permitting foreigners to carry all American commerce for the purpose of earning dollar exchange, they would only earn sufficient dollar exchange with which to pay for 6 percent of the present volume of American exports to those foreign countries.

Mr. HART. Gentlemen, aren't we asking the American taxpayers to shoulder an additional burden to keep the shipbuilding industry healthy? What do you think about that, Mr. Oakes?

Mr. OAKES. Let's look at the actual figures that are involved; they are very much smaller than most people realize. The Federal Government paid a subsidy last year of $80,000,000 for the potato crop alone. The Federal Government has paid an annual subsidy for road building of over $134,000,000. Now it is calculated that a Federal subsidy for a balanced, strong postwar fleet of 15,000,000 dead-weight tons would be a good deal less than $15,000,000 a year, only one-third of 1 percent of the volume of United States world trade, a good deal less than $50,000,000 a year. Compare that with the $80,000,000 for potatoes alone and $134,000,000 for roads, and what are ships but roads across the oceans, roads to carry goods and people back and forth. Is it logical to subsidize our highways on land and not our highways on the sea?

Mr. BAILEY. If you will permit the interruption, Mr. Oakes, speaking from the operators' standpoint, the ship operators' shipping subsidy to the operators has been less than $4,000,000 per year, on the average, since the Ship Subsidy Act was passed in 1936.

Mr. HART. Gentlemen, what does our merchant marine mean in terms of national defense? We have been talking about world trade. Suppose we should have a World War III, which, of course, we all want to avoid. Just what does our merchant marine mean to our national defense, Mr. Bailey?

Mr. BAILEY. The best authorities, Mr. Hart, who are the military heads themselves, have told us that the Army and Navy would be unable to carry on an aggressive war unless supported by an adequate merchant marine. In fact, the end of the last war was delayed approximately 1 year while we built up a sufficient fleet of merchant ships to support the activities.

Mr. OAKES. And remember, they have now developed the atomic bomb, which, if there is another war, will prevent us or certainly not give us time to develop shipyards and redevelop the lost skills to build that merchant marine which will be so necessary to winning a war.

Mr. BAILEY. That is perfectly right, Mr. Oakes. We had warning before, but we have been told by the military authorities that we cannot expect such warning hereafter.

Mr. HART. Well, the shipping of foreign nations is controlled by the governments of those foreign nations. Isn't that true generally, gentlemen?

Mr. OAKES. Generally, that is true—controlled almost completely. Furthermore, in most cases, they are subsidized 100 percent.

Mr. BAILEY. And we certainly can't rely upon foreign-flag vessels to support a military action in another world emergency, and the conditions in Europe today do not lead to any complacency.

Mr. HART. Well, thank you, Mr. Bailey and Mr. Oakes, for warning us of the peril America faces unless Congress acts promptly to insure this great Nation of an adequate, well-balanced merchant fleet.

This is Ed Hart saying good-by from Washington.

The Constitution

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 23 (legislative day of Wednesday, July 16), 1947

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an article which I contributed to the distinguished magazine Think in its July 1947 issue. The subject of my article was The Most Wonderful Work Ever Struck Off at a Given Time by the Brain

and Purpose of Man—the United States Constitution.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LITTLE JOURNEYS TO THE CONSTITUTION

(By Hon. ALEXANDER WILEY, United States Senator from Wisconsin)

A term that is frequently heard these days is: "Un-American." How can you and I be sure that it should not at times be applied to us—that we ourselves are really thinking in the American way, living in the American way, actually being American in our personal lives?

The answer to that question is not as simple as it would appear to be. There is a tremendous amount of European-type propaganda being circulated and discussed everywhere in our midst, and many of us, who are normally devoted completely to our American system of free enterprise and to all that belongs to our American heritage, may have been infected by it unconsciously. How can we be sure that our thinking and our actions have not been influenced in some way by this alien thinking which is expressed in doctrines of class and religious war, of national hatreds, by those who proclaim that there is no more hope in our system of private property, no more frontiers of opportunity?

I submit that one way by which we can be sure that we are thinking American is from time to time to take little journeys to the Constitution, there to familiarize curselves anew with the basic doctrine and the basic landmarks of the American heritage. Today we all need to be sure that we are "on the American beam," that we have not been misled by subversive doctrines, that we have not strayed from the "American way."

By "little journeys," I mean the careful reading periodically of the articles of the Constitution, the Bill of Rights and the subsequent amendments to it, together with interpretations thereon. I mean counting our blessings again and again as we read this precious work. There is no single document, other than the Gospel itself, which merits more studious attention by the American people than the Constitution.

There is nothing outdated about this miracle work which, since 1789, through 158 years of American life, has withstood the test of time. As we have progressed by hitherto inconceivable technological changes from a frontier civilization to an atomic age civilization, our Constitution has given us one of the oldest single continuous governments on earth today.

We might recall what a great foreign observer said about the Constitution almost three-quarters of a century ago. William E. Gladstone, Prime Minister of Great Britain, wrote: "The American Constitution is, so far as I can see, the most wonderful work ever struck off at a given time by the brain and purpose of man." We recall, too, the words of William Tyler Page in his statement of the American's Creed, adopted by the House of Representatives on April 3, 1918: "I * * * believe it is my duty to my country to love it, to support its Constitution, to observe its laws, to respect its flag, and to defend it against all enemies."

To think in the American way, therefore, is to think Constitution-wise. This means to respect and admire the wisdom of the founding fathers, the men who conceived it, and the wisdom of the strong men who administered it and gave it life, of the brave men who fought for it and the heroic men who died for it.

Calvin Coolidge wrote: "The Constitution of the United States is the single refuge of every right that is enjoyed by an American citizen."

Our respect for the Constitution does not mean that we believe that it is unchangeable, not subject to modification and to new interpretation with the years. On the contrary, we believe in its dynamic nature as Thomas Jefferson expressed it: "Some men look at constitutions with sanctimonious reverence, and deem them like the ark of the covenant, too sacred to be touched. They ascribe to the men of the preceding age a wisdom more than human, and suppose what they did to be beyond amendment. * * * Laws and institutions must go hand in hand with the progress of the human mind. * * * We might as well require a man to wear the coat that fitted him as a boy, as civilized society to remain ever under the regime of their ancestors."

But through our "Little Journeys to the Constitution" we may be sure that we are on the right track, the American track, toward peace and plenty for ourselves and our children's children.

Flood Control

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1947

Mr. JENSEN. Mr. Speaker, the spectacular floods along the middle and lower Mississippi and its major tributaries are the floods that usually make the headlines in the newspapers. Certainly, these floods on our major streams cause tremendous damage in many ways—people are displaced from their homes; business is interrupted; crops are drowned out and much of our best farm land is permanently damaged; city water supplies are disrupted and disease is spread among the populations affected; highways and railroads are washed out; and all too often people lose their lives.

Not as spectacular but just as real and more costly is the flood damage to property on smaller tributaries and to watershed lands due to uncontrolled run-off and erosion of soil from sloping fields.

These problems are so widespread and of such frequent occurrence that the welfare of the Nation as a whole is vitally affected. The annual flood damages along the streams of the United States amount to an estimated 250,000,000, including damages to agricultural lands, crops, equipment, and other property. The loss to the Nation's wealth from this source alone in the last 30 years is about equal to the total value of all the farm products sold or used by farm households in the United States in 1940.

At the flood control hearings, June 3, 1943, before the Committee on Flood Control, House of Representatives, Mr. Alan N. Jordan, executive secretary of the Ohio Valley Conservation and Flood Control Congress, included in his statement that the floods in the Ohio River Valley during 50 years had caused the loss of more than 1,000 lives and a property damage of more than a billion dollars.

We cannot afford to continue to suffer such losses either from the economic or moral standpoint, particularly now when there is such terrible distress in Europe and other parts of the world from lack of sufficient wheat, fats, protein, and other essentials to a minimum diet.

Congress has recognized that continuance of unbridled floods is a serious menace to the national welfare. And it was stated in so many words in the Flood Control Act, Public No. 738, passed by the Seventy-fourth Congress on June 22, 1936. By congressional policy, flood control on navigable streams or their tributaries is a proper activity of the Federal Government in cooperation with States, their political subdivisons, and localties thereof.

The Congress, in the above referred to act, authorized Federal investigations and improvements of rivers and other waterways for flood-control and allied purposes to be carried out by the War Department under the direction of the Secretary of War, and Federal investigations of watersheds and measures for run-off and waterflow retardation and soil erosion prevention on the watersheds to be carried out by the Department of Agriculture under the direction of the Secretary of Agriculture. The Secretary of Agriculture has designated the Soil Conservation Service and the Forest Service to make these investigations and carry out the Department's responsibilities in application of works of improvement on the watersheds.

It goes without saying that the damages from floods are of such proportions as to require the utilization of all measures that can be devised both to eliminate or improve the man-made conditions which produce the floods and to regulate the excess waters so as to minimize the potential forces which otherwise wreck such havoc.

To begin with, then, I am convinced that no stone should be left unturned to do everything possible and practical up in the fields, pastures, woodlots, idle lands, and gullies along the tributary watersheds to slow down water and reduce soil erosion that causes sediment and then siltation at the places where the floods begin. And I want to be sure that this point is clear, that the kinds of works and measures which are recommended for this purpose not only slow down run-off but they benefit the lands on which they are applied.

Technicians of the Federal Soil Conservation Service, who have done so much in this field, have found that the lands on which the measures are applied, the farms and woodlands, are materially improved in the process. It is a matter of common observation to all of us who have been close to the soil that the more of the rainfall on sloping fields that can be put to beneficial use by storing it in the soil the better the crops will be. Less water, then, will be carried swiftly downstream to contribute to flood heights. I have talked with many farmers who are especially concerned with the ever-increasing amounts of water that run off their sloping fields, carrying good topsoil with it. The damage is especially noticeable after a heavy rain—as indicated by the gutted fields and accumulations of silt at the bottom of slopes, on roads, and in waterways. We have seen our streams become brown with the soil washed from our plowed

ground. Those who have relatively level bottom lands, served by drainage ditches, know too well how the ditches are filled with sediment, resulting not only in heavy crop losses but also in extra high expense for cleaning out the ditches. The silt that clogs such drainage ditches also comes from the land, largely from cultivated fields and gully banks above.

I think we know pretty well that floods come from water which flows unchecked off the fields, pastures, woodlands, and watercourses. Of course, the run-off from only a few fields usually does not cause a serious flood. It is the accumulation of run-off from all of the land of a watershed into restricted channelways that causes floods. Since water flows without regard for property lines or boundary fences, the efforts of individuals here and there, no matter how well conceived and carried out, are limited to their respective farms and too often are of little avail, due to forces beyond their control. Hence, action on a group basis taken according to a working plan covering their lands has proven to be by far the most effective approach. Obviously, the time and effort and money spent on a compact group of farms that cover a complete watershed is less than that required for piecemeal work.

How can this group action be effected? Is there any machinery for facilitating it? Fortunately, we have in all States of the Nation laws which enable farmers to form and manage their own soil conservation districts as instrumentalities of the State, to facilitate the conservation of soil and water including upstream flood control. Local farmers decide whether they want a district and people designated and elected by them govern activities and establish policies and procedures wherever districts are set up. When such a district is organized it can use effectively the facilities available to it. It offers a channel for correlating State and Federal assistance with local contributions for a single, unified effort. For example, technicians of the Soil Conservation Service are made available for supplying technical assistance to soil-conservation districts. They work with the landowners and operators to help them individually and by groups, to develop and apply farm plans, and where flood-control operations are authorized, to include flood-control features in their assistance to the districts.

Such plans are made a part of an agreement between the farmers and the local soil-conservation districts. The district governing bodies, through their first-hand knowledge and understanding of local conditions, are in a position to know when a practical plan has been made. Not only do these districts assist farmers to get started, but they follow through with whatever matters arise from time to time in connection with operation and maintenance of the conservation practices. Many districts in Iowa, for example, have worked with land owners and operators in the districts to grow seed of grasses especially developed and adapted for grassed waterways, thereby helping to solve the problem of stabilizing the watercourses to carry run-off safely down the slopes. This grass makes such a tough turf that it actually slows down the water flowing over it, which in itself is a good measure in the interest of flood control.

The effect of this type of work can be observed on many small watersheds throughout the country. One example, in my district, is the Jones Creek watershed, a tributary of the Soldier River, in the southern part of Monona County, Iowa. This small watershed of 2¼ square miles was being damaged by erosion at such a rate that it would have been uneconomical to continue its use as an agricultural area for more than 15 to 25 years. Gullies from 8 to 50 feet in depth were rapidly cutting up the valleys and would have ruined or rendered impracticable for agricultural uses about 465 acres of the best valley land. Sheet erosion on the slopes was carrying the soil and all it contains, so that crop yields were declining. Below this watershed, 3,270 acres of valuable crop land, farmsteads, roads, drainage ditches, and a railroad running along the flood plain of Soldier River were constantly being damaged by flood water and by heavy silt deposits.

A decision had to be made by the people in this community. They could continue to derive some income for a limited number of years and when it was no longer possible to continue farming operations, they could abandon the land or allow it to revert to public ownership through tax delinquency. Or, they could fight to bring the causes of this land damage under control. They chose the latter course. They agreed to cooperate with each other and with Federal, State, and local agencies that could provide assistance in their fight. They invested money and hard work, but for a number of years now they have been able to see the results of their efforts. Their community which was once looked on as one of the most serious problem areas of the county is now being considered as an example of what can be done in a practical way to control erosion, alleviate floods, and maintain a permanent agriculture. With new and improved methods and designs to control these destructive forces, there is no doubt but what these results can be duplicated in the other areas having similar problems. As a matter of fact, this is being done in various parts of the county.

In a recent flight over the flood area, this watershed was reported to me as standing out very decidedly because of its contrast with surrounding untreated areas. There was no evidence of serious erosion or flooding or deposition in or below this adequately treated watershed.

The farmers of Iowa are taking advantage of their State soil conservation districts law. I am talking about my home State because I am more familiar with the facts about it. As of July 1 of this year, there had been organized, and are operating, 87 of these districts, comprising over 29,000,000 acres and including in their boundaries over 185,000 farms. More than 10,000 owners and operators, with assistance of Soil Conservation Service technicians, had already worked out complete plans and started to apply the measures to improve their farms the conservation way—the best use of the land and water without waste. They have found that the practices which keep fertile top soil in place not only produce better crops, but they make field operations easier as well. The saving in cost of field operations by working on the contour instead of up and down hill is an important item in figuring the net returns from a farm.

Also, these soil conservation districts are equally well adapted to develop a combined attack on the run-off and erosion problems in the interest of flood control through their coordination of the efforts of all landowners and operators in cooperation with Federal, State, and other concerned groups.

The flood-control acts passed by Congress provide a means for determining what damages are done by flood waters and sedimentation in designated watersheds—and the nature and extent of such damages; what can be done to reduce such damages by improvement of watershed conditions; how it can be done; what it will cost; and what the benefits will be. They also provide a means for the Department of Agriculture to assist local people to reduce damage caused by floods and sedimentation.

The Soil Conservation Service has had wide experience in assisting over 1,700 soil conservation districts. Conservation plans with more than 500,000 farmers have already been developed. Complete treatment has been carried out with the assistance of this service on about 75,000,000 acres of land in districts. I have confidence in the ability of the Soil Conservation Service in this field. This work done throughout the 48 States and the Territories has given their technicians the know-how on soil and water conservation methods, and they know what is practicable to apply from a farmer's standpoint.

In the flood-control field, the Department of Agriculture, in the 11 years since the first congressional authorization previously mentioned, has developed a sound, efficient procedure for making the watershed investigations for waterflow retardation and soil-erosion prevention in the interest of flood control. Eighteen such surveys have already been completed and some work has been done on 32 additional surveys. Where such investigations show that a watershed-treatment program would reduce flood water and sediment damages sufficiently to justify the cost, the Department of Agriculture technicians, with the advice and suggestions of others concerned, recommend to Congress the type of remedial program needed, together with estimates of cost for installation, operation, and maintenance. This is certainly a sound, business-like procedure.

A survey of this type was made on the watershed of the Little Sioux River in Iowa and subsequently Congress authorized flood-control operations on it. The lower part of this watershed lies in my district; hence, I am familiar with it. They found, while making the survey, that flood run-off in this watershed is responsible for damages in excess of an average of one-half million dollars each year. In the main these damages are

the result of: (1) Discharge of floodwaters and sediment upon the rich alluvial plain bordering the Missouri River; (2) flood overflows along all upland streams; and (3) the rapid growth of trench type gullies on the uplands. In addition, flood run-off washes away large quantities of fertile topsoil. The important remedial measures they recommended for this watershed are: (1) The placing of lands too steep for cultivation under permanent protective cover such as grass or trees; (2) the use of soil and water conserving rotations and winter cover crops; (3) the improvement and protection of pastures and woodlots; (4) supplementary practices such as terracing, contour furrowing, tree planting, refencing, and water protection; and (5) the building of structures to control major gullies. A program of this type not only helps to check flood damages but also helps to save our land from soil erosion. At the time the survey report was prepared the Department of Agriculture estimated that the total cost to the Federal Government for completing a program of this type on the Little Sioux watershed would be about $4,280,000.

In addition, farmers and landowners would contribute about $1,260,000 in the form of labor and materials, while State and local agencies would contribute about $370,000 in the form of labor and equipment. Operation and maintenance of the program will be taken care of by the farmers, landowners, and local agencies.

Congress has authorized work of this type on 11 watersheds of the Nation, at an estimated cost of about $90,000,000—that is the cost only for watershed improvement and does not include any major dams, levees, or channel improvements. The costs on all of these projects, however, will be spread over a period of years, as Congress makes the funds available. I am informed that the Department of Agriculture estimates that about $800,000,000 could be efficiently and effectively spent on flood-control work of this type during the next 10 years, in the Mississippi Basin alone. And I, for one, believe that it would be money well spent.

Those who are devoting their energies and skills to work out the problems in controlling floods recognize, full well, the limitations and hazards of assuming that one kind of protection is adequate for all watersheds. Watershed treatment and downstream flood control works together are required in most cases to produce effective results in reducing flood damages which occur on the tributaries and along the main streams. If, in spite of any program that may be devised for the treatment of watershed lands, it appears that in large watersheds more water will reach the main stream than can be safely carried away, means must be provided for storing or otherwise controlling the excess waters.

In summary, I want to stress first, the importance of immediate and sustained action on all fronts to alleviate the irretrievable losses to our wealth and well being brought by floods—floods that in some measure affect the lives of all of us.

Secondly, the action to be taken, I believe, logically follows a course of (1) wise use and proper treatment of all the lands in the watershed whether it be farm land, woodland, urban property, highway or railroad right-of-way—with application of practices to conserve water, retard run-off and prevent erosion, (2) installation of small structures as may be needed to stabilize the watercourses and creeks feeding into the tributaries and to trap silt, (3) providing storage and other protective measures in the tributaries further to regulate the flow of storm run-off and reduce the "pile-up" of waters which otherwise accumulate in the main rivers, and finally (4) construction of large reservoirs, levees, and channel improvement works as necessary to control the flood waters reaching the main rivers and waterways.

These steps are not independent; rather they are interdependent. They should be carried out in this order, but oftentimes the extent of damage downstream is so great that it is desirable and necessary that all four of the types of controls be installed simultaneously. However, it is very important that work of the first type—wise use and sound treatment of the land—not be delayed until flood control authorizations for carrying out the other three types of controls are granted. And all these steps can be effectively and economically done on a watershed if foresight and planning are used in a practical way. Delays in installation of the primary—first type—controls will increase the difficulty of establishing the other three and there will be corresponding increases in costs. To me, this indicates (1) the importance of formation of soil conservation districts throughout the Nation; (2) the forceful prosecution in soil conservation districts of conservation farming, especially on watersheds that contribute to our major floods and (3) the making of flood-control surveys on these same watersheds as rapidly as possible. The effective use of all the resources, landowner, utility company, county, State, and Federal agencies, requires that all control measures be a part of a well-conceived plan.

The old adage "There is no time like the present" is just as true today as it was when originated. If we act now the cost will be less and the benefits correspondingly greater than if we wait until our lands are impoverished, and our watersheds are further deteriorated.

As It Looks to the Distiller

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Joseph A. Engelhard, new president of the Distilled Spirits Institute, at a recent conference in Denver of State liquor administrators:

With the possible exception of the distiller himself, no one knows better than your State liquor administrators, the major problems which confront the alcoholic beverage industry today. The ending of most of the wartime controls has by no means ended our troubles, for now we are faced with new problems based upon changes in the economic, social, and political structure of the national economy.

Throughout the war period and the months following the end of hostilities, most of the planning and discussion within the industry had been based upon a reasonably rapid return to normal. It is all too apparent today, however, that normalcy is still far from realization.

I did not come here either to deliver or outline all of the problems with which the industry is confronted at this time, for time will permit a discussion of only a few—those which you as administrators share with the distillers.

As it looks to the distiller, the chief problem is the industry's stability and continued progress as a vital and important part of America's economic structure.

Social aspects also are important. Such factors as public sentiment toward the industry, the never-ending threat of the drys, local option elections, undesirable outlets, price wars, and other prejudicial influences of a social nature cannot be overlooked.

Nor can we overlook the competitive buyer's market which has arrived and which will bring added problems as it becomes even more competitive. Nor can we neglect to inject more of the point of view of the public into our thinking, not only to retain the respect the industry has built for itself since repeal, but to raise that respect to even greater heights. In foreign countries the alcoholic-beverage industries enjoy prestige and a firm position in public esteem. There is no reason why similar recognition should not exist in our own country. In addition to its many other activities in behalf of consumer, dealer, and industry alike, the DSI has and is doing its utmost to see that the industry is accorded the recognition and standing it justly deserves.

And, above all, if the public interest is to be served the laws and regulations laid down for the proper conduct of the industry must be enforced rigidly. There can be no relaxation. Lax enforcement can bring only the loss of public respect—which would be most serious. For public opinion is a great force in the world today—it can make or break an industry, a product, or an individual.

I cannot stress too forcibly the fact that the welfare and well-being of this industry, to a considerable extent, lies in the hands of the liquor-control administrators of each State. It is only by strict and impartial enforcement of the system of control that prevails in a particular State that the industry can expect to merit and receive general public acceptance.

AN INDUSTRY MENACE

In my considered opinion one of the greatest menaces to the industry today is the occasional licensee whose character and conduct are such that he gives cause for a movement to impose local prohibition. The industry has no control over such a dealer; neither has it any voice in his selection to receive a license to sell a distiller's product. The industry can only make the best of it if the licensing authorities permit undesirables to become licensees.

I realize fully that the task of reforming or weeding out undesirable dealers is a difficult one, but it is the duty and responsibility of the control boards and enforcement officers to undertake this job without fear or favor.

Violators of liquor laws cannot be coddled or educated into compliance. Something more than education is needed, because those who flaunt the law, as a rule, are not receptive to education of this sort. They should

never have been issued a license in the first place, but if once licensed, renewals should be denied them.

It has been demonstrated over and over again that bad operations on the retail end of the business are responsible for bad public relations and much of the unfavorable publicity which has been harmful to the industry as a whole. Fortunately, such operations are not extensive, as most of the men and women in the liquor business are living up to the spirit and letter of the law, and observing a high standard of business ethics.

The retail outlet, from the public-relations standpoint, is the most vulnerable spot in the industry. For it is the package store and the tavern that serve as the points of direct contact with the public. Those at the distilling and wholesaling level are only in indirect touch with the public. Therefore, the industry must depend largely on the law-abiding licensee to uphold the public respect it has built up in the 14 years of repeal.

The exclusive package store as an outlet does not present, in its social implications, much of a problem. As a point of public contact, especially to the home buyer, it does represent an opportunity to the credit or discredit of the whole industry, depending upon the integrity of the owner.

The most extensive point of contact with the public is the tavern. That is why it is of such great importance that conditions in these places be above reproach. For upon the status of the tavern, with the drinking and nondrinking people of a community, depends the status of the industry.

The laws of most of the States you represent provide for the tavern. The greater number of them are clean, scrupulously managed, and law abiding. They are operated by self-respecting businessmen, good neighbors and citizens. Such taverns are an asset to the social life of the community.

At the other extreme is the licensed nuisance where regulation or moral control is weak or disregarded. Such an establishment is always a serious source of public complaint, and its continued operation is deplorable. Why should such abuses be tolerated under license when there is a legal way to put them out of business?

THE ORIGIN OF LOCAL OPTION

We in the industry know that local option elections originate, in many instances, because of local nuisances where enforcement has broken down. There also is much evidence that men and women otherwise liberally disposed to alcoholic beverages, have worked and voted against their sale as a protest against conditions under which they are dispensed locally. Results in local-option elections, therefore, are not always a fair index of wet and dry sentiment. In some cases the license revocation of a single bad spot might have eliminated the protest vote and kept the community affected, a legitimate market for alcoholic beverages.

There is some comfort in the fact that these local-option elections normally result in little net change in the wet-dry population, though they do indicate in most instances a troublesome condition which strict enforcement of the beverage-control laws might have prevented.

Over the entire country last year, according to the carefully kept records of the Distilled Spirits Institute's local-option bureau, there was a net gain in dry population of 285,309 as compared with a dry gain of 325,815 in 1945. The percentage of population of the country living in dry territory at the end of 1946 was 19.1 as compared with 18.9 at the end of 1945. These percentage figures, of course, include the population of the three legally dry States.

As was the case in 1945, the largest percentage loss in wet population in 1946 occurred in a few Southern States. In Arkansas there was a net dry gain of 15,488; in Kentucky a dry gain of 157,469, and in Virginia a dry gain of 104,364, making a total dry gain in these States of 415,281. For the country as a whole, however, the net loss to the wet cause was only 285,309. This was brought about principally by considerable wet gains in Alabama, Texas, and Minnesota.

The comparative stability shown by the results of the local option elections, is a clear indication that repeal is working satisfactorily to a large portion of the population of the country. But there is no doubt in my mind that these small dry gains could have been prevented had State control laws been enforced with firmness, justice, and speed.

Nearly all of the Government's restrictions which rigidly controlled the industry's output for 6 years, are now happily buried in memory, and the few that remain are expected to be removed soon. But we still have the Federal excise tax of $9 per proof gallon, which appears to be with us indefinitely.

LIQUOR TAXES CLIMB

This inevitably leads to a topic I wish to touch on briefly—the tax situation. There is no other subject at the moment, more important to industry and consumer alike, than the tendency toward higher taxes on alcoholic beverages.

In the face of the continued $9 Federal excise tax, there have been an unprecedented number of revenue-raising measures introduced in State legislatures this year. And the happy-hunting ground seems to be the alcoholic beverage industry.

Records of the legislative reporting service of the Distilled Spirits Institute show that 27 bills to increase tax on spirituous liquors have been introduced this year in various State legislatures, and thus far 6 of them have been enacted into law. The States affected are Arkansas, Nevada, Minnesota, New Jersey, Tennessee, and New York, where a temporary $1.50 per gallon tax was made permanent. Municipalities also have sought to dip into the pool of alcoholic beverage taxation, as evidenced by a Baltimore city tax on distilled spirits of 50 cents per gallon.

Florida, however, turned the tables, and cut its tax from $1.92 to $1.20 per gallon.

In the light of experience, it would take an irresponsible optimist to view this situation as just a passing phase, brought on by postwar conditions. Once imposed, there's nothing so hard to eliminate as a liquor tax. The $9 Federal levy is an outstanding example. Another is Pennsylvania's 10 percent emergency tax which was enacted to help pay the costs of the relief program during the depression period in the thirties. Although the emeregncy has passed, the tax has been renewed every 2 years since then, the last time as recently as last month.

This whole reckless concept of taxation, I am satisfied, is due in a large measure to the failure of those in industry to aggressively resist the plan. The result has been that those who make the laws look upon the industry as being on the defensive.

This whole approach must be changed if a brake is to be applied to a recurring torrent of tax proposals, or, as in the case of Pennsylvania, mark-up adjustments that force prices higher. A damaging corollary effect of added taxes which force prices higher, is the fact that the public is little cognizant that such high prices are the direct result of high taxation, and might blame the industry for maintaining or increasing prices in the particular market affected, in the face of a gradually declining price situation on many other commodities.

ADMINISTRATORS CAN HELP

The administrators, as close as they are to the situation as it affects their individual States, could be and in many cases have been of real help in these tax fights. The administrators are not without influence in molding administrative policy, especially as it is brought to play upon the industry.

Apparently, too many State legislatures in their zeal to turn up more revenue, overlooked the fact that Federal excise taxes have jumped more than 400 percent since 1938, and that distilled spirits are bearing far more than a fair share of the Nation's tax burden. Nor have the State legislatures taken into consideration the fact that the State taxes when added to the $9 Federal tax, have raised the average tax per gallon to $10.22. What does that mean to the consumer? Simply this: That at least $2.04 of the price he pays for a four-fifth quart bottle of 100-proof whiskey, in tax money.

A POT OF GOLD FOR STATE AND NATION

No one should ignore the fact that the alcoholic beverage industry is now the Nation's largest industrial producer of Federal revenue. It is exceeded only by income taxes. Last year revenues collected from the alcoholic-beverage industry for support of operations of Federal, State, and local governments, amounted to the staggering total of $2,500,000,000. These returns, collected at the rate of nearly $6,800,000 a day, or a million dollars a day above the collections from this source in 1945, indicate the increasing significance of the manufacture and sale of distilled spirts as one of the top sources of revenue for sustaining the vital functions of governments.

Like the Federal tax returns, revenues returned to State and local governments from distilled spirits, have mounted steadily since repeal, and reached a record-breaking net total last year, of $464,000,000 after deducting all costs of administration, collecting, licensing, and enforcement.

You administrators might well give some attention to the unwise and unsound legislative proposals that crop up in your States. The alcoholic beverage industry does not oppose proper and workable laws and regulations. On the contrary, it recognizes the need for adequate control and welcomes appropriate measures that protect the public from those in the industry whose social conscience may be dulled or warped. Last year with only about half the State legislatures meeting, there were over 300 bills introduced affecting the alcoholic-beverage industry.

This year, with more legislatures in session, I am sure this legislative crop will be still more abundant. Some of these legislative proposals stem from prohibitory motives; some are actuated by unwise or selfish industry motives, and other are just plain "bell-ringers," otherwise known as shakedowns.

We believe that liquor control administrators occupy a vantage point from which they can judge with detachment and fairness the validity and soundness of these proposals. We believe further that liquor-control administrators should be interested in the health and well-being of the industry they control—whose life they literally hold in their hands.

From these views we conclude that liquor-control administrators should pay some attention to the flood of legislative proposals which yearly engulfs the alcoholic beverage industry, and should assist in opposing the unwise and unsound laws that threaten the welfare of the public and the industry.

AID TO THE ALCOHOLIC

And last, but certainly not least, one big thing the industry is doing without much credit from the outside, is aiding, through substantial contributions in cash, the research that is going on in the scientific profession, to solve the age-old problem of the alcoholic.

Science already has shown us the far too prevalent attitude toward the alcoholic is as archaic as it is inhumane. It has shown us that the chronic drunkard is a sick man who deserves medical care and treatment. And it has already proved that his rehabilitation

is possible—that he can be cured and returned, with self-respect, to society.

The industry, along with many progressive communities, realizes that the clinic and not the jail, is the real answer to the alcoholic's need. And the industry knows, too, that without the drunk, prohibitionists would have no cause.

Amendment of United States Housing Act

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. FOOTE. Mr. Speaker, yesterday the House passed by unanimous consent S. 1361 providing for two amendments to the United States Housing Act of 1937; one to permit loans, capital grants or annual contributions for low rent housing and slum clearance projects where construction costs exceed the present cost limitations, upon condition that local housing authorities pay the difference between cost limitations and the actual construction costs. During the war emergency construction was deferred on many low rent housing and slum clearance projects for which the Federal Public Housing Authority had contracted to extend financial aid. This amendment would give any municipality with which the Federal Public Housing Authority had previously entered into a contract, the option and opportunity of going ahead with the project by simply absorbing the excess cost above the limitations of the act. It does not compel any such municipality to do so. The bill does not involve the appropriation of additional funds by the Federal Government because all moneys that would be disbursed have already been appropriated and allocated to the respective projects within the limits of the existing law. It permits these municipalities to pay the difference between the limitation of $5,000 and approximately $7,500 which is the actual cost of a dwelling unit and thereby complete the projects.

Section 2 is an amendment to the Senate bill which I advocated before the Banking and Currency Committee of which I am a member, and which had jurisdiction over this legislation. Under the regulations governing the administration of Federal low-rent housing units in the State of Connecticut as well as elsewhere, limits are set on the incomes of those who are eligible for residence in these projects. These limits were originally set on the theory that the properties should be occupied by those of low income who would otherwise be forced to live in substandard housing. During the war, however, and up to the present time, families whose incomes exceeded the limits were permitted to continue to live in the same on a payment of an economic rent rather than a susidized one. As stated by the Acting Director of the Housing Authority of the city of New Haven:

While it is true that tenants with high incomes have been permitted to remain in low-rent housing projects, all the tenants of this Authority have been required to pay increased rentals in direct proportion to the increase in family income, up to the ceilings established by the OPA, which, in our particular situation, represented economic rents.

The same condition exists in several other cities in Connecticut, as well as in other industrial areas throughout the Nation. The Federal Housing Authority, however, has issued notices of eviction to families whose income exceed the limits set. This means that in my district, particularly in New Haven alone, several hundred persons will be forced out of their homes and have no place to move to. One reason given is that there are many people, including veterans, who could make use of the vacated units. This overlooks the fact that many of the persons facing eviction are themselves veterans—men with large families whose sacrifice in going into the service was greater than those who went in as single men, came out, and have now assumed family responsibility. Under the present amendment eviction proceedings would be stayed until March 1, 1948, unless suitable quarters elsewhere can be proved available. This Congress has already passed an extension of the rent-control law to March 1, 1948, which makes it illegal for the individual or corporate landlord to evict a tenant before March 1, 1948, except on one or two conditions. Therefore, this amendment extends the same protection to tenants of Government-controlled properties who are not living in the same at the expense of taxpayers in general, but are actually paying full economic rent and have no place else to go due to the housing shortage.

Amendment of Civil-Service Laws

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. KEATING. Mr. Speaker, a defect in the civil-service laws, resulting in an obvious injustice, has been brought to my attention, which I seek to remedy by a bill introduced today.

One of my constituents in April 1941 took the examination for a postal carrier and received a rating of 93 percent. Later he enlisted in the Army and was badly wounded in Germany, with the result that he now has a 70-percent disability.

In March 1946 he was given a probational appointment as a substitute carrier but found that he was not physically able to do this work, which involved, of course, carrying heavy sacks of mail and a great deal of leg work. Consequently, in March, this year, he was reassigned to the position of substitute clerk.

The difficulty is, however, that, despite his rating, which with the 10 percent granted to a disabled veteran, puts him above 100 percent, he has lost all of the important seniority rights which he would have had on the postal carrier list, since his name was removed from the carrier register when he received his appointment.

The Civil Service Commission has advised that under its regulations it is not permissible to transfer an eligibility from the carrier register to the clerk register or vice versa, even though the original examination which this young man took was one given for either the position of carrier or clerk and was identical in all respects for those who were seeking appointment to either of these positions.

Accordingly, we have a case here of a veteran who was badly wounded in the service of his country, lay in an overseas hospital for many months, and finally returned to this country to take up his job after convalescence, only to find that despite his high standing in the examination, he would have to take his place far behind those who had received much lower marks in the same examination. This seems to me to present a case which cries out for remedial treatment.

The measure which I am today offering would amend the civil service law to provide that any person who, due to a disability incurred by military service, is unable to perform the duties of the position designated by him at the time of taking the examination for appointment, may upon written request at any time have his name entered on any list of eligibles for any position for which the same examination is required. It further provides that such entry shall be made without any loss of seniority or other rights of eligibility conferred by the civil service law.

This suggestion seems to me but simple justice and I hope will be received with favor.

The St. Lawrence Seaway and Power Project Is Necessary to the National Welfare

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. BLATNIK. Mr. Speaker, I rise to speak on a subject of vital concern to the people of the United States, and especially to the people of the Midwest and Great Lakes regions—the St. Lawrence seaway project. As you may know, the House Committee on Public Works has been holding hearings for the past week on House Joint Resolution 192, which was introduced by the gentleman from Michigan [Mr. DONDERO], and House Joint Resolution 194, introduced by myself, which authorizes the construction of the St. Lawrence seaway and power project. The Senate Foreign Relations Committee approved the companion measure (S. J. Res. 111) on July 18.

I know that many Members of the House are already familiar with the seaway issue. The project is, however, so important and necessary to the future welfare and prosperity of my district

and the entire Midwest, that I take this opportunity to summarize briefly the salient facts concerning the waterway, and outline the major arguments in favor of its construction.

WHAT IS THE ST. LAWRENCE PROJECT?

The St. Lawrence project involves a proposed shipping lane extending from the Strait of Belleisle at the mouth of the St. Lawrence River, to Duluth, Minn., a distance of 2,351 miles. The completion of the project would provide a channel of inland water transportation which would permit deep-sea vessels to steam up the St. Lawrence River from the Atlantic Ocean, and unload their cargoes at the Great Lakes ports of Duluth, Chicago, Detroit, Cleveland, and Buffalo. In other words, the waterway would bring ocean shipping 2,351 miles into the heart of the North American Continent.

Most of this great inland waterway is already navigable to ocean vessels. On the Atlantic side, ocean ships can enter the St. Lawrence River as far inland as Montreal, Canada, which is a distance of 1,003 miles.

From the interior, the Great Lakes system is navigable for a distance of over 1,200 miles from Duluth to Ogdensburg, N. Y., with the exception of a few minor obstructions. A few minor operations would make this section of the water route completely navigable. A new lock would have to be constructed at Sault Ste. Marie betwen Lake Superior and Lake Huron, and the St. Marys River would be dredged to a depth of 27 feet. The St. Clair and Detroit Rivers between Lake Huron and Lake Erie would have to be deepened also. The Welland Ship Canal on the Canadian side of the border would have to be improved, and the Thousand Islands section of the St. Lawrence River would require dredging. Once this work was completed, Great Lakes vessels of Atlantic size can travel eastward as far as Ogdensburg, N. Y.

There remains the 119-mile bottleneck to shipping between Ogdensburg, N. Y., and Montreal, Canada, and the improvement of this section to permit the passage of ocean vessels is the major objective of the St. Lawrence project. Some 70 miles of this distance is navigable at the present time—the Lake St. Francis and Lake St. Louis sections. To remove these major obstructions to what constitutes only about 2 percent of the total length of the waterway requires the construction of dams, locks, and canals at the International Rapids; between Lake St. Francis and Lake St. Louis; and the 10-mile stretch on the approaches of Montreal. Once these links in the waterway are completed, the midcontinent would be accessible to ocean shipping and the commerce of the Great Lakes would be joined with the main stream of world trade.

THE COST OF THE ST. LAWRENCE PROJECT

According to the 1947 estimate of the United States engineers, the over-all cost of the St. Lawrence project would be $839,121,000. Since $164,414,000 has already been expended to improve certain sections of the project—$132,672,000 has been expended by Canada, and $31,742,000 by the United States—the actual cost to complete the entire waterway would be no more than $674,707,000 at present wage and building-material levels.

Out of the $674,707,000 total outlay needed to complete the waterway, the United States share would amount to $491,609,000. With the State of New York shouldering part of the United States share—about $93,375,000 of it—for the construction of the power facilities, the total outlay on the part of the United States Government would be approximately $398,000,000.

It should be pointed out that the $398,000,000 estimate is too high. This figure is based upon 1947 construction costs, which are at the highest point in American history. Since the construction of the project will take about 7 years, the cost of materials and wages will no doubt adjust downward and thus the total construction costs would be reduced accordingly.

But the total costs need not concern the House, for the Government of the United States will not be required to assume the burden of the cost of construction of the seaway. Both House Joint Resolution 192 and House Joint Resolution 194 contain provisions which make the seaway self-liquidating through the payment of tolls on ocean traffic. Section 3 (a) of these bills permit a maximum toll charge on cargo passing through the deep-sea navigation works in the St. Lawrence River of $1.25 per ton, with differential or lower toll rates for special types of bulk cargo, such as iron ore, grain, and dairy products.

It is estimated that such toll charges will provide annual revenues of at least $20,000,000, and it is possible that these revenues may exceed $30,000,000. It is certain that the toll revenue will be ample to pay for the cost and upkeep of the seaway. The interest payments on $430,000,000 at a 2½ percent interest rate, plus 1 percent sinking fund amortization, which will retire the debt in 53 years, plus the annual operating costs of $2,500,000, makes a total annual cost of about $17,500,000. This figure is $2,500,000 less than the most conservative estimate of annual revenues from the project to be derived from the self-liquidating provisions of the measure before the House.

In other words, the seaway will pay for itself over a maximum period of 53 years, and will not cost the United States Treasury a single penny—the initial outlay is an investment and not an expenditure.

Besides being self-liquidating in itself, the seaway will pay for itself every 10 years in the form of transportation savings to American producers and consumers. Savings in transportation costs will amount to over $3 per ton on all cargo. Taking the conservative estimate of potential traffic of 10,000,000 tons, the annual savings in transportation costs would be $30,000,000. Since the annual traffic will probably amount to at least 17,000,000 tons, the savings in transportation costs will amount to about $50,000,000.

THE MAJOR ADVANTAGES OF THE SEAWAY PROJECT

The obvious advantages of the St. Lawrence seaway are so convincing and overwhelming that it is difficult to understand the opposition to it. In fact, the mystery is not why it should be under construction now, but why it was not built years ago. I wish to outline the major arguments favoring the construction of this project.

THE SEAWAY AS AN AVENUE OF TRANSPORTATION OF TRADE

In the first place, the seaway would mean tremendous savings in transportation costs. Automobiles could be shipped from Detroit at a saving of $12.24 per ton. Wheat and flour could be shipped from Duluth at a saving of $1.61 per ton and could be laid down in Liverpool at 5 to 8 cents less per bushel. Crude rubber could be brought to Detroit at a saving of $8 per long ton. The seaway would reduce the cost of lumber laid down in Detroit by $5 per 1,000 feet. The dairy products of the Great Lakes region could be transported to the Atlantic coast as a saving of $4 per ton.

It has been estimated that the average reduction in transportation costs for all types of cargo would be about $3.90 per ton.

In addition to the great savings in transportation which would benefit both producer and consumer, the seaway would have the effect of stimulating trade relations between the Eastern States and the Midwest. Grains, flour, ores, and so forth would flow over this water highway from the Midwest to the Eastern States, and be exchanged for the textiles and other manufactured products of Eastern factories. Thus the trade between the two regions would be increased, employment would rise, and the living standards of both areas would be improved.

Several arguments have been advanced to challenge the advisability of the seaway as a channel for inland transportation. It has been said that the potential traffic would be so small that it does not justify construction. This argument has no validity. On the basis of careful studies it may be said that the seaway will attract 10,000,000 tons of outgoing cargo, and 7,000,000 tons on incoming cargo each year. Such a volume of traffic will mean savings in transportation costs amounting to at least $50,000,000 per year.

It has also been claimed that the 27-foot channel of the seaway is not deep enough to accommodate a sufficient proportion of merchant ships to make its construction practical. But studies based upon data compiled by the United States Maritime Commission show that the 27-foot channel will permit 71 percent of the world's merchant vessels, and 65 percent of American merchant vessels to navigate the channel safely.

It has been argued that ice conditions will keep the seaway closed for a greater part of the year, and that its construction would be a waste of funds. Yet a survey of past weather conditions for the area reveal that the waterway would be open for shipping for at least 8 months of the year, and at that time of the year when the need for additional transportation facilities is greatest.

It has also been said that navigation of the seaway would be extremely dangerous, and would result in many costly accidents. But statistics show

that the accident rates on the St. Lawrence River and the Great Lakes at present is very low, and the fog condition is more favorable to navigation than in the New York Harbor itself.

The most vocal enemies of the seaway have been the railroad interests, who have been motivated by the misguided notion that the seaway would jeopardize the economic position of the railroad companies. An analysis of the effects of the waterway on rail transport shows that these interests have nothing to fear by its construction. The average tonnage transported by the railroads during the 1930–39 period was 858,000,000 tons per year. As a result of full production and an expanding population, total transportation requirements are expected to reach 1,232,000,000 tons—an amount which the present railroad system cannot handle without expanding its present facilities.

The potential traffic of 17,000,000 tons to be handled by the seaway would be insignificant compared to the total tonnage handled by the railroad. Instead of being a threat to the railroads, the seaway would benefit them. The peak months for railroad traffic is August, September, and October when extra rolling stock is required to meet transportation requirements. After the peak is reached and passed, the railroads' rolling stock remains idle until the next season. The seaway would relieve the railroads during the peak season, thus making unnecessary the added expense of additional rolling stock which lies idle most of the year.

THE SEAWAY AS A SOURCE OF CHEAP ELECTRIC POWER

It is a well-known fact that the State of New York and adjacent areas suffer from a shortage of power which has tended to prevent the further expansion of their industries. The power facilities of the St. Lawrence project would do much to remedy this situation. The United States' share of electric power generated by the project would amount to nearly 13,000,000,000 kilowatts per year at the very low rate of 1 mill per kilowatt. According to the New York Power Commission, seaway-generated power would save the people of the State of New York some $26,000,000 per year, and would allow for the expansion of her retarded industries to employ 50,000 additional workers.

THE SEAWAY AS A CONTRIBUTION TO NATIONAL SECURITY

There can be no doubt that the construction of the seaway would be a great contribution to the national security of the United States. The truth of this conclusion is obvious. The distance from New York to Liverpool is 3,200 nautical miles all exposed to submarines. One-third of the 2,647 miles from Quebec to Liverpool is in the protected waters of the St. Lawrence River. Had the seaway been completed before World War II, one-third of the dangerous and submarine-infested Atlantic course would have been eliminated by assembling convoys in the Great Lakes and the protected waters of the St. Lawrence, and many of our doomed merchant vessels would have been saved from destruction.

The completion of the seaway would provide the United States with additional shipbuilding facilities, protected from enemy submarines and aircraft. During World War II the United States built 50,000,000 tons of shipping. Although the Great Lakes has the greatest supply of skilled workmen in the country, only 2 percent of ship construction was done in the Great Lakes yards. This was due to the lack of a direct outlet to the ocean for ships so built. The completion of the waterway will mean that our Great Lakes yards can be utilized, and all vessels built can be floated directly to the open sea.

THE SEAWAY PROJECT IS NECESSARY TO THE FUTURE OF MINNESOTA

The St. Lawrence waterway is of special interest to the people of Minnesota; it is absolutely necessary to our future prosperity and development. It is a well-known fact that the high-grade iron ores of the Mesabi Range are being fast depleted. According to the United States Bureau of Mines there are about 992,000,000 long tons of such ore remaining. At the present rate of consumption, these ores will be gone in another 20 years.

The depletion of these ores is important not only to Minnesota but to the Nation. Let me remind the House that 80 percent of the Nation's steel industry is geared to the iron ore deposits of the Great Lakes area, and that 85 percent of all Great Lakes iron ore is mined on the Mesabi Range in northwestern Minnesota.

Faced with the depletion of these high-grade ores, Minnesota must have the St. Lawrence seaway. We must have the seaway in order that we may develop our low-grade ores by permitting small amounts of high-grade ores to be imported to mix with the low-grade ores which we must use in increasing amounts in the future. Otherwise the steel mills of the Midwest will move to the east coast where they can obtain the high-grade ores of Brazil and Labrador.

We need the seaway to facilitate the development of our peat and taconite resources. Approximately half of the Nation's peat resources are located in Minnesota, most of it being located in my district. It is estimated by the United States Bureau of Mines that in St. Louis County, Minn., there are 6,000,000,000 tons of peat. Using modern methods sun-dried peat can be produced for $1 per ton at the bog, thus guaranteeing an unlimited amount of cheap fuel for the future development of the region.

Northern Minnesota is extremely rich in taconite. As Mr. J. R. Findley states in the report of the Department of the Interior, there is enough taconite ore in the Lake Superior region to last the world a thousand years. But the utilization of taconite, peat, and our low-grade ores requires the seaway.

Mr. Speaker, the failure of Congress to take decisive action on the seaway project during this session means continued waste of a precious natural asset. The seaway will open the world's market to Midwest farmers. It will bring vast new quantities of cheap electric power to power-starved New England. It will contribute to the national defense of America. It will benefit directly over half of America, and indirectly the whole Nation.

The people of the Great Lakes area and the Midwest have dreamed of the day when the seaway would become a reality. Forty years is long enough to wait for this vital project. It is more than long enough for narrow sectionalism and the private selfishness of railroad and public utility interests to block a program of utmost importance to the general welfare.

Import Revival Faces Snag as Exchange Bill Is Dropped

EXTENSION OF REMARKS
OF
HON. ROBERT W. KEAN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. KEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal of Commerce of July 18, 1947:

IMPORT REVIVAL FACES SNAG AS EXCHANGE BILL IS DROPPED

Prospects of reviving imports from various foreign countries received what importers considered a serious blow yesterday when the Senate Finance Committee decided to take no action at this session of Congress on a bill which would have permitted the Secretary of the Treasury to set foreign exchange rates for the purpose of assisting import values.

The bill which had passed the House last month had been strenuously opposed by customs lawyers for its failure to incorporate provisions for the judicial review of the Secretary's findings.

MEASURE PIGEONHOLED

In view of these objections, Senator EUGENE D. MILLIKIN (Republican, Colorado), chairman of the Finance Committee, announced that his group had decided to drop the measure for this year but that it had agreed to give it prompt attention at the next session if there was evidence of continued interest.

Importers and customs brokers, pointing to the fact that more than 50,000 import invoices have already accumulated in a backlog awaiting official rulings on applicable exchange rates, stated yesterday that the effect of the measure would be to discourage importers from bringing in merchandise from countries where wide discrepancies exist between the official and open market rates for the American dollar.

The difference between the two rates, according to one customs broker, can at present make a difference of between 25 to 50 percent in the duty to be paid on certain imports. Due to the present uncertainty of the applicable exchange rate, it was said, importers cannot tell whether they are operating at a profit or a loss and will consequently tend to avoid commitments.

Among the countries that are principally affected by the present foreign exchange situation are China, Italy, and a number of the Latin-American countries.

TREASURY MAY ACT

The possibility that the Treasury may take some step to liquidate the accumu-

lated invoices despite the failure of the Secretary to obtain the power which this bill would have given him was mentioned in trade circles yesterday but the exact nature of these measures was not known.

Some importers pointing to the fact that in the case of China the discrepancies between the official and open market rates have existed since before the war stated that "if we have been able to get along for 8 years without this bill, we probably can manage for another 8 months."

However other importers described the Senate Finance Committee's action as constituting almost as serious a blow to the prospects of world trade revival on a two-way basis as the passage by Congress of the first Robertson bill which would have given the President the right to impose quotas or to raise the duty on wool 50 percent.

These predicted that by discouraging imports the failure of Congress to act on the foreign exchange bill would accentuate the decline in the country's exports now anticipated for the final quarter of the present year.

GOP—Operation Bedlam

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. BLATNIK. Mr. Speaker, during this first session of the Eightieth Congress the Republican majority has done its best to take away from the people all the social and economic gains made under the Democratic administration these past 14 years. They have supported the depression-causing policies followed by the Hoover administration, and have attempted to enact into law the entire Wall Street program with respect to labor, the farmer, the veteran as well as in taxation and Government finance. The welfare of the people have been consistently sacrificed on the altar of corporate profits by my Republican colleagues.

Such short-sighted policies are not confined to the Congress of the United States. Reports from my neighboring State of Wisconsin indicate the State legislature is following along in the same pattern. I think I am safe in saying that at least the GOP is consistent—consistently reactionary.

Under leave to extend my remarks, I include in the Appendix of the RECORD an article from the July 17 issue of the Madison Capitol Times. This article by Aldric Revell describes the antics of Wisconsin Republicans in the State Legislature:

In preparation for SA-day (sine die adjournment) Republicans have been marshaling their forces in the legislature for months and are now putting into effect operation bedlam.

This carefully planned operation is calculated to throw the enemy (the public) into utter confusion. This is caused by the fact that GOP members rush up to the firing line and shoot off their mouths in all directions.

The party has now left its platform and is pursuing guerrilla tactics, shooting when it sees the color of the public's greenbacks.

As T. C. Douglas, Premier of Saskatchewan, says about his conservative opponents, their attitude toward a party platform is the same as toward a railroad platform—something to get on and get away from as fast as possible.

The legislature has now reached a political impasse. A political impasse, Republican style, is a valley with steep sides of stupidity through which runs a river of confusion with eddies of hypocrisy.

In the past week the legislature was dominated by a flying saucer mentality. GOP legislators were so busy running around in circles that they met themselves coming back, which naturally made many of them sick to the stomach.

The conflict is between the assembly which has twice insisted upon financing school aids through an increased surtax, and the senate which has refused to tax the corporations for anything.

While legislators toss this problem back and forth to each other, they also keep dipping huge amounts out of the general fund. At the present time there isn't a legislator who knows how much they have appropriated over and above the $105,450,000 biennium budget, or how much surplus is in the treasury.

Senators Frank Panzer (Republican), of Oakfield, president pro tempore, and Louis Fellenz, Jr. (Republican), of Fond du Lac, are flatly opposed to increasing taxes, maintaining there is enough of a surplus to finance educational aids, provided not more than $4,000,000 is spent for this purpose.

Senator Warren Knowles (Republican), of New Richmond, floor leader, and Gordon Bubolz (Republican), Appleton, chairman of the steering committee, feel that new taxes must be levied if educational aids are to be increased. This leaves your grandmother mumbling into her ear trumpet.

Some sort of public monument should be erected for the guy who announced before the session started that all would be peace and harmony since Republicans controlled 88 of 100 assembly and 27 of 33 senate seats.

The type of harmony which has been existing was illustrated in the senate last week when Senator Panzer accused Knowles of being unethical and told Bubolz he was conceited. Panzer also said he couldn't crawl on his hands and knees to Senator Conrad Shearer (Republican), of Kenosha, former president pro tempore, and Shearer replied it was immaterial to him whether Panzer crawled on his hands and knees, his back, or any part of his anatomy.

It seems that all the legislators who weren't given the opportunity to make Fourth of July speeches have been making them on the floor of the legislature. There has been much pounding of fists, raising of pinkies, and beating together of tonsils.

Legislators seem to feel that if they talk long enough and loudly enough the financial problems will go away and stop bothering them.

About 2 months after the session was under way, I wrote a column in which I predicted the present chaos and confusion. I said this was inevitable because the Republicans had no leadership.

From time to time legislators have tried to get together, but they never could agree because no one presented a program to them. Neither could a GOP legislator read his party's platform of 1946 and receive any guidance.

That platform promised that the GOP would meet every problem head-on and solve it with dispatch. Instead of facing the problems, legislators have been imitating cattle in turning their backs to them.

It seems to me that Republicans this session have given a dramatic demonstration of what happens when you elect people without convictions and without a program. The result is a floundering around which would make stampeded sheep appear calm and deliberate.

There isn't a single issue causing bedlam today which hasn't been before the legislature for months. With leadership, these problems could have been faced and disposed of weeks ago.

They all proclaim that they got a mandate from the people last November. If that is so, I can only conclude from the activities of the session that the mandate was to be stupid.

And so "operation bedlam" is being put into effect. The longer the legislature remains in session the more it costs the taxpayers. They should have stood in bedlam at home instead of coming to Madison.

Depreciation Accounting

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. POULSON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an excerpt from the Journal of Accountancy of July 1947:

ACCELERATING DEPRECIATION

There is urgent need for greater flexibility in depreciation accounting. Taxpayers hesitate to invest in fixed assets at current high prices unless they can charge off a large part of the cost within the next few years, while business prospects are bright. But the Treasury has generally disallowed acceleration of depreciation.

The value of more flexible depreciation regulations has been demonstrated in connection with the acute housing shortage. New apartment houses can be erected only at high cost. The owners could easily rent new dwellings now at rentals high enough to secure a satisfactory return on the investment, but this may not be possible after several years of active building. Hence, builders hesitate to proceed with the construction of new apartments unless they could write off a considerable fraction of the cost within 5 years.

The Bureau of Internal Revenue was asked by the Federal Housing Administration to authorize accelerated depreciation of rental housing during the years immediately following completion. Its reply was to authorize, for use by all taxpayers, a 150 percent declining-balance formula for depreciation. This method permits taxpayers to depreciate the balance of the book value of an asset at 150 percent of the straight-line rate. Appraising this formula, Paul D. Seghers in the Journal of Accountancy finds that it penalizes rather than benefits the taxpayer. It is far less desirable, he holds, than the old declining-balance method of computing depreciation, which is seldom used because of its complexity. (Editorial in the New York Journal of Commerce, February 6, 1947.)

Wool Bill, S. 1498

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a telegram I have

received from the Boston Wool Trade Association on the wool bill, S. 1498:

BOSTON, MASS., *July 22, 1947.*

HON. THOMAS J. LANE,
House Office Building,
Washington, D. C.:

Reference wool bill, S. 1498, about to reach floor; we earnestly request your presence and your understanding of section 1a which calls for a fixed-price guaranty for wool higher than market price and which is contrary to traditional parity basis of support for agriculture. Government subsidizes and nationalizes a commodity when it becomes sole purchaser at a fixed price higher than market as in this bill. This fixed price for wool is unnecessary to sheep farmer because of his present record income from meats, lamb, and mutton, which comprise the large bulk of his products. A slightly lower support level, say 90 percent of the parity basis the same as provided for most other agricultural commodities, would avoid nationalization of this business and yet give ample support to sheep farmer. Since Government stopped buying wool on April 15 between sixty and seventy-five million pounds, or about 25 percent of the total clip, has been sold by growers through normal trade channels at prices satisfactory to them. Please favor substitution of parity basis in place of the fixed-price basis of S. 1498, the substitution as to be proposed by Representative HERTER. Balance of bill, namely authority to Government to liquidate stock pile, makes good sense.

Thank you.

BOSTON WOOL TRADE ASSOCIATION,
HARRY A. TILTON, *President.*

Importance of Depreciation in Income Taxes

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I have received from a leading tax accountant of Los Angeles, Calif., on the important subject of depreciation:

LOS ANGELES, CALIF., *July 11, 1947.*

HON. NORRIS POULSON,
House Office Building,
Washington, D. C.

DEAR NORRIS: I am enclosing a clipping from page 4 of the Wall Street Journal of July 9, entitled "Congress Urged to Legislate More Liberal Tax Laws on Depreciation."

In the final analysis and over the life of a business the same net profit results whether it is divided in annual periods in which estimated depreciation is provided or whether the income of the business is computed for the entire life span from which is deducted the cost of capital assets used up in this business span. This statement necessarily excepts Federal taxes based on income as changing rates, application to yearly profits (but not losses) (this latter has to some extent been ameliorated by the loss carry-back carry-over section) and the graduated rates in certain brackets causes a variation in the result which would otherwise be obtained.

However, broadly speaking, the one method (using that of the estimated life span as computed by the business) is that of the average businessman while the other arbitrary annual application of a rate as set by the Treasury expert is the one which oftimes is economically speaking extremely fictitious.

It seems that the ultimate aim of the Treasury Department would be to get as much revenue with as little adverse effect as possible on business. One of the greatest points of argument relative to audit of income tax returns probably causing the largest administrative expenditure is that of the annual estimate of depreciation and the so-called 5-year plan which has been put into effect by the Treasury Department is no solution. It never will be so long as a Government man batters down depreciation allowance to increase the tax take in a particular year and then tries to make it stick for 5 years. It appears to me that there is much more than merely dreaming in the very practical suggestion that a businessman be allowed to determine his own depreciation rate within certain outside limits and that as suggested in this article he be allowed to limit that to net profits for a particular year. What sounds like a startling innovation or a radical idea may turn out to be rather sound tax practice to which you may agree after giving this consideration and thought.

Let us assume, for instance, a corporation starting a new business which is almost always a venture that could lose money; in fact the majority of them do. The corporation starts with $100,000 in the bank and the stockholders have $100,000 worth of capital stock. The corporation builds and furnishes the building with machinery so that they can begin manufacturing and (eliminating the discussion of working capital at present) we have the situation of a balance sheet showing fixed assets $100,000 represented by capital invested of the same amount. The following year (this is one of those unusual profitable businesses) the corporation makes $50,000 profit and its balance sheet now shows accounts receivable $20,000, inventory $40,000, fixed assets after depreciation $90,000, capital $100,000, surplus $50,000. We now have a corporation with $60,000 worth of working capital, $100,000 fixed assets on which we have estimated $10,000 depreciation, but we do not show a tax liability which will be approximately $20,000. The corporation should go out and borrow money unless it is compelled to reduce its receivables below the normal amount in order to meet this obligation, and thereby its efficiency is impaired. If they were allowed to provide for this fixed asset depreciation to the extent of $50,000 the first year and the balance in succeeding years so that instead of being compelled to borrow to pay taxes they would be able to pay subsequent taxes out of cash on hand, then we would have a much sounder basic financial structure and we would have a much more efficiently equipped industry. In the long run there is little question but what this same industry would turn out a much larger volume both in gross units and dollars which would result in a higher profit subject to taxes.

Where is the Government depreciation engineer or other man who can tell you today whether a building should be depreciated at 3, 4, or 5 percent? However, we actually have a controversy on now in which an agent is challenging the judgment of the management by a difference of 1 percent in depreciation rate. While it is true that the difference of 4 percent as against 5 percent a year is a 20-percent differential, this Government employee is attempting to say, "I know better than the management just exactly how long that building will last and you business people will have to accept my judgment in place of yours."

The proposed method would, in my opinion, be a great boon to rental housing, and that, after all, is the most essential type of housing today. The average veteran and his young wife, aged 20 to 25, with possibly one child, cannot afford nor does he decide to purchase a home in a location in which his working life may not finally be spent; likewise at this young age he does not have the accumulated backlog nor the earning capacity to be able to make payments on a $10,000, $12,000, or $15,000 home, which is what he would have to pay for the type of residence he will ultimately want to own. It is a boon to these people to be able to obtain a three- or four-room rental property for $20 to $30 a month during that interim period of time that they are becoming adjusted and that he is preparing for his life work. Two- and three-family dwellings in single units are generally owned by the comparatively small investor. This is true because it has not required the same accumulation of capital to produce these types of units as it does to combine them all in one large apartment building on a high-priced piece of land. If these same investors were entitled to deduct on their tax return each year as depreciation an amount equivalent to the net income received from rent until they had completely depreciated the cost basis of the improvements, I think it would be quite an inducement for anyone in the 30-percent bracket or more to build one or more of these small units. While this might result in some loss of revenue for the Treasury Department, I seriously doubt that this would be the case over the long pull. First, the value of this type of property would go up so that there would be a substantially greater long-term capital gain on the sale thereof; secondly, the additional building done would result in net income to those people who do the construction work and report ordinary income; third, the rent from the fully depreciated properties would be subject to tax without reduction; and fourth, there would be a decided falling off of chiselers of rent-house expenses, as the average person would take the attitude that the depreciation would be far better to use as a deduction than to think up a lot of minor expenses such as doubling the utility expenses against a particular unit.

Bear in mind that this entire letter is written having in mind the majority of honest and reasonable taxpayers. There will be chiselers regardless of any law that is written, and these must be watched in any event.

Yours sincerely,

C. C. GABRIELSON,
Certified Public Accountant.

[From the Wall Street Journal of July 9, 1947]

CONGRESS URGED TO LEGISLATE MORE LIBERAL TAX LAWS ON DEPRECIATION TO PROMOTE EXPANSION INVESTMENT

WASHINGTON.—More liberal tax allowances for capital investment and foreign income were recommended to the House Ways and Means Committee yesterday.

Alden D. Walker, a Chicago industrial engineer, told the committee the depreciation policy adopted by the Treasury Department during the Roosevelt Administration discourages needed plant expansion for full employment and national defense.

He proposed that all producers, including farmers, be permitted to deduct from gross income a maximum of 20 percent of their capital investments annually for depreciation and obsolescence. In effect, they would be permitted to write off these investments over a 5-year period.

So long as he kept within the 20 percent limit, the taxpayer would be permitted to deduct any amount he saw fit for this purpose and thus write off his investment over a longer period, providing that he was consistent from year to year. In addition, he would be permitted to postpone his depreciation allowance whenever he operated at a loss.

Under present law, the Treasury Department will not allow as much as 20 percent write-off per year in most cases. It requires

the producer to amortize his facilities over periods ranging from 10 years for tractors to 75 years in the case of warehouses.

Under present conditions, Mr. Walker said, producers cannot foresee their chances of recovering capital investments over these long periods. He estimated that in the years 1925–46, inclusive, the United States manufacturers spent an aggregate of only $11,200,000,000 on factory-building construction, about as much as the Nation spends annually for military preparedness. From 1930 to 1940, he said, the value of physical assets for industrial and farm production, commerce, railroads, and public utilities declined 22.3 percent.

"We submit that our productive industry is the real first line of national defense, and if we continue to restrict the industrial expansion and modernization to a like scale in the years ahead, we will find to our sorrow that we have built another false Maginot line," Mr. Walker warned. The plan he offered recognizes that enterprise capital will be invested first where the return of original capital is a reasonable expectation; secondly, where the anticipated return is comparable to the risk involved, he said.

Meanwhile, other witnesses urged the following changes be incorporated in the GOP omnibus tax to be introduced next year:

John S. Carlson, Tulsa, Okla., attorney, proposed that citizens absent a year or more should be exempted from taxes from income earned in foreign countries or possessions of the United States. At present this exemption is allowed only if the taxpayer is domiciled in a foreign country. It is intended to encourage foreign trade by giving United States engineers, merchants, and other businessmen the same tax advantages accorded their foreign competitors by their governments.

A. E. Brooks, Fort Worth, Tex., attorney, proposed that any income received from foreign sources by citizens who are not residents of the United States for 183 days or more be exempted from taxation.

George S. Eaton, executive secretary of the National Tool and Die Manufacturing Association, asked that machine-tool makers be given an extension of time in which to file for certificates of necessity to take advantage of the special wartime amortization rates.

John G. Lang, director of the Cuban Tobacco Co., Inc., proposed that foreign companies resident in the United States be allowed the same 85-percent exemption for intercorporate dividends to which domestic corporations are entitled.

Pentlarge & Johnson, of New York, asked that foreign personal holding companies be treated for income, estate, and capital gains tax purposes the same as domestic firms.

The Question of the Separation of Church and State

EXTENSION OF REMARKS
OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1947

Mr. LYNCH. Mr. Speaker, the proposal to give Federal aid to our schools has focused attention on the traditional American principle of separation of church and state. I know of no American who would want to see that principle violated. On the other hand, I fear that this principle, on occasions, is invoked, either through misconception or prejudice to defeat worthy causes.

Since the cessation of hostilities, the United States has given generously, as it should, to the stricken and impoverished people of Europe, even though some of them were our enemies in the past war. Whatever Stalin or Tito or their henchmen did with respect to the money, food medical supplies which the United States has sent to the devastated areas, certainly we in the Congress know it was never the intention of the United States Government to discriminate against needy people in these areas, nor to deprive children of food and medical care because they attended denominational schools. Nor does such discrimination exist in the American, British, or French occupied zones. However, when it comes to giving free or low-cost lunches or medical or dental care to American children attending denominational schools in our own country, many people immediately see in such humanitarian aid a violation of the principle of church and state, in that public money is being used, so it is said, to support a school in which religion is being taught. It would seem to me that if we can spend money for food and welfare for the children of the war-torn areas of Europe, we could equally as well, and without violating the principle of church and state, give low-cost or free lunches to the undernourished children of our own country, regardless of the school to which their parents send them.

On a Sunday morning, several months ago, I was walking along Connecticut Avenue and I noticed two policemen directing traffic in front of a Protestant church. It was really edifying. I thought it was good police work and showed a proper consideration for the safety and protection of the pedestrians. The thought did not occur to me then—nor does it register with me now with any sense of sound thinking—that these policemen, paid out of public funds, in protecting the churchgoers from the hazards of Connecticut Avenue traffic, were violating our accepted principle of church and state, in that they were indirectly aiding that particular church by protecting the parishioners against traffic hazards. I can see little distinction between that case and the child who is protected from the hazards of traffic and weather by being transported to school in a bus operated by public funds. As a matter of fact, while certainly not decrying the protection given the churchgoer, in my opinion the child, who must under the State law attend school, whether public, parochial or private, is more entitled to such protection than the churchgoer who is not compelled under State law, to go to church.

I believe there is considerable confusion in the minds of many people with respect to the principle of separation of church and state. I have, therefore, requested unanimous consent to include in my remarks an article by an old college classmate of mine, Very Rev. Msgr. Edward Roberts Moore, on this subject. Monsignor Moore is the pastor of St. Peter's Church in Barclay Street, which is the oldest Roman Catholic parish in New York City. The article was published in the Barclay Street News, the monthly publication of St. Peter's Church and was written just prior to the recent decision of the United States Supreme Court in the familiarly known New Jersey school-bus case and is, in part, as follows:

THE QUESTION OF THE SEPARATION OF CHURCH AND STATE

(By Very Rev. Msgr. Edward Roberts Moore)

Some recent events have revived an old American debate. When President Truman reappointed Myron C. Taylor to be his personal representative at the Vatican, certain Protestant organizations strongly objected that the action of the President violated the constitutional principle of the separation of church and state; Cardinal Spellman strongly denied such a conclusion. Later in the year some Protestant spokesmen returned to the charge in the pages of the New York Times; this time they were answered by Archbishop Ryan, of Omaha. Again, the Christian Herald decided that American Catholics cannot honestly support the Bill of Rights and the principle of separation of church and state. At the present time the Supreme Court at Washington has before it an appeal against the decision of New Jersey courts which permits parochial-school children transportation in the public-school busses; such service, says the appeal, violates the separation of church and state. Just the other day the Davenport (Iowa) Board of Education held up distribution of New Testaments in the city's public schools, on the objection of a rabbi that the action violated the historic separation of church and state. On January 13 Archbishop Cushing, of Boston, speaking of the parochial schools as an integral part of American education, described the extreme development of the idea of separation of church and state as "fantastic and un-American." (New York Times, January 14, 1947.)

What does the phrase really mean? Since much of the current misunderstanding is based on false assumptions, an attempt is made herewith to clarify public thinking on the subject in the light of American history and constitutional law.

WHAT THE PHRASE DOES MEAN

In 1787, delegates from thirteen allied but intensely individualistic political entities met at Philadelphia to form a Federal Constitution. In their deliberations they were confronted with a religious problem serious enough to wreck their efforts to found a government of the United States. The problem was the establishment of a State religion. Of the thirteen States, five accepted Congregationalism as the public religion. Two more had established the Episcopal Church. Five others, which as commonwealths had established the Episcopal Church, had disestablished it on becoming States, for patriotic reasons. Three States never had an established church.

At the same time all the States represented at the Convention, except Rhode Island, had some religious test for those holding public office. All required belief in "God, Creator and governor of the universe, the rewarder of the good and the punisher of the wicked." Some required belief in the Christian religion. Some required acceptance of the Protestant religion. One required belief in the Trinity. Owing to such variety of religious tests for public office, it was impossible to formulate a Federal religious test satisfactory to all the States. Furthermore, Rhode Island would never have joined the Union if any such religious test had been imposed.

So apparently, there were the two insuperable difficulties facing the delegates: What religion to establish? And what religious test to impose on officials of the Federal Government?

The Convention addressed itself first to the question of the religious test. The delegates recognized how perilous it would be to ally the civil power with religious opinions

and thus to exclude dissenters from sharing in public honors, trusts, pay, and immunities. Nor did they feel that so vital a matter could be passed over in silence. What was to be done? Ultimately, devout Christian members of the Convention joined hands with nonreligious members to oppose the enactment of any religious test at all. Hence, in the Constitution we read: "No religious test shall ever be required as a qualification to any office or public trust under the United States." (Art. 6.)

By "the United States" is meant the Federal Government, not the governments of the various States. While the constitutions of most States have been influenced by the stand of the Federal Constitution, eight States have kept some form of religious test, all of them in constitutions ratified in the century after 1787.

The Constitution, as signed by the delegates and ratified by 11 States, made no mention of church establishment. But the question had paramount place when, shortly afterward, the delegates reassembled to draw up the 10 amendments that are known as the Bill of Rights. It was feared that if the new Federal Government were left free to set up a national religious establishment, the Union would be constantly endangered by struggles for dominance among ecclesiastics and the religious bodies which they represented. Religious liberty was generally desired, and along with it a prohibition against Government preference for any religious body; for among the champions of religious establishment in the Constitutional Convention, each one wanted his own denomination preferred by the Federal Government. As a practical solution, the Convention adopted, as its first amendment, the following: "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof."

THE FIRST AMENDMENT

The effect of the first amendment on State laws was first indirect, later direct. Though it was not the intent of the Constitutional Convention to trespass on the right of individual States to keep their established churches, the five States that had such recognized churches established by law disestablished them, though gradually. Massachusetts did not disestablish congregationalism until 1833, and New Hampshire still retains in its constitution the provision that the State legislature may devote public funds to maintain "public Protestant teachers of piety, religion, and morality." It should be noted, however, that the New Hampshire legislature has not exercised this power for over a century.

The influence of the first amendment became direct after the Civil War. Upon certain western States desiring admission to the Union, Congress imposed a Federal compact, preventing them from establishing any church and making them put into their constitutions the law that "perfect toleration of religious sentiment shall be secured, and no inhabitant of this State shall ever be molested in person or property on account of his or her mode of worship."

Though of the State constitutions only Utah's in so many words forbids "a union of church and state," it became a commonplace of American jurisprudence that "in our form of government church and state are not and cannot be united."

OTHER AMENDMENTS

In further amendments the Constitution had more to say about religion. The fifth amendment had forbidden the United States to deprive any person of "life, liberty, or property without due process of law." The fourteenth amendment, passed after the Civil War, enforced the same safeguard upon the States: "No State shall make or enforce any law which shall abridge the privileges and immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the full protection of the laws." According to the decision of Circuit Justice Fields in 1879, the fourteenth amendment prevents "hostile and discriminating legislation by a State against persons of any class, sect, creed, or nation, in whatever form it may be expressed."

To sum up, the American Constitution did two things. It forbade the establishment of any denomination as the state religion of the country; and it removed any political disability in the Nation at large because of religious belief.

WHAT THE PHRASE DOES NOT MEAN

To make the meaning of what has been said clear beyond dispute, it might be well to examine some of the things that separation of the church and state does not mean.

1. It does not mean that America has politically made itself an irreligious Nation Christians colonized this country. The Republic was founded by Christians, and they founded a Christian Republic. It is a recognized maxim of law that "Christianity is the law of the land." This maxim is fully consistent with the principle of separation of church and state, for the distinction is made "between a religion preferred by law and religion preferred by the people, between a legal establishment and a religious creed freely chosen by the people themselves" (Carl Zollmann, American Church Law, 23, citing an 1828 decision of the State of Delaware). In 1844 the Supreme Court declared that Christianity is part of the common law in the sense "that its divine origin and truth are admitted, and therefore are not to be maliciously and openly reviled and blasphemed against, to the annoyance of believers or the injury of the public."

A CHRISTIAN NATION

In keeping with this, the Declaration of Independence invoked the name of God, most State constitutions acknowledge gratitude to Him and ask His blessing. The national coinage is stamped "In God we trust." The national anthem has given the Nation a religious motto. Public officials assume office with a religious oath of faithfulness to their duties. Legislatures open their sessions with prayer, some with readings from the Bible. Presidents and Governors proclaim public days of thanksgiving. Both National and State Governments support legislative, military, and hospital chaplains out of the public funds. Sunday is the weekly holiday for rest and worship; Christmas is a national holiday.

2. Separation of church and state does not mean that religion is denied a favorable position in law. Religion has always been considered a benefit to the public good. All States except Virginia and West Virginia allow church associations to incorporate. They exempt church property from taxation. They protect worship by injunctions and verdicts for damages, and by requiring licensed businesses to build outside a certain radius from church buildings. These special considerations can in no way be construed as a violation of the first amendment.

3. At the same time the Government, though it will not trespass on religious beliefs, keeps a strong watch that no religious practice (or antireligious practice) passes the boundaries of elementary Christian standards or the good of public order. So all our States demand that marriage be monogamous. The Federal Government has outlawed the former Mormon practice of plural wives, and has punished religionists who tried to spread that tenet. In 1889 the Supreme Court passed down a much quoted decision: "The existence of such a propaganda is a blot to our civilization. The organization of a community for the spread and practice of polygamy, is, in a measure, a return to barbarism. It is contrary to the spirit of Christianity and of civilization which Christianity has produced in the Western World."

Similarly the Government will not allow certain religious practices to pass under the plea of religious liberty. A religious healer cannot practice medicine without a license, and a parent who allows his child to die without medical attention because of his belief in faith healing cannot excuse himself on the ground of religious liberty. Religious bodies devoted to an outdoor apostolate cannot be a nuisance on the public streets. Blasphemy is forbidden. The law will punish those who vilely attack the legitimacy of Christ and the virginity of His mother.

4. Separation of church and state does not mean in America that the church, or religion in general, is made subordinate to the state. No approval of a Congress or Government bureau is needed for a religious body to exist, to teach, to make converts, to carry out its acts of worship. This is an extremely important point, for the kind of separation of the two powers with which the Popes have had to deal and of which they speak, almost invariably included subordination, legal disability and state control over religious matters.

5. Separation of church and state, as a principle of American law, does not put the stamp "American" on atheism or indifferentism. For it is one thing to express a principle of law, another to express a philosophical principle or a religious dogma. The Constitution does the former. It makes no claim to be a philosophical instrument, much less a religious creed for the American people.

6. Nor may the inclusion in the Constitution of the principle of separation of church and state as defined be adduced as indicating that the founding fathers held this principle to be the ultimate and ideal solution in any and all circumstances of the problem of the relationship of church and state.

As a matter of fact it did not even indicate that the founding fathers really favored the principle at all. Many actually favored an established church but could not agree as to which church was to be the one established. The end result, therefore, the agreement that no church should be established, was largely the outcome of expediency.

A COMPROMISE

Historically and juridically it represents, as much of all law must and does, a practical compromise, one that over the years has worked well, framed to meet existing conditions. It rests simply on a factual basis: one political community, a wide diversity of faiths. To quote from John Courtney Murray, S. J., in a recent article in America, "The religious liberty proclaimed by the first amendment is not a piece of religious mysticism but a practical political principle, ethically grounded on the obligations of the state to the consciences of its citizens and to its own end, social harmony, prosperity, and peace."

7. Finally, separation of church and state does not mean that therefore the American state esteems itself as the complete and exclusive agency for all matters of public concern. A good example of unwillingness to assume a power which it does not possess is seen in the 1924 decision of the Supreme Court on the Oregon school law. An older generation will remember how that despised law sought to do away with private schools. Deciding for unconstitutionality, the Court said:

"The fundamental theory of liberty upon which all governments in this union repose excludes any general power of the State to standardize its children by forcing them to accept instruction from public-school teachers only. The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations."

Oregon, the Magnificent

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Portland Homebildor.

OREGON, THE MAGNIFICENT

"Are you tired of offices, business, and stores.
Are you tired of daily work with its attendant chores,
Do you wonder what vacationland will be satisfying, best?
We have a ready answer. Come West, young man, come West."

By west, we mean Oregon, of course; Oregon, the State that has everything from the mountains to the sea. The State where trout lurk in abundance in our crystal-cold streams, our limpid sky-blue lakes, our majestic rivers. The land of the Old West where round-ups, rodeos, and buckaroo contests are featured events all summer long, the land of the open range and the deep forests of pine, cedar, and fir, the land of snow-capped peaks and lush fertile valleys, the land of shining beaches and craggy shores. Yes; that's Oregon extending its arms in welcome to the jaded, tired, and weary.

Come out and drive over our superb flower, fern, and tree-lined highways to such recreation as your heart desires. Drive up to Larch Mountain where you can see five mighty silver-crested peaks and over 10,000 miles of matchless forested terrain. Drive the Columbia River Highway where nine waterfalls in 10 miles cause you to stand in awe; see the great Bonneville Dam, one of the man-made wonders of the world: The Dalles; the Indian village at Celilo Falls; the great Hood River orchards, the view at eventide from Crown Point where the setting sun bathes the Columbia in miles of gold, orange, and crimson. Yes; it is grand and we Oregonians never cease to delight at the glories that nature has bestowed so lavishly upon us.

Now, having seen all this, don't rush away—we have lots more in store. Drive the Mount Hood loop; see the Indian pageant on the way where the Umatillas hold tribal dances daily; stop at Timberline lodge, high up in the snows, where skiing is an almost year-round sport; continue on the loop past glaciers, waterfalls, and Nature's primeval wildernesses on the slopes of this magnificent, white-crowned sentinel, until you reach the Hood River orchards nestling below you, mile upon mile.

We also offer you Bend, in the heart of Oregon, with its great Deschutes River; the spectacular Crooked River Canyon, its lava beds and caves, eerie, weird, and awe-inspiring. Over 200 lakes in that section lure the fishermen and the rivers have those rocky eddies where the trout lie in wait for your fly.

On to Crater Lake, wonder of wonders, an extinct volcano high in the mountains, breathtaking in expanse, and exquisite in coloring. Down through Klamath Falls, Ashland, Medford, and Grants Pass, to the great Oregon caves, back up the coast where the grandest coastal scenery in the world thrills you again and again. The coast where the forests walk down to the sea.

Back through the fishing villages, resort towns, the famed cheese center of Tillamook, to Astoria at the mouth of the mighty Columbia, where salmon is king and where the sun bids Oregon, "Good night." Back to the City of Roses along the lower Columbia River Highway and then start all over again and drive through the historic and beautiful Willamette Valley. See Oregon City with its falls, original Hudsons Bay Trading Post, Salem (our capital), Corvallis, Albany, Eugene, and Roseburg, each city a gem in its own right. On this trip not only the Willamette River but rivers and streams galore add to your zest for living. Of course the queen city, Portland, is your Oregon home and you return ready for more but less extensive rambles. Drive along Terwilliger Boulevard above the Willamette River, where the East Side with a background of Mt. Hood forms a never-to-be-forgotten picture, then on to Lake Oswego, beautiful, inviting, entrancing. Drive over the Skyline atop forested mountains and view Mt. Adams and Mr. St. Helens across the Columbia, while the great fertile Tualatin Valley awaits on the lee side. Turn left and see Hillsboro, Forest Grove, McMinnville, and Sheridan, the old covered bridges, the pioneer farms, the modern homes, and then come back to the days of relaxation and charm in Portland.

Visit the extinct volcano on Mt. Tabor where the mighty forces of nature exploded in the dim past, visit our rose-laden parks, our inviting golf courses, our miles of beautiful homes, meet our splendid, kindly citizens, who spurn ostentation and cultivate sincerity, who practice the hospitality of the days of the covered wagon, whose latchstrings are out and with whom a genuine welcome awaits the visitor.

On your way east don't miss Pendleton, the home of the world-famous round-up, the Umatilla Indian Reservation, LaGrande, where you turn off to the Wallowa Mountains, the Switzerland of America, with jagged peaks and mountain lakes, back to LaGrande and on to Baker and Ontario, with all the bustling towns in between.

In Oregon see nature at its finest, humanity at its best, enjoy a zestful, restful holiday where everything delightful abounds, where life is abundant for all. The place is Oregon, your vacation home.

CARLOS W. HUNTINGTON.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the Marshall plan, which I delivered last Friday night over the National Broadcasting Co., through Station WRC.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad of this opportunity to discuss with my listeners among the American people the proposal advanced by Secretary of State Marshall for coordinating all efforts in behalf of European recovery.

I take it for granted that no serious-minded American now doubts the necessity of American aid in the stabilization of Europe particularly, and it may be of other countries, especially parts of Asia.

While our Nation was not in any way responsible for World War II, which devastated vast areas of the earth's surface, and destroyed billions of dollars worth of property and of homes, and disorganized world economy more completely and universally than ever before, human destiny has placed upon our doorsteps the responsibility of aiding in the economic, moral, and political stabilization of the nations of the world in the interests of peace.

These efforts on our part are not dictated merely by the emotions of charity, worthy as they are. They are not based solely upon a Christian duty, which we acknowledge in our pews, but sometimes deny in our politics, to serve mankind in any way that may lift his standard of life, and his enjoyment of freedom and self-government.

These efforts on our part are justified on the sole ground of national self-interest, because we know that we cannot long prosper if the rest of the world lies prostrate, and we know that democracy in America and the Western Hemisphere cannot be safe and secure so long as it is in danger, or has been destroyed in the rest of the world.

Already we have granted aid in the way of loans to Great Britain, to France, to Poland, to China, and to Italy, and to some of the other nations of Europe. Almost overnight a situation developed in Greece and Turkey that made it necessary for us to come to their aid to the extent of $400,000,000 in order that they might maintain their independence and the integrity of their nationality. It was my good fortune to be in Turkey and Greece during the discussion of these two loans in the Congress of the United States, and it was actually pathetic to observe the renewed faith and confidence that the Greek and Turkish people had in themselves and their own economic and political independence by even the prospect of help from the United States.

In addition to these direct loans, we have afforded a large amount of aid in the form of food and materials, in order to help rebuild the economy of the devastated nations of Europe, and along with our allies, we have been compelled to assume a large and continuing obligation in the occupied sections of Germany.

General Marshall has recognized that this aid cannot continue indefinitely on a piecemeal basis. The industrial situation in Europe must be improved in order that the dwellers in the city may be able to purchase the food produced by the farmers. The exchange of food for industrial products between city and country, based upon the medium of a sound currency, constitutes the basis of economic prosperity. So long as the industrial workers of Europe, by reason of unemployment or pitifully low wages, or for any other economic reason, are unable to purchase the products of European farmers, outside efforts will have to be brought to bear to feed and clothe them until they can restore their own economy.

Hunger and despair breed anarchy and chaos. Destructive ideologies feed upon hunger and despair and hopelessness, and we know already, I regret to say, that there are certain nations in Europe who are, apparently, seeking to compound the suffering of the European people, in order that they may find a fertile field for the propagation of their totalitarian ideas among people of normal democratic habits and instincts. Realizing this situation, as it has become crystal clear in recent months, General Marshall, in his address at Harvard University, suggested that the nations of Europe come together and take account of their own situation, tabulate their needs, and make a survey of their own ability to help themselves, in order that they and we might know the situation from the standpoint of need and ability. In the meantime, the President of the United States has appointed three separate commissions to make a survey of our own resources and ability to aid the distressed nations of the world to get on their feet, and thereby restore their own political independence, and increase their ability to resist outside pressure.

These commissions will, undoubtedly, report as soon as it is humanly possible to gather all the facts.

In the meantime, the Foreign Ministers of Great Britain, France, and Russia, met in Paris recently for the purpose of discussing the possibility of a European conference to carry out the suggestions of our Secretary of State to take stock of European needs, not for the purpose of presenting us a one-sided bill for collection, but in order, by their mutual conference and mutual efforts, to determine what they can do for themselves, so that we may determine for ourselves how much of the balance we are able to do, as well as what other nations are able to contribute to the general results.

As so often happens, the Russian Foreign Minister made the conference of the three ministers impossible of success. He packed up his bags and returned to Moscow. Whereupon, Mr. Ernest Bevin, Foreign Minister of Great Britain, and Mr. Georges Bidault, Foreign Minister of France, issued invitations for 22 European nations, including Russia and her satellites, to meet in conference in Paris to do what General Marshall suggested in his speech at Harvard University a few weeks before. So far Russia has declined, and 4 of her satellites have declined. One of them, Czechoslovakia, first accepted, but, under pressure from Moscow, withdrew the acceptance. But, if that nation had been free to accept upon their own responsibility, without outside pressure, they would be sitting in the Paris Conference today with the other European nations. I believe the same may be said of the other nations which declined, including Poland, Hungary, Rumania, and Bulgaria. But, be that as it may, there are 16 European nations now in session at Paris, seeking to take stock of their conditions, of their own abilities, in order that they and we may present a picture to the world and to our own people, which may be the basis of cooperative action designed to restore human happiness, human prosperity, and preserve the peace of the world by preserving it in every nation.

We do not know what will come out of this conference in Paris. It has begun its deliberations with commendable zeal and speed. It seems to have sensed the responsibility which rests upon the statesmen of Europe to tighten their belts and reduce their necessities to a figure which can be easily understood by those upon whom they call for assistance. It is impossible to speculate as to how much money it will be found these nations need from the outside world. But, we know that in order for the American people to put their hand to the plow with a determination which the situation may require, we must give them the facts. We must tell them the truth. General Marshall has emphasized this necessity in every utterance he has made, and I think the Congress of the United States recognizes the necessity of taking the American people into their confidence, insofar as it can be done. There are, of course, certain facts surrounding the conditions abroad, and certain delicate, diplomatic difficulties, which cannot be publicized, at least until all the facts are known. But, what we are trying to do, and our Secretary of State and President, and all of us, without regard to partisan politics, are trying to do, is organize our efforts upon a sound and stable basis, and organize the recuperative ability of all the nations who need help, so that they may not be led to believe that they may rely solely upon our own largess, in order that they may reap the benefits of a long and prosperous peace in the years to come.

We feel that the recovery of Europe is not a one-way street. We are willing to go the full length of the requirements, so long as we feel that the nations we are trying to help are, in good faith, trying to help themselves. We know that the peace of the world cannot be long maintained, if there is chaos in Europe and Asia. We know that democracy in America cannot be maintained if it is to be surrounded by the antithesis of democracy in every other continent of the world. Realizing this, the American people and American Government are willing to team up with every other nation that is, in good faith, seeking to help itself. We are willing to pull even the major part of the load, if necessary, in order that the vehicle may go forward—the vehicle of peace, of contentment, of happiness and confidence in the future—the vehicle of self-government, and of political and economic integrity in every nation whose independence is essential to the advancement of democratic ideals in all portions of the world and their preservation wherever they exist today.

It is, therefore, my view that this suggestion, or plan, or proposal, of General Marshall's, whatever it may be called, is one of the most constructive approaches to world rehabilitation that has been made, and it is my sincere hope and belief that, if the nations who are the victims of the ravages of war, and victims of internal and external pressures designed to eat into the foundation of their national integrity, rise to the opportunity which now faces them, by cooperating fully with our Government and among themselves, we shall find a solution of the problems that beset Europe and the rest of the world and constitute such a pall upon the horizon of liberty and democracy. We are willing to cooperate with all nations that are willing to cooperate with us. We would prefer to cooperate with every nation, regardless of the form of its government, but, if we cannot enlist all of them in this international effort to restore normal conditions, to restore employment, and production, and the stability of currencies, and all the other things so essential in the production of the essentials of happiness and contentment, we shall do the best we can to cooperate with those nations that are willing to meet us halfway on this highway to peace and progress.

Cashing of Terminal-Leave Bonds

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I issued yesterday when I introduced a bill to raise from 2½ to 6 percent the interest accruing on uncashed terminal-leave bonds of veterans, and thereafter a recent editorial entitled "Keep the Bonds" from the Pittsburgh Press of July 21.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

I hope the President will sign H. R. 4017 to allow those veterans who really need the money from their terminal leave bonds to cash them at any time after September 1, and not be required to wait for 5 years. At the same time, I recognize the validity of the argument frequently made against cashing the bonds that the money, if paid out in great volume now, might cause inflationary pressures on our already inflated economy.

That is why I am introducing this bill to raise the interest rate on the bonds to 6 percent. If the bonds bear interest at this rate, they will become the best bond value in America, and there will be real incentive for any veteran who does not absolutely need the cash now to hold on to his bonds and receive this substantial interest return.

The present 2½ percent interest return on the bonds puts them in the same interest classification as Government bonds anyone can purchase, whereas I think veterans who fought in this war are entitled to a much better interest break on these very special issues.

Veterans are paying much more than 2½ percent interest on home loans and on other loans they may be making either through Government-sponsored programs or on the outside. I think it is only fair that when the Government owes them money on an obligation arising primarily out of their war service, it pay at least as much to the veteran as he now has to pay in the Government, and preferably 6 percent.

As a matter of fact, the Government now pays 6 percent interest on all refunds to those who overpay their taxes. It certainly has the obligation to pay the same amount to the veteran, to whom the Government owes a far greater debt.

[From the Pittsburgh Press of July 21, 1947]

KEEP THE BONDS

Without one dissenting vote, both branches of Congress have passed the bill to permit GI war veterans to cash their terminal leave bonds at any time after September 1. Despite the Treasury's objection that this bill might have inflationary effect, we hope President Truman signs it into law.

It is a measure of simple justice. Officers were given in cash the terminal leave pay due them when they left the armed services but the GI's had to take theirs in bonds.

We hope, also, that all veterans who possibly can will hold on to their bonds until they mature. The bill permits that. These bonds are a fine, sound, interest-bearing investment. Those whose need for cash is not immediate and urgent will find it highly profitable, we think, to keep the bonds and let them earn more money for future use.

The United States Treasury and Gold

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a very interesting article entitled "The United States Treasury and Gold."

I insert this article as a means of calling attention to, and clearing up a very obscure and curious method of handling our governmental operations. It seems to me that our Secretary of the Treasury owes to Congress an explicit explanation of the extraordinary incongruity of our financial operations, as set forth in the article which follows:

THE UNITED STATES TREASURY AND GOLD

(By Bronson Trevor)

According to the Wall Street Journal of July 19, 1947, the Treasury and the Federal Reserve Board have issued a joint statement calling on all American banks, business enterprises, and individuals to refrain from helping speculative buying and selling of gold abroad.

The Wall Street Journal says that the speculation referred to is the buying and

selling of gold abroad at prices above the legal rate. This newspaper further states that the joint announcement was prompted at least in part by complaints from the International Monetary Fund that this speculation undermines the currency exchange stability that the fund is trying hard to achieve.

From the same source comes the following quotation:

"After characterizing most of the gold transactions abroad as taking place in illegal markets, the announcement continued: 'In view of these circumstances, and on general grounds of national policy, the Treasury Department and the Board of Governors of the Federal Reserve System request American individuals, banks, and business enterprises to refrain from encouraging and facilitating this traffic and in particular to refrain from extending the use of their facilities and funds for the carrying out of such transactions.' "

In a dispatch from Manila, published in the Wall Street Journal of the previous day, July 18, 1947, appeared the following:

"A free world market for gold seemed assured in Manila when a Philippine spokesman indicated that the Republic would do nothing to hinder private gold sales to British, Chinese, and other purchasers at prices higher than the United States-controlled rate of $35 an ounce.

"On Wednesday United States Treasury Secretary Snyder hinted the United States Government would make no effort to prevent an American firm from buying Canadian gold ore, refining it in the United States, and then exporting it for shipment abroad at prices higher than the $35-an-ounce level. This was taken here to mean there would be no objection on the part of the United States to similar sales in the Philippines."

As the Philippine market is a legal market, the Treasury's objections on the score of illegality would be invalid as to transactions consummated there. The only other basis in the Treasury's statement, as quoted in the press, appears to be on general grounds of national policy.

What is the national policy? On July 18 the Secretary of the Treasury is reported as countenancing the sale of gold by American business firms at more than $35 an ounce. On July 19 the opposite appears to be the case.

The complaints of the International Monetary Fund apparently have influenced our policy. Let us examine what justification there is for the present attitude of the fund.

The New York World Telegram on June 25, 1947, published an article by Arthur Gorman from which the following is quoted:

"Camille Gutt, managing director of the fund, on Monday called on member nations to prevent transactions in gold at premium prices. His statement had the endorsement of Secretary of the Treasury Snyder as Chairman of the National Advisory Council on International monetary and financial problems.

"Mr. Gutt said sales of gold in the free market at premium prices threatened world exchange stability."

Article V, section 6, of the Articles of Agreement, International Monetary Fund, reads as follows:

"SEC. 6. Purchases of currencies from the fund for gold.—(a) Any member desiring to obtain, directly or indirectly, the currency of another member for gold shall, provided that it can do so with equal advantage, acquire it by the sale of gold to the fund.

"(b) Nothing in this section shall be deemed to preclude any member from selling in any market gold newly produced from mines located within its territories."

It would seem from these provisions that section 6 (a) in the phrase "provided it can do so with equal advantage" envisions the possibility of a nation having a greater advantage, which could only mean a higher price, in selling gold elsewhere than to the fund, and obviously confers no power to restrict such a transaction.

Section 6 (b) is even more explicit as to the freedom of members in disposing of newly mined gold.

Therefore, whatever the personal opinion of Camille Gutt, managing director of the fund, may be, it would appear that he had exceeded his authority in calling for a restriction on sales of gold at premium prices. Any policy of our Government cannot be justified by reliance on the opinions of an individual, no matter how distinguished, when they contravene the written text of an agreement to which our Nation, perhaps unwisely, is committed.

Is it the policy of the Treasury Department to attempt to hamper the operation of the International Monetary Fund as the agreement intended, under the guise of cooperating with an official of that body who apparently has exceeded his authority?

In connection with the above article, the following from the New York Journal of July 18 and 19 will be interesting:

GOVERNMENT MOVES TO PUT AN END TO REPORTED USE OF FACILITIES IN UNITED STATES BY FOREIGN GOLD SPECULATORS

WASHINGTON.—The Federal Government yesterday took the first step toward blocking the reported use of American business facilities to aid illegal speculation in gold abroad.

In a joint statement the Treasury and the Federal Reserve Board called on all American banks, business enterprises, and individuals to refrain from helping speculative buying and selling of gold abroad. Treasury officials indicated later that if this request does not halt United States participation in the speculation, the Government will take stronger action.

The speculation referred to is the buying and selling of gold abroad at prices above the legal rate. Usually the gold is traded against United States dollars. Since the black-market price of gold varies in different countries, shrewd speculators can make large profits by buying gold in one foreign market and selling it in another.

The Treasury-Federal Reserve announcement said it is well known that such active speculation has been going on. The announcement did not specify any American interests participating in the speculation. It simply warned American firms and individuals not to. Privately Treasury officials say they have evidence of participation in the speculation by American interests.

The joint announcement was prompted at least in part by complaints from the International Monetary Fund that this speculation undermines the currency-exchange stability that the fund is trying hard to achieve.

The Treasury declined to say what further action might be taken if the request failed to end the speculative activity.

After characterizing most of the gold transactions abroad as taking place in illegal markets, the announcement continued:

"In view of these circumstances, and on general grounds of national policy, the Treasury Department and the Board of Governors of the Federal Reserve System request American individuals, banks, and business enterprises to refrain from encouraging and facilitating this traffic and in particular to refrain from extending the use of their facilities and funds for the carrying out of such transactions."

OTTAWA.—Finance Minister Abbott reiterated in the Commons the government's stand against allowing Canadian mines to sell gold in the open market at more than $35 an ounce. This is the price paid by the United States Treasury.

The minister did not commit himself definitely on what action if any he would take regarding the recent proposal of the American Smelting & Refining Co. to export gold refined from Canadian concentrates at more than parity prices.

The government has all along permitted certain gold mines in British Columbia, whose ore contains arsenic and requires special treatment not conveniently available in Canada, to ship their concentrates to the American company. All other gold produced in Canada must be sold to the mint.

While the United States insists that all gold produced there must be sold to the United States Treasury at parity prices, it does allow gold from concentrates imported for refining purposes to be reexported.

The combination of Canada permitting these particular concentrates to be exported and United States permitting the gold from them to be reexported places this gold in a unique position of being available for sale in the free, or what is referred to as the grey market.

The refining company has offered to sell this gold in the open market at whatever premium it could obtain and give the Canadian firms 90 percent of the premium obtained.

While the minister did not say he was going to stop this, he did read the statement of the International Monetary Fund, endorsed by the United States, urging that steps be taken in member countries to stop the international traffic in gold, much of which goes into private hoards and is not available for currency stabilization.

"That is the reason," Mr. Abbott said "why we believe it is in conformity with international obligations and in the public interest to prohibit exports of gold to this so-called free market."

FREE WORLD MARKET FOR GOLD NOW SEEMS ASSURED FOR MANILA

MANILA.—A free world market for gold seemed assured in Manila when a Philippine spokesman indicated that the republic would do nothing to hinder private gold sales to British, Chinese, and other purchasers at prices higher than the United States controlled rate of $35 an ounce.

Some sales already have taken place in Manila.

The latest involved the purchase by a Chinese syndicate of bars of refined gold from the big wedge mine operated by the Atok Gold Co. at $45.50 an ounce. The sale involved only about $20,000, but it was understood that Atok had disposed of a considerable amount of its production since April to Chinese buyers through London, at $42.50 an ounce.

On Wednesday United States Treasury Secretary Snyder hinted the United States Government would make no effort to prevent an American firm from buying Canadian gold ore, refining it in the United States and then exporting it for shipment abroad at prices higher than the $35-an-ounce level. This was taken here to mean there would be no objection on the part of the United States to similar sales in the Philippines.

Fair Prices—America's Big Problem

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. WILEY. Mr. President, I ask that there be printed in the Appendix of the

RECORD a statement which I have prepared on America's big problem—the securing of fair prices.

I ask that following my statement there be printed the text of an article in the Christian Science Monitor of July 22, 1947, on the subject of labor monopoly.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

FAIR PRICES—AMERICA'S BIG PROBLEM

LET'S BRING DOWN HIGH COST OF LIVING

Almost every mail which comes to me from the State of Wisconsin emphasizes the need for bringing down the high cost of living. Just as after the First World War, when high prices caused great hardship among our people, so the Second World War has left us with this problem. We are on our way toward defeating it; many prices have come down already, but cooperation on the part of all of us is still necessary to lick inflation decisively.

THOSE WHO SUFFER

Who suffers from high prices? Just about everyone—the housewife who cannot buy enough food and other items for her family; the wage earner who sees the pitiful inadequacy of his wage envelope; the old folks living on meager pensions and annuities; the white-collar workers, like teachers and others living on relatively fixed incomes; the storekeeper who cannot sell overpriced goods; the manufacturer who finds that he cannot sell his increasing inventory of items; the farmer who finds prices skyrocketing on the things he has to buy, with still relatively low returns for him on the things he has to sell. High prices hit where it hurts most—the American home.

ANSWER TO PROFITEERS

Yes; we all find ourselves caught in the web of inflation brought about principally by underproduction. Only the profiteer rejoices. The best answer to him—to anyone who would try to gouge the public by asking outrageously high prices—is to turn his goods down flat, to let him know in no uncertain terms that the public believes in fair prices but not outrageous prices, that the American people believe in fair profits but not in profiteering, in sensible buying, not reckless buying.

The profiteer—the price gouger—can be slapped down, too, by full, uninterrupted production—the solution of which I have urged throughout the whole history of OPA. Full, uninterrupted production means increased supply, and increased supply balanced with demand in a free competitive market means fair prices.

MALICIOUS SLANDERS

Profiteers and political opportunists are helped rather than hurt when you and I fail to understand the true reasons for high prices. When we know the "truth which sets men free," we are freed from their control. Certain opportunists are seeking to use the present situation to attempt to smear the Eightieth and preceding Congresses by blaming the Congress for the present situation. Moreover, they are attempting to delude the people into thinking that Congress prematurely removed Government controls, thus causing higher prices. A further slander they are attempting is to vilify America's farmers for alleged profiteering.

What is the answer to these untrue charges, to oversimplified explanations, to sly innuendos? What are the real factors causing high prices?

Here are a few:

LABOR FACTOR

(1) Higher wage levels: The labor costs in American industry have soared to their highest peak, even surpassing wartime levels. This is not to imply that our present wages are unjustified, for they have been worked out in the democratic process of collective bargaining between labor and management.

But it does indicate that all other things being equal, with labor constituting as much as 90 percent—in some industries—of the total cost of a product, when labor costs go up, the price of the item will have to go up.

(2) Work stoppages: This factor caused us last year a direct loss of 116,000,000 man-days of working time. It also cost us a loss of hundreds of millions of man-days more indirectly when, for example, plants had to shut down because of material shortages caused by strikes in so-called feeder plants. With underproduction brought about by labor disputes, we have had decreased supply, which has inevitably caused high prices.

It is the prayer of the American people that the new labor statute, Public Law 101, will make for industrial peace. It is our prayer that this law will be administered fairly, efficiently, and in a manner consistent with Congress' intent so that the public welfare—the paramount welfare—can be protected.

HIGH INCOME

(3) Still another factor is the high-spending level of the American people—over $160,000,000,000. With 60,000,000 Americans working, and many of them having the highest incomes they have ever realized, it is only natural that in their competition for scarce goods, they would serve to force prices up. However, once we can get into full and uninterrupted production, the cost of goods will come down because there will be a sufficient supply for all.

WORLD SHORTAGE

(4) Everyone knows that another factor in the picture is the world shortage of food and other items. With Europe and Asia desperate for goods and eager to pay high prices for them (where they have a dollar supply) our domestic prices have inevitably reacted by rising with the intense overseas demand.

(5) Another factor is adverse conditions of nature. We can see this in the case of present corn prices which have soared because of the reduced crop resulting from Midwestern floods and other factors.

(6) Still another factor relating to high prices is the terrific heights to which prices soared on the black market during OPA days. While OPA was still regimenting the American economy, many items could not be secured at all on the open market, but only on the black market at fantastic prices. In almost no instances have prices these days, no matter how high they have reached, come up to the level of the black-market prices of OPA days.

GOVERNMENT IRRESPONSIBILITY

(7) The Federal Government itself has contributed to many high prices by its arbitrary buying practices. Thus, for example, as has been cited here in the Senate, the Government's Commodity Credit Corporation bought huge supplies of wheat in January 1947 when actual requirements were low and we were experiencing a terrific boxcar shortage. On the other hand, the Government has spurned wheat purchases in more opportune times. The effect of such irresponsible purchases is obvious in upsetting the market.

(8) An eighth factor in causing high prices is the inevitable maladjustment that comes after years of Government control during war. We could not expect to return to normalcy overnight. Reconversion cannot be accomplished by a flick of the legislative wand. It takes time, patience, and experimenting in a free economy.

SUMMARY

These are eight factors. There are more, too. But the keyword—the key factor in high prices is underproduction. Lick underproduction and you lick high prices.

ANSWER TO CHARGES

Let us consider now two of the many unfounded charges which I have mentioned above. The first is the charge that it is the Congress which caused these high prices. That charge is disproved by the above factors. Obviously, by considering all of those factors, we see that no matter what was done in Washington, D. C., these various influences would have served to cause a rising price level. But let us note this historical fact, too. The record shows that it was the President of the United States who effected the mass decontrol of items. Thus, on November 9, 1946, for example, President Truman announced the end of price control on everything except sugar, rice, and rent and the following day all but these controls were removed at his direction. Of course, previous to that date the Congress had sought to decontrol those items which it felt were in abundant supply.

FARMERS' PRICES

A second false charge is that the farmers of America are gouging the consumer by charging high prices. Anyone who is even slightly familiar with the farmers' postwar problems knows that this charge is basely untrue, first, because the prices of items that the farmer buys have risen far higher than the prices of items that he sells, and, second, because the price that the farmer gets for his products—for his milk, for his cheese, his butter, and other items—is still but a small fraction of the price that the consumer ultimately pays.

When one considers the amount that the farmer invests in his product, the amount of labor that he puts into his work, the help that he has to secure from his own family, and his other expenses, we see that his return is still far lower for a given hour of work compared to the return which city laborers get.

As proof of the farmers' disadvantage, let me point out that prices paid by farmers have risen 126 percent above the 1940 level, while city consumers' prices have risen 89 percent above the 1940 level. Both farmers and city consumers are obviously in the same boat, but the farmers are even worse off than their city cousins in feeling the pinch of inflation.

CONCLUSION

These times call for meeting the price problem with adequacy. With the same spirit that we displayed during the war, we can bring the high cost of living down to a reasonable level. We have made tremendous progress toward that end. Many items, such as luxury goods, which were selling at amazingly high levels, have been brought down by the simple law of supply and demand.

We can bring other high prices down in the American way by full production and sensible buying.

[From the Christian Science Monitor of July 22, 1947]

NEW TRUSTS TO BUST?—AN INTIMATE MESSAGE FROM WASHINGTON

(By Harlan Trott)

WASHINGTON.—Monopoly, it appears, is no longer an economic sin indulged in exclusively by businessmen.

The house painter plying a brush 4 inches wide instead of a 6-inch brush and the bricklayer laying 150 bricks a day and no more—both acting on union orders—are in the monopoly business.

They are acting in combination to limit production. They are candidates for a crack-

down by the Department of Justice. Some members of the House Small Business Committee, at any rate, would like to convince Congress there ought to be a law defining the liabilities of labor unions under the antitrust laws.

The closed shop, the slow-down, padding of personnel, and other forms of featherbedding, union opposition to labor-saving machines, industry-wide bargaining, all these have been cited at one time or other as reasons why organized labor should be subjected to the same legal restraints as monopolistic business.

C. E. Wilson, president of the General Motors Corp., expressed a widely held opinion when he remarked during the coal strike last winter that the American people must be protected against the predatory abuse of monopolistic power under the guise of unionism.

A good deal has happened since then to tighten the curbs on labor unions. Curbs on featherbedding are pretty well covered by the Taft-Hartley Act, which makes it an unfair-labor practice for a union to force or require an employer to pay or deliver any money or thing of value in the nature of an exaction for services which are not performed or not to be performed. The closed shop also has been outlawed by the new labor law.

Small business groups are worried these days over still another threat to their economic interests—that is the warning voiced by William Green, president of the American Federation of Labor, that if the inflationary wage price spiral continued, the AFL's 7,500,000 members might have to form a system of labor-consumer cooperatives to produce and distribute the necessities of life on a gigantic scale.

Such a move in the opinion of Representative WALTER C. PLOESER (Republican), of Missouri, chairman of the House Small Business Committee, would, if carried to its logical outcome, seriously endanger the American small-business profit system, if not labor organizations, also.

The recent coal agreement between John L. Lewis' United Mine Workers and the bituminous-coal industry is cited as another example of the way smaller business interests, and the public as well, are being squeezed between two powerful economic groups.

"Few persons can be found today," observes Gerard D. Reilly, a former member of the National Labor Relations Board, "who view the monopoly possessed by the United Mine Workers in the bituminous-coal industry as anything short of a continuing public menace."

There is a tendency to regard the coal agreement as a victory for free collective bargaining. But anyone appraising the effects of the new wage contract on the price of coal perhaps will conclude that big labor is as economically powerful as big business.

Wholly apart from the merits of the miners' wage gains, it is apparent that very little real collective bargaining figured in the process of agreement. This is confirmed by the report in the current issue of the Mine Workers' Journal of the secret talks the heads of the two biggest steel and coal interests initiated with Mr. Lewis, without the knowledge or approval of the operators' group which the industry had delegated to negotiate with Mr. Lewis.

Charles O. Gregory, former solicitor of the Department of Labor, once observed that the Supreme Court, by so interpreting the antitrust laws as to give extreme latitude to union activity, had done the labor unions a real disservice in vesting them with the worst curse of modern times—too much economic power over others.

The Taft-Hartley law was enacted out of the awareness in Congress that it would be compounding the evils of labor monopoly if it did not provide appropriate controls over that power.

Address by Wilson W. Wyatt Before American Veterans Committee

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address recently delivered by Wilson W. Wyatt, national chairman, Americans for Democratic Action, before the American Veterans Committee dinner at Chicago, July 18, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I salute you as a young, great, and growing liberal organization of veterans of World War II. I salute you as an organization of veterans interested first in American citizens.

Many times have I acknowledged your dynamic and unflagging support of the veterans' emergency housing program last year, both through your leadership and through your membership throughout the country. Early last year I met with your national chairman, Charles Bolte, with the chairman of your housing committee, Franklin D. Roosevelt, Jr., with your national legislative representative and this year's national chairman, Chat Paterson, with Bob Nathan and Bill Batt, and others in your leadership. From each of them I received inspiration and valuable concrete assistance. I cannot pay too high a tribute to F. D. R., Jr., who gave such invaluable support throughout all of last year, not only to the veterans' emergency housing program in general, but to the Wagner-Ellender-Taft bill in particular.

As many of you know, I have a certain interest in that non-Communist liberal organization known as Americans for Democratic Action. I therefore feel a further bond in common with you through that ADA national vice chairman, one Franklin D. Roosevelt, Jr., by name; through your national vice chairman who was the Midwest organizer for ADA—Dick Bolling; and through your national chairman, who is a charter member of ADA.

I have the greater admiration for you in AVC because I realize so well the difficult role of liberals in this atmosphere of Taft inflation, postwar disillusion, and normalcy fatigue. Inflation blinders destroy the perspective of many people today. The premature lifting of price controls by TAFT, WHERRY, and their colleagues has whirled people into an upward spiral so rapid that they do not yet realize just how air sick they are. The American economy is going to have a bad headache from this back-to-normalcy binge. The short-sighted self-proclaimed realists have carried us into a very unreal world, the world of inflation, the world where you make believe high prices are prosperity.

Anyone with even a scintilla of historic sense knows the truth of that adage: "Where there is no vision the people perish."

Despite the seeming evidence of last November's election—and make no mistake about this—America is a liberal country. If anyone doubts it, let him look at Elmo Roper's Fortune survey analyzing the elections of last year. If ever you become discouraged, just pause for a moment to reflect on the great names of American history: Thomas Jefferson, Andrew Jackson, Abraham Lincoln, Woodrow Wilson, Franklin D. Roosevelt. America's years of greatness have been America's years of practicing, performing liberalism.

So I salute you as an organization with the courage and the vision to be an oasis of liberalism in the desert of 1947.

A straight-thinking liberal knows well that the future of this country, just as the past and the present, lies neither in the totalitarianism of the left nor in the totalitarianism of the right. Both fascism and communism and their police states ask people to sell their birthright of freedom and liberty for a mess of false security. But liberal democracy does not offer "bread or liberty—which?"; it offers "bread and liberty—both." In the true American tradition of liberalism, your uncompromising leadership has seen quite clearly that a totalitarian state, even if it is on the left, does not have so much as a cousin relationship with an American liberal. Every person who loves the Declaration of Independence and cherishes the Bill of Rights knows full well that there is but one course—the course of democratic American liberalism. The other day I talked with an Austrian professor who had lost his freedom under Hitler; he fairly inhales and breathes his new freedom as an American. Although some liberals are confused, just as some conservatives are blind, I am thankful that the AVC is an organization which realizes that Communists have no kinship with liberals. The reactionaries are inviting at least a recession by the inflation which they have created. Through their ignorance they are bringing about the very climate in which communism thrives—the climate of recession or depression, call it as you will, of unemployment, of frustration, of hunger.

I happen to know that your leadership is very uncompromising and your membership very principled and discriminating, since I know that your "independent progressive" caucus of non-Communist liberals won at your recent election in Milwaukee, and with this victory, of course, has come responsibility—a grave responsibility for leadership in these trying times.

If for one moment we liberals think that we can relax, all we need do is cast our eyes in the direction of those forces of grab that have been voting to increase the wool tariff, contrary to every consideration of America's foreign policy and commercial position in the world of today. The great danger is that the power lobby and the real-estate lobby and the various other lobbies will grab enough for themselves from this "had-enough" Congress that there will not be enough left to keep America as a Nation in her position of world leadership. Under the false and deceptive cry of economy, this Republican-controlled Congress would either silence the Voice of America or reduce it to a whisper. This same Republican-controlled Congress has just passed a so-called rent control bill, the practical effect of which will be to raise the rent bill some $750,000,000 and score another triumph of inflation. Of course, the rent control and housing bill does not stop there. It also makes it certain that nonhousing construction will have a full and unfettered opportunity to diminish even further the all-too-little home and apartment construction which we now have. Thanks to Taft and his "had-enough" colleagues, houses, and apartments in the range of the average veteran's pocketbook have been priced out of the market, and, with a sickening swing to Harding normalcy, the veteran is now left to the hazards of the trickle theory for the chance of a roof over his head. In such a congressional climate, the importance of a grass-roots, liberal organization becomes incalculably great.

Steadily throughout this year it has been obvious that the majority of Congress had no intention to provide a decent minimum wage. Since the lowest income group is unorganized, it has no representatives to

speak up for it through the processes of collective bargaining; and only by Federal legislation can it be assured a decent increase in income with which to meet present-day inflationary costs. But because of criticism heaped on Congress for restrictive provisions incorporated in its labor bill, it now looks as though the leadership of Congress may be frightened politically into taking action on this bill. Without constant public pressure, however, the authors of this eleventh-hour conversion of expediency may lapse back into their old habits. If the minimum wage bill is to become a law and to be effective to relieve human misery and want, the aggressive support of your organization is essential.

And then what of the Stratton bill, a bill which is descended from that very spirit which prompted peoples of many lands to leave the oppression of Europe to settle on the eastern shores of North America. The phrase "displaced persons" has almost a clinical sound, but it describes people of flesh and blood who so love and treasure their freedom and their liberty that they are unwilling to return to their native countries in Europe where persecution of a police state awaits them. If this bill fails of passage at the present session, we must not be discouraged. On the contrary, we must remember that only with the militant pressure of liberal groups such as yours will there ever be a chance that such a bill can be passed. Can we so forget our heritage, can we grow so smug in our new comforts, that we as Americans can forget the plight of these wretched, weary and homeless people? If we do, we shall at the same time forget the future of America. Since our earliest days, our shores have been the haven for suffering people of Europe seeking new homes, new horizons, and new freedoms; and yet until now the leadership of Congress has preferred to appropriate millions of dollars in relief funds, a dollar dole for people living virtually in prison camps, rather than to permit part of them to come to America. This bill requires the outspoken championship of veterans. You who risked your lives not only that we might achieve victory in combat, but the further victory of a better and more decent world in which to live; you, the veterans of this war, have a special right to speak on this subject, and Congress has a special duty to listen keenly to what you say.

Since you are concerned with veterans first as citizens, you have made it clear from the beginning of your organization that you are interested in homes, decent American homes, and in decent and continuing livelihood. Certainly the minimum that any veteran has a right to expect is a decent job and a decent home. This means that you are interested not in fifty-seven or sixty million jobs for a few months, but in full employment on a regular, continuing basis. It is not enough to have a good hourly wage or a good monthly salary for a season, or a short period of time. It is important to have the security of a continuing job or an annual wage. Here you are faced with a great challenge in economics in a changing world. How can big business and big labor and big agriculture be brought to identify themselves with the interests of the public in such a way that we may have full production, full employment, great efficiency, dignity of labor, and a fair division of profits? The problem is how to make our capitalism responsible. Who, better than you, can be counted upon to bring forth the answer? The problem is not merely what to do when the next depression comes; the greater question is how to prevent that next depression.

And almost before we can get our breath from stating some of the problems on the domestic front, we realize that we have a job of pioneering yet to do if the phrase "one world" is to become a reality. And we know full well that unless it does become a reality, all other things are insignificant. We live in a world where time and space have been telescoped by our inventive and productive genius. The airplane and the radio have made all nations neighbors. We might have been given a more leisurely period for working out our international solutions, but the sands of time have been placed in an hour glass by the splitting of the atom, and those sands are running fast. Atomic energy, if we are permitted to put it to peaceful use, will undoubtedly mean a far higher standard of living and way of life than even we of the twentieth century can envision. And yet against this bright possibility, Dr. Einstein and his Emergency Committee of Atomic Scientists tell us simply and coldly that "atomic bombs can now be made cheaply and in large number. They will become more destructive. There is no military defense against atomic bombs, and none is to be expected. Other nations can rediscover our secret processes by themselves. Preparedness against atomic war is futile and, if attempted, will ruin the structure of our social order. If war breaks out, atomic bombs will be used, and they will surely destroy our civilization. There is no solution to this problem except international control of atomic energy and, ultimately, the elimination of war." Faced with these simple yet startling facts, we realize there is no question of shall we, or should we, work together as united nations; that is a must. And the Christian philosophy is the way. Two thousand years after Christ, his teachings of brotherhood are no longer an elective for occasional Sunday sermons. They are the indispensable "must" if our civilization is to continue. The discovery of atomic energy has given this, our generation, a challenge such as no other generation in the history of the world has ever faced. And face it, and meet it, and solve it, we must.

Against this ominous background of the atom, you of the AVC, and all of us as Americans, must get a quick answer to such questions as these—how to make certain nearsighted people in our own country see the importance of having the Voice of America as the voice of freedom and liberty heard behind the iron curtain by the people of a country whose leaders would divide this world, one world, into two worlds; how to lower tariffs, not raise them as was tried in the case of wool; how to bring about a commercial one world through advancing world trade; how to obtain effective, speedy, and thoughtful support for the rehabilitation of foreign countries, not merely as a matter of kindness and charity, but as a matter of hard-headed, realistic self-preservation in one world.

As liberals we want decent housing, adequate provisions for health, expanded social security, Federal aid to education, a decent minimum wage. We want the Marshall plan for European reconstruction. We want a stronger United Nations, able to cope with the problems of the atomic age. As liberals how shall we achieve these objectives? Through a third party? No. By launching a third party we shall lose them. I am not going to duck the $64 question of liberals: What about Henry Wallace and a third party in 1948? I think such a third party would be a catastrophe. Who would gain? The liberals? Not at all. It would be the Communists and the NAM. What a pair of bedfellows. If there were a liberal third party in 1948 it would result inevitably in the election of a reactionary and isolationist administration; the legislative objectives of liberals would be lost; the NAM would be in the saddle; and the isolationists would turn our foreign policy back to the steps of the twenties that led to World War II. The Communists would be rubbing their hands in gleeful celebration of the accomplishment of their dual purpose; reaction and an economic bust at home, and United States isolationism, bringing in its train chaos throughout the world. Some liberals, following Wallace, would probably argue that a liberal administration would then be elected, but I say to you that Paul Hoffman of the CED is right, that our system cannot afford another serious depression and its attendant unemployment and misery. If that should happen—God forbid—pent up hates and emotions would break their bounds and the moderate course of American democratic liberalism might perish. That is why we in the ADA are not, and from the beginning have not been, a third party movement. That is why ADA disagrees with Henry Wallace and believes that when he fronts for a third party with the private cheering of the reactionaries and the beaverish industry of the Communists, he is fronting for a movement which can only injure—perhaps irretrievably—the very liberalism for which Franklin D. Roosevelt fought. I am not unmindful of the fact that there are many sincere non-Communist followers of Wallace who are ready to rally behind his banner of a third party. No step they could take would lead more assuredly to the defeat of the very objectives in which they believe. American liberals should work through the two-party system and should not, quixotic like, tilt with the windmills of a third party. However naively and innocently done, it would merely advance the causes of communism and fascism, and do injury, not to reaction, but to liberal democracy itself.

Because you see the problems of today in the bold strokes in which they are painted on the canvas of history, because you are applying your abilities and your energies to the solution of these problems, you, the members of the AVC, are important to postwar American life. God speed you on your way.

Proposed Curtailment in Natural Gas in Fort Dodge, Iowa

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. HICKENLOOPER. Mr. President, I have received a letter dated July 18, together with two short statements from a radio broadcast from Station KVFD, in Fort Dodge, the letter being signed by Edward Breen, the manager of the broadcasting company, and refers to certain hearings of the Federal Power Commission.

I ask unanimous consent that the letter and the extracts from the broadcast be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

NORTHWEST BROADCASTING CO.,
Fort Dodge, Iowa, July 18, 1947.

Hon. BOURKE B. HICKENLOOPER,
United States Senator,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR: I am enclosing copies of two news stories which were aired over KVFD yesterday, one at 8:15 a. m. and the other at 12:15 p. m. They describe, first of all, a possible and disastrous gas shortage in Fort Dodge next year. Second, they describe the treatment accorded radio and news reporters by representatives of the Federal Power Commission.

If the schedule described in these stories is approved by the Federal Power Commission, Fort Dodge industries, employing 2,000 people, will be without gas for manufacturing and industrial purposes for a period of 60½ days this coming winter. That figure is based upon the actual record of gas consumed in Fort Dodge last year. If we should have a severe winter, those same industries will be closed for a much longer period.

How much longer is Congress going to put up with the insolence of these Washington carpetbaggers, such as Kaufman and Sarnoff?

Yours very truly,

EDWARD BREEN.

The question uppermost in the minds of civic-minded Fort Dodge residents is, What will develop if the proposed curtailment in natural gas as proposed by the Northern Natural Gas Co. should become effective?

About a week ago natural gas consumers in Fort Dodge learned that a new consumption schedule was being proposed, not only for house heating units but industrial plants as well. The proposal would curtail the city's allotment to about eight and a half million cubic feet a day during the peak period in severe winter weather. It so happens that about twice that amount is required to efficiently heat all home units and still keep the industrial plant users in operation.

Naturally Fort Dodge industrial leaders who use natural gas in their plants became greatly concerned on a possible gas curtailment next winter. They realized only too well that such a schedule would force them to close their plants for as long as several months. Not only would the plants suffer great losses, but the city itself would feel the effect of reduced pay rolls. Some 2,000 employees would be laid off.

So a meeting was arranged for yesterday at Omaha with representatives of the Federal Power Commission, the Northern Natural Gas Co. officials, and officials of the Iowa-Illinois Gas & Electric Co.

This meeting was just another of a series—not only is Fort Dodge vitally concerned about natural gas, but so too is Mason City and Des Moines. These cities also have met with the Federal men and the natural gas officials at Omaha.

Not all details concerning the meeting could be obtained first-hand by KVFD's news editor Ken Peterson. No, sir! He and Bob Kenyon, of the Messenger, were ejected from the hearing. No force was used but Federal employee Kaufman, fronting for the Federal Power Commission, and Vice President Marian of the Northern Natural Gas Co., were most insistent in declaring that a precedent had been established—a precedent barring radio or newspaper men from the hearings. Well, that was enough for Ken, but as he approached the door to leave the sacred precincts of the public utility, he remarked: "Gentlemen, regardless, we have a story whether in or out."

That left 12 Fort Dodge industrialists in the room to voice their objections to the proposed curtailment of natural gas in the city next winter. Those present were Fred Clark, Harold Gilman, and Frank Crabb of the Tobin Packing Co.; O. J. Whittemore, Vicent Clay Products; Henry Wasem of the Wasem Plaster Co.; Harvey Marxhausen of Cargill's; E. L. Flynn, Certainteed; Fred Kratosky, Iowa-Illinois Gas and Electric; William Carroll, of the Warden shops and apartments; Mayor Poole; Homer Marshar, National Gypsum; and William Terrill, secretary of the chamber of commerce.

In addition, there were legal representatives of the gypsum companies from Chicago, and officials of the Iowa-Illinois Gas & Electric Co. from Rock Island.

And sitting at the table with Federal employee Kaufman, and a man in the same classification with Kaufman with a name which sounded like Zainoff or Sarnoff—with those two were the Northern Natural Gas Co. officials—Vice President Marian, Sales Manager Larry Schumaker, and President Bay.

Each one in the hearing room presented his objection to the proposed natural-gas-reduction schedule. At times the natural-gas men were at it hot and heavy with the Iowa-Illinois gas and electric men. But after hours in the hot hearing room, the meeting was ended and the result of the session was in plain words—nothing.

The only step remaining appears to be to request a formal hearing before the Federal Power Commission, the only body which can make a ruling on the natural-gas question.

One thing brought out into the open—behind the closed doors of the meeting room—was the charge that the Northern Natural Gas Co. had oversold its product. The gas company claims that all its new customers have been prewar commitments. This brings to mind that Webster City now is being furnished natural gas from the Northern Natural Gas Co. and we doubt very much if that was a prewar commitment. Voters of Webster City back in 1940 defeated a proposal to let the natural-gas company into the city. Then about a year ago—and it was after the war—the voters again balloted on the same question and this time approved the plan to make natural gas available in their city.

There is no shortage of natural gas in the Texas field. The trouble now is that the present pipe line is not big enough to handle all the accounts along the line.

If you are wondering what happened at the meeting yesterday in Omaha relative to a Fort Dodge protest to curtailment of natural-gas service next winter—the answer is nothing.

When we say nothing we mean no understanding of any kind was reached before the "yes" men who were representing the Federal Power Commission and three top officials of the Northern Natural Gas Co.

Technically we have no right to even mention what went on in the conference room yesterday in Omaha. The 14 businessmen of Fort Dodge who attended the conference had entered the meeting room, and with them were members of the press, including KVFD's news editor, Ken Peterson. Federal Power Commission Representative Kaufman and the Northern Natural Gas Co.'s Vice President Marian quickly voiced objection to having any publicity on what they called an informal conference over the proposed schedule to curtail natural-gas service to Fort Dodge.

So the men who handle the publicity graciously left the room—and if this were Russia, we would say they left the Kremlin. Then the iron curtain fell—that is, Kaufman and Marian hoped it had. After being ejected from the sacred sanctorum at the Northern Natural Gas headquarters, the men had a photographer take a picture of the closed door—the closed door behind which arguments were to be heard on the natural-gas question.

But if Federal Power Commission Kaufman and Natural Gas Marian expected no publicity on the meeting, their expectations have certainly gone into a tailspin.

Fourteen Fort Dodge businessmen stayed in the room, and after hours of presentation of arguments against the proposed curtailment the meeting was adjourned. Kaufman and his colleague, a man by the name which sounded something like Sarnoff and who, by the way, never said a word during the session, could make no ruling on anything. All they can do is make a report to the Federal Power Commissioners. So it looks as though a bona fide hearing will be held some time in the future before the Commissioners—and not some front men.

The Northern Natural Gas Co., which operates the gas line which feeds the product into Fort Dodge, has a new schedule for consumption of gas in the city. This schedule would limit the use of gas to approximately eight and a half million cubic feet daily during the peak next winter. If this were allowed to be done, all industrial users in the city would have to switch over to such stand-by units as they could rig up. Industry in Fort Dodge would be crippled, and any future expansion industrially would be smothered. Fort Dodge would cease expanding.

Fort Dodge men at the meeting and who protested the gas curtailment included heads of the gypsum plants, packing plant, feed companies, large apartment buildings, the mayor, chamber of commerce—all users of natural gas.

It was stressed that the gas needs in Fort Dodge during a peak load in the wintertime would be about 13,000,000 cubic feet.

And behind those closed doors yesterday at Omaha the arguments at times became very pointed and even a bit personal.

Proposed Amendment of United Nations Charter

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, recently I received a request from the Renovo Daily Record, of Renovo, Pa., asking for my opinion on certain pending Senate resolutions which urged an immediate revision of the United Nations Charter. I replied, and in my letter I indicated that I feared that these resolutions probably would bring about the final cleavage within the United Nations, and instead of strengthening it, would actually destroy it.

I ask unanimous consent that the two communications be printed in the RECORD, the letter to me, which is dated July 12, and my reply, dated July 18.

I also ask that there be printed at the same place in the RECORD a recent article entitled "Would This Make UN a Reality?" by Sumner Welles, which appeared in the Washington Post of July 22, 1947.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

JULY 18, 1947.

Mr. JACK SMYTH,
Publisher, Renovo Daily Record,
Renovo, Pa.

DEAR MR. SMYTH: This is to acknowledge your letter of a few days ago in support of the two resolutions urging the convening of a conference to review the Charter of the United Nations with the purpose of strengthening it. You asked my frank opinion on these resolutions.

First of all, I want to say that I share your concern over the weakness of the Charter and in the United Nations as they have developed. I recognize the feeling behind these resolutions, as expressed by some of the sponsors, that such a conference would provide an opportunity for us to learn exactly which nations are sincerely committed to making the United Nations work, and which are not. As one Senator, I think it was Senator TAYLOR, put it, if Russia refuses to cooperate in revising the United Nations in order to build a more effective organization,

then we will know where we stand, and we will know that we have done everything we can do to prevent a possible rupture of the peace.

This position undoubtedly has merit, or there would not be so many citizens whom I know to be whole-heartedly committed to effective international organization who would be supporting it. On the other hand, I am frankly afraid that what we might do by proceeding with this show-down—and it would be a show-down—at this time would be to strike the final cleavage within the United Nations and instead of strengthening it, actually be destroying it. Can we take that chance?

It is my own belief that the leadership of the Soviet Union at the present time has absolutely no inclination to cooperate with us and with other free nations—perhaps I should use the term "nations of free people," so that you do not confuse my thought with the implication of sovereignty—in really making the United Nations work. She has blocked almost every program in all of the constituent agencies, those that she bothered to join at all. Her action in connection with the Balkan situation and the report of the United Nations Balkan Commission shows that Russia is not now willing to allow the United Nations to work effectively.

On the other hand, the United Nations as it is now set up is probably the most effective organization we could hope to have at the present time and still retain the Soviets and their satellites as members. I think it is important to try to hold them as members in the hopes that this present intransigence may be merely a passing period, a sort of adolescence in international cooperation. For this reason, I think that the proposed conference would be premature, and, in probably breaking up the United Nations, would, in fact, be responsible for losing us what now appears to be our best present hope for stabilizing peace.

I know this is not what you want from me, and perhaps the better part of wisdom on my part might have been to give you ambiguous or noncommittal generalities. Knowing how important it is to you, however, and appreciating the vigor your newspaper is demonstrating on behalf of real and effective international cooperation, I feel I owe it to you to make my views specific.

I am enclosing copies of three speeches I delivered recently which reflect some of my thinking on this urgent problem of enduring peace.

Thank you very much for your letter. Although we apparently do not see eye to eye on all of the mechanics, I know we are in perfect accord that wars must be prevented and that this can be done only by the United States and all of its citizens being willing to expend the time, the energy, and the money to make this a reality.

Sincerely yours,

FRANCIS J. MYERS.

RENOVO DAILY RECORD,
Renovo, Pa., July 12, 1947.

Senator FRANCIS MYERS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MYERS: It is with surprise and disappointment that I did not find your name among the Senators sponsoring the resolutions introduced July 9 calling on the President to strengthen the United Nations.

The feeling that the present set-up is becoming another impotent League of Nations is becoming more and more prevalent, even in a small town like Renovo, as the enclosed clippings indicate.

This is really the time for courageous, farseeing action in the field of international affairs. Any course chosen is filled with peril but far more dangerous is apathy.

Very truly yours,

RENOVO DAILY RECORD,
JACK SMYTH, *Publisher.*

[From the Washington Post of July 22, 1947]

ABOLISHING THE VETO—WOULD THIS MAKE UN A REALITY?

(By Sumner Welles)

The issues raised by the bipartisan resolutions recently introduced in the Congress which urge an immediate revision of the United Nations Charter and the restriction of the veto require sober thinking and plain speaking.

Three resolutions have been introduced. They range from a demand that the President summon a general conference for the purpose of making the United Nations capable of enacting, interpreting, and enforcing world law to a recommendation that amendments to the Charter be adopted that will strengthen the United Nations as an instrument to prevent war and maintain world peace.

The sponsors of one of these resolutions assert: "There is no surer way of determining whether the Soviet Union is bent on conquest than by learning whether she would be willing to go along with other nations in creating a United Nations which would guarantee her security."

Article 109 of the Charter provides that a conference of the United Nations may be held to review the Charter, if two-thirds of the members of the General Assembly and any seven members of the Security Council so determine, and that any alterations of the Charter recommended by a two-thirds vote of such conference shall take effect when ratified by two-thirds of the members of the United Nations, including all of the permanent members of the Security Council.

It is, therefore, clear that even if the suggested conference recommended the amendments desired by those who support the pending resolutions, the Soviet Union could, under the terms of the Charter, block their adoption.

The measures introduced in the Congress have naturally been acclaimed with loud hosannas by the various groups in this country that are clamoring for the prompt establishment of a world republic or a world government.

One of the least highfalutin of these organizations is the United World Federalists. It is directed by outstanding citizens who are versed in foreign affairs and who believe in the United Nations. This organization commends the Senators and Congressmen who have introduced these resolutions, "for taking the lead toward making peace through the UN a reality rather than a promise." It urges that the resolutions "now receive insistent vigorous support if the UN is to be strengthened in time to end the growing threat of war."

There can be no doubt that the Charter contains defects which should be corrected, and that the exaggerated use of the veto by the Soviet Union has frequently hamstrung the United Nations. The all-important question is whether the steps contemplated by these congressional resolutions are in fact calculated to "strengthen the United Nations," and to make "peace through the UN a reality."

We have entered a most dangerous period. Recent events are already threatening to divide the world into two hostile camps. The Politbureau has pursued an aggressive and expansionist course. The Soviet leaders have shown themselves to be pathologically suspicious as well as increasingly fearful of the military and economic strength of the west. By their most recent maneuvers they are doing irreparable damage to the vital interests of the Russian people as well as to those of the rest of the world.

Yet is it likely that this Government can now change Russian policies by any such show-down as would result from our demand for a revision of the Charter and a limitation of the Soviet's veto rights? The Soviet Union faces an adverse majority on almost every issue coming before the United Nations. From Russia's standpoint her veto right is her only assurance that the United Nations will not endanger Russian security. Under present world conditions the Kremlin will not relinquish that right.

If a United Nations conference were now to recommend Charter amendments to which Russia objects, what would be the practical results? Russia would either veto such amendments, in which case the present split between the east and the west would be still further intensified, or Russia and her satellites would abandon the United Nations.

In the latter event, what hope would we then have of a peaceful world? The United Nations would become merely an alliance directed against Russia and the countries within her sphere of influence. There would no longer be any universal organization. We ourselves have known from the outset that the United Nations, as a universal organization, cannot succeed unless Soviet-American cooperation can be achieved.

An American foreign policy designed to maintain the United Nations intact, while at the same time based upon a long-range program of reconstruction intended to check Soviet expansion wherever it may be attempted, is not a dramatic policy nor can it be a popular policy. For it implies protracted patience, persistent effort, and continued burdens upon the taxpayers. Yet it is the only policy that may prevent war and that may eventually convince the Russian people that cooperation, rather than antagonism, between the west and the east is in their own interest.

A divided world will not solve the problems of atomic control, of disarmament, of economic reconstruction, nor any of the other grave international questions which today confront us. The measures proposed in the Congress would merely force the issue. They would probably obliterate the last glimmer of hope which we possess of avoiding a two-world order.

Investigation of Department of Justice in Connection With Alleged Kansas City Election Frauds

---

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. KEM. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article from the Washington Times-Herald of July 23, 1947, entitled "Last Chance" by Frank C. Waldrop, and I also ask unanimous consent to have printed an article from the New York Times of today written by Arthur Krock on the subject of the inaction of the Department of Justice in connection with the Kansas City vote frauds.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of July 23, 1947]

LAST CHANCE

(By Frank C. Waldrop)

Today's the day for Attorney General Tom Clark to mow the Republicans down. It's his last chance, and all he has to do is make a public demand that his good name and that of the Department of Justice be cleared by thorough and searching investigation of the record.

At today's session of the Senate, one more attempt will be made to stop the filibuster by the Democrats against a resolution for such an investigation brought by Senator JAMES P. KEM (Republican), of Missouri.

There is very little chance that the filibuster can be broken unless Clark or President Truman, or both, speak up. The old party wheelhorses in the Senate can go plugging right on and holding up the Senate's business.

One thing they can't do by such tactics, however, is clear the good name of the Justice Department. That can be done only by a search of the facts.

And another thing the Democratic filibuster can't do is prevent such a search.

For it is only necessary to switch the resolution of investigation from Senate to House and the full congressional power to act will then be in operation just as effectively.

That is exactly what may happen, too. And if it does, the black cloud over the Department of Justice settles just that much lower. The Democrats will have not only tried to prevent public knowledge of the truth but will have been defeated in their evasive action.

What are they afraid of, anyhow? The truth can't hurt anybody who has been behaving himself. The Department of Justice is the world's biggest staff of lawyers. It knows the law and it knows perfectly well the paths of right and wrong.

If it has been following the path of good behavior, "triumphant vindication," as Senator KEM has accurately put it, is not only inevitable but thoroughly deserved.

In fact, not only the Department of Justice deserves triumphant vindication but the taxpayers of the United States, who finance the Department, are entitled to see that vindication spread on the record.

What's Clark afraid of?

The Kem resolution was introduced because there has been some very strange doings down at Justice.

Last August a Democratic Member of the House of Representatives was defeated for renomination in Kansas City, Mo., by special request of Mr. Truman.

The boys who did the job for him are known notoriously all over the U. S. A. as the Pendergast mob, a handsome garden of roses, indeed, including jailbirds and some who aren't yet but will be.

The Pendergast performance in that deal was so raw that even strong-stomached Kansas City couldn't take it. First, the congressional seat went Republican. Then the Kansas City Star turned up a hair-raising scandal of voting frauds in the Democratic primary aforementioned. Then grand juries began to click.

Things got so hot that the Department of Justice had to make at least an appearance of interest in the possibilities of Federal corrupt practice acts. Then came on a preliminary inquiry in the Senate Judiciary Committee, which disclosed that the Federal Bureau of Investigation has never made a full investigation of the Kansas City thing but only has done a very limited check of items listed for it by Clark.

That, in spite of Clark's statement to the Senate committee to the effect that a full and thorough investigation by the FBI disclosed no evidence of Federal law violation.

And then, just when things were beginning to get all tangled up in legal wildwoods, whereases, henceforths and howsomevers—Blam! Some eager beaver blew open the vault in the courthouse at Kansas City and made off with a lot of ballots and other evidence.

So, though he had already said that a "thorough and full" investigation had been made by the FBI before, Mr. Clark had to turn around after the blast and order another "thorough and full" investigation.

No wonder Senator KEM asks that the Department of Justice be put under the microscope.

It is very bad, by any test.

The Department of Justice, since Government has come to penetrate into every detail of our political and economic affairs, is the most powerful agency of the civil government.

Other branches may take your money away from you or bust you out of your job. But Justice can take your liberty. It can smear your good name. It can fix you so you can never come back.

The good name of the Justice Department, therefore, ought to be guarded fiercely and by nobody more than the Attorney General. The Kansas City vote fraud thing to date is working exactly opposite to that and Mr. Clark has it in his power to do more than any other man to make the matter right.

He needs only be the first today to demand the senatorial investigation. That, alone, would be more than half that's needed to restore public confidence. Why doesn't he do it?

[From the New York Times of July 24, 1947]

IN THE NATION—THE BLOCK AGAINST THE KEM RESOLUTION

(By Arthur Krock)

WASHINGTON, July 23.—In somebody's memoirs one day a comprehensible reason may be given for the effort of administration Democrats in the Senate to prevent a vote on the Kem resolution, but it is doubtful that, whatever the reason, it is politically sound. This is the resolution offered by the junior Senator from Missouri, a Republican, to inquire into the record of the Attorney General and the Department of Justice with respect to the primary election frauds in the Fifth Missouri Congressional District, located in Kansas City.

So far as this correspondent was able to discover from the departmental record, Attorney General Clark has nothing serious to hide in his action on the revelation of frauds made by the Kansas City Star. It is true that these were committed by the unsavory Pendergast machine, of which the President is a member and which put and promoted him in public office. It is also true that the purpose of these frauds was to nominate the President's choice for the Democratic congressional nomination in 1946, Enos Axtell, over Representative Slaughter. But before the blocking move on the Kem resolution began in the Senate, a special Federal grand jury and prosecutor were on the move in Kansas City to disclose the full facts and punish more of the guilty. And, if the Senate Democrats were able to block the inquiry into Mr. Clark's activities, it was plain that the probe would ultimately be made.

Delay merely meant that whatever headlines come from the investigation would appear nearer to the dates of the national conventions and elections of 1948. How this timing could help the Democrats, and Mr. Truman as candidate for reelection, and why it was not better political strategy to separate these events as widely as possible, are questions to which the semifilibusterers in the Senate have offered no good answer, publicly or privately. Whatever the influence behind the delaying tactics, the reasoning is mysterious.

COMPETING FOR THE BOOBY PRIZE

Lacking any explanation, the tactics seem just dumb. For, despite the outcome of the semifilibuster, it has given the Republicans a chance to charge that the administration was trying to cover up something directly damaging to the high command in Washington. And many people will probably believe that.

The Republican leadership in this Congress has been accused of unbelievable dumbness in handling various matters. But the record to date of the Democratic leadership in the matter of the Kansas City frauds surpasses in this particular anything the Republicans have done.

The Attorney General's part in the inquiry came to the attention of Congress when J. Edgar Hoover, Director of the Federal Bureau of Investigation, testifying before the Senate Judiciary Committee, left an implication concerning his chief which he sought later to remove. This implication, however unintentional, was that Mr. Clark's directive to the FBI to look into the frauds tended to protect the guilty by narrowly limiting the FBI inquiry.

But the text of the Attorney General's instructions, under date of October 11, 1946, does not support the doubts of his course which have materialized in the Kem resolution. He told the FBI to investigate the evidences of fraud uncovered by the Kansas City Star; and that possible violations were indicated of the scanty Federal laws that affect primaries, which are under State jurisdiction. He directed a preliminary investigation by the FBI together with all circumstances surrounding the violations.

NOT AN FBI INVESTIGATION

The FBI was further instructed to interview six persons (the four election officials and two Star reporters) and such other of the Star employees as participated in the Star investigation. The FBI obeyed except that, instead of interviewing the 30 or more designated as such others, it examined more than 1,400 affidavits obtained by them from 8,000 persons in the district. Though this was not classified as an FBI investigation, and the agency's director in Kansas City made this distinction in writing to the district United States attorney there, the restrictive statement did not appear in the FBI report made to the Attorney General.

The report advised him that the inquiry he ordered had developed data insufficient to indicate that the result of the primary might have been changed by the frauds; that the Missouri State authorities were actively prosecuting the culprits and that the Federal judges in Kansas City, to whom the evidence had been submitted, found no ground for further Federal action. Accordingly Mr. Clark closed the case for the Department.

After that the ballot boxes that doubtless contained more evidence were stolen by the gang, the Federal judges reversed their conclusion, and the Attorney General appointed a special assistant in Kansas City to bring Federal prosecutions. It is very difficult to see anything in this record to prompt administration Democrats in the Senate to a course which has aroused suspicion that something very rotten is concealed there.

Senator KEM contends that the words, "together with all circumstances," were deliberately placed in the directive in such a way as automatically to restrict their natural meaning and foreclose a real FBI investigation. This syntax will be at issue in the probe of the Department and the Attorney General.

A Summary of Florida Archeology

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very scholarly address entitled "A Summary of Florida Archeology," delivered by the Honorable John W. Griffin, archeologist, Florida Park Service, before the Jacksonville Historical Society, February 12, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A SUMMARY OF FLORIDA ARCHEOLOGY
(By John W. Griffin, archeologist, Florida Park Service)

Twenty years is a short time in either history or archeology, but the last 20 years mark a major epoch in the history of archeology. To see just what has been accomplished in American archeology in this time let us look back to 1927.

In 1927 the first wholly acceptable find of early man in America in association with extinct animals, as found at Folsom, N. Mex., was just a year old, and the lid was off the much-discussed problem of early man in America. The two finds of fossil man in Florida, Vero and Melbourne, were still in disrepute among archeologists.

In 1927 another important contribution was just a year old; the arrangement of the prehistoric cultures of the southwestern United States into a time sequence. The science of tree-ring dating which was further to revolutionize southwestern archeology was as yet unborn.

In the eastern United States, vague is the only accurate term to describe the state of archeological knowledge. True, in New York, some ideas of early and late Indian cultures had developed, largely because of the well-known history of the Iroquois. But in the remainder of the East, that essential element of history and archeology, time perspective, was poorly developed.

In Florida specifically, our knowledge rested primarily on the investigations of C. B. Moore, conducted for the most part around the turn of the century; admirable for their day, but woefully inadequate from the point of view of modern archeology—just as our present research will be inadequate 20 years hence, for this is the way in which science and scholarship advances.

The past 20 years, then, have seen tremendous strides in our knowledge, and corresponding shifts and changes in our thinking and interpretation. It is not amiss to point out that a mere 20 years ago professionally trained archeologists were virtually unheard of; practicing archeologists were frequently trained transfers from other fields. The archeologist trained as an archeologist is a relatively modern phenomenon.

Most of these advances in our knowledge have accumulated so rapidly that they have not been digested for the public. They remain buried in technical archeological reports, or even in unprinted manuscripts or unanalyzed field notes. It is difficult, therefore, for the seriously interested layman to find out much of what he would like to know, and it is the purpose of this paper to offer a summary of our present knowledge of Florida archeology—a summary which we sincerely trust will be hopelessly out of date in another year.

If we begin with the problem of early man in Florida we will find that thinking has changed radically in recent years. You may be aware that when Dr. Sellards, then State geologist of Florida, announced the finding of human remains associated with extinct animals at Vero, Fla., in 1915, his account was met with extreme skepticism in the archeological world. In 1925, when Dr. Gidley announced a similar find from Melbourne, Fla., he was greeted with the same reaction.

The finds at Folsom, N. Mex., in 1926, opened the door to research in this field, and in 1946, Dr. T. Dale Stewart of the United States National Museum published a reanalysis of these two important Florida finds. He finds that in the case of the Melbourne skull in particular the early reconstruction was in error—so much in error that his reconstruction shows not an extremely round headed individual, but a long headed one. Stewart points out that this agrees in shape with the Vero skull, and that less than 4 percent of Florida skulls exhibit this character. Purely from this point of view, Stewart asks if it is not strange that two skulls of this minority type have turned up under conditions that have made geologists feel they were associated with fossil animals; and less than 40 miles apart, at that. Indeed, such coincidence is difficult to explain away. Then, too, it is now generally agreed that the extinct animals found with these skulls may have outlasted the Pleistocene period, or ice age, and therefore the skulls do not need to be quite as old as was postulated by their supporters a few years ago.

To summarize, more and more authorities are of the opinion that the Vero and Melbourne skulls were associated with extinct animals, and do date from a time when those animals roamed Florida. This would place men in Florida shortly after the end of the ice age, some 10,000 years ago.

As to the question of Folsom points—the type of arrowhead found with extinct animals in numerous places in the Southwest and high plains. In 1935 Dr. Stirling pointed out that no Folsom points had been found in Florida, but in recent years several points that can be definitely considered as related to this type have turned up. We have here a further suggestion of man's antiquity in Florida which future research must clarify.

Following this incompletely understood early period, we are faced with a gap of some thousands of years in our knowledge. This is true not only in Florida but in America in general. It is now definitely established that man was in America ten to fifteen thousand years ago, but we lose sight of him from that time almost to the turn of the Christian era. From the turn of the Christian era until the present day our record is relatively continuous, although hazy in parts.

Jeffries Wyman, in 1875, was the first to recognize that the bottom layers of some of the deep shell heaps along the St. Johns River were definitely built by man, but contained no pottery. In recent years a series of such cultures have been found in the eastern United States. In every case they underlie the earliest known pottery and are, therefore, termed prepottery cultures. In Florida we know little of these cultures other than that they exist, but from comparative evidence it would seem that they all begin after the turn of the Christian era and continue until approximately 500 A. D. The people were undoubtedly nomadic or semi-nomadic hunters, fishers, and gatherers. We may well imagine that the groups were small and movement over an area rather than permanent village life the rule.

About 500 A. D.—perhaps a little earlier, perhaps later—the first pottery was made in the eastern United States. It is believed that the idea spread from either the Southwest or Mexico. This early pottery was made from clay to which a liberal amount of vegetal fiber had been added. When the pottery was placed in the fire to bake it hard, this fiber burned out, leaving the core of the pottery honeycombed with little holes. The surface is frequently decorated with series of lines cut into it. The archeologist calls this fiber-tempered pottery. In Florida it has been found in several sites along the St. Johns River, and recent excavations by Yale University have shown it to lie below later pottery at a site near the headwaters of the St. Johns. The Florida Park Service has located a site of this period in eastern Volusia County, the only such site known from coastal Florida. Scattered pieces have come from the Florida northwest coast, and probably indicate relationships to and contemporaneity with the next period to be discussed.

The northwest coast of Florida has long been a favorite hunting ground for the archeologist, and many of C. B. Moore's most interesting explorations were carried on here in the 1890's. In 1940 an expedition under the direction of Gordon R. Willey, cosponsored by the National Park Service and Columbia University, covered this coast from Pensacola to St. Marks and established a series of archeolcgical periods which form a framework for future research.

The earliest culture known in this region is called the Deptford period, and it dates from approximately 800 to 1000 A. D. As previously indicated, this period seems in part to be contemporaneous with the fiber-tempered horizon in the St. Johns area. Pottery of the Deptford period is tempered with sand rather than fiber, and is decorated with rather large, crude checked designs imprinted on the damp surface of the pottery with a wooden paddle. It seems doubtful whether the Deptford people knew the art of agriculture, and it is certain that they had not as yet begun to inter their dead in mounds.

About 1000 A. D. this period gives way to one known as Santa Rosa-Swift Creek. The pottery decoration is made up of curved lines in a complicated design impressed, as before, on the surface of the vessel with a wooden paddle. Other types of pottery are also known, but there is not sufficient time to do other than indicate the main types and trends. Another important innovation of this period was the burial mound, and it is probable that this is the first period in which agriculture was practiced.

This horizon gives way in approximately 1200 A. D. to the Weeden Island period, which may perhaps be described as the artistic peak of prehistoric Florida. The pottery becomes more elaborate in both decoration and form. A common and definitive decoration consists of neatly executed curvilinear lines, with the spaces thus defined filled with little punched depressions. In form the vessels take on exotic shapes; double bodies, bowls with bird or animal heads modeled on the rim, vessels with many compartments, and a variety of others. The burial mounds of this period frequently contain numbers of pots with the dead, as well as other ornaments and tools. It would seem that by this period agriculture was firmly established, villages were larger and more permanent, and the population in general had increased in numbers.

The next, and at present final, period of the northwest coast is called the Fort Walton culture. In this period the use of mounds for burial is largely abandoned, their place being taken by what can properly be called cemeteries. In the place of the burial mound an-

other type of mound was built. This is the so-called temple mound, a truncated pyramid of earth on top of which temples or houses were constructed. Some of these temple mounds are tremendous in size. The early Spanish explorers describe mounds of this kind, for the Fort Walton culture runs from approximately 1500 A. D. into full historic times. The pottery has once more undergone a change, being decorated with lines cut into the clay, confined mainly to the upper portions of vessels, and the vessels themselves tend to be shallow bowls.

Moving to south Florida, we find that the development of prehistoric culture followed slightly different lines, and must be considered apart from the previous outline. Most of the work in south Florida has been done by John M. Goggin, at present at Yale University.

From about 900 to 1100 A. D. the Indians of south Florida made a plain pottery, tempered with fine sand so that it has a gritty feel to the fingers. It was not decorated. This period is called Glades I by Goggin, and is not known to southeast Florida.

Succeeding this period is Glades II, a period in which designs are found near the rims of vessels. These designs are scratched into the damp clay, and take various forms which seem to have significance in their distribution in space in the southern peninsula.

At about 1400 A. D. further changes make it necessary to designate the period as Glades III. This period shows a decrease in decoration of pottery, and is the period in which the elaborate earth and shell works of south Florida were built. Temple mounds, similar to those described for northwest Florida, appear in this period, and it is evident that the people have been subjected to the same influence so far as mound building is concerned, but have developed their pottery along different lines. This Glades III period runs well into historic times.

Turning our attention to another part of the State, we will discuss the northeastern portion of Florida. It is well to indicate at the outset that we know this region incompletely; even more incompletely than we know the rest. We have mentioned the early fiber-tempered horizon previously, and we do know that various cultures follow it, but the exact definition of the sequence in northeast Florida is one of the major problems facing us. This sequence will be defined by careful work in the shell heaps and mounds of the area—in the near future, we hope.

We do know that there are materials in northeastern Florida which are somewhat related to the northwest coast. We also know that there are materials related to the known sequence in southern Georgia. With two known sequences to tie to the archeology of northeastern Florida becomes important not only in and of itself but as a means of relating two known areas to each other.

The most common type of pottery design in northeast Florida is a checked design impressed by a wooden paddle, and this design seems to be prevalent over a long period of time. This very fact is one of the confusing features when an attempt is made to arrange the archeology of the region into time periods.

I have delayed a discussion of the historic horizons until this point in the paper so that they may be discussed for the State as a whole rather than regionally.

One of the most interesting archeological phenomena in the entire Southeast occurs near the end of the archeological record. This is the so-called Buzzard cult. Sometime after the first white inroads into North America a religious cult sprang up among the natives. Since the most typical sites of this movement are found in northern Georgia, Alabama, and Oklahoma it is felt that the cult centered there. However, sites which have articles belonging to this cult are widespread; from Illinois through Florida.

The cult is marked by items unknown from any other period. Plumed rattlesnake and spider motifs are used on pottery, shell, and other materials. Elaborately carved shell gorgets with woodpeckers, and masked men in ceremonial costumes are found, axes made of a single piece of stone, handle and all, are part of the paraphernalia. Many other items too numerous to record are also found. Many of the motifs are clearly Mexican in derivation, but this does not mean that the makers were Mexicans. It is assumed that this cult was a reaction to the conquest by the whites, and that it arose, spread rapidly, and soon disappeared as did the later ghost dance among the plains Indians.

That the cult is historic in Florida is proved by cult motifs on metals that must have been procured from the Europeans. The exact dates are as yet unknown, but I tend to date the Buzzard cult as belonging to the middle of the seventeenth century, or perhaps a little earlier.

On the northwest coast the influence of this cult is clearly seen on the Fort Walton horizon, and in south Florida it is equally clear in such Glades III sites as Key Marco. In eastern Florida it is evident in such sites along the St. Johns as Mount Royal, south of Palatka.

The unraveling of the interesting history of this cult in Florida promises to be one of the most interesting problems which we will encounter, and it is a problem that may have some light shed upon it by historical documents.

We have several times mentioned the fact that the Fort Walton period in northwest Florida extends into historic times. We may now state that pottery of this period has been found in connection with European materials at early Spanish mission sites east of Tallahassee. The Florida Park Service has excavated one of these sites and is analyzing the data.

Although many other sites have been found in Florida which give evidence of historic Indians, most of them have not been scientifically excavated or analyzed. I shall, therefore, mention only one more.

In a low sand mound south of Sebring, Fla., the Florida Park Service has discovered Indian burials accompanied by European trade objects. These trade objects consist of thousands of small glass beads of various colors, little copper hawk's bells (such as the ones used on falcons in Europe), fragments of glass mirrors, rusty scissors, and a couple of small pieces of sheet copper perforated for suspension as ornaments. There is also a fragmentary Spanish jar. The Indian pottery which accompanies the burials is not decorated, and has a gritty feel. Surprisingly little is known of the dates of various trade goods; our only good comparative information comes from Michigan. Here the trade period has been divided into two phases, one dating from 1700 to 1760 and the other from 1760 to 1825. The materials found near Sebring, when compared to the Michigan list, would seem to fall before 1760; in other words in the first Spanish occupation of Florida.

We have learned a lot in the past 20 years, but there is still much more to learn. The material which I have given you tonight is, as you can see, just the beginning for Florida. To summarize, we have begun to achieve historical perspective in the archeology of Florida, and the basic framework for some regions has been worked out. The detailed investigations into Florida's past will go on, with the support of the people of Florida.

I hope that I will be able to appear again before this group, and that at some future time some of the gaps of knowledge which made themselves evident tonight will have been filled by continued research.

Our Debt to TVA

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. HILL. Mr. President, I ask to have printed in the Appendix of the RECORD an editorial entitled "Our Debt to TVA," from the Denver (Colo.) Post, July 11, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR DEBT TO TVA

For years such authorities as the United States Bureau of Mines and the Encyclopedia Britannica have been saying the Rocky Mountain empire eventually will become the center of a big phosphate fertilizer industry. The West has waited, but not patiently, for the predictions to come true.

In the last few days there have been a couple of encouraging developments, however. The Bureau of Mines has announced that F. H. Gunnell and W. A. Young have completed a report suggesting the use of Reclamation Bureau power for the operation of a phosphoric-acid plant at Casper, Wyo., which would have a capacity of 100 tons a day.

The report suggests the entire installed cost of the project, including a mine near Lander, a crushing plant at Lander and the plant at Casper, would be $5,844,000.

The other development was a proposal by the Tennessee Valley Authority that it be allowed to erect a new phosphate experimental plant at Mobile, Ala., to explore new and cheaper methods of treating western phosphate rock. Department of Agriculture experts immediately suggested the erection of such a plant at some place in the West, like Pocatello, Idaho, instead.

If the plant is built, its location probably will depend in large measure on the adequacy of cheap electric power with which to operate furnaces.

When the Rocky Mountain phosphate industry becomes a booming reality, this region will have the TVA to thank. TVA has sold American farmers on the use of phosphate fertilizers. It has developed processes for producing such fertilizers more cheaply than ever before. It has led the way in research to increase the percentage of phosphoric plant food in such fertilizers, thereby accomplishing important savings in shipping costs.

TVA was created to develop the water and other resources of a single region. In doing so it has rendered an important service to the Rocky Mountain empire also. If proof were needed that the development of any particular part of the country benefits the Nation as a whole, the TVA fertilizer program supplies it.

It is to be hoped that western capital will seize the opportunity to finance the Mountain States phosphate industry. If it does not, eastern capital, operating through existing or new companies, will do so only too gladly. The profits from entirely too many western resources now go elsewhere, never to return.

Medical Care and Treatment of Veterans

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following report of the deans' committee of Baltimore, on the medical care and treatment of veterans and the residency training program for physician veterans in the Baltimore region, 1946–47:

Subject: Report of the Deans' Committee of Baltimore on the Medical Care and Treatment of Veterans and the Residency Training Program for Physician Veterans in the Baltimore Region, 1946–47.

To: The Director, Department of Medicine and Surgery, Veterans' Administration, Washington 25, D. C.

I. This report summarizes the activities of the deans' committee of Baltimore in respect to the provision of adequate medical care and treatment for veterans and of approved residency training to physician veterans in the Baltimore region during the year 1946–47.

II. The deans' committee of Baltimore, which is one of a number of similar committees set up in cooperation with medical schools in this country by the Director of the Department of Medicine and Surgery, Veterans' Administration, at the direction of the Administrator, Veterans' Administration, was organized by the University of Maryland School of Medicine and the Johns Hopkins University School of Medicine under the chairmanship of Dean Robert U. Patterson, University of Maryland School of Medicine, on March 6, 1946. It has held nine meetings since its organization. On July 1, 1946, Acting Dean H. Boyd Wylie, University of Maryland, succeeded Dr. Patterson as chairman of the committee. In June 1946, a subcommittee on neuropsychiatry composed of Drs. Ross McC. Chapman, John C. Whitehorn, and Philip S. Wagner was established by the Deans' Committee of Baltimore.

III. The functions of the deans' committee of Baltimore as described in the original and subsequent memoranda from the Director, Department of Medicine and Surgery, Veterans' Administration, were as follows:

A. To organize the professional staffs of the various medical installations of the Veterans' Administration in the Baltimore region in a manner to insure the provision of high standards of medical care and treatment for veteran patients.

B. To organize and maintain a program of adequate postgraduate education for physician veterans within the medical installations of the Veterans' Administration in the Baltimore region.

C. To provide the full-time and part-time medical staff in the medical installations of the Veterans' Administration in the Baltimore region which would be necessary to carry out the design of A and B.

D. To maintain a constant supervision of the professional aspects of medical care and treatment of veterans and of the educational program for physician veterans.

E. To integrate the professional medical services of the medical installations of the Veterans' Administration in the Baltimore region in order to provide high standards of medical care for veterans without a concomitant uneconomical use of the medical talent available for such services.

IV. The activities of the deans' committee of Baltimore. Initially, a survey was made by representatives of the committee of the medical personnel, professional resources, and the physical plant of the Veterans' Administration Hospital at Fort Howard, Md. Following this study, the committee took steps in conjunction with the Veterans' Administration to secure professionally competent, full-time and part-time staff members for the hospital at Fort Howard. As the result of this joint effort, the following full-time chiefs of service were obtained:

A. General medicine. Dr. Paul Padget, assistant professor of medicine, Johns Hopkins University School of Medicine; instructor in medicine, University of Maryland School of Medicine; diplomate, American Board of Internal Medicine.

B. General surgery. Dr. Joseph Miller, instructor in surgery, University of Maryland School of Medicine; assistant in surgery, Johns Hopkins University School of Medicine; diplomate, American Board of Surgery.

C. Pathology. Dr. William B. Vandergrift, instructor in pathology, University of Maryland School of Medicine.

D. Orthopedic surgery. Dr. John Lyford III, instructor in orthopedic surgery, Johns Hopkins University School of Medicine; diplomate, American Board of Orthopedic Surgery.

E. Urology: Dr. Herman J. Meisel, diplomate, American Board of Urology. Highly qualified part-time chiefs of service were also secured for neurosurgery, ophthalmology, and dermatology and syphilology.

The committee next undertook the task of providing a group of competent consultants and attending physicians and surgeons in order to insure that high standards of medical care and treatment for veteran patients would be constantly available at Fort Howard, and that a program of postgraduate education, adequate to meet the specialty boards' requirements, could be developed in that institution. The response to the overtures of the deans' committee by qualified physicians and surgeons in Baltimore was very gratifying, and the part-time staff was filled in a short time. A list of the consulting and attending staff in the hospitals in the Baltimore region is in appendix A of this report.

With the cooperation of the Veterans' Administration, excellent junior full-time personnel was obtained for the various services at Fort Howard, and residency programs were established in 1946. The committee wishes to report that the residencies in general surgery, general medicine, orthopedic surgery, radiology, and dermatology and syphilology have been approved at Fort Howard by the various American specialty boards concerned.

In June 1946 the committee initiated studies through its subcommittee on neuropsychiatry and other representatives of the professional problems of the neuropsychiatric hospital at Perry Point, Perryville, Md. This hospital is forty-odd miles away from Baltimore, and in the past because of its isolation has not received the needed professional support from Baltimore. The surveys made by representatives of the committees showed that due to the depletion of the professional staff at Perry Point resulting from the war, and to the inexperience of many of the then current staff (junior medical officers on loan from the Army and Navy), a large backlog of neuropsychiatric patients had accumulated, whose records were incomplete, and whose psychiatric treatment had been limited. The first task of the committee was to reorganize the neuropsychiatric service at Perry Point. In this effort the committee was aided by the Department of Medicine and Surgery of the Veterans' Administration, which placed an able manager in charge of Perry Point and added a competent clinical director of neuropsychiatry to the staff of that hospital. The subcommittee on neuropsychiatry secured the services of seven competent neuropsychiatrists from the staffs of the University of Maryland and the Johns Hopkins University Schools of Medicine for Perry Point. These individuals act as consultants, both in service and teaching capacities.

Next, the efforts of the deans' committee were turned to a study of the needs for surgical and medical services at Perry Point. A careful consideration of these services led the deans' committee to recommend the initiation of residency training programs in general medicine and in general surgery at Perry Point. These recommendations were accepted and at the time of the writing of this report, the surgical service has been reorganized under the direction of a qualified surgeon, while the medical service, which already had a competent chief, is being prepared for such a program. Already such strides have been made in the psychiatric service that it is now under consideration for approval by the American Board of Psychiatry and Neurology. It is hoped that the training programs in surgery and medicine will be approved within the year. In addition to these activities, the deans' committee has provided qualified consultants in ophthalmology, dermatology, and syphilology, obstetrics, gynecology, radiology, and in tuberculosis for the hospital at Perry Point.

The final major activity of the deans' committee of Baltimore during the year 1946–47 was the correlation of the professional services in the various medical installations of the Veterans' Administration in the Baltimore region. It became evident to the committee in the course of its activities, that the provision of a high level of medical care and treatment to veterans and of an adequate post-graduate education to physician veterans could be facilitated by a correlation of the professional activities in the dispensary in Baltimore with those of the two hospitals in the Baltimore region. Discussions were then held with the regional director, representatives from the branch office, the chief medical officer of the dispensary and with the managers and chiefs of service of the two hospitals, with the result that in the year 1947–48, the following plan will be in operation. Resident physicians and surgeons from the two hospitals will participate in the activities of the dispensary in Baltimore under the immediate supervision of the consulting and attending physicians and surgeons from the University of Maryland and Johns Hopkins University Schools of Medicine. In addition to the general medical and surgical clinics in the dispensary, special clinics will be established in diseases of the chest (tuberculosis), dermatology, and eventually, in allergy. This will mean that veterans will not only have made available to them the highest type of diagnostic and therapeutic services, but also their after-care following hospitalization will be made easier for them. Under this plan there will not be a veteran applying for medical service in the medical installations of the Veterans' Administration in the Baltimore region, who will not have the opportunity of receiving adequate medical or surgical care and treatment.

V. The deans' committee feels that at this point in its report, it can enter into a short discussion of what its activities have meant to the sick veteran. The hospital at Fort Howard will be used as an example. In 1944, 1940 patients; in 1945, 3,099 patients; and in 1946, 3,942 patients were admitted to that hospital. The death rates of patients at Fort Howard were 6.4 percent, 6.3 percent, and 4.2 percent, respectively. The appreciable drop (36 percent) in the death rate at that hospital in 1946 occurred despite the fact that many more seriously ill patients were admitted and many more serious operations were performed than in the previous 2 years. In reality, in 1946 many patients were taken care of at Fort Howard who would have had to be sent elsewhere before the deans' committee, working in cooperation with the Veterans' Administration, provided a highly competent staff for that hospital. The death

rate at Fort Howard is not higher than it is in any other good hospital in Baltimore. Another point which is of importance is that now patients do not have to wait for long periods before they can undergo surgical treatment. They are taken care of as promptly as the bed space at Fort Howard permits.

The deans' committee of Baltimore wishes to make clear that this improvement in the medical care of veterans in the Baltimore region is the result of the policies initiated by Gen. Omar Bradley and his director of medicine and surgery, Dr. Paul R. Hawley. As a result of their efforts, the cooperation of the medical schools was obtained through the establishment of deans' committees in the problem of staffing the hospitals of the Veterans' Administration. These committees have secured the specialists who are now giving part-time service to the veterans, and have been instrumental in obtaining many qualified physicians who have entered the medical service of the Veterans' Administration on a full-time basis. The deans' committee of Baltimore heartily endorses and supports the efforts of General Bradley and his staff for providing adequate medical care and treatment for veterans. The committee believes that few of the members of the staffs of the University of Maryland or Johns Hopkins Hospitals would be participating in this program were it not for the policies established by General Bradley. These doctors (who are listed in appendix A) are interested in working under the present plan because:

A. It permits them to maintain a high type of medical care and treatment for veterans.

B. It is relatively free from the stifling effects of red tape and of bureaucracy.

C. It permits the doctors to practice under conditions comparable to those existing in the best civilian hospitals in Baltimore.

D. It is free (or has been so far) from so-called politics.

E. It is satisfying to both doctor and patient alike.

F. The physicians and surgeons who participate in this program are paid in relation to their training and experience and to the time which they give to the medical care and treatment of veterans.

VI. In concluding this report, the deans' committee desires to state that it has had excellent cooperation from the Veterans' Administration in the development of adequate medical services for veterans in medical installations of the Veterans' Administration in the Baltimore region. The committee also wishes to reiterate that, in their opinion, the policies initiated by Gen. Omar Bradley and Dr. Paul R. Hawley for providing adequate medical care and treatment to veterans and postgraduate education for physician veterans in the Baltimore region have been highly successful.

THE DEANS' COMMITTEE OF BALTIMORE,

H. BOYD WYLIE, M. D.,
Acting Dean, University of Maryland School of Medicine; Chairman, Deans' Committee of Baltimore.

ALAN M. CHESNEY, M. D.,
Dean, the Johns Hopkins University School of Medicine.

LEWIS P. GUNDRY, M. D.,
Assistant Professor of Medicine, University of Maryland School of Medicine.

HARRY C. HULL, M. D.,
Assistant Professor of Surgery, University of Maryland School of Medicine.

ALAN C. WOODS, M. D.,
Professor of Ophthalmology, the Johns Hopkins University School of Medicine.

PERRIN H. LONG, M. D.,
Professor of Preventive Medicine, the Johns Hopkins University School of Medicine; Secretary, Deans' Committee of Baltimore.

APPENDIX A—CONSULTING AND ATTENDING STAFF OF THE HOSPITALS (FORT HOWARD AND PERRY POINT) OF THE VETERANS' ADMINISTRATION IN THE BALTIMORE REGION, 1946–47

CONSULTANTS AT THE VETERANS' ADMINISTRATION HOSPITAL, FORT HOWARD, MD.

I. General surgery:

A. Dr. Harry C. Hull, assistant professor of surgery, University of Maryland.

B. Dr. George A. Stewart, assistant professor of surgery, Johns Hopkins University.

C. Dr. George G. Finney, assistant professor of surgery, Johns Hopkins University.

II. Orthopedic surgery:

A. Dr. Allen F. Voshell, professor of orthopedic surgery, University of Maryland.

B. Dr. Henry F. Ulrich, associate professor of orthopedic surgery, University of Maryland.

C. Dr. H. Alvan Jones, instructor in orthopedic surgery, Johns Hopkins University.

III. Urology: A. Dr. J. A. C. Colston, associate professor of urology, Johns Hopkins University.

IV. Neurosurgery:

A. Dr. Richard G. Coblentz, clinical professor of neurological surgery, University of Maryland.

B. Dr. James G. Arnold, Jr., associate professor of neurological survey, University of Maryland.

V. Thoracic surgery: A. Dr. Thomas B. Aycock, professor of clinical surgery, University of Maryland.

VI. Gynecology: A. Dr. J. Mason Hundley, professor of gynecology, University of Maryland.

VII. Ophthalmology: A. Dr. M. Elliott Randolph, assistant professor of ophthalmology, Johns Hopkins University.

VIII. Otolaryngology: A. Dr. Dudley C. Babb, assistant professor of otolaryngology, Johns Hopkins University.

IX. Proctology: A. Dr. Monte Edwards, professor of clinical surgery, University of Maryland.

X. Roentgenology: A. Dr. H. Webster Brown, assistant professor of roentgenology, Johns Hopkins University.

XI. General medicine:

A. Dr. Louis A. M. Krause, associate professor of medicine, University of Maryland.

B. Dr. Lewis P. Gundry, assistant professor of medicine, University of Maryland.

C. Dr. L. Earle Morre, assistant professor of medicine, Johns Hopkins University.

D. Dr. Perrin H. Long, professor of preventive medicine, Johns Hopkins University.

XII. Cardiology: A. Dr. William S. Love, associate professor of medicine, University of Maryland.

XIII. Gastroenterology: A. Dr. Samuel Morrison, assistant professor of gastroenterology, University of Maryland.

XIV. Alergy: A. Dr. Walter W. Winkenwerder, assistant professor of medicine, Johns Hopkins University.

XV. Tuberculosis: A. Dr. Hugh G. Whitehead, instructor, medicine, Johns Hopkins University and University of Maryland.

XVI. Neuropsychiatry:

A. Dr. Theodore Lidz, assistant professor of psychiatry, Johns Hopkins University.

B. Dr. Stephen W. Ranson, assistant professor of psychiatry, Johns Hopkins University.

XVII. Dermatology and syphilology: A. Dr. Maurice Sullivan, assistant professor of dermatology, Johns Hopkins University.

ATTENDING PHYSICIANS AND SURGEONS AT THE VETERANS' HOSPITAL, FORT HOWARD, MD.

I. General surgery:

A. Dr. George H. Yeager, associate professor of surgery, University of Maryland.

B. Dr. Edward S. Stafford, assistant professor of surgery, Johns Hopkins University.

C. Dr. Harry C. Bowie, instructor of surgery, University of Maryland.

D. Dr. Howard W. Jones, assistant in surgery, Johns Hopkins University.

E. Dr. Karl F. Mech, assistant in pathology, University of Maryland.

F. Dr. Edward F. Lewison, assistant in surgery, Johns Hopkins University.

II. Urology:

A. Dr. Howard B. Mays, instructor, genitourinary surgery, University of Maryland.

B. Dr. Hugh J. Jewett, assistant professor of urology, Johns Hopkins University.

III. Gynecology: A. Dr. John C. Dumler, associate in gynecology, University of Maryland.

IV. Otolaryngology: A. Dr. Theodore A. Schwartz, instructor, otolaryngology, University of Maryland.

V. Oncology (cancer): A. Dr. Arthur G. Siwinski, associate in surgery, University of Maryland.

VI. Roentgenology: A. Dr. Harry A. Miller, Mercy Hospital.

VII. General medicine:

A. Dr. Theodore E. Woodward, assistant in medicine, University of Maryland.

B. Dr. Samuel T. R. Revell, assistant in medicine, University of Maryland.

C. Dr. John Z. Bowers, assistant in medicine, University of Maryland.

D. Dr. Joseph E. Muse, assistant in medicine, University of Maryland.

E. Dr. Ralph G. Hills, instructor of medicine, Johns Hopkins University.

F. Dr. Sidney Scherlis, assistant in medicine, Johns Hopkins University.

G. Dr. J. Elliott Levi, assistant physician, Johns Hopkins Hospital.

VIII. Dermatology and syphilology:

A. Dr. Harry M. Robinson, Jr., assistant professor of dermatology, University of Maryland; assistant in medicine, Johns Hopkins University.

B. Dr. Eugene S. Bereston, assistant in dermatology, Johns Hopkins University.

C. Dr. William D. Wolfe, assistant in dermatology, Johns Hopkins University.

D. Dr. Israel Zeligman, assistant in dermatology, Johns Hopkins University.

E. Dr. Albert Shapiro, assistant in dermatology, Johns Hopkins University.

IX. Psychiatry: A. Dr. James Bing.

X. Anesthesia: A. Dr. Fred C. Dye, professor of anesthesiology, University of Maryland.

XI. Plastic surgery: A. Dr. Clarence P. Scarborough, assistant in surgery, University of Maryland.

CONSULTANTS AT THE VETERANS' ADMINISTRATION HOSPITAL, PERRY POINT, MD.

I. Psychiatry:

A. Dr. Paul V. Lemkau, assistant professor of mental hygiene, Johns Hopkins University.

B. Dr. O. R. Langworthy, associate professor of psychiatry, Johns Hopkins University.

C. Dr. Wendell S. Muncie, associate professor of psychiatry, Johns Hopkins University.

D. Dr. Jacob H. Conn, assistant professor of psychiatry, Johns Hopkins University.

E. Dr. Philip S. Wagner, instructor, psychiatry, University of Maryland.

F. Dr. Manfred Guttmacher, psychiatrist, supreme bench, Baltimore, Md.

G. Dr. George S. Ingalls.

II. General surgery:

A. Dr. Richard T. Shackelford, assistant professor of surgery, Johns Hopkins University and University of Maryland.

B. Dr. Edward S. Stafford, assistant professor of surgery, Johns Hopkins University.

III. Gynecology:

A. Dr. Bernard C. Brack, assistant professor of gynecology, Johns Hopkins University.

B. Dr. Ernest I. Cornbrooks, instructor in gynecology, University of Maryland.

C. Dr. Edward S. Diggs, assistant professor of gynecology, University of Maryland.

IV. Tuberculosis:

A. Dr. H. Vernon Langeluttig, associate professor of medicine, University of Maryland.

V. Medicine: A. Dr. Theodore E. Woodward, instructor in preventive medicine, Johns Hopkins University.

VI. Ophthalmology: A. Dr. Fred M. Reese, instructor in ophthalmology, Johns Hopkins University.

ATTENDING PHYSICIAN AND SURGEON AT THE VETERANS' HOSPITAL, PERRY POINT, MD.

I. Urology: A. Dr. Benjamin Klotz, assistant professor of surgery, genitourinary staff, Sinai Hospital, Baltimore.

All attending physicians and surgeons are diplomates of their respective American specialty boards.

Mr. Truman Versus President Truman

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. BENDER. Mr. Speaker, the President of the United States in vetoing the tax-reduction bill has placed himself on record as opposed to the constitutional tradition of our Government. It is the province of Congress to determine Federal expenditures and appropriations. It has never been the prerogative of the President to arrogate to himself this authority, and no President in our history prior to Mr. Truman has ever successfully asserted such authority.

If a President may veto every measure dealing with public taxation enacted by Congress and win for himself the sustaining of that veto, the specific provision of the Constitution vesting the taxing authority in our National Legislature becomes meaningless. It would be possible for a political-minded President and a determined one-third minority to prevent the passage of any revenue legislation which he opposed, irrespective of the judgment of the will of the overwhelming majority of the Congress.

It has been asserted by our President that the type of tax reduction passed by Congress is the "wrong kind of reduction at the wrong time." He has cited figures designed to demonstrate that this bill, concurred in by a 3 to 1 majority of the House of Representatives and an almost 2 to 1 majority of the Senate, offers tax reductions to the well-to-do which are disproportionate to those offered to others less fortunate economically. Therefore, says the President, let us offer no tax reduction for the year 1947 to anybody. He is now seeking to exert pressures which are simply calculated to influence the trend of the election in 1948.

If the President himself had not voted in 1945 to exempt corporations from excess-profits taxes, when he was a Member of the Senate, the charge that his conduct now is based upon political considerations rather than fiscal might be difficult to support, but the record of Mr. Truman on this subject is at variance with the record of President Truman, and the political implications are inescapable.

Let us look at the facts and figures which furnish the proof of this pudding. In my own State of Ohio the President's veto of the tax-reduction bill means that hundreds of thousands of taxpayers who are now faced with increased living costs must continue to bear large Federal tax burdens unnecessarily. These men and women are not economic royalists. They are folks who have worked long and hard in the war years and deserve some relief. I say that we could readily dismiss several hundred thousand Federal employees without impairing the efficiency of our essential Government services. We will not dismiss them so long as the President can veto and veto and veto our efforts to cut taxes. For, as sure as the sun rises, the more money there is in the Federal Treasury, the more money Government agencies are going to spend. If we cut those funds, they will not be able to spend them, and I am certain that nobody doing business with the Government will be unduly disturbed.

Here is the monument to President Truman's violation of our Government tradition on the passage of tax bills. The people of Ohio's 88 counties will be paying to the Federal Treasury these millions of dollars they should have and could have saved.

Count them up, people of Ohio—and they total $227,513,000—from our State alone. I furnish this table, supplied by the Chief of Staff of the Joint Committee on Internal Revenue Taxation of Congress, to prove the point.

If Mr. Truman has his way, we should change the motto of our country to these well-known words: "Sweat on, Mr. Taxpayer, sweat on."

Address by Burgin Dassett to Tennessee Convention of American Legion

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an outstanding address delivered before the Tennessee Convention of the American Legion at Memphis on Monday night, July 21, 1947, by Hon. Burgin Dassett, commissioner of education of Tennessee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Commander, my comrades of the American Legion, distinguished guests, ladies and gentlemen, we are gathered tonight in this beautiful ampitheater, having turned aside for the moment from the heat, the dust, and the uproar of the workshops of life to commemorate the valor and sacrifices of the soldiers of Tennessee who helped give birth to this Republic, and through the years have done much to peserve its life. On a memorial shaft standing in one of the parks of this beautiful city, erected to the memory of three young men who gave their lives in the service of their city and State, are inscribed these words: "He who lives on in the hearts of his friends never dies." In the spirit of these words we are here in this twenty-ninth American Legion convention memorial to pay tribute to our comrades, our soldier dead, to acknowledge our gratitude to our Nation's defenders, both living and dead. We reconsecrate curselves to the cause for which they died. Through these 29 years by usage and custom this hour has broadened so as to include the memory of all our soldiers and sailors who have cemented their services and their sacrifices into the superstructure of our American life.

Within the recent past we have seen the peoples of Europe and Asia cowering under the clouds of darkness by night, and watching fearfully for the shadows of wings by day. We have seen our young men and women again go forth to war on foreign fields with the hope of giving aid to oppressed peoples, and making the world safe for democracy. Today we give thought to the principle for which this sacrifice in youth and treasure was made in the empty hope that wars may be ended forever. However, the light of that hope burns low between the spirit of the close of the conflict in 1918 and the spirit of today, 1947, when the blighted expectations of nations and whole generations, and the liberties of millions of men and women still cry out for peace 2 years after the war.

To our eternal regret there are signs of renewal of the tramp of marching armies, argosies of fighting death on wings, and the roar of cannon. In spite of the tremendous sacrifice, in spite of the staggering cost in lives and money, it begins to appear that the two world wars which we fought did not end in the solution of world problems. It again appears that notwithstanding the hope held out to the world in the Atlantic Charter, the sincere efforts made at Casablanca, Chapultepec, Yalta, Teheran, Moscow, Quebec, San Francisco, London, and Paris, to the end of a better world understanding, and the soul-searching effort being made by the United Nations in an attempt to establish a just peace and understanding built upon the principles of the prince of peace that there may arise new totalitarian governments, to again destroy political, religious, and economic rights; that have taken away freedom and made millions of helpless people mere vassals of the state doomed to slavery. Against this imminent threat to the nations of the world, who believe in the perpetuation of the liberties of men, we must marshal our peacetime forces. We must go forth in peace as in war with the same faith in democratic ideals, and with a renewed determination "to foster and perpetuate a 100-percent Americanism," "to uphold and defend the Constitution of the United States," and to stop forever the propagation of a sinister philosophy seeking to dominate all the free peoples of the world. We must be determined to "make the world safe for democracy." We must catch the torch and take up the quarrel with the foe.

It is said that in 1918, when the news was brought to ex-President Theodore Roosevelt that his son Quentin had been shot down over the German lines and killed, the old soldier and statesman, as was his custom, brought his teeth down and replied firmly, "He who lives like the eagle lives dangerously, but dies gloriously." Through the years the American soldier has bared his breast to the cold steel of the enemy to assure the prosecution of the ideals exemplified by the American eagle. Our goals and purposes as a nation have never been successfully questioned, but even though many of our present goals are remote, and the noblest objectives are beyond our present grasp, and we declare with Henry VI, "O War, thou son of hell," there are few among us who, after the perspective of time, do not hold that "right is more precious than peace" and rejoice that we fought for the thing that we have always carried nearest to our hearts so as to bring peace and safety to all the na-

tions and make the world itself at last free with full appreciation of the tragic cost.

With this restatement of our ideals and purposes, we turn backward in our thoughts and rededicate ourselves today to the ideals for which our men have died in the past, and acknowledge our gratitude to our defenders, both living and dead. It is altogether fitting and proper that we should do so, for a nation which forgets its defenders is not fit to live and should not long endure. The great heart of this people is peculiarly warm and tender today as we pause in these exercises. As we gather here the mystic chords of our memory turn once again to that sainted one whom it pleased God for us to call mother. This has come from every battlefield, from the deck of every battleship, and emanates from every patriot's grave throughout the world where sleeps an American soldier or sailor, because—

"Here where these gravestones white,
Like soldiers stretched in line,
Stand guard by day and night,
Here is a nation's shrine."

We are touched by the finer, better sentiments which actuate men and women. The soldiers of our land should occupy the mind and heart of the people today as never before, challenging their admiration, claiming their love and gratitude; and in paying this tribute to our dead, and in acknowledging our debt of gratitude to the living, we renew our faith in American institutions and reconsecrate ourselves to the task of transmitting these institutions, unimpaired, to posterity. "One thousand years scarce serve to found a state; an hour may lay it in the dust."

There is but one guaranty on the life of a nation, and that is written in, and rests upon, intelligent appreciation of our institutions, and a determination that we will serve our country as loyally now as her defenders have served her in the wars when her ideals were pressed upon the crucible. This occasion, therefore, means much to all who are gathered here, but it has a deeper meaning for the veterans under whose auspices these exercies are conducted. In joining the American Legion in commemoration of the Nation's defenders, we renew our faith in American institutions. The spirit and purpose of these organizations when put in the life of the American people are the guaranties that we will continue to exist as a free people.

For the members of the American Legion who are gathered here, this is a day of sacred memories. Their minds turn backward in their flight, and "fond memories bring the light of other days around them." Through the mist of the years they are reminded anew of the noble heritage received from their fathers who never bowed their heads to a foreign foe, nor permitted in their beautiful land the tyrant's tread, but met him with that steel which carves the progress and marks the determination of a true and noble race.

The courage of these soldiers—dead and living—is fully exemplified by that hardy Tennessean, David Crockett, who having served in the counsel chambers of his Nation, hearing the call of the oppressed, set forth for the lone star of the West and gave his life in the Alamo for the sunset republic of his adoption. From the smouldering campfires of Sycamore Shoals the forebears of this noble soldier dead ascended the slopes of Kings Mountain and, amid the withering fire of the British guns, planted the first American flag that ever unfolded its beautiful colors over the victorious fields of an American host. This same type of soldiery from the mountains and plains of Tennessee, men of loyal souls and brave hearts who feared Almighty God, and loved the welfare of their race, took their Bibles, their axes, and their muskets and, through wilderness, savage and difficult, which it seemed no courage and acumen could surmount, planted, cultured and nurtured the greatest civilization that man has ever known.

This panorama rises before you like a dream and you become young again. The years roll away and again in the strength, vigor and loyalty of young manhood, in your solemn imagination, you march away from home and loved ones, erect in form with elastic step, to join in spirit your comrades on the muster-grounds to enlist again under your country's flag to preserve for the world their heritage of freedom and independence.

The world's loftiest examples of friendship, as well as courage and sacrifice, were born upon the battlefield. We read that "the soul of Jonathan was knit with the soul of David and he loved him as his own soul." Thus in the long ago, between two soldiers was formed a friendship that laid the shepherd's crook beside the scepter, and outweighed a scepter and a crown. In the hot crucible of war the soul of the soldier is expanded and made luminous with the ardor of a righteous cause, and is welded with that of his comrade in an insoluble brotherhood of love.

The comradeship born of a common danger, privation, and suffering from Yorktown to Pearl Harbor, sleepless nights and harrowing days of the sunburned and seared Marne, the soaked forest-fastness of the Argonne and Chateau-Thierry, Iwo Jima, Anzio, and Bataan, and the raising of the flag of victory at San Juan and Manila Bay, endured together, has flowered into acts of individual heroism and challenged the admiration of the world.

Thus it has ever been—

"The bravest are the tenderest;
The loving are the daring."

It is said of an army of Scotland that when reduced to a bagatelle of their former power and greatness, surrounded by their enemy on a little hill of their country, that when their surrender was demanded they knelt and prayed for guidance. Upon arising each one pledged his word that he would not surrender, but that they would all die for their country. They were charged by their foes whose number exceeded theirs many hundred times, and not one was left of that gallant band of Scottish heroes of carnage. As a mark of respect their enemies buried them upon the beautiful hill where they fell. This hill was soon covered with the most beautiful bluebells that ever bloomed in Scotland, and the people hold in sacred belief today that these bluebells bloom in eternal memory of those heroes who died rather than stain their country's soul with the shame of surrender. Like those liberty-loving Scotsmen to whom freedom meant more than life, the soldiers of America have been found in the front of every battle where the tyrant's grip was to be broken from the wrist of a fettered slave. They sealed the destiny of our country when they marked with bleeding feet the snows around Valley Forge. Their devotion to freedom was uttered by Nathan Hale when he said his only regret was that he had only one life to give for his country.

Their steadfast courage was exemplified by Sam Davis—a Tennessee son of the Confederacy whose heroic figure in bronze stands on the slopes of capitol hill at Nashville—who, when told by his captors that if he would reveal the secrets held in his heart that his life would be spared and he could return to his mother, replied, "I would rather die a thousand deaths than to betray a friend or a noble cause."

Of the patriotic devotion of the American soldier to his country, no writer, no speaker, has ever expressed a doubt. When in infinite wisdom the power of righteousness called for help in the two World Wars to aid the struggling millions of Europe and Asia to free themselves from the fetters of bondage, Tennessee, ever ready to aid mankind, furnished the fairest sons of her soil for this awful sacrifice. Who can portray the possibility of a State and Nation whose manhood had followed the Stars and Stripes through the smoke and flame of so many desperate battles and have stepped proudly into history as the greatest fighters the world has ever known, making possible the birth, preservation, and practice of the Declaration of Independence: "That all people are born free and equal, that government derives its power only from the consent of the governed, and that man's inalienable right is freedom to worship God according to the dictates of his own conscience."

A great American has said "he who sacrifices most contributes most." In calling the roll of our heroes we see again that noble character pacing restlessly through the night the deck of the British battleship outside the ramparts of Old Fort McHenry at Baltimore. The Capitol and White House had been desecrated at the hands of a foreign foe and he feared that this bulwark of American freedom would be forced to yield to superior forces. Dawn came and there, proudly floating over the old fort, though tattered and torn at the instance of enemy shell, was the old Stars and Stripes. There came into his mind those immortal words, "Oh, the Star-Spangled Banner, long may it wave o'er the land of the free and the home of the brave."

In the darkest hour of our country's history when the mosaic of our noble institutions were about to be torn asunder, there appeared one whose faith could ever see the star of his country's hope, and whose lasting love could ever hear the rustle of her flag with not a stripe erased nor a star polluted. In his clarion call to his countrymen to forever stand by the faith of their fathers and the heritage bequeathed them, he was able to say in that immortal memorial at Gettysburg "That this government of the people, by the people, and for the people shall not perish from the earth."

We stand here today to rededicate ourselves to this principle. This, Tennessee soldiers, living and dead, have guaranteed. Its glory is yours and because of it you do, and ever will occupy a high place in the affection and esteem of the American people.

Soldiers, veterans, your country is your monument. Her greatness, her laws, her liberty shall be your epitaph. A grateful people in deathless bronze, in imperishable granite, in animated bust have cast and covered the story of your exploits. Your valor and your victories shall live and breathe throughout the endless years on the pages of history, while—

"On fame's eternal camping ground
Your silent tents are spread
And glory guards with solemn sound
The bivouac of the dead."

But the deepest tribute to your lasting fame is not written on tablets of cold stone, nor plates of bronze, but is inscribed by the finger of memory upon the imperishable tablets of the human heart. And when you have passed away it will be to have joined—

"The choir invisible
Of these immortal dead who live again
In minds made better by their presence; live
Impulses stirred to generosity
In deeds of daring rectitude, in scorn
Of miserable aims that end with self
In thoughts sublime that pierce the
Night like stars,
And with their wild persistence
Urge men's hands
In vaster issues."

Tennessee takes you to her heart today and joins with you in rejoicing as you hear the verdict of history. When your country called and its principles were at stake, you were true to that country, and by your valor and loyalty you have passed on to posterity the principles for which your fathers died. As we stand at the crossroads of our country's destiny today, we have but one sentiment for the soldier, cheers for the living and

tears for the dead, with the patriots' inflexible resolution never to surrender their vision—

"'Till the war drums throb no longer
And the battle flags are furled
In the parliament of man
The federation of the world."

In this reconsecration of our lives and rededication of our talents to the liberty which is the consummation of all the blood and sacrifice made by mankind since Jesus of Nazareth hung upon the cross of Calvary, it is clear that our imperative obligation is to gird our loins and be actuated by the spirit of the Roman soldiers who said as they saluted, "Hail Caesar, they who greet thee are ready to die for thee." It is in that spirit that democracy is to be preserved, first for America and then for the world, if we would undergird and perpetuate the blessings of free institutions at home and set a standard for the nations of the world who are looking and yearning for government built through the mosaic of the rights and privileges of free men.

From beneath the crosses which mark the resting place of our hero dead throughout the world today, the spirit hand has thrown to us the torch of liberty with the challenge to hold it high and carry on with the same faith and determination with which they marched with the banner of freedom. Their call to us will not be in vain; their sarcophagus will become a monument to all free men; their dust shall rest a sacred memory to the myriads whose thoughts shall journey to their resting place to rekindle their zeal and patriotism and their devotion to their country. They will not have died in vain and "They shall sleep where poppies grow in Flanders Field."

"Rest on, embalmed and sainted dead,
Dear as the blood you gave;
No impious footsteps here shall tread
The herbage of your grave.

"Lord God of hosts, be with us yet,
Lest we forget, lest we forget."

The End of Tax Reduction

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. KNUTSON. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I desire to insert two editorials on the President's veto of tax reduction, and desire to call particular attention to the editorial from the St. Paul Pioneer Press because it raises a point that many members have evidently overlooked. The editorials are as follows:

THE END OF TAX REDUCTION

For the first time in the history of the United States, Congress has permitted a President to take the power of taxation out of its hands.

This power was put by the Constitution in Congress. Only one other President has ever attempted to defeat the intention of the Constitution by vetoing a general tax bill, and in that attempt Franklin Roosevelt encountered perhaps the sharpest rebuke of his Presidency.

President Truman becomes the first Chief Executive to succeed in taking the taxing power into his own hands, but those Senators who yesterday voted to sustain his veto may be sure that it will not be the last. The failure of the Senate to override the veto will mark the beginning of a new phase in the strengthening of the executive at the expense of the legislative branch of the Government.

The veto and the Senate vote also combine to deprive 49,000,000 taxpayers of a measure of relief from wartime peak taxation. President Truman again finds that this is not the right time to reduce taxes, because business is good, because the fiscal outlook is uncertain, because of inflation. Yet Roosevelt raised taxes when business was bad and the country was in a deflation. So far as the fiscal outlook is concerned, there never was a time when it wasn't uncertain and never will be. The suspicion will not down that 49,000,000 taxpayers must wait for tax relief because President Truman wants to wait until the time is better for him.

The President also repeats his criticisms of this kind of tax reduction, with a few statistical embellishments not in his first veto message. By starting with the tax law of 1940 as a base, he invents a so-called special wartime tax burden. This is the tax increase between the 1940 law and the present. By this tricky device he is able to make a sophistical attack on the bill passed by Congress.

The bill would have reduced taxes on small incomes 30 percent, on middle incomes 20 percent and on large incomes 10½ percent. But the President says that this formula reduced the special wartime tax burden of the biggest taxpayers 85 percent, of the middle taxpayer 64 percent and of the little taxpayer only 21 percent.

Of course what he talked about is the added taxation since 1940 and not total taxation. The little taxpayer was paying almost nothing at all in 1940; a married man with $2,500 net paid $22 that year. But the million-dollar income in 1940 already was paying nearly confiscatory rates. The rate on that income was about 75 percent and the tax was $751,000. Wartime taxation could not add much to that rate. In fact it went up to about 85 percent, and the tax at present is about $840,000.

Meanwhile the married man with the $2,500 income was increased to $285. Since the big incomes were already being taxed so heavily, there was no way of increasing revenues greatly except by reaching into the small and middle incomes. So by looking only at the added tax since 1940, 30 percent of the small income tax must necessarily work out as a lesser percentage than 10 percent of the big income tax.

What President Truman is saying is that he is so interested in seeing the many little fellows get an even bigger tax cut than provided in this bill that he is not going to let them have any at all. He could have said this better in fewer words and without the tricky use of a tax base deliberately selected to make Congress look bad.

KNUTSON

One thing is certain and that is the Republicans in Congress refuse to bow to the President's veto of the tax bill. Congressman KNUTSON, GOP chairman of the House Ways and Means Committee, announced Friday that the American taxpayers could look forward to the $4,000,000,000 tax slash as a 1947 Christmas present from the Republicans.

KNUTSON, author of the tax-cut bill, and other economy-minded Congressmen, are of the opinion that they now have enough votes to crash through the next Truman veto.

This was about the best news of the day, because the average American taxpayer has his "belly full" of Truman's unnecessary expenditures, which in turn is piling taxes upon taxes until the load has reached the back-breaking point.

If the Republicans can pass this new tax slash legislation before 1948 they'll not only win back the Congress but the White House as well.

Americans are tired of supporting European wars.

Modernize Our Presidential Election—VIII. Population as a Basis of Dividing Electoral Votes Between the Candidates in the State

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. LEA. Mr. Speaker, House Joint Resolution 124, which I am advocating, does not change the constitutional provision which now assures each State its relative strength as to other States in electing a President, on the basis of its population. However, an understanding of this phase of the Presidential election is of related interest to the general problem.

Since the beginning of the Government there has been a marked difference in the percentage of the population that has voted at Presidential elections as between the States, as well as for the Nation as a whole. The percentage of the popular vote was extremely low for the first 30 years under the Constitution. The tendency toward an increased vote is illustrated as follows:

1824	5.1
1836	12.6
1848	12.8
1860	15.3
1872	16.9
1896	22.4
1908	16.3
1920	25.
1932	32.4
1940	38.02

In 1940 over 53 persons out of each 100 voted in Illinois, while less than 40 out of 100 voted in Michigan. In Michigan 19 electoral votes represented 2,085,925 popular votes, while the same number of electoral votes in Illinois represented 2,859,160 popular votes, or 769,462 more than the same number of electoral votes represented in Michigan.

In 1920 California and Indiana were practically equal in population. In the Presidential election that year 43 people out of 100 in Indiana voted, and 27 out of 100 in California. Here were two States practically of equal population, in which there were 16 more out of 100 voting in one than in the other.

This made no difference in the final count of electoral votes at Washington, because under the Constitution the relative voting strength of each of these States was based on its total population and not on the number of its votes. If the relative strength of these States had been in proportion to the number of their voters and not in proportion to population, Indiana would have had over

50 percent more influence in electing the President than California with an equal population. That is not an exaggerated illustration. Figures to the same import could be provided at every election.

As illustrative of the disparity of voting population in the election of a President, we might accept the election of 1940 as fairly typical of the present percentage of voting population per hundred. The percentage of voters per hundred in the various States is shown by the following table:

Alabama	10.385
Arizona	30.052
Arkansas	10.297
California	47.323
Colorado	48.874
Connecticut	43.722
Delaware	51.171
Florida	25.587
Georgia	10.005
Idaho	44.804
Illinois	53.410
Indiana	52.008
Iowa	47.884
Kansas	47.766
Kentucky	34.089
Louisiana	15.749
Maine	37.869
Maryland	36.244
Massachusetts	46.956
Michigan	39.685
Minnesota	44.808
Mississippi	8.051
Missouri	48.451
Montana	44.306
Nebraska	46.803
Nevada	48.231
New Hampshire	47.895
New Jersey	47.415
New Mexico	34.412
New York	46.750
North Carolina	23.032
North Dakota	43.738
Ohio	48.061
Oklahoma	35.362
Oregon	44.163
Pennsylvania	41.198
Rhode Island	44.809
South Carolina	5.254
South Dakota	47.969
Tennessee	17.930
Texas	16.230
Utah	45.032
Vermont	39.824
Virginia	12.943
Washington	45.722
West Virginia	45.640
Wisconsin	44.796
Wyoming	44.763

This difference of the number of persons who would vote in the various States was anticipated when the Constitution was written. It was recognized that there would be a variety of conditions in different States and of the motives which induce people to vote. It was also recognized that each State would fix the qualifications of its voters, and perhaps there would be no common system of qualification in any two States.

This disparity of voting population between the States and the allotment of two electoral votes to each State regardless of population, make it entirely impractical to provide for equality of treatment between the States on the basis of popular votes. This is illustrated by table V.

The nearest practical approach we can get to a common denominator to measure the relative strength that each State should have in the election, is by giving it electoral votes which are common units as measured by population, plus the two electoral votes assigned to each State regardless of population.

The voters are a limited class of the people of each State authorized to vote by the laws of that State. There is no Nation-wide, universal qualification of voters. Each State maintains its right to fix the qualifications of its own voters, subject only to certain limited provisions of the Constitution.

In the make-up of the Federal Government one State is not entitled to more influence or power in the Federal Government than another State of equal population, simply because one State sends more voters to the polls than the other. Each member of the population of a State is equally the concern of the Federal Government; each citizen has equal rights and is entitled to the same consideration of the Federal Government, regardless of whether or not he votes.

A man who goes to the polls and votes does not vote for himself alone. He belongs to one of the class of citizens of a State who are qualified to vote. There is another larger group of citizens within the State who do not vote. Those who exercise the vote within the State control the elections of the State. There is a common unit of the voters within the State under a common qualification to vote that justifies the State in determining the result of the election according to the number of the votes. The voter, as such, has no other or greater rights beyond the rest of the people. In voting, he represents the people of his State. The real parties in interest are the people he represents, and not the voters alone. His vote is one of the common unit to express the will of the people in that State.

So in a Federal election for President, the credence that should be given to the vote of the State is the number of people in the State represented by its voters, and not merely the number of voters, who are only agents for the expression of the popular will of the whole population. Therefore, the constitutional provision, so far as it fits the relative strength of the States in the Federal Union on the basis of population, does so with the greatest possible fairness under which the authority of the State to participate in the Federal Government could be defined.

The further provision awarding the electoral votes regardless of population was a departure from that fundamental policy in the allotment of electoral votes between the States. It was, however, consistent with the policy of the Constitution in distributing its powers to Congress by making each State the equal of every other State in the Senate. In other words, this allotment of two votes to each State is not more violative to the population basis of representation, than the provision of the Constitution which gives the State equal voting powers with every other State, in the Senate.

The attempt now to eliminate that two-vote assignment would be comparable to a proposal to eliminate the Senate itself.

So the practical situation is that we should accept these two provisions of the Constitution as a permanent and acceptable part of the policy of the Nation.

If we had no constitutional provision defining the right of the State and its limit to participate in the election of a President, we would thereby create for each State the temptation to inflate its voting population to take advantage of its sister States. At the present time, and under the proposed amendment, it would be beyond the power of any State to unduly increase its relative strength over other States.

Under the present policy of the Constitution and under our proposal, the electoral vote would remain as the common unit of determining the relative powers of the States in electing the President. The fundamental evil in the constitutional system is not in granting electoral votes, but rather in the fact that it provides no method for the division of the State electoral votes between the candidates in the State. Neither is there any provision that prevents the whole vote of the State being cast as a unit for a candidate who fails even to secure a majority vote of the State. In other words, in defiance of common sense and fairness, the whole vote of the State, given to it primarily for the purpose of representation according to its population, is accorded to one candidate who failed to secure the support of even one-half of its voters.

Commission on Reorganization of Executive Branch

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. LODGE. Mr. President, on July 4, there appeared a syndicated article by Joseph and Stewart Alsop entitled "The 100-to-1 Shot," which discussed the Lodge-Brown bill for a commission to reorganize the executive branch of the Government.

I believe the viewpoint of the article is both original and constructive.

The Alsop column, I may add, has for a long time been a consistent and early advocate of the type of survey which we all hope will result from the Lodge-Brown bill and gave the bill support and encouragement throughout the session. I ask that an excerpt from that article be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

MATTER OF FACT—THE 100-TO-1 SHOT

(By Joseph and Stewart Alsop)

WASHINGTON, July 3.—The optimistic citizens who enjoy backing long shots might get a little money down on the proposition that history will remember the Lodge-Brown bill as one of the most important enactments of the present Congress. The odds are heavily adverse, but the pay-off will be very big indeed if it occurs. And, incidentally, it will

be vitally important to the future of the United States.

As usual with long shots of any real promise, it is necessary to explain what the Lodge-Brown bill is. In brief, it is a bill introduced by Senator HENRY CABOT LODGE, JR., of Massachusetts, and Representative CLARENCE BROWN, of Ohio, which permits the President, the Speaker, and the President pro tempore of the Senate to name a Commission to Investigate the Organization of the Federal Government. The Commission is allowed 16 months to complete its inquiries and is instructed to recommend a plan of reorganization in January 1949. The idea is that if the Commission does a decent job a newly elected President with a Congress of his own party may then conceivably be able to effect the thoroughgoing Government house cleaning that has been more and more urgently needed every year for the last 50 years.

AN UNWIELDY BODY

The odds are unhappily against the Lodge-Brown bill paying off for two reasons. First, the Commission is to be composed of 12 members, 4 from Congress, 2 from the executive branch, and 6 from private life. So large a body, tackling so complex a task, is bound to be hampered by its mere unwieldiness. Second, there is no guaranty that men of the highest quality will be named, or can be persuaded to serve on the Commission. It is crucial that none but men of the most eminent abilities, able to command general confidence in their judgment, be charged with the job of replanning the Government. Such men are hard to find.

It will do no good, on the other hand, to name one more commission which will be just like all its predecessors, drawing its per diem, presenting a report recommending strict economy and general virtue, and fading into obscurity again. The responsibility placed on President Truman, Speaker MARTIN, and Senator VANDENBERG is heavy. It will be the more difficult to discharge because the really acute need for thoroughgoing Government reorganization is so little understood.

None the less, a heavy debt of gratitude is owed both to the hard-headed Representative BROWN and to Senator LODGE. * * * Even if their scheme is not successful, LODGE and BROWN have at least called attention to the two most important facts about the United States Government today. They have pointed out that the Government is disorganized, ponderous, and dropsical to the point of acute danger. And they have tacitly recognized that the economy shouters are largely talking nonsense at present. This is because the economy shouters really know nothing whatever about the inner pattern of the Government, and are therefore in the position of doctors trying to operate on a patient with dropsy when the source of the dropsy has not been located.

STATE DEPARTMENT PROGRESS

The remarkable progress made by Secretary of State George C. Marshall and Under Secretary Robert Lovett, following blueprints originally drawn by Dean G. Acheson, is an illustration of what can be achieved in one small area. From immemorial chaos, something like order is emerging at the State Department. It may not result in fiscal economies. But what is immeasurably more important, it will unquestionably result in a clear, coherent foreign policy, in which all parts will be related to each other and the whole, and the whole will be conditioned by the interests of the United States. Clarity and effectiveness of policy are more important, in every branch of the United States Government today, then the petty penny pinching bawled for by the kind of Congressman who would sink the national defense in order to cut 30 percent off the income taxes of his political angel.

If one were to write a memo to the commission to be named under the Lodge-Brown bill it would contain the following headings:

1. The insane complexity, the nightmarish proliferating, of Federal administration is the first fault. No government on earth can operate when there is so little consolidation of responsibility that every major activity involves a score or more of agencies; and that at least 150 officials in theory and about 90 in practice report directly to the President.

2. Besides ruthless consolidation of responsibility, the Government cannot much longer continue to operate without some sort of coordinating executive secretariat working under the President to keep the whole machine oiled and in condition.

3. Most urgently of all, a decent governmental service, with reasonable conditions of servitude, is now required. It is plain, stark, staring madness to let a $37,000,000,000 national enterprise be largely directed by an army of routine-minded clerks.

The commission will do well to concentrate on these fundamental objectives. Achieve these, and we shall get efficient Government. And once we get efficient Government, we shall get economy as a healthy byproduct.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. EDWARD O. McCOWEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. McCOWEN. Mr. Speaker, under leave to extend my remarks, I desire to include the following statement:

STATEMENT OF REPRESENTATIVE WINSTEAD ON FEDERAL AID TO PUBLIC EDUCATION BEFORE SUBCOMMITTEE OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR, APRIL 29, 1947

Through the leadership of Thomas Jefferson, the great fundamental ideal of human equity in rights, privileges, and opportunities was conceived and established. Under this ideal we believe that every American has as his birthright the chance to achieve according to his individual capacity and effort. The American public-school system had its origin in this ideal, because it was established as one of the major instruments through which the ultimate ideal of complete equality of opportunity for all might be realized. Perhaps we have never achieved the ideal because we have never given to public education the Nation-wide financial support essential to develop its full force and power. We can no longer afford to leave the great potential power of this resource only partially developed. Perhaps the leadership of America among the great nations that have emerged from this war-torn world depends more than anything else upon the power of enlightenment generated from an adequately supported system of public schools open to all regardless of place of birth.

Yet American education has never in all its history faced conditions as critical, as deeply rooted, and as far reaching as those that threaten the complete breakdown of the Nation's public-school system today. Since 1941 more than 350,000 teachers have left the classroom for other more lucrative employment. This is more than one-third of the Nation's normal teaching force and has been termed by many the greatest vocational migration in our Nation's history. It has resulted in the employment of 110,000 substandard teachers, more than one in eight, as replacements. It has curtailed school programs and created split-shift days, yet 75,000 teaching vacancies now exist. Classes have been crowded to twice normal capacity, yet 75,000 children in school are being deprived of education because of lack of teachers, and another 5,000,000 school-age youth are not attending any school.

These conditions are not likely to be relieved in the near future by replacements from students now enrolled in colleges and universities. Recent surveys indicate that the number of college students planning to enter teaching is so small that it would not provide normal replacement of teachers 25 years ago.

No less alarming is the devoloping pressure on school systems by the enormously increased birth rate during the war years. Where population experts predicted wartime births amounting to from 4 to 8 million they actually aggregated 13,000,000 from 1941 to 1946. Schools have already felt this pressure at the kindergarten and primary level—as the "bulge" moves upward the extraordinary demands upon schools will bring about the unprecedented crisis unless quick and effective measures are taken to replenish the rapidly shrinking teaching force.

While there are other factors that influence the teacher shortage, the disgracefully low salary of teachers as compared with other employed personnel is the major reason for the dearth of teachers. Although this is not a temporary condition brought about by war, the impact of the war and postwar conditions have increased this disparity. Since 1940 the average salary of teachers has increased 31 percent, that of all other employed persons 79 percent, while during the same period living costs have increased 55.5 percent. Business Week recently revealed the startling information that between 1939 and 1946 public school teachers have suffered an actual loss of 20 percent in real wages. This reveals more than any other fact why teachers are continuing to leave the classroom for other employment.

Within recent months a number of States and larger cities have attempted to improve teachers' salaries. A recent survey reveals that 12 States and 15 of the larger cities have provided a substantial increase in teachers' salaries. I am proud to say that my own State of Mississippi has made a magnificent effort to improve teacher salaries. For the school year 1944–45 Mississippi appropriated 46.9 percent of its total tax revenue, or $10,000,000, for schools. The next session of the legislature increased the school appropriation to eleven and one-half million, making the appropriation for session 1947–48 total $16,500,000. This increase takes the whole of the present excess-tax receipts, yet next session the average teacher's salary in Mississippi will be less than one-half the minimum of $2,400 established in several of the wealthier States.

While educational expenditures by States vary widely, the extremes between communities are even greater. Some communities spend 60 times as much on the education of children as other communities and the educational opportunity is so meager in some areas that more than 25 percent of the school-age children do not attend any school.

Various studies have been made of educational inequality among the States. Invariably these studies reveal that in areas where educational opportunity is abundant, the per capita wealth is high, the burden of child care low, and the relative effort to support education small. On the other hand, in areas where educational opportunity is meager, the per capita income is low, the number of children per wage-earning adult extremely high, and the effort to support even inadequate education higher than in wealthier communities.

Since these conditions seem self-perpetuating, and since they seem to be clearly beyond the power of the States to remedy, the only possible solution seems to be financial aid from the Federal Government to estab-

lish a minimum program of adequate education guaranteed to every American boy and girl without interference by the Government in the complete control of education by States and local communities.

To accomplish this purpose I have introduced H. R. 1722, a bill to assist the States in providing more effective programs of public education with every safeguard over State and local control. For two decades legislation to secure Federal aid for public schools has been before the Congress yet never has the need been presented with such Nationwide interest. It is my sincere belief that the need is so clearly and conclusively evident that this Congress must take positive action to prevent the complete collapse of America's system of public education.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, July 24 (legislative day of Wednesday, July 16), 1947

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared on the subject of tax reduction for our people.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GIVE THE AX TO HIGH TAXES
WHY WISCONSIN AND ALL AMERICA NEED TAX RELIEF

The American people insist that the second session of the Eightieth Congress shall vote long-overdue tax relief. I, for one, will do everything within my power toward that objective. Mail to me from the State of Wisconsin overwhelmingly endorses tax relief as indispensable to America's welfare.

I voted for both 30-10.5 percent tax reduction bills which the President unfortunately vetoed. Moreover, I have in the past, sponsored legislation for a complete overhaul of our entire obsolete tax set-up, including excise taxes, social security, income taxes, community-property phase and all other tax features, all of which must be reevaluated in the light of changing needs. We must set our tax structure on a sound, streamlined basis, fair and equitable and calculated to encourage private initiative rather than to penalize it.

"Unnecessary taxation is unjust taxation" has been a true American motto. We must give the ax to outrageously high taxes. The American people, already hard pressed by high prices, have been bled too long by high taxes.

EFFECTS ON WISCONSIN

In our State, the effects of the President's two tax vetoes spelled "bad news" to Wisconsin's 1,183,000 tax-paying citizens and to their dependents. So, too, the two arbitrary tax vetoes which were made in the face of the overwhelming mandate from the American people for tax relief, spelled "bad news" for all 49,000,000 other American taxpayers in every State of the Union.

We might note that in Wisconsin 1,151,000 folks earn under $5,000 and only 32,000 earn more than $5,000 per year.

WHY RELIEF IS NECESSARY

Well, why is tax relief so necessary to Wisconsin and every other State? Here are the answers:

(1) Tax relief is necessary in order to sustain purchasing power. Many so-called Government experts have been predicting a recession or a decline in economic activity. This tax relief would have put four billion needed dollars of purchasing power into the hands of our people, thus assuring a continuing effective demand for goods.

(2) Tax relief would have served to help American small businesses. Some two and one-half million new small businesses have just entered into the picture. They could have been immensely helped in expansion through the tax relief they could have secured.

(3) Tax relief is important to America's people in order to assure a better distribution of their income spending. It is an amazing fact that the American people are now forced to give more of their money to taxes than they actually spend on food. This makes for absurd distribution of income. America's nutrition and its whole standard of living depends on a more sensible distribution of earnings.

(4) Tax relief would have served to encourage American initiative and enterprise. We know that in recent years countless individuals and companies have spurned expansion of their businesses because more income would have only served to put them in the higher tax brackets, thus in effect causing a loss in their net income.

(5) Government itself would have benefited. Reduced taxes would have meant more income for the American people because free enterprise could expand. This in turn would have meant adequate revenue to Government, which always has a high tax revenue in times of prosperity.

PEOPLE'S MANDATE

(6) Tax relief would have served to fulfill the mandate of the American people which was given in the November 1946 election. The people at the same time demanded every reasonable economy in Government—making sure that every taxpayer's dollar was well spent and that useless bureaus and bureaucrats were demobilized. The Congress has done everything it could toward reducing the budget in the face of stiff opposition from the executive branch. Had it been able to enact tax relief, it would have served to pass along the savings which it has made in accordance with its promises to our people.

(7) Tax relief would have shown the American people that their welfare is borne in mind just as is the welfare of stricken foreign peoples. It is absurd to talk of unlimited United States expenditures overseas at the same time that our own people are urgently in need of tax relief. Reducing taxes here is consistent with our foreign relief program because reduced taxes mean increased enterprise, increased production, which will help us fulfill foreign commitments.

JUSTICE OF TAX BILL

The two tax bills which the President vetoed were absolutely just for the principal reason that they were "graduated" according to income level. Thus,

(1) The largest percentage reduction made under the bill was 30 percent. Twenty-six million taxpayers with surtax net incomes of $1,000 or less would have gotten the benefit of this substantial maximum reduction.

(2) The next largest reduction was to go to 7,000,000 taxpayers with surtax net incomes between $1,000 and $1,400. They would have benefited by reduction between 30 and 20 percent.

School teachers, clergymen, shopkeepers, retail store clerks, small farmers, office workers, factory workers—folks in the lower income brackets would thus have gotten the major benefit. These folks have been terrifically hard-hit by inflation, by the housing shortage, and other factors, which have already seriously curtailed their purchasing power and their standard of living.

(3) An additional 16½ million taxpayers with incomes between $1,400 and $136,700 would have gotten the benefit of 20 percent tax reduction.

(4) Our old folks who have been severely hurt by inflation would have benefited by receiving a special exemption of $500. The relief provided by this exemption would have been heavily concentrated in the lower income brackets.

(5) We may note that 63 percent of the total tax reduction provided by H. R. 1 and H. R. 3950 would have been received by taxpayers with net incomes of $5,000 or less. On the other hand, taxpayers with net incomes over $25,000 would have received only 19 percent of the total tax reduction. A married couple over 65 years of age with an income of $2,500 would have received a reduction of $218.50. That amounts to nearly 77 percent of their present tax—which is a very high percentage obviously. Now, as a result of the President's vetoes, such elderly couples, as well as younger couples, will receive no tax reduction at all.

We may note, too, that a single person with no dependents earning $2,500 a year who is now paying $380 would have paid only $304 in taxes under the bills. Now that individual must continue to pay $380 per year.

PARTISAN VETOES

America will neither forget nor forgive the partisan politics which apparently motivated the vetoes of the tax-reduction bills. The American people have memories and they will recall that the Administration which vetoed the present tax bills put through (a) the ending of the excess-profits tax on corporations, and (b) a 5-percent reduction on personal-income taxes at a time when there was a severe Government deficit. Yet, a short time later the same Administration brazenly refuses to pass tax-cut bills when there is a substantial Government surplus rather than a deficit, and when there is sufficient money to make a reasonable reduction in the huge national debt.

CONCLUSION

Wisconsin and all America demand income-tax relief, and by all the laws of justice, they will get it. I will do everything within my power to fulfill the mandate given to me by my constituents.

The New York Herald Tribune on the Poll Tax

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent editorial from the New York Herald Tribune of yesterday, July 22, 1947:

THE POLL TAX VOTE

The House passed yesterday by a vote of 290 to 112 a bill to make poll taxes unlawful. This action gains added significance from its manner and timing. With the driving assistance of Speaker JOSEPH W. MARTIN, who nipped an incipient filibuster by using his power of refusing to entertain dilatory motions, proponents broke up a southern revolt and passed the bill under suspension of the rules, getting the necessary two-thirds vote and 22 to spare.

Much too simple was the minority opposition's cry of "politics." Their point that the gesture was hollow since the Senate obviously will not act by Saturday, when Congress goes home, overlooks one fact: The bill will remain alive when the Senate reconvenes following the recess. A year-long filibuster even in the Senate, where delaying tactics have developed into a fine art, is hard to imagine.

It may be that some voted, as Representative GERALD W. LANDIS threatened to do, in order to "put on the spot" those southerners who "opposed us on taxes." It strikes us as more likely that the decisive elements were the Republican leaders' determined steering and the growth of popular feeling even in the South about the democratic process—which growth, in spite of outbursts of prejudice, has been real. It is indicated, to take but two examples, by the appeal of the Governor of Alabama to his legislature to abolish the poll tax, and the recent decision of the Corpus Christi, Tex., Junior Chamber of Commerce to campaign against the poll tax upon the basis of its own State-wide sentiment of 4 to 1 against the tax.

The House vote is another sound gain for the democratic idea, here and elsewhere.

Good for Yankee Nerves

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. ELLIS. Mr. Speaker, several days ago we received a booklet or pamphlet from the Baltimore Sun which I commend highly to my colleagues as a reliable source of information in regard to Russia. It is a reprint of a series of articles by Paul W. Ward, published in the Baltimore Sun, entitled "Life in the Soviet Union."

In view of the saber rattling on the part of our generals and Government officials during the past several months, the document is timely and will enable us to get a better picture of the Russian situation, to analyze and place a true value on the war propaganda now rampant throughout the country.

The last chapter in the booklet is entitled "Visit to Russia Good for Yankee Nerves," and I quote:

WASHINGTON, May 17.—Moscow lacks even a faint resemblance to a health resort, but a visit to the Soviet capital is good for the nerves.

At least it is good for the nerves of Americans who worry about the possibilities of the Kremlin:

1. Acquiring atomic weapons in the foreseeable future.

2. Extending into perpetuity its present domination of some 100,000,000 Poles, Bulgars, Rumanians, Yugoslavs, Finns, Germans, Slovaks, Hungarians, and Ruthenians.

The Soviet system, seen in operation at close range, does not foster either type of fear.

It is hard, for example, to conceive of atom bombs being made in a country that had to rely on American trucks to move its armies toward Germany and that has been unable to manufacture successfully even so relatively crude a machine as the automobile.

It is equally hard to think of its rulers maintaining indefinitely their sway over the so-called states after seeing evidence of their own fears on this score as well as their lack of the wherewithal to manufacture lasting bonds. They enjoy certain advantages such as direct access to these territories and possession of modern technical weapons.

Perhaps more potent than either of these are the energy, discipline, and ruthlessness of the Communist Party regime. It is, of course, at the beck and call of the Kremlin and—no matter how much Stalin may disown it in talk with Stassens, Willkies, and Roosevelts—its official gospel is still Lenin's assertion:

"We cannot live in peace; memorial services will be sung either over the Soviet Republic or over world capitalism. But until this takes place, the principal rule is to dodge and maneuver. We have to use any ruse, dodge, trick, cunning, unlawful methods, veiling of the truth."

These advantages, which the Kremlin enjoys, are, however, likely to be outweighed in the long run by the weaknesses it also has.

These include the necessity of giving at least a feeling of independence to the Poles and others, a difficult thing among people whose training under German occupation has made them expert at spotting quislings.

It is a task made more difficult by the arrogance and chauvinism the war and accompanying propaganda have rekindled in the Kremlin's satraps at home and abroad.

Historically, moreover, the Russians have always failed to hold and control alien peoples. Out of their difficulties in this respect there arose in the nineteenth century the Jewish bundists, Lettish trades-unionists, Polish Socialists, and Caucasian minority groups that in the twentieth century formed the backbone of the Bolshevik organization which undermined the Kerensky regime and took over the Russian revolution.

The subsequent loss of Russia's western states due to that revolution was in some respects a relief to the Bolsheviks, enabling them to concentrate on a home front which, in 1947, again needs intensive looking after.

There are also some other difficulties facing the Kremlin, the visitor to Moscow discovers. These include the fact that the Bolsheviks are poor propagandists.

Despite complete control of all avenues of communication within the Soviet Union, they have not been able to sell their system even to the Russian people. They have found it necessary to extinguish rank-and-file democracy and substitute Stalinism, which is closely akin to czarism.

Virtually all the original generation of Communists, some 75 percent of the governing class and intelligencia and more than half the higher officer corps were liquidated in the 1937 purge. As a result of this and other things, the fire of revolutionary Marxism is largely dead today in the U. S. S. R.

The masses are submissive but no longer inspired; they turn out obediently for Communist Party demonstrations but show none of the fervor exhibited in attendance at churches. Their reopening has evoked no protests from a people subjected to 30 years of the Bolsheviks' aggressively antireligious propaganda.

* * * * *

Russia, at the moment, has nothing to give them (Russian people) except land reform, a Communist affair of splitting large farms into little ones to garner peasant votes. It is a program that both reduces agricultural production—thereby further lowering living standards—and, by increasing the need for mechanization, creates a demand for machinery the U. S. S. R. cannot produce in quantities sufficient for its own needs.

I am quite sure you will find the articles entertaining and informative and, as the author says, "Good for Yankee nerves."

Hon. Benjamin V. Cohen

EXTENSION OF REMARKS
OF
HON. SAM RAYBURN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. RAYBURN. Mr. Speaker, for something like 14 years, off and on, Benjamin V. Cohen, who has just resigned as counsel for the State Department, has been connected with the Government of the United States in some fashion. The Government was never served by a better or abler individual than Ben Cohen.

I fully concur in the views expressed in today's Washington Post regarding him. The editorial follows:

BRAIN TRUSTER

The last of the brain trusters who gathered around former President Roosevelt has taken his bow off the stage of our public life with the resignation of Mr. Benjamin V. Cohen as Counselor of the State Department. Mr. Cohen put intellectual spine in many of the reforms which we lump together as the New Deal.

A superb lawyer, with a priceless gift of draftsmanship, Mr. Cohen wrote the Truth in Securities Act, the Wages and Hours Act, the Public Utilities Holding Company Act, among other New Deal laws. His particular monument was this last-named measure. Public utility lawyers little realized the skill with which this statute was drawn till they came to test it. Then they found Mr. Cohen as adept in marshaling the defense as in draftsmanship. The law weathered all the challenges at the hands of a mobilized bar, and the history of the litigation was a personal triumph for Mr. Cohen. It is nowadays regarded as a classic in both the preparation of a complicated piece of legislation and the conduct of an equally complicated piece of litigation.

President Wilson once said that those who come to Washington either grow or swell. Many of the New Dealers swelled out of all recognition as they basked in Mr. Roosevelt's favor. Mr. Cohen, fixed in character and endowed with a true humility, never did. Or the stars died out of the eyes of many of Mr. Cohen's coadjutors as they throve on power. Mr. Cohen's remained unchanged, though they never shone offensively. Then there were many New Dealers who in their zest to make over America forgot that America is not an island in the great world. Here is where Mr. Cohen, in particular, furnished an example of perspective. As absorbed as any of his colleagues in reform, yet he saw the international storm clouds on the horizon, and threw his energies and talents into preparedness. He was an invaluable aide, for example, in putting through the destroyer deal and lend-lease.

When war came, he was on familiar ground, for in the First World War he had been a young lawyer in the Shipping Board. In this war he worked inconspicuously but most effectively at the side of successive top-level administrators. One of his great services consisted of what in effect was the briefing of the Nation on what was happening. This he did for Mr. Byrnes when Mr. Byrnes was head of the Office of War Mobilization. Before the war was over, Mr. Cohen's gifts were made use of in preparing for the peace. He sat on the delegation to the Dumbarton Oaks Conference, and when Mr. Byrnes went to the Department of State was appointed counselor.

This was a public recognition of the services of a man who gave himself unstintingly

and almost anonymously to the prosecution of war. But the counselor role was nothing new, only the spotlight. In public or private, "deliberation sat, and public care" on Mr. Cohen's shoulders for a dozen years, and he seemed destined to become a very pillar of state. Now he has retired. He does not intend to put up a shingle or capitalize his experience for personal profit. We fancy he will still be on hand, in his shy and modest fashion, to keep on helping those who know the true worth and sterling objectivity of his counsel.

Agricultural Credit

EXTENSION OF REMARKS
OF
HON. JOHN W. FLANNAGAN, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include copy of a letter received from A. S. Goss, master of the National Grange, Charles W. Holman, secretary of the National Cooperative Milk Producers Association, and John W. Davis, secretary of the National Council of Farmer Cooperatives, on how sections 307 and 308 of H. R. 3756 will undermine agricultural credit.

If agricultural credit is to be sound these two vicious sections should be stricken from the bill.

The letter follows:

WASHINGTON, D. C., *July 22, 1947.*

To Members of the House of Representatives:

GENTLEMEN: Your attention is invited to the effect of sections 307 and 308 of H. R. 3756 on agricultural credit.

Government lending corporations fall into two groups. The first includes those created by Congress under basic legislation which provides ample safeguards in detail for the borrowers, the lenders, the public and the Government. The second includes those either created directly through legislation, or set up by executive order, or otherwise, without adequate safeguards. The operations of such corporations have been adequately safeguarded in the public interest through the Byrd-Butler bill of the Seventy-ninth Congress.

Sections 307 and 308 of the House bill undermine a Federal policy of over 30 years standing—a policy designed to build up a farm credit system owned and controlled by farmers in order to provide themselves and their cooperatives an assured source of credit under fair competitive treatment.

It now develops that some members of the House Appropriations Subcommittee on Government Corporations have been working for 18 months on the provisions embodied in sections 307 and 308. Despite this long study and preparation, the provisions were sprung on the Congress without allowing the farmer borrowers affected by the proposed drastic changes any opportunity whatsoever for public hearing.

Enactment of sections 307 and 308 would be legislation written into an appropriation bill by an appropriation committee, without public hearing in the House on the legislation involved. It is therefore a fundamental issue. It cannot be solved by exempting certain corporations from the effect of the legislation, as has been forcefully pointed out in the report of the Senate Appropriations Committee on the bill. It is an issue that can only be solved by eliminating the two sections in their entirety.

ANALYSIS OF SECTION 307

A. Section 307 provides annual fiscal year limitations and restrictions on:

1. Administrative expenses: The total amount that can be used and for what purpose it may be used.
2. Capital: Total amount that can be used, and the amount that must be returned to the Treasury.
3. Surplus: Total amount to remain for use during the fiscal year and the amount to be declared as dividends to the Treasury.
4. Loans: Total amount of loans that can be made; total amount that could be outstanding at any time; and the kind of loans that can be made.
5. Borrowings: Total sums that can be borrowed on debenture sales and borrowed from commercial banks, and the amount that can be outstanding at any time.

B. In the Farm Credit Administration the wholly owned corporations with adequate basic legislation are:

1. Federal intermediate credit banks.
2. Production credit corporations.
3. Federal Farm Mortgage Corporation.

C. Effect of section 307 on operation of Federal intermediate credit banks.

1. Commitments to borrowers such as production credit associations, agricultural credit corporations, commercial banks, and banks for cooperatives could not be given until all items under A above are authorized in an annual appropriation bill. It would be impossible for the appropriations committee or any other committee to determine annually with accuracy the credit requirements for agriculture 18 months in advance.

2. Purchasers of debentures might well hesitate to buy debentures that matured beyond a fiscal year date, because the capital and surplus of the banks might be withdrawn before the debentures matured. This restriction might cause an increase in the cost of debenture money to the banks; hence, an increase in interest costs to farmers.

3. Production credit associations and the banks for cooperatives obtain their major supply of lending funds by rediscounting farmers' loans with the FICB's. By limiting or restricting the borrowing and lending amounts of the FICB's, the lending resources of the PCA's, and the banks for cooperatives, the needed loanable funds might not be available.

D. Effect of section 307 on operations of Production Credit Corporation.

1. Ownership by farmers of production credit associations could be materially retarded and many PCA's crippled if severe limitations or heavy withdrawals of capital were made during fiscal year periods.

2. Supervision of PCA's by PCC's might be restricted so that PCA's would become unsound in credit policies to a point of jeopardizing the Government's and the farmers' capital in their associations.

E. Effect of section 307 on operations of Federal Farm Mortgage Corporation.

Although not making loans now, the corporation will need ample administration expense funds for the collection of outstanding farmers' loans, some of which mature each year for the next 20 years. The amount necessary varies widely with crop and price conditions and requires the flexibility provided in the basic law.

ANALYSIS OF SECTION 308

Section 308 would place the central and regional banks for cooperatives which are mixed ownership corporations, under the limitations outlined under A above. True, the present law does not provide an adequate basis whereby the farmers' cooperatives—the borrowers—can acquire eventual ownership. But these cooperatives desire the law to be amended so that they can eventually own these banks and assume the responsibility and authority for their operations under general supervision of the Government.

Present basic laws authorize these banks to make loans only to farmers' cooperative marketing associations, farmers' purchasing associations, and farmers' business service enterprises.

Until fiscal year authorizations were approved, no firm loan commitments could be made to borrower associations for the seasonal marketing of farm commodities, for providing fertilizer, seeds, feeds, and other farm supplies, or for rendering farm business services such as those of mutual irrigation associations, freezer locker plants, etc.

Intermediate or long-term financing of from 1 to 3 years or long-term financing running for a long period of years—for processing, storing, and other facilities—would be hazardous because of the uncertainty of future seasonal operating and commodity and facility loans required.

Farmers, and their cooperative enterprises, would hesitate to invest their money in the capital of the banks if these restrictions were present. The life of the banks and their usefulness would be too uncertain. Plans are being made for submitting amendments to the present laws in order that this ownership may become realistic. Placing the banks under the proposed restrictions would not permit borrowers to assume responsibility and authority in operating the banks which they would demand if they put in the funds to own the banks eventually as is their present long-time objective.

GENERAL

Sections 307 and 308 reverse a 30-year trend of congressional action which has pointed toward ownership and control of these Farm Credit institutions by their users—the farmers and farmers' cooperatives. The proposed limitations, restrictions, and controls of sections 307 and 308 can lead only to the Treasury as the source for all lending funds instead of leading toward the goal of complete capitalization by farmers.

We therefore request your cooperation in having sections 307 and 308 stricken from the Government's corporations appropriation bill, H. R. 3756, now in conference.

Respectfully yours,

A. S. GOSS,
Master, National Grange.
CHARLES W. HOLMAN,
Secretary, National Cooperative Milk Producers Federation.
JOHN H. DAVIS,
Executive Secretary, National Council of Farmer Cooperatives.

Government Buying of Wheat and Flour

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. SHAFER. Mr. Speaker, if Uncle Sam's busy bureaucrats continue buying wheat and flour out of all proportion to the Nation's needs and the simple economics of the situation, you are going to see housewives paying from 3 to 5 cents more per loaf for bread in the near future.

Bakers of the country are today warning that the Federal Government is making price increases in bread inevitable. Here is a quotation from the market pages of newspapers Tuesday:

Grain futures made a strong spurt at the start of trading today. * * * Wheat climbed as much as 4 cents a bushel on buying and short covering influenced by the Government's increases of 15 and 20 cents per hundredweight in its flour buying price for export.

We have heard a lot of talk recently about what causes high prices in America. Much of the talk has been sheer demagoguery, particularly that which attempted to make people believe that the OPA or some other Government agency could hold the line against inflation. Even now there are some who tell us that we can feed and finance Europe and can maintain extraordinary Government expenditures and still have lower prices.

The fact that Uncle Sams's bureaucrats are in the market shopping for wheat and flour, is running the price out of sight, although there is the greatest amount of wheat being harvested in the history of man. It seems incredible that Government should choose this time when wheat prices are the highest in years, to get into the market and bid prices higher, causing further inflation.

President Truman should do something about this. Otherwise he must take full responsibility for high prices. What his bureaucrats do surely cannot be laid to the Republicans.

Too Strong Germany?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Thomas L. Stokes that appeared in the Washington News of July 24, 1947, as follows:

TOO-STRONG GERMANY?

(By Thomas L. Stokes)

The campaign going on in behalf of building a strong internal German economy, while employing some surface logic, arouses doubts and suspicion.

This is especially true in the case of anyone who has explored in recent years—before, during and since the war—the devious activities and influences of the German big-business cartelists, their methods of creating the Nazi war machine, and their tie-ups with powerful industrial and financial interests all over the world, including our own country.

Not so many months ago evidence was presented to the House by former Representative Jerry Voorhis, of California, that cartel directors continued during the war their relations with outside interests through channels in neutral countries, that they sequestered and protected their resources, and were in a position to return to power again.

Today, it is indicated, they are in a strong position and again influential, both in Germany and outside, despite the purposes of the Potsdam agreement and despite the round-up of some important cartel leaders for the trial now going on in the United States zone. Missing at the bar of justice, though, are some of the more powerful figures.

France's recent representations to us against a policy that would give Germany a dominant position in Europe again should give us pause. While France naturally is highly sensitive to a strong Germany, this also should provide a clue to a situation that affects us as well as other nations.

The campaign in this country for building up the German economy to a strength plainly not contemplated by the Potsdam agreement seemingly has gathered considerable headway.

The campaign has found fertile ground in the current anti-Russian feeling and the fears aroused over communism. These find an outlet in the idea of building up Germany as a bulwark against Russia, though nobody publicly puts it that bluntly. That idea proved a snare and a delusion to England in the years before World War I, blowing up with an explosion that engulfed the world when Germany turned first on England and France.

The new and changed attitude toward Germany has been a slow and gradual development, but only 2 years after the end of the war it is something rather strange to behold. It easily could lead, especially among powerful economic and financial interests that have international stakes, to the sort of sympathy that was prevalent here among those interests toward the Nazi system not long before World War II.

The reason for this interest, other than a philosophical kinship, was clearly revealed in the numerous investigations in Congress and by the Justice Department that showed the relations of big American interests with German cartels in agreements that divided up markets, pooled patents, and restricted our own production of strategic materials to our disadvantage, as we discovered when war came we had to protect ourselves.

It is dangerous to forget that.

There is somewhere a middle ground between an economically insufficient Germany and a too strong Germany that again would be a threat. It may be hard to find. But it must be found if we are not to make the same mistake that was made after World War I. No selfish interests should be allowed to obscure that vital fact.

The Government's "Snatch" of the Fidelity Building in Kansas City

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1947

Mr. REEVES. Mr. Speaker, for obscure and unspecified reasons the President has seen fit to veto the bills (H. R. 2955 and S. 1231) providing for an appraisal and for the reception of bids looking to the sale by the Government of the Fidelity Building in Kansas City. This is the 32-story, narrow-shaft office building purchased only last August. The Government's purchase and retention of this building has aroused angry protests from the people of Kansas City and has actually endangered the businesses of tenants of the property in addition to inflating all other commercial rentals in the downtown area.

The general resentment of the people of Kansas City at the veto of the bill in question is well expressed in the column "It Happened in Kansas City," which appeared in the Kansas City Star on July 20, and in an editorial published in the Kansas City Times on July 19. Under leave heretofore granted, I include at this point in my remarks an excerpt from the column referred to and the entire text of the editorial:

[From It Happened in Kansas City, July 20, 1947, issue of the Kansas City Star]

The President's attempted justification of the Fidelity snatch was kin to the loose thinking that helped muddle our housing. * * * The housing mess was easy to brew. Just a lot of shouting about the sweet little white bungalow for the veteran. And so easy to ignore the really vital, but problem-packed, business of new rental housing. Blame, as we see it, mantles both political camps and just about everybody except the handful who here and elsewhere were trying to get multiple-unit rental projects under way.

Sure the Fidelity buy was a prudent investment on the part of Government, the same as a candy factory cornering a community's supply of sugar, or Mr. Rich trucking the corner butcher's entire stock to his own deep freeze. * * * Already office tenants are paying through the nose for this bit of callous prudence. * * * And with the Government one of the few users of office space in a position to erect new office buildings. * * * A fine time for Uncle to become economy-minded or so belatedly conscious of building costs.

[Editorial from the Kansas City Times of July 19, 1947]

WHY NOT BUILD ITS OWN?

If you assume the Federal Government is obligated to consider the plight of local communities it never should have bought the Fidelity Building in the first place.

Since it was done, the bill sponsored by Representative ALBERT L. REEVES, JR., and Senator JAMES P. KEM offered the best way out of a bad situation.

President Truman gave no specific reason for his veto, so people are left with the impression that it could have been a political shot at REEVES and KEM. The veto doesn't solve the real problem, which deserves some straight thinking both by Congress and the President.

Needed immediately is a Government policy on buildings to fit its program of decentralizing various agencies. The decentralization plan is fine. It should be good for Government and good for the cities that share in it. The Withholding Tax Unit moved to the Pratt & Whitney Building will employ as many persons as a large industrial plant, which is a big thing for Kansas City. The office will be close to the grass roots and away from the influences that were making trouble in the East, so it should be good for Government.

But as long as we have a big Government, it will have to be housed. All can't go to places like Pratt & Whitney. There are only two choices in sight. One is to buy existing property and force out the firms that now occupy it. That is what the Government is doing in the building the Donnelly Garment Co. has occupied for many years. Since the veto the threat comes closer to the tenants of the Fidelity building. And so much office space cannot be squeezed out of Kansas City without squeezing its business future.

The other choice is Government construction to go along with its big operations. From a strictly business standpoint it should be little more expensive for the Government to build than it is to buy. Few Government offices require such an expensive location and structure as the Fidelity building.

Dollars and cents are not the only consideration for the Government. It is obligated to consider the local communities. If it is to protect the cities where its expands it will be forced to build wherever there is no vacant space available. It can't afford to become an unfair competitor in this desperate scramble for office space.

An era of Government office construction is rather frightening. It suggests the old

post office pork barrel on a larger scale. But where is a decent alternative?

The Fidelity building in overcrowded Kansas City should furnish the President and Congress a good illustration of their problem. Until that problem is solved by a definite policy, we would think it would hold back the movement of Federal offices into the building. There is no real reason to hurry with the moving and it wasn't planned as a rush job. Neither does a policy of erecting Government buildings where necessary, require a big rush of construction this year. Just ordinary common sense ought to solve this one.

A Letter on DP's

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks, I desire to include the following letter which I received from an outstanding Georgia citizen who is a former jurist and presently an officer in the Army of the United States:

JULY 15, 1947.

Hon. PRINCE H. PRESTON,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Among the many dangers to the American way of life that the postwar adjustment is attempting to impose upon the American people, it is my opinion that the current efforts to secure Congressional action authorizing the admission of 400,000 displaced persons to American refuge and citizenship, is the most serious and far-reaching danger thus far proposed.

I concur fully in the humanitarian aspect involved, and readily agree that some effective measures should be developed, whereby these unfortunate individuals could be given some hope of security and stability for the future, but from my personal experience in dealing with DP's in the occupation of Germany I am thoroughly convinced that mass importation of these people into the already confused, social, and economic life of America would create a danger to the future welfare of America that even the political and economic benefits to this great number of people could not justify.

In the many years that were available for study and planning for the eventual occupation of Germany the serious and important problem of the DP's was not given sufficient consideration to develop a definite program or plan for solution of this problem. It was determined early in the study and planning period that there were approximately 20,000,000 DP's in German-controlled areas, but no definite plan for their care or ultimate repatriation was formulated. Because of this lack of planning many DP's were arbitrarily determined to be citizens of a given country and crowded into trains or trucks and sent there, but in many cases they were not sympathetic with the powers we control, and their ultimate disposition in many cases have been doubtful. The remaining groups of DP's are aware of what has happened in many instances of the bunglesome job of repatriations to which we have been a party and in which either relative or fellow countryman has been a victim.

In addition to this final imprint of unfairness and injustice that has been inflicted upon groups of fellow DP's, there are the impressions and developed characteristics which many years of German enslavement have created in the basic thinking and political purposes of these people. From my observation in dealing with groups of these people, it became positively apparent, that because of their experiences they had lost all concept of the rights of individuals in private ownership of property. They followed a most ruthless and reckless abandon in satisfying their slightest desires by the appropriation of any available article or property regardless of ownership or value. In addition to this loss of a sense of individual right of ownership the life which the average DP's was forced to adapt himself to under German domination has had a decided tendency to destroy his social equilibrium.

There are inherent dangers to the American way of life in the normal concepts of the Europeans and when these difficulties are augmented by indelible concepts and impressions as a result of many years of enslavement and ill treatment, in some instances, but both the country of which he is supposed to be a citizen, and by the country which has been his master. We are inviting reinforced difficulties of assimulative when we voluntarily invite him to become a factor in our already disturbed and confused social and political order. It seems to me to be a completely fallacious and unfounded hope to argue that absorption of DP's by the United States would remove a persistent source of friction with Russia. Since Russia is claiming that all subjects of countries now subject to the Soviet governmental authority are Russian subjects and under obligation to return to such territory, and demanding that we forcibly repatriate the DP's, it seems to me, that for us to evade this demand for repatriation, by offering them refuge as citizens of the United States would aggravate rather than remove a persistent source of friction with Russia.

As has been suggested, it is a dangerous undertaking for America to add 400,000 patent political agitators to the already millions of Americans who have been confused and disturbed, both socially and economically by the consequences of war. There are many problems of readjustment which are still unsolved in America, and unless these problems are solved by distinctly American processes, then their solution presents a definite threat to the American way of life. European political concept has never been able to grasp the fundamental basis of American democracy. Freedom of political expression and submission to the will of a majority is totally foreign to the European understanding of politics. Minorities are always considered menaces, and it is the established political procedure of the European to rid itself of such dangers, and for this reason it has been possible to so easily develop totalitarianism in Europe.

Most of the individuals composing the 400,000 DP's who would seek refuge in the United States are political agitators. That is the reason why they cannot be satisfactorily repatriated. They would create political disturbances wherever they were sent in Europe and would do the same thing if brought to the United States.

Since it is considered of little value to offer criticism without proposing some alternative, constructive solution, I shall try to meet that obligation by proposing what has been my idea of the correct solution of this problem from the time I first began to study it early in 1944. My experiences in dealing with large groups of D. P.'s during 1945, confirmed my conviction in this solution of the problem. After World War I there were large groups of people who were never repatriated, but who were wards of the Geneva Conference and people without a country. These were so few in comparison to the numbers now that there can be no possibility of making these wards of the UN, but these people should and must have the opportunities of citizenship and a chance to work out of this chaos a future for themselves and their children. My idea of the solution for this problem is for the United Nations Organization to establish a separate and independent state under direct supervision of UNO as a permanent national home for all D. P.'s who are unwilling to claim citizenship in their original state, and for those who are unable to establish their citizenship. It will, in my opinion, be a great deal more economical for the United States to bear its share of the cost of this procedure through UNO, than to assume the risk and responsibility of attempting to absorb them into American citizenship.

Very truly yours,

LEROY COWART,
Lieutenant Colonel, AUS.

Keeping Gold Price Officially Low Retards Recovery

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. ENGLE of California. Mr. Speaker, the gold miners in this country have long contended that the price of gold should be increased. The gold mining industry is the only industry in this Nation with but one customer for its product, with the customer—the United States Treasury—fixing the price. It is not only justice to the gold miners to raise the price but it will make good sense economically here and abroad. I wish to call the attention of the House to the following article in the July 21, 1947, issue of Barron's National Business and Financial Weekly by John E. Kelly in which he forcefully points out the beneficial effects on international trade of paying for gold what its actually worth in a free market:

UNITED STATES COULD RAISE QUOTATION TO FREE-MARKET VALUE AND THE WORLD TRADE

(By John E. Kelly)

Maintenance of a fictitious gold quotation threatens to precipitate an international monetary crisis, and cripple or halt our export trade. For this reason, this Nation should resolutely defy the tearful plea of M. Camille Gutt that the signatories of the International Monetary Fund veto the law of supply and demand. We should revalue gold in the $52–$60 an ounce range.

Currently, American exports are running at over $16,000,000,000 per annum, while imports total only about half that. To make up the balance, foreign buyers must increase their shipments to this market, pay with their fast dwindling stock of United States dollars or gold, or hope for further American loans.

Since few items of overseas manufacture can compete in our home markets and foreign luxury goods are meeting with increasing buyer resistance, proposals recently emanating from official sources, among such the Secretary of Commerce, suggest that the gap between export and import totals be narrowed by the importation of much greater amounts of alien raw materials, principally minerals. But attempts to dump here vast quantities of ores and metals would endanger the domestic mining industry and meet with the determined opposition of the potent congressional delegations of the Western States.

GOLD HOLDINGS TOO SMALL

When a foreign nation wishes to acquire more American goods than it sells here it

must first secure dollars to buy the excess. Dollars are to be had for gold, the universally accepted medium of international settlement. But the hard fact is that the world beyond our borders has too little gold—at $35 per ounce—to continue to buy American goods at our present rate of overseas shipment. Already the shortage of dollars has forced several foreign governments to restrict the importation of American products. As the gold and dollar scarcity increases abroad, United States exports will be hampered or prohibited to a degree causing repercussions in every American factory. It is this peril, not a slackening in domestic buying power, that will bring about a recession, if one comes.

It is obvious that if gold were revalued at $70 per ounce in terms of paper dollars, foreign buyers could pay for twice as much American goods as they do today. Gold as a commodity is worth what it will bring, no more, and certainly no less. In the free markets of the world which perturb M. Gutt, gold sells at from $39 to $80 per ounce, with prices firming upward. The list is long: Mexico, Peru, Stockholm, Buenos Aires, Brussels, Paris, Toronto, Athens, Bucharest, Bombay, Cairo, Chungking, Tangier, Istanbul, Rome, Lisbon, Beirut, Santiago. Even in New York, despite harsh legal penalties threatening private possessors of gold, it is $39 an ounce.

The new Indian Government maintains the market at $70 per ounce; the Attlee regime has just announced that it may be compelled to permit a free market in London. An eminent Canadian authority estimates that the British market would open at 250 to 270 shillings, or in the range $50 to $55 (United States). President James D. Mooney, of Willys-Overland, with an unexcelled experience as head of General Motors Export Corp., also calls for a free auction of gold to determine the true value of paper currencies, and estimates gold's value in today's dollars at about $60 per ounce. A prominent Canadian gold producer, McIntyre-Porcupine Mines, has stock-piled ingots worth $5,700,000, about 90 percent of its 1946 output, to await the higher prices which its directors consider imminent. Despite her desperate financial status, Britain is hoarding gold, outbidding us for South African metal. Canada also is increasing her reserves.

INFLATION WORLD-WIDE

Gold is not priced upward. As the measure and yardstick of value, it marks the fluctuations of paper money. All the world's currencies today, save only the Swiss franc, which is redeemable in gold on demand, suffer from chronic inflation. The paper dollars, guilders, crowns, pounds, francs (French), lira, etc., are inflated because so many of them were paid for things that no longer exist, the expendables, wastage, and loss of war. The buying power of the American dollar is about 60 cents in terms of productivity and value received.

A major error in the Bretton Woods plan which, unless promptly rectified, will prevent European rehabilitation and render even the Marshall plan unproductive of permanent stability, was the freezing of the world's paper currencies at their inflated wartime levels, or at the nominal values set by the signatory nations. These claimed values were fictitious then; they are even more unrealistic today as inflation increases while world need grows and production stalls. The Bretton Woods plan in inception and execution was largely the work of the late Lord Keynes, but the cheap gold figure of $35 was due to the insistence of the United States.

THE SHOE PINCHES

With our 60-cent dollar, we export a $1,200 motortruck priced at $2,000 and pay $4 for wines or perfumes worth $2.40 or less. If the totals of imports and exports were substantially the same, this mutual overpricing would be comparatively unimportant, but when our customers must pay in gold for half their purchases—and the United States will accept that gold only at $35—the shoe pinches until the sufferer soon cannot walk.

After every great war, currency devaluation has been necessary to write off part of the loss of real values by fire, looting, property destruction, use in munitions, etc. Ancient kings devalued their currency by clipping bits from the silver coins, while maintaining their face value by decree. Nations ignoring this truism have experienced sharp lessons in economic law. In 1946 Sweden and Canada, two of the most solvent powers, raised their currencies in terms of United States dollars. Their motives differed, but the result was the same. Canadians and Swedes could then buy American goods more cheaply, but their products were higher priced to us, further unbalancing international trade. Gold and dollars flowed out of the two countries at such a rate that their governments became, tardily, alarmed and placed restrictions upon imports.

The British pound is pegged, officially, at $4.04, but it brings only $2.90 on the free market, a measure of its acceptability. It is said that among the unwritten clauses of the recent British loan was London's guaranty to maintain the higher quotation. Yet Ernest Bevin has truly said England must export or die and the greatest efforts, coupled with rationing severer than in wartime, have proven unable to lift British export totals above those of the depression year 1937. With the pound at $4, British goods are too expensive for John Bull's traditional markets. Early next year the American and Canadian loans, designed to last until 1951 and set Britain back on her feet, will be exhausted. Then or before London must cut the pound to increase her foreign sales. Signs that despite American opposition the time of devaluation is nearing, include the London free market trial balloon previously mentioned and the action of India and Egypt, with large sterling credit balances, in cutting their currency tie to the pound and adhering to the dollar. If the British devalue, every other European exporting nation must follow suit. We could not remain aloof from a general devaluation, whether it took the form of a scuttling race or orderly multilateral agreement.

LITTLE EFFECT ON US

Despite the fulminations of die-hard New Deal economists, wedded to a managed currency and detesting the gold standards and all its safeguards, devaluation of our paper money would have little if any perceptible effect within our frontiers. No appreciable change in the domestic price index was definitely attributable to the gold price increase from $20.67 to $35 in 1934.

In our export trade, the effect of a dollar with the water squeezed out, would be definitely beneficial. The seller in the U. S. A. would still get $2,000 for his motor truck, but the foreign buyer would need only as much gold as buys $1,200 today. Hence he could buy more and oftener, become a better customer, and contribute importantly to his country's rehabilitation, which is the aim and end of all international planning, official and private.

Price Increases

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Amherst (Va.) New Era-Progress, of July 17, 1947:

WASTE OF TIME

President Truman might as well have saved his breath as to have expended it in a plea against further price increases as a result of the wage boosts granted miners. Despite the President's urging, you can be sure that ere long that wage increase is going to be reflected in the price of everything you buy which contains steel, and unfortunately by the time the cycle of increases gets down to Mr. and Mrs. John Public, the increase is going to be vastly out of line with what the miners received.

This is a situation which just naturally follows as the night the day and talking isn't going to do any good. It will not be many months before John L. Lewis will be leveling a finger at the charts and bellowing that his miners must have another wage increase.

We don't know where it will all end, or when, but we do know this: The American miner will live to curse the name of John L. Lewis as he praises it today. The mine boss is the miners' hero today, but he is driving more and more individuals and industries to seek other means of heat than coal. The day is not far distant when oil, natural gas, and hydroelectric power will have supplanted in a large measure the use of coal. And then where will our miners be?

The coal market is too unstable—too vastly uncertain as to anything except rising costs and threats of work stoppages. If it continues thus there can be only one answer, the answer the American people have given before. They will find a substitute.

Midyear Economic Report—Campaign Document

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. ELLIS. Mr. Speaker, now that the President's Midyear Economic Report has been in the hands of the people long enough to be studied and analyzed, it is regrettable that the administration has seen fit to distort the facts in order to serve their political ends. Many able observers classify the report as a campaign document. Thus, as has been the case for 14 years, tax money is used to promote a political campaign.

David Lawrence, in the Evening Star yesterday, heads his column "United States economic report seen adulterated by political puff," and to quote part of his article:

Some splendid statements of economic reasoning are to be found in the Midyear Economic Report submitted by President Truman to Congress, but unfortunately someone at the White House has interspersed just enough political argument, designed presumably for the 1948 campaign, to adulterate the whole document.

It is unfortunate that Congress has not passed legislation requiring that the report of the nonpolitical economic advisers appointed under the Full Employment Act be transmitted to Congress unedited by the White House politicians. Such a step would be constructive and would add immeasurably to the respect with which these reports would be received in the future.

It is high time we have honesty in government. The Government demands

honesty of the people under penalty of fine or imprisonment; if you falsify your tax return, severe punishment awaits you. The people have equal right to demand and receive honest treatment on the part of governmental officials, but from what we have experienced from these administration reports we know well what to expect from the committee the President has set up to ascertain if we can continue dumping billions of dollars all over the world.

We have every reason to expect that as far as the report will be concerned Uncle Sam may just as well fill his fountain pen and get out his checkbook. The cheating and deception of the American people on the part of Government agents has been the all-American pastime for the past dozen years.

Marshall Plan: What Price for France?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Carlyle Morgan which appeared in the Christian Science Monitor of Wednesday, July 23, 1947, as follows:

MARSHALL PLAN: WHAT PRICE FOR FRANCE?

(By Carlyle Morgan)

A while ago it might have seemed less important. But it is important now. France is keenly dissatisfied—it would not be too much to say disquieted—by the way American diplomatists are developing United States policy in Europe.

Any reader of French newspapers over the last week end knows that. And Premier Ramadier did not even bother to insinuate the French discontent between the lines of his speech to the socialist federation the other day. He stated it as frankly as possible.

There was a time when American diplomatists might have dismissed the French attitude with a shrug. That time was passing while Secretary Marshall was making a now-famous speech at the Harvard commencement on June 5. Shortly afterward, France became the key continental ally of the United States for application of the Marshall plan to Europe.

French refusal to cooperate would stymie American efforts to build a wall of European prosperity against the advance of communism. The French do not threaten to refuse cooperation. But there are factors in the French equation which could make France unable to cooperate.

Washington seems to be giving these all too little attention. The most outstanding piece of evidence of this neglect is the new directive issued to American occupation authorities in Germany. Now it may be said for the directive itself that it only brings rules into line with actual practice in the American zone. It may be said that a change of emphasis as between controlling German industry and building it up was needed. Nevertheless, the timing of the directive gave it a sharp side.

It was issued just after the Paris conference of 16 nations under British-French sponsorship had come to a successful conclusion. This conference met to take steps toward putting the Marshall plan into operation. The British and French, having taken a lead in setting up committees to study Europe's needs, are now informed by the American directive that in any plan to rehabilitate Europe, the United States will insist that German rehabilitation be given a leading place.

There is no doubt that Germany will have an important place in European recovery. But the question is one of priority. For the immediate future, American plans seem to the French to envisage a program for German recovery, which will deprive France of German coal so that Germans can use it to make steel. At the same time, the Soviet reaction to the Marshall plan means that Polish coal will stay in eastern Europe. Therefore, France, by cooperating in the Marshall plan, might deprive herself of coal from both sources.

Looked at over the perspective of say 15 or 20 years, American plans seem in French eyes to risk the building up of an expanded steel industry in Germany while France gets along as best she can. This is a matter of French security. On this the French will speak out.

There is one way that maximum French energies may be enlisted in a European recovery plan under American auspices. It is to make the program harmonious with French security needs vis-à-vis Germany. If the Marshall plan can be based on that foremost consideration of French politics, economics—yes, survival—then Communist opposition to it in France will have to be careful, to say the least.

Washington policy at the moment seems to be contributing less than nothing to the solution of this French problem. It is asking France, with a big Communist Party, not only to oppose communism but to do it through methods opposed to the general French sense of national security.

The result, so far, is to produce echoes in France of one of Mr. Molotov's statements at Paris. But not only in France, in Britain, too, and from Mr. Bevin himself. These echoes are to the effect that Germany ought not to be singled out for special attention ahead of the victims of German aggression.

It is doubtful if Mr. Molotov makes this point as seriously as he seems to, in view of Russian reparation demands for German steel which would result in a great expansion of German steel making. It is doubtful that Mr. Bevin would agree exactly with the French as to where to draw the line on rehabilitation of Germany.

But what the French think is clear enough, and matters enough at the moment, to warrant the special attention of American policy makers.

Settled Labor Benefits Factory at James Lees & Sons Co.

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Rockbridge County News, Lexington, Va., of July 17, 1947:

SETTLED LABOR BENEFITS FACTORY AT JAMES LEES & SONS CO.

(By Helen Henley)

GLASGOW, VA.—When big business came to Glasgow, a town of 1,050 people hidden away in the valley of Virginia, where the Alleghenies and the Blue Ridge Mountains meet, it made no effort to industrialize the community.

Instead, industry ruralized itself.

In so doing, it has developed a pattern of democratic living and working which not only has caused the business to prosper but also has enriched the everyday lives of the people who do the work.

James Lees & Sons Co., maker of carpet and hand-knitting yarns for the past 100 years, has written industrial history in its 13 years of operation in Glasgow, but at the same time, an even more engrossing story has been recorded in the lives of the people who inhabited the valley long before the Lees' experts discovered it.

It takes Wert Faulkner, General Manager of the Glasgow plant and a native of the area, to tell this story. The other executives of the company are his friends, the workers in the plant are his lifelong friends and neighbors, and no one knows more intimately than he what goes on behind the scenes in the modern 17-acre factory tucked in among the Virginia mountains. He knows intimately, too, the lives that go on in the workers' homes scattered throughout the valley.

"Every executive in this company," Mr. Faulkner told me, "is imbued with the fact that the people are the most important thing in the mills. You can't make a quality product without quality people. That's why, in seeking a site for the new mill 13 years ago, the company looked not only for the necessary three R's—rivers, roads, and railroads—but looked first for the people who could do the job."

In the course of the search, 99 sites were surveyed, and here in Rockbridge County was found the largest percentage of native-born families in any of the counties investigated.

"We were looking for people who had sunk their roots in the county and loved it—people whose integrity was unquestioned, who sent their children to school, and who went to church," Mr. Faulkner explained.

When Earl B. Morgan, now vice president, but at that time general manager, offered him a position 13 years ago, Mr. Faulkner was assistant football manager at Virginia Military Institute, his own alma mater. He said that he didn't know much about business then, but as a native of the State, he did know the people of the valley. He accepted the job of personnel manager and thus became the first employee.

Workers for the mills were recruited with great care, because the company had no wish to throw off balance the normal agricultural pursuits of the area. If a farmer had four sons, Mr. Faulkner explained, jobs were not offered to all of them. The farmer was asked, "Do you want your boys to work in the plant?" He might reply that he could spare two of the boys, but needed the others to keep the farm going.

Thus, it was worked out with each family which of their members should work in the mills.

"We believe in people living on farms," Mr. Faulkner said. "Then the worker is sure of his eggs, his hog meat, and his butter, and is always taken care of. The money he earns in the plant can go to improve his home."

"These workers are individualists," he went on. "They're accustomed to running their own farms and businesses, and our biggest job was to teach them mill procedure. The average worker, a farmer, was used to getting up very early, feeding his horses, having his breakfast, in getting out into the fields by sun-up. After lunch, he rested awhile, then went back to the fields. If a neighbor came by, he'd stop and chat with him as long as the neighbor would linger.

"In the plant, at first, he reacted much the same way. If a neighbor strolled by, he just naturally stopped his loom and devoted himself to visiting."

Although in these respects, it was necessary for the people to learn new ways of conduct,

the problem was pretty well solved when the piecework plan was adopted. Once the first shiny new automobile bought with the worker's earnings made its appearance, Mr. Faulkner recalls, the problem of work interruptions vanished. On piecework, employees have no trouble assessing for themselves the good results of sticking to the job.

When a young man takes his first job with the company, Mr. Faulkner says, they tell him:

"We are putting you in business. We are putting you on a loom. We pay for the loom, and for insurance for you, and we've set up a cafeteria where you can eat. We are going to buy your carpet. You wouldn't sell us bad potatoes or a bad watermelon. Now don't sell us a bad carpet."

As an incentive to careful workmanship, each loom in the plant displays in large letters the slogan, "Quality first, then yardage."

Manufacturing and Exhibiting in Foreign Trade Zones

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 23, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Representative ELLSWORTH B. BUCK, of New York and myself on amendment to the Foreign Trade Zones Act:

REPRESENTATIVES BUCK AND CELLER INTRODUCE AMENDMENT TO FOREIGN TRADE ZONES ACT—WOULD PERMIT MANUFACTURING AND EXHIBITING IN FOREIGN TRADE ZONES

Representatives ELLSWORTH B. BUCK, Republican, New York, and EMANUEL CELLER, Democrat, New York, today introduce into the House identical bills to extend the Celler Foreign Trade Zones Act of 1934 to permit exhibition and manufacture in foreign trade zones.

This legislation was introduced at this time in order that persons and groups interested in foreign trade may have an opportunity to express their views of these extensions of the Foreign-Trade Zones Act in anticipation of hearings to be held at the next session of Congress.

Under the 1934 act, foreign trade zones were established in New York in 1937 and in New Orleans this year. Applications for permits to establish similar zones in San Francisco, Houston, and San Juan, P. R., have been received by the Federal Foreign Trade Zones Board. Other ports undertaking surveys preliminary to applying for grants are Los Angeles, Seattle, Laredo, and Norfolk. Should the extensions provided for in this amendatory legislation be enacted, it is anticipated that other ports of entry having airports, including those in the interior of the country, will seriously consider the establishment of zones in their area.

ZONES DEFINED

Foreign-trade zones are areas within a port of entry containing warehouse facilities, steamship piers and/or rail connections set apart from the remainder of the port by unscalable walls or fencing, floodlights, and guards. In these segregated zone areas, which by law are divorced from custom territory, merchandise in foreign trade may be stored, manipulated, and transshipped free of the duties, taxes, quotas, licenses, Government inspection, bonds, and similar encumbrances imposed on like articles in customs territory. In the event foreign merchandise in a zone is imported into customs territory, it then becomes subject to the laws and regulations of the United States affecting imported merchandise.

Congress in passing the Celler Foreign Trade Zone Act of 1934 joined the United States in the ranks of other countries that had given consideration to the problems of world commerce and had set apart greater or lesser waterfront areas for its accommodation and exercise of privileges. The American law differs in some respects from those of most other countries in that it is permissive in character and in that it withholds from foreign commerce a number of privileges that logically could have been expected to be within the rights and field of such commerce?

The proposed changes in the act of 1934 which are set forth in the Celler-Buck bill have been designed to extend the rights of foreign commerce consistent with the proper protection of the revenue and the economy of the Nation. They are based on the principle that merchandise in foreign trade has the right to expect every practical freedom from the time it is exported from the country of origin to the moment when it is formally imported into the country of ultimate destination—all intermediate countries at which such goods touch have no real right to do more than protect their own security and revenue

These zones such as have been established in New York and New Orleans attract new commerce to this country, thus generating additional cargo for American ships, new opportunities for labor and industry, and more business for our banks and insurance carriers.

EXHIBITION AUTHORIZED

The Buck-Celler bills would permit exhibition now prohibited in zones. This liberalization of the act would allow the organization and holding of international trade fairs and exhibits at foreign-trade zones. The success of such fairs in European cities in encouraging the commerce and industry of the country is well known. Already New York, New Orleans, San Francisco, and Chicago have taken steps to establish international trade marts. The Department of Commerce and its Secretary, who is also Chairman of the Foreign-Trade Zones Board, have advocated the holding of such fairs in this country. Whether through fairs or through modest exhibitions of single consignees, the advantages that foreign-trade zones would offer through such exhibitions would be duty- and tax-free consignments, both of samples and stocks; convenient locations for exhibitors and customers in the American Hemisphere; relatively low cost to exhibitors; inducement to the relocation of world commodity markets from their prewar European centers; an opportunity for domestic as well as foreign products to present their advantages to buyers from many countries; the increased potential of ports of entry in which foreign-trade zones are located to become world trade centers with all the concomitant material and prestige benefits.

MANUFACTURE PERMITTED

The Buck and Celler bills would also authorize manufacturing operations within zones to provide additional advantages to American manufacturers and exporters in foreign markets.

In and of itself, the value of allowing manufacture is attested by the very considerable manufacturing for export markets normally undertaken in this country with imported materials. The long history of the drawback privilege is a partial reflection of this section of foreign commerce. The shorter history of the bonded manufacturing warehouse is still another indication of its importance. All too often, however, American manufacturers and exporters have pointed out that the complexities, restrictions, and delays inherent in the drawback and bonded manufacturing warehouse procedures have so discouraged the manufacturer that he either pays the duty on his imported raw materials and absorbs this amount in his costs or he does not enter the foreign field at all. By extending the Celler Foreign Trade Zones Act to permit manufacturing in foreign trade zones, this important segment of our economy will be enabled to benefit from expanded foreign opportunities and to meet competition from other world areas.

The bills also provide for certain administrative changes of benefit to American foreign traders and inducements to the encouragement and expedition of foreign commerce through American ports.

The text of the bill follows:

"A bill to amend sections 3, 4, 9, and 14 of the act of June 18, 1934, relating to the establishment of foreign-trade zones

"SEC. 3. Foreign and domestic merchandise of every description, except such as is prohibited by law as malum per se, may, without being subject to the laws of the United States affecting imports, except as otherwise provided in this act, be brought into a zone and may be stored, sold, exhibited, broken up, repacked, assembled, distributed, sorted, graded, cleaned, mixed with foreign or domestic merchandise, or otherwise manipulated, or be manufactured, and be exported, or laden on foreign carriers and domestic carriers engaged in the foreign, noncontiguous, and intercoastal trades as supplies and equipment, and foreign merchandise may be sent into customs territory of the United States therefrom, in the original package or otherwise; but when foreign merchandise is so sent from a zone into customs territory of the United States it shall be subject to the laws and regulations of the United States affecting imported merchandise: *Provided*, That whenever the privilege shall be requested the collector of customs shall take under supervision any lot or part of a lot of foreign merchandise in a zone, cause it to be appraised and taxes determined and duties liquidated thereon. Thereafter it may be sorted, manipulated, or manufactured under the supervision and regulations prescribed by the Secretary of the Treasury, and whether mixed or manufactured with domestic merchandise or not may be sent into customs territory upon the payment of such liquidated duties and determined taxes thereon in the proportion that such foreign merchandise is contained in the entered article together with the tax on the entered article, if any, or, under regulations prescribed by the Secretary of the Treasury, may be exported, destroyed, or returned to the status of nonsupervised merchandise in the zone. Where two or more products result from the manufacture or production of merchandise in a zone the liquidated duties and determined taxes shall be distributed to the several products in accordance with their relative value at the time of separation: *Provided further*, That subject to such regulations respecting identity and the safeguarding of the revenue as the Secretary of the Treasury may deem necessary, articles, the growth, product, or manufacture of the United States, on which all internal revenue taxes have been paid, if subject thereto, and articles previously imported on which duty and/or tax has been paid, or which have been admitted free of duty and tax, may be taken into a zone from the customs territory of the United States, placed under the supervision of the collector, and whether or not they have been combined with or made part while in such zone, of other articles may be brought back thereto free of restrictions, duty, or tax, other than such tax as may be levied on them because of their changed condition; except that articles subject to internal revenue tax may not be returned for

domestic consumption if manufactured or produced entirely with the use of domestic materials taken into a zone under this proviso: *Provided further*, That if in the opinion of the Secretary of the Treasury their identity has been lost such articles not entitled to free entry by reason of noncompliance with the requirements made hereunder by the Secretary of the Treasury shall be treated when they reenter customs territory of the United States as foreign merchandise under the provisions of the tariff laws and internal revenue laws in force at that time: *Provided further*, That under rules and regulations of controlling agencies, articles may be transferred to a zone with the status of merchandise not supervised and such a transfer shall be considered to be exportation within the meaning of all Federal laws including drawback, refunds, export bonds, general order, excise, the Federal Security Agency, and the Department of Agriculture: *Provided further*, That domestic merchandise subject to excise but which, by reason of transfer to a zone in accordance with the fourth proviso of this section, has not paid such tax shall not be used in the manufacture or production of articles for return to customs territory: *Provided further*, That articles produced or manufactured in a zone and exported therefrom shall on subsequent importation into the customs territory of the United States be subject to the duty and internal revenue tax, if any, applicable to like articles manufactured in a foreign country; except that articles not subject to internal revenue tax, produced or manufactured in a zone exclusively with the use of domestic merchandise, the identity of which has been maintained in accordance with the second proviso of this section, may on such importation be entered as American goods returned: *Provided further*, That rectification, blending, reduction of proof, bottling, and other manipulations or manufactures of distilled spirits, wines, fermented and brewed malt liquors shall be permitted in a zone; except that distillation of spirits, fermentation of wines, or brewing of malt liquors shall not be permitted in a zone. If domestic taxable ingredients are used in rectification, the product, if imported into customs territory from a zone or elsewhere, shall be subject to the domestic rectification tax, if any: *Provided further*, That for the purpose of the income tax laws applicable to now resident aliens, merchandise in a zone for any purpose whatsoever, and the sale thereof in a zone, shall be considered to be outside of the United States.

"SEC. 4. The Secretary of the Treasury shall assign to the zone the necessary customs officers and guards to protect the revenue and to provide for the admission of foreign merchandise into customs territory. The operator of a zone shall pay all compensation of port patrol officers assigned to work exclusively in the zone, all compensation other than basic salaries for services performed at the request of the operator by other customs employees so assigned, and all customs expenses in the zone other than basic salaries.

"SEC. 9. The Board shall have exclusive jurisdiction over zones and all matters pertaining thereto, except as otherwise provided in this act, and no agency of State or local governments may claim or exercise jurisdiction over articles in a zone for tax, license, or control purposes. However, the Board shall cooperate with the State, subdivision, and municipality in which the zone is located in the exercise of their police, sanitary, and other powers in and in connection with the free zone. It shall also cooperate with the United States Customs Service, the United States Internal Revenue Service, the Post Office Department, the Public Health Service, the Bureau of Immigration, and such other Federal agencies as have jurisdiction in ports of entry described in section 2.

"SEC. 14. Each zone shall be operated as a public utility, and all rates and charges for all services or privileges within the zone shall be fair and reasonable, and the grantee shall afford to all who may apply for the use of the zone and its facilities and appurtenances uniform treatment under like conditions, subject to such treaties or commercial conventions as are now in force or may hereafter be made from time to time by the United States with foreign governments."

Rural Electrification

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks, I am enclosing a letter from the Honorable A. P. Campbell, treasurer of the Shenandoah Valley Electric Cooperative, of Dayton, Va., which is in compliance with my request for information on the rural electrification in his area.

Mr. Campbell has made an outstanding success with the Shenandoah Valley Electric Cooperative, and through his fine service and constant consideration for those in rural areas, many, many hundreds now enjoy light who once were sentenced to darkness.

The letter follows:

SHENANDOAH VALLEY
ELECTRIC COOPERATIVE,
Dayton, Va., July 3, 1947.

Hon. L. MENDEL RIVERS,
House Office Building,
Washington, D. C.

DEAR MR. RIVERS: It was a real pleasure to have your letter of June 25 on my desk when I returned from a few days of leave of absence from the office. I am always glad to hear from any Member of Congress relative to the rural-electrification program that has been put on for the upbuilding of the lives of the rural citizens and the grand joy and comfort that it brings to those who have the privilege of enjoying it at the place where they are satisfied.

The greatest contribution that could be made to the rural-electrification program, also to other consumers, would be the development of our water power so that Virginia and North Carolina, especially Virginia, could enjoy a better rate than we now have. At the present time there are few hydro developments in Virginia under consideration. We trust some of the projects that have now been started will be developed without delay, especially at least one hydro development that we could compare with the rates we now have. I understand the Gaithrite Dam has an appropriation of $40,000 for engineering on this project. This dam could be put in without destroying a large number of acres of farming land as it is between two mountains.

The Buggs Island Dam, no doubt you are familiar with this, and know the progress that is being made for the development of this project. We would be delighted to know that you are a strong supporter of this kind of development.

No doubt you are aware of the unfair and underhanded methods the power companies are using to deny the citizens of our grand country the low rate of current that could be enjoyed by them.

We are enclosing a clipping from the July issue of Rural Virginia published at Blackstone, Va., by the Virginia REA Association. This will give you some evidence as to how the power companies are using innocent people to promote their interests, if it would be honest to give them the doubt of sincerity.

We wish you the best of success in your endeavors. Any time I can be of some assistance I would be glad to hear from you. If any information comes into this office that would be of some value to you I would be only too glad to send it to you.

Sincerely yours,

A. P. CAMPBELL,
Treasurer.

The Real Reason Why We Have a Shortage of Tin Plate in the United States

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. VAN ZANDT. Mr. Speaker, the tin-plate shortage in the United States has been a source of economic concern for thousands of small businessmen during the past several years and is growing more acute each day. Yet, despite the seriousness of the situation, there has been no definite steps taken to remedy the situation.

Small manufacturers are still at the mercy of the export program and have been driven to the verge of bankruptcy because of a shortage of tin plate and inability to maintain production.

At this point I should like to read a letter from one of the manufacturers in my congressional district in which he aptly sizes up the current tin-plate situation. For obvious reasons, I have refrained from identifying the firm. The letter is as follows:

JUNE 17, 1947.

The Honorable JAMES E. VAN ZANDT,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: The Wall Street Journal article attached to this letter is ample evidence of why there is a tin plate shortage in this country.

We, as a small company, have no chance to compete with the large can companies for favors from Congress or the bureaucratic bodies and agencies, the result being that the can companies got a green light on tin plate to make enough tin cans to can everything that could be canned—dog food, beer, tobacco, in addition to foodstuffs. The foodstuffs are now going to spoil because we canned three times what we can use. We, therefore, not only waste food but we have put thousands of men out of work who could have used the same steel that went into cans to make meters, pipes, automobiles, freight cars, ice boxes, and the thousand and one other items that are in short supply.

We brought Mexican laborers into California to help can the surplus. We used gas, electricity, and coal in the canning process, while other industries were being closed down for lack of steel, lack of gas, lack of coal, and last winter people actually froze because of lack of gas and coal to heat their homes.

The steel companies knew when they were furnishing tin plate for cans that more food was being canned than could possibly be used. The can companies knew it and now want a subsidy to ship the cans to Europe so they can keep on expanding their can-making facilities.

The cheapest thing and best thing for all is, if necessary, let the fruit and food rot, paying the farmer if necessary. This would stop

the necessity for bringing Mexicans into the country, stop the waste of gas, electricity, coal, and steel. If we stop using these items in can business, there will be more steel available for the items in short supply for housing, heating homes, supplying freight cars, pipe lines, and electric power lines which we are now told, next winter, will put thousands out of work.

We have been told by our local power company that we must work our people nights because they can't supply us with power. We have been told not to buy any more equipment because they cannot supply the power.

The gas companies tell us they will be short of gas again next winter and not to add any gas load.

Are we still going to allow steel companies and can companies to use gas for making tin plate for can companies to make into tin cans and food processers to use gas and power to can food which we don't need and allow people to freeze, go without homes, or go without heat after they get their homes because there is no steel for furnaces, pipe lines, and meters to supply them with heat?

Things are sure in a mess when big business, the steel companies, the can companies, and the big food processors want a subsidy while our own people are thrown out of work, left homeless, and to freeze this winter.

Very truly yours.

Mr. Speaker, I also wish to include in my remarks the following article written by William Parker, staff correspondent of the Wall Street Journal, and which appeared in the issue of July 10, 1947.

Following Mr. Parker's article, I am calling attention to the column written on July 12, 1947, by Frederick C. Othman, Staff Correspondent of the United Press, and which has appeared in many newspapers throughout the Nation.

Mr. Parker's article is as follows:

NEW UNITED STATES HAND-OUTS?—CANNERS ASK SUBSIDY TO HELP SELL SURPLUS FOODS TO OVERSEAS MARKETS—MUST OFFER BARGAIN PRICES TO COMPETE WITH GRAINS; STOCKS PILE UP IN UNITED STATES—SOME SUPPORT IN CONGRESS

(By William Parker)

WASHINGTON.—United States consumers may be forking over tax money before the year is out to keep their own grocery bills high.

This paradoxical situation will arise if the administration decides to place an export bounty on canned foods which become so plentiful that prices begin to slip. Sentiment is growing in the Department of Agriculture for such a program to bolster the prices of some foods which are already becoming surplus.

The scheme is getting support on Capitol Hill. Meeting today, at the call of several Congressmen from areas where food canning is important, are representatives of the canning industry and the Agriculture and State Departments.

Among the farm products which might be immediate candidates for this sort of Federal hand-out are a number of canned vegetables like peas, beans, and sweetpotatoes; some canned fruits; and such dried fruits as raisins and prunes.

No specific legislative action would be required to set up an export subsidy program. The Department of Agriculture already has authority to make such payments out of funds set aside for handling farm surpluses. Such a subsidy has been paid on cotton exports for some years past.

TIPPING THE BEAM

And a kindly word from legislators on broadening the program to cover canned foods probably would be enough to tip the beam in favor of the idea.

If the canning industry gives the Congressmen at today's meeting the same story it has been peddling to the Government departments, testimony will go something like this:

Stocks of many varieties of canned goods are piling up in warehouses and on dealers' shelves. Meantime, the new canning season is approaching. Either some steps must be taken to clear out the surplus goods, or the canners will have to reduce the size of their 1947 packs of the already overproduced goods.

Should this happen, farmers who grow these vegetables will find their markets sharply reduced. Prices of these crops can be expected to slump as a result.

Meanwhile, the canning industry argues, there are a host of potential foreign customers for the surplus canned goods—if they can buy this food at a price. These other nations are already buying heavily in United States markets, but are confining their purchases largely to grains. Wheat and other cereals offer a greater amount of food value per scarce dollar than any other type of food.

WHAT THE CANNERS SUGGEST

What the canning industry has suggested to the Agriculture Department is that the Government pay subsidies which will enable sellers to offer their wares to overseas buyers at bargain prices. Presumably these prices would be set low enough to bring the foods into competition with grain on a cost-per-unit-of-food value. Any loss sustained by the seller in these bargain sales would be made up by Government payments.

Canners hope the subsidy, in addition to increasing their sales to foreign buyers, will enable them to do a land office business with the War and State Departments.

The Army is responsible for feeding the people of our occupied zones in Germany, Austria, and Italy and seeing that the Japanese and Koreans are fed. This makes the Army the largest single buyer of food for export. The State Department, meantime will soon take on the job of dishing out a $350,000,000 fund approved by Congress for foreign relief. Most of this is expected to be spent on food.

Both State and War Departments have had somewhat the same attitude toward the export of canned goods as purchasing agents of foreign nations have. They believe that, with a limited amount of money available, they can feed more hungry people by spending it on grain. A subsidy on canned goods—even though paid by another Government agency—would permit the Army and State Department to purchase these foods without making such a large hole in appropriations.

OTHER FOOD INDUSTRIES CHIME IN

Backing up the canners in their campaign for a subsidy are representatives of other food industries beginning to feel the pinch of overproduction. Dried fruit processors are worrying over markets for prunes and raisins. Citrus fruit growers and packers saw high wartime prices collapse last winter. They know another bumper crop next year means the same slump—or worse. Their plight has been bad enough to make the Florida, Texas, and California sections of the industry temporarily forget their rivalry and get together behind a program calling for Government aid in finding additional markets at home and abroad, through Federal payments.

Unless some unexpected and heavy opposition develops to the plan to be discussed today on Capitol Hill, it appears likely the Government will initiate an export subsidy program. It may start on a small scale, but it could cover a wide range of commodities before it's finished.

What are the probable results of subsidizing food exports on a broad scale?

First, if carried out extensively enough, such a subsidy would bring the canning industry back into the market for new produce. This, in turn, would help maintain prices to crop growers.

Second, the program would tend to delay any decline in food prices to domestic consumers. If the surplus foods are not sold abroad at subsidized bargain prices, sellers here probably would be forced to follow the traditional method of disposing of surpluses—selling them on the home market at a loss.

A flood of low-priced foods on the grocery market might well tend to bring down the cost of many other items not already on the surplus list. Housewives finding low-cost canned peas on store shelves, for example, would probably buy these rather than more expensive vegetables. If this process of substitution were carried far enough, the grocer would find the reduced demand for higher-priced foods creating a surplus. He then would be forced to reduce their prices to compete with the low-cost items.

LIST OF FOODS WOULD GROW

Under present proposals, the list of subsidized foods would be relatively short and would not bulk too heavily in the total cost of living. However, the list could be expected to grow. As farmers found markets for other products filing up to the point where prices began to soften, they'd be inclined to turn to the Government for subsidies to move a portion of the oversupply from the market. The Government, having set a precedent in helping out canners, raisin and prune packers, and citrus growers, would find it difficult to turn down other requests for aid.

Machinery for operating an export subsidy program already exists within the Department of Agriculture. Since the 1930's the Department has been paying exporters a subsidy to enable them to sell United States cotton on the world market in competition with less expensive cotton grown in other parts of the world. In the late thirties when wheat was a drug on the market, the Agriculture Department made payments to exporters in an effort to dump part of the surplus abroad.

To finance these operations, the Department has a fat kitty in appropriations for "surplus removal" operations. These funds are known familiarly as "section 32 money" because that section of the old Agricultural Adjustment Act set aside 30 percent of the gross customs receipts each year to be used in whittling down farm surpluses. The Department has wide latitude on how the surplus is to be moved. It can be exported under subsidy, given away for free school lunches, sent to public or charitable institutions, or, if the occasion arises, just dumped.

If canners, Congressmen, and the Agriculture Department agree, the Government will dip into these funds to send more food overseas. The hungry nations which hope to eat this American food may understandably be enthusiastic over the prospects. But the United States housewife, struggling to make ends meet under a rigid food budget, may question the new program.

The article by Mr. Othman is as follows:

OTHMAN IN WASHINGTON

(By Frederick C. Othman)

WASHINGTON, July 12.—You ladies noticed any slash lately in the price of a can of peas? I thought so.

So today's our day to shed a tear for the boys who find themselves with 67,000,000 cases of canned vegetables they can't sell, a new crop coming up, and nobody standing in line to buy.

There seems to be only one solution. Get the Government to do something. So the representatives of the farmers, the canners, and the wholesale groceries came to the Agriculture Committee of the House. The

thing to do, they said, is force the State Department and the War Department to send canned goods to the hungry in Europe.

The relief experts so far have refused. They claim a can of tomatoes, for instance, is mostly water and why spend the money to ship H_2O abroad?

The canned-goods fellows said the Europeans need vitamins from tinned vegetables as much as calories from wheat. They said also that if the Government doesn't take over some of the millions of cases, many a farmer will go bust (and many a cannery, too) and that'll be the start of a depression.

Representative AUGUST H. ANDRESEN, of Minnesota, wondered if any of the boys had thought about cutting prices of peas (which seem to be in greatest surplus) here at home.

"Oh, yes," replied William M. D'Miller, secretary of the Cooperative Food Distributors of America, Chicago, a typical witness. "Prices have been reduced. But the people insist on the fancy stuff and they won't buy the standard grades."

This caused Representative WILLIAM S. HILL, of Colorado, to explode. Or perhaps "erupt" is the better word.

"I'd like to see the ads on those reduced prices," he shouted. "So my wife can get 'em. How do you figure the cost of living is going up if the price of these foods is going down?"

D'Miller tried to soothe him. Representative HILL was having none of it. He charged that grocers advertised low prices on canned goods, but always were fresh out when Mrs. Hill tried to buy.

"And it isn't only canned goods," he said. "Why one store advertised lamb at 15 cents a pound and when I went in to get some I had to pay 65 cents a pound for it."

The suave D'Miller, wearing a checked suit, a large diamond ring, and heavy-rimmed eyeglasses, said he was sorry but he didn't know about meat. Only canned goods. And the warehouses in his association have so many cans of peas, string beans, cut beets, sauerkraut, and sweet potatoes on hand they intend to buy no more for the next 8 to 14 months.

Representative ANDRESEN wasn't convinced. He ordered D'Miller to produce a list of current retail prices of canned goods for study by the lawmakers. The witnesses kept coming. A thousand acres of string beans have been plowed under in Louisiana because the canners wouldn't buy. Spinach is rotting in the Norfolk, Va., area, and tomatoes in Maryland.

"Tomatoes are being plowed into the ground right now," said Dr. T. B. Symons, director of the extension service of the University of Maryland.

"But I paid 35 cents a pound for Maryland tomatoes only last week," protested Representative ANDRESEN.

"Ah yes," repied Dr. Symons. "Lovely tomatoes, from our Maryland hothouses. But field tomatoes, no. There is no market for them."

This was hard for Representative ANDRESEN to understand. He could use a few pounds and so, I think, could I. If we could afford 'em, that is.

Joseph Jefferson Mansfield

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. MANSFIELD. Mr. Speaker, I cannot add to the memorable and beautiful tributes that have been paid my namesake, Judge MANSFIELD. However, I wish to join my colleagues in expressing my sadness over the death of the judge. The passing of our colleague did not come as a surprise because we know he had been critically ill for a number of days. However, we are never ready for news of this kind. It leaves us, who knew the judge so well, with very heavy hearts indeed.

During his 30 years here he was faithful to his task. He had but one purpose and that was to represent his congressional district to the very best of his ability. By his passing Texas has lost a most efficient public servant; and the Nation has suffered a heavy loss. All who knew him will miss a true friend.

An inspiring statesman and a splendid American citizen has left this world for the rich reward which will be his in the kingdom of heaven.

Proposed New Maritime Shipping Code

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. WEICHEL. Mr. Speaker, a most important undertaking of interest to our merchant marine was inaugurated by the former Committee on Revision of the Laws of the House of Representatives about 2 years ago under the chairmanship of the gentleman from New York [Mr. KEOGH]. This project is to codify all of the Federal laws relating to shipping. It is part of a comprehensive plan to codify all the laws of the United States so that the text of these laws will be accessible and clear without the necessity of examining scores of volumes of the Statutes at Large.

The Legislative Appropriation Act of June 13, 1945, authorized the former Committee on Revision of the Laws to prepare a new edition of the United States Code and the codification of the shipping laws is one of the most important parts of the preparation of such a code. The functions of the Committee on Revision of the Laws have been transferred to the House Committee on the Judiciary under the Legislative Reorganization Act of 1946, and the work has gone forward under the supervision of the latter committee.

I should like to give you a brief statement of the background of this work and of its present status. The committee engaged the services of the West Publishing Co. and the Edward Thompson Co., two law publishing companies which have assisted the committee in the preparation of the United States Code and in the preparation of bills to codify other titles of the code. These companies, in addition to their regular editorial and manuscript staffs, engaged the services of a reviser who is experienced in the codification of laws and a special consultant, the former general counsel of the War Shipping Administration. They have maintained close contact with the counsel for the Committee on Revision of the Laws and the Judiciary Committee in the various stages of the work. After a preliminary draft had been prepared which contained the Federal laws relating to shipping, most of which are now found in title 46 of the United States Code, a meeting was held to review it. At this meeting, there were present the publishing company staffs and the chairman of the House committee, together with his counsel and the counsel for the Committee on Merchant Marine and Fisheries and a group of men familiar with the administration of the various phases of the shipping laws from the point of view of the shipowners, operators, labor, the Department of Justice, and the Maritime Commission. The preliminary draft was reviewed section by section and suggestions and criticisms were noted and work was then commenced on the preparation of a second draft which was later submitted to a comprehensive and painstaking review by the same groups. These preliminary drafts were circulated among the ship industry and the labor organizations throughout the country and suggestions and criticisms were solicited.

The Maritime Law Association appointed a committee to examine the drafts and report thereon.

There has now been printed a committee print of a bill which I understand will be introduced by the gentleman from Kentucky [Mr. ROBSION], at the opening of the next regular session of the Congress. Copies of the committee print have been distributed to members of the Committee on Merchant Marine and Fisheries and to the various other groups interested in the project with the request that criticisms and suggestions be submitted to the gentleman from Kentucky before October 15, 1947.

The preparation of a shipping code is a matter of extreme importance. I sincerely hope that the Members of the House will take an active interest in this work with the view that an accurate, modern, and simple code will be enacted. The maxim of the former chairman of the committee, the gentleman from New York, "Making the laws understandable is as important as making the laws," is to my mind a most worthy one and is being followed in the preparation of this code.

Although no major or controversial changes in substantive law were intended in this codification, the law is being completely rewritten for the sake of simplicity and clarity. Obsolete and redundant provisions are being eliminated and the language is being modernized without doing violence to the intention of the original statutes. It is my earnest hope that this work may go forward under the Committee on the Judiciary with the active support and cooperation of the Committee on Merchant Marine and Fisheries, and that a bill will be enacted during the next regular session codifying these laws.

Mr. Speaker, the Committee on Merchant Marine and Fisheries is desirous to cooperate in this codification of the shipping laws, and I have appointed from the Committee on Merchant Marine and

Fisheries the gentleman from Maryland [Mr. MILLER], the gentleman from New Jersey [Mr. HAND], the gentleman from New York [Mr. LATHAM], the gentleman from California [Mr. ALLEN], the gentleman from Virginia [Mr. BLAND], the gentleman from New Jersey [Mr. HART], and the gentleman from New York [Mr. KEOGH], with the gentleman from Maryland [Mr. MILLER] chairman, as a special committee to study, examine, and review the proposed code with those engaged in maritime operations.

Railroads Fight for Life

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial written by Mr. Robert W. Boyer, managing editor of the Altoona Tribune, and appearing in the issue of July 19.

The editorial is as follows:

RAILROADS FIGHT FOR LIFE

How about America?

We ask that question again as Mr. Truman again vetoes the tax-reduction bill with the terse comment that such a tax cut "is the wrong kind at the wrong time."

When is the right time, Mr. President?

That, America must know.

For, while this country is spending vast sums abroad, and preparing to spend many more billions in Europe, there is increasing need of a sharp concentration of attention and effort on the home front.

Yesterday, this was emphasized for the railroads, when the interstate commerce examiner recommended that 14 major railroads in the East be authorized to raise their commutation fares and other passenger tickets sold on a multiple basis, by 15 to 25 percent.

The war years saw the railroads meet every demand placed upon them. They set world records for transportation. Without their great capacity, their great hauling power, we should not have been able to provide the munitions of war where they were needed fast enough.

But, the railroad establishment depreciated during those years when every effort was placed upon speed rather than maintenance.

The railroads need relief. They need something more from Government than constant pressure, constant demands. They need some encouragement, some real help. And they have not yet asked for subsidies as such.

The Pennsylvania Railroad, with whose welfare this city is vitally concerned, reported last year that it operated at a loss for the first time in history. It ran into the red for a total of eight and one-half million dollars.

Now, the railroads' coal bill will be raised by the new contract obtained by Mr. Lewis. Already the Nation's railroads are committed to a billion dollars for new and renewed safety appliances.

Last year, the railroads of the Nation spent almost $400,000,000 for soft coal. Now, that cost may rise as must as a fifth. And, in addition, coal, as a basic industry, also is raising the price of steel, principal commodity required by railroads.

And, still further, the railroads are faced by demands for wage increases that will reach over $500,000,000 a year. And, in addition, unions have drafted demands for working-rule changes that will require the railroads to spend almost another billion dollars.

The wage demands alone are almost equal to twice the railroads' 1946 net income.

We are sending steel, locomotives, and cars to Europe. We are busily engaged on figuring out Europe's problems, while other forces in Europe are figuring out ways to undo them.

But, who is figuring out America's problems?

Are we going to let the housing problem stick right where it is?

Are we going to let the railroads stifle under these staggering costs?

Our whole industrial establishment will collapse about our ears if the railroads stick. A major portion of Europe's present difficulties is due to destruction of her railroads.

Railroad transportation is the foundation of all others; wheels cannot turn for long with the goods they produce piling up on docks.

Experts believe our railroads should earn 6 percent; a rate which the Supreme Court has held reasonable for regulated utilities on two occasions.

The Government should see to it that the railroads are permitted to offset these increasing costs, that they are enabled to pay for the freight cars—twice as many on order as manufacturers have been able to produce—and that they are enabled to maintain their establishment so that it can do the job expected of it.

Europe again provides the shining example for us of what not to do. The world's poorest railroad schedules and accommodations are provided by railroads operating under government control.

Mr. Truman has many big problems here in America. His second tax-cut veto and his accompanying comments indicate that his advisers are blind to what is happening in their own country.

The Governor's Stand on Foreign Policy

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Outlook of Santa Monica, Calif.:

THE GOVERNORS' STAND ON FOREIGN POLICY

If for no other reason than to impress the fact upon the world, the action of the Governors' Conference at Salt Lake City in expressing "faith and confidence" in Secretary of State Marshall, and in calling for a continuation of a nonpartisan American foreign policy, is praiseworthy and valuable. The world needs to realize that the American people stand united today as never before on foreign policy, and that there is no prospect of that policy being reversed by a fatal political division, as happened a generation ago.

The action of the Governors' Conference, representing the chief executives of 44 of our 48 States, should make it clear to the world that Henry Wallace does not speak for the American people, and that his attempts to stir up discord and division on foreign policy have completely failed.

It is to be hoped that the resolution of the Governors' Conference will be widely published and broadcast abroad. It reads: "The Governors' Conference hereby asserts its conviction that the foreign policy of this country transcends in importance all partisan, personal, or political considerations, and should be at all times an American foreign policy, representative of the best in America, and representing the United States to the nations of the world as a country that seeks peace and is united in its determination to protect the inalienable rights and privileges that our citizens now enjoy."

That sentiment will command the full support of every loyal American, which means 99 percent of our population.

Home Mortgage Loans

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. JENSEN. Mr. Speaker, during the hearings of the Government Corporations Subcommittee of Appropriations one of the highest officials of the Federal Home Loan Agency submitted the following statement to that committee, but requested his identity not be disclosed.

This statement proves conclusively that while home loans guaranteed by the Federal Government have made it possible for many people to save their homes, and of course has also made it possible for many people to build a home, the facts are that the program has brought about greatly increased costs of homes, the effect of which will surely bring about disastrous results unless it can soon be corrected. Possibly the most feasible and effective way to solve the problem would be to reduce the percentage guaranteed by the Government. Prices on homes will continue to spiral to the bursting point so long as cheap, easy loans can be obtained, while at the same time the building of homes is retarded because most people will not pay these inflated prices. Even when material becomes available in plentiful supply the cost of building construction is bound to stay up so long as the Federal Government guarantees 80, 90, and in some cases, 100 percent of the appraised value under the present appraisal custom, and may I say here and now that so long as the Government is in the housing business to the extent it is today the condition I have just stated and the conditions explained in the following statement will be with us and will defeat home building at reasonable prices for our veterans and for everybody who wants to own a home of their very own. It is for these reasons, Mr. Speaker, that I have opposed, and will continue to oppose, the so-called WET bill or any other socialized housing bill that can be cooked up by the great planners.

The statement submitted by the Federal Home Loan Agency official follows. I trust it will make a lot of people think through on this problem.

WHY THE HOME-MORTGAGE DEBT OF THE UNITED STATES AS OF DECEMBER 31, 1946, IS $24,561,000,000

The effect on national economy, if difficulties should arise in savings institutions and home mortgages, is indicated by the experiences of 1930 to 1933.

In 1931 and 1932 there were over half a million foreclosures of mortgages on homes—an all-time world record. In the spring of 1933 such foreclosures were running at the rate of a thousand a day. Indignation meetings of home owners were being held in the larger cities and many communities. Farm foreclosures at the same time resulted in riots and threats to hang sheriffs in some sections.

While the situation was bad enough when the Home Owners' Loan Corporation was organized, there was no adequate understanding of how really serious it was. The Home Owners' Loan Act was passed with only four dissenting votes in the House of Representatives and none in the Senate. The House votes were equally divided—two Democrats and two Republicans.

The law gave the Corporation $200,000,000 of capital and provided for the issuance of two billions in 4-percent tax-free bonds to be exchanged for defaulted mortgages. Loans could be made only to home owners whose mortgages were being foreclosed or those threatened with foreclosure and unable to refinance their loans elsewhere. The applications for relief poured in at such a rate that it was soon apparent that two billions of bonds would not be enough, and presently Congress increased the limit to three billions and finally to $4,750,000,000. The Corporation received more than 2,000,000 applications representing mortgages in excess of $6,000,000,000 or almost one-third of all the outstanding home mortgages in the country. When about $1,000,000,000 worth of the money represented by these applications had been paid out to the mortgage-lending institutions and the Federal Housing Administration was organized to insure mortgages, the pressure on the Home Owners' Loan Corporation relaxed somewhat and the total number of mortgages which the Corporation was called upon to accept before it finished lending in June of 1936, was a little over a million.

The balance of its total advances up to three and one-half billions was represented by taxes the Corporation was obliged to pay, amounting to $486,613,716, delinquent insurance of about $18,000,000, and the necessary expenditures of $239,000,000 to repair and rehabilitate the long-neglected houses on which loans were made.

The above figures convey some idea of the results which can develop if as a result of the present high speculative level of prices on homes and excessive mortgages made on such homes things begin to move in the wrong direction.

Many mortgage-lending institutions failed to realize before the conclusion of HOLC refinancing that large numbers of home loans on their books were weak and would develop trouble. For 3 or 4 years after June 30, 1936, the lending institutions had unusual foreclosure records and losses. In Massachusetts alone they took over half a billion dollars worth of homes through foreclosure in the years following 1936. In New York, New Jersey, and Pennsylvania the figures were very high, and the total in the country as a whole ran into billions.

Such a development can be prevented by the exercise of caution, but it will be very difficult to deal with if it starts again on any considerable scale.

PRICES ON HOMES

The present inflation of sales prices on homes and the corresponding influence on mortgages began to be apparent as far back as the spring of 1943. These prices have been rising rapidly ever since, and in the latter part of 1945 and during 1946 they jumped at a record-breaking rate. This is reflected not only in the total dollar volume of home mortgages made—the highest for any single year in our history—but reliable records of prices on sales for average, everyday homes in all parts of the country during the 18 months ending December 31, 1946, show clearly enough what has happened. On top of the 1942–44 increases, further increases in prices from 1945 to 1946 by 40 to 45 percent for the same types of homes were common. Some States showed jumps from a low average for 1 month in 1945 to a high in 1946 of 59 to 72 percent. In one State an increase of as much as 90 percent from the lowest average price for any one month in 1945 to the highest average for a corresponding period in 1946 is recorded.

In the 10 most populous States, figures on more than 175,000 sales reflected such percentage increases in prices from 1945 to 1946 as those quoted above. These prices were made on houses renting on the average from $31 to $33 a month. The rental averages do not tell the full story because they include rentals in some of the more densely populated areas which range higher, but they indicate the great increase in prices on houses selling for $4,000 and less.

Figures on a limited number of sales in recent months in one western State at $13,000 to $13,500 indicate that the costs of construction and land were less than $7,000.

MORTGAGE DEBT DECEMBER 31, 1946

The all-time high mortgage debt at the beginning of this year was $24,561,000,000. This was three billions above any previous peak. The increase in home mortgages for 1946 over 1945 of $4,570,000,000 was the greatest for any one year for which there are reliable records. This in spite of the fact that because of full employment, higher rates of pay and overtime pay, more mortgages were undoubtedly paid off in full and more were substantially reduced than in any corresponding period.

In 1946 we built but 450,000 new houses but the total mortgages made during the year was $9,453,000,000. This figure indicates the extent to which prices and mortgages on existing homes were raised.

In 1925, the year of greatest home building in this country, we built, ready for occupancy, 937,000 homes. This was over twice the number of new homes produced in 1946. All the mortgages made in 1925 on existing homes and new homes totaled less than half the dollar amount of the mortgages made in 1946. The total figure for 1925 was $4,763,000,000.

At the end of that year (1925), total home mortgage debt in this country was $13,216,000,000—a little more than half of the $24,561,000,000 figure of 1946.

The old houses which sold at such high prices in 1946 were over 20 years old on the average and a large proportion of them more than that. Because of the inability to get material for repairs and rehabilition during the 5 years from 1941 to 1946, these houses sold and mortgaged at higher levels, were mostly in need of important repairs and upkeep.

As a result of neglect from 1929 to 1933, following the 1929 panic, the reports of the Home Owners' Loan Corporation show it was necessary for that Corporation to advance $239,000,000 to place the houses on which it made mortgages in decent repair.

CONSTRUCTION LOANS

Aside from inflationary mortgage loans on individual houses, it is a matter of common knowledge that in the last few years many lending institutions, of all groups, have made construction loans to an extent far in excess of any lending of this sort they had ever before done. Reports are common of inflationary lending to contractors with little or no financial responsibility.

With all types of mortgage lending institutions in possession of greatly increased savings, the competition in the making of home-mortgage loans has been more extreme than at any time in the past. It has been characterized not only by excessive loans to contractors but the payment of black-market prices for materials, higher fees to real-estate brokers for bringing in mortgages than have ever prevailed before, and other competitive practices which have contributed to inflationary lending and, in turn, inflationary prices for homes. If excessive loans had not been made in so many cases, the price level of homes today would not be as high as it is.

HOME APPRAISALS

Anyone who has examined the system under which appraisals are made as a basis of making home mortgages in this country must recognize immediately that it is full of defeats and calls for critical attention without undue delay if we are to avoid needless troubles in the future. It is a somewhat complicated problem and cannot be solved quickly because of the great variety of conditions which exist in different parts of the country.

Most of the appraisers who fix valuations as the basis of mortgage lending are real-estate brokers. They receive commissions based upon the price at which a home is sold. In boom times it is, of course, to their interest that the price shall be the highest price obtainable since their return is thereby increased. Many lenders are quite willing to make a mortgage which is higher than it should be. The higher it is, the better, since at present low rates per thousand, it produces more interest income and when, as today, a large proportion of the home-mortgage loans made are guaranteed by the Federal Government, through the Veterans' Administration or the Federal Housing Administration, there is a strong temptation to many lenders to make inflated loans because of their conviction that they cannot lose as a result of the insurance.

Reckless lending institutions, with plenty of funds to invest, often make or accept appraisals intended to get the loan away from a competitor who is trying conscientiously to protect the home purchaser from incurring an excessive debt.

No experienced financial institution thinks of making a business or industrial loan which is to run for 20 to 25 years without employing engineers and experts to examine every phase of the risk involved and taking every conceivable precaution to protect against loss. It cannot be denied, however, that too many mortgages are placed on American homes without any adequate examination of the risks involved or the unfortunate experiences which a family may suffer through being loaded with too much debt.

The home-mortgage appraisal system of the United States should be investigated thoroughly and carefully reorganized.

FIRE INSURANCE AND MORTGAGE LENDING

One of the activities in connection with the operations of too many of our mortgage lending institutions which demands attention is the placing of fire insurance on homes by officials of these institutions. It is well-known that a large number of them are acting as insurance brokers and personally collecting the commissions on such insurance. The practice can and often does have an influence not only on the approval of the loan but the amount loaned. If a real estate broker receives a commission for bringing the mortgage to a lending institution, the higher the price of the home, the more he receives as a commission. In turn, the higher the loan and the amount of insurance, the greater the commission to the person who approves the loan and places the insurance. The monthly payment on long-term, amortized mortgages, under present-day plans, usually includes insurance and taxes. The official of a lending institution making the loan who places the insurance, therefore, has no risk of loss on unpaid premiums and

little collection cost. He has an unfair competitive advantage over independent insurance brokers.

Those who must have mortgages on their homes should be free to place their fire insurance wherever they please. It should not be a factor in the granting of a mortgage. It is well-known, however, that mortgages and officers of many institutions, a large proportion of them mutual in character, have incomes from the handling of insurance in connection with the placing of mortgages, aside from their salaries, the extent of which the public does not realize.

FUTURE HOME MORTGAGE DEBT

It is generally recognized that most of our veterans who have been able to do so, have acquired homes as a result of the $4,000 guarantee against loss on mortgages by the Veterans' Administration. If only one-half of the former servicemen still eligible apply for such guaranteed mortgages within the 10-year period, it will mean approximately 7,000,000 homes to be financed.

If the average mortgage is but 50 percent of reasonable value, it means an increase of between thirty-five and forty billion dollars over our present home mortgage debt. This mortgage need can apparently be financed readily enough if home prices are not excessive, since the net savings of our people at the beginning of this year were at an all-time high of $133,000,000,000.

The price question is vital, however, for not only veteran but nonveteran families will need homes and many of these will be provided out of the existing supply.

The Federal Reserve Board completed a survey of family incomes for 1945, last year. The report declared that in that year of high wages, full employment and much overtime, 70 percent of our American families had an average income of $3,000. These families earned, according to the Federal Reserve Board, 43 percent of the national income and contributed 24 percent of the national savings for that year. These figures show plainly enough what the average American family car afford to pay for a home and safely discharge the mortgage debt. The figures demonstrate conclusively the importance of getting home prices down.

GOVERNMENT INSURANCE ON MORTGAGES

The fact that mortgage insurance has made a substantial contribution to higher prices cannot be ignored. These insured mortgages have been made by all classes of lending institutions. The houses, new or old, would not have been sold except in limited numbers if very liberal mortgages had not been available. It is apparent that there must be real caution in making home mortgages from now on by all these institutions if difficulties are to be avoided in the future. Extreme and unwise competition between lending institutions must inevitably bring foreclosures and demands upon the insurance funds of Government agencies.

Charles O. Andrews

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. SPESSARD L. HOLLAND, United States Senator from Florida:

Mr. HOLLAND. Senator Charles O. Andrews was a native Floridian, born in Holmes County in the western part of the State on March 7, 1877. He was educated in the public schools of Florida, and in the South Florida Military Institute, a small but excellent military college then existing at my lifelong home, Bartow, Fla. It was while he was a cadet at that school that I first saw him. He also held diplomas from Florida State Normal and the University of Florida. In military activities he served as captain, Company M, First Regiment, Florida National Guard, and also volunteered for the Spanish-American War and applied for service in the First World War but was not accepted. He acquired invaluable experience as bill secretary of the Florida Senate. He was admitted to practice law, by the supreme court of Florida, in 1907, and by the Federal courts in 1911. His legal attainments and standing were of the highest. He served as judge of the criminal court, Walton County, 1910–11; as assistant attorney general of Florida, 1912–19; as circuit judge, 1919–25; and as a commissioner of the Florida supreme court, 1929–32. He was president of the Florida State Bar Association in 1921–22. In civic and fraternal affiliations he was a Rotarian and a Mason, a member of the Florida University Alumni Association, of Pi Kappa Alpha social fraternity, and of Phi Delta Phi legal fraternity. He was elected to the United States Senate November 3, 1936, and reelected for a 6-year term November 5, 1940. He received the honorary doctor-of-laws degree from Rollins College, Winter Park, Fla., in 1941.

Senator Andrews married Miss Margaret Spears of Tallahassee, Fla.—his beloved Daisy—to whose inspiration and influence he attributed much of his success. No man had a more devoted wife, and no children, of whom there were three, a more devoted mother.

It was as a young attorney that I first became closely acquainted with Senator Andrews. This was while he was a circuit judge in Florida and I had just begun the practice of law. From this acquaintance grew a friendship that increased in strength throughout the years and which was always a source of pleasure and inspiration to me. One of his outstanding contributions to the business life of Florida was his service as an attorney and as a citrus grower and citizen in organizing a State-wide agency for citrus growers and handlers known as the Florida Citrus Growers Clearing House Association, which he served as general counsel. He was entitled to much credit for the large amount of good which was accomplished by that organization.

A stanch defender of States' rights and imbued with a patriotism and love of his country transcending all other considerations, Senator Andrews believed in the literal interpretation of the Constitution. Indeed, with him it was truly the supreme law of the land. He made this known in the Senate upon his arrival in 1936 by joining forces immediately with others of his southern colleagues of like convictions on issues where either encroachment on or impairment of the powers reserved to the States was threatened. Senator Andrews' advice and opinion on constitutional questions was eagerly sought and highly regarded by his fellow Senators.

Although Senator Andrews had not been in robust health for some time, which was of great concern to his myriad friends in Florida as well as in Washington, his passing in the early hours of the morning last September 18 came as a shock to all of us. Of a kindly and sympathetic nature, with the modesty and gentleness that so become a gentleman, Senator Andrews from the very beginning of his service in the Senate formed friendships that endured to the end. He was recognized and loved for his sincerity of purpose and for his unwavering devotion to duty, said by General Lee, whom he idolized, to be the "sublimest word in the English language."

Charles Oscar Andrews

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. Charles Oscar Andrews, late a Senator from the State of Florida.

Mr. PETERSON. Mr. Speaker, when the announcement of the death of Senator Charles O. Andrews came it was a shock to those who knew him intimately and a distinct and decided loss to the State of Florida and to the Nation.

We have often heard the phrase "to know him is to love him." In the life of Charles O. Andrews this was true. Those Members in the House of Representatives, his associates in the Senate, the employees with whom he came in contact, litigants in the court when he was circuit judge, legislators of the State, men and women in high official life, workmen in the orange groves of Florida, intuitively loved Charles O. Andrews when they knew him. He was kindly and courteous; he was painstaking and thorough, he was conscientious and had a high regard for the office which he held at the time of death and for the offices which he had held previously.

He brought to the Senate a broad background of experience which included position of captain in the Florida National Guard, bill secretary for the Florida Senate, judge of the criminal court, assistant attorney general for the State of Florida, circuit judge, president of the Florida State Bar Association, and commissioner of the Supreme Court of Florida. It was experience which gave him a knowledge of people and a knowledge of problems. Having been born and raised in the State of Florida, and having lived in different sections of the State, he had an intimate knowledge of the problems of this rapidly growing State. When he came to the Congress he made firm friends. The firmness of this friendship was evidenced on a number of occasions. On one occasion when the Everglades National Park bill passed the House, the desire in the Senate to help Senator Andrews was such that within an hour it had passed the Senate. He came to the Senate from a sickbed and was able to secure the passage through the Senate of a bill to reimburse the fruit growers of Florida for losses in the Mediterranean fruitfly campaign. In his service in the Senate he was thorough and conscientious, holding firm to those principles that he thought were right. His was a distinguished career in that great legislative body, a record of which his friends, our State, and his family can well be proud. Our sympathy goes out to his fine family.

Senator Charles O. Andrews will be missed in the Nation; he will be missed by our State, and, personally, I will miss him. It was my pleasure to have appeared before him when he was on the bench and to have his wholehearted cooperation when he was in the Senate.

There comes to my mind a short poem which I heard a number of years ago on a memorial occasion. It is so typical of Senator Andrews that I quote it here:

Here was a man whose heart was good,
Who walked with men and understood.
His was a voice that spoke to cheer,
And fell like music on the ear.
His was a smile men loved to see
His was a hand that asked no fee
For friendliness or kindness done.
And now that he has journeyed on,
His is a fame that never ends
And leaves behind uncounted friends.

The St. Lawrence Waterway Development

EXTENSION OF REMARKS
OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the RECORD a recent radio discussion on the subject of the St. Lawrence waterway development, participated in by the Senator from Wisconsin [Mr. WILEY], Dr. N. R. Danielian, and myself.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

Dr. DANIELIAN. Senator WILEY, you are chairman of a Senate Foreign Relations subcommittee which held extensive hearings on the St. Lawrence project. Could you give us your impressions of the case made before your committee?

Senator WILEY. Dr. Danielian, the subcommittee had very important witnesses before it, such as former President Hoover, Secretary of State Marshall, Secretary of War Royall, and Secretary of Commerce Harriman. They favor construction of the project for national security and industrial development of our country. Opposition witnesses, mostly from Boston, New York, and New Orelans, expressed fears that they would lose business. The subcommittee reported the measure without a dissenting vote. That tells the story.

Dr. DANIELIAN. Senator AIKEN, you have been a staunch and devoted advocate of this project. How do you size up the chances for congressional approval now?

Senator AIKEN. Dr. Danielian, we have the best chance ever to secure congressional approval of the St. Lawrence project in 1948. The Senate Foreign Relations Committee approved it by a vote of 9 to 4, and it goes on the Senate Calendar during the first week of January.

NATURE OF PROJECT

Dr. DANIELIAN. Senator WILEY, could you tell our audience briefly what the St. Lawrence project is.

Senator WILEY. It is simply this: there is now ocean navigation from the Atlantic to Montreal, which is 1,000 miles up the St. Lawrence River. There is also deep-water navigation from Duluth to Ogdensburg, N. Y., a distance of 1,250 miles. Between Montreal and Ogdensburg there are three rapids, with a tremendous amount of power. The St. Lawrence project contemplates construction of the necessary dams, canals, and powerhouses in this stretch of the river to bring ocean ships directly into the Great Lakes, and to establish 2,200,000 horsepower of electric capacity. We can't let it go to waste.

Dr. DANIELIAN. How is it, Senator WILEY, that at a time when Congress is so economy minded, this project receives favor?

Senator WILEY. Dr. Danielian, there are two reasons for that. First the evidence is overwhelming that this project has national defense value. It is clear that failure to construct it before World War II was very costly. The second reason is that this project will be self-liquidating. The power phase will be paid for by the consumers of electricity and the cost of the seaway will be carried by tolls on traffic. This means that, as in the case of the Panama Canal, the Nation will secure a great asset for commerce and national security, without cost to the taxpayer.

Dr. DANIELIAN. That sounds like a good bargain for the people.

Senator AIKEN. It is a good bargain, and the people realize it. Every poll of public and business opinion indicates that the country is ready to construct this project.

CANADA'S FULL SUPPORT

Dr. DANIELIAN. How about Canada? This is a joint project and Canada must build part of it. Do they favor it on the present basis?

Senator WILEY. The Canadian Government has accepted the principle of self-liquidation by charging tolls.

Senator AIKEN. When President Truman addressed the Canadian Parliament he got tremendous applause when he expressed his support of the St. Lawrence project.

Dr. DANIELIAN. I can well understand that. The Great Lakes-St. Lawrence system is Canada's lifeline. Senator WILEY, how much will it cost to build the seaway?

COST OF SEAWAY

Senator WILEY. On the basis of the high construction costs of May 1947, it is estimated that the whole of the unfinished works would cost about four hundred and twenty-five or four hundred and thirty million dollars. This does not include the power project which will be paid for by New York State and Ontario, but it does include the cost of the seaway to both governments, with interest during construction.

Dr. DANIELIAN. How much will it cost on an annual basis?

Senator WILEY. Dr. Danielian, the subcommittee went thoroughly into that question, and it estimated that on the basis of 2½ percent interest, and a sinking fund which would retire the investment in 53 years, and including adequate operating costs, the annual charge to both governments together would be about $17,000,000.

Dr. DANIELIAN. Will there be enough trade and toll revenues, Senator AIKEN, to support such annual expenses?

Senator AIKEN. The bill provides a maximum tonnage charge of $1.25. Bulk agricultural products would carry a much lower rate. Now, former President Hoover estimated there would be 30,000,000 tons of traffic. Secretary of Commerce Averell Harriman substantiated this estimate. The evidence is clear that after a period of development, there will be more than enough revenue to pay the annual charges. This has been our experience at Panama Canal.

Dr. DANIELIAN. The railroads opposed the Panama Canal, too, didn't they?

Senator AIKEN. Yes, and I guess they are not too proud of that episode now.

Dr. DANIELIAN. If the St. Lawrence can be developed on a self-liquidating basis, why doesn't private industry undertake it?

Senator AIKEN. Dr. Danielian, it is an interesting but little-known fact that private industry was among the first to stake out a claim to this natural resource. Twenty years ago some of the most powerful economic interests in the United States tried to get licenses from the State of New York to develop this project for profit. Governors Al Smith and Franklin Roosevelt of New York and President Hoover in Washington just didn't see it that way.

Dr. DANIELIAN. Some Members of the House Public Works Committee say that they would favor this as a private development. Do you think that is feasible?

Senator AIKEN. I think congressional policy and the law as interpreted by the Supreme Court is quite clear on the point that the development of these large water resources is a governmental function. I don't think we are going back on that established policy. It is not practical to suggest that everybody, the public, the Governments of Canada and the United States, and the governments of New York and Ontario, should change their program in order to create opportunities for private exploitation.

Senator WILEY. Senator AIKEN is right, The Canadians would oppose private development and I am not sure that it would be acceptable either in New York or Washington. Throughout our history, the Army engineers have spent nearly $4,000,000,000 for flood control and rivers and harbors projects, none of which brings a direct revenue to the Treasury. In this instance, we are going to make the project pay for itself. I like it that way.

Dr. DANIELIAN. What position do the opponents take, Senator Wiley?

Senator WILEY. Representatives of the railroads testified that they favor self-liquidation and would not oppose this project if it can be proved to be self-liquidating. Of course they have doubts on that score but the subcommittee is convinced it can and will be made to pay for itself.

MIDWEST ORE SITUATION

Dr. DANIELIAN. Senator WILEY, during the past several months there have been many stories in important magazines to the effect that the iron-ore resources of the United States, in Minnesota, are being exhausted. Was there any evidence presented before your committee on this situation?

Senator WILEY. Yes, Dr. Danielian, everyone seems to be agreed on the facts that the iron-ore resources in the Lake Superior region would be exhausted in a matter of 10 to 20 years. The only difference of opinion seems to arise on how to deal with this condition. Some say we will utilize low-grade ores, but the cost of this would be substantially higher than at the present time, resulting in higher costs of steel and everything that is made from steel. Others say they will just pick up and move their plants to the east coast or the Gulf coast. This will mean tremendous dislocation of industry and community life in the whole Great Lakes area. I say let's build the St. Lawrence seaway and utilize both low-grade ores and import from other sources the remainder of our requirements. In this way, the cost of iron and steel would be low and dislocations of industry and people not too serious.

Dr. DANIELIAN. I understand the Interior Department claims also that the seaway is needed to bring in other minerals, too.

Senator WILEY. Yes; copper, bauxite, chrome, and many other minerals are needed and can be brought in cheaply.

SEAWAY'S POWER ASPECT

Dr. DANIELIAN. Senator AIKEN, the St. Lawrence project calls for the development of a large amount of water power on the St. Lawrence River. We have heard much about atomic energy displacing existing sources of electric power. Would you care to comment on the claim made by some that we will not need to develop hydroelectric resources, in view of the impending abundance of atomic energy?

Senator AIKEN. There is no question that in time atomic energy will, if applied to peacetime uses, change our mode of life very materially. It will become an important source of energy. However, the most optimistic estimates currently available seem to

agree that in the foreseeable future electricity from atomic energy will cost about 4 times as much as from the St. Lawrence. When atomic energy becomes available it will first replace highest cost electricity, the most inefficient steam-generating units. We are going to need to develop water power in large quantities for a long time to come, because it will be cheaper.

ADVANTAGES OF SEAWAY

Dr. DANIELIAN. Senator AIKEN, could you briefly outline the principal advantages of the St. Lawrence project?

Senator AIKEN. 1. Of course, national defense. The Joint Chiefs of Staff, Admiral Leahy, General Eisenhower, Admiral Nimitz, and General Eaker said in a report to the Senate Foreign Relations Committee that this would be a substantial help in total industrial mobilization in another emergency.

2. Cheap water transportation to bring out industrial and agricultural resources of the whole midcontinent of North America nearer the markets of the world.

3. Cheap power, in an area including New York and New England where rates are high and power resources are short.

4. Conservation of natural resources of oil, iron ore, copper. There are many raw materials that are running low in this country and we should import as much as we can.

Finally, improved international relations. Canada, our best friend and customer, has spent over $130,000,000 completing a part of this waterway, and we have delayed our part. We can set a good example to the world of international cooperation in great constructive undertakings.

What we do here will have an influence on the Rhine, the Danube, the Uruguay River in South America, the Yangtze in China, and many other places.

Senator WILEY. That's a splendid summary of the case, George.

Senator AIKEN. Thank you, Alex; I got it partly from your subcommittee report.

NAVIGATION AND POWER

Dr. DANIELIAN. Senator WILEY, I have heard it suggested that the St. Lawrence Power project could be built separately without constructing the seaway. Is that feasible?

Senator WILEY. No; definitely not. From a legal standpoint, under the commerce clause of our constitution, navigation is the principal justification for constructing anything on navigable rivers. Power is a by-product. I don't believe either the Federal Government or Canada would sanction the construction of power without navigation on the St. Lawrence River.

Senator AIKEN. All that talk about building one without the other is merely an attempt by the opponents to divide those who are supporting the St. Lawrence project. When you build the dam and powerhouse, you already create a lake for navigation. It only requires a small amount of additional expenditure to build the canals and locks. It is not economical to build this project for one purpose alone.

BIPARTISAN SUPPORT

Dr. DANIELIAN. I notice, Senator WILEY, that the St. Lawrence legislation is sponsored by a distinguished bipartisan group including yourself and Senator AIKEN, as well as other leaders in both parties, such as Senator BARKLEY and Senator VANDENBERG. There doesn't seem to be any partisanship in the advocacy of this project.

Senator WILEY. In fact, that has been characteristic of this project ever since its inception. From the time of Woodrow Wilson, through the administrations of Coolidge, Hoover, Roosevelt, and Truman, the support of this project has been bipartisan. I say it is an all-American project.

Senator AIKEN. I think it will continue to be that way until it is built. The same thing has been true in the State of New York where both Democratic and Republican governors have repeatedly advocated the construction of this project.

Senator WILEY. If New York State really gets behind this project, with 2 important Senators and 44 Congressmen in the House, our job of getting Federal approval would be much facilitated.

Dr. DANIELIAN. How is it possible for the public to impress its views upon Congress? For example, the Rochester Chamber of Commerce has been opposing the St. Lawrence project before congressional committees. However, a recent poll of 3,000 business firms in the city indicated approval of the St. Lawrence seaway by 72 percent of them. Here is a situation where Congress is getting a wrong view of the attitude of the business community in Rochester.

Senator AIKEN. The only way you can get around such misrepresentation is for the people themselves to write and wire and speak to their Congressmen and Senators. Otherwise, minority interests will try to give a wrong impression of public opinion.

CONCLUSION

Dr. DANIELIAN. Thank you, Senator AIKEN and Senator WILEY. You have been very helpful in explaining the situation in Washington on the St. Lawrence legislation. I might add that when this project is built, it will be due in large part to your efforts.

Col. Evan E. Kimble

EXTENSION OF REMARKS

OF

HON. T. MILLET HAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. HAND. Mr. Speaker, under leave to extend my remarks, I am enclosing an interesting article in the Vineland (N. J.) Times-Journal, which refers to a story appearing in the American Flint, the official publication of the American Flint Glass Workers Union, relative to Col. Evan E. Kimble, one of the leading figures in the glass industry today. The article follows in part:

HE NEVER FORGOT

An entire page in the June issue of The American Flint, official publication of the American Flint Glass Workers Union, is devoted to a tribute to Col. Evan E. Kimble, founder of the Kimble Glass Co. The article is illustrated with a photograph of Colonel Kimble, and a picture of the AFGWU withdrawal card issued to him on February 28, 1897, by Local Union No. 33, Gas City, Ind.

The article reads:

"We here reproduce a photostatic copy of the withdrawal card of E. E. Kimble, which furnishes evidence of the trade-union background of Col. Evan E. Kimble, of the Kimble Glass Co., Vineland, N. J.

"Mr. Kimble was an outstanding worker in the lamp-working department and at an early age readily grasped the fundamentals in the art of producing fine glassware, which is evidenced by the fact that from the humble beginning as a worker and a member of the American Flint Glass Workers' Union he applied himself to his given task and by the fair play and honest business methods was responsible for the growth and progress of the Kimble Glass Co., which is one of the outstanding glass companies, producing in their Vineland (N. J.) plant chemical wares, laboratory glassware, and apparatus rod and tubing."

NEVER FORGOT HE WAS A WORKER

"Mr. Kimble, in his relationship with the members of the American Flint Glass Workers' Union throughout the years that he has been the owner of the Kimble Glass Co., has been harmonious and he has never forgotten the day when he himself was a worker in the lamp room and a member of the AFGWU, and understands by experience all the trials and tribulations that confront the working men and women.

"The Kimble Glass Co., which he built to its present powerful position in the glass industry, has employed throughout its entire existence members of the American Flint Glass Workers' Union, Local Union No. 44, Hot Metal, Vineland, N. J.; Local Union No. 132, Lamp Working, Vineland, N. J.; Local Union No. 87, Mold Making, Chicago Heights, Ill.; Local Unions Nos. 514, 521, 550, 559, 523, Miscellaneous, at Vineland, N. J.; Local Union No. 555, Miscellaneous, Pleasantville, N. J.; Local Union No. 588, Miscellaneous, Camden, N. J.; and Local Union No. 582, Indianapolis, Ind."

The First GOP Congress Since the Advent of the New Deal

EXTENSION OF REMARKS

OF

HON. HARVE TIBBOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio broadcast made over Station WOL July 25, 1947, by George E. Reedy on "The First GOP Congress Since the Advent of the New Deal":

The first GOP Congress since the advent of the New Deal has demonstrated one all-important fact. Whatever shortcomings the Republicans may have, they are a unified party, and do follow the program laid down by their leaders.

To one who has watched the family feuds in Democratic Congress after Democratic Congress, this is little short of amazing. A party that presses a united program and forgets minor differences in favor of that program will definitely leave its mark.

At the beginning of the New Deal regime, the Democrats looked like a political party solidly behind its leadership. It turned out that the only unifying factor, was the personality of the late President Roosevelt.

Even that wore thin in a few years. The Democratic Party was irreparably split, between the North and the South. No one could heal that breach, on any permanent basis. It was just one of those things that couldn't be done.

This was probably one of the most important factors in the defeat of the Democratic Party last fall. No one could vote for the organization with any assurance that it would push any particular piece of legislation.

As Abraham Lincoln once said, "A house divided against itself must fall." The Democratic House did fall, and unless its tenants learn how to patch up their quarrels, it will take them years to put it up again.

The Republican Party, on the other hand, took over the control of Congress, with a clear idea of what it wanted. It also knew how it would get what it wanted. A program was laid down and followed by every Member.

It is interesting to note that there are never more than a few Republican votes against any Republican bill. Frequently, however, there are more Democratic votes against than for a piece of Democratic legislation.

The same situation is reflected, in the House leadership race in both parties early this year. The Republicans selected JOSEPH MARTIN, of Massachusetts, as the Speaker, and CHARLES HALLECK, of Indiana, as their floor leader.

These selections were based solely on the views of the Members as to the ability of the two men. There was no question about different political factions, because there weren't any. It was one party.

The Democrats, by contrast, found themselves in a hot box, on the leadership question. Southerners refused to take a northerner, and vice versa. Eventually the problem had to be solved by asking SAM RAYBURN, of Texas, who wanted to retire, to take the job.

RAYBURN'S personal prestige was sufficiently great to bring his party into a semblance of unity. But it was not great enough to really close the breach. Looking forward to the 1948 campaign, Democrats must envy Republicans their unity and singleness of purpose.

Utah and Its History

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. DAWSON of Utah. Mr. Speaker, 100 years ago yesterday, on July 24, 1847, a sturdy band of Mormon pioneers entered the Great Salt Lake Valley. On this memorable day Brigham Young, their leader, surveyed the desolate expanse of sagebrush bounded on the west by a sea of salt, and uttered the historic words, "This is the place." To less hardy individuals this desolate expanse could hardly be termed a paradise. Yet, those who visited the same spot yesterday to view the unveiling of one of the most beautiful monuments in the world were united in their acclaim that "This is the place," for the desert has been made to blossom as a rose. One of our distinguished visitors, Vivian Meik, an outstanding writer, well describes the enthusiasm which strangers have expressed regarding Salt Lake City and the events transpiring there:

UTAH AND ITS HISTORY GREATEST OF HERITAGES

(By Vivian Meik)

A year ago Salt Lake City was only a vague name on a map to me. Today I wonder why the whole world has not acclaimed it as the destined metropolis of humanity's dreams of tomorrow.

To you I am a stranger—perhaps with the ways of strangers inclined to enthuse over a new experience. But to me, whose years can claim as milestones some intimate experience of almost every country across the seven seas, your city and your State are something unique.

I know of no city in any country which can compare with yours in spacious town planning. London, Paris, Berlin (prewar), Moscow, Rome, Calcutta, Shanghai, Tokyo—also prewar—I have known all these and many more. Some equal, perhaps surpass, Salt Lake City in one particular respect or another, but none has your combination of beauty and, shall I say? "quality."

No other city has compelled me, almost against my will sometimes, to watch the dawn wake. Yet I do this almost every morning—and every morning thank heaven for the experience.

BEAUTY ENTHRALLS

There is no question of becoming lyrical about the soft glow across the mountains as the morning—and evening—sun rises or falls over the horizon. My emotion goes far deeper than that.

From the porch of the hospitable home which has given me so typically American a welcome to your country, I look over your valley in amazement—an amazement that seems to be reaching its climax in your centennial.

Paradoxically enough, my amazement is not created by the city itself, but by the epic of the story behind it, the story of the dream that came true * * * the greatest civic dream in hisory.

Perhaps you who were born into this modern saga have allowed your keener perceptions to be dulled somewhat by constant familiarity. I wonder sometimes how many of you appreciate fully that you—yes, you—are a part, a living, integral part, of one of the most dramatic interludes in history.

STORY TO BE RETOLD

In a few days this story—your story—will be reenacted for those to read who will. It may remind you of stories of "your ain folk" which you heard at your mother's knee. It will, I am sure, cause all of you to glow with pride.

For myself, I know I shall live in those few hours every chapter of the greatest human story since God led Moses safely into the land of milk and honey.

I am not concerned here with the purely religious harmonic which spans the centuries between Moses and Brigham Young. I accept that without question as something beyond even the long arm of coincidence.

Today I am concerned with the human story.

From my porch I see a green, tree-laden vista of incredible beauty. It is as if Providence has flung forth largesse and held it static at its moment of bounty—a personal, lovely miracle for you, for me, for thousands yet to come.

FROM DESERT TO GARDEN

Yet prosaic history tells me that only a hundred years ago today there was but one solitary juniper in a deserted barren solitude by a lake whose moribund waters were comparable only to the Dead Sea.

Did the man whose vision made this land "blossom as a rose" see this city today? Did his vision stretch out tomorrow?

If I could only answer these questions.

But behind that vision—can anyone call it merely a dream? There is an almost incredible story of work and faith and of invincible, irresistible courage.

How proud you Utahans must feel today of the story of your fathers—and in that word I include their no less noble womenfolk—who toiled and sweated and honored their God in word and deed that you may have a heritage the like of which there is not in the world today.

HAS NO EQUAL

Yes, I, the stranger who has traveled the years that the locust has eaten, tell you that within your centennial you have the greatest heritage that, in my experience at least, has ever been given to any single community or State—and I think I may claim that my observation of these things is not entirely untrained or inexperienced.

I am proud with you. I feel privileged to watch this story unfold.

Next week I shall watch the Sons of Utah Pioneers come down the canyon of their forefathers—their goal after nearly 1,500 searing, alternately scorched and freezing, footsore, heartbreaking miles.

I shall see the unveiling of the worthy monument to mark that historic day and those immortal words: "This is the place."

But I shall also search the clouds above your mountains.

I shall range the horizon above the mountains for the spirits of those who first won through those cruel miles.

You may tell me that I am fanciful, that I shall be wasting my precious moments in vain imaginings—but I shall still seek, and, in my heart, I know that I shall not have searched in vain.

In my mind's eye, I shall see them and I shall find understanding of these hundred years.

Then I shall look around at you who will be paying homage to their memory—no, homage to the great achievement rather, to their matchless courage, to their faith, and to their dreams—and I shall be glad beyond words that I am with you.

Vicious Campaign Being Made for Purpose of Destroying Cooperatives—Tax-Dodging Charge a Smoke Screen

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. PATMAN. Mr. Speaker, on July 18, 1947, I delivered an address before the annual State-wide meeting of Rural Electric Cooperatives of Texas at Austin, Tex., on the subject entitled "The Cooperatives' Place in the Field of Free Enterprise."

The address is as follows:

My subject, The Cooperatives' Place in the Field of Free Enterprise, is one in which I am greatly interested.

As chairman of the Committee on Small Business of the House of Representatives during the Seventy-ninth Congress, I caused to be conducted an investigation of the charges being made generally over the country that cooperatives did not pay their fair share of taxes and were a threat to the free-enterprise system. Our committee and nine members reported, after 1 year's investigation and after conducting public hearings in many parts of the United States, that the charges that cooperatives are a threat to private enterprise and that cooperatives do not pay taxes were absolutely false and unfounded. This report has been widely circulated and has been grossly misrepresented by many of those, who do not agree with our findings.

COOPERATIVES NOT TAKING COUNTRY

Is is my considered opinion that no individual proprietor, partnership or corporation nas anything to fear from the competition of the cooperatives as long as the customers of such concern are treated fairly and are not required to pay exorbitant prices. The cooperatives are not going to take the country and destroy all existing businesses as many alarmists, who are putting out scare information for the purpose of raising money for themselves to fight the cooperatives, would lead you to believe.

REA ONE OF FINEST FORMS OF COOPERATIVES

The Rural Electrification Administration is one of the nest and best examples of the benefits that may be obtained through a cooperative. Out of approximately 700 REA cooperatives in the United States that have been organized during the past 12 years, not one of these cooperatives has been forced into liquidation. It is a great tribute to the

fine men and women of the rural population of our country that these cooperatives have been so efficiently and successfully conducted and operated. It certainly shows that all the financial and business brains of the country are not in the cities.

A cooperative, such as the REA, attracts the attention and efforts of the most public-spirited and unselfish citizens of a community. A cooperative must have as its officers and directors leaders in a community, who are willing to do something for others while they are doing something for themselves. In order to attract people of this caliber, the members of a cooperative must necessarily have something in common. In the REA cooperative, they have much in common. Each member wants to obtain electricity and the very best and most satisfactory service for himself, in order to obtain the fullest use of electric energy. Each member has this interest in common with the other members, who have a similar feeling and who are anxious to electrify the homes and farms in their community. This great blessing of mankind, which relieves the farmers of back-breaking duties on their farms and relieves the wives of the drudgery in the home, should be made available to every farm home in America just as quickly as possible. Congress should, and I believe will, cooperate to that end.

It is said that the three greatest institutions in the world are the home, the church, and the school. It is also said that the four greatest evils in the world are poverty, ignorance, disease, and crime. One of the longest steps that has ever been made in our country to encourage the three greatest institutions and to discourage the four greatest evils was made when rural electrification was sponsored.

The REA cooperatives were brought into being because of the desire to make this benefit available to rural America. The record that had been made by the private power companies in this respect had not been a satisfactory one. I doubt that anyone can blame the private companies for not doing too much in this field, in view of the fact that they have so much fertile territory to serve where the cost of serving would be so much less and their profits so much greater. However, the private companies should not oppose, and I will say that very few of them do oppose, the move that has been made by the United States Government in cooperation with the people for the purpose of supplying the electrical need of the farmers of the United States.

When Thomas Jefferson advocated public free schools, he was charged with being socialistic. It was said that the private schools of the country—and there were many at that time—would be put out of business in the future if public schools were encouraged and supported. The same argument was made in abolishing toll roads, toll ferries, and toll bridges; however, there is a certain field of service that cannot be properly performed by private capital and which must be provided through encouragement of the State or the Government. Our country has not gone very far in that respect and will probably go little, if any, further in that direction. Our country is primarily, essentially, and fundamentally composed of people, who believe in the free enterprise system and who are opposed to socialism, communism, or fascism in any form.

This brings me back to my subject. The cooperatives are a part of the free enterprise system. Business and industry in this country are operated by either individual proprietorships, partnerships, corporations, or cooperatives. The REA cooperative pays the taxes that either one of the other forms of business pays to either city, county, State, or Federal Governments. The charge that cooperatives are tax dodgers and do not pay their fair share of the taxes is a false charge and made principally by those who have a selfish, greedy ax to grind. There is only one minor exception, which I shall discuss later, but which does not represent the average or the general rule.

TAX-DODGING CHARGE A SMOKE SCREEN

The selfish people who are trying to build up sentiment against, and who are trying to destroy cooperatives in this country, are using the tax-dodging charge as a smoke screen. It is unfounded and they know it. What they are after is not to tax cooperatives, but to destroy cooperatives. It is their purpose to destroy cooperatives as a way of doing business. It is my opinion that it is just as honorable, legitimate and right for 100 farmers to organize a cooperative for the purpose of furnishing themselves with electricity as it is for the same 100 farmers to organize themselves into a partnership for the purpose of doing the same thing. The propagandists, who are carrying on the insincere and dishonest fight against cooperatives, would have you to believe that the partnership form of organization is all right, but that the cooperative form is all wrong.

REPEAL CORPORATION TAX

Under the cooperative plan, all savings that are passed on to the members increase the incomes of the members, which increases the amount of Federal income taxes that the members must pay to the Federal Government. At the same time, the partnership does not pay any taxes as such, but the members of a partnership who profit by reason of earnings or savings from the partnership must pay taxes on their individual incomes to the Federal Government. It is exactly the same thing. I will admit that as between individual proprietorships, partnerships, and cooperatives on the one hand and the corporate form of organization on the other, that there appears to be double taxation on the corporation. The corporation must pay the tax as a corporation and the dividends that are distributed to the owners of the stock by the corporation must also pay income tax on the amount so received. People prefer the corporation form of organization because it limits the liability of the stock owners. However, this form of double taxation should be removed by the Federal Government and I advocate its removal. The corporation should be relieved of the obligation of paying taxes except possibly a small, say 5 percent, which could be considered a premium payment for the corporate form of organization, which limits the liability of the stock holders. Then the dividends that are distributed to the stockholders would be subject to income taxes in the hands of those receiving them. Some of the greedy opponents of the cooperative system of doing business have gone so far as to charge that cooperatives represent a form of communism, and that they are sponsored in America by Stalin. No charge is further from the truth. I repeat that the cooperative is just as much a part of our free enterprise system and is just as free from communism as the corporate form of operation.

During the past 12 years the Federal Government has made available to REA cooperatives approximately $1,000,000,000 in the form of loans to the cooperatives. This money is being paid back with interest, much of it long before it is due.

Objection is raised by the opponents of cooperatives that they do not pay a sufficient interest rate. This charge is without substance because the interest rate paid by the cooperatives has been on the average the going rate of interest paid on Federal obligations. This charge is rather ironical coming from those in many instances, who are now and have in the past profited so much from Government subsidies, and financial assistance provided by the Federal Government at a much lower rate of interest. The Federal Government can easily borrow money for much less than 1 percent.

THE RFC

The Reconstruction Finance Corporation was organized in 1932 for the purpose of bailing out the banks, railroads, and insurance companies that were in distress. It was not until 1933 and later that the powers of the RFC were enlarged to help other groups and classes. During the past 15 years, the RFC has made loans aggregating more than $6,000,000,000 to banks, railroads, and insurance companies and no one screamed to high heaven that this was communism and should be stopped. Incidentally, the amount loaned to these three groups represents six times as much as the total amount loaned to all the farmers in the the United States for the purpose of assisting them in electrifying their homes, which substantially increases the resources of the entire Nation. In addition, the Federal Reserve Banking System, as good a purpose as it serves, and the commercial banking system of the country, which has performed such wonderful service in time of peace and war, operate substantially upon the credit of the entire Nation, thereby giving to business, banking, and industry a great advantage through the use of our Government's credit at a very low rate of interest. Much of such business is performed on a rate of interest of one-half of 1 percent, or less, because it is secured by the properties and incomes of all the people, including the rural population.

Any benefits received by the REA cooperatives are molehills in amount compared with the huge mountains of benefits and subsidies which have been furnished to big business and industry by the Federal Government.

When Congress investigates the charges made against cooperatives for the purpose of comparing the infinitesimal benefits they receive with the huge subsidies and privileges granted by the Federal Government to others, the results will not be helpful to the latter. I welcome such an investigation and hope it is soon conducted.

MEMBERS OF COOPERATIVES WEALTH PRODUCERS

The greatness of a Nation can be measured by the happiness and prosperity of the people, who create the Nation's wealth. No group in America creates more of the Nation's wealth than the group of people, who are members of the REA cooperatives. They are truly wealth producers. They are daily adding to the wealth of the Nation. They furnished the food that was necessary to win World War II. Food was just as necessary as bullets, as bullets could not be used without food.

Although we should not try to array class against class, and I certainly would be one of the last persons in this country to make such an attempt as it would be contrary to every principle that I have ever stood for, however, it is very unbecoming to the classes and groups, who are not wealth producing, to criticize and attempt to destroy the opportunities and benefits of those, who are among the greatest wealth producers and creators in our land. In their own interest and in the Nation's interest, they should encourage such benefits to our farm population rather than attempt to retard them.

Danger lurks where people go hungry. For many years to come, the farmers of this Nation have a great responsibility in furnishing the food for people in other countries, as well as our own country.

REA VITAL FOR FOOD PRODUCTION

When the oceans represented barriers to would-be aggressors, our Nation was more secure against attack by a foreign foe than now when not only do the oceans represent paved highway to our shores, but air transportation and atomic energy have made our country a quick target for any foe. This

situation makes it more necessary than ever that we try to prevent conditions in other lands arising that will cause people to starve and go hungry. In any country, people will fight before they die of hunger. Little fights cause riots. Riots cause small wars. Small wars cause big wars. Our country cannot escape involvement in any major war. It is in our interest to do what we can to prevent conditions in any country that could likely cause a war.

The farmers of this Nation, most of whom are members of the REA cooperatives, will do more toward assisting in relieving these conditions at home and abroad than any other group in America.

KINDS OF TAXES PAID BY COOPERATIVES

To be specific on taxes, cooperatives pay all kinds of Federal taxes, including capital stock, income, old age insurance, unemployment compensation, and stamp taxes. A cooperative also pays to the State capital stock, income, occupational, licenses, unemployment, property, and retail sales taxes. In addition, a cooperative pays all city and county taxes like any other form of private enterprise.

ONE SMALL GROUP—NOT TYPICAL—EXEMPT

There is only one small group of cooperatives that is exempt from the payment of one tax. A cooperative in this group is not required to pay a Federal income tax if an exemption has been granted after application has been made therefor, although required to pay all other taxes. These cooperatives in this small group are organized under what is known as the Capper-Volstead Act, which was sponsored by two prominent Republicans in 1921, and the bill was signed by President Warren G. Harding, a Republican President. This is mentioned to answer the argument that the New Deal gave the cooperatives a tax exemption.

Under this law, the Federal income tax exemption is granted upon application. However, the benefits are so small that 50 percent of the cooperatives in this group have failed to even make application for the tax exemption. These cooperatives are composed principally of small farmers for the purpose of buying many of their supplies needed in farm operations and to sell the products of their labor. Out of the tens of thousands of cooperatives in the United States, it is only this small group of very small cooperatives that receives any kind of tax exemption whatsoever and it is only this small group that the big propagandists of the Nation, who are spending millions of dollars a year to destroy cooperatives, can claim are vulnerable to any one of their attacks. The propagandists, who are trying to destroy all cooperatives, are spending several times as much money every year in their efforts than the amount of Federal income tax would be if the tax-exempt group was fully taxed. In fact, if the cooperatives in that group were fully taxed, the Government would not collect enough money to pay the interest on the national debt 60 seconds and would not collect enough money to pay the cost of administering the tax returns. The propagandists, who are making the false charges against cooperatives, fail to tell the public that five out of every ten corporations engaged in business in this country pay no tax whatsoever, because they operate without profit or in a loss position. If you use the arguments of these propagandists as a guide to go by, it could be contended that these operators of corporate businesses that pay no Federal income taxes are also a threat to other units of free enterprise.

CREDIT UNIONS

Credit unions have been very helpful to the people of small means in this Nation. They are also cooperatives. The members are composed usually of groups having a great deal in common. For that reason, the officers and directors spend a certain amount of time each month in the interest of their credit unions. There are 3,782 Federal credit unions and 4,858 State credit unions in the United States. They have 3,000,000 members, with assets over $4,000,000. They encourage thrift and savings. If a member is in need of funds, because of illness or a death in the family, or for any other purpose, the funds can be obtained through the credit union at a very low rate of interest and the members saved the expense and embarrassment of having to deal with a loan shark. Like the REA cooperatives, not a single credit union has been forced into liquidation in the United States. They, too, are operated by people of small means and without financial experience.

LOAN SHARKS

A trail of misery that cannot be calculated is caused by the loan shark, who is often referred to as "the most odious of all human vultures." In many States, he is preying upon as many as a fourth of all families. An investigation has recently disclosed that in Dallas, Tex., a record of 2,556 loans by 72 companies show that the borrowers paid $85,000 interest on $55,757. The average interest rate in the first thousand cases was 271 percent and the highest was 1,131 percent. One case was cited in which the loan shark took in $1,053 in 9 years on a loan of $20 obtained by the borrower to purchase medicine for his sick wife.

The Government has been trying to eliminate loan sharks through different cooperative credit unions that can be organized locally and conducted by the people who organize them.

The credit union and the REA cooperatives are my favorites among the group.

COOPERATIVES NO THREAT TO EXISTING BUSINESSES

I do not agree that cooperatives will soon operate all or even a substantial part of the grocery stores, drug stores, filling stations, or other types of retail distribution in this country, as charged. In order for a cooperative to be conducted successfully, it must be composed of people who have something in common; for instance, members of the same church, or a lodge, employees of the same post office, factory, city, county, or State, who are closely associated together, people who are willing to use their time and efforts to help the other members while they are helping themselves. Cooperatives composed of members who do not have something in common will not likely succeed and prosper in the end.

SHOTGUN IN CORNER

Therefore, cooperatives in our national economy represent a shotgun in the corner for oppressed people to use in an emergency in order to protect themselves from monopoly, greed, and extortion; also in order to provide themselves with comforts, conveniences, and essentials, which cannot be satisfactorily or economically obtained in any other way.

1948 IMPORTANT YEAR

Next year in Texas will be an important year to members of cooperatives. A strong effort is being made to destroy cooperatives. The year 1948 is a Presidential year, when party platforms will be written. Unless there is substantial sentiment in favor of cooperatives at the various political conventions there is a likelihood that anticooperative planks will be inserted. Being more specific, next May delegates to the Democratic National Convention will be selected in Texas.

To be more specific, May 1, which is the first Saturday in May, national precinct conventions will meet to elect delegates to national county conventions. The time of meeting has been fixed for 2 p. m. in rural precincts and 7 p. m. in city precincts.

The following Tuesday, May 4, at 10 a. m., the county executive committee will meet and make up the temporary roll of delegates to the county conventions. On the same day, May 4, at 2 p. m., the national county convention will meet at a place to be previously designated by the county executive committee to elect delegates to the national State conventions.

May 25, which is the fourth Tuesday in May, the national State convention will meet at a city previously selected by the State executive committee for the purpose of selecting delegates to the national convention.

These are important dates for every good citizen. I urge you and your friends to attend your precinct convention, May 1, and see that the right kind of delegates are selected to the county convention and then to the State convention and then to the national convention.

It is through politics that the people rule. Anyone who says he is not interested in politics is saying that he is not interested in his Government or his own business. It is only through politics that the people control their Government and remain the sovereign power of our country. Applying this discussion to free enterprise, it is necessary that the political affairs of our Government be successfully conducted in order to save our Government, in order that free enterprise may also be saved. Without politicians there could not be a representative democracy, because it is only through politics that the people have a vehicle to express their wishes and demands so that they can be carried out. The public has a fertile, honest, and intelligent mind. The collective mind, acting through the medium of politics, has provided our country—the United States—with the greatest Government in all the world. It will continue great as long as the people taken an interest in its affairs and do not become indifferent.

You have a great responsibility. Your policies will be reflected in the economy of the Nation. In helping to save your country you will be helping your own business by preserving the free-enterprise system.

It was Demosthenes who said: "He who saves his country saves all things, and all things saved will bless him. He who lets his country die lets all things die, and all things dying will curse him."

Mr. Speaker, I am inserting herewith chart A, which appeared in the report of the Committee on Small Business, concerning the taxation of cooperatives:

CHART A

SUMMARY OF TAX LIABILITY OF VARIOUS TYPES OF BUSINESS ENTERPRISES, INCLUDING COOPERATIVES

As a reference for consideration of facts outlined further in the report it has been deemed advisable to indicate generally the differentiation in the various forms of business enterprise and the tax liability each incurs by virtue of its income.

There follows as chart A a simple chart which indicates this position in relative form. In the text following will be found a more detailed description of the points in issue.

Table A has been carefully checked and verified for accuracy by the following agencies and organizations:

United States Treasury, Tax Research Division;

Department of Labor, Bureau of Labor Statistics;

Department of Agriculture, Farm Credit Division, Cooperative Research Section;

Staff of the Joint Committee on Internal Revenue and Taxation, United States Congress; and by

Independent attorneys and representatives of business and trade associations in position to pass an unbiased opinion on the reflections indicated by the chart.

TABLE A.—*Comparative tax applicability for selected types of business enterprise*

[Positions are generalized. Detailed explanations appear in text of the report]

	Nonco-operative corpo-rations	Partner-ships	Individ-ual pro-prietor-ships	Nonfarm consumer co-ops	Farmer cooperatives	
					Exempt	Non-exempt
FEDERAL TAXES						
General corporation taxes:						
Capital-stock tax	Yes	[1]	[1]	Yes	No	Yes.
Income taxes, general	Yes	[1]	[1]	Yes	No	Yes.
Individual income taxes (in the hands of the recipient):						
(A) Cash distributed:						
1. Patronage dividends	[1]	[1]	[1]	[1]	Yes	Yes.
2. Dividends on capital stock	Yes	[1]	[1]	Yes	Yes	Yes.
3. Cash withdrawals	[1]	Yes	Yes	[1]	[1]	[1].
(B) Undistributed earnings:						
1. Patrons dividends in noncash form	[1]	[1]	[1]	[1]	Yes	Yes.
2. Allocations to reserves or surplus	No	Yes	Yes	No	No	No.
Social security taxes:						
Old-age insurance	Yes	Yes	Yes	Yes	Yes [2]	Yes.[2]
Unemployment compensation	Yes	Yes	Yes	Yes	Yes	Yes.
Stamp taxes	Yes	Yes	Yes	Yes	No	Yes.
STATE TAXES [4]						
General corporation taxes:						
Capital stock taxes	Yes	[1]	[1]	Yes	No	Varies.
Income taxes	Yes	[1]	[1]	Yes	No	Yes.
Occupational and other licenses	Yes	Yes	Yes	Yes	Yes	Yes.
Unemployment taxes	Yes	Yes	Yes	Yes	Yes	Yes.
Property taxes	Yes	Yes	Yes	Yes	Yes	Yes.
Retail sales taxes [5]	Yes	Yes	Yes	Yes	Yes	Yes.
CITY AND COUNTY TAXES [4]						
Occupational licenses	Yes	Yes	Yes	Yes	Yes	Yes.
Property taxes	Yes	Yes	Yes	Yes	Yes	Yes.

[1] Not applicable.
[2] Usually no.
[3] Agricultural pursuits are exempt from old-age insurance and unemployment compensation if renumeration does not exceed $45 for the calendar quarter.
[4] These items vary with State or local regulation. Applicability shown is the general position.
[5] Certain types of agricultural items are exempt from retail sales taxes in all forms of business enterprise including cooperatives.

The table is as follows:

Passenger fatalities and fatality rates per hundred million passenger-miles

ALL STEAM RAILWAYS

Year	Passenger-miles	Fatalities	Rate per hundred million passenger-miles	Passenger-miles per fatality
1935	18, 509, 497, 000	23	0.12	804, 760, 739
1936	22, 459, 781, 000	23	.10	976, 512, 217
1937	24, 695, 214, 060	22	.09	1, 122, 509, 727
1938	21, 656, 918, 000	79	.36	274, 138, 203
1939	22, 712, 941, 000	32	.14	709, 779, 406
1940	23, 815, 598, 000	80	.34	297, 694, 975
1941	29, 406, 250, 000	41	.14	717, 225, 610
1942	53, 747, 029, 000	98	.18	548, 439, 072
1943	87, 924, 994, 000	271	.31	324, 446, 472
1944	95, 662, 501, 000	259	.27	369, 353, 286
1945	91, 826, 353, 000	145	.16	633, 285, 193
1946	[1] 64, 750, 000, 000	115	.18	563, 000, 000

DOMESTIC SCHEDULED AIR LINES

1935	313, 905, 508	15	4. 78	20, 927, 034

[1] Partially estimated.
[2] Not yet available.

Source: Railways: Interstate Commerce Commission. Passengers as used above relate to passengers on trains in both train and train-service accidents; that is, collisions, derailments, etc., or persons getting on or off passenger-carrying trains under conditions not constituting trespass. They do not include ICC Subclassification "travelers not on trains"—other persons lawfully on railway premises in connection with their journeys by railways. Fatalities cover both injuries which result in death within 24 hours following the accident and deaths occurring more than 24 hours after the time of the accident. Suicides are not included.

Air lines: Civil Aeronautics Administration. Figures cover scheduled air lines operating within the continental limits of the United States. Fatalities and passenger-miles include both revenue and nonrevenue data.

Passenger automobiles and busses: National Safety Council. Drivers of passenger automobiles are classed as passengers. Bus transportation passenger mileage estimated by Bus Transportation magazine. Other mileage estimated from gasoline consumption by the National Safety Council. Data for passenger automobiles and busses combined in years prior to 1941.

A Good State

EXTENSION OF REMARKS
OF
HON. FRANK W. MATHEWS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. MATHEWS. Mr. Speaker, it is a fine thing for a man to be proud of his own State, even if he does not have too much to be proud of. It is a finer thing when a man is proud of his own State and has good reason for that pride. I am proud of my State of New Jersey. It has just about everything that could be desired in a State, from large industries to small businesses, and from enormous corporate agricultural operations to small farms. It has busy cities, beautiful country, and attractive towns. It can offer the visitor the seashore or the mountains, the ocean, or the lake.

It has good government which is not costly and which does not take very much from what little is left of the taxpayers money after the Federal Government cuts off its big slice.

It is a happy State in which to live, and from statistics compiled by my good and efficient friend, Dr. J. Lynn Mahaffey, director of the Department of Health of New Jersey, it appears to be a normal and healthy State in which to live. There are 21 counties in the State of New Jersey and the following is the record of births, marriages, deaths, and deaths under 1 year of age for the year 1946:

County	Births	Marriages	Deaths	Deaths under 1 year
Atlantic	2,406	1,954	1,722	87
Bergen	9,496	5,466	4,118	227
Burlington	2,326	1,453	1,154	74
Camden	6,142	3,798	2,914	161
Cape May	613	411	474	21
Cumberland	1,785	944	913	71
Essex	18,487	12,595	9,296	518
Gloucester	1,780	982	817	52
Hudson	13,815	10,427	7,034	424
Hunterdon	656	444	416	20
Mercer	4,558	2,939	2,223	178
Middlesex	5,187	3,475	2,141	124
Monmouth	4,153	2,416	2,296	117
Morris	2,974	1,591	1,376	73
Ocean	983	631	578	36
Passaic	6,569	4,754	3,221	166
Salem	1,195	436	463	50
Somerset	1,833	978	768	53
Sussex	808	398	374	20
Union	8,158	4,281	3,355	198
Warren	1,120	647	608	34
State total	95,044	61,020	46,261	2,704

Travel by Railroads Safest Method of Transportation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. VAN ZANDT. Mr. Speaker, the following table of passenger fatalities, which furnishes a comparison between rail, bus, taxicabs, private passenger automobiles, and air travel, reveals that the railroads provide the safest mode of transportation for the traveling public.

Lobbying at the Capitol

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the RECORD an article

entitled "The Little Foxes," written by Joseph and Stewart Alsop, in their column in the Washington Post of July 25, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MATTER OF FACT—THE LITTLE FOXES

(By Joseph and Stewart Alsop)

The country is due for a barrage of pious platitudes about the accomplishments of the departing Congress from partisans who wish to paint a charming picture. There will be a holy silence, however, about one feature which has been as conspicuous as it is uncharming. In the presence of lobbyists the Eightieth Congress of the United States has behaved like a blowzy chorus girl just starting on her second pint of rye.

The fact is vitally important, and not merely to the American progressives who can hope that the triumphs of the lobbyists today will prepare for the triumphs of progressivism tomorrow. Sensible American conservatives must realize that holding a lobbyists' carnival at the Capitol is not a wise way to serve long-range conservative interests. Yet at this session something very like the beginning of a lobbyists' carnival has been plainly discernible.

"You can't take a deep breath around here," remarked one disgusted Republican Senator, "without getting a lungful of utilities lobbyists."

Although the large ranchers, real estate, wool, and one or two other lobbies have been rather more conspicuously successful, the best introduction to what has been going on is the story of the blatant power lobby.

The power lobby is the most active, and most conspicuously well-heeled in Washington. Its grand panjandrum, the high-powered P. L. Smith, representative of the National Association of Electrical Companies, gets a salary in the Hollywood class—$65,000 annually, with an ample expense account. But even the prosperous Smith is less important than the numerous officials of the large utilities companies. These converge on the Capitol at frequent intervals to make the boys on the Hill see the power question in the old, free enterprise way. And behind these larger operators, there is a whole network of lawyers with retainers from the utilities, bankers with deposits from them, and other influential figures. These speak from the voting districts to Washington with voices of authority.

Besides stirring up the sordid attack on David E. Lilienthal, the power people have scored major successes at this session with the Appropriations Committees. These committees are a natural field of operations, because of their views on public power held by the two chairmen, roaring old JOHN TABER, of New York and his more slick opposite number in the Senate, STYLES BRIDGES, of New Hampshire.

Through the Appropriations Committees, in fact, the Federal power program has been put into a slow stall, by snipping here and chopping there at vital projects. The great Bonneville project, for example is so undermaintained and overloaded that the transformers are literally being cooled by having hoses played on them. Yet the Bonneville construction funds were cut almost in half, and the funds for operation and maintenance reduced from $4,700,000 to $2,500,000. Thus the present thoroughly dangerous condition will continue.

Again, extension of power supply from the Shasta Dam to several important California municipalities was neatly prevented by the simple deletion of funds for a transmission line. And the Southwest Power Administration, which has to contend with especially strong political counterinfluences in its Texas-Oklahoma-Arkansas area, also had its funds for transmission lines drastically cut. Thus the benefits of the national investment in the Dennison and Norfork Dams, on the Red and White Rivers, will be denied to many potential power users.

These achievements at the present session are obviously intended, however, to be only the hors d'oeuvres—the little snacks at the beginning of a much larger meal. For the first time in a good number of years, the more unenlightened utilities leaders have been openly trying to put the clock back with legislation. The result has been a crop of strikingly significant bills—the Rizley bill, to free natural gas from regulation; the Dondero bill, to limit sales of public power and to deprive the public power-minded Interior Department of its jurisdiction; the Thomas bill, which would have the effect of forbidding Government construction of any further transmission lines; and the bills of Representative MILLER of Connecticut, which would liberate from regulation large numbers of utilities companies now regulated.

None of these bills has yet passed. But this does not trouble the power people. Their strategy obviously is to put on their real pressure drive later on, when the election is over and, as they hope, an intensively conservative Congress will listen to them even more complacently. In that happy period, the body of Federal power legislation is to be revised.

The public power advocates among Federal officials are to be quietly dropped down the political oubliette. And everything is to be as it was before the hated name of Roosevelt was heard in the land.

Fortunately, such Republican leaders as Senators VANDENBERG and TAFT show none of the responsiveness of the congressional rank and file to these "little foxes that spoil the vines." But as the party of business, the Republicans have got a very big, very difficult decision to make, because of this onslaught of the little foxes upon Washington.

Summary of Agricultural Coordination Act of 1947

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a summary of the so-called Agricultural Coordination Act of 1947, the summary having been made by the American Farm Bureau Federation.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF AGRICULTURAL COORDINATION ACT OF 1947

(H. R. 4150, by Mr. COOLEY, of North Carolina; H. R. 4151, by Mr. HILL, of Colorado; and S. 1621, by Mr. REED, of Kansas, and Mr. STEWART, of Tennessee)

Purposes of this legislation are to avoid duplication, overlapping, and conflicts and to bring about effective coordination in programs and activities of agricultural conservation agencies; to decentralize these programs so that each State and county can adapt them to its own conditions and needs; to reduce the costs of administration; and to achieve the maximum results in agricultural conservation among the maximum number of farmers at the minimum expense.

COORDINATION OF RESEARCH

The research work in conservation would be coordinated through the State agricultural experiment stations in cooperation with the Federal Office of Experiment Stations, on a grant-in-aid basis. The conservation research now carried on by the Soil Conservation Service through its own experiment stations would be assigned to the State experiment stations.

COORDINATION OF EDUCATIONAL AND TECHNICAL ASSISTANCE

The proposed act would eliminate duplication, overlapping, and conflicts among various agencies in furnishing, educational, informational, demonstrational, and technical assistance to farmers, in the field of agricultural conservation, land use, and farm planning, by assigning these functions to one agency, the Agricultural Extension Service. This is the basic job for which the Extension Service was established. The Extension Service would also furnish technical advice and assistance to local soil-conservation districts and to State and county PMA committees, in connection with conservation programs carried on in the respective States and counties.

SOIL CONSERVATION SERVICE

The Soil Conservation Service would be transferred to the Extension Service at Federal, State, and local levels and their Federal, State, and local offices would be consolidated. The regional offices of the Soil Conservation Service, now costing several million dollars annually, would be abolished as they would no longer be necessary under this set-up. The activities of the Soil Conservation Service consist almost entirely of educational, informational, demonstrational, and technical assistance to farmers in the field of conservation, all of which are a part of the basic functions of the Extension Service. The identity of the Soil Conservation Service would be retained but it would function as a part of the Extension Service of the United States Department of Agriculture and the extension services of the land-grant colleges in the States. This consolidation and coordination will make it possible to reach a larger number of farmers and accomplish much better results at less cost. This part of the program would be decentralized on a grant-in-aid basis. In each State, the Extension Service would be required to maintain the Soil Conservation Service as a division of the State extension service, and such of the personnel of the Soil Conservation Service as are needed would be utilized in the State and county offices of the Extension Service.

The bill will not change or interfere in any way with the set-up and operations of the State soil conservation districts acts or local soil conservation districts, organized under these acts. On the contrary, these districts would have more real autonomy under the program than under the present set-up under which the Federal Soil Conservation Service can dictate to local districts what practices and programs they shall adopt. Under the proposed act, soil conservation districts would continue to receive technical assistance but would be freed from centralized control by the transfer of the responsibility for furnishing this assistance to the Extension Service, which is a State agency operated under cooperative agreements with the United States Department of Agriculture. The State extension services would enter into cooperative agreements with local soil conservation districts within their respective States to provide these services.

The appropriations for this work would be placed on a grant-in-aid basis of which not to exceed 10 percent would be allotted as grants to State experiment stations for conservation research, not to exceed 2 percent would be allotted to the Washington office of the Soil Conservation Service, and the balance would be allotted as grants to the

State extension services to maintain the services of the Soil Conservation Service in the States.

AGRICULTURAL CONSERVATION PROGRAM

The agricultural conservation program, hitherto carried on under the Agricultural Adjustment Act, would be decentralized and the responsibility for developing and carrying out this program in each State would be vested in a State committee, which would be reorganized to make it more representative in character and more democratically selected. The State committee, after receiving recommendations of the county committees, would develop a State conservation program, subject to approval of the Secretary of Agriculture. The conservation practices to be included in this program would be limited to those recommended by a technical committee, composed of the State extension director, the State experiment station director, the State commissioner of agriculture, and a representative designated by the State authority created by the Soil Conservation Districts Act, all of whom would be ex officio members of the State committee. In addition to these ex officio members, the State committee would consist of five farmer members. The State committee would function as a part-time policymaking committee and would employ an administrator and other needed assistants to carry out its duties under the supervision and direction of the committee.

In like manner, the county committee would be responsible for planning and carrying out the county conservation program. It would also be enlarged to include a representative to be designated by the board of supervisors of the soil-conservation district in any county where such districts exist in whole or in part.

The State and county committees would be confined to planning and administering the action phases of the agricultural conservation programs and would also continue to administer the regulatory, enforcement, and other administrative phases of the marketing-quota provision of the Agricultural Adjustment Act, and also local phases of commodity loans and price-support programs under the Steagall Act.

By including on these State and county committees representatives of the State soil districts authority and local soil-conservation districts, the act will facilitate the coordination of the conservation programs carried out through soil-conservation districts and the over-all agricultural conservation program, which is developed and carried out through State and county committees.

Conservation payments to farmers, administered through State and county committees, would be utilized to implement this coordinated conservation program within the respective States. The appropriations for soil-building and soil-conserving practices hereafter would be apportioned to the States on the basis of need.

The Champion Rainbow Trout Are From Idaho

EXTENSION OF REMARKS
OF
HON. ABE McGREGOR GOFF
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. GOFF. Mr. Speaker, now that our session is about over, the membership should be interested in the pleasant subject of fishing. Herbert Hoover says what is wrong with the world is that people ought to do more fishing. I hold in my hand the April 1947 issue of Field and Stream magazine, and on page 67, there appears a tabulation of the prize winners for the 1946 Field and Stream fishing contest. Ten prize winners were all taken from Pend Oreille Lake, within my district in northern Idaho. Not only that, but of the 10 given honorable mention, 9 of these were also caught in this same lake, the home of the famous fighting Kamloops Rainbow trout. Last year's champion weighed 31 pounds 8 ounces, and even the twentieth listed weighed over 26 pounds. Already this year a 36-pound new champion has been landed.

There are plenty of other fine fishing lakes and clear trout stream in Idaho's cool, heavily timbered mountains. If you are interested, just drop a line to the Idaho Fish and Game Department, Boise, Idaho.

The list of the prize winners is as follows:

Prize winners—1946 Field and Stream fishing contest—Rainbow trout, open, western division

Winner	Weight	Where caught	When
1. E. A. Kirkpatrick	31 pounds, 8 ounces	Pend Oreille Lake, Idaho	Nov. 26
2. Ivan L. Haruff	20 pounds, 12 ounces	do	Oct. 5
3. C. E. Jones	30 pounds, 4 ounces	do	Nov. 5
4. R. Foster	30 pounds, 2 ounces	do	Sept. 29
5. J. M. Smatian	29 pounds, 12 ounces	do	Nov. 4
6. R. G. Wideman	29 pounds, 8 ounces	do	Nov. 13
7. James A. Eaton	29 pounds, 8 ounces	do	Nov. 9
8. Carl J. Haacke	29 pounds, 1½ ounces	do	July 29
9. Mrs. Laurence Hamilton	28 pounds, 8 ounces	do	Nov. 24
10. Andrew Haas	28 pounds, 4 ounces	Kamloops Anchorage, Idaho	Nov. 10

Honorable mentions: C. V. Osborne, 27 pounds 12 ounces, Pend Oreille Lake, Idaho; Mrs. H. W. Dauterman, 27 pounds, 8 ounces, Cowlitz River, Wash.; Mrs. Charles E. Wilt, 27 pounds 6 ounces, Pend Oreille Lake, Idaho; Leonard H. Licht, 27 pounds 2 ounces, Pend Oreille Lake, Idaho; Robert E. Chaffins, 27 pounds, Pend Oreille Lake, Idaho; R. W. Simmons, 26 pounds 12 ounces, Pend Oreille Lake, Idaho; H. L. Chapin, 26 pounds 8 ounces, Pend Oreille Lake, Idaho; Laurence Hamilton, 26 pounds 8 ounces, Pend Oreille Lake, Idaho; Jack A. Mason, 26 pounds 8 ounces, Pend Oreille Lake, Idaho; Mrs. Chris Kleweno, 26 pounds 8 ounces, Pend Oreille Lake, Idaho.

Board of Foreign Scholarships Appointed by the President

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix a release by the White House regarding the appointment of a board of foreign scholarships. I ask that this release be followed by a statement prepared by me and an editorial from the Kansas City Star on the same subject.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

BOARD OF FOREIGN SCHOLARSHIPS APPOINTED BY PRESIDENT

President Truman today announced appointment of a 10-man Board of Foreign Scholarships to select American students for study abroad under the Fulbright Act.

The Board, which will have general supervision of educational exchanges under the act as well as the institutions to participate, is made up of leaders chosen from the fields of cultural, educational, student, and war-veteran activities as required by the law.

The appointees are:

Gen. Omar N. Bradley, Administrator of Veterans' Affairs, Veterans' Administration.

John W. Studebaker, Commissioner, United States Office of Education.

Francis Spaulding, commissioner of education, State of New York.

Helen C. White, professor of English, University of Wisconsin.

Laurence Duggan, director, Institute of International Education.

Ernest O. Lawrence, professor of physics, University of California.

Sarah Blanding, president, Vassar College.

Walter Johnson, professor of history, University of Chicago.

Charles S. Johnson, president, Fisk University.

Martin P. McGuire, dean of the graduate school, Catholic University of America.

Appointment of the Board is a major step in starting the program under which foreign governments are enabled to pay in part for overseas war surpluses purchased from the United States, with scholarships in their own schools for American students.

Specifically, the law authorizes executive agreements with foreign governments for the use of their currencies and credits acquired by the United States in payment for surplus properties overseas to finance studies and other educational activities of United States citizens in their own educational institutions. The funds could also be used to finance their own nationals in American schools operated in foreign countries and to pay for travel of their own nationals to attend schools here so long as they would not displace Americans.

The law limits the amount to be devoted to educational exchanges in any one country to $20,000,000 to be used at the rate of not more than $1,000,000 annually.

Sale to date of overseas United States surplus property is sufficient to make about $137,550,000 available to 22 countries for the educational exchanges provided by the act over the period of the next 20 years. The annual expenditure under the program is expected to total about $7,000,000.

The State Department, which will administer the law, has received some 12,000 applications from Americans to study abroad under the terms of the act, 5,000 of whom are veterans who are given preference status by the law.

Negotiation of the executive agreements necessary to set the plan in operation has started. It is expected that the actual student exchanges will start at the opening of the academic year in the fall of 1948.

The countries now eligible to participate in the plan, together with the amounts to be proposed for educational exchanges for the 20-year period, follow:

Australia	$5,000,000
Austria	750,000
Belgium	3,000,000
Czechoslovakia	6,000,000
Denmark	3,000,000
Egypt	3,000,000
Finland	5,000,000
France	5,000,000
Greece	8,000,000
Hungary	5,000,000
Iran (rials) (about)	2,000,000
Italy	20,000,000
Netherlands	5,000,000
Netherlands Indies	7,000,000
New Zealand	2,300,000
Poland	8,000,000
Siam	4,000,000
Turkey	500,000
United Kingdom	20,000,000
Burma	3,000,000
Philippines	2,000,000
China	20,000,000
Total	137,550,000

STATEMENT BY HON. J. W. FULBRIGHT

It is most encouraging for the future of this program that men and women of such high distinction and ability have agreed to serve on the Board of Foreign Scholarships. The membership of the Board represents America in the broadcast sense and I congratulate President Truman upon the wisdom of his appointments.

The sponsoring of the legislation creating these scholarships has been the most gratifying experience that I have had in public life. I believe that the thousands of young men and young women who, under this program, will live and study among the people of countries other than their own, will, because of their experience and understanding, exert a powerful influence for peace. In the long run education is the greatest hope of mankind for peaceful and friendly relations among the peoples of the world.

[From the Kansas City (Mo.) Star of July 20, 1947]

VALUE IN A FOREIGN STUDY PLAN

Within a year the first group of American students will enroll in foreign schools under the terms of the Fulbright Act. This measure, named for its sponsor, Senator FULBRIGHT, of Arkansas, permits educational cooperation with any nation buying our surplus war goods. Part of the proceeds from such sales will be left with countries sharing in the program to finance the study of United States citizens overseas and in turn enable foreign students to attend American institutions.

President Truman recently named a board of 10 educators and officials to select students qualified for these scholarships. It will be a large-scale undertaking, with several thousand Americans benefiting from it annually and a fund of $137,550,000 already set aside to pay its expenses over a 20-year period. Twenty-two nations representing most areas of the world are eligible to join us in the plan.

Russia is not among them, having shown no interest in the idea. In fact, American officials got a silent brush-off last year when they sought to discuss a proposal for exchange scholarships with the Soviet Union. This attitude was in line with the Russians' general unwillingness to let their people associate with the citizens of non-Communist countries.

The benefits of the plan no doubt would be increased by Russia's participation in it. Yet this lack will not affect the mutual gains to be made available to all countries where students will be exchanged under the arrangement. The dividends in creating better understanding between these nations and the United States are likely to be large. Our experience in sending Rhodes scholars to England and in bringing Chinese students to America long ago proved the value of such programs.

Marshall Plan and the Demands Upon American Industry

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, it is my opinion that the American people are entitled to know all of the facts in connection with the so-called Marshall plan which has been given wide publicity in the United States and overseas. Actually Secretary Marshall did not suggest the plan but merely indicated that if European nations expected assistance from the United States they would have to work out their own problems to a large degree. As part of my remarks I am including a very informative article by a prominent newspaperman which appeared in the Washington Post of yesterday:

DEMANDS OF MARSHALL PLAN WILL TAX ABILITY OF INDUSTRY

(By Ferdinand Kuhn, Jr.)

American industry will find it hard to meet the inevitable European demands for capital goods under the Marshall program, a Washington Post survey showed yesterday.

Big European orders next winter and spring will mean that the American manufacturer, farmer, and consumer will have to wait longer to get many types of equipment of the kind Europe desperately needs.

If Congress appropriates the funds, the United States probably can export greater quantities of steam locomotives, steel rails, horse-drawn farm equipment, coal cutters, machine tools, horses, and mules.

But even if Congress appropriates the money, or if the World Bank helps with reconstruction loans, many kinds of capital goods simply will not be available for increased export under the Marshall program without the use of Government priorities, or, alternatively, a self-rationing by American industry.

Among these products are freight cars, coal cars, motor tractors, mine locomotives, textile machinery, fertilizer and soda ash, the last of which is essential for making glass, soap, paper, and other commodities.

The new act of Congress extending certain war powers gives the President the right to divert capital goods from domestic buyers if:

1. The Secretary of State certifies that their prompt export "is of high public importance and essential to the successful carrying out of the foreign policy of the United States," and if

2. The Secretary of Commerce has satisfied himself that such exports "will not have an adverse effect on the domestic economy of the United States."

CALLS FOR SACRIFICE

These are sweeping powers. The administration hopes they will not have to be used, but it is ready to use them if necessary to get Europe back on its feet.

Certainly there is no disposition in high quarters here to do what Soviet propaganda accuses the United States of doing—of using the Marshall program as a device to dump unwanted American surpluses on Europe.

Whatever specific quantities Europe may need, the administration knows already that the Marshall program will require what some officials here call sacrifice, and what others call "deferment of cravings" by the American people.

The impending problem was explained for the first time yesterday to Secretary Harriman's 19-man committee of business and professional leaders, whose assignment will be to recommend what America can "safely and wisely" do to meet Europe's needs. The first meeting was partly an organizational session, to be followed by another all-day meeting tomorrow.

STEEL IS BIG PROBLEM

In advance of the Harriman committee's studies and recommendations, however, it is possible to see how well or how badly certain capital goods industries are able to meet the impact of European requirements in the coming year. There is no question here that capital goods will be the heart of the Marshall program, and that the United States is Europe's only major source for getting them.

Steel is by far the most serious bottleneck at the moment, the Post survey shows, and is responsible for most of the others. Even with the estimated current output of 69,000,000 tons this year, steel production cannot meet the demands now coming from almost every sector of American industry.

The shortage is especially serious in sheet, strip, pipe, and tube, which account for about 40 percent of all steel products.

If steel capacity were increased in this country, there would be (in time) more trucks and tractors, freight cars and coal cars, textile machinery, and a thousand and one other industrial products to help reconstruct Europe.

But it takes 2½ years to build an entirely new steel plant, which means that an increase in capacity would be too slow to meet the present emergency in Europe. In any case, the steel industry is reluctant to expand because it doubts whether the current high demand will continue.

Some electric-furnace capacity is not being used today for the simple reason that it does not pay. If it were used, experts here estimate that it could produce an additional 2,500,000 to 5,000,000 tons of steel ingots for export.

This would give substantial help to Europe, which can roll its own steel from American ingots. But because of the high cost of using this capacity, it would require some kind of Government price premium or subsidy plan which neither Congress nor the steel industry is likely to approve.

PAINFUL CHOICE FACED

Something might be done to increase output by the new method of using oxygen instead of air in blast furnaces—a method which increases the rate of steel output by 50 percent. It would not take more than 6 months, according to estimates here, to complete a large-scale switch to the use of oxygen, but it would cost money and probably would require Federal financing.

An Unequaled Epic

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. WELCH. Mr. Speaker, a generation passed from that day in 1907 when

President Theodore Roosevelt sent the Great White Fleet of the American Navy into Tokyo harbor, to that day in 1945 when Admiral Nimitz again took the United States Navy into the same harbor. Theodore Roosevelt's purpose was to prevent war; Admiral Nimitz' purpose was to restore peace.

It was an unequaled epic in the glorious history of our Navy as a strong arm of national defense.

Mr. Speaker, an editorial which recently appeared in the San Francisco Examiner entitled "An Unequaled Epic" merits the attention of every Member of the House of Representatives. Under permission extended to me to include it in the RECORD I invite the attention of the Members to it:

AN UNEQUALED EPIC

Two years have passed since the United States Navy, in the most overwhelming demonstration of sea power history records, steamed to the shores of the Japanese homeland, poised to deliver the death stroke to an enemy who had challenged, and grievously miscalculated, the spirit and valor of American men in American ships.

How completely crushing that victory was, can best be understood by reading a statistical analysis published recently by the Joint Army-Navy Assessment Committee under the title "Japanese Naval and Merchant Shipping Losses During World War II by All Causes."

The book contains no battle accounts, no illustrations, or word-pictures, no personal names, no comment of any kind.

It is merely a collection of graphs, summaries, chronologies; it lists the name, class, tonnage, and type of Japanese craft; the "flag of agent," and "type of agent" that caused the final entry of the tabulation, which is invariably "sunk," with here and there a "probably sunk."

But the coldly objective figures achieve a dramatic impact more startling because so tight-lipped, when the totals are reached:

Out of a total of 8,000,000 tons of shipping, Japan had less than 1,000,000 at war's end.

Of the millions sunk, American submarines, carrier-based aircraft, and surface ships accounted for the vast majority, the submarines alone sending more than 5,000,000 tons to the bottom.

So much for mere figures, staggering enough in themselves, awe-inspiring in their connotations.

For the American Navy started the war reeling from a nearly fatal blow, the treacherous attack upon Pearl Harbor.

For 2 years thereafter it fought under odds always heavy, often heart-breaking and more than once seemingly insuperable.

Men, ships, planes, and guns fought incessantly, outnumbered and outweighed until it seemed neither human flesh nor tortured mechanisms could hope to endure another moment.

It was then that the United States Navy took its place in the front rank of heroism.

That was the hour of its most shining glory.

That was the time that American gallantry, courage, and devotion eclipsed the legends and epics of Salamis, Lepanto, and Trafalgar.

It was then, that through the power of spirit and stoutness of heart, the American Navy contained its materially more powerful enemy and guaranteed his ultimate defeat.

Later, the valiant handful of men and ships grew until 2 years ago no power on earth could have withstood the weight of metal flung by its guns, beneath, upon, and above the enormous area of its dominion.

The American Navy is still the mightiest force afloat.

It has gained a new progressive spirit.

It is intelligently in harmony with new developments, technical and strategic.

It is solidly based on a tradition of change and improvement, and profoundly dedicated to democratic principles.

It is an instrument of national policy, a guardian of peace, a guarantor of the Nation's security; a splendid school to patriotic youth, a source of pride and hope to America.

This great service has earned the gratitude and the unequivocal support of Americans.

It must be kept strong.

Its glorious past and its vital function today demand not only the tributes of sentiment and admiration but the invaluable aid of understanding and material facilities needed to preserve it as the principal bulwark of our liberties.

War Powers for a Postwar Job

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder, editor of the Gary Post-Tribune, asks of Congress that we use common sense in our after-war changes in order to arrive at normal peacetime conditions.

I think Congress now realizes, considering the abnormal rise in the cost of living during the last year, that we have been too hasty in abandoning wartime controls, especially price controls on food, clothing, rent, and so forth.

WAR POWERS FOR A POSTWAR JOB

In signing the bill which extended certain of his war powers until next March, President Truman commented on the aversion of our people to controls. Yet a little reflection should convince even the stoutest opponent of such Government regulation that the present extension is wise and necessary.

Broadly, these war powers are now aimed at giving the maximum foreign aid when and where it is most needed, with the minimum disturbance to our domestic economy. Already, in the postwar years, they have probably done more than most of us realize to relieve hardship abroad without imposing it at home, and to act as a curb on inflation.

This extension of authority permits the President, through the Secretary of Commerce, to maintain control over the export of critically short supplies. It also permits him to keep ODT control over the allocation of freight cars and other railroad facilities. There are a few other provisions, but these are the two that affect all of us most directly.

The export controls allow the President to continue the quota system of foreign purchase or foreign allocation. All the commodities affected are in short supply abroad. Several foreign countries have dollars with which to buy them. Removal of controls on meat and grains, for example, would almost certainly touch off inflationary bidding and send prices soaring.

The rail controls make possible an intelligent and efficient use of transportation to get badly needed supplies to the right port at the right time. By avoiding waste, delay, and pile-ups, this also tends to eliminate shortages and thus put a downward pressure on prices.

To extend these war powers does not, of course, give assurance that they will be used wisely. There is no important evidence, however, that they have been abused. Their continuance, correlated with the survey of our domestic economy and foreign aid which Commerce Secretary Harriman and a public committee are making, should help to maintain balance in a situation where the demand always exceeds the supply.

Another important matter, pointed out by Mr. Truman, is that the renewal of the war powers gives notice to the world of "our unanimity on matters affecting our international relations." There may have been times when Mr. Truman and Congress have seen eye to eye on policy matters, but not on the means of putting policy into operation. But this is not one of those times.

The United States is committed to a policy of leadership and assistance in saving human lives and human freedom.

Those just reenacted seem the only alternative to the "haphazard distribution of our produce throughout the world" which, as Mr. Truman said, "could only lead to higher prices at home and suffering for the neediest of our friends abroad."

Editorial Tribute to Senator Ives by the Washington Post

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. WILEY. Mr. President, we all admire a man of courage and convictions. Such a man is the junior Senator from New York [Mr. IVES]. I ask unanimous consent that an editorial in commendation of the Senator from New York, which appeared in the Washington Post this morning, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IVES' "CRIME"

From New York comes the news of the establishment of an AFL-CIO unity committee on a State basis aimed at unseating Senator IRVING M. IVES in 1952. Senator IVES' "crime" consists of his vote for the Taft-Hartley Act. Forgotten are Senator IVES' great services in behalf of labor, organized and unorganized, in the State of New York, and his unwearying campaign in the Senate against repressive amendments to the Taft-Hartley bill. A freshman Senator, Mr. IVES has shown public spirit, progressiveness, and zeal. His record so far warrants great expectations of his public career, especially in making changes and corrections in the new legislation, as provided for in the setting up in the statute of a joint congressional committee.

This watchdog committee was an innovation in the statute of great importance. We might not have run into the need for a comprehensive statute if provision had been made in the Wagner Act for change in the light of experience. But organized labor bottled up the Senate Labor Committee; it refused to admit the need for any change; it declined to cooperate with Congress in the effort which resulted in the Taft-Hartley Act; and it now appears it will do nothing to help the new joint congressional committee to revise the handiwork of Congress as time goes on. More's the pity. The stiffnecked and vengeful attitude shown by the so-called unity committee in New York is a reminder

of Representative MONRONEY's observation during the Taft-Hartley debate. "The trouble with organized labor is that it has only one sentence. It gives you the death penalty for everything from overparking to murder."

Marshall Plan—Some Heavy Materials That Will Be Required Under This Plan

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article which appeared in the Washington Post, Thursday, July 24, enumerating some of the heavy industrial equipment that will be necessary to support the Marshall plan. The people are entitled to know all of the facts.

The article follows:

Here is an industry-by-industry survey of what the United States can do to supply capital goods to Europe under the Marshall program:

Steam locomotives: The capacity of American plants is about 2,300 units a year, mostly from three companies. This capacity is not being used because American railroads are ordering Diesel-electric engines in place of steam. Higher production of steam locomotives for export depends largely, however, on bigger supplies of steel.

Freight cars: Twice as many new ones are being built this year as in 1946, but because of wear and tear there are 24,000 fewer freight cars in use in this country than at the start of last year. The shortage, caused largely by lack of steel, probably will be worst when this year's harvest is being moved. The shortage of coal cars is just as acute, and it would take at least a year to start production on European orders unless the Government used its powers to divert cars to Europe from the domestic users. In this case diversion of American cars would be impracticable because Europe uses a smaller and lighter type of coal car.

Steel rails: America's present capacity of 4,000,000 tons a year is twice as much as it uses. Exports to Europe so far have been only a trickle, chiefly to France and Italy. Most European countries have already patched up their war-torn transportation systems, and it is by no means certain that Europe will need large quantities of steel rails under the Marshall program.

Tractors: Demand will exceed the supply until 1949, according to the best available estimates. American farmers are clamoring for tractors to replace old equipment worn out during the war years. In spite of the demand at home, which ate up 315,000 tractors last year, the United States exported about 32,000 wheeled tractors to the rest of the world (excluding Canada) and is sending them now at a rate of about 55,000 a year. Crawler tractors, in addition, are going to the rest of the world (excluding Canada) at a rate of 28,000 a year compared to about 18,000 last year and 10,000 before the war.

Horse-drawn farm equipment: Because of the rise in feed prices here, the United States has plenty of horse-drawn farm machinery that could go to Europe. Although there are a million more tractors on American farms than in 1940, there are 4,000,000 fewer horses. There are also plenty of horses and mules available for export as draft animals if Europe wants and needs them.

Motortrucks: Present production is running at a rate of 1,200,000 vehicles a year, of which about one-quarter are being exported. The industry cannot produce more than this number without getting more steel, and Europe probably cannot import more without making American users wait longer to get their orders filled.

Hand implements for farming: Hoes, rakes, shovels, and simple plows are in fairly short supply; the five main companies making them are operating at capacity now. Here, as in so many other items, greater production is hampered by the difficulty of getting steel.

Coal-mining machinery: Cutters, loaders, conveyors, and mine locomotives are all in tight supply because of the demand from American mines. There is an excess capacity for making cutters of a type that can be used in France, Poland, and Czechoslovakia, although it is doubtful whether this type could be used in the Ruhr or in the shallow British mines. The United States probably could ship 60 coal cutters a month—as much as its whole prewar output—if the available type could be used in Europe.

Machine tools: There is ample room here for greater exports without inconveniencing American users. The prewar American business in machine tools was $300,000,000 a year; it soared to over a billion in the war, and has fallen to $600,000,000, of which $300,000,000 is essential to American needs. Thus $300,000,000 worth of machine tools are available for export, although exports are running at a rate of only $135,000,000. Here Europe's problem has been the need of using its dollars for food and fuel instead of for machine tools to reequip its factories.

Fertilizer: The demand at home is so heavy and so insatiable that the United States probably can do little more to satisfy Europe's needs. Production is double what it was in 1937, but the demand is still greater than the supply. If Europe could mine more coal it probably could supply most of its fertilizer needs without having to come to the United States.

H. R. 2873 Should Be Under the Jurisdiction of the House Committee on Public Works

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. McDONOUGH. Mr. Speaker, this bill—H. R. 2873—deals almost in its entirety with water power. It extends from 50 to 78 years the repayment period on power projects built in connection with reclamation projects, reduces the interest rate from 3 to 2½ percent, and allows allocations to be made to certain purposes which shall be nonreimbursable. It is a drastic and important change in Federal power policy, particularly in extending the 50-year amortization period in the existing law by over 50 percent. The change is not explained in the committee report and the figure of 78 years does not appear anywhere in the hearings. It originated in a report of the Interior Department, without explanation, made after the hearings were closed.

The Committee on Public Works, and not the Committee on Public Lands, is vested by the Legislative Reorganization Act of 1946 (Public, 601, 79th Cong.), with jurisdiction over water power. See section 121 of that act, amending rule XI of the House, paragraph O.

The Committee on Public Works has been holding hearings for several weeks on legislation dealing with general power policies. Its jurisdiction extends to all legislation involving water power, whether such power is generated at dams built by the Reclamation Bureau or at dams built by other Government agencies. It it quite proper for the Committee on Public Lands to consider, if it likes, legislation which involves both reclamation of public lands, which is within its jurisdiction, and water power, which is not; but when it has finished its consideration of such a multiple-purpose bill, it cannot exclude the jurisdiction of the Committee on Public Works by reporting out the bill; the Committee on Public Works has full jurisdiction over water-power legislation, the Committee on Public Lands has none, and a bill involving water power reported out by the latter should be referred to the Committee on Public Works for its consideration, concurrence, or amendment. Otherwise, the whole plan of jurisdiction so carefully set up by the Reorganization Act of 1946 is set at naught Manifestly if the Public Lands Committee had included in this bill a provision for taxation of power revenues of reclamation projects, it could not, by reporting the bill, have deprived the Committee on Ways and Means of jurisdiction. The bill, after clearing the Public Lands Committee, would have to be referred to the committee having conclusive jurisdiction over revenue measures generally. In like manner, this bill, H. R. 2873, because it deals with water power, should be referred at this point to the Committee on Public Works, which alone has jurisdiction of that subject.

This is a matter of extreme seriousness. The amortization period and the interest rate are the controlling factors in the determination of rates to be charged for power. The whole question of the proper Government power policy is under active consideration of the Public Works Committee. The Senate Committee on Appropriations, in reporting out the Interior bill for 1948, called attention to the need for such a study.

The Federal Power Commission is the administrative agency generally charged with jurisdiction over water power. It reports to the Committee on Public Works.

Power policies should be recommended to Congress by the committee having jurisdiction, after consultation with the administrative agencies having jurisdiction. If this bill drastically altering the amortization period and hence the whole scheme of Federal water-power rates is not enacted, placing in the law a period which has not had a single word of explanation in any hearings or report, obviously the ground is cut from under any real and comprehensive overhauling of the Federal power policy, and it will continue to be a piecemeal and patchwork

affair put together by the agencies who want to construct projects.

For these reasons H. R. 2873 should not be enacted but should be referred to the Committee on Public Works.

The United States and the Displaced Persons Presently in Europe

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mrs. BOLTON. Mr. Speaker, it is with sincere regret that I have learned that the Stratton bill, providing for the admission into the United States of 400,000 persons now in the displaced persons camps of Europe, is not to be considered in this first session of the Eightieth Congress. The bill does not commend itself to me in every particular by any manner of means; but these matters could have been taken care of by amendment. What I am interested in, what I regret, is that this great country with its almost incalculable wealth, its many square miles of open country is presently estopped from bringing into its wide borders a few hundred thousand people who have suffered indescribably from the impacts of war. It distresses me immeasurably that we speak so many words and make so many gestures and then fail to come forward when there is a practical, human action possible to us which would bring into our citizenship useful people whose long period of suffering would give us a leaven of understanding of what Europe has suffered, in itself a very real contribution to make to world understanding and peace.

There have been many misstatements made relative to these people which I feel have been instrumental in halting the action that might well have been taken. With a view to clarifying the record as this session of the Eightieth Congress draws to an end, let me give you as objective a picture as it is possible for me to do.

According to the best figures available there are now about 1,000,000 refugees or displaced persons in western Europe who are under the care of the United States and Great Britain. More than half are in United States zones. The President of the United States asked Congress, in effect, to let 400,000 into the United States.

Before inquiring into the merits of this proposal, it is essential first to know who these people are in terms of nationality or racial stocks:

A. Nearly 300,000 are Poles. They fear to return to their Russian-dominated homeland.

B. About 170,000 are from the Baltic States now incorporated into Russia. They also fear to return to their former homeland.

C. Another 70,000 are from Russian-dominated Yugoslavia.

D. Two hundred and sixty thousand are from the Russian Ukraine and the Balkans.

E. The remaining 200,000 are Jews, and are considered stateless.

Nearly all these refugees fear political or racial persecution if they should return to their former homelands.

The religion of these displaced persons is largely Christian. About 65 percent are Catholic; 15 percent, Protestant; and 20 percent are Jewish.

The age of the displaced persons is relatively low—about 66 percent are between the ages of 18 and 44. This is considered the best working-age bracket; only 21 percent are under the age of 18, and 13 percent are over 44. It is clearly apparent, therefore, that the majority are able to work.

It is important to note that these displaced workers command a variety of highly usable skills in a world which lacks skilled workers. The division of skills among them is as follows: Doctors and nurses, 3.2 percent; inexperienced and students, 4.4 percent; construction workers, 6.7 percent; mechanics and drivers, 7.6 percent; professional, 7.9 percent; mining and factory workers, 9.1 percent; clerks, 11.3 percent; farmers and lumbermen, 24.5 percent; skilled service workers, 25.3 percent.

Farm workers and lumbermen number 89,500 and are, of course, immensely useful wherever they might be put.

The skilled-service workers number 92,700 and include domestics, barbers, printers, bookbinders, opticians, butchers, linotypists, tailors, seamstresses, and upholsterers. Of this total, 33,600 are domestics such as waiters, kitchen help, gardeners, bakers, and cooks. All of these are in short supply in this country. Tailors and seamstresses number 22,800.

Clerks, bookkeepers, stenographers, office managers, interpreters, and typists make a total of 41,400 workers who could readily be absorbed in the world labor market.

Doctors, nurses, dietitians, and veterinarians represent 11,700 displaced persons. Their skills are in enormous demand everywhere.

Construction workers ranging from bricklayers to electricians number 24,600 skilled artisans who are needed here as elsewhere.

Mechanics, radiomen, seamen, and drivers account for a further 27,800 refugees available for immigration. Professionals, including clergymen, engineers, and teachers, represent 23,500 persons, while artists and writers total another 4,230.

Factory skills are available in 9.1 percent of the displaced persons. Seven thousand seven hundred are trained in metal work, 17,960 in processing and ore refining, 8,300 in factory-laborers jobs. These skills are specially needed here and elsewhere.

Inexperienced workers among the displaced persons come to only 4.4 percent of the total, half of whom are students.

United States taxpayers are now paying out $130,000,000 a year to maintain 550,000 refugees in Europe. Of these, about 400,000 are in camps. The cost of this operation in the year ahead is to be reduced to $73,000,000 but the hundreds of thousands of displaced persons remain and will continue to remain, a burden on the United States, until their fate is resolved.

As a partial solution of this painful question, the Stratton bill was introduced in the House. It proposes to bring into the United States 100,000 of these useful people each year for 4 years.

What are the alternatives if we do not do this?

First. The United States could continue for an indefinite time to support the refugee in camps. This could be done only at a very high cost to the American taxpayer and at the continuing deterioration of the men, women, and children who are in these camps through no fault of their own.

Second. The displaced persons could be turned loose in an already overcrowded and impoverished Germany.

Third. They could be forcibly repatriated to their native countries where they would meet with severe political and racial persecution with the result that they would become slave laborers or be executed.

It is significant of a radically changed attitude toward immigration into the United States that the great organized labor organizations of this country, which hitherto have often been opposed to letting down immigration bars, even a little, are now strongly in favor of permitting the 400,000 displaced persons mentioned in the Stratton bill, to enter this country. These include the American Federation of Labor, the Congress of Industrial Organizations, the United Automobile Workers, Oil Workers International, Amalgamated Clothing Workers of America, International Ladies Garment Workers Union, Marine and Shipbuilding Workers of America, Brotherhood of Railway Clerks, National Women's Trade Union League, and many others.

Among the religious groups supporting immigration of displaced persons to the United States, there are the American Friends Service Committee, the American Unitarian Association, Council for Social Action of the Congregational Christian Church, Evangelical and Reformed Church, Commission on Christian Social Action, Federal Council of Churches of Christ in America, General Council Northern Baptist Convention, Home Missions Council of North America, International Board of the Y. M. C. A., National Catholic Rural Life Conference, National Catholic Welfare Conference, National Lutheran Council, Presbyterian Church U. S. A., Division of Social Action and Education, Protestant Episcopal Church, General Convention, Russian Orthodox Greek Catholic Church of North America, Southern Baptist Convention, Synagogue Council of America, Unitarian Service Committee, United States Synagogue of America, World Alliance for International Friendship Through Churches.

The admission of 400,000 displaced persons to the United States is also favored by the following women's groups: American Association of University

Women, Catholic Daughters of America, Hadassah, League of Women Voters, National Board of the YWCA, National Council of Catholic Women, National Council of Jewish Women, National Council of Women of the United States, National Federation of Temple Sisterhoods, United Council of Church Women, Women's Action Committee for Lasting Peace, Women's American ORT, Women's Auxiliary of the Protestant Episcopal Church, Women's Division of the Methodist Church, Women's International League for Peace and Freedom (United States section), as well as the General Federation of Women's Clubs.

The following social, civic, and welfare groups have also gone on record as favoring the admission of 400,000 displaced persons to this country: American Association of Social Workers, American Association for the United Nations, American Council for Judaism, American Farm Bureau Federation, Americans for Democratic Action, American Jewish Committee, American Jewish Congress, American Lithuanian Council, B'nai B'rith, Federation of Americans of Central and Eastern European Descent, Lithuanian Alliance of America, National Association for the Advancement of Colored People, Order of the Sons of Italy, Polish-American Congress, Polish National Alliance, Russian-American Union for Protection and Aid to Russians Outside Russia, Ukrainian Congress Committee, The Self-Help of Emigrés from Central Europe, Inc.

Among veterans' groups the following favor the entry of displaced persons into this country: American Veterans' Committee, Catholic War Veterans, Jewish War Veterans, National Conference of Union Labor Legionnaires, National Council of American Veteran Organizations.

It will be seen from the foregoing list that organized labor, the church bodies of the United States, farm opinion as represented by the American Farm Bureau Federation, women's groups representing all shades of opinion, and dozens of social, civic, and welfare bodies favor the entry of displaced persons into this country under the provisions of the Stratton bill.

The principal organizations opposing the bill are the Daughters of the American Revolution and the American Legion. On behalf of the American Legion, National Commander Paul H. Griffith, in an address on June 12, 1947, made the following statements:

> Countless numbers of illegal immigrants are entering the country daily, that for every legal immigrant there are at least 10 illegal immigrants.

Proof of this charge seems to be entirely lacking.

> Immigrants would build up a fifth column in this country.

In other words, they would be representatives and proponents of communism. It is hard to reconcile such a charge with the fact that one of the sources of friction between the Soviet Government and Britain and the United States is that the Soviet Government is demanding that the displaced persons be repatriated to the countries of their origin; that is, that they should be placed again under the domination either of Russia itself, as in the case of Ukrainian displaced persons, or under the domination of Russian satellite countries, such as Poland or the Balkan States. The fact that displaced persons refuse to return to the countries of their origin would seem strong proof of their desire to resist communism and all its works.

Commander Griffith also made the claim that immigration to this country would mean increased competition with our citizens for jobs. This charge is almost as ancient and as trite as immigration itself. It was made more than a hundred years ago when our population was small and the United States was a rapidly developing country, and we had to import millions of people in order to build it up. But if proof were needed of the fallaciousness of Commander Griffith's charge, it lies in the fact that organized labor is strongly in favor of the proposal to admit these 400,000 displaced persons into the United States. It is true that previous to the First World War, labor groups were the traditional opponents of unrestricted immigration because they believed that immigrants tended to lower wages. Trade-union groups had for decades prior to the enactment of the quota laws urged restriction of immigration. As long ago as 1837, during the depression of that year, labor protested against the so-called dumping of Irish immigrants, and in 1868 the National Labor Union took the strong stand against immigration. It is also true that during certain periods in our history employers would find in unrestricted immigration a weapon against unions and tried to play off one immigrant group against the other, but unionization of the immigrant has tended to destroy this weapon in the hands of the employer, while signal success of the foreign-born in unionization have long since withdrawn them from the disfavor of the worker class.

The attitude of the Congress of Industrial Organizations was clearly set forth by its representative, Mr. Leo Goodman, at hearings before the Committee on Immigration and Naturalization; House of Representatives, March 20, 1946. He said:

> Naturally, a labor organization representing 6,000,000 American workers would not be inclined to support measures which would threaten the job security of its own membership. However, the CIO realizes, from past experience, that immigration is automatically checked in periods of unemployment while it rises in periods of prosperity; that in the past immigrants have contributed in innumerable ways to the wealth and well-being of this country; that a large proportion of immigrants are not potential job seekers, being women and children; that new blood in industry, agriculture, business, and the professions enriches our national life; and that the best and most enlightened thought on this subject opposes arbitrary, prejudiced, and superficial legislation to curtail immigration into the United States.

The American Federation of Labor takes a similar stand. Mr. Lewis Hines, representative of this organization at the hearings, said:

> Most of our citizens desire that the United States set an example for other nations by continuing to offer succor and a haven to the oppressed and displaced persons uprooted as a result of the war. Our nation has a large share of the responsibility in the maintenance of a peaceful world. The American Federation of Labor, therefore, feels that we should maintain our present immigration quotas as an indication to the world that we intend to remain an active participant in world affairs, believing that to do otherwise, and especially to reduce our immigration quotas, would indicate that we are not willing to accept the responsibility of leadership. The United States as a leading world power must continue its tradition of humanitarianism toward the displaced people of the world.

It has also been charged by opponents of the Stratton bill that refugees to the United States might become public charges. This cannot possibly happen, for the simple reason that thousands of the displaced persons have relatives who are American citizens and who have announced their eager willingness to post bonds or do whatever is necessary to guarantee that immigrants will not become public charges. Similarly, various interested organizations in the United States are prepared to guarantee that those who have no relatives here will not become public charges.

It is also said that immigrants would increase our housing difficulties, but this charge, too, cannot bear examination, for the simple reason that the number of persons who might enter the United States under the Stratton bill is limited and their relatives or friends are prepared to share their housing with them.

If this bill is enacted into law, it will save the United States hundreds of millions of dollars now being spent for the maintenance of displaced persons. Persons admitted have usable skills, which would make them productive here, add to our production of wealth, and increase the number of consumers. They will bring us, fortunately, an added increment of population. It is a matter of grave concern that the United States is now entering upon a period of declining growth of population, and is faced with a relatively static stage of population increase in the present century. A characteristic of a static population is that old people tend to increase disproportionately to the number of young people. The result is that there are fewer able-bodied men and women in the country, while a greater burden is cast upon the young—or the public—to support the older people who have passed their industrial prime. It is worth noting that students of population estimate that in 1970—less than 25 years from now—Soviet Russia will have 34,000,000 men between the ages of 18 and 31, a prime age for industrial as well as military uses. The United States, at the same time, will have between ten to twelve million men of these ages, and we shall be outnumbered in this vital age group by almost three to one. It is not suggested that the admission of 400,000 displaced persons could remedy this disparity, but they would certainly help in some measure to close the gap.

But even if all of these persons should be admitted to the United States, their numbers would fall far short of those who would have come here under our quota laws had not the depression and

the war almost completely shut off immigration. Since the last change in our quota system in 1929, our immigration policy has called for an annual quota immigration of 154,000 people per year. Actually our quota immigration since 1929 has averaged but 40,000 people per year. If 400,000 people should be admitted in 4 years under the Stratton bill, that figure would constitute less than half of the quota numbers that went unused during the war years, and less than 17 percent of the quota numbers that have gone unused since 1929.

It is evident that upon grounds of economy, the usefulness of skilled workers who might come here, and the future of our population, that the admission of displaced persons to this country would benefit the United States. But it is not upon these grounds alone that we must act. There are higher considerations.

The United States has strongly resisted Russian efforts to compel displaced persons to return to the country of their origin; which is another way of saying that they must come under Russian influence. This we have refused to permit. Displaced persons are victims of the Nazi terror, driven from their homes by the march of the German Army. They do not want to go back to Communist-dominated countries, and in this stand the United States has supported them. Are we now to say that while we will not permit Russia to take hold of them, we ourselves will not take them in, but will permit them slowly to rot and degenerate in concentration camps? The Russians offer them slavery. We offer them, as matters now stand, life on the dole. From the point of view of the displaced persons, and the point of view of all the world that is watching us, can it be said that our actions are as noble as our pretensions, or that the choice we offer to the refugees is much more alluring than the grim prospect offered them by the Russians? Is this the utmost that generous America can do by way of generosity? Is this all that democratic America can do for men and women who stoutly resist communism? Is there no place in the vast, compassionate bosom of this continent for a handful of people who stand on the brink of spiritual and physical death?

Shall we continue to hold ourselves up as champions of the democratic ideal, and fail to live up to its requirements? While we are talking about admitting displaced persons, Great Britain is admitting them. They are at present migrating into England at the rate of 4,000 a week. This is in addition to 120,000 Poles settling in Britain as the Polish army is disbanded. It does not include the 100,000 Estonians, Latvians and Lithuanians which the Ecumenical Refugee Commission, acting for British churches, is planning to bring in during the year beginning September 1. France and Belgium are taking their share, and a number of displaced persons are going to Latin-America, but the migration to England is on a larger scale. England, let us remember, is living on strict rations, and its housing shortage is much greater than that of the United States, but the English people evidently do not see their present or future menaced by the admission of displaced persons. The British action and the action of other countries in this case ought to be the definitive answer to those who say that the whole burden of settling displaced persons will fall upon us.

In view of these facts it is with infinite regret that I register the fact that consideration will not be given to the use of what can be called deficit or unused quota numbers to bring this group of people to this country whose eyes cannot help but turn to this land at whose eastern harbor stands the Statue of Liberty.

Unnecessary Quorum Calls—A Proposed Amendment to the Constitution

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted, I wish to include in the RECORD my statement with respect to the House joint resolution which I have introduced today.

Mr. Speaker, the Constitution, as written, makes it imperative and necessary that a majority of the Members be present in the House or Senate in order to transact business, from which it does not necessarily follow that all of us who are busy in our offices, or in committee, should surrender to the whim and caprice of any one Member who raises the point of no quorum to call us to the floor to hear him talk about some matter concerning which we are all ready to vote our convictions. We do not need to hear the Member talk unless we wish so to do or unless there is business to transact.

The arbitrary right of one Member to interrupt the real business of all Members in order to have them present at a quorum call simply to hear him talk, is a nuisance, a waste of time, and of the taxpayers' money. That is not the intent of the Constitution.

The framers of the Constitution drew an instrument which is susceptible of amendment. They intended it so. My proposed amendment may need revision or amendment in order to accomplish its purpose, but something should be and must be done to abolish unnecessary quorum calls which are a fraud on the public such as the framers of the Constitution never contemplated could be perpetrated under the language or the provisions of the Constitution as drawn.

My proposed amendment conserves all fundamental rights, violates no prerogatives, carries out the intention of the founders, and protects the rights of minorities.

As I said in the House on April 5, 1946, I again point out that—

in the Seventy-eighth Congress we wasted time in the amount of 45 days of 5 hours each answering quorum calls, many of which were made under a constitutional right to raise the point of order of no quorum, but the privilege is abused. We could amend our rules and protect constitutional rights.

The people laugh at us when we are seen running over here to quorum calls and running out again to our committees. We should show ourselves some respect if we expect the people we represent to respect us.

So I have today offered the following proposed constitutional amendment:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. Except as may be provided in rules adopted after the ratification of this article, the question of the absence of a quorum in either House of the Congress may be determined only at the desire of one-fifth of the Members present. This article shall not apply in the case where the right of choosing the President devolves on the House of Representatives or the right of choosing the Vice President devolves upon the Senate.

"SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission."

Mr. Speaker, I propose to keep at this proposition until something is accomplished in the interest of long-suffering Members of Congress who are really busy, and for the benefit of the taxpayers.

Address by Spyros P. Skouras at Hon. Tom Clark Luncheon for the United Jewish Appeal (UJA), July 22, 1947

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. CELLER. Mr. Speaker, I am happy to offer an appeal, made by my friend, Spyros Skouras, president of Twentieth Century-Fox Film Corp., in the interest of displaced refugee Jews and for those Jews in Palestine and elsewhere in need of economic and moral rehabilitation. Mr. Skouras, an enlightened and charitable gentleman, is serving as chairman of the nonsectarian committee of the United Jewish Appeal for the motion-picture division. His address follows:

My friends, I wonder whether we have a deep enough sense of gratitude to Almighty God for the blessings of bountiful, free America that enable us to gather here to engage in the noblest of all human endeavors—that of helping others. There is no greater gift nor higher duty than to be the good and kindly neighbor. To be our brother's keeper is the very essence of all religion.

When my own forefathers were striving toward the ideal of democracy they could hardly have envisioned so wonderful a country as America. We have a glorious heritage and a glorious outlook because we based our society upon the brotherhood and equality

of man, borrowing from the highest in religion. To me, personally, I consider it a great honor to be here among you today, because I want to discuss with you a matter of the utmost urgency to all of us—as individuals and members of our community. I refer to the plight of the 1,500,000 surviving Jews of Europe, and I know it is close to all our hearts.

No one who reads the newspapers, listens to the radio, or shows any concern in what is going on in the world can be blind or deaf to the tragic facts of their situation. Nor can anyone be unmindful of the awful significance of the word "surviving," as applied to them.

A little while ago these Jews of Europe numbered 7,500,000. They were peaceful, useful citizens of Germany, Czechoslovakia, Rumania, Hungary, Poland, and other countries, honored by the world for their great contributions to the spiritual life, the culture, and the well-being of mankind. Then came the black doctrine of hate and intolerance, the lust for power, that singled out this religious minority for extermination, and in doing so shadowed in grief every fireside in the world. Six millions were eliminated by the most savage deeds in the history of civilization.

By their very plight, by their sorrow and suffering, the 1,500,000 surviving Jews symbolize the whole fight for freedom all of us profess to feel with such intensity and determination. They represent us all. Indeed, in one way or another, all of us belong to minorities in the last analysis, and every drop of blood shed in behalf of one minority is in the name of freedom for all.

As tragic as any part of the tragic story is the fact that 2 years ago the day of liberation dawned for these unfortunate people abroad.

When the black evil of Hitlerism was at last struck down, these survivors—representing only one-fifth of the prewar Jewish population—saw the beginning of their salvation. They had a right to hail that day as meaning the end of hunger, hopelessness, and despair—the end of torture and persecution. Men of every creed, nationality, and color, cherishing liberty, had rallied to the cause of preserving the dignity of man, the sovereignty of the individual human being. Millions had died in this cause, always the greatest in the upward struggle of mankind.

But we know now that these oppressed people in Europe were cherishing an empty dream. For most of them, starvation, homelessness, and persecution continued. They were driven from country to country. Their morale was worn down by more tragic wandering, by hopes lifted and then dashed down, by unbelievable bungling and unkept promises.

Today, hundreds of thousands are in many respects in a plight as bad as that at the time of the surrender. Instead of 85,000 there are now 250,000 Jews in camps for displaced persons in Germany and Austria—driven there by fear, famine, and homelessness and by the hope that some day, somehow, they might be able to reach the United States, Palestine, or some other haven.

But, whereas a year ago there was hope for effective official solution to this problem, the situation now is a bleak one. UNRRA has been terminated and its successor, the International Refugee Organization, is obviously inadequate. On both the international and national levels the story is the same. At home, we have failed to follow through with legislation that might have helped. The world at large has turned from its triumph over evil to quarrel over new issues.

And these surviving victims, to say nothing of their dead and the dead of all other creeds, are all but forgotten—but not entirely forgotten because we in free America will not have it so.

I wish it could be possible never to refer to any minority by name. But as long as we must talk of the plight of the Jews, why should we not speak of the great contributions they have made to the progress of man from the beginning of time? All of us Christians owe them a great debt.

Perhaps their greatest gift has been made to the philosophy and depth and sincerity of religion in general. Our spiritual life most certainly has been enriched by them. They also have played a great part in developing the kindred ideal of democracy and our own American history is filled with their fighting deeds and wise counsels. In the annals of the arts, sciences and industries, philanthropy and statesmanship, their work has made an eternal mark. In every experience of our daily lives, we find some boon that grows out of their genius. Names like Disraeli, Einstein, Haym Salomon, Brandeis, are immortal. In our land many illustrious family names symbolize public service and humanitarian endeavor. As far back as the revolution, men of the Jewish faith, like Salomon, were helping to fashion the great system of freedom for the individual which is now the one hope of the world and which lies behind the Marshall plan as our retort to totalitarianism.

As much as any other group, the Jewish people help to shape our thoughts, make our laws and, above all, sing our songs. Through the entertainment world, the inspired creativeness so necessary to lift up our visions comes to us from a galaxy of great Jewish names.

It is only right to mention the entertainment industry at this point. We appreciate the privilege of belonging to an industry that provides relaxation and information, but never for a moment forgets that in ministering to the masses it bears a great humanitarian responsibility as well.

I do not believe that our motion-picture people have ever or ever will fail to respond to a worthy call from those in distress—always with never the slightest question as to race, creed, or color. And I believe as firmly that the motion picture itself is the greatest single medium for showing all men how free men can live.

Now we of our industry turn to the plight of the Jews. In my own travels, I saw for myself the stark, ironic tragedy of the people who were the first to suffer, the first to die, and the last to be remembered.

And, particularly, in my native Greece and in Palestine, I fully appreciated for the first time the tremendous scope of the work of the United Jewish Appeal agencies. When I came home, I told everyone about the tragic things I saw and I urged upon my non-Jewish friends that they must participate in the work of the United Jewish Appeal. In my opinion, this is a problem for all humanity and calls to the conscience of the civilized world for solution.

Men of good will must band together to meet this great human need.

I know many of us here already have made generous personal contributions or will do so. But I believe that the corporation we represent owes the same kind of an obligation we feel as individuals and I believe that every one of us should present to our board of directors the case for the Christian committee, of which Thomas J. Watson is chairman, of the appeal at the very earliest possible moment. I am confident that our directors, representing a wide cross section of the community, will respond with generosity and sympathy. I want to appeal to you as strongly as I know how to use your influence with your corporations, and you do have very great influence, so that we may raise our share of the $170,000,000 sought by UJA for this life-saving work. I know you will do that.

Remember the blessings that we enjoy in this great land of ours. Remember the wonderful good fortune the Almighty has bestowed upon us, the unparalleled freedom and plenty we enjoy. Remember that we have an untold opportunity to share a little of our bounty with those who suffer, to spread a little happiness where there is stark despair. Do not forget that a little effort on our part can be a benediction to the tired masses of our fellow men who have suffered so much and want only their birthright—freedom and security, and the privilege of walking upright as self-respecting citizens of a democratic world. We must not take our freedom and security for granted and we must understand how precious these gifts are to those who do not have them. From the bottom of my heart, I ask that you do not fail them.

At this luncheon at which Mr. Skouras spoke, Attorney General Tom Clark lashed out against the bigoted and selfish groups who would restrain Uncle Sam from offering a haven to DP's seeking entry to these shores. He said "America is a Nation of immigrants, a Nation of minorities" and that immigrant-pioneers were the ones who had created the wealth of America, and through their amalgamated genius established a Nation that led the rest of the world in achievement. He reminded his audience that he has advocated that at least 100,000 Nazi victims be admitted to America each year, for at least 4 years. He declared, "Unless governments do assist in this great crusade, our children and their children will suffer by reason of their neglect."

Barney Balaban, chairman of the industry drive, spoke briefly on the sacrifices that must be made to help those who could no longer expect aid from UNRRA since it no longer functions, or from IRO, its successor, since it has not yet begun to function.

Norman Lourie, Paramount News representative in Palestine, and independent film producer, revealed the bitter dilemma in which the moderate element of his co-religionists find themselves when they see how promises have been broken, and they find themselves without recourse.

Edward M. Warburg, chairman of the Joint Distribution Committee, an affiliated agency of the United Jewish Appeal, described the growing distrust of the DP's toward the unfulfilled promises of the United Nations. Only private agencies like the UJA separate these betrayed people from starvation, Warburg said.

Mr. Harry Brandt, an indefatigable worker for UJA, was also present.

Supervision of Foreign Aid

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. MacKINNON. Mr. Speaker, a few days ago on the floor of the House there was some discussion as to the necessity, desirability and possible effect of the provisions in the foreign relief bill which provided for supervision by United States authorities. Upon this general subject I include a newspaper article which appeared in the Washington Times-Herald for July 18, 1947:

AUSTRIA REJECTS RUSS VIEW ON AID

VIENNA, July 17.—The Austrian Government rebuffed the Soviet high commissioner for Austria today in a note rejecting Russian contentions that the Austro-American relief treaty violates terms of the control agreement on Austria.

Chancelor Leopold Figi sent a note to Russian high commissioner Col. Gen. Kurassov stressing that supervision of relief and supply by the United States is necessary since Austrian authorities are unable to prevent the Soviets from taking foodstuffs and raw materials for their own purposes.

The Road to Peace

EXTENSION OF REMARKS
OF

HON. JOHN H. FOLGER
OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. FOLGER. Mr. Speaker, without the missing of a day or night, no doubt, every thoughtful person is giving most intent thought to the subject which we regard of the highest importance to our people—world peace.

We ought not to have another war. The question is how to avoid it.

We cannot expect bickering and strife to contribute to a world or international status that may or can lend itself to a just and lasting peace. It doesn't seem to me that a flexing of the muscles, an effort or program of impressing our physical prowess, with heralding a preparation to fight, can contribute to a peaceful desire, or to the convincing of others of this disposition on our part.

There is no use to dodge or cover up. We are not making for peace by indulging in hard words, ascribing mean motives to every act, observed by those in other lands. The presentation of truth, the educating of others in the ways of peace and good will, a disposition to tolerance, a firm stand for the right, a friendly attitude in this stand, will more likely fruit in friendly relations. Friends do not fight; therefore we should cultivate friendship. We are strong, we will remain strong, but we should remember that our strength should lead us to a consideration for the weak. We hope we can say we are morally and spiritually strong.

We can then, with greater assurance, teach others that this strength is to be desired in every nation and among all people.

The Golden Rule, "Do unto others as you would have them do unto you," is strength of character and ought to be taught to all people.

It is that ideal that will, above every other thing, tend to abolish ill will, prevent wars, and bring peace.

We have need presently to see to the sufficiency of our military strength for purposes of defense, but let us quit boasting about it; in humility retaining it as no more than a guaranty just till the time when we hope to perfect a sounder and better foundation for lasting peace.

In our present attitudes we seem to be groping. We cannot count in plural the years that have elapsed since the days we fought side by side with Great Britain and Russia in a death struggle to save ourselves and the world from physical, intellectual, and spiritual slavery to the German Nazi forces, saying little just now about Japan and the German satellites that engaged as partners in their dastardly undertaking.

And yet, now, we hear no expressed fear of a Nazi German repetition of these attempts, nor a future alliance as that known recently as the Central Powers. All we hear is Communist, Communist; something to scare, excite, prejudice.

A committee of reliable persons finds and certifies: "That a Nazi network in Germany gets stronger." This international committee for the study of European questions charges that a Nazi network in Germany, "whose strength is increasing more and more each week and each month, is laying the groundwork to recapture power through control of Allied fostered democratic institutions." The committee, which includes many outstanding British, French, Danish, and Dutch leaders, reports that this network is composed of former Nazi leaders, important ones, of the former wehrmacht, a fairly important number of former Nazi collaborationists, who took refuge in Germany after her defeat, officers, and noncommissioned officers of wehrmacht, a fairly important number of those liberated July 3, 1946, in the general amnesty granted by United States Gen. Lucius D. Clay.

According to this report, this Nazi organization has a plan, a campaign of action, contemplating, first, wehrmacht nazification; second, spying on Germans in their political and private life to maintain the nationalistic Nazi spirit; and, third, to cause disorder to increase difficulties of Allied Powers administration, thus to insure, more and more, control in the Germans themselves. Of course, thereby to build the Nazi power and control for another war.

Maybe our complacency toward this situation frightens Russia. Possibly, or probably, they see, not in the distant future, the re-establishing of Germany, not only economically, but militarily as well; and see this as a great threat to their own existence. It is just possible they fear an international cartelization to which they are not an admitted part, controlling coal and iron and steel, and materials of every character, with Germany, Nazi Germany, the beneficiary in a large degree. Maybe they know of this, and remember how Germany marched against Russia, through some of the countries, now called Russian satellites; and that on account of that fear they have not cooperated with us, Britain, and France in a program, which we believe in with honesty, but which they fear on account of an apparent program of Nazi Germany to control, in that area, all minerals and metals, adequate to fortify them for a third war. There is danger of this.

The Nazi influence became very powerful when it was able to develop the most powerful war machine the world had ever seen, and to carry on, with danger to the world, the greatest war of all time.

In 1939 Germany attacked France.

In September 1939 Germany attacked Poland;

In September 1939 Germany was at war with the United Kingdom;

In April 1940 Germany attacked Norway;

In May 1940 Germany attacked Belgium;

In May 1940 Germany attacked Luxemburg;

In May 1940 Germany attacked The Netherlands;

In May 1941 Germany attacked Greece;

In May 1941 Germany attacked Yugoslavia;

In June 1941 Germany attacked Russia;

On December 11, 1941, 3 days after the Pearl Harbor outrage, Germany declared war on the United States of America.

Being forced by Germany, on December 13, 1941, Bulgaria declared war on the United States. On June 26, 1941, Finland, fearing destruction at the hands of Germany, declared war on Russia.

For the same reason the next day, June 27, 1941, Hungary declared war on Russia. On the 22d of June 1941 similarly influenced, Rumania declared war on Russia. The next day after Germany declared war on the United States of America, December 12, 1941, Rumania declared war on us. And on December 11, 1941, Italy, under the control of Germany, declared war on us. Italy, under the control of Germany, had, on the 11th of June 1940, declared war on Great Britain and France. It may not be any wonder that Russia has no faith in Nazi Germany and fears to join her or to allow her easy access to Russian territory, after Nazi reestablishment, with her commercial and industrial cartels, with war potentials. We might look into this and find whether any such fears on the part of Russia are justified.

Russia has no right to encourage the growth of communism in the United States or, for that matter, anywhere except the privilege, perhaps, in her own country, but within her own borders. We think that is unwise but may not perhaps do more than to ask them to sit down and let us reason together.

After all, communism in this country is closely akin to nazism, fascism, and anarchism. It is possible that not all of any of these isms is dependent on Russian activity or encouragement We recognize as an antidote for communism true democracy.

Totalitarianism, undemocratic government, is ground in which communism will most surely grow.

There are, no doubt, fanatics or paranoiacs who regard every man who is not a reactionary, a Tory, or a Fascist, as a Communist.

We must realize, too, that, after all, peace can come and last only through good will and real democracy. That we teach this lesson, emphasizing our sincerity by feeding the hungry and clothing the naked, is not a sign of weakness or appeasement but a demonstration of our strength and faith. And we cannot con-

vince anyone of our belief in this power, while we, by our action, lay greatest stress on preparations to kill. And we can convince no one of our faith in democratic government by supporting totalitarian regimes.

A practical situation requires our maintenance of adequate forces of defense for a time—one cannot say how long—but to depend on this permanently is to trust a broken reed, and to paramount it and pyramid it is likely to do no more than invite disaster. We should not forget, either, the need for economic strength and security and moral strength.

I can see no common sense in trusting to toy guns in an atomic age, where technical methods of defense have supplanted the outmoded means of pitiable inability.

The rule of reason ought to have some place in our thinking. We have the greatest Navy in the world. We may supplement it as research and progress may allow. One of our highest military men has said that so far as the Army is concerned we should maintain an army of reasonable proportions, but devote our energies, too, to the discovery and improvement of methods.

In considering what is adequate and competent, I remember that adequacy does not depend so much on the number of soldiers and sailors we have, but on the character of war mechanism we shall use. Have we not learned anything from Hiroshima or Nagasaki or Bikini?

Do we hope to kill communism by supporting Fascist totalitarian governments, or by rebuilding the military power of Germany? I fear such a course will not reduce communism, but will tend to its growth and spread.

Let us find out what is going on in Germany. Let us see what is being recommended in respect to her military reestablishment; either directly or by indirection in the name of something else.

The love of money is still the root of much evil. Our Government does not want to bow to this, but we should be diligent that those who think more of commercial advantages and considerations do not advise and lead us.

Let us look the situation square in the face and if we are traveling the wrong road, turn around.

Bad Medicine

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an editorial from the New York Times entitled "Bad Medicine":

BAD MEDICINE

The House of Representatives has passed a thoroughly bad bill in the name of a thoroughly good cause. The cause, stated generally, is a wish to make certain that those who hold public office in a democratic government actually believe in the democratic method and do their best to make it work successfully. The present instrument for accomplishing this wholly desirable purpose is a bill bearing the title of the "Federal Employees Loyalty Act of 1947." It has been passed in the House by a vote of 319 to 61, with many of the most respected conservatives in that branch of Congress protesting against it, to their credit.

The bill would create a Loyalty Review Board, which would have power to rove anywhere and everywhere into the business of any and all other departments and agencies in Washington, looking, with the enforced aid of the FBI, for disloyal suspects. On discovering such a suspect it would notify the person under investigation in writing of its preliminary finding, together with a factual statement upon which such finding is based, concealing as far as possible the source or sources of the information. The accused, thus denied his rightful opportunity to confront his accuser, would have 15 days to reply. If he failed to satisfy his inquisitors—in such matters, for example, as whether there were reasonable grounds for believing that he had sympathetic association with any organization on a list to be arbitrarily designated by the Attorney General on his own personal say-so as totalitarian, Fascist, Communist, or subversive—the accused would be dismissed summarily from Government employment. There is no provision for appeal. There is no right of review from the decision of this roving and omnipotent Board. The accused would be dropped, with the soul-searing finding—worse for many than a prison sentence—that he was disloyal to the Government of the United States.

This bill lacks all of the safeguards and protections embodied in President Truman's own recent proposal in the same field. It lacks all the elements of a decent respect for democratic rights and the standards of fair play. It is a bad bill. It should never have been passed by the House. It should be thrown out of the window by the Senate.

National Traffic Safety Contest

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I include the speech I made on the occasion of the presentation of the grand awards to the State of Connecticut and to the city of Washington, D. C., for the 1946 National Traffic Safety Contest:

You ladies and gentlemen are here this week to report on the progress made throughout the Nation in carrying out the action program for preventing traffic accidents set up last year at the President's Highway Safety Conference.

It is my great privilege today to offer to the State of Connecticut and the city of Washington formal recognition of the fact that they have done an outstanding job of translating this action program into definite results.

Connecticut and Washington have done more—much more—than win the grand awards in the 1946 national traffic safety contest for States and cities, great as that achievement may be. For they have provided the Nation with definite and convincing proof that this action program, put into effect, can and does bring results. They have proved that by using this program the traffic toll can be cut if a State or a city actually wants it cut.

Now, like most statements of that sort, there is a catch to this one. And the catch is that no State or city can reduce its traffic toll by merely wanting to unless it turns this desire into actuality by plain, old-fashioned hard work and elbow grease.

Now, that's not a very glamorous or magic formula for achieving traffic safety, is it? But the ugly truth is that there just isn't any magic formula for preventing accidents—not even through an action program. And I am sure that the gentlemen to whom I am to present these plaques will be the first to agree,

I once was on the receiving end of one of these national grand awards myself—and I know only too well how we won it. We won it by work, hard work and more hard work. That was in Memphis, Tenn., back in 1939, when I was Commissioner of Public Safety there. At that time we did not have the advantage of the complete and practical technical materials that are now available in the reports of the President's Highway Safety Conference.

We found out then that there was only one way to cut down the traffic toll—the hard way. I mean, to take the best available technical material and use it to the best possible advantage; for the public officials to assume full responsibility for doing all they are supposed to do, and more; to keep the public fully and continuously informed of our problem and our program; to make use of every possible means we could devise to obtain public support and cooperation; most of all, to make every citizen aware of his individual responsibility for preventing a traffic accident by his own behavior on foot or behind the wheel of his car.

I have been talking with many of the people attending this conference. I find some encouraging signs. I find a growing recognition of the fact that prevention of traffic accidents is sound and, in fact, vital from both the social and economic viewpoint. I find a deep and increasing interest in the traffic problem, a sincere desire to go forward with our attack on the problem.

But I also find a few cases of plain old defeatism—a feeling that the obstacles in the way of obtaining adequate budgets, enough trained personnel to do the job, and of obtaining public recognition and cooperation are just too great to be overcome.

Well, here today we have concrete proof that these obstacles can be overcome. For the State of Connecticut and the city of Washington have gone a long way in overcoming them.

Take the case of Connecticut, for example. Today it is receiving an award which signifies that it has done the best job of any State in the Union in making its streets and highways safe for its citizens. And this is not a new experience for Connecticut—not just a flash in the pan. For Connecticut won a similar award in 1940 and again in 1944. Now, I must admit that in 1942, 1943, and 1945 it slipped a little and merely won first place among the Eastern States.

Six top awards in 6 years. Does that sound like luck? You bet it doesn't. It sounds like the public officials and the people of Connecticut have made up their minds that traffic accidents in their State are going to be held down to a minimum—and that they are willing to pitch in and do their share to hold them down. Try to tell the people of Connecticut that the obstacles in the way

of traffic safety are too big to be overcome. They know better.

In 1946 Connecticut did such a magnificent job of preventing traffic accidents that its mileage death rate was only half the national rate for all States. Only half, that is.

Do you know what that means in terms of actual human life? It means that if every State in the Union had done as well as Connecticut 16,000 lives could have been saved in 1946.

Now let's turn to our own city of Washington, which today receives the grand award for cities in the national traffic safety contest. What did it do to win? Well, for one thing, it cut its traffic death toll from 76 in 1945 to 59 in 1946—a saving of 17 lives. Not a startling saving, you may think, when you remember that one spectacular disaster—a fire, an explosion, a tornado—can wipe out that many lives in an instant. But what if every city could have done as well? More than 2,000 lives would have been saved throughout the United States.

This is not the first time Washington has won an award for effectively combatting traffic danger. It took first place in its population group in 1940 and won honorable mentions in 1943 and 1944. Safety is no flash in the pan here, either.

You folks here today are practical safety people. You want to know how you can do a better job of cutting your traffic toll.

Well, I am sure that here is one way of doing it:

Put into effect every recommendation of the action program not already being followed in your State or city that it is humanly possible for you to do. Work like the very dickens, and never let up. Not even for a minute.

Enroll your State or city in the national traffic safety contest. Make up a complete factual report of your traffic safety activities on the blanks provided in connection with the contest. Then ask the National Safety Council for an analysis of your report.

This analysis will show you clearly the strength and weaknesses of your traffic-safety program, and the way to correct those weaknesses. Also, you will have an opportunity to see what officials in other States and cities are doing to solve similar traffic problems.

This traffic contest and the follow-up analysis of your own program provide a grand opportunity for you to inventory your job and find the way to further progress. Furthermore, it provides a chance for you to help your fellow officials in other States and cities to do the same.

As a fellow who was once a public-safety official, I want to say to you that this national traffic-safety contest is your opportunity to achieve a better traffic-safety program in your State or city. The contest is set up along practical lines. The questions you are asked, the reports you submit, and the analysis you receive have as their objective the evaluation of the traffic-safety activities and are based on fundamental principles of the action program. Awards in the contest are made on the same basis—plus the actual results of your efforts as shown by the traffic death toll.

The National Safety Council is the correlating agency which conducts this contest. But the invaluable benefits to be gained are yours for the asking—if you contribute your share.

This is one contest where you can't lose. If your efforts to win result in saving the life of one man or one woman or one child in your city or State, you have won a reward that is priceless.

Yes; ladies and gentlemen, Connecticut and Washington, D. C., have proved to the Nation that traffic accidents can be reduced if if you really want to reduce them. Now let all of us—each and every one of us—prove it over and over again, until this Nation, which holds aloft the torch of human liberty and human welfare to the world, proves that it no longer is willing to see 100,000 of its own citizens struck down brutally and needlessly by accidents every year. Safety, like charity, begins at home. Let's end this national disgrace.

And now, on behalf of a grateful American people, it is my great honor and privilege to present the grand awards in the National Traffic Safety Contest for 1946 to Connecticut and Washington.

Summary of Reported Bills and Resolution

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

COMMITTEE ON WAYS AND MEANS

Summary of reported bills and resolutions

[For detailed action see committee calendar]

Bill No.	Title	Summary
H. R. 1 (Mr. KNUTSON)	To reduce individual income-tax payments.	This bill was designed to relieve the individual income-tax payer from a portion of his heavy wartime-tax burden. All but a few of the taxpayers were given a reduction of at least 20 percent in the amount of the tax due. A 30 percent reduction was provided for those who have a surtax net income of $1,000 or less. Persons 65 years old and over would have received an additional exemption of $500. Vetoed June 16, 1947. Veto sustained in the House: 268 to override, 137 to sustain. It was reintroduced June 24 as H. R. 3950, with effective date as Jan. 1, 1948, and again vetoed July 18, 1947. House overrides veto: 299 to override, 108 to sustain. Senate sustains: 57 to override, 36 to sustain.
H. R. 468 (Mr. CURTIS)	To amend the Internal Revenue Code with respect to distribution by personal holding companies.	The purpose of the bill was to make the provisions of the Internal Revenue Code which determine the extent of distributions by personal holding companies constitute taxable dividends in the hands of shareholders, consistent with provisions which impose a surtax on the "undistributed subchapter A net income" of such a company. Approved June 25. Public Law No. 113.
H. R. 479 (Mr. GAMBLE)	Relating to the income-tax liabilities of members of the armed forces dying in service.	The purpose of this bill was to correct, retroactively, an inequitable situation which arises under the income-tax laws upon the death of a member of the armed forces. Existing law makes no provision for refunding an income tax that was paid prior to the date of death but allows an abatement of tax if unpaid. Passed House July 22, 1947.
H. R. 958 (Mr. LYNCH)	To amend sec. 2402 (a) of the Internal Revenue Code. (Excise tax on aromatic cachous.)	The purpose of this bill was to exempt aromatic cachous from the retailers' excise tax on toilet preparations. Aromatic cachous include sen sen and other breath-sweetening pellets other than chewing gum or candy. They are not cosmetics or toilet preparations. Administrative problems would be eliminated with minor loss of revenue. Passed House July 18, 1947.
H. R. 959 (Mr. LYNCH)	To amend sec. 3179 (b) of the Internal Revenue Code. (Relating to the draw-back on distilled spirits for export.)	The purpose of this bill is to facilitate exportation of distilled spirits and wines by permitting the use of casks or packages (barrels or similar containers) other than bottles in packaging tax-paid distilled spirits and wines for export with benefit of draw-back. Approved July 14, 1947. Public Law No. 185.
H. R. 1030 (Mr. GRANT of Indiana.)	To continue in effect certain war excise-tax rates.	The bill continues indefinitely the wartime increases in excise-tax rates made by the Revenue Act of 1943. The provisions of the Revenue Act of 1945 relating to floor-stock refunds on distilled spirits, wines, fermented liquors, and electric-light bulbs are retained in the bill. Action was taken on this bill to relieve the tension in the market because of the threatened termination of these rates on June 30, 1947, and in order to give the committee time to make a thorough study of excise-tax problems. Approved Mar. 11, 1947. Public Law No. 17.
H. R. 1945 (Mr. GEARHART)	To amend Internal Revenue Code with respect to wines.	This bill proposes five technical amendments to certain regulatory provisions of the Internal Revenue Code governing the production of wines. In general the amendments proposed permitted American wine growers to compete more favorably in the American market with foreign-made imported wines, and more flexibility in wine-making production. The bill made no changes in existing tax rates. Approved July 14, 1947. Public Law No. 186.
H. R. 1946 (Mr. GEARHART)	To amend Internal Revenue Code with respect to brandies.	This bill is designed to liberalize existing provisions of the Internal Revenue Code governing the blending of beverage brandies, by permitting them, within certain limits, to be blended and subsequently aged in bonded warehouses prior to payment of production and rectification taxes. Approved July 14, 1947. Public Law No. 187.
H. R. 1947 (Mr. GEARHART)	To amend Internal Revenue Code with respect to taxation of distilleries.	This bill would relieve stockholders and other innocent investors from liability, subject to certain limitations, for taxes on distilled spirits assessed against operators of registered distilleries, including fruit distilleries, in which such persons have invested their funds. It would not impair, however, the liability imposed by existing law upon any person interested in the operation of a bootleg or unregistered distillery, or upon operators of registered distilleries or their sureties.
H. R. 2029 (Mr. HUBER)	Provide for free importation of synthetic rubber scrap.	The bill provides for the free entry of synthetic-rubber scrap along with natural rubber scrap which is now permitted free entry under par. 1697 of the Tariff Act of 1930. In making this provision, the bill removes an inevitable discrimination arising under existing law between these 2 types of scrap rubber. It also removes a serious administrative handicap in the classification of scrap rubber which contains both natural and synthetic rubber.
H. R. 2404 (Mr. PATTERSON)	To suspend certain import taxes on copper until Mar. 31, 1950.	The purpose of this bill is to alleviate the present acute shortage of copper in the United States. It relieves, until Apr. 1, 1950, copper, copper-bearing ores and concentrates, and various articles containing copper, from the import tax imposed under sec. 3425 of the Internal Revenue Code, but does not transfer any article from or to the free list. Approved Apr. 29, 1947. Public Law No. 42.

Summary of reported bills and resolutions—Continued

[For detailed action see committee calendar]

Bill No.	Title	Summary
H. R. 2872 (Mr. KNUTSON)----	To amend sec. 4 of the Public Debt Act of 1941 and clarify its application.	This bill eliminated the ambiguity that existed with respect to taxation of Federal securities by other jurisdictions than the Federal Government. Approved June 25, 1947. Public Law 116.
H. R. 3101 (Mr. KNUTSON)----	To extend to June 30, 1949, period during which former United States employees may act as attorneys, agents, and counsel in prosecuting claims against the United States.	The bill extended the period of time during which service may be performed in certain Federal departments and agencies by technical and professional persons without preventing them from acting as counsel, agent, or attorney in prosecuting claims against the United States upon termination of such service. This legislation will aid the final completion of the work of renegotiation and work recently undertaken by such agencies as the Excess Profits Tax Council. S. 1073 passed the House in lieu of H. R. 3101. Approved June 14, 1947. Public Law No. 93.
H. R. 3444 (Mr. REED of New York).	To exempt prisoners of war from income tax in certain cases.	This bill provides that a citizen of the United States, taken prisoner of war while serving within a possession of the United States as a member of the military or naval forces of the United States, or interned by the enemy while serving as an employee (governmental or private) within a possession of the United States shall receive the benefits of sec. 251 of the Internal Revenue Code even though his ultimate place of confinement by the enemy was not within a possession of the United States. It removes an inequality of tax treatment as between identically situated taxpayers caused by circumstances over which the taxpayer had no control. Passed House June 20, 1947. Passed Senate July 23, 1947.
H. R. 3602 (Mr. REED of New York).	To exempt from admission tax general admission to agricultural fairs.	The purpose of this bill was to exempt from the admissions tax imposed by sec. 1700 of the Internal Revenue Code amounts paid for general admissions tickets at the outside gates of agricultural fairs operated by nonprofit organizations and whose profits are used exclusively for the improvement, maintenance, and operation of such agricultural fairs. It would not affect taxes payable upon admissions to amusement or other concessions inside the fair grounds. Passed House June 5, 1947.
H. R. 3613 (Mr. KEAN)--------	To amend Internal Revenue Code with respect to document tax on corporate shares.	This bill would amend the Internal Revenue Code relating to the stamp and document taxes on issues of capital stock and bonds, respectively. It was designed to remove certain inequities arising under code secs. 1802 and 3481. At present, in some cases, the tax imposed under sec. 1802 on capital stock issues, once levied, must be reimposed upon part of a new capital stock issue. Inequities also arise in mere loans of stock made to accomodate the requirements of timely delivery in the sale of shares, and also inequities in the transfer of partnership interests, where both stamp and document taxes may both be payable on the entire partnership capital. The bill will permit a pro rata tax measured by the extent of the interest transferred. Passed House June 23, 1947.
H. R. 3810 (Mr. KEAN)--------	To amend sec. 522 of the Tariff Act.	This bill proposes to stabilize procedure in determining the value of foreign currencies in terms of United States dollars for custom purposes. In recent years foreign nations have set up systems of dual or multiple exchange rates which has made it extremely difficult for importers to determine the landed cost of their merchandise. This bill would permit the Secretary of the Treasury to promulgate a fixed, single rate with appropriate safeguards. Passed House June 26, 1947.
H. R. 3818 (Mr. KNUTSON)----	Social-security amendments, 1947.	This bill establishes a new schedule of social-security taxes imposed on employers and employees, freezing the present 1-percent rate (2 percent in the aggregate) for 1948 and 1949 and fixing a 1½-percent rate (3 percent aggregate) through 1957. Thereafter the bill calls for a 2-percent rate (4 percent aggregate). It continues until June 30, 1950, the increased grants to States enacted in 1946 with respect to old-age assistance. The bill also continues on a permanent basis the present temporary authorization for congressional appropriations to a special Federal unemployment account of excess unemployment compensation tax receipts, as a protection to the State funds. The bill passed the House June 18, 1947. Passed the Senate July 16, 1947, with amendments. In conference the rate was frozen at 1 percent for 1948 and 1949; 1½ percent for 1950 and 1951; and 2 percent thereafter. The special Federal unemployment account was extended for 2 years instead of making it permanent. Conference report agreed to in House and Senate July 24, 1947.
H. R. 3861 (Mr. JENKINS of Ohio).	To treat certain predecessor and successor railroad corporations as the same taxpayer for the purpose of certain provisions of the Internal Revenue Code.	This bill removed the discrimination of treating differently railroads coming out of receivership or bankruptcy proceedings, depending upon whether they can be reorganized under the same charter or under a new charter, with respect to carry-overs of net operating losses or unused excess-profits credits of the old corporation. No carry-back allowance would be made under the bill. Approved July 15, 1947. Public Law No. 189.
H. R. 3950 (Mr. KNUTSON)----	To reduce individual income-tax payments.	(See summary on H. R. 1.)
H. R. 3997 (Mr. GEARHART)---	To exclude certain vendors of newspapers from certain provisions of the Social Security Act.	This bill would off-set the findings of the Federal district court in San Francisco so as to exclude certain vendors of newspapers from certain provisions of the Social Security Act. In general it was held that, under certain circumstances, the relationship of employer and employee may exist between a newspaper and the street vendors of its papers, and the vendors thus be covered under the social-security system. Due to the peculiar method of handling retail sale of newspapers, it is not practical that certain news vendors be covered by the Social Security Act. The bill definitely clarified the confusion resulting from the court's decision. Passed the House July 16, 1947, without amendment. Passed the Senate July 23, 1947.
H. R. 4011 (Mr. MACKINNON).	To permit voluntary contributions to be used in the computation of reduced rates in certain cases with respect to Federal Unemployment Tax Act.	This bill would give express statutory sanction to the administrative interpretation which has permitted voluntary contributions by an employer to a State unemployment fund, to be used in the computation of reduced required contribution rates. This bill would remedy existing ambiguities arising in all States, relating to the effectiveness of voluntary contributions under the Federal Unemployment Tax Act. Passed House July 3, 1947. Passed Senate July 16, 1947.
H. R. 4259 (Mr. REED of New York).	To exempt from tax, musical instruments sold to religious and educational institutions and certain photographic equipment and film.	This bill would exempt from tax, musical instruments sold to religious and educational institutions. It would also reduce from 15 percent to 10 percent the permanent tax on cameras and unexposed amateur films, and remove the excessive tax of 25 percent on photographic lenses, apparatus, and equipment. The bill relieves two of the most acute excise-tax hardship cases that have come to the committee. A floor amendment offered by Mr. Forand and adopted by the House exempts from the 10-percent jewelry tax, the first $25 of the sale price of such items as costume jewelry, fountain pens, pencils, binoculars, silver tableware, and other articles listed in sec. 2400 of the code. Passed House July 22, 1947.
H. J. Res. 57 (Mr. CURTIS)----	To extend for 15 months the period during which alcohol plants are permitted to produce sugars and sirups simultaneously with the production of alcohol.	This resolution lifted the prohibition against industrial alcohol plants from producing sugar sirups. This temporary extension would provide a market for surplus potatoes and soft and wet grain as well as relieve, to some extent, the sugar and sirup shortage. Approved Feb. 1, 1947. Public Law No. 2.
H. J. Res. 121 (Mr. KNUTSON).	Income, estate, and gift tax deductions for gifts to the United Nations.	This resolution is intended to facilitate the acquisition of a site in the city of New York for the headquarters of the United Nations. It provides that for the period of 1 year beginning Dec. 2, 1946, and ending Dec. 1, 1947, gifts made to the United Nations exclusively for such purpose shall be treated, for Federal tax purposes, as public and charitable gifts are now treated under the income-, estate-, and gift-tax provision of the Internal Revenue Code. Approved Feb. 26, 1947. Public Law No. 7.
H. J. Res. 210 (Mr. KNUTSON).	To extend time for the release, free of estate and gift taxes, of certain powers of appointment.	This resolution extends to July 1, 1948, the period for tax-free release of powers of appointment created on or before Oct. 21, 1942. The Revenue Act of 1942 made a number of significant changes in the treatment, under the estate and gift taxes, of property which is subject to a power of appointment. In order to enable holders of previously created powers to adjust their affairs in the light of the new legislation, it was simultaneously provided that such persons could release their powers within a stated period of time without incurring any tax liability. The extension granted under the resolution is believed to be ample to permit this whole matter to be considered in connection with the general revenue bill to be taken up during the early part of next year. Approved June 25, 1947. Public Law No. 112.
H. R. 4069 (Mr. KNUTSON)----	To terminate certain miscellaneous temporary revenue provisions.	The purpose of this bill is to provide for the termination of a number of war and emergency statutory provisions related to internal revenue and customs. The 2 most important provisions being (1) the termination on Jan. 1, 1948, of servicemen's exemptions from payment of admissions and transportation taxes and exemption of their active service pay from income taxes on account of active service pay, and (2) continuance on a permanent basis of percentage depletion allowances, applicable in certain mining operations. Other important terminations in the bill relate to tax-free status of gifts sent home from overseas by members of the armed forces, and to various administrative provisions of the code. It also continues the suspension of tariff duties on scrap metals and coconuts. Passed House July 21, 1947. Passed Senate with amendments, July 24, 1947. Conference report agreed to in House July 25, 1947.
H. R. 4257 (Mr. KNUTSON)----	To extend time for filing claims of credit or refund with respect to war losses.	The bill extends the time for filing of claims for credit or refund with respect to losses sustained in 1941 and 1942, to Dec. 31, 1948, on account of enemy action during the war. This extension of time will permit the committee to enact a plan of revision that will be generally satisfactory to all groups concerned with war-loss recoveries. Passed House July 22, 1947.

Summary of reported bills and resolutions—Continued

[For detailed action see committee calendar]

Bill No.	Title	Summary
H. J. Res. 238 (Mr. BROWN of Ohio).	To amend Tariff Act of 1930 with respect to definition of standard newsprint paper.	The purpose of this resolution is to permit free entry under the Tariff Act of 1930 of standard newsprint paper in widths of 15 inches rather than the present 16-inch width now accorded free entry under that act. Due to shortage of paper during war, the width of rolls was reduced temporarily by Congress. This provision expired at the end of hostilities. The paper shortage has continued to be acute. Passed House July 19, 1947. Passed Senate July 24, 1947, with amendment. Amendment agreed to in House July 25, 1947.
S. 1072	To extend period during which income from agricultural labor and nursing services may be disregarded by States in making old-age assistance payments.	This bill would continue to help relieve the farm labor and civilian nursing service shortage that existed during the war and continues to exist especially with respect to nursing. Approved June 30, 1947. Public Law No. 131.

SUMMARY

Out of a total of 30 bills and resolutions reported by the committee, all have passed the House except 1, H. R. 2029. As of July 25, the day before adjournment, the Senate had passed 22 of the committee's bills. We believe this established an outstanding record.

HAROLD KNUTSON,
Chairman.

JULY 25, 1947.

Disaster of Accidents

EXTENSION OF REMARKS
OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. DAVIS of Tennessee. Mr. Speaker, I take the floor today for the solemn purpose of announcing an impending disaster that will take the lives of 100,000 Americans, injure 10,000,000 more and cost the Nation $5,000,000,000 in economic loss.

Incredible as it may seem, this catastrophe will be endured by America with scarcely a shudder. No screaming headlines will proclaim it, and no spontaneous or general effort will be made to prevent it.

For the disaster to which I refer is the disaster of accidents. And the terrific and frightening toll accidents will take in 1947 is all the more tragic because it could be prevented with little individual effort and at negligible cost.

But this disaster will not be prevented. Its toll may not even be reduced. Why? Because too many of us are not seriously concerned about it, even though it threatens the one thing dear to all of us—our own life or the life of a loved one.

The toll of accidents is an insidious thing. It creeps up on us without fanfare, so that its horror and enormity are assimilated gradually. An accident here, an accident there, one today, another tomorrow, a steady but unspectacular seeping of human life, catching public attention only when a major catastrophe shocks us momentarily by its size or dramatic impact.

Accidents play no favorites. They live with us in our homes, ride with us in our cars, work with us at our jobs, pursue us even at our play.

The irony and tragedy of it is that most of these accidents can be prevented. Industry has long proved this. Cities and States are proving it now—more and more of them every day. They are proving it in the field of traffic safety, which some of us had begun to fear might be beyond redemption.

The extent to which a State or city can control its traffic toll was brought home to me forcefully, when it was my privilege recently to represent the American people in presenting national grand awards to the State and city which won top honors in the national traffic safety contest conducted by the National Safety Council.

This would have been a pleasant assignment for anyone, but it was especially pleasing to me because I have been tremendously interested in accident prevention for many years. And I can think of no finer reputation of a State or city to enjoy than the distinction of having done most to protect the lives of its citizens on the streets and highways.

These awards were presented during the President's Highway Safety Conference here in Washington, and it seemed to me they could have been bestowed at no more appropriate time. For public officials, business leaders, and safety men had come to the Conference from all parts of the country in a united effort to find the answer to the perennial question—"What can be done to make our streets and highways safer for everyone?"

The winners of these traffic safety awards had found, in part at least, the answer to that question. For example, Connecticut, which won the national grand award for States—went through 1946 with a mileage death rate approximately half the national rate for all States.

Think what this means in terms of actual lives saved. It means that if every State in the Union could have had a death rate as low as Connecticut 16,000 lives would have been saved in 1946.

Sixteen thousand lives. Sixteen thousand men, women, and children—16,000 mothers, fathers, sons, and daughters—sacrificed needlessly in 1 year because the American people were unwilling to put forth the little extra care and effort needed to prevent traffic accidents.

Our own city of Washington, D. C., won the grand award for cities. What did Washington do to win? Well, for one thing, it cut its traffic death toll from 76 in 1945 to 59 in 1946—a saving of 17 lives.

Seventeen lives. Not a startling saving when you remember that one tragic disaster—a fire, an explosion, a tornado—can destroy that many people. But what if every city could have done as well? More than 2,000 lives would have been saved throughout the United States.

And Connecticut and Washington had no monopoly on saving human lives in 1946. Other States and cities also won high honor for doing an outstanding job of preventing traffic accidents.

In fact, the record of winners in this national traffic safety contest bears out a conviction that I have held for many years. It is this: A city or State can make its streets and highways just as safe as it actually wants them to be.

Does this sound preposterous? There is plenty of proof that it is not.

When I was commissioner of public safety in Memphis, Tenn., it was my honor and privilege to come to Washington and accept from the National Safety Council on behalf of my city the national grand award in this same traffic-safety contest. The night I stood here and received the bronze plaque emblematic of victory was one of the proudest and happiest moments of my life. I knew as I received that plaque the terrific amount of work and planning that had brought this honor to Memphis. I remembered the long hours of hard, tedious labor that had been spent in formulating and maintaining a traffic-safety program that would make our city safer for its people. I recalled the discouragements and setbacks we had met along the way, and the hours when it seemed that no matter how much we tried, the traffic toll could not be held down. I thought back to the loyal and willing help given by everyone—the police, the traffic engineer, the schools, the civic organizations, the courts, the safety leaders—and, most of all, the people themselves.

Yes, I remembered all this as I received the plaque that night. And I realized more than ever before that there was no magic formula, no easy recipe for winning traffic safety awards. I realized that there was only one way to conquer traffic accidents, and that was by everlastingly keeping after them by a united, hard-hitting attack in which every citizen must play a part.

When this sort of attack is made on accidents day after day, hour after hour, without any time out for rest, the toll comes down and stays down.

We have found that out in Memphis. True, we have not always continued the attack as we should. And when we have not, the accident toll has gone up. When we have, it has come down. And I am happy to report that in the 1946 contest, Memphis won first place among cities of its population group.

But if only one city had proved that accidents can be controlled almost math-

ematically to the extent the people want them controlled, it would not be proof positive that the same thing could be true generally. But when it happens in city after city, and State after State, even the most skeptical cynic has to admit that there is a way to get traffic safety.

Let us name names. Take the State of Connecticut, to start with. Its victory in 1946 was nothing new for it. For almost a decade it has proved to the Nation that it can and does control its traffic accidents. In 1940 and again in 1944 it led all the States in the Nation in its efforts to hold down its traffic death toll. And in 1942, 1943, and 1945, it won first place among Eastern States in the national traffic-safety contest. How do you explain this record? Luck? No, it goes far beyond that. I believe it is because the public officials and people of Connecticut are sold on the idea that traffic accidents can be prevented, and that it is well worth the trouble it takes to prevent them. It is just that simple.

Take Minnesota; in 1942 it won the national grand award of all States. And it finished first among Midwestern States in 1939, 1940, 1943, and 1946! Does that sound like luck? You know it does not. It sounds like a lot of people in Minnesota made up their minds that they wanted their highways and streets to be safe. And did something about it.

I could not, of course, omit the South in this narration of traffic efficiency. So let us consider the case of Texas. Texas won first place among all Southern States in 1946. It also won first place in 1942 and 1945, took second place in 1938 and 1941 and finished third in 1939.

Does that sound like luck? It sounds to me like hard work and efficiency!

Have you ever driven through New Jersey? Then you will agree, I believe, that the volume of traffic is enough to discourage anyone who is trying to hold down accidents. But it did not discourage New Jersey. The people and public officials worked together for safety on their highways—and New Jersey has won 10 traffic safety awards in 15 years.

Have these States a monopoly on safety? Apparently not. For the Commonwealth of Pennsylvania, which handles a terrific amount of traffic, has won eight awards in 15 years. Oklahoma also has won eight awards in the last 15 years. Iowa and Washington, they too, have made outstanding records.

Yes; these States have proved that you can have traffic safety if you really want it.

And how about the cities? Well, have you ever heard of what Milwaukee has done about traffic accidents? Of course you have and so has everybody else.

For six consecutive years the city of Milwaukee has had the lowest traffic death rate of any big city in the country. This achievement has just won for it a special award from the National Safety Council for sustained excellence in protecting the lives of its citizens in traffic.

Milwaukee has won special awards in 1941, 1943, 1944, and 1946. It won a grand award in 1934, first place awards in its population group in 1933, 1935, and 1937 and tied for first place in 1938.

Does this sound like luck? Ask Milwaukee. It will tell you hard work did it.

And do not think for a minute that Milwaukee has any monopoly on safety among the cities. Detroit, with its teeming industrial life and streaming traffic, has held down accidents so successfully that it has won 10 high safety awards in the last 15 years. The college city of Evanston, Ill., which feels the full force of Chicago's tremendous flow of traffic, has won seven awards. Providence, R. I., also has won seven. Rochester, N. Y., has won six and my old home town has, I am proud to say, won five, and in South Dakota, Aberdeen has come through as a winner time after time, until its municipal trophy case now holds seven prizes.

Does all this sound like luck? You know it does not. But why do some States and cities manage to make headway against traffic accidents while others do not? Is it because the other States and cities do not want to reduce their accident tolls? Of course it is not. It is, I think, because the States and cities I have mentioned are willing to work a little harder to prevent accidents, and because their citizens have caught the spirit of teamwork and cooperative traffic behavior a little better than the others.

This contest for traffic safety that the National Safety Council has been conducting for 15 years is a magnificent project—one of the finest and most inspiring I have ever known. Think of it—more than a thousand cities and every State in the Union competing with each other for the great honor of best protecting their citizens against death and danger that come through accidents. Can you think of anything better that can happen to a State or city than to win national acclaim for doing the most to make its streets and highways safe? Would you not like to live in such a place?

States and cities throughout the Nation take this National Traffic Safety Contest very seriously, and fight hard to win it. They strive throughout the year to establish a traffic safety record and to carry out a traffic safety program that will enable them to win an award. I remember that when Memphis won the national grand award in 1937, the whole town was as excited in the closing weeks of the year as if we were fighting for a baseball pennant. In fact, some of our rival cities claimed that in the final days of the year, we carried all our pedestrians across our busier intersections and made all traffic detour around the city, just to make sure our record was not jeopardized. Well, we didn't go quite that far, but we really worked to hold down those accidents. And we succeeded. We know it was not luck.

And the benefits of this traffic safety contest does not stop with the efforts to win an award. Public officials in States and cities throughout the country are so sincere in their desire to find ways of improving their traffic safety activities that in the first 6 months of 1947 more than 300 requests have come to the National Safety Council for detailed analyses of the various traffic safety programs—pointing out weaknesses in those programs. This, of course, is a huge job for the staff of the council, but it pays off in greater safety. And the encouraging part of it is that practically all the States and cities which received this analysis service in 1946 have put into effect many or all of the recommendations made in the analyses.

Can you think of a finer thing for America than for a thousand cities and all the States to be competing for the privilege of saving human life and limb? If the National Safety Council did not do anything else but conduct this contest and provide the incentive for cities and States to work harder for safety, it could well be proud of itself.

But the council does much more than that. Day in and day out, year after year, its staff of safety experts and engineers, its writers and editors, its statisticians and researchers work to find out how, why, when, and where accidents are caused—and how they can be prevented. And even more important is the fact that throughout the country—in every State and virtually every city—loyal and willing safety-minded men and women serve without pay and without any thought of reward to help the council do the best possible job of reducing the accident toll. These volunteer safety workers number into the thousands, and without them, the chance of winning the war against accidents would be hopeless indeed.

The National Safety Council serves as a clearing house for the safety experiences and activities of the Nation. It has only one aim in the world—to prevent accidents of all kinds. It makes no profit, has no commercal interests. I am proud to have been permitted for many years to work with it and to help a little, I hope, in the work it is doing.

Perhaps some of you may have the feeling that this is an unusual subject for a Representative in Congress to be discussing, especially in these days when so many vital and important problems must be solved if America is to progress. To me it is a perfectly natural thing to be discussing safety here. For I sincerely believe there are few, if any, problems facing America that are more vital or more important than halting this needless slaughter of 100,000 Americans every year.

Let me again repeat that figure. One hundred thousand lives lost in America every year by accidents that could be prevented. Is this what America wants? Is this what we are willing to endure merely because it takes a little time and effort to prevent it?

I do not believe so. I do not believe—I refuse to believe—that a country known around the world for its humanitarian instincts is willing to see 100,000 of its citizens struck down needlessly every year, and another 10,000,000 injured, and shrug it off as something that cannot be helped.

It can be helped. If 100,000 men, women, and children died in 1 year of some dread disease that medical science knew how to prevent, you can be sure we would soon see to it that steps were taken to prevent it.

Well, we know how to prevent accidents. We know it after more than 30 years of research and experiment by the

National Safety Council and other safety organizations. But we cannot wipe out this national scourge of accidental death and injury until the American people use and apply the remedies we have available. If every American citizen would make up his mind today to be more careful, more courteous, and more sensible in traffic, in his home, at play, at work, everywhere; if every American would redouble his efforts to prevent the accident for which he may be responsible, we could cut the accident toll in half overnight.

It costs nothing but a little effort. It means the saving of life—perhaps your life. Is not it worth the trouble?

I ask every Member of Congress, every public official of whatever level, every citizen, no matter where he lives or what he does, to join in a great united effort to cut this accident toll. Let us make America a land of the safe as well as a land of the free.

The Late Henry Ford

EXTENSION OF REMARKS
OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the text of a radio talk by the Honorable Samuel B. Pettengill over the ABC network, Sunday, April 20, 1947, which reviewed the life of the late Henry Ford, founder of the Ford Motor Co.

In reviewing Henry Ford's life, it sounds almost like a review of the opportunities open to all people under the American system of freemen.

Mr. Ford benefited humanity by giving them an opportunity to benefit themselves through honest effort, work, and thrift. I wish every young man and woman in America might read this story of What Henry Ford Taught America.

It sometimes seems easier to be the recipient of a gift than it is to earn an equivalent compensation for one's self, but the very earning of the compensation for one's self is the thing that has built character into America and its citizens for more than 150 years under our Constitution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The death of Henry Ford, 83 years young, calls attention to some big facts.

America's 30,000,000 motor vehicles, in close formation, would go twice around the world. If necessary, every man, woman, and child in America could get into these cars and all ride on rubber at the same instant of time.

A nation on wheels—traveling on vehicles undreamed of when Henry Ford and everybody else in this country, 60 years old or over, was a child. I was a boy in college when I first saw an automobile—a foreign contraption—costing $8,000, which no one would have as a gift today.

Well, here are some more big facts that tie in with the argument as to whether communism, socialism, or the individual enterprise system is best for America—and the world.

RUSSIA FAR BEHIND

Thirty-four States of the Union each has more automobiles than all of Russia. Seven States each has more than Great Britain, or France, or Italy, or Germany. California has more than Great Britain, France, and Italy combined.

Of trucks, the United States has five times as many as Russia, and 50 percent more than the rest of the world combined.

I believe that every system of government and business is going to survive that does most for most. What system in any century, in any country, has done more for more people than the American system?

Henry Ford was born while Lincoln still lived. Abraham Lincoln and Ford mean America throughout the world—log cabin to White House—machine shop to industrial empire. Henry Ford and the other automobile manufacturers who, like him, have developed and applied mass production methods represent the American system at its best. They show what competitive individual enterprise can do—and I stress the word competitive.

For many years, Ford was the pacemaker. He forced those who would stay in the race to adopt his principles. He benefited his competitors. But the day came when his competitors benefited him. Even Ford held on to Model T too long, and would have done so still longer, if new competition had not forced him to change his designs.

AVOIDING FEDERAL CONTROL

And so it has gone in an endless struggle—General Motors, Chrysler, Nash, Willys Overland, Studebaker, Hupp, Hudson, Crosley, Packard—all working to build a better car and sell it for less in order to compete for the favor and patronage of the American consumer—better cars, tires, gasoline, lubrication, and looks.

It is worth noting that the industry that has provided the most jobs at the best pay—5,000,000 jobs, in fact—is the one that was freest of Government control. Compare the automobile industry with the railroad industry that can scarcely turn around without Government consent.

Orville Wright, one of the two brothers who first flew a heavier-than-air plane in 1903, says that Henry Ford did more for mankind than any man of his generation.

Ford had the revolutionary idea of tapping the mass market at the base of the economic pyramid. He saw clearly that the big money was in the pockets of the little people. He said: "The market is like a pyramid, pointed at the top, with a very broad base. If a car cost $1,000,000 there might be a few men foolish enough to buy it. If it could be sold for $10, scores of millions of people would buy and use cars instead of wearing out shoes. The further we can lower the price, the more millions can enjoy the car." He taught America that truth. He wanted to design a car that would go anywhere, whether in the frozen wastes of the Yukon or the scorching heat of Death Valley.

He wanted to make a car that even the latest immigrant could build, could drive, and could own. Also, a car that would get you there and bring you back. He built that car, and it went into every country in the world. The name "Ford" became better known and understood by more of the earth's people, probably, than even the name of Lincoln or Washington.

ONCE SOLD CAR FOR $310

At one time, he sold that car at the factory for as little as $310. But, of course, at that time a profligate Government had not added huge taxes to the sales price of every car. Cheap cars led to our great system of paved highways. Neither county commissioners nor Congress, itself, would have built ribbons of concrete from coast to coast for Fiats or Rolls Royces. America has 1,400,000 miles of improved roads, enough to circle the globe 56 times. These roads, brought down the cost of moving produce from farm to city. They made rural life more attractive. They moved families away from the congested slums of the big cities into the suburbs and countryside. They have added enormously to our capacity for national defense.

Cheap cars, plus highways, furnished markets for our great petroleum industry, now a world giant. They planted rubber trees in Java and Borneo and Brazil. They made new markets for cotton, glass, steel, and hundreds of other industries.

WE BEGAN TO GO PLACES

Millions of Americans who had never been 50 miles from their birthplace turned their flivvers toward Niagara Falls, Pike's Peak, Plymouth Rock, Valley Forge, the Alamo. "Old Liz" taught history and geography and patriotism. She helped to erase the scars of the Civil War. She helped to make Americans friends and neighbors.

The Ford Co. alone has built over 30,000,000 motor vehicles. In all the rest of the world, there are only 6,000,000 of all makes combined. Some achievement! As was said of our pioneer forefathers, Ford built his empire with no capital except courage and no resource except resourcefulness. Only $28,000 was invested by others in what became the vast Ford empire, with factories and branch offices in 33 foreign countries. The rest was plowed back from earnings. Taxes had not then fallen like a blight upon the expansion of business.

Has big Government, and the cost and waste of big Government, made it impossible for America to ever have another Henry Ford? Although rated as the world's first billionaire, his fortune was chiefly in buildings and machines, worthless unless at work.

PRODUCTION FOR USE

"Production for use," as the Socialists urge, was actually the principle to which he devoted his life.

Apart from his plant and equipment, it is doubtful if his personal fortune ever exceeded 1 or 2 percent of the wealth he created. Now, by his will, the bulk of his fortune has gone into charitable foundation for public welfare.

The father of mass production, with his single purpose machine tools turning out parts that would fit one another to a hundred-thousandth of an inch, was the first to pay $5 a day to the men who made the cars. He said: "No wage is too high for the man who earns it."

Contrary to the teaching of Communist professors that "one man's gain is the other man's loss," he demonstrated on a world scale that it is possible to make more money, pay higher wages, and reduce costs all at one and the same time—investor, worker, and consumer all gaining and no one losing by the process.

The secret of this miracle of economics is high production per man-hour, which brings costs down. And, high production per man-hour is possible only because of better tools, more mechanical horsepower helping human backs to do the work, better management and last, but not least, higher skill and know-how in the fingers and brains of the men on the job.

The best manager of a machine is the man who runs it, if he takes pride in his job. This is the miracle of America.

It is hard to see any limit to this progress—any ceiling on American achievement in the years and generations to come—if. We have the world by the tail with a downhill pull—if.

If we don't lose the magic formula in a struggle between class and class; if investor, and manager and worker all play fair with each other, each recognizing the part that the others play in better tools, more efficient work and a better coordination of all the parts in the great machine.

In the 90 years following 1848, when Karl Marx wrote his Communist manifesto, investment in tools for each factory worker here in America increased nine times, and working hours were cut almost in half. Because Ford supplied much more capital and much better machine tools for each worker, he was able to lead the whole world in raising the workingman's pay.

But even the magic formula cannot work except under a government friendly to achievement, a government that protects a man in the fruit of his toil. Great as he was, I firmly believe Henry Ford would be a name scarcely known beyond the county limits of his home, if he had not lived under the protection of the Constitution of the United States.

Socialism, fascism, and communism would not have a Chinaman's chance to outlive this generation if they were not financed and subsidized at home and abroad from the earnings, ideas, and inventions of individual competitive enterprise. Socialism and communism put on a show only because they are able to hide their failures from their own people behind the iron curtain of government.

When the American and Russian Armies met at Berlin, it is reported that a Russian general in great surprise said: "Why, you American have jeeps, too." He didn't know that his jeeps came from Detroit and Toledo.

If we could get a Sears, Roebuck or Montgomery Ward catalog, in the Russian language, into every Russian home, Stalin wouldn't have as much chance as a snowflake on a frying pan.

One of the ironies of history was to see engineers, sent here by a foreign government, studying the automobile factories at Detroit while their government has worked constantly to destroy the very system which made these American factories possible.

MUST WORK TO SURVIVE

But the vast assembly line, which is America's other name, will slow down if we featherbed it, doing less but demanding more; if we make savings unattractive by taxing the earnings of capital too highly; if we make good work unattractive by taxing too highly the workers' pay envelopes; if we permit the vampire of big government to suck the lifeblood out of business, and continue to subsidize socialism and communism—here and abroad.

Mr. Bernard Baruch, our statesman without portolio, said the other day, "We are at the brink of an engulfing inflation. There is only one way out. That is by work. * * * We should adopt wholeheartedly a 44-hour week without strikes or lay-offs." This same thought was urged before a congressional committee over a year ago by President Wilson of General Motors.

It is tragic to witness the present stampede for more pieces of paper called dollars because every workingman's wife pays the bill at the market place for every wage increase that does not represent more production per man.

Henry Ford proved that higher pay comes from increased production, and that only increased production can bring costs down and make higher pay mean anything.

Every American should thrill with pride over the life's work of Henry Ford. It is quite possible that in our lifetime he and his friend, Thomas Edison, exerted the most far-reaching and beneficial influence of any two men in the world.

The capital that he accumulated and invested in better tools, the manufacturing methods that he introduced, lifted wages and raised everybody's scale of living.

He, and the other automobile manufacturers, enriched people's lives everywhere by the low-cost, personal transportation they brought within the reach of every family.

Ford's career was possible only in an America with constitutional government and competitive free enterprise unhampered by confiscatory taxation of able men—as it was when he was born.

The Facts About the Action of Congress on Agricultural Appropriations

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. BENNETT of Missouri. Mr. Speaker, the time has come to debunk the vicious and untruthful propaganda put out by the press agents of the New Deal about the action of the Congress on agricultural appropriations for the next fiscal year. Some of this propaganda is being swallowed by agricultural interests, who would think otherwise if they knew the true facts. The facts are in the record. As Al Smith used to say, "Let's look at the record."

The agricultural appropriation bill for 1948, as passed by the Congress, carries an over-all reduction of about 19 percent, or $228,526,400. This is less than some of the other departments have been reduced, but is agriculture's proportional share of reduction. We are not giving a straight across-the-board reduction to Federal departments, for that would necessarily eliminate some valuable programs. Instead, we have studied each program on its individual merits and have cut in some places, left others alone, and increased still others.

There has been more demagoguery and misrepresentation about this particular appropriation bill than any I can remember. The self-appointed spokesmen for the farmer have proclaimed that everybody should have his appropriations reduced except the farmer. They argue that the farmer will vote against anyone who cuts funds for the Department of Agriculture. They thus say, in effect, that the farmer is not willing to do his part to restore an economically stable America. They infer that he favors unnecessary Government spending and subsidies as long as he gets some of it. This is so much bunk and is an insult to the patriotism and good judgment of the farmers of America. I think that the Democrats who raised this hue and cry in the House realize it for the appropriation bill finally passed with the aid of their votes. The vote on final passage was 315 to 38 and the final conference report was approved unanimously.

The House did not go into this matter half cocked. The bill was debated for 3 days. The Appropriations Committee was careful to get the full facts to justify its recommendations to the House. How careful it was can be seen from the printed record which contains 2,833 pages of hearings, weighs 6 pounds, and contains the testimony of 411 witnesses. The bill carried the staggering sum, as approved by the Congress, of $960,044,908, almost a billion dollars to run this one Government Department in 1948.

The criteria used by the Congress in making reductions in appropriations this year were roughly as follows: (1) We have a public debt of $257,000,000,000 on which interest is annually $5,000,000,000. To reduce it requires reduced spending. It must be reduced if we are to stem inflation and the cheapening of the dollar. (2) The people are demanding reduction of wartime high taxes. This means also that economies must be made in Federal spending. (3) People want Federal pay rolls reduced. They can only be reduced by cutting appropriations, in all departments including the Department of Agriculture which employes over 77,000 people. (4) Agriculture is in a sound condition today with farm income at a record high. (5) There are many desirable things the Government might do but are they necessary under the foregoing conditions or can they be postponed until a later date?

RURAL ELECTRIFICATION

One of the most popular programs is rural electrification. I am for it. The question before the House was whether or not the President's budget request of $250,000,000 should be granted in full. The REA lobby, one of the most powerful in the country, put out the word among applicants desiring electricity that they have not been connected with an REA line because Congress has not provided enough money. What are the facts?

Last year Congress provided REA with $325,000,000 more than it was able to spend for construction of lines because it could not get the materials. Yet, REA asked the Congress for $250,000,000 more for the next 12 months. The Secretary of Agriculture and the head of the REA say it will be at least 20 months before sufficient transformers, and so forth, become available to take care of all applicants. Congress reasoned that if this was so there was certainly no point in again appropriating so much more money than REA could possibly spend. So, it cut this request by $25,000,000, which leaves a total of $550,000,000 available on July 1. This is 90 percent of what REA asked for. It asked for more than it expected to get and need, as do all Government agencies, and as proved in the case of REA by the fact that last year it asked for and got $325,000,000 more than it could spend. Yet, one Missouri farm publication says: "Thus REA will be materially slowed down and thousands of farm families are condemned to many more years of darkness and all that implies." How untrue and unfair. Congress is not unfriendly to rural electrification. It will provide all of the funds necessary. But, this money is not paid back as fast as it goes out and there is no point in having too many millions tied up in allocations when sufficient materials to spend it on are not available for construction.

We have provided more than can be spent for actual construction next year and no farmer will be deprived of electricity or have the date of his connection postponed by reason of the House action.

I might point out in passing that REA could stand some economy and the Congress went perhaps too easy with it. With only one-half of the amount the REA requested for administrative expenses, they energized twice as much line in 1940 as they did in 1946. The House reduced funds for administrative purposes, the salaries of the REA bureaucrats, from the requested $5,600,000 to $4,000,000. Even so, that amount exceeds any amount appropriated for this purpose for previous years up to and including 1945. The hearings on the bill are full of startling information about the backgrounds of some top REA officials who, when appointed, actually were chauffeurs and otherwise unqualified by experience for the positions they now occupy. There is no agency of Government so holy it cannot stand a little economy and efficiency. And, when I say that I say it as one who has in the past voted more money for REA than it has been able to spend and will be able to spend to build lines for the farmers in the next 12 months.

THE TRIPLE-A OR PMA

The House voted to reduce conservation and use payments for the AAA and to eliminate it in 1948 but the Senate restored it for 1948 and the House accepted the Senate position. Greatest pressure for continuation of the AAA comes from the limestone producers who have been providing farmers with lime, partly paid for by Government. They maintain a powerful Washington lobby calling itself the National Crushed Stone Association. They have heavy investments in machinery and are out on the limb. Many of these people have borrowed heavily from the banks to finance their operation. These banks have also put pressure on Congress to continue this program so that they can be bailed out. Their argument is that Congress is breaking faith with the farmer by not providing all appropriations for this program previously authorized. Further, they fear that the farmer will not buy lime unless it is subsidized by the Federal Government, although it would be cheaper if not subsidized. At this point it is pertinent to quote the Appropriations Committee report, from page 24:

> In prior years the committee made it plain to departmental officials that the programs were contingent upon appropriations made by the Congress and repeatedly insisted that this fact be made clear to agricultural producers. The Department officials testified that millions of circulars relating to the farm program for 1947 were printed and distributed to all cooperating farmers so that it is abundantly clear to all participants that the program is based upon whatever funds are made available. One Congress cannot bind another.

Page 1249 of the committee hearings also quotes Mr. Dodd, Under Secretary of Agriculture, who advised the committee he had 971,500 handbooks printed for AAA committeemen and every cooperating farmer either got one of the booklets or was advised of its contents by an AAA worker. This literature advised farmers and lime producers as follows:

> The provisions of the 1947 program are necessarily subject to such legislation as the Congress of the United States may hereafter enact; the making of the payments herein provided is contingent upon such appropriations as the Congress may hereafter provide for such purpose.

When the lime producers and the Democratic New Deal editors of various farm papers put out the misleading propaganda saying that Congress was breaking contracts with the farmers they did not disclose the foregoing information. Nor did they quote the President who in his budget message to Congress on January 10, 1947 suggested that we shift our efforts from this kind of subsidy to providing technical guidance to all farmers for soil conservation and management along the lines of the Soil Conservation Service and Extension Service. The President said further:

> More than 60 percent of total payments have been going to only 20 percent of the Nation's farmers.

So, if the average farmer who gets absolutely nothing under this program objects to the reduction he has not taken the trouble to write to Washington about it. The pressure is coming from the lime producers and from the Triple-A committeemen. There are 9,087 AAA county committeemen and 97,663 community committeemen, who get a per diem of about $6 from the United States Treasury. The total granted for this army of AAA workers was $24,500,000 for 1948. For national and State administrative purposes, the cost was estimated at $9,025,868 additional and involves the services of 481 persons in Washington and 2,630 at the State level. Two hundred and sixty-five million six hundred and thirty-five thousand and forty-four dollars was appropriated for 1947 payments to the farmers, which is about all requested.

The average farmer knows it is weaning time for the bureaucrats whose motto has been "Spend and spend, tax and tax, elect and elect." Those bureaucrats being weaned are crying loudly. Their cries are music to ears of the taxpayers, including the average farmer, who is willing to do his part. However, professional farm leaders in many cases are like the professional labor leaders who do not want labor legislation, or the nontaxpayers who do not want tax reduction, or the brass hats who want our military establishment operated in peacetime with the same extravagance as in war. They have not learned to take the "me" out of economy. They want only the other fellow to have his appropriations cut. But, "We can't have our cake and eat it too." Such a policy would mean no debt or tax reductions or lifting of controls at all. It is a selfish, greedy, and unpatriotic attitude and a disservice to agriculture.

SOIL CONSERVATION

I suppose everybody agrees on the importance of soil conservation. Congress created an agency to assist farmers with soil conserving practices. For their field operations for next year this agency asked for forty-three and a half million dollars. That is twice the amount they had only 10 years ago. The House reduced the operations item by only about $6,000,000. We found that they employ 124 publicity people to send out press releases to farmers and farm organizations and newspapers to promote their agency and put pressure on Congress to give it more money. They also employ 146 persons just to supervise the other people employed in this agency. Still another defect in this agency which justified a reduction was the fact that the cost of its operations is about $300 per farm whereas in some areas, other methods of soil conservation got substantial results at one-third the cost. But, the most challenging thing about it is that other agencies with some 30,000 employees also provide advice on soil conservation and duplicate much of the work of the soil conservation agency. Let us look into that for a moment. Here are some of those other agencies doing soil conservation work:

First. The agriculture experiment stations for soil work. The funds for this work were not reduced at all.

Second. The Extension Service or county agents with their soil specialists who have been doing this work for 30 years. Their funds were not reduced at all.

Third. The AAA program which is entirely a duplication of the work of the Soil Conservation Service, the Extension Services, and other agencies. The AAA is the agency which gained fame by killing little pigs a few years ago to promote scarcity and plowed under crops as late as the first year of the war. Now it is trying to increase production by distribution of lime, fertilizer, and encouraging terracing and the planting of trees.

Fourth. The TVA distribution of fertilizers is also a soil-conservation activity duplicating the others.

Fifth. The Forestry Service has an important place in soil conservation. The tree-planting program of this service was not reduced at all. It can do the work AAA was doing in this field; duplicating its effort.

So, we can see from the foregoing, that other agencies of Government are doing soil-conservation work in addition to that being performed by the so-called Soil Conservation Service itself. There is a lot of duplication of effort which means unnecessary expense to the taxpayers and a lot of jobs which should be abolished. But the Soil Conservation Service got off pretty easy. It got only about 2 percent less than it got in 1947. It got about 74 percent more than it did in 1943. A bill is pending to consolidate soil-conservation agencies and I hope it passes in the next session.

The Eightieth Congress is for soil conservation. It might be pertinent to point out in contrast that any Administration such as the present one that discriminates against the livestock industry like it has these many years in order to oversubsidize soil depleting crops; any Administration that has not lived up to the

law in supporting livestock products at not less than 90 percent of parity at the same time it puts a floor of 150 percent of parity under a soil depleting crop; any Administration that functions in such a manner as to reduce hog numbers from 83,000,000 to 56,000,000 as this administration has during the past 4 years; any administration that functions in such a manner that the sheep numbers of America have been reduced by 35 percent during the past 4 years; any administration that functions in such a manner as to reduce cattle numbers in the United States by over 4,000,000 head in the past 4 years; any administration that lowers the duties and invites imports and secures 30 percent custom receipts to be used as section 32 funds under the guise of disposing of surpluses, and then uses these funds to grind up tobacco for fertilizer, subsidize insecticides made of tobacco and pay export subsidies on tobacco, wheat, corn, and other soil depleting crops, is in a rather poor position when it takes upon itself to point a finger at the Eightieth Congress, and accuse it of being against soil conservation.

SCHOOL LUNCHES

The school lunch program began back in the days of food surpluses and the idea came up and was approved, authorizing disposal of these surpluses for school lunches at expense of the United States Treasury. It is thus essentially a nutrition program and is administered as a cash subsidy to schools which operate such programs. Payments are made in cash through the State Educational Authority and schools are free to operate the program as they see fit and serve what they like. The administration asked $75,000,000 for this program for 1948. But, we do not have a surplus of anything now except potatoes. The Congress allowed $65,000,000. The challenging question this item presents is why the Federal Government, head over heels in debt, should be called upon to provide money for a strictly local program when most of the States today receiving this Federal cash subsidy have comfortable bank balances? Certainly, the program today is no longer an aid to agriculture so even if it is provided for why should it be in an agricultural appropriation bill?

FARM LOANS

Time will permit reference to one more item in the bill, namely, the Farmers Home Administration, successor to the discredited Farm Security Administration which engaged in Communist collective-farm experiments and which now administers loans to tenant farm purchasers, production and subsistence loans, and rehabilitation services to farmers. A great hue and cry has gone up that these funds are necessary to help veterans buy farms. Here again we have a duplicating agency. Any veterans who wants to buy a farm can borrow guaranteed money under the GI bill of rights, administered by the Veterans' Administration.

It seems a queer time to provide the FHA with $30,000,000 to spend on salaries of its 8,120 bureaucrats to do work being done by the five other Government farm lending agencies. The amount was reduced to eighteen million and might well have been less for it is an inappropriate time to provide money for tenant purchase loans when only recently a conference was called by the President to cope with land fever and the skyrocketing land prices which would place every tenant purchaser of a farm in jeopardy if commodity prices should start sliding downward or land prices drop. To furnish lavish funds for such a purpose now is to encourage inflation and farm bankruptcy, so farm tenant loans were reduced to $15,000,000 for 1948.

Funds were eliminated to insure farm mortgages because the testimony disclosed that on the basis of the 2½-percent rate for a long-term mortgage, there was not a single customer for such insurance.

A request for $90,000,000 with which to make production loans was cut one-third, or to sixty million. Every bank in the land is bursting with money to loan for such purposes. If we are believers in private enterprise we should practice what we preach when the opportunity presents itself.

There are other items in the bill, but the ones I have mentioned were the most controversial. Efficiency of the Department of Agriculture has been increased by this pruning of the branches, and all essential services have been preserved. The Congress has even played safe and square with the farmer by providing $4,750,000,000 which can be used by the Commodity Credit Corporation to maintain prices on basic commodities at parity level, although it hardly seems likely in this era of high farm prices that these funds will be much used. Treatment of this bill by Congress, which has ignored the appeals of demagogues seeking to farm the farmer, is a real contribution to sound financial policy for the entire Government and in the interest of national welfare.

Letter to a Young American Pole

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter published in the Polish Review of July 10, 1947:

LETTER TO A YOUNG AMERICAN POLE
(by Eugene Lyons)

DEAR MICHAEL: You bear an authentically Polish name. Lovely Polish tunes run through your mind; tunes you heard in the cradle, in childhood, at family gatherings. There are a few exotic reminders of the old country in your home—perhaps pictures, books in strange bindings, maybe a costume—and they do touch a chord in your heart.

Being an intelligent young man, you agree that Poland has gotten a raw deal in this war. Listening to your relatives and their friends discuss the ordeal of their native land, you sometimes share their anger and their sorrow.

At the same time, however, you are a little annoyed by their eternal concern about a place thousands of miles away and problems that seem so remote from everyday American life. That hankering interest in the fate of a foreign nation seems to you almost un-American—almost, as you put it, "like divided loyalty." Your parents came here from Poland and you love them. But it seems to you high time they erased the memory of their origins and settled down to being "real Americans."

In any case, you want to know why you—an American boy, as American as any of your Anglo-Saxon classmates—should bother about a far-off country which you have never seen.

It's a fair question, Michael, and you're entitled to a fair answer. It's a question being asked not only by the sons and daughters of Polish-American homes. Millions of Americans only one or two generations removed from their immigrant forebears, from every country on earth, face the same problem.

Somehow they must reconcile their family heritage, whether it be Polish or French, Irish or Mexican, with the general American heritage. Unlike "old line" Americans, they were born into two cultures: the one at home, the other outside the home. Unless they can succeed in blending the two, in making them harmonious, they are likely to be disturbed and unhappy.

Many of them never do achieve that inner sense of harmony. They go through life with a self-conscious feeling about their origins, their names, the "foreign" touch to their homes. Instead of being proud of those things, as they have every right to be, they act almost as if they carried a guilty secret.

But the wisest and healthiest among the second and third generation Americans, Michael, are those who understand early that the whole problem is artificial. It's not in reality but in their minds. They need only straighten out their thinking on the subject and presto! the problem disappears.

And they do straighten out their thinking just as soon as they become aware that America is not made of one piece but is a wonderful mixture of races and cultures, to which new ingredients are always being added. That mixture, in fact, is the basic reason for the vigor and power of our country.

Eric Johnston, now head of the movie industry, made this point well in the course of a speech sometime ago.

"Any metallurgist," he said, "will tell you that the toughest, most resistant metals are not 'pure' ores but alloys that blend the most valuable qualities of many ores. It is thus with the American, who fuses in his blood and his spirit the virtues and vitalities of many races, creeds, cultures—giving us an amalgamation that is new, unique, and immeasurably strong."

There never was and never will be a point at which our American amalgam will be fixed and finished. Ours is a vital, dynamic nation in a continuous process of growth and change. Every new arrival—whether from Poland or Timbuctu—makes a contribution to that evolution. He brings his labor power, his passion for self-betterment, his brains, the virtue and experience of his particular civilization, and throws them into the great American pool.

Our America has never expected its immigrants to discard and forget their past. On the contrary, it has expected them to distil the best in their personal heritage for the enrichment of their adopted fatherland. What distinguishes America from some older

nations is that it has a diversity of people but an equality of human rights.

Once you have grasped this great truth about America, Michael, you will get over any uneasy feeling about your slightly foreign home and relatives. It will turn instead into a feeling of pride—pride in the special qualities and unique experiences of your forebears and their courage in coming to America for a fresh start. You will know that foreign homes have been typically American since the day when the *Mayflower* unloaded its contingent of immigrants on Plymouth Rock.

Immigrant, after all, is only another word for pioneer. It took guts for your father or grandfather to tear up his roots and strike out for a new country on the other side of the ocean. The same kind of guts the Pilgrim Fathers had, or those who struck out for the unknown West in covered wagons.

What if the sons and daughters of a *Mayflower* immigrant had been self-conscious about their English family? What if the boys of old New Amsterdam, which was to become New York, had been a bit uneasy about their Dutch ancestry? You'd say they were foolish. Well, it is no less foolish for the sons of more recent settlers to behave in that fashion. Except for the difference in dates, you are in exactly the same position. America is a long chain of many and diverse links. Your link is more recent, closer to the end of the chain, but not one bit less important than the rest.

An Irish American, if he has self-respect, loves the Green Isle of his forebears, though he has never seen it and doesn't expect to. He marches proudly in the St. Patrick's Day parade and feels himself, rightly, a better American for it. If his interests run in that direction, he gets a special kick out of Irish literature, Irish music, Irish history. If his tastes run in another direction, he takes a deeper pride in an Irish jockey or Irish prize-ring champion.

The very fact that he does these things proves that he is thoroughly adjusted to America. His American patriotism is not one iota less because it includes a perfectly natural and wholesome affection for the ancient land of his fathers.

Do you know, Michael, that tens of thousands of Irish Americans gave their money and their energies in the long struggle for Irish freedom? They did not thereby reduce the measure of their Americanism. Indeed, intelligent fellow-Americans who were not Irish understood and applauded that loyalty to their race. Because our country is compounded of scores of races, a decent pride in your own race, coupled with a decent respect for the other fellow's, has become a fine American tradition.

Intelligent fellow-Americans understand and applaud today when Americans of Polish extraction—Americans like yourself—fight for the cause of Polish liberation. Would it be natural for Americans, who cherish freedom above all else, to remain indifferent to its suppression in another country? Certainly not. And by the same token it would be a hundredfold more unnatural if they remained indifferent to the enslavement of the land from which they have sprung.

Let me put it bluntly. If your father and his friends, born in Poland, ignored the tragedy of their native country it would mean that they have not learned the lesson of their adopted country. It would mean that they have not learned the value of human freedom. If you, the son of Poles, are untouched by the suppression of Poland's freedom, it does not mean that you are a "real American," but, on the contrary, that your Americanism is superficial, shallow, and incomplete.

The fact is that those who fight for Polish freedom are also fighting for American freedom. It happens that an epochal struggle is under way in the world today—a great duel between freedom and dictatorship. America typifies the nations and peoples on the freedom side of the tussle, just as Soviet Russia typifies the forces on the side of slavery. A victory for dictatorship anywhere is a defeat for our America. A victory for freedom anywhere is an American triumph.

Yes, Michael, in standing up for the rights of Poland you are helping to pull your weight in the great tug-of-war against the ideas and the threats represented by Soviet Russia. Poland was one of the first victims of those threats, but their main and ultimate target is the United States. The liberation of Poland, when it comes, will be a great step in the defense of American liberty and the American conception of human relations.

Think of these things next time you are tempted to annoyance because some Pole grows vehement in denouncing the raw deal meted out to Poland by its wartime allies. Remember that he is right. Remember that the betrayal of Poland was also a betrayal of America. It is not simply a "Polish affair," but an affair affecting the entire world.

When Poland, which fought so valorously and paid such a heavy price in blood and pain for its loyalty to the allied ideals, was sold down the river to appease a totalitarian despot, the hopes for a free world suffered a body-blow. You know by now that the injustice perpetrated against Poland did not end there. It was the prelude to a lengthening series of injustices. The latest victim, as these words are written, is Hungary, and other countries are waiting their turn to be enslaved.

A few years ago, when the war was still under way, there was a great deal of talk about one world. The phrase expressed the old yearning of plain people everywhere for a free world organized under law. Today, alas, that phrase sounds ironic—the globe has so obviously been split into two contending worlds, one headed by the United States of America, the other by the U. S. S. R.

As a physical and political fact the one-world concept has been exploded. But in a deeper sense, in the moral sense, this is one world. It always has been and will remain one. I mean that we cannot close our eyes and hearts to evil elsewhere without being contaminated ourselves. Those who exclaim that they are not their brothers' keepers share the biblical mark of Cain. We cannot smugly enjoy liberty and well-being while suffering, moral degradation and political despotism spread beyond our borders.

There were Americans, before World War II, who insisted that it was none of our business what Hitler was doing to his own people, his Jews and his neighbor nations. By this time we know how terribly mistaken they were. We know that in due time the whole world paid heavily in life and substance for the diabolic crimes of the Nazis.

Even so there are Americans who now pretend that it is none of our business what Stalin does to his own people and to the populations of neighboring countries. Their vision, alas, is as narrow as their human sympathies. Horror of the kind the Soviet dictators are inflicting on an ever larger portion of Europe and Asia cannot be ignored with impunity. It is a source of contagion for the rest of mankind. Unless it is cured in good time it may well plunge the world into yet another orgy of global blood-letting.

So I repeat, Michael, that in fighting for the rights of Poland you will be fighting also for the best interests of America. Kosciusko and Pulaski did not cease to be great Polish patriots when they chose to fight for the independence of 13 far-off American Colonies. Lafayette did not cease to be a great Frenchman when he devoted himself to the cause of American freedom. A great English poet, Lord Byron, took up arms for Greek freedom at the beginning of the last century; he did not thereby cease to be a noble English patriot.

By the same logic you—and your Polish relatives, their Polish friends—do not cease to be good Americans when you champion the cause of Polish freedom and independence. Indeed, you demonstrate your Americanism by doing your share in defense of principles of human liberty and human dignity that have their focal center in these United States.

Another thing: Communism is the No. 1 danger facing the world today. Its depredations in Poland or France, in China or in our own country, are not separate phenomena. They are parts of the same world-wide force. We must stand up to it, all of us, not only here at home but wherever the danger is manifest.

Viewed in this light, Poland is not at all far away. Its fate is not unrelated to the interests of America but, on the contrary, intimately linked with our everyday problems.

It is not only your right as an American, Michael, but your duty as an American of Polish origin, to take a direct and enlightened interest in the vital struggle to liberate Poland from Soviet dominion. You will be a better American for it and, more important, a better human being, a better citizen of the world.

"Streamlined" Congress

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. KEFAUVER. Mr. Speaker, as the first session of the Eightieth Congress comes to a close, the people take an especial interest in the success or shortcomings of the Congressional Reorganization Act of the Seventy-ninth Congress. Some features of the La Follette-Monroney Act, have proven quite beneficial to the functioning of Congress. Other provisions would have been of substantial benefit if Congress had made a greater effort to carry out intent of the Reorganization Act.

It should be borne in mind that only a small part of the job of modernizing Congress was accomplished under the reorganization. Other suggested improvements are contained in the book, Twentieth Century Congress, written by Jack Levin and me. I hope Members of Congress will study and consider these additional proposals.

Life magazine this week in its editorial carries a fair and accurate analysis of the effectiveness of the reforms that were accomplished in the Reorganization Act and the editorial forcibly presents the need for further modernization. Under leave to extend my remarks, the editorial is included herewith:

THAT STREAMLINED CONGRESS—ONE REFORM OF OUR LEGISLATIVE MACHINERY WASN'T ENOUGH—SO LET'S TRY AGAIN

Since Congress will wind up in a rush of long-delayed work, it is too soon to assess the legislative hits and misses of this ses-

sion as a whole. But in one respect the score is already in. The Eightieth Congress was to have been known in the history books as the first streamlined Congress. It was the first to apply to itself the La Follette-Monroney Act, passed by the Seventy-ninth, reforming its own machinery. How have those reforms worked out?

The passage of the La Follette-Monroney Act was considered at the time a great victory for better government. Practically all right-thinking people agreed that reform was needed. Now that we have some clinical data, however, it is our sad duty to report that it cannot be called a success.

REFORMS THAT FAILED

Take three of the major reforms in the La Follette-Monroney bill and look at what has happened to them. First, the number of standing committees in both Houses was reduced from 81 to 34. Cutting down this sprawling jungle of "little ministries" (as Woodrow Wilson called them) was supposed to eliminate a lot of unnecessary work. But instead of 34 committees, or even 81, Congress now has more than a hundred—with more being appointed all the time. They are now called subcommittees, and they are not covered with mossy prestige like the old standing committees, but they aren't any more efficient either. Indeed when a subcommittee has finished work on a bill, the bill has to go through the extra step of passing the parent committee before reaching the floor. The regular committees, being fewer, are even more overloaded with work than before. The Judiciary Committee alone has had upward of 1,500 bills this session and has given birth to eight subcommittees in a futile attempt to keep up with them.

Second, there is that potentially very important reform known as the legislative budget. The Reorganization Act required Congress to take at least one annual look at its total appropriations and estimated revenues, fitting them together and authorizing the appropriate increase or reduction in the public debt at the same time. Only by such elementary housekeeping can the Government ever make any real fiscal sense. Those repeated Republican efforts at tax reduction, for example, would look a lot better if Congress had first agreed on approximately how much it was willing to appropriate and on whether it wanted to retire any debt or not. In an effort to obey its own rules the House accepted a budget of $33,000,000,000 ($6,000,000,000 lower than the President's budget); but the Senate wanted $34,500,000,000, and a conference committee has been sitting on the problem since March 4. By now the legislative budget for 1947 is academic. Appropriations are going through on their so-called individual merits, as of yore, without reference to income, debt, the value of the dollar, or any other aspect of high fiscal policy.

A third reform, also potentially very important, was more money for the committees—also for each Senator—to hire expert help. About $3,000,000 has been spent on these vital new jobs this year. The original idea was to build up staffs of brains and ability so that Congress wouldn't have to rely so heavily on lobbyists or on the executive departments for its information. However there has been no great rush of brains to Washington as a result of this reform. The new jobs became patronage, just like the janitors, pages, and elevator operators before them. George Smith, secretary to the majority policy committee, made a partially successful effort to introduce a rudimentary merit system into the selection of committee staffs, but the seniority system (which the Reorganization Act left untouched) and its attendant gravy stains proved too much for him. By and large, the streamlined Congress is much too much like its predecessors.

This is a source of great satisfaction to lobbyists, to cynics, and to those mossbacks in Congress who were against the reforms to begin with. So what do we do; conclude that reform was a bad idea? That the more you try to change Congress, the more it remains the same? Or try again?

A TWELVE AND A HALF PERCENT GAIN

When the Reorganization Act was passed, the principal reason for all the cheering was that Congress had shown itself capable (much smart money to the contrary) of taking any action on self-reform at all. No expert thought the act went far enough. Representative KEFAUVER, of Tennessee, one of the hardest workers for reform, estimates that the act went about 25 percent as far as it should have and has been 50 percent effective, which gives us a 12½ percent net advance. Salaries were raised to $15,000 (they should be $25,000), lobbyists have had to register, the legislative drafting and reference services have been expanded, etc., etc.

Another 25 percent gain should be comparatively easy. Mr. KEFAUVER has filled a whole book—Twentieth Century Congress—with further ideas for lightening Congress' crushing load of work and tradition. For example Congress should get rid of the anachronistic duty of governing the District of Columbia, a duty which takes 1 day a fortnight and which once enabled Senator Cole Blease to make a speech on the floor because he couldn't get a seat in a streetcar. The Senate could also save a lot of time by getting rid of the filibuster. The La Follette-Monroney committee was barred by its own terms of reference from considering this reform. A similar fate met the excellent Kefauver proposal (Life, February 21, 1944) providing for a weekly question period during which executive department heads would appear before both Houses of Congress.

As KEFAUVER says, Congress as at present organized could not function without lobbyists, who outnumber the Congressmen in Washington by two to one. Registering them is a harmless and even useful step, but lobbyists will continue to influence too much legislation until every committee and Member has more and better experts at his call. One reason the House Judiciary Committee is so overworked is that it hasn't a single lawyer on its staff; the members have to do their own drafting. The House took a small step in the right direction recently when it hired a $12,000 Coordinator of Information. That is one kind of public expense no intelligent taxpayer will begrudge.

But even that will not be enough. Congress has at least two wider rivers to cross before it can consider itself streamlined or even decently efficient.

First, it must find some substitute for the seniority method of choosing committee chairmen. The reduction in the number of standing committees has had the effect of increasing the average age of the chairmen; what used to be called the "senility system" must now be called "supersenility." Seniority was adopted in the House in 1910 as an escape from the tyranny of Speaker Cannon. But feudalism is not the only alternative to tyranny. Why not let the committees choose their own chairmen?

THE LAST RIVER

The second river is wider and is not to be crossed in one leap. It requires the development of a clearer and more formal sense of responsibility for legislative policy. Toward this end the La Follette-Monroney committee recommended a majority and a minority policy committee in each House. Speaker RAYBURN, for reasons best known to himself, killed this proposal; but the Senate adopted it for itself, and its majority policy committee which has worked quite well. As Democrat KEFAUVER points out, the Republicans seem to have a more coherent party sense anyway; even in the House, JOE MARTIN'S tight little machine has shown itself quite capable of making a decision and getting out the votes to back it up. But what is still badly needed is a formal and public method for reaching a joint House-Senate majority (and minority) position on critical issues, so that responsibility for action or inaction can be focused where it belongs.

A joint majority policy committee could have prevented the farcial fate of the 1947 legislative budget. It could be a means of better liaison between Congress and the White House. It could lead to the development of a true legislative cabinet, equal and opposite to the Executive Cabinet. It could reverse the depressing trend of this efficiency-minded century, which has been to exalt executives and to discredit parliaments everywhere.

Even in Britain, Parliament has become little more than a talkative appendage of the ministerial government, and one political scientist (Don K. Price) expects the Commons to become like the Lords, one of the merely "theatrical elements" of British self-rule. Our system, through Congress, gives the people a more direct voice in their own fate. Congress has a chance, but only a chance, to justify that high function by becoming responsible and so remaining free.

Flood Control

EXTENSION OF REMARKS
OF
HON. PARKE M. BANTA
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. BANTA. Mr. Speaker, I listened attentively, as did all the Members of this House, to the President's message of July 16 relating to the development of water resources and flood control, since referred to by the Members and in press reports as Truman's flood-control plan.

The President opened his message with this sentence:

> The major opportunity of our generation to increase the wealth of the Nation lies in the development of our great river systems.

A variation of this sentence has been uttered by our politicians, and by some of our statesmen, too, for more than a hundred years, during which time ill-conceived, piecemeal plans have been submitted to the Congress for authorization and appropriations, along with pleasing promises for expenditure of funds in the most fertile political areas, upon the theory that we must control floods and preserve our fertile soil.

In the beginning, it was navigation and flood control, but navigation received the benefits and floods continued. Later it was navigation, irrigation, and flood control, whereupon irrigation and navigation received the benefits and floods continued. More recently it has been navigation, irrigation, high dams, behind which shall be multiple-use reservoirs for such additional benefits as the development of hydroelectric power, municipal and industrial water supplies, recreational areas and opportunities, preservation of fish and wildlife, the abatement of pollution, and flood control.

Many huge dams have been constructed, some are in the process of construction and many others authorized, but the floods continue, and in the region

of the great Central West, correctly referred to as the breadbasket of America, in the Missouri and upper Mississippi Valleys, this year, 1947, those rivers have had crests as high as the record of more than 100 years ago; namely, in the year 1844. There was less water in these rivers this year, but the crest was almost as high. Does this fact demonstrate anything to the President or to the Army Engineers Corps? If nothing else, it must serve to teach them that something is wrong with the plan. First things have surely not been placed first in the execution of plans, or they are being erroneously executed. It is conceivable there has been no proper plan from the beginning. We have not received flood control for flood control expenditures. Some may say, "Give us time", and to that the farmers living along these rivers in Missouri are saying: "We have been at it for more than 50 years". We have expended hundreds of millions of dollars for dredging and for dikes in the streams, and to riprap the shores, all of which has served to slow up the flow and to increase the depth at low water stages, but none of which has served to prevent the terrible damage and alleviate the suffering caused by ever-reoccurring floods. We have even built some superficial levees, and in many cases quite near the water's edge, but they have served only when the floods have been minor ones. Also after each disastrous flood these insufficient and superficial levees have been repaired at what virtually amounts to a waste of public money.

In the past, the expenditure of vast sums in the name of development of our great river systems, and for flood control, have been placed in the hands of the War Department, Corps of Engineers, in the Department of Interior, Bureau of Reclamation, and in the Department of Agriculture, Soil Conservation, just where the President, in his most recent message on the subject, proposes to continue the authority and expenditure of funds. To some extent at least, each Department has competed for authorization of funds, and for appropriations. Each has had its own plan, not too clearly defined to the Congress nor to the people. There has been no coordination, and no overall plan or program. More often than not, we have witnessed expenditure in the most fertile political area. With each reoccuring failure, demonstrated as I have pointed out by the ever-increasing damage by flood waters, more money has been asked for, and for supplementary purposes, until now, still without an overall plan, it is suggested that $250,000,000 be quickly appropriated to the three departments named, for expenditure, so far as the President makes known, in the same manner in which these agencies have proceeded throughout the years.

Moreover, the President recommends that the Corps of Army Engineers should have more than 94 percent of the total appropriation; the Department of Interior, Bureau of Reclamation, should have 4 percent of the total; and for soil conservation, which undoubtedly is the principal thing to be accomplished by flood control, if not in fact the principal thing, the Department of Agriculture should have only a little more than 1 percent of the appropriation. In Missouri we are becoming impatient with the expensive and ineffectual flood-control procedures practiced over the years. We want flood control. We know it cannot be had with money alone. If first things are to come first, we must have a carefully and expertly prepared plan. It must be one that goes beyond high dams far downstream designed chiefly for the development of hydroelectric power, and to provide playgrounds and recreational areas. The latter we already have in Missouri in abundance. We want rural electrification, but its importance will be gradually lessened if we fail to get flood control.

I am not an engineer, nor am I an authority on flood control, but our experience has been such that I know, as do the thousands of farmers living in the recently flooded Missouri and Mississippi River Valleys, that for the hundreds of millions of dollars spent in this area in the development of these great river systems, we have failed to accomplish flood control. We do not, any longer, favor the haphazard wasteful expenditure of public money for the purpose. It is time to do some efficient intelligent planning in advance of spending.

Statement by Robert M. Hutchins, Chancelor of the University of Chicago

EXTENSION OF REMARKS
OF
HON. PARKE M. BANTA
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. BANTA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

I oppose universal military training on the ground that as a military measure it is absurd. And if you ask how a layman, whose only military experience was that of a private in the First World War, can contradict the leading military experts on a military matter, I reply that they contradict themselves, for they first show that universal miliary training is a military anachronism which will weaken the Nation, and then demand it in the name of military strength.

The generals and admirals all insist on the rapidity of technical change. Then they insist that men trained with old weapons are going to be effective in using entirely new weapons. They prove that there is no defense against the atomic bomb, and then ask for an enormous Army to defend us against it. They show that this bomb can be sent into other countries by rockets or smuggled in by agents and then ask for a large Army, Navy, and Air Force to carry it into other countries. They convince us that in an atomic war 40,000,000 of us will be killed in one night, and then claim that it will be helpful to us to have wasted two or three billion dollars a year in teaching millions of young men close-order drill. They demonstrate that the strength of the country depends on its industrial power and scienific intelligence, and then advocate a system which will give us less industrial power and less scientific intelligence, for it will interrupt the training of men for science and industry. They propose, in short, an obsolete, wasteful, and ineffectual method of dealing with the military problems of the atomic age, problems which they themselves admit require an entirely new approach and entirely new ideas.

There is no defense against the atomic bomb. This means that there is no way of preventing the destruction of the cities of the United States, for nobody seriously supposes that there is a "secret" of the atomic bomb which the United States can keep. If we cannot beat the atomic bomb we shall have to beat war. There is no other way in which we can save our cities from the fate of Hiroshima and Nagasaki. How are we going to train the survivors of the next war to pick up the pieces, connect the plumbing and telephone wires, and get the water, gas, and electric works going again is a matter of relatively little importance to the majority of us; for the majority of us, or our children, or grandchildren, will be killed.

Professor Einstein thinks that about two-thirds of the population will be killed, and that is certainly a cautious estimate. But of all the kinds of training which the one-third surviving might need, the most useless is military training. They would need scientific, industrial, perhaps plumbers' and electricians' training, but their military training would do them no good against the atomic bomb.

The New York Times on the Poll Tax

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 22, 1947. This is a very good discussion of the poll-tax issue, although I feel that the New York Times is unduly pessimistic about action in the other body of the Congress on my bill to abolish the poll tax in Federal elections.

AT LEAST A MORAL VICTORY

Legislatively the House passage of an anti-poll-tax bill yesterday does not mean a thing. The bill will not reach the floor of the Senate, and if it did it would be killed by filibuster. The House has passed such bills before—in 1942 by a vote of 254 to 84; in 1943 by a vote of 265 to 110; in 1945 by a vote of 251 to 105. Yesterday's vote was 290 to 112—the highest yet, with 216 Republicans reinforced by 73 Democrats and Mr. MARCANTONIO. Representatives RANKIN of Mississippi and PICKETT of Texas led the opposition, both speaking for States in which the poll tax is still a means of preventing citizens from voting. They used the same arguments that had been used before. Among other things, they said that the Federal Government cannot constitutionally abolish the poll-tax requirement for voting. But if spokesmen for poll-tax States had real confidence in this argument, they would not need to make such desperate efforts—amounting in the Senate to a sit-down strike on all legislation—to keep a bill from passing.

The argument against the poll tax is not that the Federal Government has a right to interfere in the domestic concerns of the

States. It is that an artificially limited franchise in elections to Federal offices is an interference by some States in the affairs of the Nation. Laws which concern all of us are acted upon, sometimes decisively, by representatives from the limited-franchise districts. The results might be different if all those morally entitled to vote were actually enabled to vote. The limited franchise in Virginia, Texas, Mississippi, Tennessee, South Carolina, Alabama, and Arkansas is very much the business of citizens of New York, Massachusetts, and other States. Someday this fact will be generally realized and someday the Senate will have to back the House up in anti-poll-tax legislation. Yesterday's action in the House was at least a moral victory.

Veterans Housing—What Has Been Done About It in the Eightieth Congress?

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I would like to ask my colleagues what has been done for the housing of our war veterans? The answer is, obviously, nothing. Notwithstanding that the Committee on Veterans' Affairs reported out H. R. 3565, a bill that would alleviate the greatest domestic problem confronting our country today, the Congress has failed to take any action on it.

This bill was a sound solution to this problem in that it would afford to the veteran an opportunity to rent a decent home at a price within the average veteran's income, which is $37 per week. We all recognize that with the high cost of building today, these veterans are not in a position to buy a home.

If this Nation can send billions of dollars abroad to rehabilitate foreign countries certainly it could lend its credit to the men and women who so willingly gave up their good homes to fight for the preservation of the homes of those that they left behind when they answered the call to the colors.

The plan set forth in H. R. 3565 has received acclaim not only from the veterans but also from private enterprise, as evidenced by an editorial which appeared in the Fitchburg (Mass.) Sentinel on July 19, 1947, which is herewith appended.

BANKERS NOD AT THIS ONE

Bankers, especially those in savings and cooperative banks dealing with large numbers of home mortgages, always view with a critical eye proposals for governmental ventures into housing. Being in the business themselves, they know many of the pitfalls of various plans and have a robust faith in private initiative and enterprise.

When, therefore, any project wins the unsolicited approval of bankers, the advocates of action for veterans' housing sit up and take notice. One such proposal that has received favorable comment and endorsement from bankers in this community and region is the H. R. 3565, a bill introduced in May by Congressman HAROLD D. DONOHUE, of Worcester.

Raymond P. Harold, president of the Worcester Federal Savings and Loan Association, in the association's July News-Letter has flattering words to say about H. R. 3565. Inasmuch as they come from a banker in the mortgage business, they seem almost ecstatic in their endorsement of an attempt to meet the desperate plight of veterans' families. After citing the defeat of veterans in their search for rental quarters at a price they can pay, and asking this question, What plan will do the best job for the least expense? Mr. Harold comments and explains:

"Congressman DONOHUE's bill is short, simple, and understandable. Proposed as an amendment to the Servicemen's Readjustment Act of 1944, it would make funds available to local or State housing authorities, groups of veterans or others, organized as limited dividend corporations, in proportion to housing needs and veteran population. Funds would be advanced at the rate of $1,000 per room, or 50 percent of cost, whichever is less, for the construction of up to 200,000 multiple-housing four- and five-room rental units. Funds so advanced by the Government would constitute secondary liens on the rental projects, with interest and principal payments deferred until first-mortgage obligations were entirely discharged.

"It is estimated that, under this plan, modern living quarters can be provided veterans' families at a monthly shelter rent of $30 to $50, depending on the number of rooms, and allowing for variance in construction costs in different sections of the country.

"The bill contains provisions giving reasonable assurance that the Federal Government will get back in large part the money it advances, plus an average yield of 2 percent. Any qualified public or private agencies may participate in building and financing rental homes for veterans under its provisions. These agencies include any bank, Federal savings and loan or building and loan association, insurance company, real estate or builders corporation, veterans' cooperative, and any group of citizens representing the civic, business, or industrial life of a community. The bill calls for tax exemption of rental projects for a minimum period of 10 years by municipalities, which may also provide land and install utilities as a contribution to veterans.

"A 3-percent minimum yearly amortization of first-mortgage indebtedness and a maximum 4-percent-interest rate are specified. After discharge of the first mortgage, net proceeds of operation or sale of such housing would be paid to the Federal Government as a refund in part or whole of its advances. All provisions of the bill when and if enacted and effective, would be handled by the Veterans' Administration."

Noteworthy and significant in Mr. Harold's endorsement of H. R. 3565, which has drawn favorable comment in Fitchburg banking circles, are these facts:

(1) It recognizes the primary need for rental units at prices the veteran can afford to pay.

(2) The bankers, by their endorsement, concede that "something must be done."

(3) They do endorse a proposal that is virtually a Federal subsidy.

(4) The banks themselves would share in the plan to the extent of placing a 4-percent maximum interest rate on first mortgages on projects under the bill.

H. R. 3565 seems to be a good bill, but any plans to proceed under the State housing program should not be held in abeyance. If the bill does not pass at this session of Congress, it would be of no value in meeting the immediate needs of Fitchburg's veterans' families now without living quarters.

Taft-Hartley Bill

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a fine article on the Taft-Hartley bill appearing in the April-May 1947 issue of the American Watch Worker, the official publication of the American Watch Workers' Union.

The article follows:

TAFT-HARTLEY BILL WILL NOT BRING INDUSTRIAL PEACE

President Truman is to be congratulated by every working man and woman in America for the courage of his convictions in vetoing the Taft-Hartley bill, for it took courage for him to veto this bill which had been overwhelmingly passed by a Congress which knows less about industrial relations than they do about what is happening in Timbuktu.

The Congress of the United States is composed of men who are essentially honest and they are a barometer of what the people back home are thinking. This Congress felt it had a mandate to harness labor into channels of conservatism and to bring about industrial peace.

However, the bill which was passed by Congress to bring us about did not accomplish the objectives which would bring about industrial peace, and the law which was just passed over the President's veto can only play into the hands of those industry lawyers who will have a field day under the Taft-Hartley law.

Industrial peace can only come about by human understanding; no law, no legislation can bring about industrial peace until there is human understanding, and what this Congress failed to do and failed to realize is that there are more persons who belong to unions than those few top union officials who have brought the wrath of public opinion down upon all of the trade union movement. Why should the innocent suffer with the guilty? Why should the good, well-disciplined, responsible, democratic union suffer for the abuses of the corrupt union? Why should responsible labor leaders be classed with irresponsible union leadership? The Taft-Hartley law places every union leader under a cloud and makes every union the same. The Taft-Hartley law is a bad law, an unworkable law that can only bring about industrial discord.

President Truman recognized this evil in the law and condemned it. But the Congress was too anxious to meet the wave of hysteria which has been mounting against the labor movement, instead of really studying the problem and bringing in specialists from both companies and unions who really practice the doctrine of union-management cooperation.

It's odd that when a banking bill is being considered by Congress that a cross section of American bankers are heard on the bill, and their advice is heeded. But when a labor bill is up, only the top names in labor and the top names in industry are listened to and the intermediate groups in both labor and industry, those that work at the community level, are completely ignored.

It is time for Congress to realize that the working men and women of America want industrial peace, but they also want social justice; they want to be treated with the dignity of man; they want union democracy;

they want Government agencies to service them honestly and fairly; they want enlightened management which is willing to furnish them the facts concerning the corporation for which they work. The working men and women of America want the economic facts of life and are entitled to them from industry. What Congress failed to do in this bill was to correct the abuses in labor and still give to the working men and women of America the protection to which they are entitled in collective bargaining. The Taft-Hartley law returns America to a day when company unions flourished and when injunctions were served against unions at management's whim.

The American Watch Workers' Union has no problems which it cannot settle without Government aid or interference. It has a successful record to point to in industrial peace and union democracy, but the American Watch Workers' Union will be harassed under the terms of this law and will be punished as much as will those unions which helped bring down the wrath of public opinion upon the rest of us.

To President Truman we say "thank you" for trying to help the bona fide labor movement which represents the rank and file of American working men and women. To those Members of the United States Senate and Congress who voted to override his veto, we ask them to let the test of time determine whether their conscience was right when they cast their vote.

Life in the Soviet Union Today

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. McCORMACK. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I herewith insert the address delivered by my friend, the Reverend Dr. Joseph F. Thorning, rector of St. Joseph's Church, Carrollton Manor, Md., and associate editor of the Americas and World Affairs, before the officers, members, and guests of Rotary International, of Frederick, Md., Commander John F. Fitzpatrick, president, presiding. In this speech Dr. Thorning presents a vivid picture of Red fascism:

"One Russian is a genius. Two Russians present an immediate difference of opinion. Three Russians are a cooperative; and four Russians are a revolution."

This is a humorous observation that the Russians themselves used to be the first to enjoy. The description is still valuable as exemplifying the wealth of talent, good will, and overflowing vitality inherent in the Russian people, irrespective of the type of administration by which they are exploited. In the domain of music, painting, sculpture, ballet dancing, operatic composition, poetry, drama, and other forms of literature the Russians have made substantial contributions to world culture. They are a naturally gay, spontaneous, life-loving people. Few, if any, political entities have richer human resources than the Union of Soviet Socialist Republics.

No government, however dictatorial, can obliterate the innate qualities of 200,000,000 men, women, and children. The latter comprise the most important element in life in the Soviet Union today.

In this connection, it is interesting to note the birth rate in the chief totalitarian state. Taking the figure 1, or unity, as denoting the net reproduction rate necessary to maintain a population, without increase or decrease, we find that the net reproduction rate among the peoples of the Soviet Union is in excess of 1.6. The comparable figure for people of the United States, both white and colored, is 1.2. The net reproduction rate for whites alone in our country is unity. Relatively speaking, therefore, it is safe to say that the Slavs are an expanding, multiplying, dynamic people.

The tremendous driving force represented by this human Niagara has been harnessed by a clique of Soviet Commissars. These Soviet overlords work their will on the masses by means of the Bolshevik Party.

This party, the only one permitted in the Soviet Union, numbered some 23,000 members in Red October 1917. It was this revolutionary group that overthrew, not the Czars, but the social democratic regime of Alexander Kerensky. Although the Bolshevik Party grew rapidly within the next few months, Nicholas Lenin considered the domination of the majority by a minority perfectly natural. "Russia used to be ruled by 150,000 landlords," he wrote in August 1917. "Why could not 240,000 Bolsheviks do the same job?"

Under Josef Stalin, however, the party has reached its period of greatest expansion. A powerful leverage is exerted upon the masses by a tightly knit organization of some 7,000,000 members.

Of course, this is not a party according to the American idea. In the United States, our party system provides variety and liberty. Leaders emerge from and are chosen by the voters.

In the Soviet Union, however, the Bolshevik, or so-called Communist Party, is an officer corps which organizes an army of slave labor. Party members are local agents of the all-powerful Politbureau of 16 slave masters. Although bosses, demagogues, reporters, and spies in their respective districts, the individual party members know that their privileged position depends upon the will of those in the higher echelons of the party.

Few ideas or choices circulate from the bottom up; orders come from top to the lower layers of officials. Combined with constant surveillance of every phase of life, in factories, fields, and mines, this totalitarian dictatorship utilizes schools, newspapers, science, literature, and art in order to indoctrinate and police the people. Indoctrination and supervision are the keynotes of existence in a police state, whether that state be dominated by a Hitler or a Stalin at the top.

One of the boasts of the high priests in the Soviet hierarchy is that the literacy rate has shown a sharp rise under Soviet rule. This is true. It is to the advantage of the ruling clique to have millions of people able to read the propaganda dished out by the one-party regime.

Every dictatorship of the totalitarian model is eager to provide its own type of so-called education. The task of governing is simplified when slave workers can read everything put out by men at the top. This is particularly effective when a brutal censorship eliminates every trace of an opposite opinion.

Nowhere in the world are facts more carefully sifted, selected, and arranged than in the so-called press of the Union of Soviet Socialist Republics. The propagandists of the Kremlin make Paul Goebbels, master of black magic, blush for shame. Over the radio as well as in magazines, pamphlets, and shop papers, Stalin, head of the police state, plays upon public opinion as an organist operates the keys and stops of a pipe organ. The higher and wider the receptivity for his ukases among the masses, the more simplified is the task of administration. Should there be some tiny dissident view, it is drowned out in the blare of the official chorus.

The impact and influence of the single official party upon life in the Soviet Union is intensified by means of the Communist Youth League, a party auxiliary. Although this organization began modestly, it now numbers more than 20,000,000 members.

Nowhere has party indoctrination been more successful than among Soviet youth. Boys and girls, accustomed from their earliest years to a single view of life and work, dedicate all their idealism and enthusiasm to the promotion of party aims. Knowing no other goals or objectives, they work for the glorification of the Soviet state.

Children, who grow up in a one-party, police state, have no chance to learn the truth either about themselves, their parents, or their fellow human beings in other political systems. Like the Hitler youth, these young Soviets are the first victims of propaganda as they are likewise the most fanatical supporters of Red fascism. As long as the youth of the U. S. S. R. continue to be inoculated with the virus of dialectical materialism, according to Karl Marx, there is little or no hope for a decent administration of the countries now in the Soviet orbit.

At this point, it is important to single out for attention a conclusion expressed in that otherwise excellent booklet, Communism in Action (H. Doc. 754). The passage in question reads as follows (p. 113):

"It appears, however, that in proportion to the national income the Russian people are supporting education several times as generously as the people of the United States. According to George S. Counts, professor at Columbia University, the Russians are supporting education far more generously than any other people in history."

Every Member of the Congress of the United States as well as every citizen of our country ought to ask the editors of this booklet, Communism in Action, what is meant by education. Is indoctrination in dialectical materialism true education? Or is this indoctrination not an intellectual discipline, mixed with as much facts as suit the Red Fascist oligarchs, aimed solely at perpetuation of a reign of terror?

Would the Congress or the American people have been complacent in speaking about the Nazi totalitarian system of indoctrination as "education"? Are the Members of Congress willing to permit Marxist propaganda in a House of Representatives document?

This is a clear illustration of how easily the Leftist professors can betray their trust and use a "slanted" terminology to suggest that "the Russians" are more interested in education than the people of the United States.

In the United States, thanks be to God, the people have a voice in the allotment of funds for education. Furthermore, private citizens occasionally have enough private property to endow universities, colleges, academies, elementary schools, vocational and manual training centers, clinics, hospitals and centers of medical research.

In the U. S. S. R., the people have nothing to say about the so-called educational system. In fact, it is particularly in this field that Soviet totalitarianism is most ruthless and uncompromising. Why? Because a regime of slavery can maintain itself, as did that of Hitler, only as long as it can tyrannize over the human mind.

Based upon a partial statement of truth or fact, red fascism can stand only as long as the half-truths by which it is propagated are doled out in state institutions.

It is an unfair reflection upon the generosity of the people of our country to insinuate that they have been less willing than the Russian people in their contributions, whether voluntary or obligatory, for education worthy of the name.

I call upon the Members of the Congress of the United States to investigate the procedure that could allow an "angled" statement of this vicious character appear in a House document. Incidentally, the Congressmen and their constituents should be on their guard whenever they see conditions attributed to the Russian people. That can be and usually is a tip-off that a Soviet sympathizer is engaged in doubletalk.

The Russian people have about as much to say about what moneys are or are not appropriated in the Soviet Union as the seals in a zoo have to say about the amount of fish provided by the trainers.

It is my impression that the "indoctrinators" responsible for this "slanting" of evidence in a House document are loyal neither to the United States of America nor to the people of this country who gladly contribute to education.

Not long ago a United States clergyman, the Reverend Harry F. Ward, praised the concentration camps of the Soviet Union as "rehabilitation" centers. In the Real Soviet Russia, by David J. Dallin (published by the Yale University Press), it is possible to read a rather detailed description of life for the millions forced to labor in these camps. The following is one of the eyewitness accounts given in this book (p. 198):

"More than 200,000 prisoners were employed on the project. * * * More than 50,000 died during a period of a year and a half. The workday was 11 hours. There were no Sundays or any days of rest. Interruptions occurred only during transfers of workers from one camp to another. The work tasks were set very high, and food rations very low. Those who carried out their prescribed task received 800 grams of bread daily; those whose performance was only half of the prescribed norm received 300 grams. Besides bread a watery soup and salt fish were the only foods. Most of the work was done by hand without manual appliances. Despite the terrible Karelian cold, prisoners were forbidden to build camp fires. 'You can warm up by working,' they were told. This camp was named by the prisoners 'Hell of Ice.' I myself saw dead people who had been frozen with axes or saws in their hands. From 25 to 30 men died daily in winter."

This was the price of success in constructing the White Sea-Baltic Canal.

"The number of inmates in the concentration camps," it was reported in September 1938, "has assumed astronomical proportions. Gigantic works are under construction, for example, the Verkhne-Kolymsk Road, extending from the Sea of Okhotsk, is being built with bare hands, without any mechanical appliances. The center of this project is at Nogayev, where there is a huge labor camp to which thousands upon thousands have been exiled. People are dying there like flies, perishing in various ways, without anyone knowing about it, for the sentences dooming victims to prison and labor camps carry with them the notation: 'Without right of correspondence.' This is how they live under horrible conditions of boredom, bad food, in complete isolation from the outside world, slowly dying from weakness and exhaustion, hunger, and constant thrashing of the nerves. They are buried alive."

People in the satellite States of the Soviet Union are exposed to the same brutal treatment. According to a dispatch, published in the New York Times, March 24, 1947, from correspondent Sidney Shalett, "Bulgaria and Yugoslavia are teeming with concentration camps and prisons for political prisoners, offenders against the military and some minority groups. * * * As of fairly recent date, 630,000 persons, according to a conservative estimate, were in concentration camps and prisons in Yugoslavia and Bulgaria for 'political offenses' against the régime or the ruling Communist party. * * * Most of the inmates are described as intellectuals: teachers, university professors, priests, lawyers, physicians, businessmen and leaders and outstanding workers of suppressed political parties. The report said many of them had been imprisoned without court trial."

Mr. Sidney Shalett adds:

"The source of this report says many were 'kidnapped by the Communist militia in Bulgaria or by the UDB, formerly the OZNA, in Yugoslavia. Vermin, filth, humiliation, even torture were allegedly conditions of imprisonment."

About 2 years ago, Matthew Rakosi, the Soviet dictator in Hungary, when reproached with the shameful conduct of Soviet soldiers in Budapest, replied:

"We are taking very energetic measures and hope that in a few weeks we shall have order."

What were the complaints 2 years ago, before the Soviets had taken over the country, lock, stock and barrel? I quote from reliable reports in The New York Times, August 13, 1945, by correspondent John MacCormac. He wrote as follows:

"In broad daylight a Russian soldier is reported to have torn a wristwatch from a woman's arm. When her husband interfered the Russian shot him.

"Another complaint to the Budapest police was that a Russian had entered a house at night, tied up the husband and a boarder and raped the wife before the husband's eyes."

Now that Soviet-trained Matthew Rakosi is in full command in Hungary, he is able to suppress most unfavorable reports about the Red Fascist terror.

In the Soviet Union itself conditions for the ordinary people, with respect to food, clothing, and housing, are appalling. The CONGRESSIONAL RECORD Appendix for June 6, 1947, contained an illuminating description by Cecil B. Dickson. This newspaperman reported as follows:

"In Moscow I visited one old prerevolutionary mansion where eight families were living in four basement rooms and a hallway, all using the same kitchen, the toilet separated from the stove by a thin partition. One of their so-called modern apartment buildings, built in 1938 before Russia began to prepare for war, was equally jammed with families. Dirty, badly in need of repair, it looked like an East Side tenement, with wiring tacked onto the ceiling and the top-floor rooms flooded by leaks in the snow-covered roof.

" 'Tis said in Moscow that only the roof on the Kremlin does not leak. The attitude of the people is, 'Why take care of property that belongs to the Government?' As a result Moscow is shabby, buildings other than those occupied by high military and Government and party officials need repair."

This touches upon a point that needs elucidation and emphasis. There is a privileged class in the Union of Socialist Soviet Republics. The words of Mr. Dickson are revealing. His report reads as follows:

"What the Russians have now is not democracy but despotism. A small hierarchy of some 600,000 rule nearly 200,000,000. These people in the Politburo, Government positions, top military and naval officers, and those high in science, medicine, the arts, are the privileged groups. They have automobiles, summer homes, good apartments, ample food. But the common people live under conditions in cities and on collective farms much as did the pioneers in America. But they do not have the freedom our pioneers had."

This report coincides pretty well with a study released on Sunday, July 13, 1947, by the United States Department of Labor. According to this analysis the standard of living of the average American is 1,000 percent above that of the average worker in the Soviet Union today. The study added that the "trend of the Russian standard of living, rather than going upward, has been going sharply downward since the war."

It is fair to note, of course, that a large part of the decrease in the Soviet standard of living may be due to the damage inflicted by the war as well as the strenuous demands of the job of reconstruction. With proper allowance for these factors, it can be concluded that inflation in the Soviet Union and in the Soviet satellite States is fantastic compared to the rise of prices in the United States.

This development would indicate that, so far as living conditions for the working people are concerned, the Soviet system, which is really ultracapitalism, is a socioeconomic failure. As several correspondents put the case, after the recent Moscow conference, "the Soviet performance, checked by professions and promises, makes P. T. Barnum look like a piker." Or as the Hon. Alexander C. Kirk, one-time United States Chargé d'Affaires in Moscow, expressed himself to me, "the Soviet experiment is the most colossal hoax that has ever been perpetrated upon mankind."

Nevertheless, publicists like Mrs. Vera M. Dean, research director of the Foreign Policy Association, and Mr. Maurice Hindus, author of "Red Bread," write and talk as if we were not confronted with something much more formidable than the old Imperial Russia. Neither of these Russia-born propagandists realize that the democratic, freedom-loving people of the United States are face to face with a world conspiracy, directed by Josef Stalin in the Kremlin. They do not recognize that the Nazi-minded followers of Karl Marx, quislings and traitors, are willing to exploit the Orthodox Russian church for the purposes of window dressing and to promote pan-Slavic sentiment in eastern Europe for the aggrandizement of the Soviet Union.

To be sure, some tendencies and attitudes of the ancient Russian Empire persist in the Marxist high command. But both Mrs. Dean and Mr. Hindus should be able to see that some tremendously new elements have been added to the traditional Slavic imperialism.

The Soviet ideal is a police state for all the peoples of the world. Stalinism equates with Hitlerism, with its bigoted emphasis upon religious hatred.

It is time for Mrs. Dean and Mr. Hindus to stop talking and writing about Russia and the Russians. Why don't these leftist sympathizers ask themselves a few simple questions? Is Jacques Duclos a Russian? Is Palmiro Togliatti a Russian? Can Gerhart Eisler, recently convicted in a United States court, be described as a Russian? Since when are William Z. Foster, Eugene Dennis, Maurice Thorez, and Marcel Cachin Russians?

Turning to the Western Hemisphere, can we call Lazaro Peña in Cuba, Vicente Lombardo Toledano in Mexico, and Luis Carlos Prestes in Brazil Russians?

The plot against decency is world-wide. The aims of Stalin were the aims of Hitler: world domination. The totalitarian tactics of the Marxists were the methods of the Hitlerites: intimidation, torture, coercion, arson, rape, and murder. The Red Fascists are an international ring of gangsters. These world racketeers are far more brutal, ruthless, and cunning than the late Al Capone or "Legs" Diamond. They got their cut in every dominated country in the shape of political power, prestige, food, travel privileges and living conditions.

Materialistic to the core, the international clique, with an army of hatchet men in every part of the globe, wait for the word from Moscow for the final onslaught on civilized men, women, and children.

It is idle to talk about understanding Russia or the Russians. It is a clear case of comprehending the nature of a closed corporation of gangsters. If you can grasp the significance of "murder incorporated" on a world scale, you have understood the essence of world Marxism. Whether we live or die, survive or perish, depends upon our getting a full view of the danger of Red fascism and defending ourselves before it is too late.

Twenty-Year Housing Record Broken

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. MACKINNON. Mr. Speaker, during this session many of us have been concerned about the need for housing. This is not a new need, but has been with us for many years. While it is, of course, true that Congress cannot construct houses, we can encourage home construction. To acomplish this end this Congress has:

First. Removed numerous restrictive governmental controls that were preventing the production of necessary materials.

Second. Provided for aid for the construction of prefabricated homes.

Third. Passed legislation to stop featherbedding practices that have added to the cost of construction.

Fourth. Passed laws to solve jurisdictional strikes between unions that have stopped housing construction all over the country and added materially to the cost of home building.

It is gratifying to note that these measures are beginning to take hold and are having the intended effect. As evidence of the success of this program, I include, under leave to extend my remarks, an article from the Washington Post of July 20, 1947, which quotes the Federal Housing Expediter as saying that "more new homes were started and more completed in June 1947 than in any month in 20 years."

That is encouraging news and shows that we are on the right track.

TWENTY-YEAR BUILDING RECORD IS BROKEN—JUNE HOMES FIGURE, AND YEAR'S ARE UP, CREEDON REPORTS

(By John W. Ball)

More new homes were started and more competed in June than in any month in 20 years, Housing Expediter Frank R. Creedon reported yesterday.

Creedon said 75,000 new permanent homes were started last month, compared with 72,500 in May and 64,100 in June last year.

The total for the first 6 months of this year, he said, also set a new 20-year record, with 358,000 new homes started, compared with 340,100 last year.

In June, he said, 62,800 new permanent units were completed, a new postwar high, more than double last year's 30,600.

In the first half of this year 362,000 new homes were completed, he said, against 128,600 for last year.

Creedon predicted that the present high rate of building would continue through July and August in spite of the lifting of controls on nonresidential construction June 30.

Blue Hen's Chickens

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. BOGGS of Delaware. Mr. Speaker and Members of the House, House Joint Resolution 246, introduced by my good friend and distinguished colleague from Connecticut, the Honorable ANTONI N. SADLAK, provides for the issuance of a special series of stamps commemorative of the one hundredth anniversary of the poultry industry in the United States.

May I, at this time, commend my distinguished colleague, Mr. SADLAK, for his thoughtfulness and foresight in presenting this resolution because it directs attention to one of our most important and most colorful industries here in the United States. The poultry industry especially flourishes in the State of Delaware, and I believe that Sussex County, Del., is the greatest poultry-producing county in the world.

It is my hope that this resolution will receive the favorable attention of the Members of this House and that an appropriate commemorative stamp may be issued.

In this connection, it is my understanding that a decision has not been reached as to an appropriate design for the stamp. I would, therefore, like to suggest to the authorities who may have this decision to make that they consider the design of the State bird of the State of Delaware. Such a design would bring to this commemorative stamp the full color and vigor of our American life from the colonial days to the present. The cut for this design may be procured through the office of the State archivist in Dover, Del., as well as all of the historical tradition and background of the "blue hen's chickens" which have been so much a part of the history of our country and the State of Delaware.

Briefly, let me give you a little of this rich background.

A tradition that has been recorded by the historians of Delaware in their writings relates to the "blue hen's chickens." It is told that during the early days of the Revolutionary War the men of Capt. Jonathan Caldwell's company, recruited in Kent County, took with them game chickens noted for their fighting ability. These chickens were said to be of the brood of a famous blue hen.

Captain Caldwell's company was attached to Col. John Haslet's regiment which fought at Long Island, White Plains, Trenton, and Princeton. When not fighting the enemy, the officers and men amused themselves by pitting these blue-hen chickens. The fame of these cock fights spread throughout the Army and when in battle the Delaware men fought so valorously that they were compared to these fighting cocks, with the result that they received the sobriquet "Blue Hen's Chickens."

Although a law was not enacted and approved until April 14, 1939, by which the blue-hen chicken was adopted as the official bird of the State of Delaware, it is interesting that it received unofficial recognition through the years. Francis Vincent published a newspaper at Wilmington in 1845 which he called the Blue Hen's Chickens. A model of a blue-hen chicken surmounted the flagpole of the Delaware State Building at the centennial exposition, held at Philadelphia in 1876. The blue-hen chicken was used as the motif in numerous political campaigns and in many publications. During the Civil War a company of militia organized in Kent County on May 4, 1861, adopted for themselves the name "Blue Hen's Chickens." During the ceremonies of presenting a silver service and flags to the newly commissioned U. S. S. *Delaware* in 1910, a pair of blue-hen chickens were given to the vessel. In 1913, when the State flag was adopted it was stipulated that—

The Governor's flag should be similar to the State flag, except that a fringe of gold is to surround the edge of the flag and on the pole carrying the same is to be mounted a model of a blue-hen's fighting cock.

Safety for Miners

EXTENSION OF REMARKS
OF
HON. W. HOWES MEADE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. MEADE of Kentucky. Mr. Speaker, I again want to bring to the attention of this House the crying need for adequate safety provisions to protect the miners in this country from the peril of having to work in unsafe mines.

I appealed to the membership for adequate protection laws immediately after the Centralia mine disaster which took the lives of 111 miners on March 25 of this year. Although an investigation was made, and valiant efforts have been made on the part of a few Members of Congress for adequate safety laws and rigid enforcement, the job still remains undone.

Yesterday afternoon at the Old Ben Coal Co.'s No. 8 mine at West Frankfort, Ill., only 55 miles south of Centralia, 26 miners, and perhaps by now even more, lost their lives as a result of a mine explosion. We must take steps to prevent this wholesale slaughter of the miners in this country.

I plead with the membership on both sides of this aisle to give this horrible situation their utmost attention.

The Electrical Industry and Multiple Purpose River Valley Development

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an address entitled "The Electrical Industry and Multiple Purpose River Valley Development," by Morris Llewellyn Cooke, a consulting engineer of Philadelphia, read at the Valley Development Conference in Washington, D. C., July 18, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The commercial electrical operating industry is, and will continue to be, the spearhead of opposition to multiple-purpose and socially minded river valley development. Progress to the goal advocated by this conference will involve the recognition of the character of this opposition and constantly increasing efforts to thwart it. The history of the industry during the last 50 years should leave us in no doubt as to what we are up against.

The electrical industry since early days has been liberal to profligate in the matter of advertising in its various forms. With an all but untrammeled opportunity to spend other people's money, obtained through what have in the great majority of cases been excessive rates, elaborate ventures in publicity were irresistible. Unwisely conducted and put on far from a factual basis, nothing else has so injured the prestige of the industry with the general public—not even its gross overcapitalization and the door-to-door sale of securities at inflated values. The man on the street has been quick to recognize the fallacious character of many of these ideas as elaborately set forth in edited school books, in lectures by highly compensated college professors, and in advertisements in publications of both large and small circulation. Then we must not forget the industry's own subsidized publications, Public Service, Public Utilities Fortnightly, and Edison Electric Institute Bulletin, about as prejudiced and irresponsible a group of trade papers as one can find. Certainly we should and do welcome valid criticism of either legislative action, but such carefree and undependable comment as has been heaped on TVA and other public agencies in this field is wholly regrettable.

In the early days a tender solicitude for widows and orphans pictured as solely dependent upon the income from electric and other utility securities was the underlying thought in most industry pronouncements. Mr. Dooley, the Will Rogers of his day, twitted the industry about this so unmercifully that he had the whole country rocking with laughter, just as Johann Strauss had all Europe dancing after the Napoleonic wars with his Blue Danube and other waltzes.

Of course this widows-orphans theme song had to be changed when at the end of the gay twenties the Electric Bond & Share upped its capitalization five hundred millions with so little reason that a few years later it was forced to drop a like amount. Other electric companies followed suit. Thus financial dark days were brought to thousands of widows, orphans, school teachers, and others operating on limited incomes.

The bright new thought is that any raising of eyebrows at the practices of commercial electric utilities or any advocacy of public ownership necessarily involves lack of loyalty to our free enterprise system. Apropos of this new melody, the New Yorker (issue June 7) says:

"A current ad sponsored by a group of 'business-managed, tax-paying' electric light and power companies in defense of the American way shows a freckle-faced boy—you know him well—selling 'leminade' at 3 cents a large glass.

" 'Butch wants a bicycle' (reads the ad)! 'Lots of lawn and lemonade and baby-sitting lie between Butch and that bike, but we're betting on the boy. He has energy, vision, and our national habit of working hard for what he wants. He's American business—in miniature.

" 'There are many names for Butch's philosophy. You can call it free enterprise, opportunity, democracy, or capitalism, if you want.' (End ad and resume New Yorker.)

"If the sponsoring utilities will pardon us, we should like to discuss the economics of Butch's enterprise for a moment. A large glass of lemonade requires the juice of two lemons, at 40 cents a dozen, and about an ounce of sugar, at 15 cents a pound. Each glass thus stands Butch around 8 cents, not counting ice and overhead, and on every sale he loses 5 cents plus. He is able to operate only because he gets his lemons from his mother's ice box and his sugar from her pantry, figures his gross as his net profit, and offers his lemonade as a public service. What kind of business management is that? What kind of free enterprise? What kind of capitalism? We're afraid that what Butch symbolizes is socialism, and his mother the kindly, protective figure of the State."

As a matter of fact the use of the term "free enterprise" as it pertains to the electric utility industry should call for a "cease and desist" order from the Federal Trade Commission. The privately owned and operated electric utility industry stands in a very different relationship to its customers—the public—than do other privately owned organizations. Many of these companies have the words "Public Service" as a part of their corporate name, indicating the emphasis placed on service rather than profits. These companies are by nature monopolies, and should be. No one disputes this fact. They do not engage in business as a matter of right but rather as a matter of public trust. They are given power to run a business in the public interest, free of direct competition, under public control, and are permitted to earn for their stockholders a fair return on a fair value, both of which are determined by public bodies. To do business, commercial utility companies must obtain a franchise or certificate of public convenience and necessity from the respective sovereign body, Nation, State or city.

An insistent item in the industry's propaganda campaign is to the effect that hydro power and flood control are so opposed as to make impossible or uneconomic multiple-purpose dams which are of course essential to sound river valley development. In the face of TVA's highly successful practice of combining power and flood control back of practically all its dams I ask you to note these weasel words in large type as carried in a recent full-page industry "ad" in large circulation weeklies: "You don't use a full pan to catch a leak. Would you use a full dam to catch a flood?" Certainly not. But——

In most pools back of dams the lower levels account for a relatively small percentage of the total potential storage space. On the contrary, the top levels extending back greater distances from the dam and usually of greater width than those nearer the bottom provide the bulk of the possible storage. This means that by a slight increase in height, additional storage for flood control can generally be obtained economically from a dam which would otherwise be built primarily for power. Even during a flood the effectiveness of the reservoir for minimizing the effects of floods is not materially lessened by releasing the comparatively small amount of water required for driving the power-generating turbines.

Floods on many streams—one is tempted to say on most streams—occur at certain well-defined seasons and under improving modern scientific procedures the operators have increasing advance notice as to when floods are to be expected. This permits the utilization of the same space in the reservoir for flood control and power storage and is the method of multiple-purpose operation generally employed in the Tennessee Valley. Flash floods occasioned by cloudbursts may occur at odd times and, of course, rarely give advance notice. Their effects are local and limited, and can usually be easily handled and their peak flow decapitated by a limited amount of storage. In many situations then, the installation of power equipment in a dam need not stand in the way of flood control. On an integrated system including a number of dams this statement takes on added meaning.

Going further into the seasonal character of floods, experience has shown that with a multiple-purpose reservoir having flood control and power in combination, it is possible to draw a portion of the power storage in the season of greatest flood hazard. Storage capacity can then be provided to reduce flood flow which will be greater than would be available with a single-purpose flood-control reservoir. Further, the greatest incidence of flood flow is in the spring, not at the time of peak power demand, and the draft of power storage to provide for greater flood-control space can be made with no decrease of power values and a material increase in flood-control values.

The opposition of the commercial electrical operating industry to hydroelectric development is based primarily on the fact that the great majority of undeveloped sites are owned by the public, and that if and when developed, low rates based on costs will be charged as is the case with TVA and certain municipally owned plants such as Tacoma, Seattle, and Los Angeles. This will tend to question even more emphatically the existing and usually excessive rate schedules of the commercial companies.

Reduced costs always mean increased use Thus in Seattle in 1946 an average residential rate of 1.39 cents per kilowatt-hour as compared with a national average of 3.23 cents per kilowatt-hour led to an average annual use of 4,099 kilowatt-hours compared with the national average use of 1,327 kilowatt-hours. Fortunately, there are no issues such as navigation, flood control, or irrigation to complicate this showing. Seattle's annual report covering over 40 years' experience makes it as clear as a bell.

A review of typical bills for all classes of electric service in the States constituting parts of the Missouri Basin reveals the extent to which the people of that region can look forward to cheaper power under a Missouri Valley Authority. Speaking in broad terms they should ultimately see their bills cut in half, thereby opening the way to much larger average use with resulting benefits to homes, farms and the attractiveness of the area to industry.

Thus, according to recent Federal Power Commission figures, a majority of the homes in the Missouri Valley are today paying $3.64 or more for 100 kilowatt-hours of electric service a month. Similarly, they are paying more than $6.95 a month for 250 kilowatt-hours use. If these same homes were located in the Tennessee Valley, where a valley authority supplies wholesale power from a fully developed river, they would pay only $2.50 and $5, respectively, for these amounts of service. Their savings would run at the rate of $13.68 and $23.40 annually.

The Commission's figures show even more striking contrasts for commercial and industrial service. Thus, a majority of commercial lighting customers in the Missouri Valley, with a monthly demand of 6 kilowatts and a monthly use of 750 kilowatt-hours, must pay $27.21 or more a month, as compared with a typical bill of $14 for the same service under TVA basic rates. Similarly, a majority of commercial power customers, with 30 kilowatt demand and 6,000 kilowatt-hours of monthly use, must pay $146.30 or more a month, as compared with a typical bill of $78 for such service under TVA basic rates.

In the field of larger industrial service, a majority of industries with a demand of 300 kilowatts and a monthly use of 60,000 kilowatt-hours, would have to pay $940 or more

in the Missouri Valley under present conditions, as compared with a typical bill of $650 under TVA basic rates.

A few examples of possible savings to specific industrial plants under a valley authority set-up will illustrate my point. The annual savings for a representative brick and tile plant, if billed at TVA rates, would range from $720, as compared with rates for off-peak service in Omaha to $2,616 if billed at industrial service rates for unlimited service in Sioux City, Iowa. Such annual savings for representative plants in other industries would be:

A hosiery mill would save from $1,548 for unlimited service in Topeka, Kans., to $3,996 for the same service in Sioux City.

A furniture factory would save from $840 for off-peak service in Omaha to $5,160 for unlimited service in Sioux City.

A foundry would save from $3,312 for off-peak service in Omaha to $8,628 for unlimited service in Sioux City.

A meat packer would save from $5,844 for off-peak service in Omaha to $15,216 for unlimited service in Sioux City.

A machinery manufacturer would save from $1,080 for off-peak service in Omaha to $18,516 for unlimited service in Sioux City.

What such savings might mean to all the people of typical Missouri basin cities is shown by the following figures for estimated savings for all consumers of electricity in 12 such cities on the assumption that they were billed at TVA basic rates:

Community	Population	Annual savings
Sioux City, Iowa	82,364	$903,562
Omaha, Nebr	223,844	2,367,205
St. Joseph, Mo	75,711	663,773
Kansas City, Mo	399,178	4,131,220
St. Louis, Mo	816,048	6,779,026
Topeka, Kans	67,833	489,271
Kansas City, Kans	121,458	939,554
Bismarck, N. Dak	15,496	165,208
Minot, N. Dak	16,577	211,676
Sioux Falls, S. Dak	40,832	393,294
Huron, S. Dak	10,843	154,020
Billings, Mont	23,261	202,058

Another illustration of the way in which the electrical industry operates is afforded by the spectacular development of rural electrification during the last 20 years against the concerted, continuous and at times vicious opposition of the industry, illustrating both its ineptitude as to public relations and the power of public opinion. When in 1923 Gifford Pinchot began his campaign for rural electrification there were about 250,000 electrified farms in the whole United States. Today, almost wholly due to the REA, there are 3,335,000.

Yet only 12 years ago, about the time REA began operations, at a meeting held in the old Interior Building, 18 of the industry's highest officials united in saying emphaticaly and quite solemnly that it could not be done. The real reason why it could not be done was that since early days commercial rural rates had been fixed at "city rates plus" while because the farmer is a power as well as light user rural rates should have been less than city rates. Then REA promptly learned how to cut the cost of building rural lines in half and more.

Notwithstanding such a record note this equivocal claim in the opening address at the recent Edison Institute Convention: "Our industry pioneered in rural electrification. It built the first farm electric lines and has always been a leader in that activity."

The new task of the industry's high command is to assume that the job of electrifying our farms is all but done thus warranting the early liquidation of REA and a smothering attack on REA appropriations led by the industry's $65,000 a year lobbyist, Purcell Smith. As a matter of fact, the most difficult part of this job, that is, operating in increasingly thin territory remains to be done. If REA is not permitted to do it, the commercial industry certainly will not.

So it must regretfully be admitted that the operating electric industry opposes public control and its service responsibilities whenever it can get away with it. During the last 35 years as a private citizen and while occupying a wide variety of official posts I have had exceptional opportunities to observe at close range this utility industry in action. Based on this experience I have no hesitation in saying that the industry is operated essentially for ends all but without social purpose and under conditions which, if understood and properly appraised, would rate it as a closely-knit conspiracy against the public welfare. It reaches practically every county in the United States and, until the disruption caused by World War II, it had baneful international understandings. Its organization includes the Edison Electric Institute, certain State public service commissions, and some individual commissioners, certain city officials, city legislatures, Washington lobbies, and most important, certain inside quasi-social organizations where over-all policies are determined as far as they can be outside top banking circles.

Difficult as it may be to believe in the face of a welter of claims to the contrary, the operating industry has made very few contributions to the art and science of electric service. Practically everything in the way of progress has resulted from research and invention carried on by General Electric, Westinghouse and other electric manufacturing concerns. I am told by those who should know that the large company operating in my home city, Philadelphia, has not one important development affecting electric service to its credit. Research even of the so-called applied variety is all but unknown among service companies. Its secured monopoly position has made of the industry actually a reactionary social agency.

Practically every step in the direction of clarifying the issues involved in the orderly regulation of the industry and providing for more comprehensive electric service has been opposed by the industry. In spite of this opposition we, representing the public interest, have accomplished much:

(a) In many States we have a reasonably satisfactory system of public utility regulation providing rates based on cost plus a fair profit.

(b) Valuation is now based on actual cost or prudent investment, both depreciated, and the reproduction cost new method is now out the window. This system formerly having the support of the United States Supreme Court was so skillfully built up as to place no limits on the intangibles that could be included in valuations. The system led hundreds of engineers and lawyers to leave the straight and narrow path.

(c) Communities wanting publicly owned plants can have them—sometimes after a few years of quite futile litigation. The rights of incorporated communities in this matter have been fully established.

(d) We have the ably administered Water Power Act. It is under fire at the moment but good horse sense will keep us from going back to the days when such things as red neckties were included in water power inventories. There are eleven Ripper bills now before Congress intended to weaken the public control of river development. None of them should be passed. The rivers belong to the people and should be utilized for multiple purposes and for the benefit of the people.

(e) And finally we have in TVA, a going and all but unchallenged concern, the admiration of a world intrigued by the possibilities of river valley development.

These wholly worth while ends have as a matter of fact been accomplished by a relatively small group of men imbued with the importance of energy and electrical service in our whole economy, and courageous enough to give uncompromising battle to what at times seemed an unbeatable interest. For today's more fortunate position of the public, as contrasted with the commercial interests, we have to thank such gerat citizens—only to mention a few of those for whom the struggle is at an end—as the two Roosevelts, George W. Norris, Gifford Pinchot, J. D. Ross of Seattle, Tom Johnson of Cleveland, George Woodruff, Philip Wells, and Jack Eshleman of California—one of my idols. He had great character and he actually gave his life for the cause.

The following headline was in last Sunday's New York Times:

"United States victory seen in power industry. Lack of concerted campaign by private utilities cited as main factor."

This reminds me of an incident in my youth. A very attractive girl lived in our block. A youth of the neighborhood took her what was called in those days "buggy riding." After a 2-hours drive the young man brought the young lady back to her home door. In saying a pert good-by, but with a beguiling smile on her pretty face, she observed: "You didn't have the sand." This "Lack of a concerted campaign" on the part of the electrical industry, as referred to by the Times, really means that the electrical industry hasn't got the sand. Those at the helm—business, large security owners, and operators—have neither the vision nor the nerve to provide such public-spirited service as in the long run a democratic people will demand.

It was a nicely balanced judgment which led General Eisenhower to create a new wartime classification within the United States Army known as combat leaders, which included only those who actually directed combat, ranging from the commander in chief himself, through the various heads commanding and leading armies, divisions, regiments, and even corporals leading platoons of possibly 15. The designation "combat leader" was as simple as the insignia, i. e., a piece of green cloth tied to the shoulder strap. The designation suggested no impeachment of those not wearing the green band—staff officers, commissaries, and agencies of supply—all indispensable adjuncts of an army. But it did afford an inconspicuous distinction to those who led in combat.

While in this widely ramifying fight of ours on behalf of a fundamental public interest we need all kinds of assistants—engineers, accountants, and technicians of many kinds—we need more than all else combat leaders such as those who have won the battles of the past. Choose your own niche but be a combat leader. You don't have to wear the green band on your shoulder if you have laid it on your heart.

Tribute to Pennsylvania

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Mr. Hamilton Dalton before the Sunbury Rotary Club, at Sunbury, Pa., June 5, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the Sunbury Rotary Club: "And what is so rare as

a day in June." We probably never thought James Russell Lowell lazy until today. With the pride understandable in loyal Pennsylvanians, we now think he should have written: "And what is so rare as a day in June—along the Susquehanna, at Sunbury? He could have gotten his beauty from the ripening verdure of these ancient surrounding hills, and his strength from the majestic river that flows mightily to the sea.

Of course Mr. Lowell never had the privilege of knowing Mr. Charles Duffy for 15 years, and of being invited to address the Sunbury Rotary Club, on a June day. Concerning your Northumberland County, Mr. William S. Livengood, Jr., able secretary of internal affairs of the Commonwealth, writes: "Perhaps no county in the State has more beautiful and picturesque scenery, both land and water, or greater diversification of agricultural, manufacturing and mining interests." That sort of makes it official, adding weight to our regret about Mr. Lowell.

For several years, this dealer-in-words has enjoyed sitting back, aloof from the maelstrom of public affairs—and from the microphone, thinking, and saying little. It seemed too much was being said by too many who knew too little. Deep thought, profound silence, are habits especially recommended to the headline, spiel-line and byline boys. Many of us will agree with Lowell when he writes: "There are few brains that would not be better for living on their own fat a little while." We agree the more readily when we understand that many important things are being left unsaid by our professional "thinkers." America needs accurate, complete information—and plenty of action!

A story isn't important because its publisher happens to know a President or a lesser official. Friendships can—and do—hide the real story. In time of war, it isn't human nature for a correspondent to attack a general who has the power to kick him out. That's like sticking one's hand in a buzz saw. In time of peace, a newshound will hesitate before bearing down on a high official who opens friendly doors. It takes no expert of the who, what, when, where and why profession to know that skullduggery lurks and multiplies behind friendly doors and radiant smiles. The charm of men in public life is attested through the ages. It is not an American invention, much as we might like to claim it, but considering everything, we are well served. However, if eternal vigilance is still the price of liberty, we better look behind the sights of our news shooters unless we would gaze, later, into the muzzles of our enemies. Truth and the public will be better served when molders of public opinion again knock down a few doors.

We are fools to accept boudoir Peeping Toms and night club tattle-tale Bettys as a substitute for two-fisted reporting. We worship headlines, by-lines and spiel-lines! Gentlemen of Rotary, they are false gods! They are tinsel! They stand revealed as the glitter of, and not the gold of, truth! Still, we often act as though we believed every sensationally presented story to be important! To this vacationing professional observer such idolatry is a stark example of ballyhoo catnip proving that 140,000,000 people can look—and can act silly. We forget that milk and liver feed the cat! We forget that truth alone is a healthy diet for the reasoning processes of people. The only persons to whom most sensationally presented stories are important are the editors who have papers to sell, and the trick-larynx commentators who have an audience to startle.

Let us recall a tiny few of those headlines! The Japs wouldn't fight! The Japs couldn't fight! Marshall Tito was our friend! We certainly swallowed that catnip. We've been as badly fooled as the hillbilly gentleman was in the following story. His wife was heard laughing uproariously in the corridors of a mountain courthouse. When someone asked why, she replied: "Ah'm th' happies' woman in this here lan'. Ah jes' gotta deevohs from mah ol' man. Ah nelly dahd alaffin at th' cot's decision 'cause it gave him the chillun—and they ain't even hisn."

It is our necessity to find out how seriously we've been cuckolded by this truth-obscuring fiddle-faddle of the palsy-walsy scribes and screechers. Their barrage of chatter and printer's ink is becoming tiresome—people are getting bored. That is serious. All of us know there is no answer to boredom—except flight or change. People are beginning to believe they may safely ignore "world shattering" stories and emotion-drenched radios, without danger of missing anything important.

A story concealing truth, or that diverts the minds of people from truth, is evidence of a kept press or a kept radio, and there isn't a tiny speck in my entire body in which the germ of communism can grow! Moreover, I like editors. A pioneer in it, I also respect my profession, but in the public interest it is essential to protest abuses. And this, incidentally, is the only obligation a commentator owes to a radio station or a sponsor. Our baffled—but always vocal—molders of public opinion seemingly cannot shake off old slogans, old habits.

It comes as quite a shock to the molder boys to learn that it is no longer news when a man bites a dog! To keep from starving, our gallant captured American servicemen had to eat dogs in Japanese prison camps. There's something ghoulish about the descendants of Greeley, Dana, and Watterson being minions of shibboleth and tradition. They are as necrophiles, worshiping the dead bodies and not the immortal inspiration of those nation-building careers. There's something downright dangerous to America in allowing—under cover of press and radio silence—military, naval, or State Department officials to control or direct news releases, or to withhold news. This cover is mendacious when the releases would be embarrassing to such officials. The people should have recourse!

Lowell couldn't have foreseen the difficulties stemming from such reporting when, in a poem called "The Present Crisis," he wrote:

"Once to every man and Nation
Comes the moment to decide
In the strife of Truth with Falsehood
For the good or evil side."

The great poet lived in an American era when moulders of public opinion were hair shirts to America's leaders, and not two-way stretch silken girdles smoothly hiding the bulges of skulduggery. He lived in an age when it was a distinction to be a newspaper man!

It may be pleasant to view the passing drama of life from the Big Wig's box but unless the trained observer constantly comes up with panaceas for human woes, or discloses weaknesses—or worse—in public leadership, he is brazenly flaunting the arrogant power, and not the cleansing duty of a reporter. America desperately needs a few back row editors and commentators who will know how to gripe—and who will have the right to gripe—when the people cannot see, hear and understand all that is done or said on the stages of life. After all, gentlemen of Rotary, the seats of the mighty are with the people—and not on the platform!

To return to Lowell. How are we to know when a headline or a spiel-line is true; when it is propaganda; or when it is falsehood—deliberate or otherwise? How can we make decisions—bold decisions—war-pregnant decisions if we learn less than the whole truth? Does any American think he is smart enough to make decisions for every other American? For even a majority of Americans? Do such people think we should abolish Congress?

Are these decisions to be made for us, in secrecy, by appointed officials? Are even the elected Senate and the House to be in the dark about them? Decisions affecting the lives, liberties and welfare of every living American, and the countless unborn? To a similarly momentous, and self-asked question, the immortal Patrick Henry replied: "Forbid it, Almighty God!" In our time, we prayerfully add a simple but thundering "No!" It has been said, and with ever-recurring truth, that a judge is but a lawyer who knew a governor. It may well be observed that many of our leaders are prominent only because they know pliant men who control publicity outlets!

A great deal of emphasis is placed on America helping the world—and no man of good purpose objects to a donation of assistance to starving, homeless people of whatever race, creed or color. But who pulls these strings? Who enjoys the corollary benefits? Are these benefits financial? Political? Is a bureaucracy again perpetuating itself? Are these people not telling us that food won't grow and cattle won't multiply in foreign lands? Isn't it ridiculous? If there are men in high position in the Army, the Navy, the State department, the Government—or men who own newspapers and radio stations, who believe the American people cannot be trusted to know the whole truth about any subject affecting their vital welfare, those men should be exposed. Moreover, they should be driven from their positions of power or ownership of news channels. Ownership is not overlordship and it endows no living human being with the right to censor relevant news.

In the overpowering emphasis upon helping the unfortunate, Americans are losing sight of the fact that our Nation is entirely innocent of blame for starting the war that devastated people. We did not prepare for war and we did not want war! But we read and hear very little of that! First things come first, ye molders of public opinion—even in politics or propaganda! We must protect America's ability to give! The molding boys should remember that! We must also give emphasis to this Nation's ability to earn! The molding boys should stick that on their mastheads! Finally, we must see that the world respects us for what we are, and for what we do to help ourselves and the world!

As a people we fear nothing—externally or internally—but the gravest menace to our tranquility comes from the public officials who have little or no faith in the common sense of our people to meet any emergency, and the newspaper and radio boys who shield such spineless officials from exposure and dismissal.

We may be a very wealthy Nation at the present time! Some do not unreservedly accept that definition since they happen to think that wealth consists in having more than food, money, and material possessions. An automobile cannot reproduce an automobile! A farm cannot divide itself into two farms of equal size. Thus, it is not valid, in their judgment, to call America wealthy until our people again activate that secret ingredient of mutual trust that inspires Americans to work together to make and keep this Nation strong. Too many groups—of every identifiable description—aided and abetted by the typewriter potentates and the microphone jaw-jaw boys, are trying to blackjack Uncle Sam into making each group hog-fat, power-ridden, and obligation-free. Special privileges of any kind is abominable, especially the privilege of the press and radio to censor news. The people are being outrageously deceived when a free press throttles itself!

Where is the time-tested, common-sense duty of the individual to the whole? Dumb animals herd together in a blizzard to keep a minimum of them from freezing! There is no special privilege in the herd, because constant milling about forces those in the

center to take their turn on the perimeter of cold. That, my good friends, is merely another way of stating the basic principle of democracy—the greatest good for the greatest number. The molding boys might recall that!

One who encourages strife among us, or division among us, is our enemy, whether he be statesman, journalist, or commentator—and whatever his race or creed. Those who tell us to lend or give until we're weak, are our foes, notwithstanding these things be urged in the name of charity! Our Communist "friends" know that a bankrupt America is a softer touch for them than a prosperous, a productive, a united America!

Just as Sunbury's Fort Augusta was an outpost for liberty in the French and Indian Wars and in the Revolutionary War, so is the Sunbury Rotary Club an outpost for the substantial growth of America's strength, in this era of egotistical exploitation of national welfare by our would-be king makers, the bureaucracy-line columnists and commentators.

You have been most kind to allow me this opportunity to emerge from the study and to again take part in the battle for a vigorous and well-informed citizenry. As Rotarians, and as Americans, you see the future as a challenge you want to face. You are better informed than the Biblical Adam. He had to face everything—and of all he beheld none could explain. He didn't know the difference between a toadstool and a mushroom, nor the difference between an insect-eating blacksnake and a deadly cobra.

Adam demonstrated more raw courage than the mariner who first sailed the uncharted Atlantic. Adam showed more fearlessness than the aviator who first flew that vast and stormy ocean. Adam revealed more intrepidity than did those great scientists who made the atomic bomb, because previous experience had taught them safeguards. Adam displayed more daring fortitude than will the hardy adventurer who first flies to the moon—if such be an event of the future, because he will be helped on that flight by a mass of knowledge discovered and proved by other men. Americans are thus emboldened to welcome the future, but they demand the whole truth, so that they may apply safeguards. They are particularly allergic to kilocycleitis which word is defined as "hot air rushing through propaganda-diseased tonsils."

In an era notable for bigotry, Rotarians cherish a belief in the Brotherhood of Man and the Fatherhood of God. Here in Sunbury they remember, for instance, that 90 years before the assassination of Abraham Lincoln, the Pennsylvania Society for the Abolition of Slavery was organized, with Benjamin Franklin as its first president. Thus, it is to be expected that love of their fellowman is warp and woof of their glory-studded history and their restless present.

The very letters of the word Rotary provide, in anagram form, a slogan for the future! R-otary O-penly T-rusts A-merica's R-edoubtable Y-outh! That youth has the wisdom of the ages at its command—as well as America's superior use thereof! Adam did not! That youth will know what to accept and what to reject. That youth wants to meet the world on a basis of mutual respect. It wants to live in peace and happiness with all men. We have every reason to hope that it too will destroy the shackles that hobble truth; that it too will humble leaders of our Government, press or radio who forget that the seats of the mighty are with the people!

Those young people may well take inspiration from the great American poet we have quoted so often tonight, when he wrote: "When I was a beggarly boy and lived in a cellar damp, I had not a friend nor a toy but I had Aladdin's lamp!" Fueled by knowledge, and burning the wick of courage, that lamp must be the light of the world. From these surrounding mountain slopes, let the word reverberate that the power of God alone is infinite, the courage of youth in unfailing, and the future of America is safe in the stewardship of those well-sired and well-trained young men! And now I see by the stop watch that it is time for the motto: "Whoever you are, wherever you live, if you're for progress, you'll like Pennsylvania."

The Pick-Sloan Plan: A Wasteful Failure

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "The Pick-Sloan Plan—A Wasteful Failure," by Benton J. Stong, delivered at the Valley Development Conference in Washington, D. C., July 17, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE PICK-SLOAN PLAN—A WASTEFUL FAILURE

It is extremely fortunate that advocates of valley development through over-all authorities of the TVA type have gathered here at this particular time.

Decisions are being made in connection with the biggest valley in our Nation which may give it either a great and dynamic development, or may lay a blighting, deadening hand across the whole Missouri Valley. A valley authority may be adopted, insuring that the enormous agricultural, mineral and human resources of the area shall be developed. Or a so-called flood control plan may be adopted which would foreclose for generations the full development of the Missouri Valley's irrigation, electric power, minerals, and industrial resources.

We are choosing between a plan with the dynamics to set off a great expansion in the Missouri Valley, as has happened in the Tennessee Valley, and a plan which will chain it to the dead past until billions of dollars of its assets are buried in silt and another, braver, and more enlightened generation comes along to repair damages which cannot be estimated.

Assigning the United States Army engineers to the job of controlling floods in a river is precisely like sending Typhoid Mary to stop a typhoid epidemic.

The Ohio valley has been fully developed by the Army engineers. It is now the scene by some of the Nation's worst floods. The Missouri Valley is only partially developed by the Army engineers. Thus far, with a little under $400,000,000 spent on the lower Missouri River, the Army has pushed flood crests up by 5, 6, and 7 feet. But, given time and a few more hundred million dollars, the Army doubtless can still all opposition to their stream-clogging boondoggles by the the simple process of applying a corset—simple process of drowning out the population.

They have increased flood crests from Omaha, Nebr., to the mouth of the river by restricting the channel for navigation purposes and reducing its carrying capacity to carry water below the flood state. The Army has contended that the river would scour out its bottom and reacquire its former carrying capacity. Instead it has scoured out buildings, farms, urgently needed crops, roads, railways, the Army's own works—hundreds of millions of dollars worth of property. It has scoured out lives and human welfare—but not its own bed. Gen. Lewis A. Pick may still have some faint hope that the convenient theory of scouring will eventually work, but I am certain that Fred Heinkel will tell this conference that his people along the Missouri River have "had enough." The 130,000 members of the Missouri Farmers Association want the Missouri River problem approached in the intelligent way, starting at the headwaters and developing the assets of the valley rather than starting at the mouth and gradually destroying values all the way back to the headwaters, until there is nothing left for the floods to bother, nor people to protest.

The fight for a Missouri Valley Authority dates back to January 1941, shortly after the Army engineers announced Gen. Lewis A. Pick's plan for lower river development. It proposed a navigation channel 300 feet wide and 9 feet deep, of running water, up to Sioux City, Iowa. Such a flowing channel was estimated to require within 2,000,000 acre-feet of the average annual flow of the river over a 30-year period. Some in the West quickly recognized that this plan meant the end of new irrigation, or even a supplemental water supply. In even a moderately dry year, there would not be enough water for such a navigation channel alone. It meant that the river's enormous water power potential would be left undeveloped. And it meant that, although we sacrificed every other beneficial use of the river to attain navigation, even the navigation would be so unreliable that no shipper could rely upon it year-in and year-out as his transportation lifeline.

Whenever rainfall in the valley dropped just 10 percent below average, there would be a scarcity of water even for navigation, and any great industry relying upon it would be forced to look elsewhere for a means of moving goods. One does not build wharves and dock facilities for occasional barge services. Nor does one gamble large investments to establish industries, dependent on low-cost water transportation, when that transportation cannot be depended upon. Even if provided the flowing channel would not assure the reliable navigation which has been assured in the Tennessee Valley by slack water pools, which can be maintained with only enough moving water to operate the locks.

The vested interests which concern themselves so greatly over every river development quickly recognized the implications and meaning of the Pick plan. They saw that it would drown out all the enormous hydroelectric potential of the lower valley, 10 to 12 billion kilowatt-hours a year. They saw that it would provide only spasmodic, unreliable navigation. So they started supporting it with all their might, and drew power companies and water organizations from all over the Nation—even the Pittsburgh Yacht Club—into the flight. They saw that the Pick plan would deaden the river against interference with their monopolies, and they are 100 percent for it.

The contractors recognized the Pick plan, and its meaning. To them, it meant the establishment of the first full-scale, perpetual-motion machine in history—an endless job of dredging the river to get sand and gravel to build dikes and levees which would have to be heightened or replaced by dredging the river to get more sand and gravel, to heighten and replace dikes and levees, ad infinitum. They are for the Pick plan. It would be a contractors' bonanza.

The Bureau of Reclamation also recognized the true meaning of the Army's plan, and it quickly put together and released a plan of its own for the upper valley, known as the Sloan plan, which provides a large group of reservoirs on the tributary streams, and in the Missouri itself, to impound water for irrigation projects, and to develop some

hydroelectric power. It was a hurried throw-together, a "quickie" to prevent the Army staking out and perfecting a claim to all the waters of the river for intermittent navigation.

The advocates of over-all western development also recognized the implications of the Pick plan. My own organization, the National Farmers Union, proposed, as did the St. Louis Post-Dispatch, that it was time to apply the principles of the Tennessee Valley Authority to the Missouri Valley. We suggested that the principles which were first proposed by one of the greatest citizens who ever lived in the Missouri Valley, or the Nation, be adopted in the home river basin of the late George W. Norris.

The valley authority idea is a powerful idea.

The mere proposal, and the publicity given it by the Post-Dispatch and Star-Times in St. Louis, stirred vested interests all over the Nation. The vested bureaucracies, the Army and Bureau of Reclamation, which had hardly been on speaking terms for years, arranged to a hurried alliance.

W. Glenn Sloan had previously testified for the Bureau of Reclamation that two of the Army's principal proposed dams were wasteful, excessively costly, and should be eliminated from a river plan.

The Reclamation Bureau could see no good whatever in either Garrison Dam nor Gavins Point Dam, which were estimated to cost nearly $200,000,000.

The Army, in its turn, opposed the great Souris irrigation project of the Reclamation Bureau as impractical dream stuff.

The two agencies did not like either of the other's children, and said so publicly.

But when a Missouri Valley Authority was proposed, they hastened to Omaha, had what has been aptly described as a shotgun wedding, adopted each other's children, and proclaimed to the public that a great over-all plan for the Missouri Valley had come of their union.

The whole thing is a hoax, pure and simple. The Pick and Sloan plans, no matter how forcibly jammed together, are not one. They remain conflicting, special purpose plans for the Missouri Basin. Neither is complete. Neither is adequate. And the two cannot be operated in harmony.

The Army engineers, apparently with President Truman's support, are out to take the West's water for their own flowing channel. The Bureau of Reclamation, betrayed by the special interests in the National Reclamation Association, and now cut in for only a minute 4 percent of the President's proposed huge emergency flood control budget, has been trying to keep a trickle of water for its irrigation work, by going along with the anti-MVA conspiracy. Certainly it must know today that it has lost virtually everything and that Gen. Lewis A. Pick has, within the official family, been given the go sign to carry out his recent boast in Time magazine: "I am going to control all the waters of the Missouri." Certainly the Bureau people know that after the Army spends another billion dollars on its flowing channel, the waters of the West will have been committed to a use hundreds of times more extravagant than slack water pools, which have never even been investigated as a substitute for the Army's proposal.

The Missouri Basin Interagency Committee, which has been a farce since its establishment, was presented to the public as something better than a valley authority board, an integration of the old and reliable agencies which would require no new machinery. Within a year of its establishment, it had so completely demonstrated its futility as a coordinating body that the Commissioner of the Bureau of Reclamation picked up his brief case and started to walk out, inquiring as he left if he should tell the reporters that the arrangement had blown up.

He was hastily called back into the room, an agreement was reached that the committee would not attempt to settle any controversial issues, but act only as a little interagency reporting bureau, and the public appearance of a happy little family was maintained until July 16, 1947.

It is true that there have been minor flare-ups; flare-ups which have truly exposed the tragic wastes of the so-called Pick-Sloan plan.

The wastes of public moneys on the construction of inadvisable projects will be trivial compared to the enormous wastes of the river's potentials which are inherent in the plan.

The valley authority principle which we advocate is based upon the use of the river, its water and its power as the great natural engine which will set in motion soil programs, resources development, industrial growth and an expanding economy. It contemplates that the river will be the dynamo for better human life, for higher incomes, for development of recreational facilities, abundant power and low cost transportation.

If the river is committed to the Pick plan strait-jacket, then the mighty resources which could have been used to spark an expanding economy will have been wasted. True valley development will have been made enormously expensive, if possible at all until the Army's works have destroyed themselves.

I use that last phrase advisedly—until the Army's works have destroyed themselves. There is little doubt that in time they will do so. Anyone who has seen levees crumble and wash away knows that they will. Only the extremely gullible are even temporarily misled by such fancy theories as the one which General Lewis A. Pick apparently sold to Life magazine recently, namely, that the accumulation of alluvial flow into the basin of a dam "strengthens" it. Amazing as that statement may be, it appeared in a recent edition of Life magazine in a double-page spread titled "The Greatest Dream of Them All," telling of General Pick's ambition to control the Missouri river. Under a picture of Fort Randall dam site, the magazine explained that the dam would be an earth structure, and that the alluvial flow deposited by the river would serve to strengthen it.

Life would apparently also be for filling the interior of skyscrapers with beams and girders because that would make it stronger. It would also settle the problem of tenancy, almost exactly as General Pick's silt-filling dams will settle the problem of flood control.

The nation could far better suffer the monetary loss of the cost of Fort Randall, and the other Army structures, than it can suffer the consequences of such a program.

The Federal Power Commission's regional engineer at Chicago has publicly stated that a minimum adequate power program in the Missouri Basin would develop 25,000,000,000 kilowatt-hours of economic electricity annually. The Pick-Sloan plan would waste more than two-thirds of that potential, throwing away the trigger for industrial development, and the trigger for a great phosphate industry which would, in its turn, be the trigger for an enormous soil conservation program.

The Army has not provided for any power installation whatever in the Missouri River between Omaha and the mouth, where 10 to 12 billion kilowatt-hours might be developed.

The Forestry Service, in the Department of Agriculture, has pointed out the total omission of planning for what are called water crop lands, high in the mountains and at the heads of the creeks so named because they store water and release it gradually. Without this storage of water in the land itself, main stem river works cannot be intelligently planned in the first place. If our forest lands in the upper Missouri are permitted to be destroyed, then planning for the present flood crests will again be tragically inadequate for, as the lands are denuded, the flood crests will be increased. If we are going to do a real conservation job in the water crop areas, then the enormous storage proposed in the main stem is a profligate waste of money, for the land will store the water as it falls and release it gradually.

If we are going to extend soil conservation down into the central valley, and store more water, then the waste of oversize main stem works will be increased in direct proportion. If we are not, then we are going to go in for an even more tragic waste, the waste of our basic land resources which will be lost not only to our generation, but to all generations to come.

The Pick-Sloan plan does nothing whatever about the Dust Bowl. It proposes no shelter belts, no land practices which will help to solve a Missouri Valley scourge as great and devastating as the floods.

President Truman said in his recent message to Congress that floods in the Mississippi Valley had done a billion dollars destruction in the last 10 years.

So has drought. Indeed, drought has done more. There was paid out of the United States Treasury, never to return, $1,246,000,000 in relief, rehabilitation, and uncollectible emergency loans as a result of the drought of the thirties in the Missouri Valley alone. That total is 20 percent more than the President's flood figure for the whole Mississippi River Valley.

Yet today we are being urged to adopt an emergency, single-purpose program in the Missouri Valley which would delay action on this even greater destructive force until "ultimately." Recent figures indicate that more than two and a half million more acres have been put under cultivation in the Dust Bowl than ever before in history. Dust storms are again in the making. Only unusually heavy rainfall prevented them this year. This situation, and the need for control measures, is just as urgent and just as great as the floods have ever been.

A successful attack upon the problems of the Missouri Valley, and of all our valleys, must be made on all fronts. It is foolhardy to build dams that are going to be so completely reinforced with silt that they will become valueless. It is foolhardy to believe that any piece-meal, single-purpose approach will succeed.

The Missouri River—Joseph Kinsey Howard's "Golden River"—can be a golden river. It can produce 25,000,000,000 kilowatt-hours of energy to serve as the dynamo for an expanding, instead of a declining, economy. It can supply water for four to six million additional acres of irrigation, and supplemental water for now inadequately irrigated lands. It can provide a great navigation channel to carry the grains, the ores, the fertilizers and the finished products produced in this great valley. It can supply the stimulus for a great soil conservation program. It can provide unlimited recreation. It can be the basis for a new and richer human life in the valley, and in our whole nation. It can stimulate enormous new markets for the nation to supply.

The Missouri Valley awaits only the application of the principles which have been tested and proved successful in the Tennessee Valley.

Until we apply them—and so long as we flirt with interim plans, compromise plans, piecemeal plans and bogus plans—we are wasting not just dollars, not just a few hundreds of millions on false starts—we will be wasting our heritage. Some of it, like the 250,000,000 to 300,000,000 tons of life-sustaining top soil annually passing down the Missouri, will be gone for all time.

The time to start doing the job right in the Missouri Valley is now—not ultimately. It is folly and waste to keep on trying to control floods by methods which, it has been proved, are certain to make them worse, in

the meantime depriving farmers, businessmen and workers of the wealth that is theirs for the planning.

I earnestly solicit those who are attending this conference to hear the four other men from the Missouri Valley who will speak from this platform, and to give us every possible assistance in hastening the achievement of an MVA, that our valley may be through with wastes of every sort and be set on the road to progress.

The Foreign Policy of the United States

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. WATKINS. Mr. President, I ask to have printed in the Appendix of the RECORD a very able address delivered by the Senator from Nevada [Mr. MALONE] at the convention of the National Editorial Association, at Fort Worth, Tex., April 12, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The decisions reached at the little-publicized Geneva Reciprocal Trade Conference beginning this month could well be more important and far reaching in their effects upon the economic structure of this Nation than anything the present Congress can do, including labor, wartime controls, or tax legislation.

The people of this country can no longer ignore or dodge a definite decision on their long-time foreign policy.

The objective is the same—to maintain our standard of living and to arrive at a free and unobstructed trade flow between nations—the roads proposed to reach that objective are radically different.

The reciprocal trade road as now administered with a free trade trend, without due regard to the difference in the wage standards of living between the countries of the world, means a sharp reduction in our own high wage standards to meet the low wage living standards of the Asiatic and European countries.

The flexible tariff road, adjustable at the will of the President and administered by the Tariff Commission, continually meeting the variable differential of cost of production between this Nation and in competitive countries on specific products, protects and maintains our higher wage living standard while raising those of foreign countries.

As each one of the 54 member nations of the United Nations reach our standard of living, free and unimpeded trade is the immediate and automatic result.

Under the 1930 flexible tariff law, the President may at any time request the Tariff Commission to compute the differential of cost of production of any specific product in this Nation and in any specific foreign country, considering the difference in wages, efficiency, transportation, etc., and then such differential of cost becomes the tariff without further action by Congress or any other body.

Congress searched for the answer to this problem over a long period of years. They tried the Underwood Tariff Act which approached the free trade trend—its effect on American trade caused a special session of Congress to be called almost immediately following World War I to halt market raids and dumping by foreign countries.

They then tried the Smoot-Hawley Tariff Act, but it became evident that any rigid tariff structure, changeable only through congressional action after full debate, would not meet the continual shifting economic conditions and costs of production.

The 1930 Flexible Tariff Act was then designed to meet the ever changing economic picture so that any disturbance in the balance can immediately be met with a corresponding change in the tariff.

Two all-important things are accomplished through the flexible tariff method: First, it protects our economic structure while we are assisting our less fortunate neighbors to reach our standard of living; and second, it will discourage the long-established practice of the empire-minded nations, notably England, France, and the Netherlands, of holding the wages down in the countries under their control and of manipulating their money system, in order to wriggle under our tariff structure.

We must make up our minds; high wages in this country and free trade with the low wage foreign countries is impossible; the two things are not compatible.

The flexible tariff leaves the door open with a definite procedure laid down by law of giving immediate credit through a lowering of the tariff to meet a corresponding rise in the living standards of any country.

Our people must stop and consider this new picture of world living standards suddenly presented to them through faster transportation and communications. Americans have been building up our standard of living through a kind of fierce ambition and restless energy since the Pilgrims landed at Plymouth Rock, while the Europeans and Asiatics have lived according to the standards imposed upon them by their rulers since recorded history.

They were old when we were born and they have not perceptibly changed their standards of living since that time—some of them have little desire to change. All of these factors must be considered when we would, out of the goodness of our hearts open to them the only market of any magnitude in the world today where you can sell anything and get paid for it, unless we have previously loaned the necessary funds to that nation.

All agree that to help other nations we must remain strong. It should be agreed that we cannot remain strong and substantially lower our wage-standard of living. Then it would naturally follow that our economic structure must be protected while we are trying to improve the wage living standards of the 54 other members of the United Nations.

It should also be clear that we cannot continue forever making huge loans to foreign nations to build up their dollar balance through adding to our national debt and without hope of repayment as we have done continually since World War I. The effect on this country would be the same if we simply paid our people for the goods out of the United States Treasury and dumped them in the ocean.

It could well be that the time is here when we have to tell our foreign neighbors the truth, that our money and resources are not inexhaustible and that we cannot continue to support them in the style to which they would like to become accustomed.

We can, however, furnish them the "know-how"—our engineers, technicians, and industrial experts are available. They can be retained by such countries and can show them how to set up tax districts to pay their wages and construction costs for dams, power plants, factories, water supply and necessary city works all in the interests of improving their living and working conditions.

This is the slower, surer method that will be appreciated by the foreign peoples and that will fit into the flexible tariff method of coordinating the economic structures of 54 nations while the normal adjustment to 54 separate and different wage-living standards is taking place.

There is a common sense way for us to approach foreign trade discussion with any nation—or for that matter for any two nations to discuss it.

First, we would make a list of the products produced by us and not produced by that nation. Second, make a list of such products produced by that nation and not by us, and third, make a list of the materials produced by both.

The products on the first two lists will enter the trade channels naturally. The third list is the embarrassing one between friendly nations and the one to which close attention must be paid.

Obviously, there is no more reason for us to purchase cow meat from the Argentine than there is for that nation to purchase it from us—except in such form and at such times as it might be needed. It is not even a friendly gesture to buy something from another country when you do not need it. It is a silly thing to do, or to expect, and over the long swing simply invites contempt.

Further, when the State Department, dealing as it does exclusively with foreign affairs, starts trading segments of the American market to foreign countries to bring about agreements or treaties entirely unrelated to our domestic economy, a permanent disturbance could well be initiated that might be far reaching and dangerous to our intricate economic structure.

For example, our annual economic cycle is one of producing raw materials, taking them to the factory and, after processing them, distributing them to the consumer.

A recent study demonstrates that every dollar of income received by agricultural and other raw material producers, results in approximately $5 of national income. In 1940, for example, we had a raw material income in the United States of approximately $15,000,000,000, while the national income was $77,000,000,000, a little over five times the raw material income. At the present time we have a raw material income of approximately $34,000,000,000 per year, while the national income is running at approximately $170,000,000,000 or five times the raw materials income.

This 5 to 1 ratio has held true for the past 25 years. It is perfectly obvious, therefore, that to have a high level of national income and national prosperity, it is absolutely imperative that we have a high level of income from the production of raw materials and purchasing power for the farmer, miner, and other raw material producers. The importance of maintaining a high level of income for the farmer can be shown by taking a simple example.

Since each dollar of raw materials income generates $5 of national income, if the raw material income level of $34,000,000,000, which now prevails, should be reduced by $10,000,000,000, the net result according to the record would be a substantial reduction in national income, probably near $50,000,000,000, or five times that amount.

With a national Federal budget running above $30,000,000,000 a year, we cannot afford to support any policies, or take any steps, which may lead to a reduction of $50,000,000,000 a year in national income level.

The above analysis points to only one conclusion—that, at this time, it could be disastrous to start a wave of wholesale drastic cuts in import fees and tariffs such as proposed and currently being negotiated by the State Department.

If any changes in tariffs are made to meet the differential in standards of living between this country and foreign nations, let them be made slowly and only after a careful and comprehensive investigation of each product on the flexible tariff basis which includes a comparison of the cost of producing each product in the United States and in such

foreign countries by the Tariff Commission. The Commission is equipped and experienced to do the job.

Floods in the Mississippi Valley

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, the Pathfinder of July 30, 1947, in an editorial titled "Mad Waters," said that the full fury of the floods which ravaged the Midwest these past weeks will strike the rest of the nation—and a hungry world—this fall and winter.

The St. Louis Star-Times of June 27 last carries an editorial "Breadbasket to Desert." Consider the implication of these statements in the light of the proposal to add new millions of dollars to the vast sums already spent by the Army Engineers:

"The Army Engineers and various other Federal agencies, the Star-Times editorial reads, "have now been at work on the Missouri and the Mississippi for more than a century. Yet today there swirls around us the muddy evidence that each succeeding flood is more costly than its predecessor. Further, major floods are becoming more and more frequent. They have become more and more frequent. They have become all but an annual occurrence. Is it not high time, then, to adopt a new strategy in the war against the Big Muddy?"

At the Valley Authorities Conference held in Washington last week, Morris L. Cooke, consulting engineer from Philadelphia, formerly first Administrator of the REA, chairman of the Mississippi Valley Committee appointed by President Roosevelt, and long-time director of public works of Philadelphia, presented a most provocative paper on the subject of "The Electrical Industry and Multiple Purpose River Valley Development." There he said:

> The commercial electrical operating industry is and will continue to be the spearhead of opposition to multiple purpose river valley development.

Mr. Cooke's study presents authentic facts based on careful engineering investigations of relative costs of electricity. Such information will prove of interest to all those who are concerned over the high cost of electric energy to farmers, industries, and home users in the Missouri region.

A second paper presented at the Valley Authorities Conference was by Benton J. Stong, the chairman of the Regional Committee for an MVA, describing the Pick-Sloan Plan, "A Wasteful Failure."

I have had these two papers published in the RECORD, and I ask permission to have the St. Louis Star-Times editorial of June 27 printed in RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BREADBASKET TO DESERT?

With levee after levee giving away along the Mississippi, the Missouri and their tributaries, and with the irreplaceable topsoil of a fair-sized farm being swept under Eads Bridge every few minutes, this great valley once again is undergoing a tragic depletion of its resources.

Remembering that the deserts of the Middle East once were a land of milk and honey, there is no escaping the question whether the breadbasket of America faces a similar fate. Nor can an answer be evaded because it is of interest only to those who will live in the valley hundreds or thousands of years from now. Nature works much faster than that. A rich farming section can be destroyed in 25 or 30 years—sometimes even quicker. Sections of Missouri already offer proof of this.

The Army engineers and various other Federal agencies have now been at work on the Missouri and the Mississippi for more than a century. Yet today there swirls around us the muddy evidence that each succeeding flood is more costly than its predecessor. Further, major floods are becoming more and more frequent. They have become all but an annual occurrence. Is it not high time, then, to adopt a new strategy in the war against the Big Muddy?

The basic battle plans for such a new attack are already at hand. They are to be found in the successful operation of the Tennessee Valley Authority. There all that man knows about curbing turbulent rivers has been applied in a coordinated and effective way. The TVA program has not been merely a matter of building levees which, paradoxically, sometimes increase flood damage. Nor has it been merely a matter of building modern dams. The damaging waters were checked at their real sources. As Paul S. Mathes, Tennessee State Commissioner of Conservation, has pointed out, the attack included the application of better farming practices in an area embracing 40,000,000 acres. It meant the planting of more than 200,000,000 trees, the damming of millions of gullies and the terracing and reclamation of thousands of eroded fields. Crops were diversified. Wood lots were developed and the grazing of cattle and sheep was substituted in areas where the plow was the predecessor of the flood.

TVA, however, is much more than a flood-control project. It has made the Tennessee a busy highway of commerce, and it is generating enough electricity to encourage industry and to raise substantially the valley's standard of living. It is not merely a self-liquidating public works project, but over the years will become a major contributor to the Federal Treasury. It is one of the most imaginative works of man, and it is being imitated all over the world. Why not then in the valley of the Missouri?

The governors and the legislators and the people of the Missouri Valley States ought to visit the valley of the Tennessee. They ought to talk not only to TVA's engineers but also to the people of the valley. To see and to hear could hardly fail to convince. There is the great working lesson for this valley. How long before we learn it?

Disloyalty in Government

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Cure Worse Than Disease," from the Hartford Daily Courant of Wednesday, July 23, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CURE WORSE THAN DISEASE

If the Senate fails to act on the House's version of a bill against disloyalty in Government it will be fortunate. No one likes Communists in Government positions, but casting into the rubbish barrel traditional American principles of jurisprudence and fair dealing is hardly the way to get them out. It could almost be said of the House bill that the cure it prescribes is worse than the disease.

The proposed independent loyalty board would act as judge, jury and prosecutor. No appeal could be taken from its findings. The bill presumes persons guilty until proved innocent. The accused would not have the right to face or to cross-examine his accuser. In these and other provisions the bill proposes to adopt totalitarian means to get rid of totalitarian advocates.

Although Congress crippled President Truman's executive order for a purge of Government rolls by withholding an appropriation, departments are doing their own investigating and dismissing. Nearly 250 employees have been discharged, and numerous applicants for jobs turned down, because of their Red tinge. If the departments will do this work effectively, they can save the country the cost of another bureau. In fact, they should do it, not only as a matter of executing a public trust, but to forestall congressional action that would be both costly and a reflection on department heads. At any rate, no matter how deeply we may be concerned about Communists in government, we do not want the kind of bill the House passed.

American Federation of Physically Handicapped—Proceedings of Public Forum

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. SPARKMAN. Mr. President, about a year ago Congress passed a resolution authorizing the observance of the National Employ the Physically Handicapped Week.

On June 19, 1947, under auspices of the American Federation of the Physically Handicapped, a public forum was held in the National Press Club Auditorium, Washington, D. C., at which representatives of large national organizations discussed the subject, How To Stimulate Employment of Our Physically Handicapped.

Speakers representing industry, labor, veterans, women, scientific and professional groups, along with the President of the United States Civil Service Commission, the Director of the United States Employment Service, the Director of Information of the Office of Vocational Rehabilitation, and others, presented facts and figures, and outlined their plans for employment of handicapped.

This forum is a part of the program preliminary to observance of National Employ the Physically Handicapped Week, established, as will be recalled, by the Seventy-ninth Congress, which I am sure all of us are proud to have supported, as it has been the means of 42,878 handicapped being placed in employment, through the United States Employment Service, of whom 27,341 were disabled veterans.

I believe the proceedings of this important gathering should be broadcast to the general public, so that all may know what has been done, what is being done, and what is planned, in the direction of continuing effort for employment of our disabled citizens, both military and civilian.

The length of the proceedings is such as to require an estimate from the Public Printer. I have obtained such an estimate. It is $710. This is a great deal of money but last year the Government spent some $10,000 in promoting National Employ the Physically Handicapped Week. This year I understand there will be no Federal expenditure. I feel that the cost of having this material printed in the CONGRESSIONAL RECORD is a small contribution to help the physically handicapped. Therefore, Mr. President, I ask unanimous consent to have this material printed in the Appendix of the RECORD notwithstanding the cost.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

A mass meeting, under auspices of the American Federation of the Physically Handicapped, was held in the National Press Club auditorium, Washington, D. C., Thursday, June 19, 1947, to discuss "How to stimulate employment of our physically handicapped." The meeting was called to order by Mr. Anthony J. Oliver, at 8:15 p. m.

Chairman OLIVER. The meeting will be kind enough to be in order. I will ask the audience to rise, while Rabbi Samuel Penner delivers the invocation.

Rabbi SAMUEL FENNER. Almighty God, Father of all men, to Thee we pray for vision and courage—vision to see our brother's need and courage to strive for its realization.

Grant, O God, that out of these sessions there may emerge an ever-growing movement which shall capture the hearts and spirits of all our countrymen, so that our Nation may rise to a conscience befitting its greatness and find a useful and self-respecting place for the handicapped in our midst.

We invoke Thy blessing, O Lord, upon the leaders and membership of this movement, and pray that Thou mayest strengthen them in the pursuit of this great cause to its successful end. Amen.

Chairman OLIVER. The audience will be seated. Honored guests and friends, you are invited here tonight in order to lend your enthusiasm to the spreading of the spirit of an act of Congress known as Public Resolution 176, of the Seventy-ninth Congress, the purpose of which was to set aside the first week in October of each year to be reserved and carefully thought out as a week to employ the physically handicapped people of our Nation.

The thought that originated the selection of this particular week in our busy calendar year came from the mind of the president and founder of this organization, who sits beside me tonight and who is, among other disabilities, totally deaf. We watched the results of our work last year in spreading "Employ the Handicapped" throughout the Nation, and we found it quite successful; but this year we are asking all of the industries, we ask the States, we ask the cities, and the counties to redouble their efforts in order to make our goal 50,000 placements by the end of the year. We feel that can be done, because we believe that the employers have somewhat changed their attitude. They begin to realize the value of our people and the prejudice that once held them tight has now modified and almost passed away, wherein they wouldn't hire anybody, anywhere, with any kind of a physical handicap.

In this progressive Nation we cannot bypass 28,000,000 physically handicapped citizens and forget them when they appeal to the Nation as a whole and ask simply for an opportunity to be self-supporting and then self-respecting citizens.

Sensing this humanitarian and economic atmosphere in the country, the President of the United States signed the act that dedicated this week, that set it aside, and then he called on all of the States and the cities and the counties and the industrial managers to help bring it to a head and carry out its ideas. So, tonight, we feel that we are going ahead fast and we will be able to accomplish far more than we did last year, because the thought of giving all the physically handicapped of our Nation an opportunity and a chance to work has seeped into the people gradually, and among our guests tonight there are many who have specialized knowledge of the needs of the handicapped, and many more who have specialized knowledge of the economic value the handicapped employed would be to the economic condition of our country. These same people have in their hearts the tenet that they are their brother's keeper.

I shall now turn the chair over to the president of the American Federation of the Physically Handicapped, Mr. Paul A. Strachan. [Applause.]

President STRACHAN. Thank you, Anthony. Father Kenney, Rabbi Penner, distinguished guests, members of the federation, and friends of the handicapped, tonight we are here to devise, if possible, ways and means to improve the conditions of our handicapped citizens and to insure them opportunity for decent employment in the face of a looming crisis.

During the war years millions of disabled proved, beyond shadow of doubt, that, given a fair opportunity, they could hold up their end. In action on the home front they showed themselves (1) loyal to the job; (2) had less absenteeism than nonhandicapped; (3) production on par with, and in some instances exceeding, nonhandicapped; and (4) being already disabled, they were careful, and therefore had less injuries than their nonhandicapped brethren.

Despite that brilliant record of achievement, what is the picture today? From all across the country we learn that the handicapped, once more, are being shunted into the oblivion from whence they came. Part of this is due to deplacement of workers by returning veterans—disabled and nondisabled. Part of it is due, we believe, to the fact that industry feels insufficient obligation to the handicapped and takes the attitude, "Why continue to employ disabled, when there is, or soon will be, a plethora of nonhandicapped?"

Whatever the reasons may be, the picture today is dark. On one hand, we have approximately 150,000 disabled veterans whose applications are on file in the various State employment offices. We have, in addition, approximately 2,500,000 civilian handicapped presently unemployed.

Of the estimated 28,000,000 handicapped in the United States, likely some 5,000,000 to 7,000,000 could be employed, although some of these would require preliminary treatment and training.

We cite also the increasing relief loads in all States as a further indication of the downward trend of employment. In the June report of the American Public Welfare Association, it is stated that "General relief case loads are going up fast," the most recent figures showing an approximate increase of 100,000 cases over that of a similar period in 1946.

When this federation was formed in 1942, in the light of experience following World War I, we foresaw, in part at least, the present situation. We hammered away upon the necessity of all public agencies instituting long-range programs designed primarily to take up the slack at the war's end.

We called upon Congress to plan and execute programs for the handicapped that would provide a barrier against future disasters. Although much sympathy has been shown to this idea, as yet nothing has developed. It may be said in passing, that we have at all times insisted upon a full employment program, because we know, from bitter experience, that the place of the handicapped in the economic scheme today is as follows:

1. The disabled veteran, as is just and proper, has first call upon jobs.
2. The nondisabled veteran, reintegrating himself into civilian life, is next.
3. The nondisabled civilian is next.
4. The handicapped are last!

The only out for them, then, is a cycle of full employment of all workers.

We have consistently demanded that the handicapped have a seat at the table when the steak and potatoes are being passed around, and emphasis has been laid repeatedly upon the necessity of all agencies, public and private, devising programs to bring about that happy consummation.

In my opinion, there are still too many people in high positions who are thinking in terms of the conditions which obtained during the War years, when everybody rushed to the Government and said, "Gimme help, Uncle, gimme help!" Today that situation is radically changed. Instead of people coming to Government, they are going away from Government. The transition must be marked and provision made to change our ways. Instead of sitting and waiting for people to come to us, we, instead, must go to them; and above all, we must sell a "handicapped program" to the general public. Without public support we cannot succeed, no matter how good our plan.

Among the speakers here tonight are representatives of public and private agencies and organizations, and I am sure that many of them have performed well on behalf of the handicapped. Yet, as I stand here and reflect, while I realize that they are, in many respects, prohibited from initiating action voluntarily, still I do not see why they cannot recommend programs which they believe essential to meet these changed conditions.

What, for example, are we going to do with the handicapped who came into Government service during the War, made excellent records, and today have little or no chance of continuing a Government career? Are we going to banish these people from the face of the earth entirely? Cannot the Civil Service Commission develop programs beneficial to them, where their services justify it?

What of the skilled and unskilled workers in industry—and there are millions of them—who are now forced to retire involuntarily? Are we going through the same dreary cycle of defeat and misery that we experienced from 1929 to 1933, or are we going to plan, and execute boldly and fairly, to see that our own citizens get a break?

What of the disabled veteran? Is it not true that, even now, we begin to note the same situation which developed following World War I when, after the paraders stopped marching and the bands stopped playing, the public soon forgot their plight and they were "pushed around" and in all too many instances, in the days not long after, became apple sellers?

These things, my friends, are major problems. We cannot shrug them off. We cannot take the smug attitude, "I am not my brother's keeper." I say to you if we do not find a way to provide a decent means of living for the handicapped, let us do what Hitler did: Start a Euthanasia League and wipe them all out at one time! By so doing, undoubtedly we would please those "economy-minded" who object to spending money to aid their fellow citizens in necessary ways.

The way, in my judgment, to stop "wasting" money, is to provide a real program for all disabled. Let us recognize facts for what they are. If we are to shove the handicapped out of jobs, we shall have to maintain them on relief, and that, we know, is expensive and unsatisfactory, from every angle.

There is but one answer: Establish a program wherein the handicapped are treated, trained, given vocational guidance and placement in suitable employment. That is the program of this federation, and we shall keep shooting for it.

Now, however, we address ourselves to the specific question of how best to promote immediate employment for handicapped. As is generally known, this federation authored and sponsored "National Employ the Physically Handicapped Week," which has proven a great success. In 1945, the first year of its observance, 13,439 handicapped were placed through USES offices, of whom 8,141 were disabled veterans. In 1946, 29,439 handicapped were placed through USES offices, of whom 19,200 were disabled veterans.

This year we hope to increase the number of placements materially, both military and civilian, and the speakers who follow me will outline briefly the plans of their agencies and organizations to effectuate that.

I am sure that you will be greatly interested in their presentations and I am glad to present to you Mr. Oliver Kincannon, director of information, Office of Vocational Rehabilitation, who will explain the plans of that agency, which has done effective work in this field, and has greatly expanded its activities during the past 4 years. Mr. Kincannon. [Applause.]

Mr. OLIVER KINCANNON. Mr. Chairman, honored guests, ladies and gentlemen, I always get a great kick out of sitting down to a table with Paul Strachan. I get a great kick out of attending a meeting which he sponsors. I draw great inspiration from his enthusiasm, and it is a genuine pleasure for me to be here at his invitation tonight.

Paul is one of the outstanding advocates of universal employment of the handicapped that we have. He certainly needles us to do a good job, and I am quite certain that when we do an adequate job—and no one has yet done that—he will give us his applause and hearty approval.

The subject that we are assigned tonight is: How to get jobs for the handicapped. I wish I could answer it succinctly, finally. I cannot do that. I can tell you what we in the Office of Vocational Rehabilitation are doing and I am sure that there are many abler speakers here tonight who will give you the plans of other agencies to promote the effectiveness of "employ the physically handicapped week" this year—and I hope we drop the "physically." I hope it is national employ the handicapped week.

We in the Office of Vocational Rehabilitation feel that one of the greatest deterrents to full employment of the handicapped is a lack of appreciation on the part of the public of the extent of the problem, a lack of knowledge on the part of the handicapped of the services available to them, and a failure to realize, I assume, a lack of knowledge, on the part of employers as to the effectiveness of handicapped workers.

I cannot understand why there is such a lack of knowledge, because all of us know that our employers are pretty smart people, or they couldn't be employers. We know that the handicapped have established records which offer unassailable proof of their value, as Mr. Strachan has said, they are safer, they are more efficient, they reduce labor turnover—a great expense item to industry—and beyond that, they have a lower rate of absenteeism. These are four elements that are desirable in any employee, and our effort shall be, and should be, to impress upon the employer that it is not disability that counts; it is ability!

In that connection we have made efforts to inform employers, to impress them. We now have in circulation, and only recently in full circulation, a motion picture to which contributions of footage and actual employment scenes of a wide variety of handicapped persons were made—substantial contributions, I may say—by four of the greater industrial companies of this country who are among the most successful employers of the handicapped. Those contributors and those participants are the Ford Motor Co., with something over 11,000 handicapped employees; the Caterpillar Tractor Co., which has originated a community plan in Peoria that I think should be adopted everywhere (there is virtually no unemployed handicapped person in Peoria); the Western Electric Co., which utilizes innumerable handicapped persons in all of its plants throughout the country, and utilizes them intelligently; and lastly, the Bulova Watch Co., which has set up a splendid training plan, which I believe is primarily for returned veterans, and those, of course, who are rather limited in movement, but who have the dexterity to do the fine precision work that goes into watchmaking. We had great pleasure in viewing some of the operations of all of these companies.

We feel, also, that the public and the handicapped person should know about the services available and the need for the services which will render the handicapped person not only employable, but will put him on the job and not just a job, but the right job. In that connection we have issued a considerable number of publications which are receiving wide distribution throughout the country at present, but we are not content to stop there; we are going into every post office in the United States with posters explaining these services. We are finishing right now a series of 13 dramatized radio stories. They are success stories of the handicapped, and these transcriptions will be broadcast throughout the Nation over some 300 to 600 stations. We cannot guarantee in advance what the booking will be, but we know it will be at least 300 stations. We feel that we will help to break down the barrier which consists largely of a lack of information. We do not feel that the people of this country have any animus toward those who are not perfect. We know that none of us are perfect.

In addition to that we are trying steadily to rally the support and the participation in the program of vocational rehabilitation of all agencies and groups and professions which can render material assistance in repairing the disabilities and in fitting the handicapped for employment. As one example of that, last week at the American Medical Association's Centennial Convention in Atlantic City, our consultant on orthopedics conducted a most widely attended demonstration of amputation prothesis and development. At the same time we introduced a booklet, which is addressed to doctors only, and through the cooperation of the American Medical Association that booklet is being mailed this week to every member of the American Medical Association. We feel that doctors, above all, should understand what services are available.

We have worked and are working closely with the American Federation of Labor to the point where we are distributing their material and they are distributing ours, and we hope soon to effect a similar working arrangement with the Congress of Industrial Organizations.

In addition, we are producing special little booklets that are addressed to particular groups. Some of you may possibly be familiar with "Opportunities for the Deaf and the Hard of Hearing." Some of you will become familiar with our forthcoming tuberculosis booklet, and the amputation booklets that we have put out. We feel that while none of these things in itself will cure any ill that exists, all will contribute to the effort that is being made by all of us—by the Office of Vocational Rehabilitation, by Paul Strachan, by the United States Employment Service, by the Veterans' Administration, by B'nai B'rith, by all of the many organizations that are now attacking this problem. We feel that we will eventually remove the lack of information which constitutes such a barrier to success.

Our feeling, in the Office of Vocational Rehabilitation, is this: that the best way to get jobs for the handicapped is to make every handicapped man or woman who is placed in a position, a salesman for every other handicapped man or woman. We do not think it is good business to place a man without a medical examination on a job that apparently he can handle, only to have him die of heart failure. We do not feel that it is good business to put an amputee on a job, only to have him break down with tuberculosis. We feel that he should be prepared and fitted, physically, mentally, and by training, for a specific job within his capacities—the right job for him, the job that will make his employer say, "Come on boys, send me more like this fellow." That is one of the best ways. It is a slow process. However, we are making progress.

At the moment there are in process of vocational rehabilitation throughout the country, in the State agencies which operate the Federal-State system, more than 100,000 persons. They are receiving the vocational rehabilitation services which will equip them for and place them on the right job. I had occasion today to write a little item that included this statement: If we can wipe out the backlog of 1,500,000 persons known to be physically or mentally handicapped and in need of vocational rehabilitation services, and if they are as successful as those whom we have rehabilitated, we will add $2,000,000,000 a year to this Nation's productive wealth.

The cost of rehabilitating a disabled man or woman, on an average over the years, has been around $300. It costs more, much more than that, generally twice, to keep that person in dependency. That cost in dependency goes on year after year. The cost of rehabilitation is a one-time cost, and in many cases the rehabilitated person pays back to his Government in income taxes within the first year of his rehabilitation more money than was spent upon his rehabilitation.

We maintain that it is good business, sound business, to rehabilitate the handicapped, and we maintain that it is not good business, as well as not good citizenship, not good humanitarianism, not to rehabilitate the handicapped.

I would just like to run over the services that are provided under the Federal-State program of vocational rehabilitation. These consist of a medical diagnosis, in every case; of any necessary medical, surgical, psychiatric or hospital care; counsel and guidance so that the man or woman may select the right job; of training so that he may learn to do the right job well; of placement on the right job; and then of follow-up, to make sure that he is making the necessary adjustment, to make sure that the rehabilitated person is making good.

I would like to give you one or two very brief statistics on how the program is operating. I know that it is not as widespread as it should be, with only 100,000 persons now in process of rehabilitation. However, it is growing; the services are increasing.

We have more than eight States this year which, in the first three quarters of the year surpassed the total year's record of the 1946 fiscal year. We have 17 other States which came very close to equaling that record within the first three quarters of the year.

I would like to point out also the progress being made in giving services—I mean real rehabilitation services, services that will put these people on their feet permanently—and I would like to cite these figures. Hospitalization and similar care last year increased 103 percent over the preceding year. This year, at the end of three quarters of the year, it is at 118.7 percent of last year's index. Medical and surgical care and treatment—92.3 percent increase last year. Already in the first three quarters we are at the rate of 135 percent. In prosthetic appliances there has been an increase within the first three quarters over the full last year, of 9.28 percent. Auxiliary services, such as training, supplies, etc., have increased also.

Training has continued on an even keel; and diagnostic examinations, which increased last year by 40 percent, have increased within the first three quarters of this year, over all of last year, by more than 8 percent.

I think you will see from that that you do have a system of State organizations, affiliated under the congressional enactment known as Public Law 113, into a system that is producing results; that is growing, and we hope to put better than 40,000 people in jobs during this year; jobs on which they will remain, and jobs on which they will succeed, and jobs on which they will act as salesmen for all the other handicapped.

I thank you. [Applause.]

President STRACHAN. Thank you very much, Oliver. I am glad to have that information. I want especially to emphasize this: That it costs more to maintain the handicapped in a status of dependency than it does to rehabilitate and put them to work.

Now we have a visitor from across the sea. This lady has been visiting the United States for the past few weeks, studying conditions relating to the handicapped. I am very pleased to introduce to you Miss Birgit Busck, Social Curator for Disabled Persons, Provincial Government Employment Service, Halmstad, Sweden. Miss Busck! [Applause.]

Miss BIRGIT BUSCK. Please excuse me, as I am not proficient with your language.

I am very glad to have this opportunity to bring you many, many kind regards from the World Association for the Handicapped in Sweden.

During the war the state employment service in Sweden had many special tasks which we do not have in peacetime. Even at an early stage of the war it was recognized in Sweden that it was our duty to help the distressed in Europe as much as possible. Mention may be made of the relief work of a more special character which has been and is still being carried on since the war ceased, to alleviate want and disease, and of the help to refugees afforded in the country itself.

For a long period during the war Sweden gave shelter to more than 200,000 refugees, and still we have about 100,000. For these displaced and disabled persons, the employment service arranged for homes and engaged social curators to help them with their special problems, to help them find their relatives, and so forth. We arranged training for them and tried to give them good jobs.

We are also very thankful to them that they were a good help to us in the labor market. Each person has received through the employment services the kinds of clothing they needed. We have still in the main offices several employees who are working only for the disabled and displaced persons. So much for the wartime.

It is my task to organize in one of the 24 provinces in Sweden the security and the placement for all kinds of handicapped persons; also, sometimes, for the old people, according to the need.

Here I want to say a few words about our plan for old people. We would never refer to an old person as being indigent. Help to our people is not given in the form of relief. That kind of giving would hurt their pride. In our country everyone has a pension, regardless of how rich or poor. If Mr. Rockefeller were in Sweden, he would get $300 a year, after reaching 67 years of age. All people of that age feel entitled to a pension because it comes from public taxes.

From the time we are 18, we begin paying 1 percent of our income to this fund. That $300 does a lot more in Sweden than it would do here. It is only a part of what the aged without private income may get. We give what we call a supplement, and even that is not regarded as relief. Sweden does not want her old people to feel dependent. We want that they should have an agreeable life in their last years.

They may earn money if they wish. If they can be on duty only a few hours a day, we try to give them good jobs. We need all the labor we can get. In spite of that, we now have a high market condition.

We have many, many problems with our handicapped, and therefore I suddenly decided to come over to America to see what you do with your problems, and I am very impressed. I find your plan for rehabilitation marvelous. I wish we had one like it in Sweden. I hope we may get it soon. There are several things I have paid special attention to, namely, the blind home teacher. The "talking books" we know well, but we haven't it yet. I have seen the films about the handicapped and have bought one about tuberculosis and one about the blind. Also, I have noticed that you have so many propaganda pamphlets, and I find the Handicapped Week and the radio programs a very good idea.

I have received so much kindness here and I have had so much valuable help from Mr. Banta, Mr. Strachan, and many, many others, that I cannot explain to you how thankful I am. Now I only hope that you will come over to Sweden and that I may take care of you with the same kindness that I have received here. I bid you welcome to Sweden. [Applause.]

President STRACHAN. I feel old age stealing swiftly upon me and I would like to know the schedule of the next boat to Sweden! If there is anything on earth for working people, everything we know of the Scandinavian countries certainly points to the fact that they know their stuff, and we should do all we can to follow in their footsteps. I thank you very much, Miss Busck. I am sure we all enjoyed it.

All of you have heard from time to time of miracle men. All of you have been told about Superman, who does tremendous jobs, who performs miracles, as it were, but, outside of the funny papers I daresay few of us have seen such an individual in real life. I have often tried to conjecture in my mind what a man would look like, who had engineered the deal that brought about the consummation of 13,000,000 jobs. I want to repeat that; that is an awful lot of jobs—13,000,000 jobs! I had sort of pictured an individual 11 feet tall, 7 feet wide, and wherever he walked, the sidewalk cracked, and I confess that, in a way, I was somewhat disappointed when I met the gentleman in person. It is true he is a pretty big guy; he could lick me with one hand tied behind him; but, in all seriousness, he has done, and his agency has done, during the war years, and what is left of it now, a superlative job. They have been kicked from pillar to post; they have been caught between two fires—the wildcats on one side who say, "You are not going far enough" (and I am one of them) and the conservatives on the other side, who damn them for spending public moneys to get people jobs. They say, "Why, anybody can find a job. There are lots of jobs."

However, I am not going to attempt tonight to steal his thunder or tell his story. He must tell it in his own way. But, before I introduce him, I want to say that up to the end of May 1947, the United States Employment Service had been responsible for the placement of 1,339,636 handicapped; and, ladies and gentlemen, in these past five and a half years, I submit that is one hell of a job! I ask all of you to stand up in recognition of that superlative effort. Let's rise and give Robert Goodwin and the United States Employment Service a hand. [The audience arose and applauded.]

Mr. ROBERT C. GOODWIN. Thank you very much, Paul. I have had many introductions in my life, but I think this one is not only one of the very best but it is the only one where I didn't know I was coming on until he got to the last sentence.

Paul Strachan said in his opening remarks that during the war the handicapped proved they were worth their hire. It seems to me that is one of the most important things for us to keep in mind. Certainly, in the part that we have been privileged to play in the last few years in this handicapped program, and particularly the National Employ the Handicapped Week each October, keeping that phrase in mind has been, in my estimation, a godsend to the program and has given it the impetus which has put it over in a way that has really paid some dividends.

Charity certainly is one of the greatest Christian virtues on which we have made tremendous progress in our civilization, but, unfortunately, it is not a basic principle on which business enterprises are operated, and we have suffered in the past from attempts to sell the services of the handicapped too much on the basis of a charity appeal.

I like particularly the motto that we adopted last year for National Employ the Physically Handicapped Week: "It Pays To Hire the Handicapped!" We in the Employment Service feel that we have made real progress going forward with that motto. It is, of course, based upon a knowledge that if you get the right kind of a job that the handicapped person can do, without any interference, where his handicap is not in effect a handicap, that that person can do as good, and frequently a better, job.

I just want to say a few things about steps we have taken in the United States Employment Service in our attempt to do our part of the job. We went along for a good many years in the Employment Service on the theory that it weakened the system if you went very far in specialization. Then we got into some of our emergency situations, one of them back in the depression years when the pressure on the local office was unemployment compensation, and we saw what happened there. We saw that, under pressure, with large groups of people waiting at the office, all the people in the office tend to be thrown into whatever the pressure job is. First, it was unemployment-compensation-claims taking; next, it came on the placement of people in war work.

So, after we studied this problem, we concluded that it would be necessary, if we were going to get results in this handicapped program, to have specialization, and most important, to protect those specialized people from being dragged off into other work. So, we set up, organizationally, protection for that group. Unfortunately, we have far too few people who are trained to do this job as yet. We have made great progress, I think, but we have a great way to go, so that we are looking forward to working with Paul Strachan and his group, and working, as a matter of fact, with any group that is interested enough to contribute to this program, because we regard it as one of the greatest challenges we have in this country.

Some of the countries, as you know, have found it necessary to pass mandatory legislation to handle this problem. Unfortunately, from an official point of view, it is

only within recent years that we have even given it special emphasis, and I do not know of any problem that needs special emphasis, not only from Government groups but from private groups interested in it—I do not know of any problem that needs more specialization and more attention, because it is a tough job. The educational job that needs to be done with employers and the public, if for no other reason than to get over this one point I started with, that the physically handicapped person is worth his hire, is tremendous. If we can get that over widely enough, we can go much, much further to lick this job.

So it is with the anticipation of getting more help from you and the other people interested in that problem that we are looking forward to playing our part this year in the National Employ the Physically Handicapped Week, so that we can carry the efforts and the results of the United States Employment Service to greater heights than we have ever before done. Thank you very much. [Applause.]

President STRACHAN. As I say, I am willing to take a vote of trust from Bob. He has made a lot of pledges here tonight, and we will hold him to every one of them. We want more jobs for the handicapped.

It is a pleasure to introduce old friends, and I have known this man since 1933, when I had the pleasure of meeting a gentleman who has been, paradoxically enough, one of the ones in Washington in high position, with whom I have been continually rowing. But, he took it as a Christian gentleman should. He realized that it was all part of the game, and certainly I regard him today as one of the real friends of the handicapped, and one who, up to the limits of his authority, would see to it that they had every possible break. I prefer to look upon this gentleman not as the administrator of a great Federal agency, but as a good American, who is our friend—the Honorable Harry B. Mitchell, President of the United States Civil Service Commission. Harry! [Applause.]

The Honorable HARRY B. MITCHELL. Mr. President, distinguished guests, ladies and gentlemen: When Paul Strachan called the other day and said he wanted me to come down and talk to this meeting about what the Civil Service Commission is doing for handicapped persons I tried to tell him that there was another man in the Commission who was much more familiar with the work than I was, who could give the details much better than I could, but he insisted that I come, and as I have known Paul Strachan ever since I have been in Washington, and am a great admirer of the work he has been doing for handicapped persons, I said, of course if that was what he wanted, I would come.

I am glad I am here tonight. I am glad I can get into personal contact with the work he is doing, and that his organization is doing, and with the persons who are interested or who are being benefited by that work.

To present the work of the Civil Service Commission in this field and to describe what it has done, it is necessary to give you a good many details and figures, which I have written out with the assistance of the man who knows more about it than any other, the head of our medical division, who is heart and soul in favor of this work. I asked him to give me some of the data, which I am going to read to you, as to what the Civil Service Commission has been doing.

Allow me to congratulate your organization on the good work that it is doing for the physically handicapped persons who are in need of employment, and to commend that work to others who are interested in these persons, as all good citizens should be.

Therefore, I am glad of the opportunity to tell you how much the Civil Service Commission is interested, with you, in the work you are doing, and to give you an idea of our efforts to stimulate the employment of those persons with physical impairments. Since we are the central personnel agency in the Federal Government, it is only fitting that we give serious thought to the judicious placement of these individuals.

Some of us in the Commission have urged for a considerable time that greater consideration be given to physically handicapped persons, as we felt that we were too stringent in the past. Shortly before our entrance into World War II, we were fortunate, in connection with this problem, in obtaining the services of Dr. Harvey as the head of our Medical Division. He not only was willing but anxious to consider the possibilities of giving greater opportunities for persons who were not in a perfect physical condition, but he has given a great deal of time and thought to the problem. The opportunity for the employment of handicapped persons was increased after we entered the war because of the heavy demand on personnel for the armed services and for the industrial production necessary because of the war. That gave a stronger opportunity to urge that there were thousands of persons with adequate training and with experience who could well qualify for Federal employment, if we could but lower the physical requirements of many types of positions.

What the Commission did to bring thousands of physically impaired workers into its employment is now history, but I am of the opinion that you would like to have some of the facts of our accomplishments, as well as some thought of future plans in this direction. From October 1943, when we began to maintain records of placements of the physically impaired, to April 30, 1947, there were 87,679 persons having permanent disabilities who were selectively placed in field establishments of the Government. Figures on placements made of such persons in the departmental service were not recorded, but these would add thousands more to the total. In these figures we do not include the placement of individuals with disabilities which were correctible through medical treatment or surgery.

It is admitted there was a time when a physically impaired person had little opportunity of obtaining employment in the Federal service. That time has passed. In order that we would have first-hand information regarding the physical fitness necessary properly to perform the duties of Government positions, the Commission instructed its medical officers to conduct job surveys on a continuing basis. To date, over 6,000 such job surveys, representing many thousands of jobs, have been completed. The results of this undertaking are published in a booklet entitled "A Guide for the Placement of the Physically Impaired." It may be of interest to you to know some of the findings of this job study. For example, we learned that, of the six thousand-and-some jobs, 875 were suitable for persons with the amputation of one hand; 2,576 were suitable for persons with the loss of one leg; and at least 81 jobs could be filled by persons having double leg amputations. The study further revealed that persons blind in one eye could perform the duties of 1,889 positions, and that 3,867 jobs held opportunity for the hard of hearing; and so on, for other physical impairments such as heart conditions, tuberculosis, and various orthopedic defects.

It is not enough to look at a job, analyze the functional capacities required, and decide that a person with this or that impairment could handle the duties efficiently. In order to see how well we had used the information secured by the job surveys, our medical officers were instructed to go back to the establishments previously surveyed and study the actual performance of physically impaired workers who had been placed as a result of the first survey. I will not go into the technical considerations that entered into this second type survey, but it will suffice to say that it was a scientifically conducted study, utilizing groups of unimpaired workers as controls. We found that the productivity of the disabled compared favorably with that of the able-bodied, both in quantity and quality. A much lower rate of turn-over was found among the physically impaired. The percentage of the physically impaired receiving special consideration with regard to transportation, lunch and rest periods, hours of work, special equipment, or in time of reporting, has been low. We also learned that the physically impaired experienced fewer severe accidents than the able-bodied worker.

As a result of these surveys, the Commission has positive proof that there are very few jobs which require a worker to use all of his abilities and faculties. We also know that most disabled persons have more ability than disability. Let me remind you that the Commission's information on job performance of the physically impaired is not based on the performance of clerical help alone. On the contrary, thousands have found suitable employment as drill press operators, mechanics, carpenters, laboratory technicians, draftsmen, electricians, truck drivers, and many other classifications which are found in the Government shipyards, gun factories, air fields, hospitals, and other installations. The fact that these handicapped individuals found gainful and suitable Federal employment attests to the success of the Commission's program of selective placement. And by selective placement I mean the deliberate and thoughtful employment of disabled persons in jobs in which the work demands do not exceed the individual's physical capacity.

It has occurred to me that many of you wonder why we at the Commission are so concerned in the physical requirements of various jobs. Many people in Government, and perhaps a majority of those on the outside, are under the impression that the primary concern of the Commission is the giving of examinations to applicants for Federal employment, ranking the names of those who passed the examination on a register, and furnishing those names to appointing officers to fill vacancies in the service. It is true that this is one of the Commission's biggest responsibilities, but in addition, the Commission is also charged with the responsibility of establishing the physical standards for all positions in the competitive service. In order that the standards established by the Commission may be realistic and that no person otherwise qualified is denied employment because he is lacking in some particular physical capacity which may not be necessary in the performance of the duties in that particular position, the Commission is determined to secure sufficient information concerning these jobs to enable it to establish standards which will reflect the minimum physical capacity required of the employee in performing the duties of the position.

Announcements of examinations held by the Civil Service Commission contain a section in which the physical abilities required for the job are outlined. During the war, when special emphasis was placed on the utilization of handicapped persons to help meet critical employment needs, the physical requirements were modified somewhat in those instances in which such modifications did not lead to the creation of an employment hazard.

It is now the Commission's policy to make the physical requirements as flexible as possible in all positions. The physical-ability paragraphs which appear in each examination announcement are individually tailored by the Commission's medical staff to fit the position. The paragraphs explain the physical abilities or faculties which are necessary to perform efficiently and safely the duties of the position without hazard to the employee or to others. The requirements which appear in these paragraphs are based

on the results of the job surveys which were conducted by the medical officers.

When an individual files an application for an examination, he is asked to state briefly any physical defect or disability he may have. The Commission communicates with those applicants who report defects or disabilities, to get full information about a physical impairment likely to limit efficient and safe performance on the job; the Commission's medical officer then passes upon the fitness of the candidate on the basis of a physical examination given by a Federal medical officer or by a private physician specifically designated to give such examinations. By comparing the resulting report of examination and the examiner's recommendations with the analysis of the job involved, the Commission is able to decide whether the person with the impairment can properly perform the duties of the position he desires. The appointing officer to whom the eligible's name is sent for consideration in filling a vacancy then knows that the individual referred to him by the Commission is qualified for the job. He is to be thought of as an efficient worker—not as a "problem," nor as a "special."

The Civil Service Commission looks upon the employment of handicapped persons as a continuing obligation, and not a temporary program designed solely to meet an emergency situation. Although the shortage of able-bodied workers is over, we are determined not to relent in our efforts to make as certain as possible that physically impaired applicants are not prevented from participating in the Government's work. We will not disregard the valuable experience gained in our program for the placement of these people. On the other hand, we will continue our policy of promoting the judicious and effective utilization of the physically handicapped in the Federal service in positions where they may function efficiently and without hazard to themselves, their fellow workers, or others; we will continue the study of physical requirements of jobs, and emphasis will be placed on close working relationships with rehabilitation agencies to insure adequate preemployment considerations and reassignment procedures.

Paul spoke a few minutes ago about the unemployment of handicapped persons owing to the reduction in force. So far as the disabled veterans are concerned, that is not very much of a problem. Under the law, they have a very decided advantage over others, and the chances are that nearly all of those will find positions, and those who are now in the Federal service will be continued in the Federal service. I admit that in the case of others, without a civil service status, there is a possibility of their being liquidated; there will be more difficulty in continuing them in the present jobs or finding jobs for them. However, I can assure you that the Commission is determined to do everything possible to continue the program that has been started and to extend that program so that every possible handicapped person who takes a job in the Federal Government shall be employed. [Applause.]

President STRACHAN. I am very glad to have Mr. Mitchell present that progressive attitude on the part of the Commission, which is bound to result in more jobs for the handicapped. We know that with five to seven millions to be thrown upon the labor market, it will be disastrous if public apathy is allowed to grow, in relation to this problem. I hope that the survey will determine that lowering physical standards will not, by any means, lower mental or capacity standards. I thank you very much, Harry.

I am going to call upon Dr. Gilbert MacVaugh, who is representing Mr. Millard Rice, of the Disabled American Veterans.

Dr. GILBERT T. MACVAUGH. Paul and friends, I came in late, intentionally, so that possibly I might avoid this very fine opportunity of speaking.

The DAV has been with this program for a number of years—with it, because of its definition of its immediate interest, inasmuch as it is concerned specifically with disabled veterans.

I suppose no two other individuals have been more responsible for the formation of the general concept behind National Employ the Physically Handicapped Week than have Millard Rice and Paul Strachan, so I think those two people, in addition to all the many other fine minds that have gone into the development of this "Week," should be accorded the highest possible honor and respect, because National Employ the Physically Handicapped Week is the time when all of the concentrated thought of people interested in this problem comes to the surface in a highly crystallized manner. It is at that time that the employers of the country, more than any other time, are called into a thoughtful attitude to consider the plight of the unemployed persons.

No other single individual outside of an employer can supply jobs. Sometimes we lose sight of that very important axiom. If an employer is the only man who can supply a job, obviously programs must be focused on the employer; his attitude, on him, as a personality. If we find that it is necessary to focus our attention on the employer, obviously we want to know something about employers as a group, and the employer as an individual. One of the things which we have found about employers, and about the attitudes of people in regard to employers, is this: namely, a lot of people feel that employers resist the employment of the physically handicapped. Few people will gainsay that statement. That is true; psychologically, sociologically, economically, it is true. There is a basic resistance to the hiring of handicapped people, and we must face that fact.

What do we do about it? We begin to think of a number of programs. In order to launch the programs, we want to have good reasons for launching these programs. One of the reasons why we launch programs is composed of five main points which you have heard many, many times, and I shall not reiterate for you. But one of the basic reasons behind the necessity for our gathering here is the fundamental psychology of this resistance of employers to hiring disabled veterans.

What do we find in our thinking and in our research which contributes to a better understanding of this resistance? If I may digress for just a minute, let me take you back in our thinking to the period of the cave man society. In that period we find that in the combat of one tribe or clan with another, in many cases an individual was injured. Upon his being injured, he is no longer a protector of the tribe or clan, neither is he a producer of food, and so any individual of the tribe or clan who is no longer a protector of the group, nor a producer of food, is, in that society, actually useless, and so it was the custom to do away with disabled persons. They were done away with. It became a ceremony to do away with handicapped individuals. It was an honor to have been done away with. Nevertheless, individuals who were handicapped were disposed of.

And so we see here in the dawn of man's history the beginning of this subtle subconscious resistance to the handicapped individual.

Bringing our thinking a little closer to our own time, we come up to the periods of Grecian and Roman slavery, in which society 1 out of every 10 individuals was a freeman and the other 9 were slaves. As a result, we find a tendency to isolate individuals who were handicapped economically, to isolate individuals who were handicapped socially. They were put in a group by themselves.

This is not unusual today. We find the same thing. Psychologically, our hospitals are a manifestation of this broad social piece of behavior. We isolate sick people in hospitals. Why don't we keep them in our homes? We used to. But today we are becoming sufficiently aware of the modern contributions of science to take advantage of this tendency on the part of mankind to isolate its handicapped individuals and put them in a place where they can get a special kind of treatment. Nevertheless, this is the social movement of mankind to put handicapped individuals in a group by themselves.

Coming up through the period of the guild system, there we find that an individual who could not do a whole job was not permitted to enter the guild system, or a particular guild. A man had to be a whole man in order to do a whole job. The Shoemakers' Guild required a perfect man to do the job. Handicapped individuals were not permitted in the guilds. The Housebuilding Guild had only whole men in it, total workers; only nonhandicapped workers were allowed in the guild. And so always from the dawn of time up through the periods of slavery, the guild system, we find there is a very definite and obvious resistance to handicapped or disabled people.

Bringing it up closer to us, to the dawn of our own mass-production era, which began about the dawn of the twentieth century, we find that individuals who were not whole individuals were just not taken into the mass system of production. Finally, we learned that specialization of labor was the key to success of the mass-production method, and it dawned on people then, that even though an individual was handicapped in part the remaining part of his body was useful; and thus we developed the concept of specialization of labor. And so gradually we began to match the remaining abilities of a man with the requirements of the job.

You say these concepts are not too important? Probably they are not, but they are basic in our thinking and they lead us to this one point, that even from the dawn of man's thinking, we have had a resistance which is ingrained in all of us, toward the handicapped individual. All of you who have walked down a public street have noticed a charming young lady with one limb beautifully shaped and the other withered by infantile paralysis, or what not. There is not a single one of you here who, upon looking at that individual, hasn't had chills run up and down your spine. You just felt differently toward that individual. Why? Because of this cultural heritage in all of us; the tendency in all of us to separate ourselves from those people who are handicapped or disabled in some way. It isn't something which we learn; it isn't a learned behavior pattern. We don't get these little shivers because of something we were taught in the cradle or early childhood by our parents. This is something which is just as natural to us as it is for the mother to develop milk for her suckling baby. She didn't learn to do that; it just developed within her.

So we come to this very important point, namely, that society today, and all of us interested in this major problem, must not condemn employers because of their unconscious resistance to the hiring of disabled people, because this is a subconscious act on their part. They ought to be indicted after they have once heard the story of the worthwhileness of disabled people, but our initial contacts cannot justifiably allow us to regard the employer as one who is consciously resisting the hiring of individuals. He is not. Employers are subconsciously resisting the hiring of disabled people.

I have a note here that there are many other better speakers than I am, so I am

going to abbreviate it by stating this one point: For a long time, probably a year and a half or two years, the DAV has been specifically interested in the problem of getting jobs for disabled veterans. We found, in asking ourselves why there are so many unemployed disabled veterans, that we must learn the reasons why they are unemployed, and so today, with the cooperation of the United States Employment Service, the Veterans' Employment Service, and the Veterans' Administration, there is now an effort fairly well organized on a local level which sometime in the near future we hope will spread to a national scale, which will give us the reasons why there are so many unemployed disabled veterans. When we arrive at a crystallization of these reasons, we will then be able to attack the problems which we have discovered, which are the real reasons why so many unemployed disabled veterans are being frustrated in seeking jobs. Thank you very much. [Applause.]

President STRACHAN. It becomes necessary for Representative MADDEN to leave early, so I am going to make my introduction very short. Here we have a real fighter for the underdog; the type of leadership so essential in Congress, to advance and protect our interests. In having him here tonight, I feel we have a very high type of Representative, and I say that advisedly, on the strength of his record. Here is a friend of the underprivileged, and of working people generally, RAY J. MADDEN, of Indiana. [Applause.]

Representative RAY J. MADDEN. Paul, distinguished guests, and friends: I am certainly thankful, Paul, for this invitation here this evening. I have learned a great deal. I was very much interested in the talk that Mr. Mitchell made, and some of the statistics he quoted. About a week ago I talked to Paul in regard to this great work that he is interested in; that you are interested in. In fact, back over 15 years ago I happened to be county treasurer out in my county in Indiana, and we had, I think, during the tax season, between 40 and 50, 55, and 60 employees, and we made it a point to have a certain percentage of those employees from the ranks of the physically handicapped.

I wish to make this statement: Members of Congress do not realize the importance of having a concrete program formulated on the part of the Government, in order to aid and assist in bringing employment to the physically handicapped, and it is only through organizations similar to this, and through the veterans' and labor organizations, that the attention not only of the employer but of the rank and file of the American people, can be called to the necessity of making a special effort to provide aid and employment to the physically handicapped.

I am optimistic, and I believe that the Congress will provide the proper set-up—and I would advocate a department in the Government in order to devote complete attention to the aid of the twenty-odd million physically handicapped throughout this country. I do not know of any better investment our Government could make.

A couple of weeks ago a friend of mine from Gary, Ind.—Maynard Montgomery—who is a World War I veteran and had been connected with the Carnegie-Illinois Steel Co. in Pittsburgh in the last 3 years, told me a separate department that Carnegie-Illinois—a part of United States Steel—has created in order to provide employment for the physically handicapped, and especially the veteran returning from World War II. I forget the exact figures, but I think he told me that there were around 2,000 physically handicapped that he has placed in positions with the Carnegie-Illinois Steel Co. in the short time that he has been at the head of that department.

Every employer, both large and small, should have his attention called to what a magnificent and a worth-while job can be done, if their minds can only be concentrated along those lines.

I want to say this. I am sorry that I had a previous appointment for 10 o'clock this evening. I would like to stay until the meeting is completed, but I have had this appointment for several days. I want to say this: That if at any time, Paul, any of your organization would request me to be of any service, as far as the Congress is concerned, in order to crystallize this much-needed program to the attention of the Congress, I wish you would call on me and I will be glad to cooperate in every way.

Before closing—I want to have the young lady continue with what I am going to say—I want to pay a tribute to the magnificent job she—Mrs. Claire Gibson—is doing this evening, in interpreting and transmitting these words to this gathering, because that is a distinguished art in itself, and she is certainly doing a great job. [Applause.]

President STRACHAN. Thank you, Ray. Just one minute. Before he leaves, I am going to exercise my privilege as national president of this organization, to make him an honorary life member of AFPH. I want everybody to stand up on that. [The audience rose and applauded.]

Representative MADDEN. I want to thank you, and I certainly accept the nomination. [Applause.]

President STRACHAN. Frankly, that is the kind of language that I like to hear. We are getting down to brass tacks now. We are getting down to bed-rock. The only solution to the handicapped problem is special services, and the only way there can be special service is under a special agency of the Government.

Frankly, I think we have heard from enough men for a while, and the next speaker is a very delightful lady who has shown her devotion to our cause; who is president of the District of Columbia Tuberculosis Association, and corresponding secretary of the Crippled Children's Society. She has shown a very great interest in what has been done, and what is being done, for old and young people. She took a very active part in last year's observance of National Employ the Physically Handicapped Week. I am very happy to introduce to you Mrs. C. D. Lowe. [Applause.]

Mrs. C. D. LOWE. I appreciate the invitation to appear on this program tonight, but at the same time I feel at a great disadvantage in appearing on the same program with people who are doing things and have specific examples of what they have done and what they can do in this Employ the Physically Handicapped movement.

I am just a lay worker. I have been called a "joiner" here in the District of Columbia, I belong to so many organizations, and I have been laughed at many times because I am always preaching an informed membership. I have always felt that unless we knew what we wanted, and knew how to go after it, we wouldn't accomplish anything; so that is where I feel I do fit into this picture, in belonging to many groups, that I can take back to them and try to make them understand the need.

It has been several years since I became interested in the physically handicapped. I have been working in the District Society for Crippled Children for several years, and when I saw what could be accomplished, I was amazed, and I found that those crippled children were just the same as any other people; they were not different. I used to be a little bit afraid of them, but now they are all friends, and it is the same in the Tuberculosis Association.

So I am really very glad to be a part of this, and I hope that I can spread the gospel among some of the women's organizations to which I belong. Too often we pass resolutions and that is about as far as it goes. I know from my own experience that many of us don't know, really, the needs, and if we were asked what is being done, we would say, "Well, everything is being taken care of," but I know, since I have been active in it, that it is not, and that we all have a big job, and I hope I can contribute something to it. [Applause.]

President STRACHAN. Mrs. Lowe says she has been called a joiner. I only wish there were more joiners with the spirit and determination to serve the handicapped.

One of the great organizations which has always given attention to the disabled is the Veterans of Foreign Wars, and I am very glad to introduce to you their representative, Mr. Henry N. Hensley, who is the national employment director of the Veterans of Foreign Wars. Mr. Hensley. [Applause.]

Mr. HENRY N. HENSLEY. Mr. President, distinguished guests, and ladies and gentlemen: I just returned late last night from a trip out in Idaho and Wyoming, and while on this trip I was told that a good speech was one with a good beginning, a good ending, and very little in between; so for the 5 minutes that are allotted to me here this evening I have prepared today the "in-between," which I am now going to give to you.

The invitation to appear at this meeting sponsored by the American Federation of the Physically Handicapped and its able president, Mr. Paul Strachan, is gratifying to one who has seen the difficulties encountered and many times surmounted, by the physically handicapped of two world wars. We of the Veterans of Foreign Wars are, of course, primarily concerned with the problems of disabled veterans, but we note with interest and are in complete sympathy with the parallel efforts of the American Federation of the Physically Handicapped in behalf of all disabled persons.

Anyone who examines our separate programs will inevitably be drawn to the one conclusion, that the terminal aims of our organizations are identical. Both are seeking to improve the economic and social security of physically handicapped persons. It is natural, therefore, that the approach to our common goal and our methods of procedure should be similar. Reliable figures recently published indicate that the disabled veteran is not obtaining his proportionate share of employment. Although I have no figures to back up my opinion, I feel sure that the same is true of all your physically handicapped. The reason behind this failure to place the physically handicapped is the tendency of the average employer, consciously or unconsciously, to picture a physically handicapped person as incapable of performing the duties of his average position. I am making no attempt to indict the employer who, through lack of knowledge, avoids hiring those persons he feels will be a liability to his business.

The average employer can hardly be expected to hire handicapped persons if he feels that such a hiring policy will result in financial loss, but if we are to succeed in our desire to place our handicapped in gainful employment, this misconception must be erased. The employer must be made to feel that he is not performing an act of charity in hiring the handicapped. We must stress that he is actually availing himself of a source of manpower usually equal to and often better than the average in selected positions.

We can compare our problem to that of the merchant selling goods which are overpriced. By that we do not mean to infer that the services of the physically handicapped are overpriced, but that both the merchants and our organizations are meeting buyer resistance. While the merchant can solve his problem by reducing prices, we must approach ours from a different angle. We must educate the employer and establish in his mind the quality and possible superiority of

the physically handicapped person in performing a job suited to his ability.

The VFW has already inaugurated such a program designed to seek, at the community level, the active cooperation of local employers and civic organizations. The two over-all objectives are to conduct a public education program at the community level, drawing the attention of industry and the public to the handicapped labor pool, and to mesh the functions of our post employment officers with the present existing facilities of Federal and State Employment Services. Until recently the Veterans Employment Service had a corps of field assistants whose chief duty it was to visit employers for the purpose of securing job orders for veterans. We were very sorry that the Congress saw fit to eliminate this program through the reduced appropriations, because we have felt all along that this was one means that we had to approach the employer with people who are qualified to sell the disabled veterans' employment program.

We expect to augment that service through some 9,000 employment officers. We are now developing the program and the program will now soon be in the hands of our employment officers in over some 9,000 posts, and we hope to supplant that service which has been eliminated by Congress.

Mr. Strachan, and members of the federation, I want at this time, in closing, to assure you of the full cooperation of our organization in the furtherance of your program, which is the employment of disabled persons. Thank you very much. [Applause.]

President STRACHAN. I am not at all worried about the Veterans of Foreign Wars. I know they will be in there pitching for the handicapped. They always have been.

I am now going to introduce to you the representative of a great organization which is deeply concerned, likewise, with rehabilitation and placement of the disabled. Here we have Mr. Ralph H. Lavers, director of the national employment committee of the American Legion, and I am sure you will be interested in what he has to say. Ralph! [Applause.]

Mr. RALPH H. LAVERS. Thank you, Paul. Mr. President, members of the AFPH, distinguished guests, and friends of the AFPH: I am indeed happy to be here tonight and to participate in this program, and to say to you that we of the American Legion are deeply concerned regarding the employment of the physically handicapped, whether or not they be veterans.

I think we expressed our opinion on that when, 2 years ago, we brought to you the pamphlet called The American Legion Program for Maximum Employment, wherein we tried to show to the public at large that it would be folly, in the economy of our Nation, or any other nation, to have one segment of our people employed while the other falters around to find some way to make a livelihood. We feel there is room enough and positions enough and job opportunities enough for everyone, whether they be physically handicapped or not.

Last year during Employ the Physically Handicapped Week, we brought out the picture, No Help Wanted. That film has been shown up to this time to over 7,500,000 people in the public theaters of our country, and is still being shown in playhouses throughout the Nation. Besides the 35 mm. version of that film, we have in circulation approximately 250 copies of the 16 mm. size. If you have not seen that film I urge you to do so.

I have one criticism of it, although I was one of the instigators in the writing of the script for it—and that is that it did not go deeply enough in showing the full line of disabilities that people suffer from.

This year the American Legion, in cooperation with your organization and others, hopes to initiate the presentation of a citation to one or two outstanding employers in every State who cooperate to the fullest extent and with sincerity in the employment of the physically handicapped throughout the year. We are not limiting that to the employment of veterans; we are limiting that to the employment of physically handicapped, regardless of what group they belong to. That project is not my dream; in no way is it the dream of the American Legion. I give full credit for that project to Mr. Vernon Banta of the United States Employment Service, who is the man who gave me that idea.

Tonight, when I came here, I did not come with the idea of making a speech, as I was advised I was to come to a meeting of a group to organize a plan for the Employ the Physically Handicapped Week of this year; and if I am in order, Mr. President, I should like to offer a resolution to this group, which is as follows:

"Whereas the Congress of the United States, by enactment of Public Resolution 176 (1st sess., 79th Cong.), has established the first full week in October of each year to be observed as National Employ the Physically Handicapped Week; and

"Whereas, in accordance with custom, it is understood that the President of the United States will issue an appropriate proclamation, calling upon all citizens to properly observe said week; and

"Whereas a great many Federal and State agencies have an interest in, and responsibility for, serving the handicapped; and

"Whereas this meeting has been called for the purposes of stimulating public interest in employment of handicapped and planning for observance of said week: Now, therefore, be it

"Resolved, That this gathering of representatives of interested public and private agencies and individuals, recognizing the need for immediate action, go on record as favoring appointment by the President of the United States of an appropriate committee to coordinate the activities of the various Federal agencies dealing with this problem, so that their efforts shall result in the most effective observance possible of National Employ the Physically Handicapped Week: And be it further

"Resolved, That copies of this resolution be transmitted to the President, the press, and all other media of public information."

Mr. President, if I am in order, I move the adoption of this resolution.

(The motion was seconded by Mr. Anthony J. Oliver.)

President STRACHAN. You have all heard the resolution. It has been seconded. Is there any discussion? Any objection? I am going to ask for a rising vote, and I hope we will get up—everybody.

(The audience arose and the resolution was unanimously carried.) [Applause.]

President STRACHAN. That was a fine seventh-inning stretch, and I certainly appreciate Ralph's resolution. It is one of the best things that could happen, especially since today we have no coordinating agency among the 41 agencies of Government which are concerned with that work.

Mr. LAVERS. Thank you. In closing, I want to say I have indeed been interested in this meeting, and I trust I will be invited back again. I am deeply interested in the remarks of Bob Goodwin of the United States Employment Service, and of Mr. Mitchell, the President of the Civil Service Commission. I think it is only fair for me to say to you here now that our problem with the governmental agencies, in having the physically handicapped employed, does not lie in the laps of the Civil Service Commission, but lies in the appointing officers of the various governmental agencies. Thank you. [Applause.]

President STRACHAN. In line with Brother Laver's suggestion, I want to announce that hereafter we shall hold a forum of this sort once every 3 months. We realize there must be continual fuel added to the flame, and we must keep the issue alive. We must not talk about it just once a year, but continually. We must hammer this thing home upon the consciousness of the Congress, the administration, and the public, and we must not take it for granted because what we say here tonight may form our point of view; be true, and be important, that anybody is going to pay any attention to us unless we keep on talking.

We are fortunate to have with us tonight one of the ablest executives of this area. His interest lies in the field of private industry, and he speaks for the employer group. After all, what he has to say will be of special interest to our people, and I am glad to present to you Mr. Dallas H. Smith, of the employment and security committee, Washington Board of Trade. Mr. Smith! [Applause.]

Mr. DALLAS H. SMITH. Thank you, Mr. Strachan. Members of the American Federation of the Physically Handicapped, guests, ladies, and gentlemen: Any consideration of the topic which we have before us tonight is one which I think we must approach, at least in the few words that I have to say, from the point of view of the employer. That calls for a little reviewing of some past history which I hope will bring us up to date, at least insofar as a good many employers are concerned.

Employers as a group are pretty ignorant of the broad fundamentals of the utilization of the physically handicapped. It is true that during the war they were forced, as it were, to sacrifice the peacetime standards applying to the physical condition of employees, and hire most everyone. More often than not, there are no specific or well-defined employment conditions, but rather these conditions revolve around a desire for able-bodied workers who, by common opinion, are supposed to be the best workers.

The demands of war for able-bodied workers in our armed services left less perfect workers in our industry. These were utilized and were even enthusiastically welcomed by industry during this period; but with the coming of peace those prewar standards began to reassert themselves, despite the exhortations about the legal and moral obligations of employers and communities and the hue and cry about rehabilitation.

There has been a long-standing prejudice against the employment of the physically handicapped, and those opinions are returning, to the detriment of the employee, the employer, and society, particularly when the employer had difficulty with handicapped workers during the war period, through imperfect or improper placement. Actually, the knowledge gained during the war can prevent the military, civilian, and industrial cripple from ever becoming a problem, but only if all of us—all of us who at least begin to understand the problem—see that he is used properly.

Many employers during the war found that workers previously classified as unfit could work efficiently and effectively. From the war experience of many employers and the long-time experience of others, basic principles of selective placement that contribute so largely to the successful employment of the handicapped have been evolved. They must be made available to all employers, and the employer must be educated in their use.

Employment of disabled workers is neither ridiculously simple nor beyond the ability of the capable employment interviewer or employing executive. It should be accompanied, however, by a systematic plan rather than by rule-of-thumb or snap judgment. Physical handicaps vary from plant to plant and industry to industry. Those that are accepted in some organizations are quite different from those that are employed in others. What I mean to say is that the definition of a physically handicapped worker in one plant is quite different from that in another, due to the differences of opinion, the

differences of prejudice and the differences of experience of the individuals responsible for selection and placement.

Physical examinations disclose hidden disabilities and are used frequently by some firms. The use of the information developed in the physical examination, however, varies considerably from firm to firm. Only obvious impairments, where there are no physical examinations, rule in other firms.

The definition of a physical handicap that appears to me to be the most important from the employer's point of view is as follows: "A physical handicap is a difference possessed by some persons which, though limiting physically, need not limit vocationally." That is from the Peoria plan, which has been mentioned here earlier this evening, or, in other words, from the personnel man's point of view: One who requires selective job placement because of physical or mental requirements. This definition places the shoe on the other foot. Instead of emphasizing the disability, it emphasizes the job and the need for filling the job with individuals possessing certain worker characteristics.

There are only a relatively small percentage of the total employables in our population who are in a state of physical perfection. Actually, it is a matter of degree and not perfection. The line between normal and defective is quite elastic. It varies according to the judgment, the experience, the aptitude of the placement interviewer or the executive responsible for the selection of employees, and also, according to the job to be performed and the industry in which it is found.

In studies in the use of handicapped by over 2,000 industrial firms, 28 percent showed rejection for physical disabilities of less than 1 percent. Fifteen percent of these 2,000 employers rejected from 6 to 10 percent for this reason. Seven percent rejected from 11 to 50 percent because of physical impairments.

You can see how rejection of the physically handicapped is "all over the map." Of course, there are different standards for different industries, and there needs to be, but there should be a closer proximity to the over-all figures for a greater number of firms. Similar surveys have shown that hernia and hypertension, defective vision, and orthopedics are responsible for three-fourths of the rejections, and in these studies the total rejections ranged anywhere from 0.7 of 1 percent to as high as 16 percent.

It is estimated that there are around 800,000 persons who become permanently disabled from congenital defects, disease, and accident in this country, each year. Of these, 100,000 are caused by industrial accidents, despite educational programs and safety campaigns; 170,000 of these are incapacitated through accidents in the home. Seventy-five percent of these 800,000 disabled persons are able to return to some form of employment; one-fourth of the remainder are so seriously injured that they remain unemployable and another one-fourth are either over or under employable ages. The remainder, or approximately 110,000 individuals, are actually employable by rehabilitation.

The opportunity of the handicapped worker to demonstrate his ability is his biggest hurdle. Industry in the past, as has been so ably explained by a former speaker this evening, has been reluctant, as a whole, to accept the handicapped worker because, first of all, many have excessively high standards for employment; and secondly, because a number of employers labor under an erroneous impression that the handicapped is not as good a producer as the able-bodied worker, or that he has excessive accident proneness, or chronic absenteeism, or there is the fear that he will require constant and special treatment and sympathy. And last of all—and sometimes these may be excuses—there is the fear that there will be a repugnance on the part of fellow workers for handicapped workers in their midst. Some studies have indicated, however, that, when properly selected, trained, and placed, the handicapped worker is likely to equal or excel his able-bodied fellow worker.

I would like to make it clear that in endeavoring to present these few facts I am thinking primarily of what I believe should be the employer's approach and I am not "pulling punches" or attempting to "gild the lily," so to speak, because the employer deals in practical terms that he feels will bring certain results and it is in this manner that I think most of them can be reached. But when this worker is improperly placed, his production and safety suffer; so that our real problem is to make sure that we place the handicapped worker properly and not just select him indifferently for most any job, and if he fails, attribute that failure to his disability.

Other studies made among employers of handicapped workers who have done a good placement job indicate actually that there is less absenteeism, lower turnover, a smaller accident rate, and higher productivity. That is true of the majority of these employers. There is another relatively large group of employers in this study that indicate little or no difference between the handicapped worker and the able-bodied worker. There was a relatively very small percentage of employers in which this study was made, that indicated the reverse—that the handicapped worker was less desirable.

One of the things that has bothered industry considerably—one of the concepts that it constantly brought forward, is that it costs more to insure under workmen's compensation when an employer employs handicapped workers. That is not true unless it is a case of improperly placed workers, and in that instance accidents will result to the able-bodied as well as the handicapped, although naturally to a lesser extent. The rate for workmen's compensation is based upon the experience of the individual plant and of that industry; so what we must do is to convince all employers of the desirability of properly selecting, training and placing handicapped workers, and utilizing them to the best of their ability and we will find that it will tend to improve our experience rating rather than cost us more. This can only be done through constant education and information dissemination, not only to the employer group but to related groups and to the general public as well.

Because many employers are unable to supply themselves, we must provide them with the tools and the techniques to do this job; to properly utilize handicapped workers, and we must convince them that physical disability as such, need not be an industrial handicap. We must show him how to effect the greatest utilization of this source of manpower and what it will mean to him in dollars and cents in his plant. Efficiency and economy of operation has long been the motivating force behind most employers, and needs be, although more and more of them are beginning to temper this objective with a recognition that social responsibility comes in for some consideration also.

Any plan, to be successful, must be accomplished by appraising the abilities and limitations of the workers, by appraising the requirements of jobs and matching them for the greatest possible efficiency. There are four factors that should be taken into consideration. They are:

1. The worker should have the ability to accomplish the task efficiently—i. e., he should be able to meet its physical demands.

2. He should not be a hazard to himself.

3. He must not jeopardize the safety of others.

4. The job should not aggravate his disability.

Much training and increased ability is needed for those who will handle this problem. There is need for a practical manual or handbook for all personnel men and women, to promote understanding of common disabilities of workers; their effect upon production ability, and the precautions necessary to insure suitable placement. There should be a layman's guide to the fundamentals of anatomy and physiology and the disabilities that affect worker ability. And last of all, top management must hear this story and see that the personnel policy of the firm carries it out.

It is up to groups such as this, as well as to the personnel association, the industrial relations or personnel direction, and other interested individuals to see that this story is told and retold over and over again; and it is up to the handicapped worker himself, and his professional organization, and those Government agencies charged with this responsibility, to see that the employer gets this assistance and the education that is necessary if we are going to completely convince him to utilize the handicapped worker to the greatest possible extent for the welfare of this worker, for his advantage as an employer, and for the good of the Nation.

Thank you very much. [Applause.]

President STRACHAN. Well, we led with our chins and we got it. But I am very glad to have such a fair presentation of the employer's point of view. The only thing I can say is, unfortunately, not all employers are disposed to be as fair-minded as those whom you represent.

I should like, if it is not confidential, to have a copy of that study that you speak of. That is very interesting and is in line with what we are trying to do.

With regard to a practical manual or handbook, these poor, maligned Government agencies, which are damned from hell to breakfast for spending public money, have turned out some very excellent work, and very practical indeed. There is today, in the fourth edition, out a few weeks ago, a booklet, Survey of the Handicapped, which shows the efforts made, initiated originally by the Civil Service Commission, War Manpower Commission, and Public Health Service, to aid in placement, to fit the man to the job, and I believe our good friend Harry Mitchell would be glad to present a copy of the latest edition of that manual to the Board of Trade, for study.

There is also a manual put out by Navy Rehabilitation along much the same lines, and still another, put out by the Veterans Employment Service, which is largely the work of Mr. Vernon Banta.

These are the very practical things that you speak of. We know that these efforts are yet in the embryonic stage. First of all, it has been a matter of only approximately four years since we had an intelligent effort to survey jobs and ascertain what kind of people can fit those jobs. I believe that before the War there were approximately 6,800 different jobs listed in the Civil Service, and at that time there was a precedent—let us say, to be kind about it—for Civil Service examiners to give examinations to handicapped in about 370 of those jobs. In the "Survey of the Handicapped," as I recall, the first edition shows that there are 1,800 jobs that handicapped can efficiently fill, and the next edition doubled that, and the next edition went to some 6,000; and, as I remember, the latest book shows in excess of 8,000 out of a potential 27,000 jobs.

That does not mean that these surveys can be regarded as the law of the Medes and Persians. We are still—all of us—groping in the dark, but the hope we have is that we can get together. We can assure you that we do not want any special favors. We merely ask for an opportunity for employment for

the individual who can fill the job satisfactorily. Certainly, we would not ask an aviation company to place an epileptic at the controls of a great airliner—no—but there is no reason why an epileptic cannot run your adding machines or your typewriters or do other work that does not endanger those around him, or himself. And of course we can go through the cardiacs on the other end, and protecting them from accident and death, in particular.

I am very happy to have this assurance from a representative of the Board of Trade because this, to me, sounds fair; and I again say we do not want special favors, and we do not ask you to endanger your profits—not at all—but just go along and where we have proven ground, let's take advantage of it. That is all we ask, and I thank you very much, Mr. Smith. You did a swell job. [Applause.]

Our next speaker has been abroad and has studied conditions comparatively recently in several foreign countries. He is a distinguished educator, and he has given much study to the problem of disabled people. I am glad to present Mr. Kermit Eby, Director of Education and Research of the Congress of Industrial Organizations. Mr. Eby. [Applause.]

Mr. KERMIT EBY. All I am going to do is (1) tell you a story; (2) express a direction; (3) sit down.

The story: This evening takes me back to northern Indiana to a little country church, a German Baptist, or Church of the Brethren. As a youngster I used to sit in that church and watch all the ministers. These ministers did not prepare a sermon as they do now. They were supposed to speak when the Holy Spirit moved them. Sometimes they had a difficult job, and that was to tell when the Holy Spirit stopped them. As a youngster, I would watch it, and the first time I prayed was for the ability to survive six sermons.

By coincidence, the Full Employment Committee of the CIO is going to meet tomorrow. It is going to meet for the purpose of formulating a full employment program based on the hypothesis that we are historically at a point where we need to develop such a program, even though tonight we have 58,000,000 people gainfully employed.

The philosophy back of this Committee and of this program is very simple. It rests on the assumption that the only way there can be employment for any minority group is to create an economic situation in which there is employment for all.

We are interested in the physically handicapped primarily because we are convinced that we need the productive capacity of every person, and that the great assets that this Nation has are two: (1) its soil; (2) its people. And so I conclude by saying that we wish to develop those resources for all the people.

My assistant is a man who is physically handicapped. He had infantile paralysis at two-and-a-half. I have worked with him for 10 years. All that I have ever discovered he wants is to be a man in a man's world. Thank you. [Applause.]

President STRACHAN. The only thing I am sorry for is that Kermit keeps harping on "full employment" instead of a "full dinner pail." I want to go back to those good old days, you know. This "full employment" is too technical for me, but I can understand hamburgers and onions, and steak and potatoes. Are we getting that?

I do know that they have done very effective work in that field, and I know also that "full employment" must be, if our people are to get any chance at all. Therefore, I am very much in favor of what they are doing today, and hope they will succeed in it. Thank you, Kermit. [Applause.]

Now it has been said that no party is complete unless there is an Irishman in it, and, of course, with deference to the good Father present, we have at least two Irishmen here tonight, to pep things up, and this one bears the distinction of not only being Irish, but looking Irish. Here is Pat Ryan, representative of the American Federation of Labor, which organization—and I am in a position to know—was responsible for the first Federal Vocational Training Act. It was Arthur Holder, of that organization, N. P. Alifas, of the Machinists' Union, and myself who were responsible for putting that act upon the books.

I have never been quite happy because the workings of the act have never lived up to what we who put it on the books hoped for, but the American Federation of Labor has carried on many activities in behalf of the handicapped, and I know you will be glad to hear from its representative. Pat, take the floor. [Applause.]

Mr. PATRICK RYAN. Mr. Chairman, distinguished guests, I am here tonight "subbing" for Director Fenton, who was called out of town and asked me, at 6 o'clock, to attend this meeting in his place, to give you people the word that the American Federation of Labor is 100 percent behind you in your program and will do everything that they can in any program that you people enact.

I would like to say this, from my own personal observation. I got around the country pretty much during this wartime book period that we just came through. I was sent into a good many places to adjust grievances in different plants for the American Federation of Labor. During all that time, I never had to take up a grievance that was caused by any of the handicapped people whom the employers do not, at the present time, seem to want to hire. I just wanted you people to know that.

I wanted you to know one other thing. I am a longshoreman, by trade. We have workmen's compensation, but it is a Federal law. The employer places his insurance through private companies. When I was the business agent of my own local, I had the insurance companies instruct me that certain men who were crippled in a small way, some men who had reached 60 years of age, had to be let go. We had to take the insurance that was carried on us, away from the employer, and the union carried, it, itself, and paid the premiums, and we did not lay any of these people off.

You have had representatives of different Government agencies, the Civil Service Commission and others, speak to you tonight. They are doing everything in their power to assist your people and our people, but, you people have got to get out, and get after the politicians. Two-thirds of the political jobs in your county, state, and Federal governments could be held by handicapped people, and it is up to you people to get out and do something, and get your friends interested. The Lord only helps those who help themselves.

I am surely glad I had a chance to come tonight. [Applause.]

President STRACHAN. I told you that the Irish pep things up—and didn't he do it?

I am not going to dispute great organizations that have been here tonight and have pledged their devotion and support to the handicapped. The only thing that I ask them to do is, to continue that support and keep the pressure rolling.

Last, but not least, I want to thank this audience, and I want to thank especially our speakers and our guests who have come and participated with us tonight in this forum. I hope that this discussion will mark the beginning of increased interest, and will result in positive action for all disabled people.

Before closing, I want to read a letter I received this morning, which shows you a part of a tragedy which is laid before us nearly every day. It says:

"I am writing you to inquire whether it is possible for a person who has lost their health and is no longer able to earn their way or support, to receive compensation.

"To try to make you understand my position, I will give you in as few words as I can, my condition. I lost my right leg six inches below my hip, in 1926—tuberculosis of the bone; left leg and left arm, and in 1945, my gall bladder. . . .

"Since that operation I have never been well. Now I have a bleeding in the stomach which is an ulcer or tumor, causing anemia, and I have low pressure. I am not strong enough to use an artificial leg any longer.

"At the present time I am staying in a convalescent home provided by the county, for a period of 6 weeks only. I do not have anyone I could secure help from. I have had to earn my living since I was old enough to work; went through high school, worked and attended technical university at night, and was working at a Government warehouse during World War I, and worked for the manufacturers of the Norden bombsight during World War II.

"You can see that I have always worked when it was possible, and I only wish I could continue on. In a short time I will have to leave the convalescent home. That is the reason I appeal to you. Just after going into the rehabilitation office, I was suddenly seized and taken to a county hospital, with all my strength gone. Had I been able to work, they in the rehabilitation office could have helped me."

[President Strachan, interpolating: There is the vicious circle: They say, "Get a job and we will rehabilitate you." How can you get a job when you are too sick?]

"Surely there must be some way I can secure a pension or help. I am 50 years of age, American-born. I assure you it is embarrassing for me to write this letter. However, I have no other alternative."

[President Strachan, interpolating: There is your border-line case. What does social security amount to? An average of $6.85 a week. Oh, my. Is that what we have to look forward to? If that is social security, I am the Queen of Sheba! If we are to protect ourselves, we will have to change the whole face of rehabilitation and social-welfare plans in this country. If we don't do it, nobody will.]

"I shall appreciate any assistance or advice that you can render."

There are millions of these people. In this Nation there are 3,600,000 people who are permanently and totally disabled. Think of that. Of course, as medical science progresses and the horizons lift, perhaps some of those may be restored, wholly, or in part; but this federation has devoted itself to a practical consideration of doing what can be done now to aid these people, and primarily to lay the emphasis upon the job and of the problem, because if the individual cannot work, then everything is thrown into sharp focus; if he needs treatment or training or guidance, and we shall continue to lay emphasis upon employment for handicapped people.

I thank you all again, and I especially thank our interpreter, my dear friend, Claire Gibson. And now Father Philip Kenney, of the National Catholic Welfare Conference, will pronounce the benediction, and I ask you all to stand.

The Reverend PHILIP KENNEY. Almighty and Eternal God, extend over us the hand of Thy majesty, that the thoughts that have been expressed and the resolutions that have been taken here tonight may take root in our minds and bear fruit in our practice.

Help us to lead the way in behalf of the handicapped, that the social conscience of ourselves and of our fellow Americans may be kept informed and alert. Help us to recognize and eliminate our thoughtlessness and selfishness. Help us to be fair and just

to the handicapped in our midst, who, in common with all men, only ask the right to earn a living.

Bless this Federation, O Lord, especially its zealous and selfless officers. Bless their policy of racial probity. Enable them to make even greater progress throughout the year in eliminating every semblance of prejudice and discrimination against our brothers in Christ, the members of the Negro race.

We ask Thee also, O Lord, to bless our Nation and our people. Give us the intelligence and the courage to put aside all selfishness and to plan together in organized partnership for full employment, at decent wages, and under decent conditions, all of us, labor, management, agriculture, and the professions, with the assistance and encouragement of government. Enlighten our chosen representatives to be guided always by the general welfare and to enact without unnecessary delay whatever legislation is necessary to provide decent homes and decent jobs for all of our citizens regardless of their race, color, creed, or national origin.

Finally, O Lord, we ask for lasting international peace, peace founded on justice and charity. We ask Thee to bless our efforts at international organization and to give to our Nation and to all of the nations of the world the grace to live together in harmony, as members of one common family, that family of which Thou, O Lord, art the Creator and the loving Father.

All this we ask in the name of Thy divine Son, Jesus Christ, our Lord. Amen.

President STRACHAN. Thank you, Father. And now, good night. The meeting is adjourned. I thank you all.

(The meeting adjourned at 11 p. m.)

Floods and Flood Control

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, the Valley Authorities Conference which completed its first annual session last week here in Washington, saw a gathering of eminent and serious-minded citizens intent upon finding a solution of our great flood problem in the Missouri-Mississippi region. Among those who spoke was Mr. Jerome Locke of Montana, a civil engineer whose knowledge of the Missouri Basin and its problems, and whose solid reputation in his profession should compel the most serious consideration of his statement. Mr. Locke is a colonel in reserve of the United States Army Engineers, and a former engineer for the Bureau of Reclamation. He has performed the engineering on some of our important projects, and thus has an understanding of these problems at first hand.

I ask permission to have Mr. Locke's statement before the Valley Authorities Conference printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and distinguished members, I am grateful for this opportunity and proud to have the privilege of presenting some of the viewpoints of we common folk who live in the great inland empire, the Missouri River Valley. We have hope and confidence that this important gathering will sharply focus national attention on an overdue and rapidly growing need for more valley authorities—not one but several such projects.

Beyond question the pressing and immediate need in lower Missouri Valley, where since 1940 devastating floods have wrought a half billion dollars damage and snuffed out more than 50 lives, is for flood control. In any attempt at solution of this, the currently pressing problem, we need be mindful of several things—all equally important though less in the limelight at the moment.

More than a century of costly and largely futile expenditure, in a staggering sum I have never seen totaled up, should have taught us that floods cannot be controlled by dikes, levees and channel changing devices along the lower and middle reaches of rivers. The fallacy of such works is well illustrated by a set of rating curves gotten out by Missouri State Department of Resources and Development in September 1945. These show volume of flow, corresponding gage heights and the flood stage levels for Missouri River at St. Joseph, Kansas City, Waverly, Bonneville and Herman, all within Missouri State. For a typical illustration I have taken the graph for Herman, Mo., and brought its curve up to date to cover the 1947 flood as well as previous ones.

The river goes out over its banks and floods begin to occur at Herman when the gage height reaches 21 feet. Between 1928 and 1931 one or more floods occurred there. Little or no flood control work in that area had yet been done by Army Engineers. The natural channel of the stream carried 316,000 cubic feet per second at gage height of 21 feet. Then the Army installed some flood control works—bank revetments to stabilize said banks and pile dikes to narrow the channel, increase its velocity, and theoretically cause a scouring action and consequent deepening of the channel. Thereafter the 1942 flood came along. At a gage height of 21 feet the river again went out of its banks, but it was carrying only 193,000 cubic feet per second, or 39 percent less water. When the volume of flow reached 316,000 cubic feet per second the river level was 5.6 feet above its flood stage of 21 feet by gage.

The scouring action theory must have worked a little bit between the springs of 1942 and 1943. In the 1943 flood the river went over its banks at gage height of 21 feet, but the channel was transporting 210,000 second-feet, or 34 percent less than in 1928 and 5 percent more than in 1942. In 1947, the scouring action had again worked in reverse. At 21 feet gage height, volume of flow was 193,000 second-feet. When the volume reached 316,000 second-feet, gage height was 27 feet, or 6 feet above flood level.

In simple understandable language, about 15 years of flood-control construction at five points along the Missouri River has resulted in narrowed and constricted channels with from 9 to 39 percent less water-carrying capacity and a corresponding increase in flood damage.

It is hardly necessary to consult these engineers' graphs. A couple of decades of plain observation or perusal of news accounts should have convinced us that attempts to work flood control back upstream from river mouths is a failure. The task has to be tackled from the other end of the drainage channel. In the case of Missouri River, from the crest of the Rocky Mountains downward—the way that nature and topography causes the stream to flow, to increase in volume and to gather force and effectiveness for more and ever more destructive ravages as it piles up on the flatter lands below.

From an engineering standpoint dams and reservoirs—even such gigantic projects as Fort Peck and the proposed Garrison Reservoirs—when located a half or two-thirds of the way up the stream will be helpful but not fully effective toward relief from floods. Rainfall and its run-off are erratic and unpredictable things. Nobody knows just when, how, or where excess water will develop into the next flood. There have to be many reservoirs scattered over the whole valley area, particularly on tributary streams; these are the flood feeders.

In the arid upper half of the valley even many dams and reservoirs are not enough for full protection. There has to be more irrigated land, more forestation, more replacement of all kinds of vegetation, coupled with other large-scale soil-erosion programs to retard a too-rapid run-off. Denuding of forests, overgrazing, and "soil mining" farm practices are all conspiring toward an increase in both percentage and rapidity of run-off. This must be taken into account seriously. I venture that flood damage will be fully alleviated when we have a full measure of cure for the basic cause of floods—not before and not otherwise.

The whole thing is one big problem extending from the tops of 10,000 feet high mountains in Montana, Wyoming, and Colorado, via confluence of Missouri and Mississippi rivers, out onto the great delta in the Gulf of Mexico. It is thus that Missouri River waters run and destructively transport between two hundred and fifty and three hundred million tons of topsoil annually. Most of this comes down from the semiarid States of the Great Plain Region to furnish a never-ending process of channel clogging in the lower river reaches. What MVA proposes is not a flood-control plan but a coordinated plan for flood prevention.

Nearly 50 years of a national reclamation program has been of great value to the West and the Nation. In too many cases, however, it has taken a second or even a third wave of land settlers to pay out under it. Naturally, the easier and cheaper projects are the ones that have been constructed. With increasing size and costliness future maintenance of a large scale reclamation program is increasingly dependent on a coordinated multipurpose development and a fair apportionment of construction costs to the several benefits thus made possible. The reservoir that conserves water for irrigation is also helpful in flood prevention. It often furnishes a site for a power plant, helps equalize the stream flow for increased power production in other plants below, and invariably creates a habitat for wild fowl and a rearing area for increased supplies of fish and other aquatic life. On the sun-scorched plains of eastern Montana, the Dakotas, Nebraska and Kansas, such reservoirs will furnish the only opportunity for playgrounds and shaded recreation areas. Moreover, every acre-foot of water stored and consumptively used for irrigation is one more acre-foot that does not come down on the crest of some destructive flood.

Power is the heart beat of our industrial civilization. The demand and market for it doubles about every 12 years. In the short time since VJ-day an acute power shortage has begun to develop in the West. This need not be. The Missouri Valley can furnish somewhere between 15 and 25 billion kilowatt hours more power per year if developed under the engineering principle of stream stabilization or equalization of flow, by sufficient reservoirs properly placed.

At its mouth, Missouri River volume of flow is from 55 or 60 times larger at maximum flood stage than at minimum low water. That is, the river may carry only 8,000 second-feet in December or January and 480,000 second-feet in May or June. A similar proportion is true for all points above, including live tributaries. Average volume of flow, or what would result from a completely stabilized stream, will run anywhere from 3 to 10 times the low water flow at the same point.

Any plant without storage facilities above will develop in firm or salable power only the quantity of electric current the low water flow will generate. But each reservoir installed above the plant holds back at least part of the high water and then releases it to augment the low water supply. When there is enough of properly placed storage capacity the stream is stabilized and the production capacity of the power plant is increased anywhere from 3 to 10 times. What is true relative to one power plant is true relative to every other power plant. In the upper end of the valley practically all of Missouri's tributaries streams fall down slopes that run from 5 to 50, even 500, feet fall per mile. That is why we can have cheap and abundant power under a proper development.

Moreover, the principle and process of getting maximum power production by stream stabilization is precisely the process that will eliminate floods coming down from the high areas above. It is likewise the identical process that will always tend and generally succeed in furnishing an even year-around volume of flow for navigation purposes. There is neither mystery nor magic in the idea. Every engineer and hydroelectric technician knows it. The only requirement to accomplishment is horse sense, planning, and a coordination of project units.

Pending in Congress is a bill proposing to increase and improve the Nation's supply of farm fertilizer. Phosphate rock makes the best fertilizer there is, but generally the supply of such rock is limited. Lying about half in each of the headwater drainage areas of Missouri and Snake Rivers is a vast and relatively recently discovered supply of this rock. I saw an estimate that fixed the quantity at 6 to 8 billion tons. Undeveloped hydroelectric power is running to waste down between these vast phosphate beds. Here is a potential and cheap farm fertilizer supply for half or all of the United States for hundreds of years to come.

I will not consume more of your time with details. There in the sparsely settled Missouri Valley in items already mentioned are national opportunities for six, possibly seven million acres of additional irrigated land, fifteen to twenty-five billion kilowatt-hours per year of power, and apparently inexhaustible supply of farm fertilizer, a chance for a navigation channel from the heart of America's granary out to the seven seas and the surest opportunity for complete flood prevention that can be devised. A full and coordinated development should also embrace future timber supplies, increased fish and small game, more easily accessible recreational areas, vast deposits of oil and coal, and some 35 other valuable mine, mineral, and quarry products; all of these will make up sufficient industrialization on which to base a self supporting balanced and growing economy. We need only the tools with which to work and a go ahead signal from Congress. We ask no charity. This project will pay out as TVA is now doing.

The job cannot be done piecemeal or by uncoordinated separate government agencies. Let me cite you a half dozen samples of results under such a policy. Let us look at Fort Peck Dam and its reservoir. Nobody up in my section knows the engineering purpose behind this gigantic and costly structure. Some say flood control, yet a flood control reservoir should be filled during the flood season and emptied thereafter, in order to catch the next year's flood. Then, there is no point simply for flood control purposes in providing storage capacity for four times the average annual run-off of the stream at that point or for twice the volume of greatest yearly flow that has occurred since 1882 there.

If the purpose of the structure is to aid in irrigation it seems strange that the Bureau of Reclamation is now obliged to make surveys for and apparently contemplates another dam across the Missouri only 12 miles below Fort Peck. This second dam was to be installed for the purpose of diverting Missouri River water to serve a great project of 1,250,000 acres in northeastern Montana and North Dakota.

Clearly, power development was not the purpose at Fort Peck. The little old Madison River that falls down about 2,500 feet in its 100-mile journey from Yellowstone Park to Three Forks and carries only about one-tenth the water that passes Fort Peck will generate one-half as much power at about one-fourth or one-fifth the cost of Fort Peck.

In a coordinated multipurpose development there is need for some storage at Fort Peck. I think careful planning will show this should be about seven, rather than twenty million, acre-feet of capacity.

About the same thing is true of Garrison Dam, where 23,000,000 acre-feet of storage is proposed.

The truth is that 80 percent of all Missouri River waters passing Yankton on the South Dakota-Nebraska line originate in Montana and Wyoming. Yet, under the Peck end of the so-called Pick-Sloan plan 80 percent of total storage capacity is being located down in the lowest holes through the two Dakotas. All the engineers this side of the Pearly Gate cannot make water run uphill. The result must be a great denial of irrigation, power, phosphate, and all the type of development in Montana, Wyoming, and the two Dakotas. This denial will cut the upper end of the Valley down by 40 or possibly 50 percent in the development to which it is entitled. Of equal consequence is the certainty that the type of development now proposed will do much less toward eliminating floods than would a larger number of smaller reservoirs properly placed.

In brief outline I have tried to paint for you the dream of we common folk in the Missouri River Valley. Yes, our dream. And some of the basic engineering principles that must lie behind its accomplishment. The task will not be concluded overnight. Some of the work that will stop soil erosion, cure dust bowls, and finally eliminate the last of destructive floods may be in active progress 50 or 75 years hence.

That the job will finally be done we have no doubt. Missouri River water is the lifeblood of our civilization in a semiarid region. Except by the conservation of every drop of this valuable water, there appears no other way to set one-sixth of our country back on the road to self-sufficiency and enduring prosperity—to make it an asset and helpmate rather than a beggar from the whole of our country. We want no more of 1932–40 conditions when Uncle Sam was obliged to dole out more than a billion dollars in relief funds to keep thousands of our worthy people from starvation. We just want a chance to help ourselves and to be able to always hold up our heads as part of a progressive, aggressive, and prosperous nation.

Yes, this magnificent challenging and indispensable project will become a reality. Its construction cannot be accomplished by an uncoordinated piecemeal process or by 15 or 20 governmental agencies, each jealous of its own prerogatives, bound down by outmoded grants of power and authority, and naturally trained to regard its own line of activities of paramount importance. These existing agencies can all participate, and each can render an invaluable service, but this must all be coordinated and dovetailed together into one general master plan developed under the authority of one central agency—not a flood-control program that will forever foreclose half of all other progressive development, but a full-scale, multipurpose, coordinated project that will return maximum benefits including complete flood prevention—a Missouri Valley Authority.

Making the United Nations Work

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. KEFAUVER. Mr. Speaker, recently a bipartison group of Members of the Senate and of the House joined in filing a resolution asking the President to call a meeting of representatives of the nations comprising the United Nations for the purpose of strengthening the United Nations Charter so as to make it more effective. This idea has for many months had the backing and support of people in all countries. The interest of John W. Apperson, a well-known and capable attorney of Memphis, Tenn., is typical. Under leave to extend my remarks, I include the following letter dated July 19 from Mr. Apperson to me:

MEMPHIS, TENN., *July 19, 1947.*

Mr. ESTES KEFAUVER,
House of Representatives,
Washington, D. C.

DEAR MR. KEFAUVER: Recently I read in the paper where you are sponsoring the resolution introduced in the House which, according to the papers, reads:

"For the purpose of making the United Nations capable of enacting, interrupting, and enforcing world law to prevent war."

Having long been a student of and ardent advocate for a federated world government, I am deeply interested and delighted to learn that our Representatives in the Congress are beginning to get the ground beats from the grass roots, for I am thoroughly convinced that the great mapority of our thinking people have come to realize that the only way we shall achieve world peace is to have world order, and that we shall never have world order without world law, and that that law must be made by the majority of the people, through their representatives, in some sort of world parliament. Again, that law must be applicable to individual citizens of the world and not solely to nation states.

For a long time I was a strong advocate of a full world government, with every nation in the world belonging to it in the beginning either by amending the UN or by forming a new constitution. I have now come to the conclusion that the realistic and practical way to work this out is through the UN, which is already an organization with a good start, and that if Russia or any other nation does not desire to come in at first, then leave the door open for such nations to come in when ready.

Enclosed with this letter is the copy of a letter which I wrote to President Truman on March 20, 1947, a reply which I received to that letter through the State Department under date of April 16, 1947, and a letter which I received from Judge Hugh Anderson, presiding judge of the Court of Appeals of Tennessee, when he had received a copy of my letter to President Truman.

The matter seems so simple to me in principle that it is difficult to understand why all statesmen of the world cannot appreciate the value of the idea.

Wishing you the greatest possible success in the passage of the resolution, I am,

Most sincerely yours,

JOHN W. APPERSON.

Also, I include a part of the remarks Mr. Apperson made over Station WHHM, July 20, 1947:

The question is: To what extent must national sovereignty be surrendered and still maintain national security?

At the outset I would state that we can no longer maintain national security unless we do surrender some of our national sovereignty. In fact, since 1917 we have had no national sovereignty or security. We have thought we had it. But Germany in 1917 and Japan on December 7, 1941, proved to us that they could make us go to war when we, with our so-called sovereignty, did not want to.

Sovereignty in the sense of absolute power to do as we please without any other nation having any say so is an ideal—a dream.

The only possible way for this or any other nation to have security is for the whole world to have order based on law.

When every man was a law unto himself, when there was untrammeled freedom, there was in reality no freedom at all. In the early days of our West there was no law and hence no order. Every man was sovereign and carried a six-shooter and when things didn't go to suit him, he pulled it out and fired at will. Thus everyone was insecure, including the man who carried the six-shooter; for some man who was quicker on the draw might kill him.

Today between the nations there is no law. Each nation reserves the right to carry its six shooter and to fire it at will. We, of course, have the biggest six-shooter, but Russia or some other nation with its dictatorship may be quicker on the draw and blast us into impotency before we could get our six-shooter into firing position.

How was the lawlessness of anarchy remedied between man and man in our West? It was remedied by all men surrendering some of their sovereignty to a government with power to enact laws which would give security to all.

In order to maintain our national security and still control our own domestic affairs a world government based on the Federal system as initiated by our forefathers is the only known and proven way. Under that system we would surrender to an international government limited authority in a few fields in order to gain security and reserve all other authority to ourselves.

The UN should be converted by amendments into a federal government for world affairs with authority to control a few things which transcend our national boundaries. This government should be given power to enact laws in its field which shall apply to individuals of all nations of the world and not just to nations alone. Some of the things which such an international government should control are: Arms and armaments, trade between nations, money, transportation and communication between nations and citizenship. At first only one or two of these subjects might be given into the control of such a government. More may be added as time goes on.

It would be ideal if Russia would join such a government, but if she doesn't in the beginning then leave the door open for her to come in when ready.

This great country of ours should lead the way.

Just recently resolutions have been introduced in the Congress to strengthen the UN. The one in the House reads:

"For the purpose of making the United Nations capable of enacting, interpreting, and enforcing world laws to prevent war."

These resolutions reflect the fact that our political representatives are at last awaking to the fact that the large majority of our people want some form of world government adequate to give us world order based on law and thus prevent war.

Until we do surrender enough of our so-called national sovereignty to get world order based on law, we shall continue to have world anarchy and insecurity.

As stated by J. Z. Howard, managing editor of the Press Scimitar in an article in that paper on July 4, 1947, the freedom-loving nations of the world should prepare and promulgate a declaration of interdependence.

Therefore, I submit that we should surrender our national sovereignty to a federated world government to the extent necessary to enable that government to control arms and armaments, trade between nations, money, transportation and communication between nations, and perhaps citizenship, and that in doing so we will then for the first time maintain national security.

I also include a letter written by Mr. Apperson to President Truman:

MEMPHIS, TENN., *March 20, 1947.*

Hon. HARRY S. TRUMAN,
White House,
Washington, D. C.

DEAR MR. PRESIDENT: Now that the Republican majority controls Congress you can well afford to assume the true role of a great statesman and devote yourself entirely to your personal convictions free from partisan politics and for the good of the entire country and the world at large. This is true, too, because you really owe allegiance to no one politically. You are, in a sense, a free lance.

Lately I have sensed that you realize this great role made possible for you. You seem to be breaking away from what you thought were your obligations to the New Deal and seem to be asserting your own ideas.

The following quotations from two of your speeches lead me to believe that you fully realize that our only hope of salvation is to have a government for world affairs which shall be given authority to control a few things which transcend our national boundaries as was so well stated by Judge Robert N. Wilkin at the Atlantic City meeting of the American Bar Association in August 1946. This government should be given power to enact laws of its field which shall apply to the individuals of all the nations of the world and not just to nations. To enforce laws against nations means war.

In the Senate on November 2, 1943, you stated:

"A small group of willful men kept us from assuming our world obligations in 1919–20, and the same thing can happen again.

"I am just as sure as I can be that this World War is the result of the 1919–20 isolationist attitude, and I am equally sure that another and worse war will follow this one, unless the United Nations and their allies, and all the other sovereign nations, decide to work together for peace as they are working together for victory."

This was quoted as a frontispiece by Alan Cranston in his "Killing of the Peace," the Viking Press, 1945. If you have not read it, I recommend it to you. I particularly recommend what Mr. Lodge said, as quoted at page 2 of this book, as follows:

"This league certainly has the highest of all aims for the benefit of humanity, and because the pathway is sown with difficulties is no reason that we should turn from it. It is the vision of a perhaps impossible perfection that has led humanity across the centuries. If our aspirations are for that which is great and beautiful and good and beneficent to humanity, even when we do not achieve our end, even if the results are little, we can at least remember Arnold's lines:

" 'Charge once more, then, and be dumb!
Let the victors, when they come,
When the forts of folly fall,
Find your body by the wall!' "

That same philosophy applies to an effort to implement the UN. Mr. Lodge said this in 1916 in a speech to the League to Enforce Peace before he turned against Mr. Wilson.

In your speech at Kansas City in June 1945 you stated:

"I am anxious to bring it home to you that the world is no longer country size, no longer State size, no longer Nation size—it is one world, as Willkie said. It is a world in which we must all get along. And it is my opinion that this great Republic ought to lead the way. It is my opinion that this great Republic ought to do and carry out those ideals of Woodrow Wilson and Franklin D. Roosevelt.

"It was my privilege to be present at the signing of the Charter in San Francisco, which is the first step toward the accomplishment of world peace.

"Back in 1787 and 1788 our forefathers wrote a Constitution for 13 independent States. They considered that Constitution imperfect. They had to go out on a selling program to get enough States to ratify that Constitution to put it into effect. One of those 13 States didn't ratify that Constitution until after it was put into effect. We are going to ratify this constitution at San Francisco, and I want to see the United States do it first.

"I am standing here receiving a degree, a doctor of laws. That means that we live in this country at least in an age of law, and an age of reason, an age in which we can get along with our neighbors. Now, we must do that nationally. It will be just as easy for nations to get along in a republic of the world as it is for you to get along with the Republic of the United States.

"Now when Kansas and Colorado have a quarrel over the water in that Arkansas River they don't call out the national guard in each State and go to war over it, they bring a suit in the Supreme Court of the United States and abide by the decision.

"There isn't a reason in the world why we cannot do that internationally."

For the good of all mankind I recommend that you sponsor amendments to the UN which will evolve it into a government for world affairs with limited power over a few things that transcend national boundaries such as trade, money, transportation, and communication between nations and arms and armaments. Citizenship and some other matters may be later added. The laws enacted by this Government should apply to individuals in the nations and not alone to the nations.

The atomic energy control proposed in the Baruch plan I submit does not go far enough and does not strike at the roots of the evil. It has been turned down by Russia—perhaps to our good fortune.

Should Russia refuse to accept the necessary amendments to UN then those nations which do accept should put them into effect and leave the way open for other nations to come in later as was done when our Constitution was offered for acceptance or rejection.

Respectfully and hopefully yours,
JOHN W. APPERSON.

Also a letter to Mr. Apperson from Judge Hugh C. Anderson of the Court of Appeals of Tennessee:

COURT OF APPEALS,
STATE OF TENNESSEE,
Jackson, April 16, 1947.

Hon. JOHN W. APPERSON,
Exchange Building, Memphis, Tenn.

DEAR JOHN: I have just now had an opportunity to acknowledge receipt of yours of the 3d instant with enclosures. I thank you very much for sending me a copy of your letter to President Truman. I think it is splendid. As you say, the President of the United States has an opportunity such as comes to few mortals to grasp the reins of leadership for the benefit of humanity. If he would do so it would give an impetus to a movement which, in his or

her heart, the average man or woman really believes in, and would almost certainly insure its success. This would come about by choice of the free peoples, and as a result of the governments of the others being forced, whether or no, to join in sooner or later.

Those who seem to think that there are insuperable difficulties in the expectation that the United Nations can be converted into a world government of limited powers, it seems to me make the mistake of presupposing that the only way the evolution can take place is by getting agreement of all of the member nations, including the totalitarian powers. The argument is that however likely the free peoples would enter into such an agreement, that is too much to expect of the dictatorships. They overlook the fact that a unanimous agreement is not the only way, indeed, is not the most likely way, whereby the desired results will be brought about. The germ of the evolutionary process is being laid and developed right now by the actual demonstration being given of the inability of the United Nations to function effectively. This demonstration is absolutely essential as a prerequisite to any drastic change, and this is especially true of our own people. In other words, I believe that most of the people of this Nation would still prefer to have nothing to do with the affairs of other nations and revert to what, for want of a better short term, we call "isolationism." They abandoned isolationism pro tanto and accepted the idea of the United Nations only after a very practical and terrible demonstration that that doctrine would not work in actual practice. I think we must go through the same process before they will be willing to take the next step, that is, that they must be convinced by actual demonstration that the United Nations cannot accomplish the desired end. As said, this demonstration, it seems to me, is going on now. A demonstration that will convince a minority will not suffice. There must be one that will convert the average man and woman.

When this stage is reached I believe it will be possible to form, by agreement, a government of limited powers on an international scale among the free peoples, and when such a government is formed, the totalitarian nations can and will be forced to change their systems so as to be eligible and will be forced to join, whether willingly or not. And in this manner the evolutionary process will be complete. It is the possibility of the later phase of the process which I think Fyke and those who believe like him overlook.

* * * * *

With personal regards and best wishes,
Yours very truly,

HU C. ANDERSON.

Col. Patrick J. Ryan

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. DEVITT. Mr. Speaker, one of the outstanding Army chaplains of World War II was Col. Patrick J. Ryan, now Deputy Chief of Chaplains. The newspaper report that he has just been elevated to the rank of Domestic Prelate with the title of Right Reverend Monsignor by Pope Pius XII.

Monsignor Ryan is a native of St. Paul, Minn. He received his education and seminary training in St. Paul. He then served 1 year in a parish assignment and entered the Regular Army in April 1928. Chaplain Ryan has devoted almost 20 years of his life to the Army chaplaincy, during which time he has held many important posts around the world.

The work of Monsignor Ryan was especially outstanding during some of the toughest campaigns fought in the European theater of operations during the last war. He landed with the Third Infantry Division in north Africa and served as its division chaplain throughout the north African campaign. He shared the sorrows and victories of his men through those arduous months of fighting. In the Italian campaign Monsignor Ryan served as the chaplain of the Fifth Army.

His valor has been recognized by his own and other governments. He has been awarded the Legion of Merit, the Bronze Star, and the Army Commendation Ribbon. He also wears the Medal of War (Brazil), the Order of the Brown (Italy), the Bronze Medal of Valor with Star (Italy), and the Order of the British Empire.

Monsignor Ryan's many friends in his home community, in the armed forces, in official life in Washington, and throughout the world join with him in the happiness he must feel upon this well deserved recognition tendered by his superiors in the church.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the Marshall plan, by the Senator from West Virginia [Mr. KILGORE], broadcast over the radio Sunday, July 20, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Press reports from several sections of the country indicate that many people have little interest in international affairs. The difficult task of meeting the present-day high cost of living and other domestic problems have overshadowed interest in world affairs. Many people say, "I know nothing about foreign affairs. That is the job of Government officials." Others cannot understand why they should be worried about the affairs of people who live in foreign lands. Why should I help a man who lives several thousand miles away? is a question asked by many.

That sounds plausible to many people until they sit down and thoroughly analyze conditions confronting all nations in this postwar era. The United States is by far the most powerful Nation today. Production is high. Even though we have a serious housing shortage and the cost of living is high, the average American lives much better than the average citizen in any foreign land.

However, there is a serious doubt as to how long we can continue to enjoy prosperity in a world that is slowly dying economically, socially, and politically. The nations of Europe, battered and torn by several years of bitter warfare, must have help, and if we truthfully analyze the world situation today, we must admit that the majority of that help can come from only one country, the United States.

Since the end of hostilities in Europe, the United States has shipped thousands of tons of food to hungry people. The United States has sent millions of dollars to foreign lands to prevent them from going bankrupt. This program has been very helpful, but it has not solved the many reconstruction problems. It has been a piecemeal plan rather than a long range program.

In an effort to further the reconstruction of Europe, Secretary of State, George Marshall, has proposed a comprehensive program now generally referred to as the Marshall plan. Secretary Marshall set forth this plan at a speech at Harvard University on June 5. He pointed to Europe's plight and said:

"The truth of the matter is that Europe's requirements for the next three or four years of foreign food and other essential products—principally from America—are so much greater than her present ability to pay that she must have substantial additional help or face economic, social and political deterioration of a very grave character."

He said that the remedy for Europe's troubles lies in restoring the confidence of the European people in the economic future of their own countries and of Europe as a whole. Secretary Marshall, also, declared, and I quote:

"Aside from the demoralizing effect on the world at large and the possibilities of disturbances arising as a result of the desperation of the people concerned, the consequences to the economy of the United States should be apparent to all. It is logical that the United States should do whatever it is able to do to assist in the return of normal economic health in the world, without which there can be no political stability and no assured peace. Our policy is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist. Such assistance, I am convinced, must not be on a piecemeal basis as various crises develop. Any assistance that this Government may render in the future should provide a cure rather than a mere palliative. Any government that is willing to assist in the task of recovery will find full cooperation, I am sure, on the part of the United States Government. Any government which maneuvers to block the recovery of other countries cannot expect help from us. Furthermore, governments, political parties or groups which seek to perpetuate human misery in order to profit therefrom politically or otherwise will encounter the opposition of the United States."

After Secretary Marshall outlined the need for large-scale aid to Europe the heads of several European nations took definite steps to frame a plan looking toward the recovery of Europe. You may recall that Foreign Ministers Ernest Bevin of Britain and Georges Bidault of France met in Paris to discuss the recovery program. Later in June, Foreign Minister Molotov of Russia joined with Bevin and Bidault to further consider the plan. Eearly this month Mr. Molotov rejected the Marshall plan and returned to Russia. It

is regrettable that Russia has turned down this important program looking to the recovery of Europe; a program, I wish to emphasize, directed against hunger, poverty, desperation, and chaos.

Russia, or any other country, has the right to refuse to participate in the Marshall plan, but any country taking such action must accept the grave responsibilities that go with such a position, and the possibility of being regarded as an obstructionist to the plan of European reconstruction and peace.

While the foreign ministers were conferring in Paris, here at home President Truman named special committees, including both Government specialists and private citizens, to make a thorough analysis of our natural resources, to the end that we may know what things we can most safely spare. The President's Council of Economic Affairs also launched a survey of the impact of overseas aid on our economy.

This month the nations of Europe are meeting again to create committees to list the needs of each area—food, coal, steel, transport, fertilizer, lumber, etc.—and to establish priorities. By that I mean what will do the most good and where. Next month the European planners will decide how much their countries can contribute to the common stock pile for recovery. They will endeavor to determine how much additional help will be needed from America and other countries able to assist them.

After the European planners have completed their task, sometime late in August or early in September, President Truman will meet with his cabinet to discuss the European plan. They will weigh the various recommendations to determine what can be done to get Europe back on its feet. Then it will be up to Congress to act.

Briefly, I have outlined the Marshall plan timetable. It is an important timetable, one that undoubtedly will affect the future of the world. The Marshall plan is a sound, constructive approach to a tremendous task. It means helping those nations willing and able to help themselves—once given initial assistance.

The European nations will have to show that they are willing to mobilize their resources of manpower and materials for the maximum economic efficiency and future recovery of the Continent as a whole. The success of the Marshall plan should prove a sound investment rather than an endless drain of American dollars into Europe. That is the logical conclusion of many leading Americans of both political parties.

Foreign Secretary Ernest Bevin of Britain has characterized the Marshall plan as a step toward a great unity of peoples throughout the world. In a few terse words he outlined the problem, and I quote, "Europe is bleeding to death; it must be stopped."

It is indeed essential to world peace that we do everything possible to help the friendly European nations. However, the Marshall plan cannot succeed unless the people of America clearly understand the character of the problem and the remedies to be applied. Secretary Marshall ably pointed out in his Harvard speech that "political passion and prejudice should have no part" and he added these words: "With foresight and a willingness on the part of our people to face up to the vast responsibility which history has clearly placed upon our country the difficulties I have outlined can and will be overcome."

These difficulties can and will be overcome if the peoples both of America and Europe support the Marshall plan. Although it is still in the formula stage, I regret to say that it is being attacked on many sides. In addition, many competent Washington observers say that the lack of an informed public opinion in the United States may cause the Marshall plan to falter. I sincerely hope that events of the future prove that these observers are wrong.

We face a great challenge. The future of world civilization depends on how well we carry out our responsibilities. We must not permit the lack of understanding, cheap political demagoguery, or isolation boobytraps to defeat the Marshall plan.

This is one time when we must rise above petty grievances and prove to the world that the United States stands ready to assist the devastated nations of Europe.

The United States can win the admiration of the world by supporting the Marshall plan. If the United States adopts an indifferent attitude toward the ill, hungry nations, we may awaken one day in the not too distant future to find the whole world against us.

The Marshall plan offers the opportunity for our Nation to prove to the world that we measure up to our responsibilities. We must not fail in this great task.

Mr. Truman Versus President Truman

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. BENDER. Mr. Speaker, the President of the United States in vetoing the tax-reduction bill has placed himself on record as opposed to the constitutional tradition of our Government. It is the province of Congress to determine Federal expenditures and appropriations. It has never been the prerogative of the President to arrogate to himself this authority, and no President in our history prior to Mr. Truman has ever successfully asserted such authority.

If a President may veto every measure dealing with public taxation enacted by Congress and win for himself the sustaining of that veto, the specific provision of the Consitution vesting the taxing authority in our National Legislature becomes meaningless. It would be possible for a political-minded President and a determined one-third minority to prevent the passage of any revenue legislation which he opposed, irrespective of the judgment of the will of the overwhelming majority of the Congress.

It has been asserted by our President that the type of tax reduction passed by Congress is the "wrong kind of reduction at the wrong time." He has cited figures designed to demonstrate that this bill, concurred in by a 3 to 1 majority of the House of Representatives and an almost 2 to 1 majority of the Senate, offers tax reductions to the well-to-do which are disproportionate to those offered to others less fortunate economically. "Therefore," says the President, "let us offer no tax reduction for the year 1947 to anybody." He is now seeking to exert pressures which are simply calculated to influence the trend of the election in 1948.

If the President himself had not voted in 1945 to exempt corporations from excess-profits taxes, when he was a Member of the Senate, the charge that his conduct now is based upon political considerations rather than fiscal might be difficult to support, but the record of Mr. Truman on this subject is at variance with the record of President Truman, and the political implications are inescapable.

Let us look at the facts and figures which furnish the proof of this pudding. In my own State of Ohio the President's veto of the tax-reduction bill means that hundreds of thousands of taxpayers who are now faced with increased living costs must continue to bear large Federal tax burdens unnecessarily. These men and women are not economic royalists. They are folks who have worked long and hard in the war years and deserve some relief. I say that we could readily dismiss several hundred thousand Federal employees without impairing the efficiency of our essential Government services. We will not dismiss them so long as the President can veto and veto and veto our efforts to cut taxes. For, as sure as the sun rises, the more money there is in the Federal Treasury, the more money Government agencies are going to spend. If we cut those funds, they will not be able to spend them, and I am certain that nobody doing business with the Government will be unduly disturbed.

Here is the monument to President Truman's violation of our Government tradition on the passage of tax bills. The people of Ohio's 88 counties will be paying to the Federal Treasury these millions of dollars they should have and could have saved.

Count them up, people of Ohio—and they total $227,513,000—from our State alone. I furnish this table, supplied by the Chief of Staff of the Joint Committee on Internal Revenue Taxation of Congress, to prove the point.

If Mr. Truman has his way, we should change the motto of our country to these well-known words: "Sweat on, Mr. Taxpayer, sweat on."

Estimated distribution by counties in the State of Ohio of the tax reduction provided for in H. R. 3950

Had Enough?

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Veterans' Report:

HAD ENOUGH?

It seems to us that the Republicans will have to figure out a new campaign slogan if they expect to get anywhere at the polls in 1948.

Last fall their slogan—"Had Enough?"—worked fine, for the country was suffering from war nerves and the voters were ready to try most any kind of medicine to cure them.

At this writing, and as a direct result of the kind of bromides prescribed by the Republicans, Uncle Sam not only is more nervous than ever before, but also his blood pressure is dangerously high. Coupled with the constantly rising prices of food, the medicine they've been giving him costs so much that Uncle Sam's family is reported to be looking around for other doctors.

No, the Republicans can't very well ask the voters whether they've "had enough" next year, for if they do the answer is apt to be a resounding "Yes," and if that's so old "Doc" Truman, who was muscled aside at the polls last fall is likely to be given another term in the White House, this time backed by a competent staff of "consulting physicians" in the United States Congress.

This country is not so ill but what it can be cured. However, it strikes us that if the medicine prescribed by the New Dealers was often hard to swallow, the petty behavior of the Republicans in the Eightieth Congress has had an even worse effect on the patient. Those who took over majority control of Congress from the New Dealers have been arguing so much about who is to take the place of "Doc" Truman in the White House that they haven't yet written out a satisfactory prescription for what ails us all.

At any other time, we could forgive and forget, considering that America is on the eve of a Presidential election. But in these days when everybody is depending so much on the recovery and leadership of Uncle Sam, there is no excuse for such horseplay as has taken place on Capitol Hill during the Eightieth Congress.

In our opinion, the behavior of the Seventy-ninth Congress—which marked the exit of the New Deal was bad enough to give anybody a headache. But the lobby-dominated, labor-baiting Eightieth Congress which promised so much and did so little for the little guy—especially the homeless veteran—takes the all-time prize for political skulduggery and boondoggling during a highly critical period in the history of America and the world.

Yes; recent Nation-wide opinion polls indicate that the people of America have "had enough." The majority—and this certainly includes millions of veterans—seem to lean toward Harry Truman at the moment. Unless the Republicans really go progressive and nominate a man of the caliber of Eisenhower or Bradley, this newspaper will have to go along with the Democrats.

Are Lower Tariffs Always Good?

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. HILL. Mr. Speaker, the following article describes in general what difficulties face us when we attempt to conduct business with countries of the world whose products are placed in the markets not by individuals or private firms but products fully under the control of the Government itself.

[From Pathfinder for July 2, 1947]

ARE LOWER TARIFFS ALWAYS GOOD?

More heat than light was produced recently when Congress, the press, and radio debated about wool. The tariff angle of the Robertson wool bill was the match that set off the sputtering.

Again next year Congress will decide whether to extend the right of the President to reduce tariff duties by reciprocal agreement. His present authority expires July 1, 1948. The wool debate offered a foretaste of the arguments that will be heard before that date.

Belief appears to prevail that the United States is still a high-tariff country. Little attention has been paid to the fact that, on the contrary, the United States places fewer and lower restrictions on imports than do most other nations. United States barriers are lower than those of Britain, France, and of more than half of the world's trading nations.

Roughly two-thirds of our imports are duty-free. The largest items normally bought from overseas are rubber, coffee, sugar, tin, and silk. Of these only sugar pays any tariff.

How strongly should the United States insist that other countries lower their barriers? Many nations depend upon receipts from import duties for a large share of their national revenue. Sweden and China get nearly half of their revenue from duties. Is it our business to try to trade their revenue away from them?

Many countries need to protect new industries from competition by the United States and older industrial nations. Are we helping them help themselves if we try to bargain them out of such commendable efforts?

Any economy that depends on selling a raw material in the world market can depend on attaining one result: The people who do the work of production will remain in poverty. That has been true for the sugar hands of Cuba, for the rubber plantation workers in Malaya, for the tin miners of Bolivia—and for the cotton farmers of the American South.

Even now an agricultural minority in the Philippines protests against free trade with the United States in sugar and copra. They say that this means plantations up to the cabin doors.

Australia is one of many countries that desire American manufactures and therefore wants to sell goods here. Australia needs dollars and offers wool. We have wool. Wool in an Arctic war may well be a material as strategic as rubber was in 1942.

Economic strength—the strength that flows from a constantly growing, expanding nation—produces more than preparedness. The country has such strength when thousands of kinds of enterprises are healthy, active, and contributing their parts to the whole of employment and prosperity.

A policy that impairs an industry here, another there, can weaken the whole national economy.

Rather than to throw wool and a few other protected products to the internationl dogs, the United States might first do a better job of hunting out a greater variety of imports.

Obviously prudence calls for large stockpiles of whatever strategic minerals may not be here in ample supplies. Around the world there must be many kinds of handicrafts for which Americans would gladly pay dollars.

Much might be done to encourage foreign travel. That, along with purchase of other foreign services, affords means to scatter United States dollars abroad and get something for them in return.

To import what Americans need and do not have, and to spend dollars abroad for services Americans want, is to raise the American standard of living. No case has been made, however, that proves the necessity of driving some American producers out of business in order that others may export.

After all, what the people in most of the world need worst is not merely more trade. It is to produce for themselves more things they need.

Impressions of Poland

EXTENSION OF REMARKS
OF

HON. GEORGE G. SADOWSKI
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Melvin P. McGovern, former Chief of Distribution of the UNRRA Mission to Poland:

The last gunshot in Europe was fired early in 1945. Peace was officially restored to the ravaged and destroyed countries of the Continent. The cessation of hostilities did not signify the end of toil, sacrifice, or struggle for the war-weary peoples of Europe. There still remained the gigantic task of reconstruction. It took the remainder of 1945 for these countries to fully calculate their losses and lay down workable plans for rehabilitation. Therefore, the actual physical reconstruction of Europe didn't begin until January of 1946.

Poland experienced more misery and devastation in human lives and material wealth than any other European nation. She lived through a literal inferno of Nazi occupation. To indicate the immensity of the problem facing the Polish people at the time of liberation, here are some figures on Poland's wartime losses: 6,104,990 Polish citizens killed; 10,000 factories and industrial plants destroyed; 300,000 buildings and 400,000 farms totally or partly left in ruins; 100 percent of the machine-tool industry wiped out; 6,399 damaged schools; 15,900,000 books destroyed; approximately 6,500,000 children in need of medical care, homes, and food.

But, in the face of these seemingly unsurmountable problems, the Polish people willingly turned to the enormous task of rebuilding their destroyed cities, renovating their factories, resowing their farmlands, reestablishing their transportation and communication lines, and countless other tasks. The accomplishments of the Polish people during the past year and a half is nothing short of remarkable. Emerging from the dark chaos of war, the Polish people, through their undying love for their motherland, have instilled new life in their war-ravaged country.

The reconstruction of their ruined capital, Warsaw, is symbolic of the Polish people's achievements during the past year and a half. The Germans had wantonly destroyed this once glorious city, burning its buildings and killing off the populace. Rising from the burning embers the few remaining Poles proceeded with the work of resurrecting Warsaw. A Supreme Council of Reconstruction, comprised of representatives of social, artistic, technical, and professional groups, was formed. Its task was to mobilize all the spiritual and material resources of the nation for the work of rebuilding the city. Not only was the new capital to be based on the old cultural traditions, but its physical environment would coincide with the new social, economic, and political life of the nation.

During the past year and a half great strides have been made in rebuilding Warsaw: Electric plants have been rebuilt; the water system has been repaired; radio station reconstructed; surface transportation has been restored; and many other improvements have been instituted.

One has to be in Warsaw only a short time before one realizes that this city is unlike other ruined cities of Europe. There is a spirit that transcends the sorrow and destruction. On the top of a heap of rubble, where a beautiful edifice once stood, there is now a flower shop. Further down the street, on tops of similar heaps of crumbled stone, one will find a clothing store, a book mart, or other "temporary" shops. All over the city people are rebuilding and renovating. One gets the feeling that the Polish people do not believe in waiting for machinery, equipment, etc.—they are rebuilding with their hearts and hands. Warsaw will live again because the people believe in the inherent value of reconstruction; because the people love her dearly; and because the people are enthusiastic about the future of Poland and are willing to sacrifice to achieve a better life.

But, the spirit in Warsaw is not unlike the feeling of all Poland. Wherever one goes people are working, learning, creating. They have faith and courage in what they are doing. They will succeed.

One of Poland's greatest achievements to date has been the reconstruction of its transportation and communication system. Before the war Poland had a well-organized railroad system. The Germans did their best during the occupation to change that. They confiscated railroad cars, locomotives, and engines. They destroyed about 30 percent of Poland's railway tracks (10,000 miles); 42 percent of her engines; 92 percent of her passenger cars; and 92 percent of her freight cars. At the end of the war Poland was left with 30 locomotives, 100 passenger cars, and 2,000 freight cars. These, without exception, were antiquated German cars, minus windows and doors, and locomotives which couldn't travel 100 miles without stopping for repairs.

At the beginning of the reconstruction period it was not an uncommon sight to see people traveling on the steps and tops of trains or inside passenger cars without doors, windows, or seats. Such was the legacy of German destruction which the Poles took over in the spring of 1945.

Today the picture is still far from perfect, but scenes like the above are no longer common. Poland now has 3,000 locomotives, 5,000 passenger cars, and 122,000 freight cars. In addition, on some few lines, the prewar luxury of sleeping-car accommodations has been reinstituted.

All in all, the Polish people are once again "riding the rails." (The number of passengers on all lines is approaching prewar figures, i. e., 202,000,000 in 1946 as compared with 226,000,000 in 1938.)

At the end of the war Polish bridges were in a state of complete destruction. (Seventy percent of her large bridges were demolished.) The Poniatowski Bridge, the largest in Warsaw, is a good example of what is being done today. It took 7 years prior to World War I to build this bridge. It was destroyed during that war and was reconstructed in 3 years during the early twenties. Totally destroyed by the Germans in World War II, it was rebuilt this time in only 1 year, despite the worse condition existing after this war than after the First World War.

Taking everything into account, the speed in which Poland has rebuilt her transportation and communication system marks one of the great achievements in the economic recovery of Europe.

Perhaps the most striking example of the rapidity with which Poland is rebuilding her industries is her coal production. The losses sustained by the Polish coal mines during the war are estimated to be as high as $700,000,000. Despite this, the Polish people at the beginning of 1946 undertook the gigantic job of rebuilding their coal-producing industry.

So successful have they been that today Poland stands out as the No. 1 supplier of coal in Europe. Her total production for 1947 is expected to be 57,500,000 tons, of which 18,300,000 tons will be exported, as against 45,000,000 tons produced last year, of which 13,487,934 tons were exported. These figures have tremendous significance for the economic recovery of the continent. Europe's most urgent need today is coal. Production in the Ruhr has been decreasing, and Great Britain, once a great exporter of coal, is forced to import coal from the United States and other countries. Consequently, Poland, with its mounting coal production, is becoming the one shining light in an otherwise bleak coal picture in Europe.

One reason offered by many people for the increased coal production in Poland as compared to other countries is the high productivity and enthusiasm of the Polish miner—this, despite the fact that the Polish worker receives fewer calories than the German worker.

Poland's coal production would increase many more times if she could receive more modern mining equipment.

Another area in which Poland has recovered rapidly since the end of the war is her ports and harbors. Destruction in the ports at the time they were liberated was practically 100 percent. Most of the harbors were mined and blocked by sunken ships.

Today, after months of steady work, all of the ports are back in operation. Gdansk can now handle 40 ships daily. The port of Szczecin is now prepared to receive large ocean vessels. Its warehouses and wharves have been rebuilt. An important addition to this port's commercial potentialities is the rehabilitation of its grain elevator with a capacity of 42,000 tons, the largest in Poland.

In 1946 the two principal ports, Gydnia and Gdansk, handled 2,800,691 tons of imports and 4,945,495 tons of exports. With the addition of 19 former German freighters to the Polish merchant marine and with the increased port facilities, these two ports are expected to handle 12,400,000 tons in the course of this year under the provisions of existing trade agreements.

The results of Poland's reconstruction endeavors during the past 18 months were "on display" recently at her first post-war international fair held at Poznan during the latter part of April 1947. At this fair, participated in by 1,500 foreign exhibitors and attended by 363,000 persons, Poland displayed products of 17 branches of her industry.

In traveling throughout Poland, one becomes more and more aware of one important fact: Poland has made great advances in reconstruction, but she needs assistance, especially food and machinery. During the past few years UNRRA provided this aid, but now, with the activities of UNRRA completed, the food situation is extremely grave. During the past few months Poland has been forced to purchase grain on the world market and use her few remaining dollars. She still has a grain deficit of 200,000 tons but no dollars with which to purchase the much needed grain.

Poland is in a position to contribute to the rehabilitation of Europe in a very high degree and she is anxious to do so. She has enough coal to fulfill a great part of Europe's need, but to do so she must have food for her miners and modern machinery to work the mines. Assistance given to Poland would result in her rapid reconstruction and that in turn would mean more assistance to the rest of Europe.

One cannot write about reconstruction in Poland without considering the enormous progress that has been made in the western territories, Poland's recovered territories. A visitor to these areas in the summer of 1945 would have seen only desolation, destruction, idleness, and despair. Today the picture has completely changed. As Charles Drury, one of the former chiefs of the UNRRA mission to Poland, said upon returning from a visit to these areas in 1946: I was greatly impressed * * * by the determination with which the Polish people are undertaking the task. We were in areas where the Poles had been operating as slave laborers for the Germans during the war. Now they are converting these same plants in which they were

slaves to the production of coal cars and other reconstruction items."

When the Big Three at Potsdam agreed to the reversion of the western territories to Poland's possession, the Polish Nation embarked on one of the greatest tasks in European history—the resettlement and reconstruction of a war-devastated area and the repatriation of Germans back to Germany. This involved the movement of millions of people. Today over 4,000,000 Poles have been resettled and about 2,000,000 Germans repatriated.

The resettlement of Poles in these areas has been compared to the early American pioneer days. These hardy people, with no other place to go, have decided to settle in these territories and rebuild a new life. Despite the greatest hardships and difficulties, these people are on the road to building a new civilization out of a wasteland.

To illustrate the extent of Polish colonization in these areas here are a few facts and figures:

Before the last shots were fired in the streets of Wroclaw (Breslau), a group of Polish officials (17) entered the city and established a city administration. They proceeded to extinguish fires, clean up the streets and restore sanitation and other facilities. Since then the 17 pioneers have been joined by 180,000 settlers and the once ghost town has been restored to life. Two of the three bridges have been rebuilt. Thirty new school buildings and 18 hospitals have been constructed. Art and book collections have been brought to the city from Lwow by permission of the Ukrainian Government.

Walking through the streets of Wroclaw—and it should be pointed out that what is going on there is typical of all the cities in Poland—one cannot but help admire the intense determination, willingness to sacrifice, and unrelenting spirit of these new Polish settlers.

The greatest activity in these territories—and that which is most essential to Poland's economic recovery—is occurring in the Silesian coal fields. Here, in mines that had been ruthlessly exploited and later destroyed by the Germans, Polish miners are putting every ounce of their strength into mining coal. Despite poor equipment, the shortage of electric power, the lack of skilled workmen, Poland has succeeded in increasing coal production steadily.

Because of the importance of coal, both to the reconstruction of Poland and to the economy of Europe, it becomes clear how important the recovered territories, and particularly the Silesian coal fields, are to Poland. Already people are describing the Silesian region as the Ruhr of Poland or the Polish Pittsburgh.

In other branches of industry reconstruction in the recovered territories is proceeding at a rapid pace.

Transportation facilities in these areas were badly wrecked by the Germans. The settlers have rehabilitated bridges and railroads with amazing speed. More than 70 percent of the large bridges and 77 percent of the small bridges have been rebuilt.

Like all other branches of the economy, agriculture in the regained territories was in a miserable state at the time of liberation. Through the efforts of the Polish Government much progress has been made in restoring some semblance of a going farm economy. More than 80 percent of the horses, cows, and other farm animals supplied by UNRRA and other agencies were sent to these areas to speed up the agricultural revival. Four hundred thousand acres of land belonging to former German landowners have been divided among the new Polish farmers. Since food is so essential to the maintenance of a healthy Polish economy, the agricultural achievements in these areas take on greater significance as the days go by.

When discussing rehabilitation in the recovered territories one cannot pass by without mentioning the cultural progress that has been made. As of June 30, 1946, there were 4,000 schools of all types, 1 university, 1 academy of medicine, 1 engineering school, 1,000 kindergartens, 130 homes for children, and 80 industrial or trade schools. The destruction of Polish culture during the war was not merely a result of normal hostilities; it was the result of a well-calculated and methodically executed campaign developed by the Nazis. But just as the Polish people are rebuilding their homes, farms, and factories, so too they are resurrecting their culture. The Germans were able to break Polish bodies, destroy Polish cities, and devastate Polish farm lands, but they were not able to still the Polish faith and spirit, the Polish will to learn and create.

From this brief and far from complete review of the accomplishments in the recovered territories one can understand why these areas have been called the cornerstone of Poland's economic reconstruction.

In all Europe the writer has seen nothing comparable to the advances made by the Polish people during the past year and a half. Where once there was confusion and uncertainty, today there is hope, order, and assurance. The Polish people are forever looking ahead. Out of the ruins of the old order a new Poland is rising.

Minnesota Wilderness Area

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. MacKINNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Minneapolis Star of July 4, 1947:

UNSPOILED WILDERNESS RETREAT NOW UP TO CONGRESS

(By George L. Peterson)

ELY, MINN.—Proper way to get acquainted with the international boundary territory north of Ely is by canoe. It's just about the finest canoe country left in the United States, because it still is a virgin, roadless, wilderness in large part.

But I wanted to get a bird's-eye view of the whole area. So with Federal Ranger Jack Valentine as guide and C. M. Nelson as pilot we took off in a forest service seaplane from Shagawa Lake here. A brisk wind was blowing and the silver ship bobbed around in the air as we flew northeast to Lac la Croix. Then we headed west along the border, flew almost to Saganaga Lake, turned south and east and came down at Basswood lodge on Basswood Lake.

It was a perfect day for sightseeing from the air. And what a sight.

The country is rocky and hilly, covered with forests of pine and spruce. Generous rains this spring have made the landscape greener than usual. Not a single forest fire marred the view. A dozen lakes were always to be seen below us—deep blue lakes reflecting the sky, with a tinge of brown from iron. Shorelines were rugged and picturesque, seldom a marshy spot along them.

We flew low over rapids which were discharging the highest water levels in years. A priest and guide were swept over Basswood Falls last week when fishing. Their boat and motor were smashed, but they got out of the battering 30-foot drop with only bruises.

In a couple of hours we covered territory where canoe parties, traveling 15 or 20 miles a day, may spend entrancing weeks. Fishing is grand—pike, northerns, lake trout. Even better is the smell of the pine, the clean air, the solitude.

That roadless area—a million acres on the Minnesota side, another million in Ontario—is one of the few remaining easily accessible wilderness expanses. Ray Hoefler of Ely estimates that more than 8,000 American canoeists explore the region each summer. It is so attractive a vacation spot that more lodges are being built and planned to exploit the northern charms. More and more seaplanes fly in.

Now, vacation lodges are fine in their place. But Minnesota has 11,000 lakes outside the wilderness area where they can be built. One sizable spot should be left for a gateway and a place where future generations may see what America looked like before the white man civilized it.

Designated roadless areas in the Superior National Forest total 1,077,000 acres. A bill before Congress defines a truly wilderness area of 460,000 acres from which the Forest Service would like to exclude resorts and other improvements. The Government owns some of the land already. It is estimated that another 110,000 acres must be purchased to protect the lakes and streams.

The bill lists 56 tracts to be acquired from private owners, 19 of them improved, 8 with resorts. Some of the land can be acquired by exchanging Government acreage elsewhere. Cash outlay would be about $500,000.

Izaak Walton League members have been active in getting together a fund of about $100,000 and have bought up some of the tracts. These members will turn the property over to the Federal Forest Service at cost if public funds are made available. In one deal at Kekekabic Lake, Izaak Walton Leaguers paid for improvements at a half-built lodge, the Government traded property on the west end of Lac la Croix for the land, and the owners moved out.

The bill would not disturb the old established resorts on Basswood, Saganaga, Seagull of the west end of Lac la Croix. It would reclaim and maintain the rest of the beautiful border area in its primeval beauty.

There is strong indication that Canada will do the same thing on its side of the boundary if America makes this fine move.

One of the chief obstacles to congressional approval of the bill is a provision that the Government pay the affected counties—Cook, Lake, and St. Louis—12 cents an acre annually in lieu of taxes.

Present law gives counties 25 percent of the net income from national-forest land located inside their borders. Sale of timber is the biggest item, although there is some revenue from rental of cabin sites.

But income from the wilderness area would be almost nil under that arrangement. Little timber cutting is contemplated there. The idea is to zone it for canoeing and camping, not for commercial exploitation.

Last year the three counties received $39,838 as their share of revenue from all Federal holdings. Those holdings include the vast Superior Forest. And last year's cut for the counties was the largest in history, brought about by abnormal demand for timber and not likely to be repeated.

The three counties, all sparsely settled, have little opportunity for tax revenue except for the iron mines. Yet they must provide roads and other services. The State has had to bail out these northern counties on occasion. It seems only just that the Nation, which takes over custody of the wilderness area, share in a small way the cost of local government in the region.

Chester Wilson, State conservation commissioner, and Federal forestry officials have given long study to this per-acre payment and approve it.

Though Ely may be penalized in a business way if fewer resorts dot the border

country, the chamber of commerce here is strongly behind the bill. A party of Congressmen is due in August to look over the region. Ely conservationists are sure that a trip into the wilderness is all the lawmakers need to convince them of the necessity for acquiring now this area where wilderness beauty is making a last stand.

The Growth of the Automotive Industry From 1904 to 1946—One of the Nation's Greatest Sources of Employment and Revenue

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. McDONOUGH. Mr. Speaker, the automotive industry has become one of the Nation's greatest assets in the relatively short span of 42 years, both as a source of tax revenue and as a means of employment for one out of every seven persons in the United States. One out of every six business concerns is directly connected with the manufacture, sale, service, or operation of automobiles and trucks.

The growth of this industry has been phenomenal. In 1904 only 22,000 passenger cars and 1,000 trucks were produced. By 1929 the total number of passenger cars and trucks produced reached 5,358,000, with a total wholesale value of $3,413,000,000. In spite of the decrease in production caused by the war, in 1946 production climbed back to 3,090,000 trucks and passenger cars, with a total wholesale value of $3,216,000,000.

The automotive industry today provides one of the largest sources of tax revenue for the Government. In 1921 special motor user taxes amounted to only $275,000,000. In 1946 taxes paid by the motoring public rose to $2,507,000,000. Federal collections from motorists in 1947 are expected to reach a point where the mortists will contribute about 3 percent of President Truman's proposed national budget for the 1948 fiscal year.

State registration fees in 1946 amounted to $551,318,000. State gasoline taxes alone collected $1,064,681,000. Municipal and county governments accounted for an additional $15,000,000, and highway and bridge tolls added another $80,000,000.

In 1946 the American motorist contributed $5,000 a minute in special Federal, State, and local taxes. Three-fourths of the Federal excise levies were paid by the population group which in 1941 was making $3,000 or less in income. In contrast, this group pays only one-eighth of income taxes.

Today automobiles are a necessity in the daily lives of millions of Americans. Fifty-five percent of automobile mileage is used for business. Forty-five percent of the total mileage represents social and recreational driving. The automotive industry contributes to every phase of living in our Nation. The industry in the short span of its existence has grown in size and services rendered until today it represents one of the greatest assets in the United States. The men who built this industry and who work in it today are to be commended for the contribution they have made to the Nation as a whole.

Finland's Debt to Russia Should Be Canceled

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. BENNETT of Michigan. Mr. Speaker, I have introduced a resolution which would authorize the President to reduce the Russian indebtedness to the United States by an amount equal to the sum that Finland owes the Russians in reparations under the peace treaty between Finland and Russia of February 10, 1947.

The resolution is short and simple and so I quote it here in its entirety:

Resolved, That it is the sense of the Congress that the President should make appropriate agreements and arrangements for the purpose of cancelling the amount which Finland owes in reparations to the Union of Soviet Socialist Republics under the treaty of peace with Finland, signed February 10, 1947, by reducing, in an equal amount, the amount which the Union of Soviet Socialist Republics owes to the United States under the Lend-Lease Act.

The effect of this resolution would be to exonerate the Finns from paying the Russians a debt which they do not owe on any basis of fairness or justice by simply reducing to that extent the amount of money which the Russians rightfully owe the United States—and which they will never pay.

Because we were never at war with Finland, we were not permitted to have any voice in her treaty with Russia. This treaty which the Russians forced upon the Finns in 1944 by unilateral action was one of the most brutal, ruthless and oppressive ever recorded in world history. None of the great powers for the world, including this country came to her assistance. We stood by silently while the Russians emasculated her government and the freedom of her people.

Finland was the first victim of the Soviet program of aggression which has now spread half way around the world. It started back in 1939 when the mighty Soviet horde attacked little Finland without any cause or provocation. When Finland fought back to defend her freedom and the integrity of her borders, the whole world marveled at the demonstration of national heroism—against overwhelming odds. The leaders of all the great countries spoke out against this wanton aggression by the Russians. Russia was righteously condemned and properly expelled from the League of Nations. Fighting alone so bravely against this ruthless and brutal adversary Finland had the sympathy of the entire civilized world. But times changed. A few years later when the Finns fought to regain what the Russians had taken from them, they were branded as aggressors by the same people who denounced the Russians in 1939.

Then came 1944. The war was still on when the Russians forced upon the Finns one of the most brutal reparation agreements ever recorded. We made no effort to invoke the terms of the Atlantic Charter in Finland's behalf at the very time when the Charter was fresh in everyone's mind and when most people thought it would be adhered to.

Many of us could see then that if Stalin and his program of aggression was not stopped at Finland's borders it would probably be too late to stop him anywhere in Europe. On March 21, 1944, I made a statement in this House on this very subject which I am taking the liberty of quoting in part:

> We have groups in this country urging Finland and Poland to accept the unilateral peace terms of the Soviet as the best means out of a desperate situation. How can we in the spirit of fairness and common decency urge a settlement which will mean virtual extermination of the free and independent governments of these sturdy little countries? Why, Mr. Speaker, that is the very sort of thing that killed the treaty of Versailles. It amounts to a sacrifice of principle for expediency; it means the abandoning of human rights and liberties at a moment when we can least afford to make that sacrifice. No, Mr. Speaker, in making such assertions these people are doing irreparable damage to the cause of freedom of governments and freedom of peoples everywhere when this war is finally won. I will tell you what I think we should do, and I say this as an average American, because I am neither statesman nor diplomat. We should insist that the Soviet Union live up to her agreements; we should insist that the Atlantic Charter be followed and adhered to now; and last, but not least, we should insist that the Soviet Union treat us as an equal ally equally concerned with the outcome of this conflict and equally concerned with the peace and future welfare of the world. Mr. Stalin will listen to our side of the story if he knows that we mean what we say; but I think it is clear that he will continue to do exactly as he pleases in his dealings with other nations unless we convey to him in plain, simple, and straightforward language of unmistakable meaning, that we expect his government to deal with its allies with all cards on the table, in the spirit of harmony and friendliness so vital to winning both war and peace.

Mr. Speaker, events have proven that we waited too long to get tough with Stalin. We could have stopped him easily in 1944 but because of our stupid foreign policy, we must now pay the penalty of stopping him the hard way.

Mr. Speaker, there was never any reason for the United States to change its attitude toward Finland. The only reason for it was our desire to appease Mr. Stalin and the Russian Communists—a policy which I assert we shall always regret. Finland fought the Russians in 1939 and again in 1942 for exactly the same purposes. She fought to preserve the freedom of her people and their democratic government. Finland wanted nothing from the Russians except the right to live in unmolested peace.

Nevertheless, we went to great lengths in helping the Russians conquer Finland. In 1944, in this little nation's darkest hour, our State Department added insult to injury by expelling from our borders the Minister to Finland, Hjalmer Procope. Mr. Procope's only offense was that he hated Communist Russia and justifiably maintained the right of his own country to defend itself against Stalin's aggression.

After Procope's departure we stood by while Stalin forced his communist regime upon the people of Finland and compelled them to agree to pay the Russians $300,000,000 in alleged reparations within the short space of 8 years.

Moreover, in addition to this unconscionable reparations agreement, Finland was forced to surrender one-twelfth of the entire area of her country. This included the warm water Arctic seaports, together with the most northern parts of Finland rich in copper and nickel as well as vital agricultural areas in Karelia, in the eastern part of Finland. Approximately one-twelfth of the population of Finland lost their homes in these areas and had to be absorbed elsewhere. Mr. Speaker, this $300,000,000 which the Finns must pay the Russians is sapping their very lifeblood. It is payable in commodities such as timber products, paper, cellulose, seagoing and river craft and sundry machinery. This means that the major part of her natural resources must go to the Russians over an 8-year period.

If there is any justice in this world, Mr. Speaker, these reparations ought to be canceled. If Finland is to survive as a free and democratic nation, they must be canceled. Stalin's current program of aggression got its start in Finland. We ought to start there to stop it.

National Security Training Act of 1947

EXTENSION OF REMARKS
OF
HON. E. H. HEDRICK
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. HEDRICK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the Subcommittee on Education and Training of the House Armed Services Committee, July 24, 1947, on the subject of national security and the bill—H. R. 4278—to enact the National Security Training Act of 1947:

Mr. Chairman and members of the committee, I am in favor of some form of universal military training. However, I cannot support fully H. R. 4278, called the National Security Training Act of 1947. There are some features of this bill which I cannot agree with, and I further believe that this bill should not have come up at the present time, near the end of the session, having been rushed through the subcommittee without the proper hearings and consideration by the committee.

This subject is controversial, and both the proponents and the opponents of this measure should have had the privilege of appearing and presenting their views before the subcommittee. This was apparently denied them.

I cannot agree that the National Security Training Commission, whose duty it is to set up the policy and standards of the training of the program, should have at least one member from the armed forces. I believe that this training should be kept entirely in the hands of a civilian Commission. I believe that the Commission should have full authority over the specifications and manner in which this training should be administered, and that the Secretaries of the War and Navy Departments should act only as consultants to the Commission—without authority to prescribe the method of training.

I am also opposed to the selective-training system as proposed in this measure, which is similar, if not identical, to the selective-service system used during the war. I feel that many fathers and mothers of this country will oppose such a system which simulates the methods used during the war to induct their sons in the armed services.

I further believe that H. R. 4278 goes into minor details too extensively, and the bill of 82 pages has been hastily drawn. It is confusing. Almost one-third of this bill is devoted to the punishment for minor offenses of the law, which, in my opinion, should be handled entirely by the commanding officer in charge.

Therefore, I do not favor the passage of this bill at this time.

Get Ready for Greatness

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD I desire to include an address recently delivered before the Chautauqua Summer Assembly, Chautauqua, N. Y., by Dr. Frederick Taylor Wilson, an eminent lecturer and author of Lebanon, Wilson County, Tenn. Dr. Taylor's address entitled "Get Ready for Greatness," appears as follows:

GET READY FOR GREATNESS

I am profoundly grateful for the delightful privilege of speaking to you today. It is a great hour to be alive. Tennyson told us a day in Sicily was better than a cycle in Cathay. Well may we feel that a month of life today is better than all the many centuries of Methusaleh, whose biography is complete in these few words, "Methusaleh lived for 969 years and died."

Many of you are in life's springtime, the poetry period of life. We cannot wholly agree with the poet that "Blessed of the gods are they who die ere youth has fled," but May is more to be desired than November. Shakespeare called the world a stage and all men and women merely players upon that stage. Many of you are now coming upon the stage of active life. For you the curtain is now rising upon scene 1 of act 1.

We hear much about the gloom which hangs like a cloud everywhere. You will remember that Dante began his great classic with a reference to a dark and gloomy wood and closed that classic, after much wandering with Virgil in hell, with a reference to the stars. Today we are in one of the tunnel periods of history. Tunnels everywhere are dark and gloomy, but the light at all their exits is blinding in its brilliancy.

Winston Churchill, at a dark hour in English history, encouraged a brave people with these optimistic words:

"In front the sun climbs slow, how slowly,
But westward, look, the land is bright!"

"Am I asking too much that we sing!
Now at last tho oft mistaken, oft despairing
At last methinks I see the dawn:
Soon shall the awakened nations
Proclaim the passing of the night forlorn;
Soon shall the long conceived child of time
be born of progress;
Soon the morn sublime shall burst effulgent
thru the clouds of earth,
And light time's greatest page, O right! thy
glorious birth!"

I am sure many of you are now dreaming of greatness. "For too low they build who build beneath the stars." My message is for you. My subject is "Get ready for greatness." We shall discuss the word "greatness" in a twofold sense. First, let us consider it in terms of our new era. Toynbee, the great English historian, tells us we have had 19 separate civilizations during our 6,000 years of recorded history; of that number, 14 now lie in ruins.

You have read of the different ages that have prevailed in our world history, of the Stone Age, the Bronze Age, and finally of the Golden Age. May I suggest Uranean as the name for our present age. Uranium, as we all know, was one of the basic elements used in the making of earth's most terrible and destructive weapon of war. Uranus, you will recall, was in Greek mythology the personification of heaven. The god Uranus was, also, the father of the Titans. The planet Uranus is one of the most distant in the sky. Let us hope and pray that in the future uranium will be used to restore the lost Eden of man instead of for the hastening of a Dantean Hades.

Let us think of the word "greatness" primarily in terms of personal growth and gain. We are inclined to associate it only with high place and power. We forget that many mute but glorious Milton's live and die unknown. The true greatness of the individual is of the mind and heart. It is a quality which belongs to the great servants of mankind and not to its masters. It is the God-given attribute of those who live and move in tune with the philosophy that the only truly great are those who serve unselfishly their day and generation.

Let us now consider ways in which to get ready for greatness. First, get ready for greatness physically. Samuel Johnson said a sick man was a scoundrel, an observation which many wives would confirm. Our recent long list of rejections for Army service disclosed the low physical and mental state of our Nation. Our many health campaigns make more vivid that sober fact. We are told that 200,000,000,000 human beings have been born into the world during the past 2,000 years. The vast majority of that number lived lives as brief as they were empty. They were—

"Like a snowflake on the river
A moment white, then gone forever."

We boast here in America of our decade by decade extension of life expectancy. We are told that it increased from 20 to 40 years between 1650 and 1850, and that now it is three times what it was 300 years ago. But let us not forget that a great deal of this increase has not been an increase in the length of adult lives but in the reduction of infant mortality.

Recent college graduates will find comfort in the forecast that the future life expectancy of the 200,000 1947 college graduates will be 51½ years for the female graduate and 45 years for the male graduate. The female of the species may not be more deadly

than the male, but she is at least more successful in defying the demon called death.

Too many of our great leaders fall at life's noontide. Theodore Roosevelt, the most athletic of all our President, died at 60, though he entered that high office as its youngest occupant. Wendell Willkie, a recent contender for the Presidency, died in his early fifties. Poe the poet died at 40 years of age.

Our new age calls for the firmest of muscles, the steadiest of nerves, and the soundest of hearts. So I beg of you to touch not, taste not, handle not anything which would prevent the maximum strength and beauty. If you travel too fast on life's highway, do not blame fate or Providence if you reach its end ahead of schedule.

It is a singular fact that our two greatest Presidents, Washington and Lincoln, were physical giants. So was Phillips Brooks, America's best-known preacher. So was Brigham Young, the Mormon leader, the one hundredth anniversary of whose westward trek to Utah was recently celebrated.

Many noble souls have bravely fought on despite their physical handicaps. The sanguine Robert Louis Stevenson sang:

"The world is so full of a number of things,
I am sure we should all be as happy as kings."

A sad but defiant Henley cried:

"It matters not how straight the gate,
How charged with punishment the scroll,
I am the master of my fate.
I am the captain of my soul."

But their optimism and bravery did not drown out the pathos of their pain-racked lives.

So strive to become like Hercules in strength and Helen in beauty. Remember that the choicest cosmetic is character, sweet modest gentle Christian character. Its mark is indelible. It alone survives unchanged the storm of life. It, too, will shine brightest in the light of the eternal morning.

Get ready for greatness—mentally.

The future will belong to the brightest in mind. The day of the thinker has come. The leaders of the future will be those who can out-think and out-act their rivals. Psychologists tell us the difference in normal human minds is largely a matter of cultivation, that not over one-tenth of the average man's brainpower is ever used. Sad would be the fate of any business or bank where only one-tenth of their resources were in use.

It was refreshing to read that more than one-half of Columbia University's 1947 graduating class were of Phi Beta Kappa rank. We often confuse the words "knowledge" and "wisdom." We have many men of knowledge but few of wisdom. "Knowledge is earthly and of the mind: wisdom is heavenly and of the soul." Our great need is for more mental poise and serenity of soul. We have all but forgotten that contemplation is as necessary as action. We are an all but neurotic nation. The crowded condition of our mental institutions bear witness to that fact. We need to choose more carefully our mental menu if our caps and bells shall mean to us what they should. We need a more wholesome and calm approach to all our problems. We have not learned to meet with triumph and disaster and treat both imposters just the same, as Kipling advised us to do.

Next, we have largely lost the lessons of nature and solitude—"To see the world in a grain of sand and heaven in a wild flower." There are still "sermons in stones, tongues in trees and books in running brooks." We need to be still. It has been said that the notes of the nightingale would be no sweeter than those of the wren if heard at noonday when all the geese are cackling. It was in calm Concord that Emerson said of Thoreau, his pupil and fellow lover of nature, "he was at home wherever there was knowledge, wherever there was virtue and wherever there was beauty." Such riches may be yours.

Get ready for greatness—socially. We are using the word social in a personal and, also a general way. The art of human understanding is one mastered by a minority of us. However, unless we learn early in life to move along peacefully and successfully with others, the odds for success are against us. President Conant of Harvard recently declared that 90 percent of those who lose their positions, both high and low, do so primarily because they are unable to get along with their fellow workers. The wise person adjusts himself to his state whatever it may be. The inability to do that was named as one of the reasons why the dinosaur disappeared from the earth 60,000,000 years ago.

A vital factor in every successful life is the ability to make and hold friends. Kingsley who answered "I had a friend" when asked the secret of his success was not the only one who could give such a reply. That has been the secret behind many great lives. No one will ever have a surplus of friends. It would be well to make new ones every day, for sooner or later like autumn leaves they fall and die.

"He who has a thousand friends
Hath not a friend to spare,
For he who hath an enemy
Will find him everywhere."

Then we must think of the word social in a larger way. We are a part of the great human family whether we enjoy it or not, our human boundaries have been broadened. Socrates, long ago, said: "I am no longer an Athenian or Greek, but a citizen of the world." His world was a puny one in comparison with ours. Patrick Henry rose in our first Continental Congress in Philadelphia and eloquently declared, "I am no longer a Virginian, I am an American." New occasions have brought to us new duties. When Washington was President, 70 percent of our population was of English origin. It is quite different now. We were then a provincial people. We, like Socrates of old, are now world citizens. What a demand for tolerance and human understanding!

We have become one world in business relationships, but we are far from it in human brotherhood. We have learned how to die together successfully, but we have yet to learn how to live together in peace and harmony. We sometimes forget that our roll of the great is a cosmopolitan one. The answers come to us from various climes and countries. From Greece we have the voices of Homer and Demosthenes; from Italy those of Dante and Virgil; from Poland, the Catholic Copernicus; from Russia, the troubled Tolstoy; and from Germany we hear the voices of the cultured Kant and Goethe.

A deep sense of justice, an abiding mercy, and a God-given humility alone will prepare us socially for greatness.

Get ready for greatness—spiritually. Every student of our times is aware of the spiritual depression which has long prevailed, not only in America but everywhere. It is a world-wide tragedy. We have advanced a thousandfold faster in a material way than we have in a spiritual way. Things have long been in the saddle. We forget that the Golden Age was not an age of golden things but of golden minds and hearts. We need to learn afresh that goodness is preferable to gadgets, and that royal manhood, not moving machinery, makes a nation great. We forget that spiritual values are as real as material ones; that faith is as real as the fragrance of flowers, hope is as eternal as the everlasting hills, and love is as luminous as the light from sun and moon and stars.

History has proven that only men and women of a strong religious faith survive long the stings and arrows of misfortune. In a brilliantly written magazine article some months ago, the story is told of the saintly men and women who came unscarred in souls, though broken in body, out of the death house at Dachau.

The study of astronomy has always been a valued adjunct to the students of religion. It is our oldest science. Kant named the starry heavens, along with the moral order in man, as his reasons for believing in God. He was not alone in thinking that the heavens declare the glory of God. Your speaker saw with supreme interest out in California a few weeks ago the final work upon the lens of the world's largest telescope. Millions await with infinite interest the new wonders of the sky it may reveal.

You will remember that Pluto was the name given to our newest planet, discovered at Lowell Observatory in Flagstaff, Ariz., a few years ago. Suppose we let the five letters—P-l-u-t-o—suggest to us certain great absolutes in all spiritual growth.

P is for purity. "Blessed are the pure in heart, for they shall see God." So spoke time's greatest teacher. The light of purity cannot enter the stained soul. Milton never failed to pay homage to purity. It was he who wrote:

"Love virtue! She alone is free!
She can teach you how to climb
Higher than the sphery chime,
Or, if virtue feeble were
Heaven itself would stoop to her."

L—for love. Love never faileth. It is the divine alchemy which transforms foe into friend, darkness into light, and hell into a heaven. The supreme contribution to Jesus of Nazareth was the revelation of God as love. That was a far cry from the vindictive gods of the pagan world. Whatever our faiths may be, we can all sing together with John Greenleaf Whittier, the Quaker poet:

"I know not where his islands
Lift their fronded palms in air;
I only know I cannot drift
Beyond his love and care."

U—for unselfishness. The sublimest of the paradoxes is that we only find ourselves when we lose ourselves in some great cause. Emerson reminded us that we forget ourselves into immortality. Tennyson wrote:

"Love took up the harp, smote upon its chords with all its might, smote upon the chord of self that trembling passed in music out of sight."

T—for truth. The perplexed Pilate of old asked what is truth? When Truth Incarnate stood before him. "Ye shall know the truth and it shall make you free." That is the great glory of the true scientist. William Cullen Bryant warned us that truth crushed to earth will rise again. Lowell sang:

"Truth forever on the scaffold,
Wrong forever on the throne;
Yet that scafford sways the future
And behind the dim unknown
Standeth God within the shadow,
Keeping watch above His own."

O—for order. In our disturbed and depressed age we could well pray with the psalmist, "Let me never be put to confusion." Clear and calm minds were never needed more. Pope called order heaven's first law. Victor Hugo reminded us that God is awake while we are sleeping, and that a divine justice will always prevail. The laws of God, in man as in nature, are inexorable; we cannot successfully defy them.

The great goal of every fine person is to grow into a beautiful soul. It was for that Plato prayed to Pan his pagan god. It is for that men and women make their holy pilgrimages. Oliver Wendell Holmes prayed that his soul might leave its low vaulted past as it built for itself more stately mansions. The ancient writer in his historic prayer cried exultingly, "He restoreth my soul."

A final word—one of our classic stories is Hawthorne's story of The Great Stone Face, which tells of the lad who gazing day after day upon that face dreamed that some day

a native son who had wandered afar, in fame, would return home bearing upon his countenance the image of the great stone face. One by one came those who had won riches, military renown, fame in a statesman's life, and finally, poetic fame. But none of them could be likened to the rocky face upon the mountain side.

At last, with spiritual insight, the poet reminded his former friends and neighbors that the one time lad who had kept the vision of the great stone face before him as he served in his humble way was the real one who had grown into its likeness.

May you, strong in body, cultured in mind and selfless in soul, fix your minds and hearts forever upon our Rock of Ages and so serve His creatures high and low, and so grow into His image and then you will be ready for greatness.

Excess-Lands Limitation on Federal Irrigation

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. MILLER of California. Mr. Speaker, Dr. Carleton R. Ball, representing the legislative committee, Council of Social Action, Congregational Christian Churches, made an excellent statement in opposition to the bill that proposed the repeal of the land-limitation clause of the reclamation law—the so-called 160-acre clause.

This statement was made before a subcommittee of the Senate Committee on Public Lands. Under leave to extend my remarks, I include his statement:

EXCESS LANDS LIMITATION ON FEDERAL IRRIGATION

(Statement of Dr. Carleton R. Ball, representing the legislative committee, Council for Social Action, Congregational Christian Churches, submitted to the Subcommittee on Irrigation and Reclamation Projects, Senate Committee on Public Lands, May 1947)

The long-accepted principle of limiting the acreage of a single owner which may receive public irrigation water does not stand by itself alone. It is inseparably tied to the still older principle of devoting arable public lands to the service of the people and the Nation, as family-sized, owner-operated farms. Material is presented here under several subheadings, in order to make the story clearer and more complete.

A. THE STAND OF THE CONGREGATIONAL CHRISTIAN CHURCHES

Presented first is a policy statement on the proposed legislation to remove the long-maintained 160-acre limitation on public water for irrigable lands of a single owner on the lands of a single owner in the Central Valley project of California, and elsewhere. This was adopted by the Council for Social Action on April 5, 1947.

"The General Council of the Congregational Christian Churches in its biennial meeting of June 1946 urged the denomination to support the family-sized, owner-operated farm and called upon the Council for Social Action to concern itself with legislation which would strengthen the position of the family-sized farm unit.

"We believe in the soundness of the land policy which guided the framers of the Reclamation Act of 1902 and of all subsequent amending and supplementing acts to provide that delivery of water from Federal irrigation projects shall be limited to family-sized farm units not larger than 160 acres (or in case of joint ownership by husband and wife, not more than 320 acres).

"We believe that the present acreage limitations on water deliveries in the Central Valley project of California, the San Luis Valley project of Colorado, and the valley gravity canal project of Texas are sound legal provisions and necessary safeguards to the family-sized farms in these areas.

"We believe that the repeal of the aceage limitation provision of the Reclamation Act would expose the family-sized farms of these Federal irrigation projects to pressures which would seriously jeopardize their survival. Such action would vastly reduce any hope that as a result of the Federal reclamation works the number of family-sized farms in the Nation might be increased. There is a real possibility that such a policy, if adopted in respect to these three irrigation projects, would be an entering wedge for those who would then advocate the elimination of acreage limitation on all Federal irrigation projects.

"Therefore, we oppose S. 66, S. 912, H. R. 655, H. R. 656, and H. R. 2052 and all other bills designed to remove the acreage-limitation provisions of the Federal reclamation laws as applied to Federal reclamation projects.

"We further oppose Senate Resolution 21 calling for a senatorial investigation of the practices of the Department of the Interior in disposition of water in the Central Valley project of California, unless it be amended to provide specifically that the investigation shall include hearings conducted in the Central Valley at which spokesmen for the family-sized farm operators of the valley may be heard.

"We authorize the legislative committee of the Council for Social Action to prepare testimony on these bills and the resolution in accordance with this statement, and to present such testimony to the appropriate committees of Congress and to other public officials."

This policy statement represents principles long sponsored by our Congregational Christian Churches, as a body. In 1925 our national council declared in favor of family-sized, owner-operated farms, for the welfare of the farm population and the protection of society. Nor is this policy statement their only recent declaration. In March 1945 our legislative committee published its beliefs regarding a national land policy, as follows:

"We are concerned that all Federal activities with respect to land shall be such as to encourage and promote the operation of family-type (adequately sized, family owned and operated) farms, and to discourage other types.

"We urge the formulation of a national land policy by Congress. Such a policy should expressly reaffirm and declare the historic policy of encouraging and assisting families in the ownership of the lands they till. Such a policy should also discourage the development of large holdings, often absentee-owned, which force an ever large number of independent farmers to become tenants, sharecroppers, or migratory laborers.

"The increasing displacement of owner-operators from the farms, increase in the percentages of tenants and migratory agricultural families, wasteful exploitation of natural soil resources, and the development of the 'factory in the field' type of farming, are matters of grave public concern. The family type farms have long been stabilizers of social, civic, and moral attitudes in our culture. To conserve and increase such farms is to conserve and strengthen the forces of democratic citizenship.

"Specially, we believe that a workable national land policy should direct that in Federal legislation and operations with use of the land:

"1. Appropriations should be authorized and expended only when the interests of national conservation or of family-type farm ownership are promoted and protected.

"2. Agricultural lands now held in Federal ownership should be disposed of to private citizens only in tracts large enough for the adequate maintenance of the farm family, and should not be disposed of to private citizens who already possess an acreage sufficient for family needs.

"3. Provision should be made for the orderly retirement of submarginal farm lands, for the use of such lands for forestry, recreation, agriculture, or industrial use, and for the uniting of small holdings suitable for agriculture to form family-type farms.

"4. On all lands which depend upon Federally financed irrigation or flood-control projects, irrigation water in the future should be made available to landowners only for an acreage sufficient for a family-type farm and not for acreage in excess of that area.

"5. All practicable Federal assistance should be given to continued and increased operator ownership of family-type farms, through proper financial and informational help and guidance."

Our general council of Congregational Christian Churches, at its biennial meeting in Grinnell, Iowa, in June 1946, devoted one of its six sections to our rural situation. It adopted the section resolutions and urged the component churches (5,800) "to support the family-sized, owner-operated farm." Specifically, the churches were urged to create advisory committees to help their young people to settle on family-sized farms and to obtain tenure arrangements which would make ultimate ownership possible.

Our council for social action was asked to prepare a manual of suggestions and instructions for such committees. One of our boards was asked to consider the possibility of establishing a loan fund to aid in the purchase of such farms, and to cooperate with national agencies in sponsoring sound legislation and education for strengthening the family-sized farm unit. I cite these facts to show that our people are in dead earnest about these matters.

Our Congregational people always have been pioneers, following the frontier westward, obtaining land, and establishing their homes, their schools, and their churches. For them, this belief in, and support for, the family-sized, owner-operated farm is a product of 10 or 12 generations of experience.

We strongly oppose the pending bills to remove present restrictions on the single-owner acreage which may receive public irrigation water in the Central Valley project of California, or anywhere else. The public policy of America, from the founding fathers until now, has been to use the land and water resources of our country for the benefit of the greatest number of our people and not for the enrichment of a greedy and selfish few.

B. GOD SPEAKS AGAINST THE GREED FOR HUGE LAND HOLDINGS

Our Federal land policy of allotting public lands in family-sized units, for the benefit of the many, dates from the beginning of our Nation. The principle goes back to the beginning of history and bears the divine command and sanction of the Creator.

The tenth commandment includes: "Neither shalt thou covet thy neighbor's house, or his field * * * or anything that is thy neighbor's" (Deuteronomy 5: 21).

Taking away from 9 neighbors, or 90, or 900 neighbors, the opportunity to get a watered family-sized farm for each of themselves has exactly the same purpose and effect as coveting the farm the neighbor already has.

God has said: "The earth is the Lord's, and the fullness thereof; the world and they that dwell therein" (Psalm 24: 1). He certainly did not mean that the few shall have much of the land and the water and that His many shall have little or none of either. He still demands that His children shall have fair dealing. We hold that this proposed legislation is not fair dealing.

In those days, as now, His commands were not always heeded, and so we hear the Prophet Isaiah give dire warning to the greedy: "Woe unto them that join house to house, that lay field to field, till there be no room, that they may be placed alone in the midst of the land"; when in that far-off day God was showing his people the evils of increasingly large land holdings, with the selfish owner living in lordly solitude, and the many poor living in serfdom and squalor, with no opportunity to obtain a family-sized land unit and a sense of security. These nations have perished long since.

God's church today is not silent on the rights of humble citizens to share in the national land and water resources, or on the wrongs done by selfish groups in attempting to take away those rights. Many other religious bodies, both Catholic and Protestant, have spoken forcefully against the evils of land and water monopoly. Among these has been the Reformed Church, one of the bodies now forming the Evangelical and Reformed Church, with which the Congregational Christian Churches are in process of merging. Interdenominational national church bodies also have spoken.

C. ORIGIN AND DEVELOPMENT OF OUR NATIONAL LAND POLICY

From the English settlement of America until today, there has been a continuing struggle to obtain rights and opportunities for the common citizen. This has required continual effort to control the selfish demands of small but often powerful groups which seek to get much more than their share. These facts are as true in the fields of land ownership and water use as in other lines of human activity.

Our Congregational Pilgrims and Puritans came to Massachusetts not only for religious freedom but also to obtain economic freedom and opportunity. The Colony of Georgia was created as a haven for homeless and hopeless debtors. To all of the colonies lying in between, the spirit of hope brought immigrants. Many came as debt slaves, worked as indentured servants until their debt was paid, and then sought freedom, land, and security on the frontier. Orders of the Crown at times forbade migration and frontier settlement. Championing the rights of the individual against the selfishness of the powerful is nothing new to the Congregational or other religious bodies in America.

In colonial days, grants from the reigning monarch provided enormous land holdings for the nobles and other privileged persons (proprietors), and the law of entail kept these holdings intact. Some were as large as whole colonies. With the founding of the American Republic, the struggle for the right to own land took on new direction and impetus. Immediately after signing the Declaration of Independence in 1776, Jefferson introduced a Virginia bill abolishing entail and permitting estates to be sold. It was passed quickly and followed soon by others, including the abolishing of the law of primogeniture and thus permitting all heirs to share in an estate. Most of the other colonies took similar action.

Enormous areas of Crown lands soon became vested in the States. The Federal Government acquired a large body of public land by cession of such lands from several of the original 13 States. This land was situated in 30 of the present 48 States, or in all except the original 13 plus Maine, Vermont, Kentucky, Tennessee, and Texas. Land ordinances sponsored by Jefferson in 1784 and 1785 outlined the general principles of land policy in America for all time. The first provided for organizing States from this public domain and the second for surveying and selling the land. The Louisiana purchase, in 1803, insured a continuing land opportunity for American citizens.

The developing land policy of the United States was based, in general, on four convictions, namely: (1) That a new and struggling democracy must have the right sort of citizens; (2) that a freeholder makes a better supporter of democracy than a tenant or a serf; (3) that the opportunity to obtain public land would save many insolvent debtors from becoming a public burden; and (4) that land ownership promotes the stability of the family, the basis of democracy.

The young republic was poor and needed revenue. Some short-sighted leaders urged the immediate sale of public domain to speculators as well as homemakers. Others, more farsighted, urged that these lands be made cheaply available to settlers, in the faith that this was the best financail policy in the long run. Both plans were followed for many years, but gradually it became evident that pyramiding speculation and monopoly were preventing ownership of family-sized farms. By 1820, public clamor for farms for settlers on the public domain became strong and increased with the years.

The first large-scale result of the public indignation was the passage of the Predemptio nAct of 1841, which gave a settler the right to stake his claim on 160 acres of public land and make his legal settlement with the Government at a later date. Difficulties with settlement and title focused public sentiment on a more orderly homestead law. The idea was sponsored by national leaders in many walks of life and finally the Homestead Act was passed in 1862, the year in which the United States Department of Agriculture was created by Congress.

The Homestead Act finally and firmly established the principle of using the public domain to provide family-sized and owner-operated farms. This has become the economic and social ideal of America. From that time until now, this principle has never been a partisan issue. The national platforms of both major, and several minor, political parties have favored the conservation of land and water and have sponsored the fullest practicable development of the family-sized and owner-operated farm, both without and with irrigation.

D. DEVELOPMENTS AND ABUSES IN THE USE OF PUBLIC LANDS AND WATERS

The Homestead Act of 1862 insured that an adult citizen should have one opportunity to acquire, from the public domain, a family-sized farm, chiefly by his own labor. Several later amendments have held to this principle. Some have increased the acreage obtainable in the drier and less productive portions of the country, in order that the farm still might maintain a family. Irrigation legislation has provided for public irrigation water to limited acreages, varying from 10 to the present maximum of 160 acres for a single owner, under varying conditions. All this has represented a continuing recognition of the economic and social value of the family-sized farm and of the right of the people to the use and benefit of their natural resources.

These resources originally had an almost incalculable value. Economists have estimated that, if our forest and mineral resources had remained in public ownership no Federal taxes would have been necessary through all the decades of our history. That was before World War II, of course. Throughout our national history, unfortunately, there have been repeated attempts, some very successful, to defraud the people of America of their heritage in land and other resources.

The immense grants of public domain, between 1851 and 1871, to finance railroad companies in building lines into sparsely settled territory, were accompanied by congressional restrictions on the resale prices of such grant lands. Some of the larger railway companies receiving these valuable grants immediately engaged in the most scandalous and dishonest frauds to avoid these legal restrictions on sales and to obtain priceless forest and mineral lands in lieu of the granted lands of average quality paralleling their rights-of-way. These frauds constitute one of the most disgraceful chapters in American history. Within recent years, our Government has recovered some of the lands fraudulently obtained in Oregon but most of them were long since hopelessly lost to the American people.

Other speculator organizations bought up, often at little cost, the land scrip representing the Federal grants of land to aid the founding of a college of agriculture and mechanic arts in each State. By this means, and often through established dishonesty, they became the monopolistic owners of enormous land holdings, totaling many millions of acres and rivaling the fabulous Crown grants of colonial days.

E. THE LAND AND WATER POLICIES OF THE UNITED STATES DEPARTMENT OF AGRICULTURE

The land-use policies of the Department are well known and have been expressed for many years by the several agencies charged with action programs to help the people on the land. Among these agencies are the Federal-State Agricultural Extension Service, the Farm Credit Administration, the Farmers' Home Administration (formerly the Farm Security Administration), and, more recently, the Rural Electrification Administration. Much of the work of these organizations is intended, by congressional enactment, to insure that those farmers least able to help themselves shall have a fair chance at farm ownership and at better living conditions.

The water-use policies of the Department are much less widely known, because that Department has comparatively little direct responsibility in the field of irrigation. Two years ago (February 9, 1945), the then Secretary of Agriculture, Claude R. Wickard, now Director of the Rural Electrification Administration, discussed current agricultural problems before the District of Columbia Chapter of the American Society of Agricultural Engineers. Speaking specifically to the problem of the use of public water for irrigation, he said:

"Two fundamental principles underlie the Department's water policy for the West. One is the conviction that the ultimate goal of every irrigation project must be the welfare of the families who make their homes on the land. The other is a conviction that a water policy, to be fully effective, must be part of a comprehensive policy for wise use of all the Nation's natural resources."

"Irrigation projects must be so plotted and organized as to make new land available in adequate family-sized units, and to give settlers reasonable prospects of success.

"Speculation in raw land, due to the prospective increased value because of a project, should be prevented so that the increased cost of land may not offset the benefit from irrigation.

"There will be an even greater stimulus to the demand for productive farms of family

size when many of the farm boys who have gone to war return with the hope of entering agriculture. From all indications, the supply of suitable farms will run far behind the demand." (From Agricultural Engineering, 26 (4): 141–144, April 1945.)

F. THE WORK OF THE UNITED STATES BUREAU OF RECLAMATION

The United States Bureau of Reclamation has been charged, for 45 years, with the development of Federal reclamation projects and the enforcement of the regulations established by the Congress for their protection and control. These measures have been established primarily to insure family-sized, owner-operated farms and to protect against speculation, monopoly, exploitation, and fraud.

The Bureau obviously has been diligent in its performance of these duties. Recently it has issued a 100-page report on Land Ownership on Federal Reclamation Projects. This shows, among other things, that the intent of the many acts of Congress has been achieved, and that the vast majority of the holdings on these projects are family-sized, owner-operated farms, mostly 80 acres or less. It shows further that the excess holdings still existent constitute a very small fraction of the total.

One of the plausible arguments advanced by the proponents of these bills is that the present acreage limitations are unenforceable. The Central Valley project is by no means the first on which this problem of large land holdings has been met. The survey mentioned shows that it has been solved on these other projects. It can be solved on the Central Valley project. All laws are reasonably enforceable if the legislating and enforcing officers are honest and efficient and the public is vigilant.

The present national policy of land and water use for the benefit of the many is right and therefore sound. To legislate for the advantage and enrichment of a selfish few at the expense of the humble many is wrong and no amount of argument can make it right or sound.

The specious claim is made that, under present acreage limitations, the large land holders will get a free ride by pumping overflow, seepage, and percolating project waters from wells and thus irrigating their excess lands. This question doubtless will be handled by the experts on ground water. Past history in California and elsewhere does not bear out this claim.

G. THE PROBLEM IN THE CENTRAL VALLEY OF CALIFORNIA

The present rules applying in the Central Valley project forbid the delivery of water to a single farm owner for use on more than 160 acres of land (or 320 acres in case of joint ownership by man and wife). If an owner holds more than this acreage of land, he has two options. He may retain the larger acreage but receive water for only 160 acres, using the remainder for dry-land purposes. Or he may enter into a contract with the Reclamation Bureau to sell the excess acreage within 10 years and at a price which does not reflect the increased value added by the presence of water for irrigation purposes. Similar precautions were established in the large dry-land areas which may ultimately receive water from the Grand Coulee project in Washington. Undoubtedly this has prevented tremendous exploitation of the uninformed landseekers.

Numerous attempts have been made by special interests to evade this limitation in California or to obtain its repeal. We now face another such attempt to change the law. Typical of the farmers opposing the acreage limitations of the water law are the Kern County Land Co., which owns about 1,000,000 acres of farm land in the United States, and of which about 200,000 acres are irrigable acres in the Central Valley of California. In earlier years the Miller & Lux Co. owned practically a continuous block of land from the Mexican border to the Canadian boundary. Another example is the Anderson Clayton Co., reputedly the world's largest cotton grower, which recently bought a 54,000-acre farm in the Central Valley.

The basic issue at stake here is whether the Central Valley project of California is to be farmed in many family-sized units or exploited by a few large land corporations. If these bills pass, the family-sized farm is virtually doomed in the Central Valley. No one questions the fact that 160 acres is much more than ample for a family-sized farm unit under those conditions. That limit has already been breached in the 320-acre man-and-wife authorization. The pending bills represent the next step and must be stopped.

Worse still, the entire national land and water policy in favor of the family-sized, owner-operated farm is jeopardized. If the limitation is broken in the Central Valley, a flood of proposed legislation to break other limitations elsewhere is absolutely certain. Now is the time to settle this problem decisively and permanently.

Earl Bunting, president of the National Association of Manufacturers, in a radio address from Winchester, Va., on March 29, 1947, is quoted in the press as saying:

"There is no room in our future for selfish interest. What is good for the public is good for every group; any group that grabs more than its share destroys its own future, just as it destroys the greatest opportunity all of us ever had to achieve prosperity for all."

Public Affairs Pamphlet No. 100, entitled "Small Farm and Big Farm," presents a most striking contrast of conditions in two comparable farming communities in California. They are quite comparable in size, population, and their irrigated farming industry. Arvin is an area of large farms, averaging 497 acres. Dinuba is an area of small farms, averaging 57 acres. The table below shows the many striking contrasts in the two communities:

Items contrasted in the two communities	Arvin	Dinuba
1. Average size of farms	497 acres	57 acres.
2. Total population	6,300	7,800.
3. Tributary trade area	70,000 acres	77,000 acres.
4. Ratio of independent farmers to wage hands	1 to 4	1 to 1.
5. Total retail trade (October 1942 to September 1943)	$2,534,000	$4,317,000.
6. All business establishments	60	156.
7. Banks	0	2.
8. Newspapers	1	2.
9. Schools, grade	1	4.
10. Schools, high	0	1.
11. Service and commercial clubs	2	5.
12. Fraternal and women's clubs	0	7.
13. Veterans organizations	0	2.
14. Churches	6	14.
15. Streets, condition as to paving	None paved	Almost all paved.
16. Sidewalks	None	General rule.
17. Housing conditions	Very poor; lots small	Generally adequate.
18. Expenses for household goods and liquor	$103 to $100	$232 to $100.
19. Delinquency, youth and juvenile	Fairly serious	Almost nonexistent.
20. General character of community	More like a camp	A real community.

There is a startling contrast between the two communities in the relative prevalence of those things which make for a satisfying home, family, and community life. Large farms: Low ownership, insecurity of the many, poor homes, and lack of community development. Small farms: High ownership, economic ability and security, and a high development of those things which make for satisfying home and community life. The family-sized, owner-operated farm is basic to the American way of life. Large land holdings, with high ratio of tenants and wage hands, living under comparatively poor conditions, undermines and destroys the American way of life.

Congress Should Scrutinize Railroad Reorganizations

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. REEVES. Mr. Speaker, during this session of Congress many Members of the House have received a large amount of correspondence about railroad reorganizations from stockholders and bondholders alike who have waited patiently through many years of bankruptcy reorganizations to find out what, if anything, their holdings are worth. Necessarily the evaluation of equities and the satisfaction and adjustment of various classes of mortgage obligations and other indebtedness of impaired railroads, often in derogation of the interests of common stockholders, is a complex and tedious process. But it ought not to require half a generation to accomplish.

In justice to those who hold railroad securities, whether stock or bonds or debentures, and in the public interest, the reorganization of a railroad company ought to be conducted and completed expeditiously, as Congress plainly intended in enacting legislation for the purpose. Nothing should be sacrificed by haste; but neither should the rights of interested parties be prejudiced, and the soundness of the national transportation system jeopardized, by unnecessary delay. It is regrettable that the prolonged delays in such proceedings have created doubt as to their effectiveness and questions as to their administration.

As long ago as 1935 the Supreme Court recognized this situation in an opinion which said, in part:

The delay and expense incident to railroad receiverships and foreclosure sales constitute probably the chief reasons which induced the passage of section 77; and to promote the perpetuation of these evils under this new legislation would be subversive of the spirit in which it was conceived and adopted.

Notwithstanding this declaration of judicial policy, it required 9 years to bring the Northwestern Railroad reorganization to a conclusion on June 1, 1944, and 10½ years to conclude the Chicago, Milwaukee, St. Paul & Pacific proceedings in December 1945. The marathon pro-

ceeding is that of the Chicago, Rock Island & Pacific reorganization, begun in June 1935, and now in its fifteenth year. In the last case the reorganization plan has been approved and will terminate the proceedings in the course of several months.

Some of these proceedings and the formulation of reorganization plans are bitterly and expensively contested. In the Rock Island case particularly bad feeling developed. A review of the record suggests that that proceeding might have been brought to an end much earlier.

In June 1943 the district court approved the Rock Island plan—50 Federal Supplement 835—with the exception of two relatively minor matters, one involving a disputed allotment of a block of shares of the new common stock as between contending classes of bondholders, and the other making the appointment of the reorganization managers by the creditors subject to ratification by the court. The decision on these two matters required action by the Interstate Commerce Commission, and the court returned the plan to the Commission for that purpose.

On May 1, 1944, the Commission returned the plan to the court with these two matters adjusted in accordance with the opinion of the district court. Final approval of the plan was at that point presumably a matter of course and should have followed without delay. Nevertheless, 13 months elapsed before the court took action. On June 15, 1945, the court approved, without change, the plan which had been before it for more than 13 months. I am unable to find any explanation for this long delay. But this was still not the end of the road.

The district judge's order of approval of the plan was affirmed by the circuit court of appeals on May 23, 1946. Confirmation in the district court should have followed immediately and as a matter of routine upon receipt of the mandate of the appellate court. Instead, in disregard of his former decision and the decision of the circuit court of appeals—and, incidentally, of the opinion of the Supreme Court in Denver & Rio Grande Western case, handed down June 10, 1946—the district judge refused to confirm the plan and on June 28, 1946, sent it back to the Interstate Commerce Commission which had long since completed its work on it. His opinion cited as reasons for his action matters which the Supreme Court had just held were immaterial and other matters which had occurred before his first approval was given in June 1945.

An appeal was again taken, and the circuit court of appeals rejected the reasons given by the district court and directed the district judge to confirm the plan of reorganization. This mandate should have settled the matter forthwith. But it did not.

Instead of obeying the plain language of the mandate, the district judge entered a "conditional order of confirmation," stipulating that he, the district judge, and not the creditors, should have the right to select a majority of the reorganization managers. This condition was attached by the district judge notwithstanding a decision by the circuit court of appeals that a district judge had no power to alter the provisions of a plan of reorganization which gave the creditors the right to select reorganization managers.

The bondholders in the Rock Island case again applied to the circuit court of appeals. That court promptly ordered the district judge to confirm the reorganization plan as it stood and to expunge his conditions. Only then did the district judge comply.

The almost endless controversy which attended the proceedings throughout was bad enough, but much of the delay in bringing the proceedings to a close at the proper time appears to be attributable to both the action and the inaction of the district judge. Not only did the prolonging of the proceedings work an injustice on all classes of stockholders and bondholders, and a hardship on the railroad itself, but public charges against the district judge and one of his trustees of delaying tactics, whether or not well founded, cast reflection upon the whole administration of the reorganization and upon the effectiveness of the Reorganization Act. In this connection the court of appeals spoke with considerable asperity of the delay permitted by the district judge, and was sharply critical of the attitude and conduct of the trustee appointed by the district judge in delaying the reorganization and attempting to organize opposition to the plan. In this connection, I include at this point in my remarks an article which appeared in the Chicago Sun on June 21, 1947, one of numerous articles which appeared in newspapers in Chicago and elsewhere:

ROCK ISLAND GROUP FAILS TO OUST IGOE

Senior bondholders of the Chicago, Rock Island & Pacific Railway yesterday lost their fight in the United States circuit court of appeals to have District Judge Michael L. Igoe removed as administrator of the bankrupt road's reorganization.

While refusing to displace Judge Igoe with a circuit court judge, Evan A. Evans, the senior jurist of the circuit, sharply criticized two aspects of the lower court's handling of the case.

HE FINDS UNDUE DELAY

He found there has been undue delay in the reorganization. And he censured in detail actions taken by Aaron Colnon, appointed by Judge Igoe as one of the two Rock Island trustees.

"This long stay of the railroad (on the court dockets) is not complimentary to the courts," Judge Evans said. "Fourteen years is, in the writer's opinion, too long for any receivership or bankruptcy proceedings, longer than necessary to reorganize any debtor."

COLNON'S ROLE ASSAILED

Colnon, the court found, "has said and done things which would possibly justify a conclusion that he has been bent upon delaying the execution of the reorganization plan, changing it to the interest of the junior creditors to prolong the period of reorganization.

"Statements made by Mr. Colnon indicate he has misconceived his duties and entertains magnified ideas about the part he is to play in this reorganization."

NEW YORK TRIP QUESTIONED

"His duty (as trustee) was to represent all creditors, not one group. I fail to understand his motive in going to New York and arranging a meeting of stockbrokers in an effort to stir up opposition to the plan, a closed matter so far as he was concerned."

The reference to Colnon's New York trip related to a visit the trustee made there while the case was before Judge Igoe. Colnon also appeared in Washington before congressional committees considering changes in the application of bankruptcy laws to railroads.

UNITED STATES STATUTE PERMITS MOVE

In their plea for Judge Igoe's removal the bondholders acted under a Federal law making such a move possible where the public interest is at stake.

Edward W. Bourne, their attorney, charged that Igoe had caused a needless delay of 2 years in the already prolonged and involved litigation.

In rejecting the petition the court pointed out that any action of Igoe's is subject to established appeals procedure. Evans' own ruling of yesterday also may be appealed to the Chief Justice of the United States.

Mr. Speaker, it seems to me that Congress ought to review in detail the administration of all railroad reorganizations under section 77 in an effort to determine whether legislative action can be taken to expedite and improve them. Certainly special and thorough scrutiny should be given to the Rock Island reorganization in the light of Judge Evans' opinion and the particularly aggravated circumstances of that case. The interests of the public and all other parties concerned should not be prejudiced either by a deficiency in applicable legislation or by purposeful delay.

German Reparations

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. GRANT of Indiana. Mr. Speaker, under the unanimous consent granted by the House, I submit herewith a manuscript on the subject of German reparations.

It is one of the most thought-provoking documents that has come to my attention during these troubled times.

It was prepared by a German-born American citizen, an engineer, who, for obvious reasons, prefers to remain anonymous. He did very important work for the armed forces of the United States during World War II. His mother was killed by the Nazis.

His document follows:

HOW TO GET REPARATIONS OUT OF GERMANY—A SUGGESTION FOR THE PARTIAL SOLUTION OF A BIG PROBLEM

The war with Germany has been over for almost 2 years and, as the present Moscow Conference shows (April 1947), the problem of reparations to be paid by Germany is by no means solved.

The vicious circle seems to be that in order to pay reparations the German industry has to be revived and thereby its war potential will have to be reestablished. Besides the economic chaos of Germany, its lack of communication facilities, transportation, raw materials, and food will for some time to come

absorb all possible production to take care of Germany's own minimum need.

As in similar problems, the magnitude of the problem and the apparent impossibility of solving it with one big formula tends to paralyze the minds of those who are faced with having to arrive at a solution.

But perhaps if one restates the problem and, being less ambitious, limits oneself to a partial solution, it is possible to arrive at an attack to the over-all problem.

The purpose of these notes is to make this attempt.

In engineering practice it is customary to establish first a list of desirable features to be incorporated into the design of a new device and during the process of the development to modify these specifications in the light of necessary limitations. We shall make an attempt to follow similar procedures and afterward see whether our proposed solution fulfills the requirements of our established goal.

We start with the premise that Germany, having started this world war, is morally and economically responsible for its consequences and that it owes to its victims a sincere effort to relieve their suffering and losses.

The goods or products to be turned over by Germany should be such that—

(a) Their production does not call for facilities which re-create the German war potential.

(b) Their export does not deprive Germany of her minimum living standard.

(c) If possible, the exported goods should be of such a nature that Germany has a surplus of them and can replenish them.

(d) The exports of Germany should not compete with the economical efforts of its recipients.

(e) There should be an incentive for the Germans to live up to their commitments rather than an incentive, as after the First World War, to avoid the fulfillment of their obligations.

(f) Its moral justification is to be so evident that all classes of Germans will not only participate but also endorse the effort as one possibility to compensate a conscious or subconscious feeling of responsibility for what has happened.

(g) It should be a constructive scheme which will combine the efforts of Germany with those of the world and thereby give her a chance to reestablish her position in the family of nations.

(h) It should attract those intellectual leaders who in generations to come will influence the thinking and then the destiny of their fellow citizens.

(i) Last, but not least, the products should be of such general nature that they are needed equally by all of the former allies.

A glance at this formidable list may produce a sense of defeatism, as it appears almost impossible even to hope for a solution which will fulfill all or even part of the above requirements.

The proposed attack to the problem, however, seems to satisfy so many of them to such a high degree that it will be worth while at least to check its possibilities and consider its potentials.

THE PROPOSED SCHEME

The proposed scheme is extremely simple and could be tried out immediately on any scale involving a few hundred people or a few thousand. It could—which is also of importance—be stopped at any given moment if the results obtained are not satisfactory.

In its simplest form it proposes to ask Germany to pay part of her debt to the world by research in fields which will decrease the suffering of the world.

We shall now take up each specification individually to see whether or not our simple scheme fulfills these requirements.

(a) Their production does not call for facilities which recreate the German war potential.

It may be agreed that research in general offers to a nation the means for fighting a war. As an example, the rockets V–1 and V–2 and the atom bomb—just to mention the most dramatic examples—will be cited. But basic research will go on independently of whether the Germans are permitted to participate in it, and basic research means a world-wide exchange of knowledge between those engaged in it.

Even if, as in the present moment, military applications of the results of such research are kept a secret in some instances, there seems to be a general agreement on the point that this secrecy is a temporary expedient and cannot be preserved for any length of time.

It is for that reason that all universities have, since the Middle Ages, attracted an international body of research students and teachers and have objected most vigorously to any attempt of censoring this work.

It is true that in the last analysis everything has a potential war application—every child born, every plant that grows, education in general—but unless one is willing to accept the alternative of complete extermination of a people (the one chosen by Hitler with regard to Jews) one has to limit oneself to the obvious.

This means that it would not at this time be advisable to give to the German research workers an applied military research project like the atom bomb, guided missiles, or rockets (as it is being done now in White Sands where imported scientists are at work for us), but to let them work on basic problems which are fundamental in nature and whose results perhaps are not immediately lucrative.

Just to give a few examples:

(a) Cancer research is one which would, if enough talent with unlimited funds were applied to it, finally save more lives than those destroyed by this war.

(b) In general, medical research—heart, lung diseases, tuberculosis, and so forth—is a field in which the Germans have already shown considerable success.

(c) Basic mathematical research, astronomy, physics, chemistry. These are unlimited fundamental problems, never seriously attacked for want of money, time, and manpower.

Without going into more details at this point it seems that such research guided into the proper channels would fulfill the above specification not to contribute to a rearmament of Germany.

(b) Their export does not deprive Germany of her minimum living standard.

The proof that this condition is fulfilled by the above scheme is obvious.

Let us assume such a research project would occupy a few thousand people eventually. Even if they would have to be completely supported by the rest of the German community their percentage consumption would be almost negligible.

Unlike an export of coal, grain, steel, clothing or consumers' goods, the goods exported in the form of test reports neither calls for any strain on shipping facilities nor does a single person suffer hardship from the export of such a commodity.

(c) If possible, the exported goods should be of such a nature that Germany has a surplus of them and can replenish them.

This evidently is also the case if the product is research. German scientists have had and still have a reputation of being outstanding in their fields.

It appears to be part of the national character which was once defined as a tendency to be systematic without a sense of reality. This attribute, most dangerous in politics, is a great asset in science, which is a structure with an artificial reality of its own.

In research we have one of the few cases where the amount of returns is inexhaustible. Any amount of work already done just strengthens the foundations upon which future work can be built.

On the other hand, if Germany were to export food, coal, or other consumers' goods, she would deprive herself of her minimum needs; consequently something else would have to be given her in exchange to keep her population alive. (At present Great Britain is paying $500,000,000 a year in reversed reparations just to avoid chaos.)

(d) The exports of Germany should not compete with the economical efforts of its recipients.

If, for instance, Germany were made to modernize our domestic railroad system (a very desirable improvement, no doubt), the result would be a serious dislocation of our own industries which supply this service to the railroads.

Experience of the prewar years showed that the objections raised against import of scientists (refugees) to this country were justified to a certain degree as by necessity their employment competed with that of United States citizens.

There are only a limited number of top-rank research jobs available in our country (owing to limitations in funds). By filling these with imported scientists (who may be very gratified to do the job), this opportunity is taken away from these American scientists. The case is identical to the competition of reparation locomotives with the products of our own plants.

The export of basic research data, however, is of an entirely different character. The more data are made available the better can our own scientists build up their own applied and basic research and development as the foundation is strengthened.

Thus the payment of reparations by research in the form of test reports, which would be made available in translations (furnished by the Germans) to all members of the Allied Nations, would only benefit but not compete with our own research endeavors.

In this connection it may be pointed out that our country could greatly benefit by reprinting some of the scientific literature published by the Germans before the war. The translation into English as part of this reparation program would be of immeasurable value. (During the war the Alien Property Custodian reprinted a number of German publications, but as they were in German, their value was limited to those who were familiar with the German language.)

(e) There should be an incentive for the Germans to live up to their commitments rather than an incentive to avoid the fulfillment of their obligations.

After the last war, enforced reparations in the form of consumers' goods were most demoralizing for German industry, as industry was working on a cost-plus basis and as, owing to lack of supervision, wherever possible either inferior quality was furnished or charges thrown into the reparations account which did not belong there.

In the case of a research organization as proposed, all charges would go to reparations and the product would be carefully inspected by the most expert type of inspectors—the international fellow scientists.

As the scientific reputation of those who publish the reports is at stake, there is an incentive of the strongest kind to do a good job.

But beyond this, the incentive to have practically unlimited research facilities available to do a job of research that very few scientists have ever been privileged to handle will attract the best minds.

In particular, as this is no slave labor but a service which not only will benefit the scientist but all of humanity and last but not least also their own people (medical science

is the most obvious example), there is not only a strong incentive to give the best but a very strong incentive to succeed over all obstacles.

Such research work calls not only for brains but also for laboratory equipment—test setups which are usually outdated as soon as completed. This is one of the reasons for the high cost of research.

Therefore, such a laboratory will employ a considerable staff of craftsmen, who would build individual research apparatus in lots of one (or in a small number, if a laboratory of the Allies would want to obtain such equipment). The development of such special equipment is usually most uneconomical, so that it is in general avoided; or if it has to be obtained, its effect on the research budget is catastrophic, thus limiting its application.

The employment of such talent for peaceful purposes with the greatest ease of supervision is considered as one of the major advantages of the proposed scheme.

(f) Its moral justification is so evident that all classes of Germans will not only participate but also endorse the effort as one possibility to compensate a conscious or subconscious feeling of responsibility for what has happened.

The plan has not only economical possibilities.

A great number of the German scientists who were forced by the Nazis to fall in line felt deeply the responsibility of Germany for the suffering which resulted from her foreign and domestic acts of aggression.

If, by participating in this research project, they can contribute to a relief of these sufferings (again the cancer problem, or the development of new sources of food), they will feel that they are doing something constructive and thereby atone for their feelings of responsibility—if not guilt.

To cooperate—or rather to be permitted again to cooperate—in that international nonpolitical catholic group of scientists will restore their personal self-respect and make them less willing to lend their services to any underground movements which are likely to develop in one form or another.

It should not be forgotten that many research projects can be carried on in many fields with relatively small means and that such work can easily be carried on in secrecy. By giving these opportunities of rehabilitation it can be expected that the country's foremost talent will be attracted and will work in the open where their activities are easily checked.

The importance of this cannot be overemphasized. By giving liberal scholarships to Allied and American students to participate in such work two additional advantages are gained:

1. First, a unique training of our own scientist students—a training which includes a knowledge of Europe and the European mind.

2. Second, the German top scientists and technicians will learn from personal experience the habits and the democratic ways of the western nations. This experience in itself will be most beneficial as it will mean a participation in a practical experiment of democracy free from political prejudices.

(g) It should be a constructive scheme which will combine the efforts of Germany with those of the world and thereby give her a chance to reestablish her position in the family of nations.

This point has already been stressed. By giving the Germans a chance to show what they can do, applying their talents for the benefit of mankind rather than for its destruction, it will contribute eventually to their return to the family of nations and establish new international links on the highest possible level.

The leaders of tomorrow—coming out of an experimental laboratory, whose fair play and ability will be the only key to success—will be expected to bring to their tremendous task of rebuilding Europe a new, healthier approach than their predecessors.

The experience of working together with an international group of students cannot help but broaden their horizons.

Thus it can be hoped that out of this group will be recruited some of the men whose influence could change the attitude of a misguided country.

(h) It should attract those intellectual leaders who in generations to come will influence the thinking and then the destiny of their fellow citizens.

This point has also been discussed in connection with other specifications.

To make the idea workable, it is suggested that the research foundation provide additional laboratories for the scientists of the United Nations who will rotate in presiding over the project until it is decided to invite in turn one of the German professors.

This would not only give an opportunity to those Allied professors who want to study particular phases of science for which funds are rarely available but also establish a personal exchange of ideas on the top level, while giving a living example of democracy at work to those German students who will be admitted to participate in the experiment.

As all expenses will be carried on reparations by the Germans, no cost to the American taxpayer will result, and at the same time the selection of those Germans who are to participate can be made only on the basis of scientific ability and capability of working constructively in a group.

It will be easy to weed out those who in any way sabotage or delay the success of the experiment.

(i) Last, but not least, the products should be of such general nature that they are needed equally by all of the former Allies.

In most of the political discussions about reparations there was a natural competition among the Allies regarding the products to be obtained from the Germans.

For instance, food going to Russia has forced the British to ship their own food to western Germany—a strain which England can hardly stand much longer.

The results of basic and applied research are, as previously stated, noncompetitive. The people of Russia are just as much interested in combating cancer, venereal diseases, or tuberculosis as any other nation in the world.

Experiments in river and flood control, soil conservation, agricultural developments, mining, basic research in physics and chemistry, biology, history, even in the arts—all these things are of common mutual value and any success in these fields will benefit the whole world.

If one only watches the difficulty with which money is being raised in the battle for cancer control, where a few million dollars are already a terrific program only a few institutes can afford, one wonders what could be done with the reparations fund of a few billion dollars, which Germany could easily pay in this field without exhausting her resources and without costing a cent to the Allies.

CONCLUSIONS

The trouble with this approach seems to be that it appears to be too perfect. Somewhere there must be a flaw in this picture.

But, even if the experiment fails—and it is to be believed that Germany has the greatest possible interest in making it a success—then it would be very easy to dissolve the laboratory.

Again, no dislocation of an important industry or a part of the population would result. The equipment could easily be transferred to other universities or laboratories of the Allied Nations.

As a practical suggestion it may be desirable to attach such a research center to one of the old universities like Göttingen or Heidelberg, whose records, background, and traditions will give the venture not only weight but at the same time link the past with a better tomorrow.

Democratic Headquarters Plans Small Purge—Only 126 Members of Congress

---

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Republican News for July 1947:

DEMOCRATIC HEADQUARTERS PLANS SMALL PURGE—ONLY 126 MEMBERS OF CONGRESS

Once again headquarters of the Democratic National Committee announces a purge of Congressmen not following the New Deal-PAC line. In this purge, 20 Democratic Senators and 106 Democratic Representatives are read out of the party, and doorbell ringers are told to visit their constituents.

The sentence was passed on the Congressmen by Gael Sullivan, Chicago Kelly protégé who now is stand-in for Democratic Chairman Hannegan in the role of executive director of the Democratic National Committee. Sullivan writes in the current Capitol Comment, official newsletter of the party, in best PAC copybook style that the Taft-Hartley labor law was passed by the reactionary axis in Congress.

Sullivan advises Democrats to ring doorbells and get out the vote in behalf of the axis (Wallace-Hannegan) which opposed passage of the law. He says the vote on the labor law sharpened the cleavage between the two parties.

In such a cleavage, the 20 Democratic Senators and 106 Representatives could no longer be considered Democrats because they voted for the law and to override the President's veto.

Furthermore, Sullivan is quoted by the top-flight Capitol correspondent of the New York Herald Tribune, Bert Andrews, as saying that every word in the article had been read and approved by Mr. Truman.

The projected Democratic purge is reminiscent of and thoroughly consistent with earlier New Deal purges over the court-packing plan of 1938 and the Case labor bill of 1946. A successful purge by the Democratic National Committee would eliminate the whole congressional delegation from Arkansas, and nearly all of those of Georgia, Louisiana, North Carolina, Texas, and Virginia.

These presumably unhappy wretches in Sullivan's Domesday Book for the 1948 primary are:

Alabama: Representatives BOYKIN, GRANT, ANDREWS, HOBBS, RAINS, JARMAN, MANASCO, JONES, and BATTLE.

Arkansas: Senators FULBRIGHT and MCCLELLAN; Representatives GATHINGS, MILLS, TRIMBLE, CRAVENS, HAYS, NORRELL, and HARRIS.

California: Representatives LEA, ENGLE, and ELLIOTT.

Florida: Senator HOLLAND; Representatives PETERSON, PRICE, SIKES, SMATHERS, HENDRICKS, and ROGERS.

Georgia: Senators GEORGE and RUSSELL; Representatives PRESTON, COX, PACE, CAMP, DAVIS, VINSON, WHEELER, WOOD, and BROWN.

Kentucky: Representatives GREGORY, CHELF, and CHAPMAN.

Louisiana: Representatives HÉBERT, BOGGS, DOMENGEAUX, BROOKS, PASSMAN, LARCADE, and ALLEN; Senators ELLENDER and OVERTON.

Maryland: Senators TYDINGS and O'CONOR; Representatives MEADE, FALLON, and SASSCER.

Mississippi: Representatives RANKIN, WHITTEN, WHITTINGTON, ABERNETHY, COLMER, and WILLIAMS.

Missouri: Representatives BELL and ZIMMERMAN.

New Mexico: Senator HATCH; Representative FERNANDEZ.

North Carolina: Senators HOEY and UMSTEAD; Representatives BONNER, KERR, BARDEN, COOLEY, DURHAM, CLARK, DEANE, DOUGHTON, JONES, BULWINKLE, and REDDEN.

Oklahoma: Representatives STIGLER, ALBERT, MONRONEY, and PEDEN.

South Carolina: Senator MAYBANK; Representatives RIVERS, RILEY, DORN, BRYSON, and RICHARDS.

Tennessee: Senators MCKELLAR and STEWART; Representatives GORE, EVINS, PRIEST, COURTNEY, MURRAY, COOPER, and DAVIS.

Texas: Senators CONNALLY and O'DANIEL; Representatives BECKWORTH, WILSON, TEAGUE, PICKETT, JOHNSON, POAGE, LUCAS, GOSSETT, LYLE, WEST, BURLESON, WORLEY, MAHON, KILDAY, and FISHER.

Virginia: Senators BYRD and ROBERTSON; Representatives BLAND, HARDY, GARY, DREWRY, STANLEY, ALMOND, HARRISON, and SMITH.

Committee O. K. for Rayfiel is Simple Justice

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. ROONEY. Mr. Speaker, I know that every Member of this House, regardless of party affiliation, is happy as the result of the other body's confirmation of the nomination of our distinguished colleague, Hon. LEO F. RAYFIEL, to be United States district court judge for the eastern district of New York. I feel that I express the sentiment of every Member of this body when I say that we wish him a long and happy judicial career. He is the great son of a great father who served as a justice of the court of special sessions of the city of New York for many years and with eminent distinction. I am happy to say that Congressman RAYFIEL'S father is alive today at the age of 86 years to experience the thrill of his son's ascendancy to the Federal bench.

Under the leave granted me, I include an editorial published in the Brooklyn Eagle of July 22, 1947, the day before Congressman RAYFIEL'S confirmation on the floor of the other body. It accurately describes what the people of Brooklyn think of him. We all wish him Godspeed in his new career.

The editorial follows:

COMMITTEE O. K. FOR RAYFIEL IS SIMPLE JUSTICE

The action of the Senate Judiciary Committee in approving the nomination of Representative LEO F. RAYFIEL to succeed the late Judge Grover M. Moscowitz on the Federal bench in this district is good news to Mr. RAYFIEL'S many friends and supporters.

To the Eagle and all those who really know the ability and character of the nominee, the decision of the committee which virtually assures favorable action on the floor of the Senate is simple justice too long delayed.

Some of the statements by opponents of the nomination, which was made by President Truman at the recommendation of the local Democratic leader, Borough President Cashmore, were extremely unfair. Without advancing any evidence there were broad intimations of incompetence.

Representative RAYFIEL'S record was the answer to all this, and it was noteworthy that opposition by the State bar association was offset by warm support by the Brooklyn and Federal bar groups. Also the high praise by such leading jurists as Court of Appeals Judge Conway, Appellate Division Justice Carswell, and Supreme Court Justice Walsh obviously made a deep impression.

In addition to the high character and knowledge of the law, Mr. RAYFIEL has, in our opinion, just the judicial type of mind to make him a fine, sympathetic, and impartial judge.

Modernize Our Presidential Election—IX. Election of the President in the House; Electors Useless; a Separate Vote for the Vice President; a Plurality Elects

EXTENSION OF REMARKS

OF

HON. CLARENCE F. LEA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. LEA. Mr. Speaker, a very objectionable feature of our present method of electing the President is that which sometimes leads to the election of the President in the House of Representatives. In case no candidate for President secures a majority of votes in the electoral college, the election is thrown into the House. This is done even though one of the candidates might have a majority of the total popular votes of the Nation.

Election in the House is confined to a vote among the three highest candidates as voted for in the electoral college.

Under the twentieth amendment, Congress may provide for the case of a death of any of the persons from whom the House of Representatives may choose a President, when the choice devolves upon the House. The same is true as to the election in the case of a candidate where the Senate must choose a Vice President.

At an election in the House, each State has 1 vote only, regardless of its population. That 1 vote is controlled by the majority of the Representatives of each State voting. If there be a tie, the State has no vote.

In voting, every State is the equal of every other State. One State with 300,000 people has an equal voice with a State with 10,000,000 population. This method of electing the President is about as improvident as any that could now be conceived of for such purpose.

In order to elect it is necessary that the candidate receive a majority of the votes of all the States participating.

Congress has 86 Members as a total representation in the House of 25 States, a majority of all the States. It is possible, but not probable, that the majority necessary to elect the President could be made up of 25 of the small States, which have only 20 percent of its membership. So if we had the election of the President in the House it would be within the power of those 25 States to elect a President, over the will of the people of the United States and over the will of 80 percent of the Members of the House.

When this question was up in the Constitutional Convention, after a provision had been adopted to elect the President by States, a motion to require that it should also be necessary to get a majority of the whole vote of the House was rejected. The small States were riding with a strong hand and they refused to concede that much to the large States.

So we had the situation of 1800, when the election between Jefferson and Burr was thrown in the House. The Federalists had a majority in the House. Many proposals were made to Jefferson to try to get him to yield certain things to the Federalists, if they would elect him President. One proposal made to Jefferson was that if he would retain in office all of the Federalist employees, they would elect him. Jefferson replied, in substance, that he did not want to become President in that way, and refused the offer. Finally, it was through the action of patriotic men who were willing to forego what they regarded as a political advantage, for the sake of the country, and who refused to vote and thereby permitted the election of Jefferson.

In 1824 the election was thrown in the House again and accompanied by much turmoil and a degree of scandal. The country was bitterly aroused and finally the House elected Adams instead of Jackson, who appeared to be the choice of the people. There was much resentment. The result was, in the following election, some Members who voted to seat Adams were defeated for that reason. Part of the people thought those Members of the House had betrayed their trust; that the House should have carried out what they regarded as the will of the people of the Nation instead of their party or personal motives. It was an unfortunate instance in the history of our country. Henry Clay, long an enemy of Jackson, was made a Cabinet member after joining in the election of Adams. The charge of a bargain remained a cloud on Clay's career even to his dying day, although his opposition to Jackson was, no doubt, an expression of his true feeling rather than a mere means of keeping a bargain to help himself.

There have been instances in which one party had a majority in the House and another party a majority of the States. The minority party thus would be able to elect over the majority represented in the House and over a majority vote of the people of the Nation.

The fundamental evil running through this whole plan of electing in the electoral college and in the House is the absence of any accurate or assured way of reflecting the public will.

Our country had experiences in settling these deadlocks as to the President in 1800, 1824, 1876, and as to the Vice President in 1836.

In each of these controversies as to the selection of a President, public turmoil and great bitterness developed. Even Jefferson is quoted as having said in 1800 that the people would arm, if necessary, to assure themselves that the President they had intended to elect should be installed.

The conflict of 1824 was one of the notable ones of our history in peacetime.

The contest of 1876 was likewise a bitter one that greatly disturbed the country.

One primary weakness of the situation is placing in the hands of a few men the responsibility of deciding who shall be President of this Nation.

We had a long experience in selecting Senators by the State legislatures, where the power of making such selection was left to the members of the legislature.

In some instances, even one man or a small number of men had the power to elect or defeat. That developed trades and scandalous reports.

A history more current with the time of the election of Senators by the legislatures stated reasons for the change of the system, which provided for their election by popular vote as follows:

> There were several objections to it which grew stronger as time went on. (1) Deadlocks were frequent, and sometimes were not broken, so that a State went unrepresented, or partially represented. (2) It was much easier to corrupt a legislature than a whole body of electors, and elections were frequently purchased. (3) A type of men could command a majority in the legislature who could not under any circumstances have been elected by the votes of the electors.

ELECTORS USELESS

A casual understanding of our electoral college system will make it plain that the Presidential elector is a useless encumbrance in our system of electing the President. The electors were designed to select a President at their own discretion for the Nation. Through the practice of electing electors pledged to particular candidates, the electors were deprived of the exercise of their discretion.

Since that time the elector has had no function to perform so far as exercising his discretion is concerned; he has served merely as a mechanical device for registering votes cast for candidates selected by others.

A little over 100 years ago and for many years, Thomas Benton was the outstanding advocate of the modification of our system of electing the President. Thomas Benton said:

> From the beginning these electors have been useless and an inconvenient intervention between the people and the object of their choice; and, in time, may become dangerous; and, being useless, inconvenient, and subject to abuse and danger; having wholly failed to answer the purpose for which they were instituted (and for which purpose no one would now contend), it becomes a just conclusion that the institution should be abolished and the election committed to the direct vote of the people.

If we had no higher or more important purposes than simply to improve the mechanics of electing the President, we would do well to abolish the Presidential elector, let the people vote directly for President, and give the whole State electoral vote to the plurality candidate according to the present practice. However, if we put such a scheme in operation, the absurdity of giving the total electoral vote of the State to one candidate without crediting his opponents with their share of the votes would be so absurd that it would meet forthright rejection by a public that would not approve or tolerate such unfairness. Our present method is just as absurd, but its indirect methods seem to have the effect of concealing its absurdities from general recognition.

The Presidential elector performs not only a useless function in the election, but under some circumstances he is a hazard to the success of the election. The man chosen as an elector may die at an inopportune time; he may be disqualified; he may become insane; he may be slain; he may betray his trust; he may be unable to attend on the day assigned by the Constitution for his vote, or for other reasons fail to vote. And so, in a close contest, where the election of a President may be determined possibly by the vote of one man in order to get the necessary majority, if something defeats that one man's vote, the election by the electoral college is defeated. That uncertainty, that element of human frailty, is an inevitable part of the present constitutional requirement.

A SEPARATE VOTE FOR VICE PRESIDENT

The Constitution provides for the election of the Vice President by a separate vote of the electors. That practice is followed now.

Under the present practice the right to vote separately for Vice President cannot be effectively exercised by the voter, because in so many States he does not have that chance.

Normally, the Vice President will be elected together with the Presidential candidate on the same ticket. However, there may well be instances in which discriminating voters may see fit to vote for the President from one party and the Vice President from another. That is a problem for the voter. No constitutional provision would be warranted which would deny the voters the privilege of discriminating between candidates for Vice President, as well as candidates for President.

The fact that the people would have a more effective means of expressing their judgment would probably contribute to more care in the selection of Vice Presidential candidates. In any event, it is not for the Constitution to deny the voters of the country a separate vote.

A PLURALITY ELECTS

The general system of election in our country is, of course, by plurality vote. That means that in the final count the candidate receiving the highest vote is elected.

Under the Constitution, Presidents are elected only by a majority vote in the electoral college, even though the candidate did not receive a plurality of the popular vote of the Nation.

While the majority vote of the Presidential electors is required to elect, the electors themselves are elected by pluralities. The result has been that while a majority vote in the electoral college is necessary to elect, a large percentage of our Presidents failed to receive a majority of the popular vote of the country. So, in effect the President is now elected by a plurality. Of the 31 elections for President from 1824 to 1944, inclusive, 13 of the elected men were minority candidates as measured by the total vote of the Nation.

The election of Lincoln in 1860, Cleveland in 1892, and Wilson in 1912, were notable cases of the election of minority candidates.

As amply demonstrated in our history, the electoral votes do not closely run parallel with the popular vote of the country. It has been fortunate that, while a majority of the Presidential electors was required to elect, there is no requirement that the elected candidate be supported by a majority vote of the people of the country. In the three cases mentioned above, there were three or more candidates in the field with whom the electoral votes were divided. Under which circumstances, the fact that a plurality candidate won was to the advantage of the Nation. In fact, it is hard to develop any practical plan of electing the President other than on a plurality basis.

In 14 elections, electoral votes have been shared by 3 or more candidates. The popular votes are usually shared by three or more candidates. A requirement that the President be actually elected by a majority vote of the people of the Nation would be a difficult hindrance to the election under any plan. Such a scheme would require run-off elections and the compulsory elimination of some of the candidates, with all the confusion, delay and expense that a run-off election would involve.

This proposal meets that situation squarely by providing that the candidate having the greatest number of electoral votes shall be elected.

Hon. Leo F. Rayfiel

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. BUCHANAN. Mr. Speaker, it is with a great deal of pleasure that I join with the other Members of Congress in expressing their sentiments on the appointment of our colleague the Honorable LEO F. RAYFIEL, Democrat, of Brooklyn, representing the Fourteenth District of New York, to the Federal bench of the eastern district of New York.

When men come to Congress they either grow or swell. In this particular instance Congressman LEO RAYFIEL has grown to the stature of a Federal Judge.

His experience as a legislator in the New York State Assembly and as a Member of the Seventy-ninth and Eightieth Congresses, as well as his legal experience before the bar of the State of New York of which he has been a member since 1918, befits him well for his present appointment. In the little over 1 year that I have been a Member

of Congress I have learned to know LEO RAYFIEL well.

He is solid in character, sound in judgment and possesses judicial temperament. He is shy and modest and possess a deep sense of humility. He is humble. These fine attributes will make an excellent judge. Avoiding the glare of the spotlight he has an innate reserve and a deliberate sense of patience. He is one who puts social aims ahead of personal profit. Nothing could better qualify a man for life tenure than these endearing and superlative qualities. To you, Leo and your family, my sincere congratulations and to President Truman who made your appointment possible. Your record on the bench will more than justify what I say about you.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. EDWARD O. McCOWEN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. McCOWEN. Mr. Speaker, I introduced H. R. 2953, the Federal aid for education bill without Federal control, in the House April 3, 1947. In order that all Members of the House may have the opportunity to become familiar with the main provisions of the bill, I am inserting the following statement under leave to extend my remarks:

STATEMENT BY THE HONORABLE EDWARD O. McCOWEN, CHAIRMAN, HOUSE SUBCOMMITTEE ON EDUCATION OF THE COMMITTEE ON EDUCATION AND LABOR, CONCERNING THE PROVISIONS OF H. R. 2953

The purpose of H. R. 2953, a public welfare measure, is to authorize the appropriation of Federal funds to help the States and Territories finance a minimum program of education in the public schools of the Nation. It calls for $200,000,000 for the fiscal year ending June 30, 1948, $250,000,000 for the fiscal year ending June 3, 1949, and thereafter $300,000,000 per annum. Beginning with the lower figure and stepping up over a three year period to the maximum amount allows the States time in which to adjust their programs of education so as to make the most effective use of the Federal funds.

STATE CONTROL GUARANTEED

The bill safeguards the controls over educational policy now exercised by the States. This it does in a number of ways.

First, there is no transfer of existing State authority to the Federal Government. Second, the act in section 2 provides that "No department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over, or prescribe any requirements with respect to any school, or any State educational institution or agency with respect to * * * the administration, the personnel, the instruction, the methods of instruction, or the materials of instruction." Third, the bill prohibits any Federal agency or officer from entering into any agreement or imposing any term or condition in relation to grants made to any State. Fourth, the bill specifically provides that no State shall be required to alter any provision in its State constitution "prerequisite to * * * sharing the benefits of this act." There can be no Federal interference with segregation policies and practices in any State where separate school systems are maintained for separate racial groups under constitutional, or for that matter statutory, authority.

Thus the enactment of H. R. 2953 will not disturb existing educational controls now lodged in the States and by the States in the localities. In these respects the bill conforms to the best features of the more than 150 Federal-aid-to-education bills which the Congress has enacted since 1802.

APPORTIONMENT OF FUNDS TO THE STATES

The funds apportioned under the act to the States are determined by an objective formula which is not subject to manipulation or the exercise of discretionary authority by any Federal agency or officer.

The formula allots funds in direct proportion to the need of the State (as measured by the number of children to be educated), in indirect proportion to the relative ability of the State to finance its schools (as measured by average State-income payments for a specified 5-year period), and in direct proportion to State effort to finance public schools (as measured by the percentage of State-income payments devoted to that purpose). If States make less than average national effort their Federal funds are proportionately reduced. Thus the States determine for themselves whether they are to receive the highest amount, or less than the highest amount, of Federal aid for which they are eligible to qualify under the act.

MINIMUM SCHOOL PROGRAM FOR THE NATION

The funds are so distributed as to guarantee, in conjunction with State and local school revenues, a minimum-school program average not less than $40 per pupil in average daily attendance each year in every school district in the Nation. Reduced to its simplest terms, the computation of Federal aid for each State under the act is made in the following manner:

1. The cost of the foundation program is computed by multiplying $40 by the number of children, 5 to 17 years old, inclusive, in the State.

2. State income payments, averaged for a 5-year period, are then multiplied by 1.1 percent (1.1 percent is used because for a recent year approximatly 1.1 percent of national income payments would have been required to finance the $40 program on a Nation-wide basis. For that reason the percentage ratio of 1.1 was accepted as the "standard effort" which every State would be expected to make in helping to finance the minimum education program.)

3. If (2) is greater than (1) the State is then eligible to receive not more than $3 per child of school age. If (1) is greater than (2), the State is then eligible to receive the difference in Federal aid, provided, however, that in no event would the State receive less than $3 multiplied by the number of children, 5 to 17 years old, inclusive, in the State.

The formula employs child population and State income payments data established by the Department of Commerce.

Census population figures are used instead of average daily attendance because (1) methods of computing average daily attendance vary greatly among the States, (2) the use of Federally derived data places all States on the same uniform basis, (3) such data are established by a disinterested agency, and (4) the use of census data in allotting funds offers a larger assurance that the States will be in position to provide the instruction necessary to educate all children of school age.

Table 1 shows the amounts of Federal aid the States and Territories would have received for a recent year under the provisions of H. R. 2953.

For the particular year for which the computation was made, 19 States would have received aid in excess of the minimum grant of $3 per child of school age. The remaining States—29—would have received Federal funds equal to the number of children of school age multiplied by $3. Of this group of 31 States, 6 would have participated in the so-called equalization program but each in an amount less than $3 times the number of children of school age, 5 to 17 years old, inclusive. Under the minimum apportionment of $3 per school child the amounts of Federal aid allotted to States in this category would be increased to the $3-per-school-child level.

In no event would any State receive a grant of Federal aid in an amount less than $3 multiplied by the number of children, 5 to 17 years old, inclusive, in the State.

Approximately one-sixth, or $50,000,000, of the maximum authorization under the act would be required to finance the $3-per-school-child distribution to those States which are not entitled to Federal funds greater than that amount under the equalization provisions of the formula. Supporting the minimum $3-per-school-child distribution to these States are the following considerations: (1) There are no States in which education in some school districts is not financed on a near-poverty level; (2) inasmuch as all States contribute through taxes to the proposed Federal-aid program, all States are entitled to at least a minimum return for the support of their own schools; and (3) the Federal-aid program offered in H. R. 2953 conforms closely to the best features of outstanding State-aid programs in the Nation.

STATE ACCEPTANCE PROVISIONS

States are not required to qualify for the benefits of the act. Those that do qualify must, however, designate the State treasurer, or other appropriate State official, who is to receive the funds; authorize the State educational agency to represent the State in administering the funds; provide for a State audit of such funds; submit reports to Congress on money received and how expended as is done in the administration of Federal land-grant college funds; transmit notice of acceptance and certified copies of legislative enactments and the official regulations issued by the State educational authority, in connection with Federal funds, to the Federal Government, and show that the Federal funds are not applied for the purpose of reducing State and local effort to finance their public elementary and public secondary schools. The Federal funds are to be used to supplement, not to displace, State and local school revenues.

MINORITY RACIAL GROUPS

H. R. 2953 establishes safeguards in the use of the funds by the States for the education of members of minority racial groups. This it does in several ways.

First, the bill provides in section 7 (a) (1) (F) that in States where separate public schools are maintained and operated for minority races, the apportionment of such funds for such schools shall be just and equitable. A just and equitable apportionment is defined in section 9 (d) as "a proportion of said funds not less than the proportion that each minority racial group in such State bears to the total population of that State."

Second, it is provided in section 7 (a) (2) that the minimum $40 school program shall be provided "in local school jurisdictions where separate schools are maintained for separate races" in the same way such program is provided in other public schools.

Third, in section 7 (a) (1) (F) it is provided that the "just and equitable" distribution, cited above, shall be guaranteed "without the reduction of State and local moneys expended for educational purposes during the fiscal year ended in 1947 for public schools for minority races."

SCHOOLS TO BENEFIT UNDER THE ACT

H. R. 2953 is a public elementary and a public secondary school bill. Section 6 (a) provides that the funds authorized under the act shall be disbursed by the State to local school districts or other public education agencies, for all types of current expenditures (excluding interest, debt service, and capital outlay).

Section 6 (b) states that the definition of a public school is a State function and shall remain a State responsibility. In some States public funds are expended by public agencies under public control for the transportation of nonpublic school children. Some States spend their own money for textbooks for the same children. Section 6 (b) authorizes the States to use Federal funds available under H. R. 2953 in the same way they use their own State and local school revenues, provided, however, that the ratio of Federal funds used for nonpublic school pupils shall not exceed the ratio of State and local funds so expended. The support of this provision is based upon the principle of adhering as closely as possible to State control of educational policy.

RIGHT OF APPEAL

In the event a question arises at any time in the administration of the provisions of the act, the State educational agency has the right of appeal to the United States Commissioner of Education, and from him to a United States district court, which "court shall have jurisdiction as to both fact and law."

SEPARABILITY

In the event any part of the act should be held invalid, other parts of the act will not be affected thereby.

TABLE I.—*Estimates of Federal aid under McCowen bill (H. R. 2953), April 1947*

States	Estimated payments to States under McCowen bill after applications of 2.5 percent effort to the equalization funds (calculations based on 1944 data)		
	Equalization ($40 and 1.1 percent)	Nonequalization ($3 payments)	Total
(1)	(2)	(3)	(4)
Continental U. S.	[1] $141,646,000	$55,446,000	$197,092,000
Alabama	13,330,000		13,330,000
Arizona	1,232,000		1,232,000
Arkansas	8,215,000		8,215,000
California		4,356,000	4,356,000
Colorado		735,000	735,000
Connecticut		1,023,000	1,023,000
Delaware		171,000	171,000
District of Columbia		432,000	432,000
Florida	(614,000)	1,356,000	1,356,000
Georgia	10,664,000		10,664,000
Idaho	564,000		564,000
Illinois		4,512,000	4,512,000
Indiana		2,187,000	2,187,000
Iowa		1,503,000	1,503,000
Kansas		1,116,000	1,116,000
Kentucky	12,095,000		12,095,000
Louisiana	7,959,000		7,959,000
Maine	(174,000)	564,000	564,000

How To Recognize the Un-American Individual and His Un-American Activities

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which I have prepared on request of the magazine the Republican, and which appears in their current issue:

HOW TO RECOGNIZE THE UN-AMERICAN INDIVIDUAL AND HIS UN-AMERICAN ACTIVITIES

(By J. PARNELL THOMAS, chairman, House of Representatives Committee on Un-American Activities)

If every American citizen were congenitally equipped with the ability to recognize subversive activities, the House of Representatives Committee on Un-American Activities probably would never have been born. This article would never need to be written.

For I am convinced that the vast majority of our population is fundamentally loyal to the American democratic way of life. Their scorn of any subversive minority would normally cause such elements to wither away or at least to render them ineffective.

Unfortunately, however, some American citizens are not born with the power to see through subversive efforts. The peaceful history of our country's development and the geography of our country have offered them little background in international political intrigue—such a common denominator in the history of foreign countries. Furthermore, the un-American has bent every effort to keep the wool over their eyes.

Recognizing the natural American antipathy to schemes which aim to supplant the American system of free enterprise and democracy with a Communist or Fascist collectivism that can spell only slavery for its participants, subversive elements cloak their aims and activities in devious disguises with the hope of achieving a policy of noninterference if not actual support from loyal citizens.

The success of this Trojan horse strategy is shocking.

For example, the Communists have succeeded in worming their way into the control of many labor unions and liberal groups in America. In this way they are able to exert a far more powerful influence than their true numbers merit.

Another field into which the Communists are attempting to infiltrate is the movie industry. The House Committee on Un-American Activities is now in the midst of an investigation of subversive work in that industry.

One of the major aims of the House committee is the tearing away of all disguises now protecting individuals and organizations working against the true interests of the United States. By means of investigation, public hearings, and printed reports, it tries to show the American public and Congress just where its traitorous elements lie.

The individual citizen can also learn to recognize these elements. I will suggest two formulas, one for revealing the Communists on the extreme left and another for revealing Fascists on the extreme right.

Both, in spite of their vociferous opposition to each other, champion totalitarian systems which void the basic American democratic concept of individual rights. Their use of the "hate" formula, centered around classes in the case of the Communist and around race and religion in the case of the Fascist, is utterly incompatible with the democratic ideal of tolerance. Basic kinship of these two enemies of democracy is strikingly revealed by the ease with which Communists and Fascists have changed sides in Germany and Italy.

The first formula is designed to fit either the un-American individual who holds actual membership in the Communist Party or the fellow-traveler who, while not a party member, unwaveringly supports Communist policies. The latter is often more dangerous because he can more easily masquerade as a loyal American.

COMMUNIST FORMULA

1. Membership in the Communist Party.

This committee's voluminous files contain proof of party affiliations of many individuals. Many hide their affiliation, however, as in the case of Carl Aldo Marzani, whose deceit enabled him to work in the highly secret Office of Strategic Services during the last war. In cases where membership is not admitted, one can infer the same if the individual pays dues to the party, solicits membership, holds office in the party or on one of its official publications, runs for political office on the party ticket or attends closed party meetings.

2. Services rendered to Communist Party.

An individual who is un-American will also frequently reveal himself by making financial contributions to the Communist Party or its publications. Other services which may indicate a party liner include signing election petitions for party political candidates, registering as a Communist voter, speaking or entertaining at Communist functions, and writing for Communist publications.

3. Attendance at Communist Party meetings, rallies, and other functions.

4. Defense of the party or individual Communists.

Signing petitions defending the ballot rights of the Communist Party may be an indication of un-American sympathies, as may the signing of petitions or support of special committees defending individual Communists. Party members organized committees to fight for the freedom of Earl Browder, former general secretary of the party who was imprisoned for passport fraud, and to oppose the threatened deportation of Communist Harry Bridges. A committee is already organized in behalf of Gerhart Eisler, Communist International agent who was recently convicted of contempt of Congress. Such activity is significant, especially when it is found in conjunction with other types of Communist support.

5. Support of Communist front or Communist-infiltrated organizations.

The Communists have organized hundreds of groups, usually under high-sounding titles, to promote their purposes in the United States. The American Youth for Democracy, for example, dishes out Communist propaganda to college students, while the National Negro Congress exploits racial issues for Communist purposes. As a result of exposure by the House Committee on Un-American Activities, the American Youth for Democracy in many areas is now hastily trying to hide behind the disguise of a new title.

In addition, Communists have stolen control or partial control of a number of legitimate organizations, particularly unions. Outstanding examples are the American Youth Congress and the American Jewish Congress and, among unions, the hotel and restaurant locals of the AFL in New York. Communists got in on the ground floor of the CIO unions that they control; outstanding among them are the United Electrical, Radio and Machine Workers of America, American Communications Association, Transport Workers Union of America, and National Maritime Union of America—all fields in which vital interests of the Nation are involved.

6. Denunciation of the American system of government and praise of the Soviet's.

Communists and their fellow-travelers castigate the American system of free enterprise as imperialistic and warmongering and refer to the Russian way of life, in spite of its dictatorship and slave labor, as the true democracy.

7. Consistent opposition to American foreign policy that conflicts with Russian interests.

The Communist pays blind allegiance to the Soviet Union which, in his eyes, can do no wrong. Before 1935, he noisily preached revolution and condemned all governments outside of Russia. After 1935, however, he saw a great need for American-Soviet friendship and began cultivating liberals in a "united front" movement. He backed Franklin Delano Roosevelt, urged national defense efforts, and spoke in glowing terms of "democracy". All this was the result of Russia's sudden fear of Germany and her desire for other foreign allies.

Stalin's startling coalition with Hitler in August 1939 found American Communists again doing an about face. Without apology the American Communist became isolationist, attacked Roosevelt, and protested national defense efforts. When Russia became an American ally in war against Hitler in 1941, the Communist once more turned into a flag-waving patriot, demanding all-out efforts to win the war.

Today the American Communist has reverted pretty much to his stand during the Stalin-Hitler pact. The Greek-Turkish aid program and other foreign policy moves conflicting with Russian interests are bitterly assailed. Soviet expansionism on the other hand is never subject to criticism which brings up another point in the Communist pattern:

8. Unwavering defense of the Soviet Union's foreign policy.

9. Ridicule of claims that communism is a menace.

The Communist tries to silence his opponents by ridiculing them as Red-baiters and Fascists. He insists his party stands only for peace, democracy, unions, and other popular catch-words and he denounces any attempt to expose his subsersive work as an attack on civil liberties or trade unions.

The cunning of the Communist is well illustrated by the case of Carl Aldo Marzani, who worked as a party educational director in New York in the early 1940's under the pseudonym of Tony Whales. He obtained employment in 1942 with the Office of Coordinator of Information in Washington, D. C., after an unblushing denial to Federal authorities of any affiliation with the Communists. During the war, he worked in the Office of Strategic Services where he had access to top military secrets, and a little later, he was in the State Department from which he was finally discharged in December 1946. He was convicted of misrepresentation on May 22, 1947, after a court trial at which police undercover agents described his Communist party work.

Marzani had provided a clue to his sympathies in other ways, however. He had circulated petitions which would place Earl Browder, former general secretary of the American Communist party, on New York's 1940 election ballot, and he had attended rallies for Browder. Marzani was a member of the Communist-controlled American Labor Party of New York and of the Communist-dominated International Workers Order. His wife was listed as a Communist party member.

Fascism can never be disregarded, in spite of the recent costly military defeat of two of its most notorious purveyors—Hitler, in Germany, and Mussolini, in Italy.

A type of slander being directed at the House Committee on Un-American Activities is characterized by recent press statements that we see no Fascist menace in America. This is as fantastic as the claim that the Special Committee on Un-American Activities cited Shirley Temple as a Communist. Actually, on June 12, this committee, upon recommendation of its subcommittee on fascism, voted to embark on an all-inclusive program of investigations and hearings on this subversive field.

Undoubtedly the most highly organized, foreign-inspired Fascist movement seen in this country was the German-American Bund, which worked hand in glove with Hitler to prepare for Der Tag—the day when American democracy would be overthrown in favor of a Fascist dictatorship.

Testimony before the Special Committee on Un-American Activities showed that the organization could muster 5,000 uniformed storm troopers from within its ranks and that it was funneling into America great quantities of propaganda direct from the German Ministry of Propaganda and Enlightenment.

The House committee has called before it such pro-Fascists as Fritz Kuhn, leader of the Bund, William Dudley Pelley, George Deatherage, and Gerald L. K. Smith, while studies were made of many individual native American Fascists. Committee files, by the way, were consulted at great length by the Department of Justice when that agency prepared its mass sedition case. The committee plans to hold hearings on other pro-Fascist individuals and organizations as soon as investigations now under way are completed.

Thus far, there are no indications that local Fascist efforts since the defeat of Hitler and Mussolini are part of any single, highly organized movement directed from an international center as in the case of communism. But while communism for this reason remains the greater menace, we cannot belittle the dangers of American fascism.

Fascism or nazism is characterized by a belief that dictatorship, with complete control over every phase of an individual's activity, is the ideal and natural form of government. Its chief instrument is a single "rubber stamp" political party completely subservient to a head of a state who is not chosen by the will of the people. Racial supremacy is also a keynote.

Insofar as they tend to overglorify a leader and set him up beyond criticism and insofar as they tend toward the concentration of power over all phases of human life in the hands of a power-hungry bureaucracy, the New Dealers are borrowing lock, stock, and barrel from the totalitarian arsenal of both communism and fascism.

In the time of Hitler, American Fascists, much like the Communists, paid blind allegiance to a totalitarian leader overseas, preached of revolutionary overthrow of the American government and dreamed of world domination. They used the same "fifth column" strategy of the Communists.

Some of the same subversive ideas are still being propagated in this country. Some of the organizations instrumental in furthering this Fascist line in America during Hitler's career have not even bothered to change their names.

The term Fascist is often too loosely applied. There are two different types: the militant, revolutionary and foreign controlled pro-Fascist like Fritz Kuhn who wanted to see a Hitlerite government replace American democracy, or the Fascist-minded individual who will borrow such un-American attitudes as anti-Semitism and anti-Catholicism without necessarily subscribing to the complete Fascist philosophy.

The following pattern of behavior should reveal the Fascist-minded American:

FASCIST FORMULA

1. Defense of Fascist governments or Fascist individuals.

The extreme American pro-Fascist defends such "leaders" as Hitler and Mussolini and supports leading American pro-Fascists like William Dudley Pelley, Silver Shirt leader now serving a jail sentence for criminal sedition.

2. Racism.

The exploitation of racial issues was one of Hitler's most successful techniques, and it has been borrowed by our native Fascists.

3. Anti-Semitism or anti-Catholicism.

Anti-Semitism is a favorite weapon of the Fascist-minded individual, who counts on promoting his theories by promoting hate and dissention. It is a direct steal from Adolph Hitler, who did not recognize Jews as German citizens under the master race principle and used them as a convenient whipping boy and cover for his own ineptitude. In some predominantly Protestant areas, the pro-Fascist uses anti-Catholicism as a hate breeder.

4. Advocacy of a strong centralized government.

A government where the individual would be subject to the complete control by the state.

5. Derision of democracy.

The American pro-Fascist thinks of democracy as decadent, often dubbing it a "mobocracy."

6. Red-baiting.

The American pro-Fascist tries to throw the smoke screen of communism over anything or on anybody he opposes, just as the American Communist indiscriminately applies the word fascism.

7. Membership in pro-Fascist organizations or support of pro-Fascist publications.

Fascist-minded persons set up organizations and publications to promote their propaganda. These organizations and publications will reveal themselves by following the same pattern listed above for the pro-Fascist individual.

Conclusive proof of pro-Fascist or pro-Communist sympathy should never depend upon one point alone, with the exception of proof of actual Communist party membership. Liberals have been known to join pro-Fascist or pro-Communist front organizations only to resign in disgust after learning the true character of their leaders.

However, any individual who shows a consistent pattern of affiliation and/or support of un-American organizations and causes must be considered un-American.

Exposing Communist and Fascist elements in the Federal Government was one of the first tasks which the House Committee on Un-American Activities outlined for itself this year. The committee also promises to air Communist influence in Hollywood; spot-

light Communists in American labor unions; investigate groups or movements trying to steal atom bomb secrets for the benefit of a foreign power; and unearth any hidden Communist or Fascist elements in our educational system.

An aggressive effort by any private citizen or organization in ferreting out subversive individuals and their activities is always heartily welcomed by the House committee. But I would like to insert a word of caution. Blind and indiscriminate attack on any individual as a Fascist may render one a dupe of the Communists, who have lumped all their enemies into the Fascist category. Conversely, the same kind of unthinking labeling of an individual as a Communist may serve the Fascists, who use the Communist charge as their favorite smoke screen.

One should note that one of the major "fronts" for the dissemination of Communist propaganda in the 1930s was beguilingly entitled the "American League Against War and Fascism," while a present-day Communist front, Mobilization for Democracy, was allegedly formed to fight fascism. On the other hand, the notorious Silver Shirt Legion, headed by pro-Fascist William Dudley Pelley, had insisted its purpose was to combat a Communist revolution.

It is, therefore, only the thoughtful, unhysterical approach to the problem that promises all loss and no profit for the twin enemies of democracy.

Modernize Our Presidential Election—X. A Contribution to Clean, Efficient, and Progressive Government

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. LEA. Mr. Speaker, the amendment to the Constitution by which we propose to modernize our Presidential election is simple in its terms and clear in its purposes.

We would eliminate the useless Presidential electors; the State would retain electoral votes as at present; the people would vote directly for President; the electoral votes of the States would be divided between the candidates according to their popular vote in each State; the "solid" State vote would no longer appear in election returns; there would be no "solid" States; no candidate would be given credit for votes cast for another, as is done under the present system; there would be no disfranchisement of votes after they are cast.

Every citizen in every section of the country could vote with the consciousness that his ballot will be counted as cast and have its proper part in deciding who should be President. It would make unnecessary and abolish the present system of breaking deadlocks by elections in the House of Representatives; it would discourage sectionalism in politics; and it would tend to encourage a greater interest in public affairs everywhere.

In an average Presidential election the votes of more than 35 of each 100 persons who vote are not counted as cast, in the ultimate count. They are credited to other candidates.

In the Presidential election of 1944 the votes of 44 persons out of each 100 who voted were, in the electoral count, credited to candidates other than the ones for whom cast.

It is hard to recognize this system of counting votes for the Presidency as having any legitimate place in any practical plan for a popular government. Its appalling injustice is repulsive. A citizen of this Republic who must cast his vote with an uncertainty as to whether or not it will be counted as cast, is denied an incentive that should be the privilege of every citizen. We penalize a virtue that should be fostered.

Electoral votes are awarded to States primarily in proportion to their population. Instead of awarding the vote of the State in proportion to the way its people vote, all of its votes are cast in a solid block—this solid block goes to the one candidate who receives the largest number of the State's popular votes. In other words, all votes cast for the minority candidates and electoral votes representing even those who do not vote, are computed as if voted for the plurality candidate.

The total electoral vote of the Nation ordinarily varies from its popular vote from 10 to 30 percent. This shows how inaccurately the electoral vote reflects the popular will.

The legitimate object of an election is to accomplish the will of the people. There is no justification for the maintenance of a voting system which does not and cannot accurately reflect the will of the American people.

We live in an age of pressure groups—groups that frequently exercise a power far out of proportion to their numbers. It is rather a paradox that the electoral college system deprives all minor groups of a legitimate recognition in the election, but greatly enlarges the nuisance value of pressure groups. Let us assume a case. Assume that a given State has 35 electoral votes. Let us assume, for illustration, that it has 100,000 voters for each electoral vote. Let us assume there is a one-purpose pressure group in that State, 400,000 of whom are determined to support that candidate who by promises or otherwise convinces its members that he will serve their purposes. The candidate is intent on his election, in doubt as to results, under persuasion of political friends who have an overweaning desire to win the election. The demands upon the candidate may be unfair to national welfare. He visualizes the probability of the gain or loss of 35 electoral votes of one of our greatest States. His decision may well mean the difference between election and defeat. In office, he can never be as good a President as he would have been without that promise. If that candidate was in striking distance of the Presidency he must have had something like 25,000,000 ready to vote for him. With that number behind him he would be on the border line for election in 1948, for instance. By yielding he may have 35 votes, or 13 percent of the 265 electoral votes, he needs to be President. Under the system of counting, those 400,000 votes may mean 35 electoral votes. They are the final weight that may be necessary to tip the scales to the victory side.

Under the proposed plan those 400,000 votes would mean only 4 electoral votes at most. They would not control 35 electoral votes. There would be 125 times 400,000 in the total vote of the Nation.

What was a serious threat under the present system would become of minor consequence under the proposed plan. The difference is the difference between a fair and an unfair method for recognizing the will of the people of the country.

Under our system, by which States participate in electing the President under diverse plans of State elections, we can, if this amendment is adopted, by the allotment of electoral votes to the States and the division of those in proportion to the popular votes in each State, transmute the election returns into a fair and accurate common unit of expressing the will of the Nation as the votes are finally counted. We can give the Nation a just system of electing the President and on a plan that will operate definitely uniformly and accurately under all circumstances. By adopting this plan we will make an important contribution to clean, efficient, and progressive government.

Brief Summary of First Session, Eightieth Congress

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. TWYMAN. Mr. Speaker, as we bring to a close the first session of the Eightieth Congress, I believe that it will be well to sum up briefly some of the accomplishments. In doing this, I believe we should point out the fact that its first task was to put into operation the Reorganization Act adopted by the Seventy-ninth Congress. This was more of a chore than most people realize. It meant that 47 committees had to be reorganized into 19 major standing committees. The Leadership is to be congratulated for the thoughtfulness in assigning the new Members. It is well to call attention to the fact that 74 Republican Members and 30 Democrat Members were newly elected in November 1946. Naturally, the qualifications and abilities of these new Members were not too well known in all cases, and a great deal of judgment had to be exercised. This reorganization took about 6 weeks to accomplish. A very short time, considering the amount of work involved.

This Eightieth Congress was charged with the responsibility of bringing about the transition from a wartime economy to a peacetime economy. The results prove that this has been done in a very thoughtful, cautious manner. Those who remember the periods following previous wars will remember the chaotic conditions which prevailed. Compared with the transition period for which this

Eightieth Congress assumes responsibility, there is a noticeably great difference. Unlike previous situations, employment has set a high record, national revenues are at their peak, and we have brought about orderly reductions in expenditures with sensible cuts in appropriations. We are returning the Nation to a proper peacetime economy in a remarkably orderly manner.

LABOR LEGISLATION

The legislation which has attracted the greatest national interest is the enactment of the Labor-Management Law of 1947. I was one of those who did not favor the original proposal and voted against it. I was very happy to vote for the proposal that came out of the conference, and was glad to vote to override the President's veto. I feel that the President made a mistake in taking the action that he did. This is not the type of legislation that can be appraised without study and without observation and practice, and yet there are some who condemned it before even learning its provisions. Naturally, a few people, solidly entrenched in their secure positions in the labor movement, opposed this bill and are trying to mislead the rank and file. And yet, the positions of good labor leaders are in no jeopardy as the result of the passage of this law. Men and women who work should be sure that they understand the provisions of this law, and know what new rights they gain after August 22 when labor law changes take effect.

The right to work is spelled out by the law. A man looking for a job cannot, hereafter, be denied a job simply because he does not belong to a particular labor union. A man, once hired, may find that he must join a union, but he can get in on the same terms as anyone else. He has a right to appeal to the National Labor Relations Board if he is treated any differently. A worker cannot be fired on union orders unless he fails to pay his union dues. He can express his views with reference to the leaders of his union. He can urge other members to get out of the union. He can try to set up a rival union. In other words, his Government will protect him and give him freedom of action. Every worker will enjoy the right to vote in an election to determine whether or not union membership is to be required of all workers. Furthermore, a worker may decide whether or not he prefers the check-off system as a system of union dues payments.

For twelve years, individual workers have been deprived of certain rights which are restored under the Labor-Management Act of 1947. There is nothing in this law that takes away the right to strike, but a worker has a right to express himself in this connection. Furthermore, he has a right to sue the union in case of an illegal strike, if he can prove that he has lost money as the result of this strike. No longer does a worker suffer the insecurity that results from illegal strikes.

One of the most important features of the law is the report that must be made by the union of its financial affairs and methods of doing business. In order that a union may be eligible for the protections of the National Labor Relations Board, it must file with the Government copies of its constitution and bylaws. Such reports must contain complete information on salaries of union officers, methods of electing officers and detailed descriptions of union operating practices. This is information that many workers have never had available to them before. Another thing, a worker can take a position with reference to his union's policy and oppose such policy if he desires. He may be expelled by the union, but the union cannot force his employer to fire him even in a union shop. The result will be more freedom for workers to express themselves on union matters. In the past, many workers were assessed for political activities with which they did not agree. Under this law, such assessments can no longer be made and a worker cannot be fired for failure to participate. The law provides for reasonable initiation fees. The system of excessive fees which has kept many men out of unions is now barred. Under this law, Communist activity in a union is brought out into the open. No union can take a case to the National Labor Relations Board until its officers have filed sworn statements that they are not affiliated with the Communist Party. A worker can demand that the union officers file such statements to protect his union's right to use the Labor Board. A worker can report a union officer to the Justice Department if he believes that a false statement has been made concerning the officer's Communist affiliation. Many workers would prefer to take matters up directly with their employer without having to go through the union. Under this law this is now possible. This law provides that professional workers such as lawyers and engineers may also form separate bargaining units. Skilled workers can form their own unions or join craft unions, instead of remaining members of plant-wide unions.

The National Labor Relations Board will support them in their efforts to obtain separate contracts with employers. These are a few features with which men and women who work should familiarize themselves. They go even further and include protection against discrimination for race, color, or creed. This is a good law but not a panacea. There may be faults in it which will reveal themselves. In which case, corrections may have to be made. One thing is certain, it is not such a law as is described by many prejudiced persons. It will not destroy labor unions or retard a proper labor movement.

Strikes have their economic effect on the pocketbooks of individuals as well as on the national economy. The lessening of strikes since the 1st of January 1947 is quite noticeable. The predicted big strikes in steel, coal, and other heavy industries have not taken place. There has been an almost total absence of unauthorized strikes. One large union has issued a very significant official order instructing its membership that, regardless of circumstances, no strikes or stoppages of work must occur in advance of receiving sanction by the executive council. The new law, far from being against the interests of a responsible labor union, fits in with its program of discipline and makes sure that minorities will not pull off strikes without consulting the proper authorities. Wives and families of working men will appreciate the security they gain by this provision.

Furthermore, there is nothing in this new law which will destroy labor unions. The rank and file are going to ask questions later of those who have charged that this law will destroy their labor organizations.

TAX BILL

This Eightieth Congress has tried continuously to have enacted a new tax law which would reduce personal income taxes. Twice the House of Representatives and the Senate have passed such laws, only to have them vetoed. The House overrode the veto on the second tax law, but the bill failed to get the necessary two-thirds vote of the Senate in order to override the veto in that body. It is next to impossible to thoroughly satisfy everyone when making a tax cut. It is easy enough to criticise any program or plan, but it is not so easy to substitute a system which would be any more acceptable. The plan submitted was reasonable and could have been carried out. It would have meant savings in taxes to people in all walks of life, and would have eliminated taxes for a large number. There is no question but what the tax cut was feasible as, through the reductions in appropriations, the estimated revenue for 1948 will be 41 billion 200 million dollars. Expenditures are estimated at 34 billion 600 million dollars. This being the case, it is estimated that the budget surplus will be 6 billion 600 million dollars. A tax cut of 4 billion dollars for the 1948 calendar year would reduce revenues by only 2 billion dollars in the fiscal year that ends June 30, 1948. That would leave 4 billion dollars for debt retirement or further tax cut. Such being the case, no one can question the ability of the Government to make such a tax cut.

CONTROLS

One of the outstanding factors that contributed to the predicament in which France found itself after World War I was due to the retention of wartime controls and the maintenance of a large bureaucracy. Recognizing what would happen to this country if such a policy were carried out here, this Eightieth Congress has seen fit to sensibly and progressively discontinue certain controls. Some have had immediate beneficial results, and some are such that the beneficial results may take a little time. For example, this Congress pointed out that many controls were no longer necessary, notably sugar. We now find sugar in abundant supply. In taking action on rent controls the Congress was confronted with a compromise which was hardly satisfactory to either owners or renters. Members of Congress living in areas in which the majority of the people live in rented property did their very best in seeking a compromise which would be the least disruptive. The immediate results were confusion and misunderstanding. It is hoped that this will not be long-lived. The redeeming feature lies in the fact that certain controls of building materials have been eliminated which should stimulate and encourage additional building of residential property.

After all, the solution of the housing problem lies in more building. It is almost 2 years since VJ-day. Since then 16,000,000 servicemen and women have returned home. During that time the retention of controls on building materials and the shipment of such material abroad has prevented the type of construction program which took place immediately after the termination of hostilities in World War I. Many impractical ideas were tried and discarded before it was realized that people want apartments of small or medium size. The building of a sufficient number of these quickly will solve the housing problem as it exists today in large cities. Private enterprise should be given an opportunity to solve the housi g situation. At the same time, this Congress has taken a wise precaution in appointing a committee to investigate the whole housing situation. If, upon the reconvening of Congress, it is indicated that private enterprise alone cannot cope with this problem, Congress will be ready to act without further delay.

VETERANS

Action has been taken to insure proper operation of the veterans' preference provisions. Weaknesses in the Veterans' Preference Act have been corrected. An act was passed providing for the voluntary cashing of terminal leave bonds. Attempts to do this in previous Congresses failed. This Congress accomplished this, and it means that these bonds outstanding in the amount of 1 billion 792 million dollars may now be redeemed after September 1. The cashing of these bonds serves two purposes. It enables the men who need the money now to get it. It also saves the Government approximately 62 million 500 thousand dollars in annual interest. This Congress also acted on legislation recommending that the Veterans' Administration make use of Army and Navy hospitals in order to provide for veterans needing hospital care.

ANTI-POLL-TAX BILL

The House of Representatives passed by a vote of 290 to 112 a bill which would outlaw the provision which still exists in a few remaining States, which makes payment of a poll tax a qualification for voting in Federal elections. This bill will be high on the list for consideration by the Senate when Congress reconvenes.

SUBVERSIVE ACTIVITIES

Disclosures made in this Congress have resulted in positive action in the way of legislation which will eliminate disloyal persons from the Government service. Due to the turning of the spotlight on this situation several Government employees occupying positions of trust have been brought to justice and convicted. Only a short time ago, over 1,000 civilians were released from positions of confidence in the Army, the Navy, and the State Department. This is but a start, and it is hoped that as the result of the action of this Congress that we shall seek out all of those of questionable loyalty and prevent them from occupying positions in which they can be of harm to the security of the United States.

GENERAL

This Eighteth Congress has worked hard to carry out the wishes of the American people as they were expressed in the election of 1946. Appropriation requests have been scrutinized with care and savings effected without jeopardizing national security. All requests for research have been treated with liberality. We have been exceedingly generous in contributing to the welfare of less fortunate countries. It is gratifying to know that a committee of Congress is going abroad this summer and fall to investigate at first hand conditions in countries that we have tried to help, in order to determine whether that help was justified and whether additional assistance may be warranted. Other committees will explore the fields of labor-management, executive expenditures, the Post Office and Civil Service Departments, to determine policies which should be followed in the second session of the Eightieth Congress.

First-hand information is vital in order to know what plans are necessary and what programs should be followed. For example, the Post Office Department is confronted with a $300,000,000 deficit. The solution suggested by the Post Office Department is to increase postal rates. If economies can be effected which will make this unnecessary there is no need for increasing the cost of postal services. No such examination has been made in many years. There can be no question but what such an investigation should be made at this time.

Great hopes are held for modernization of the Federal Government as the result of the appointment of a 12-member Commission on Organization of the Executive Branch of the Government. It is hoped that former President Hoover will head this Commission. This Commission was authorized by the Eightieth Congress to make recommendations on the outright abolition of any services and functions it finds unnecessary and defining and limiting of executive functions, services, and activities.

The Congress is adjourning under a special agreement which permits the Republican leadership, as well as the President, to call the Congress back. In the event that any serious emergencies arise, the Congress will be reconvened before the regular session which meets in January.

Petrillo Labor Controversy

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Record, I include the following broadcast by George E. Reedy:

One of the sorest spots in American labor-management relations seems well on the way to a rapid settlement. It is the long-standing dispute between James C. Petrillo, head of the American Federation of Musicians, and school and military bands.

Possibly the method of the settlement may point the way to the adjustment of many other conflicts that have plagued our country. For the whole thing was settled, on a peaceable basis, at a conference attended by everyone involved.

There were actually two issues that had to be ironed out. One was whether the military and school bands would be allowed to make records. The other was whether the school bands would be allowed to broadcast over the radio.

These questions have been the subject of heated argument for many a year. The amateur and military bands have claimed that the people are entitled to hear their music. No reasonable grounds can be found for disputing this claim.

The union, on the other hand, has claimed that amateur competition takes work away from professionals, who earn their living out of music. No one has contended that this should be permitted to happen.

In Petrillo, the union had a strong man—one who could enforce the demands of his organization. As a result, it has been able to hold its own in a running battle with employers. As usual, the chief victim of the economic warfare has been the public.

Petrillo and the educators and military officials were brought together by Representative CARROLL D. KEARNS, a Pennsylvania Republican. KEARNS is chairman of a House labor subcommittee that is investigating the activities of the union.

The settlement was quite simple. The union leader agreed to permit military bands to make recordings for schools and colleges only. At the same time, a committee of educators was set up to write a code of ethics to govern musical education.

The most significant part of the whole deal is that, once the parties were brought together, they found they could get along pretty well. KEARNS later commented that a warm friendship seems to have sprung up between Petrillo and the educators.

For years they have been making faces and tossing brickbats at each other. To say that their differences were heated would be to understate the case. They were positively sizzling and neither side made any secret of it.

Members have been expelled from the Musicians Union for aiding the amateurs—notably, Dr. Joseph E. Maddy, of Interlochen, Mich. His misdeed was to sponsor amateur performances at which no one moved to hire professionals to stand by without playing.

Today, the educators and the union chief seem to be the greatest of friends. In fact, Petrillo has accepted an invitation to speak at an educational Congress next year. The educators are in for some real education.

The agreement, however, is not the end of the congressional investigation which started earlier this month. KEARNS says it will continue, even though another hearing is not to be held until the middle of September.

The Pennsylvanian says that Petrillo has more interests than a centipede has legs, and he wants to look into some of them. They include radio, television, frequency modulation and the movie industry.

So far, KEARNS has done pretty well. In fact, the agreement between Petrillo and the nonprofessional musicians may emerge as the outstanding feat of the House Labor Committee—in many respects, even more important than the Taft-Hartley bill.

Unification of the Armed Services

EXTENSION OF REMARKS

OF

HON. MELVIN C. SNYDER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. SNYDER. Mr. Speaker, the House today approved the Conference Report

of the Managers of the House on the legislation providing for the unification of the armed services.

The need for greater coordination and unification of the various components of our armed services has been obvious since World War I.

During the years of peace, the responsible heads of our armed forces accepted with too much complacency the demands of modern warfare and the necessity for coordinated action between all elements of the combat team. Each service not only retained its separate entity, but its independent action in the matter of procurement, supply, transportation, storage, health, and research.

The legislation as passed is disappointing in some respects, in that it does not go as far as it should in the unification process. However, as a matter of fact, no legislation actually would be necessary to obtain unification if our various branches of the service would take steps which are all too obvious.

The process of unifying the services will be slow and, in the first instance, there will not be a great deal of money saved. The responsibility of now molding into one team all of our armed services, to give the Nation the security it has a right to expect, rests squarely upon the shoulders of our military people. Congress itself cannot legislate responsibility. The Congress has appropriated approximately $12,000,000,000 of the taxpayers' money for defense purposes. If the taxpayer gets a dollar's worth of defense for his tax dollar, there is no question in my mind but that we will have national security to a degree that will fully protect the American people.

The waste, extravagance and duplication which exists today and of which the military must be fully cognizant, can be more expeditiously eliminated under the legislation just passed. No one desires to see the identify of any of our services destroyed. The Army, Navy, Air Corps, and Marine Corps, through their courageous performance, have definitely made a place for themselves in the hearts of the people. All take pride in their great achievements. The time of individual glory for any particular service is past. All must be willing to submerge individual entity and become a part of a great team. The aims, ambitions, and desires of any one service must be forgotten, except as they become a part of the team and contribute to its success. If that objective is accomplished, there will be sufficient credit for all.

Judge Evan Howell

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STRATTON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Illinois State Journal of July 22, 1947:

JUDGE EVAN HOWELL

Thousands of Illinois State Journal readers know EVAN HOWELL personally, while practically all have followed his record in Congress with sufficient enthusiasm to elect him four times to represent the Twenty-first Illinois District. Now we have another cause to take great pride in a favorite son—EVAN HOWELL has been appointed for life as a judge of the United States Court of Claims in Washington, D. C.

Judge HOWELL, as we may now call him, was never too busy in Washington or on his visits to the home district to hear the problems or opinions of his constituents, and to perform with personal interest the hundreds of minor tasks which fall to the lot of a Congressman. It can be said without equivocation that he has worked without stint to serve well the Illinois capital district.

Judge HOWELL'S record as a Congressman on the floor of the House is one of loyalty to American principles and devotion to those causes judged to be in the final interest of the American people. On issues from taxes to flood control he has always kept in mind the welfare of the 250,000 residents of Christian, Montgomery, Macoupin, and Sangamon counties he represents.

Judge HOWELL is just over 40 years of age, but he has packed into his active career the elements of personal character and professional experience needed to fit him for his new office. Although he will be under much less pressure in his new job and will find more spare time to indulge personal tastes, we cannot help but feel that Judge HOWELL will frequently recall with nostalgia his years as Congressman from the Twenty-first District of Illinois.

We would all like to feel that Judge Howell will continue to call Springfield his real home town. We know that he will return to us often to cast a good, solid Republican vote in his old district, and to keep alive the friendships and associations of his Young Republican years.

The Twenty-first District has lost an able representative, but the United States Court of Claims has gained a capable judge. Our congratulations may be accompanied by expressions of regret over our loss, but they are nonetheless sincere.

Plenty of Money Appropriated by Congress To Fight Communism but Efforts To Disseminate Information About an Equally Dangerous Enemy, Fascism, Meet With Failure—Both Communism and Fascism Should Be Exposed at Every Opportunity, and Every Time One Is Denounced, Both Should Be Denounced, Since One, Communism, Is Approaching Us From the Left and the Other, Fascism, Is Approaching Us From the Right

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. PATMAN. Mr. Speaker, the booklet on Fascism in Action is being printed by the Government Printing Office as a House document. The House of Representatives approved the printing of this document but, under existing laws, each Member of Congress will only get one copy and no other copies will be printed for distribution except a supply will be printed by the Government Printing Office to be sold to the public. The price will be 40 cents per copy.

When the booklet "Communism in Action" was printed, several hundred thousand copies were printed at Government expense and furnished to Members of the House and Senate for free distribution. This should have been done and the booklet is very helpful in advising people of the dangers of communism. We have recently gone through a horrible war with Fascists. The war cost us between 300 and 400 billion dollars. Fascism can creep up on our country and get charge of it, the same as it happened in Italy, while we are fighting communism here like they were fighting it in Italy, if we do not, at the same time, warn people of the dangers of fascism.

The Fascist movement in this country is in very strong hands. It is supported by great wealth and unlimited funds are available by Fascist-minded people for the purpose of distracting the people's attention from fascism by exposing and denouncing communism only.

DISAPPOINTED IN ACTION OF COMMITTEE

I cannot understand why a Member of Congress, or any other person in an official position, should not be just as anxious to expose fascism as communism. For that reason, I am disappointed because the Committee on House Administration has failed to favorably report the resolution which provides for the printing of 100,000 additional copies for distribution. In other words, it places the House of Representatives in the position that it is perfectly willing to expose communism but is unwilling to do just as much toward exposing fascism. Between $30,000 and $50,000 has been spent by the Government to print and distribute free books on communism. I have no complaint about this; in fact, it should have been done, but I do insist that we should at least spend as much on trying to expose properly an equally vicious enemy, fascism.

I am inserting herewith a copy of the last letter that was addressed to the chairman of the Committee on House Administration concerning this matter. A copy of this letter was forwarded to the Hon. HOBERT J. CORBETT, chairman of the Subcommittee on Printing.

A copy of Mr. LECOMPTE'S reply is also inserted.

They are as follows:

JULY 24, 1947.

Hon. KARL M. LCCOMPTE,
Chairman, Committee on House Administration, House of Representatives, United States Capitol.

DEAR MR. CHAIRMAN: After the House approved the resolution to print the document, Fascism in Action, as a House document, I introduced House Concurrent Resolution No. 69, asking for 100,000 additional copies to be printed for free distribution. This resolution was introduced July 10, 1947, and I have diligently tried to get consideration of it since that time. To date I have heard nothing concerning the resolution or the possibility of its consideration by your committee.

The House Administration Committee reported the resolution to print the document, Fascism in Action, with the understanding and knowledge that at least 100,000 copies would be asked for for free distribution and more if the demand justified. The House of Representatives adopted the resolution authorizing the printing of this document with the knowledge and understanding that I would ask for the printing of 100,000 additional copies for free distribution.

Therefore, Mr. Chairman, it occurs to me that this Resolution No. 69 should be considered by your committee at once, if it has not already been considered, and should be adopted and presented to the House before adjournment. Otherwise, during the recess of Congress, Members of Congress will be requested to send constituents copies of this booklet and they will not be available except through purchase at the Government Printing Office. I cannot understand why any Member should want to stop the publication of this book. It is just as important as the book on communism. Both communism and fascism are our enemies and each should be exposed at every opportunity.

Please advise me if and when I may expect consideration of this Resolution No. 69.

Sincerely yours,

WRIGHT PATMAN,

HOUSE OF REPRESENTATIVES,
COMMITTEE ON HOUSE ADMINISTRATION,
Washington, D. C., July 24, 1947.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

MY DEAR WRIGHT: I have your letter of July 24 with reference to House Concurrent Resolution No. 69, which you introduced on July 10, asking for 100,000 additional copies of Fascism in Action to be printed for free distribution.

I am informed that at the time the Subcommittee on Printing held its last meeting the estimated cost of printing these additional copies was not yet available.

At the meeting of our full committee on Wednesday of this week I called for reports from the subcommittee chairman, and the chairman of the Subcommittee on Printing made no report on your resolution. It appears, therefore, that no action can be taken by the committee during this session of Congress.

Always with kind personal regards, I am,

Sincerely yours,

K. M. LECOMPTE.

Reciprocal Trade

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. KNUTSON. Mr. Speaker, last spring the Committee on Ways and Means held extended hearings to determine how the reciprocal trade law was operating, and to what extent the interests of the American farmer, laborer, and manufacturer were considered in negotiating trade agreements.

As was to be expected, those segments of business which have a large export business lauded the operation of the reciprocal trade law to the skies, but on the other hand, those whose protection had been lowered to the fierce onslaughts of imported competitive products, expressed dissatisfaction, also apprehension over what will happen to them once the competing countries get back on a full exporting basis.

Mr. Speaker, the present reciprocal trade law will expire on June 30th next. Before that date the Ways and Means Committee will have to give consideration to either extending the law in its present form or making such changes in its operation as will more fully protect the interests of American agriculture, labor, and industry.

To do that intelligently it will be necessary that we have certain definite information, which has not heretofore been available. In order to make the necessary information available the Ways and Means Committee on yesterday afternoon, by a substantial majority vote, adopted the following resolution which speaks for itself:

Whereas the Reciprocal Trade Agreements Act will expire June 12, 1948, and the Committee on Ways and Means will consider a new Trade Agreements Act, or an extension of the present act and will require adequate information for that information; and

Whereas representatives of domestic agriculture, labor, and industry have indicated before various committees through briefs and oral testimony that they are fearful of a loss of domestic markets; and

Whereas the items listed for possible tariff concessions in the trade agreement negotiations which opened in Geneva on April 10, 1947, constitute the great bulk of the agricultural and other items classified in the Tariff Act of 1930; and

Whereas it is the aim and purpose of this committee to promote a system of true reciprocity in our foreign trade and a firm regard for the protection of the interests of American agriculture, labor, and industry: Therefore be it

Resolved by the Committee on Ways and Means of the House of Representatives, That the United States Tariff Commission is hereby requested to keep currently informed and to report immediately to the Committee on Ways and Means any rate or rates of duty or prospective rates of duty proposed in trade concessions, which appear to be so low as to give imports a substantial competitive advantage over domestically produced items, or so high as to exclude from the domestic market reasonable competition from imports; and be it further

Resolved, That the Tariff Commission is requested to establish as soon as practicable, but not later than November 1, the substantive and procedural criteria, measurements, or other standards by which it will determine whether imports of any particular commodity are entering in such quantities as to injure or threaten injury to any domestic unit of agriculture, labor, industry, or segment thereof, and to inform the Committee on Ways and Means as to how that Commission intends to comply with the provisions of Executive Order 9832 issued February 25, 1947; and be it further

Resolved, That the Tariff Commission is requested to revise, rewrite, or otherwise bring up to date the Dictionary of Tariff Information and the commodity Summaries of Tariff Information, by February 1, 1948.

Duel in the Sun

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. RANKIN. Mr. Speaker, on June 19 I introduced a resolution to protect the children of Washington, D. C., from the showing of a picture show called Duel in the Sun, one of the most loathsome, repulsive, and degrading picture shows the sadistic elements in Hollywood have ever been able to dish out to a helpless public.

I understand now that it is being brought back and shown in Washington in spite of the protest of the decent Christian elements of the Nation's Capital.

This immoral production was condemned by the board of censorship of Memphis, Tenn., and has been banned by Christian leaders of the Nation as morally offensive, spiritually depressing, and degrading in every respect.

As pointed out by Hon. Lloyd T. Binford, chairman of the board of censorship of Memphis, Tenn.:

This foul production known as Duel in the Sun begins with a double murder which takes place in a bedroom of a saloon and dive theater, and which is spawned and instigated by infidelity. This picture ends with a double murder brought to pass by a series of seductions and the destruction of a young woman's virtue. It is a tale of two lust-driven delinquents who rush through reams of sadistic love-making toward a final catastrophe of minds filled with murderous mania to the exclusion of even the tiniest spark of human decency. It is a story of jungle savagery, which might have amused the people of Sodom and Gomorrah in the final moments of the destruction of those ancient, evil cities.

The scenes of rape of the half-breed Indian girl should not even be shown to the inmates of a red-light district, much less to decent adults. To permit innocent, unsuspecting children to see this lecherous depiction of sexual abnormality and brutality would be contributing to the delinquency of minors. For, in the finale of the picture, the two victims of the lowest form of depraved, animal passion slaughter each other, and, with blood streaming from their wounds and sweat pouring from their bodies, press their mouths together in a last spasm of sadism and die in each other's arms.

To add flavor to this film of filth, an unordained minister of the Gospel, known as the Sin Killer, offers prayers to God that are worse than blasphemous, irreverent, impious, and profane. Christians unfortunate enough to enter a theater where Duel in the Sun might be shown will cringe and shudder as they witness the scenes in which Walter Huston appears, and hear his sacrilegious outbursts.

Hollywood commentators and critics refer to Duel in the Sun as stark realism. It is stark murder. It is stark horror. It is stark depravity. It is stark filth. If Duel in the Sun in a sample of the manner in which a prominent and influential director is going to help preserve American ideals of honor and fidelity and decency—God help America.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a short address recently

made by myself over the network of the Columbia Broadcasting Co. on the subject of Federal aid to education:

I AM OPPOSED TO FEDERAL AID TO EDUCATION

SCHOOL FINANCE A LOCAL FUNCTION

It is the business of the Federal Government to pay the cost of national defense but not to finance our public schools. That is the duty and responsibility of local government. We face many problems in our schools, but it is a mistake to think we can solve them simply by turning on the spigot of Federal funds. The problems of education cannot be solved by Federal subsidy.

CRISIS CAUSED BY GOVERNMENT SPENDING

So-called Federal-aid-to-education schemes would help only temporarily. Moreover, they would fail to restore the teaching profession to its rightful place of honor on a permanent basis. The real trouble that has caused the crisis in the teaching profession is excessive spending in Washington. Teachers' dollars are worth less because of the policy of creating scarcity of goods at home by shipping so many life-sustaining necessities abroad. The National Government has been seizing a much larger share of the earnings of the people than ever before. Twenty years ago the Federal Government took 27 percent of the tax dollar. Local governments, the largest item of which is schools, got 56 percent of all taxes levied. But in 1946, the local governments received only 14 percent of all tax collections. The National Government had increased its grab on the tax dollar from 27 percent in 1927 to 74 percent of all taxes paid in 1946.

STATES BETTER OFF FINANCIALLY

Yet there is no State in the Union but what is better able to finance its schools today than is the Federal Government. The Government at Washington has been deficit financed for 16 years. The proposed legislation calls for the Federal Government to help the States to carry the burdens of public education. But the States have been balancing their budgets. They have their taxing systems in order, and have been reducing, not increasing, their debt burdens. They have been putting money away by the hundreds of millions against stormy times. Where would the Federal Government get the money to pay this huge subsidy? Impose additional or new Federal taxes, or borrow the money, thus pyramiding debt upon debt and further diluting the value of the dollar? Remember, most States have surpluses while the National Government is in the red.

LOCAL GOVERNMENT MORE EFFICIENT

Taxpayers are getting wise to the way dollars sent to Washington shrink 20 to 50 percent by the time they get back to the home community. Local government always collects and distributes funds more directly and more efficiently. Why send our school funds off to Washington to be distributed back home by some bureaucrat? Our local officials are more familiar with the problems and best suited to deal with them. The Federal method will in the long run result in actually less being spent for education.

Last year while attending a meeting of educators in my home town of Columbia, Mo., I explained to the teachers that Missouri would have to pay their part of the appropriation for Federal aid. Many teachers were bewildered, somehow having the idea that we were to get our share of the appropriation with no burden on our own people. As a matter of fact, that particular Federal aid bill called for each of 31 States to put in more money than they would take out. One reason that so many people come rushing to Washington for relief on local problems is because they have the notion that if they get hand-outs from Washington this costs nothing to anybody. This false impression must be corrected before it wrecks our economic order. It is unadulterated humbug to tell the teachers that by Federal interference they would get permanently higher compensation for their services.

DANGERS THAT MAKE FEDERAL AID TO EDUCATION UNDESIRABLE

To say that we can have Federal aid without Federal control of education is wishful thinking. No legislator is able to offer such a guaranty. Of course, the bills say that there must be no interference with the States' own control of education. And yet the same bills provide that no State can get money until the State officially adopts a plan acceptable to the United States Office of Education. In the past we have repeatedly turned down such proposals and have adhered strictly for 150 years to a policy of local financing and supervision of public schools. Why? Because every student of government knows that so-called Federal aid means Federal control of education. He who pays the fiddler calls the tune.

These bills are not aid to education or equalization of opportunity; they are totalitarian, pure and simple. They would eventually place the Federal Government in full control of all schools. That is what every totalitarian nation has done, and automatically came the end of freedom in those lands. I suppose educational opportunities are uniform in totalitarian states but the price is too high and the product too inferior for America. From the earliest day to the present day public education in America has been primarily a local responsibility and largely supported by local taxation. Therein is a paramount reason for the greatness of America.

FEDERAL CONTROL WOULD DESTROY INDIVIDUAL INITIATIVE

Federal control and nationalization of education takes away probably the most important of local community rights—the right of parents and taxpayers to determine the kind of education their children shall have. There is a growing trend toward regimentation in textbooks, in general courses of study, length of school days and months per year. The worst disaster of all would be a standardized ideology. For example, there are those who believe in a world government. Others whose convictions are nationalistic in scope. The fact that we can arrive at our beliefs in our own way—therein lies our greatest strength. Uniformity of ideas is a first necessity to the dictator. In Germany, Italy, and other politically backward countries, control of education and of avenues of information to youth was about the first step on the road to despotism. It would probably ultimately mean the downfall of our Republic.

Federal meddling in local public school affairs would most surely have the most cancerous effects. It would destroy local initiative and control. We have had too much centralization and bureaucratic control over the local affairs of our citizens. We should not make the situation worse by a new excursion into the field of education. Our schools are one of the few remaining bulwarks of local self-government and community enterprise. If America is to remain strong and free, our public schools must maintain their independence from Federal domination.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. JOE. L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. EVINS. Mr. Speaker, as this session of the Congress draws to a close it is apparent that the legislative docket is unfinished and that much essential legislation remains for enactment into law. Should the Congress have moved as swiftly at the beginning as it has during the closing days of the session—when too much speed and too little consideration has been given to bills brought up for passage—much legislation that is needed and essential could have been passed prior to adjournment.

It is to be regretted that this session of the Congress has failed to bring to the floor of the House for consideration legislation providing Federal aid to education. The enactment of such a measure is one of great importance and concerning which there is great public interest. There exists a need for providing adequate pay for our school teachers, improving our school systems, and raising the educational standards of our country. The Congress should provide legislation to aid in wiping out and removing illiteracy that exists in various sections of America. During the recent war some 17,000,000 young men were examined under Selective Service and of this number approximately 5,000,000 were rejected for physical, mental, and educational deficiencies. As long as a situation such as this exists there will remain the pressing need for the enactment of enabling legislation to aid our States in the carrying forward of a better educational program. Federal aid to education without Federal control must be considered during the next session of the Congress.

When the Congress passed an act recreating and renewing the life of the Reconstruction Finance Corporation, the bill as passed failed to provide authority for the RFC to purchase and acquire home loans of veterans as existed in the original act. Legislation to provide a secondary market for home loan mortgages of veterans by amending the Reconstruction Finance Corporation Act has been introduced in both the House and the Senate. However, the Congress has failed to give favorable consideration to this vital and needed legislation. The failure to include this authority in the new RFC Act or to pass any one of a number of measures introduced for this purpose constitutes perhaps the severest jolt the veterans of our country have taken to date in their fight to obtain adequate housing. Under the GI bill of rights the Veterans' Administration is empowered to guarantee one-half or 50 percent of a veteran's real-estate loan or up to a maximum of $4,000 on an $8,000 loan.

Under the Reconstruction Finance Corporation Act prior to the recent legislative change, this agency was empowered to purchase GI housing loans from the original mortgagees—banks and other lending institutions—thereby providing a market for loans of veterans investing in a home. Inasmuch as a serious housing shortage exists and no veterans housing legislation has been enacted into law, it seems to me that the least which this Congress could do in the way of aiding veterans in this connection would be to provide a method of financing loans for those veterans who desire to purchase a home. I regret ex-

ceedingly that this authority was deleted from the RFC Act and that the Congress has failed to give consideration to bills introduced to correct this situation. Representatives of the Veterans' Administration, and veterans' service organizations have urged the passage of this legislation. There exists no justification for the failure of its passage inasmuch as the Veterans' Administration has reported that an exceedingly small number of a total of 750,000 veterans' home loans have proven bad or on which the veterans have defaulted. The failure to pass legislation providing adequate housing for veterans and the cutting off of means for financing loans for those veterans who desire to become home owners remains a most important part of the unfinished business of this Congress.

The recent action in providing increased funds for soil conservation purposes should be commended. However, the Congress has not provided all the necessary and recommended funds for rural electrification and various other agricultural benefit programs. Adequate funds should be provided for these purposes if we are to have a sound and prosperous agriculture in America.

The providing of legislation for strengthening our national defense has only been partially completed. The passage of the armed forces unification measure to bring about centralized command for the Army, Navy, and Air Forces is a forward step in the right direction. However, other recommended legislation to insure the strengthening of our country is needed Through the enactment of this legislation we not only "put our own house in order" but declare to the other nations of the world that America intends to remain strong and to assume her responsibilities in endeavoring to bring about a permanent and lasting peace. The completion of this and other unfinished legislation remains as objectives which must be pursued and accomplished when the next session of Congress convenes.

Income Sharing Still Lags Behind Soaring United States Output

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. DINGELL. Mr. Speaker, so timely and well written is the article in the Detroit News of July 22 by Blair Moody, able and brilliant journalist and syndicate writer, that I could not refrain from furthering this valuable and factual data and making it available in its concentrated form to more people that I have asked unanimous consent to print it in the CONGRESSIONAL RECORD.

Of course, it is gleaned from the more extensive economic report of President Truman, but I take for granted most of you do not always have the time to read all such reports in full; even if you do, however, it would be well to suggest you read again and digest these forceful facts and call them to the attention of your people.

Now, in closing let me add a thought which, if followed, I believe, may tend not only to maintain our present prosperity but will assure indefinite extension and expansion of our economic well-being.

If the present scale of high wages is maintained and the lower-paid workers are brought up into a higher plane and the minimum-wage scale is raised to 65 cents per hour, while at the same time production is increased by increased efficiency and elimination of waste so that unit prices of goods produced can be held in line or even reduced, our prosperity will last far into the future or until a gross mistake is committed by our economic forces.

INCOME SHARING STILL LAGS BEHIND SOARING UNITED STATES OUTPUT—GAIN SHOWN SINCE 1937, TRUMAN SAYS, URGING CUTS IN HIGH-PROFIT ITEMS

(By Blair Moody)

WASHINGTON, July 22.—President Truman's midyear economic report shows that more families than ever before have achieved what can decently be described as an American standard of living.

Not only are we producing goods and services at a rate of $225,000,000,000 a year—compared with $103,000,000,000 in 1929—but are as the President says, "enjoying the benefits more equitably."

Yet the President's facts indicate that we still have a long way to go before achieving the economic balance which will assure sustained prosperity for everyone without successive shots in the arm.

Then years ago, when the Nation was still struggling back from the 1929–32 collapse, more than two-thirds of its families had to get along on incomes of $1,500 a year or less. One-third—that was 40,000,000—lived in families with incomes below $790.

In those days the number of families receiving more than $3,000 a year was only 7 percent of the total. Today the President reports that 35 percent receive over $3,000 a year, including 10 percent over $5,000. He reveals that last month 60,055,000 were employed—more than the "impractical" 60,000,000 "goal" of liberal economists.

YOU CAN'T EAT FIGURES

But the President also reports that the great bulk of American families, nearly two-thirds, are still getting under $60 a week ($3,000) in this day of inflated prices, and that 17 percent still draw incomes under $1,000, less than $20 a week.

Since 1939 the average weekly wage, in a cross section of the economy so broad as to assure approximate accuracy, has jumped, according to the President's figures, from $23.86 to $48.91.

A pay check under $50 does not provide a luxury standard of living at present price levels, even though the price advance (thanks to the hold-the-line policy before June 1946) was only about half the wage advance on a percentage basis.

White-collar and other families not sharing in these gains of industrial labor have not found percentages edible, nor have the unorganized workers, down around the Federal minimum wage level, whom Congress is callously deserting this week-end when it pigeonholes the bill boosting that minimum from 40 to 65 cents an hour.

PHONY SCARCITY STORIES

Yet the gains already made have created an illuminating set of statistics in the consumption column.

In a period when many food commodities were supposed to be scarce as a nation we actually were eating better than ever before.

Howls over the meat shortage to the contrary, in 1946 we actually consumed 15 percent more meat per person than in 1939, the President reports. This was despite a much larger population, which means the supply of meat was considerably more than 15 percent above prewar.

Our 1946 consumption of canned vegetables was 52 percent above prewar; of fresh vegetables 14 percent; of canned fruits, 36 percent; and of eggs, 22 percent. Domestic consumption of wheat, dairy products and a few other items, declined only slightly despite huge shipments abroad.

"These improvements," the President said, "are in vivid contrast to the greatly deteriorated nutrition of unfortunate peoples in many other countries."

TWO MAJOR SUGGESTIONS

But the President warns that "adjustment" must be made if a "tragic depression" is to be averted. What adjustments? First, he says, "prices must be revised downward where profits are excessive or where reductions are needed to forestall a collapse of markets."

Second, wages in the lowest brackets must be raised.

The present 40 cents an hour minimum—$16 a week—must be raised, the President says, not alone as a matter of fairness but as a national economic necessity.

For when the unusual and temporary postwar markets, especially the export market, begin to fade, the country cannot afford to have an important sector of domestic demand bottled by lack of buying power. As the President put it:

"Our concern today is not whether consumers can buy as much as they could before the war. It is, rather, whether they can buy enough to sustain our postwar economy at maximum production."

Philipsburg, Pa., Celebrates Sesquicentennial, 1797-1947

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. VAN ZANDT. Mr. Speaker, it is seldom that a community celebrates its founding by attracting national and international attention but such an exception attended the Sesquicentennial of Philipsburg, Pa., one of the thriving and enterprising towns in Centre County, Pa., in my congressional district.

The week of July 21–25, inclusive, was selected for the sesquicentennial observance by the following proclamation by Chief Burgess Ernest E. Demi:

SESQUICENTENNIAL PROCLAMATION ISSUED BY BURGESS DEMI

To the People Assembled Here in the American Legion Stadium at Philipsburg, Pa., and to the Community, State, and Government:

I, Ernest E. Demi, chief burgess of the Borough of Philipsburg, Centre County, Pa., do proclaim this devotional service to be the opening session of the one-hundred and fiftieth anniversary to celebrate the memory and founding of Philipsburg.

And I further proclaim that the following days, July 21 to 25, 1947, inclusive, be set aside to further celebrate the same occasion.

It is our hope and desire that we have a large attendance of the former residents of Philipsburg, as well as many thousands of visitors.

We wish for them all a friendly and pleasant visit, and that our home people will so receive and entertain them, that they will say, "Philipsburg has again proven its reputation as a friendly town."

Affixed with the borough seal this 20th day of July 1947 and signed by

ERNEST E. DEMI,
Chief Burgess, Philipsburg.

In keeping with the spiritual development that has marked the life of the community of Philipsburg, outdoor union church services were conducted Sunday, July 20, at the American Legion Memorial Field as a fitting prelude to the official opening of the week's celebration. Dr. Ross H. Stover, prominent pastor of the Messiah Lutheran Church of Philadelphia, Pa., addressed the union religious service, choosing as his topic Pillars of Philipsburg. Dr. Stover listed as the four pillars: Divine ideals, devotional life, productive fellowship, and the passion to propagate. The union church services were attended by a huge throng, with local pastors assisting in conducting the religious program.

The Old Union Church, erected in 1820, is regarded as an historic shrine in Philipsburg and stands among ancient oaks in the center of Philipsburg's residential district on Presqueisle Street. It was erected as a church where all denominations could worship. While it has not been in use in recent years for regular church services, it is regarded as a memorial to Philipsburg's settlers and during sesquicentennial week was opened for the purpose of holding union services.

The following churches serve the spiritual needs of Philipsburg—Evangelical United Brethren Church, First Lutheran Church, Trinity Methodist Church, SS. Peter and Paul Roman Catholic Church, Philipsburg Jewish Synagogue, First Presbyterian Church, St. Paul's Episcopal Church, Philipsburg Gospel Tabernacle, First Baptist Church, Free Methodist Church, First Church of Christ, Church of the Nazarene and the Gospel Tabernacle.

The sesquicentennial program for the week provided for changes daily with Monday, July 21, being designated as veterans' day, which was climaxed by a mammoth military parade that attracted the finest bands and drum corps in the State of Pennsylvania. A gala display of fireworks featured the veterans' day program. The parade was voted to be one of the finest ever staged in Central Pennsylvania and was witnessed by a huge throng that crowded the streets of Philipsburg and wildly cheered the colorful spectacle.

Industrial transportation day on July 22 resulted in a splendid parade comprised of various divisions depicting the industrial growth and development of Philipsburg.

The remainder of the week found each day presenting a varied and novel program, which reflected careful planning on the part of the sesquicentennial committee, headed by Roy H. Schreffler, president of the celebration, and Samuel Z. Miller, celebration program chairman.

During the entire week civic groups, service clubs, and the schools of Philipsburg cooperated in presenting varied features portraying the development and achievements of the community over the period of 150 years of its existence.

The Philipsburg schools sponsored an historical pageant on three successive evenings at the Memorial Stadium, with pageant players garbed as frontiersmen, carrying ancient muzzle-loaders, depicting scenes in early American life when Philipsburg was in swaddling clothes.

The Philips family of Manchester, England, settled Philipsburg in 1797 and in recognition of this fact the lord mayor of Manchester, England, sent the following congratulatory message to Chief Burgess Ernest E. Demi, of Philipsburg:

LORD MAYOR OF MANCHESTER SALUTES PHILIPSBURG'S ANNIVERSARY CELEBRATION

TOWN HALL, MANCHESTER,
June 3, 1947.

DEAR MR. MAYOR: On the occasion of the celebration of the one hundred and fiftieth anniversary of the founding of Philipsburg, I am happy to send to the citizens hearty greetings and congratulations.

I am interested to learn that the foundations of your city were laid in 1797, by the Philips family, who are reputed to have connections with Manchester. From enquiries I have made, it would seem that the founders of Philipsburg and the present Manchester firm of J. and N. Philips have a common ancestry in one Nathaniel Philips (1659–1737) of Team in Staffordshire. The Manchester firm was founded in 1747 and part of the firm's original mill is still in being.

The city of Manchester is important as a centre of industry, commerce, art, culture, and progressive self-government, and lies at the heart of a vast industrial and manufacturing region having a great density of population.

During the war Manchester was subjected to heavy enemy air attacks and suffered considerable loss of life and damage to property. Many of the bombed-out citizens found comfort and consolation in the warm clothing, blankets, and other precious gifts that were sent to them by the kind-hearted people of the United States. Doubtless some of these gifts originated in your city, and I am glad to take this opportunity, even at so late a date, of expressing my warm thanks for these gifts.

It is a sad commentary on world affairs that a Second World War was necessary to bring the peoples of the United States and the peoples of Britain closer together in mutual understanding and good will. Strange it may seem, but nevertheless it is true to say that millions of United States fighting men were ambassadors of friendship and good will from your country to Britain, where they found those sentiments warmly and sincerely reciprocated. We had in Manchester many thousands of your fine fellows, many of whom lived in our homes, becoming accustomed to our wartime mode of life.

We were glad to welcome them and they were kind and considerate to us. The growing realization that our Nations were partners in an enterprise to preserve the freedom we both cherish brought your soldiers, your sailors, and your airmen close to the British people in friendship and mutual understanding, and in coordinated effort, equal suffering and sacrifice.

Out of these things, with the help of God, came victory. Let us pray that the sacrifices and efforts of the fighting men and civilians of both our countries will not have been in vain, but that they will bind our two peoples together in the unshakable conviction that for all times our countries shall stand foursquare to help maintain peace and justice throughout the world. The present time is a testing time, when the statesmen of all countries need conjointly the honest endeavor and good will of all peoples to dispel suspicion among nations and to establish lasting peace throughout the world.

Mr. Mayor, I am particularly pleased to send to you and to the citizens of Philipsburg sincere good wishes and expressions of friendship from the citizens of Manchester. This opportunity also enables me to express sentiments of good will which I hope will reach out beyond your city boundaries to our good American friends everywhere.

May your city prosper, and with it your citizens.

Yours sincerely,

THOMAS H. ADAMS,
Lord Mayor.

In addition to greetings from the lord mayor of Manchester, England, Fred Waring, nationally renowned band leader, dedicated a portion of the Fred Waring Show to the Philipsburg sesquicentennial on the NBC Network, Monday morning, July 21. The NBC salute to Philipsburg opened with Happy Birthday to You, which was followed by the Waring players reenacting a scene depicting the auction sale at 2 cents an acre to the Philips brothers of the land on which Philipsburg now stands. Fred Waring stated that while the Philips family, by their purchase, probably deprived many panthers and bears of their homes, acquiring this tract of land provided new homes for a lot of settlers. The famed band leader reminded the radio audience that it was in Philipsburg, Pa., in 1878 that Dr. J. C. Richards and Dr. John D. McGirk made medical history by performing the first appendicitis operation; and that it was in Philipsburg, Pa., where the first street arc lights were installed and placed in operation.

One of the features of the Fred Waring Show tribute to Philipsburg was the rendition of Deep in the Heart of the Alleghenies—a song written especially for the sesquicentennial celebration by Jack Fulton, former Philipsburg boy, who is now a nationally famed radio artist. The song was sung publicly for the first time on Sunday evening preceding the Fred Waring Show at the outdoor union church services by a male chorus of 23 voices under the direction of Dr. Frank Gette of Philipsburg.

The words of the song are as follows:

DEEP IN THE HEART OF THE ALLEGHENIES

One hundred and fifty years ago today,
Some pioneers and settlers on their way,
Picked this spot to settle down
And build a friendly town.
Philipsburg, Pa., is its moniker today,

Deep in the heart of the Alleghenies
Is my home town.
Rich in tradition and pleasant memories
Is my home town.
The friends you greet
And the folks you meet
Always wear a smile up
And down Front Street.
Deep in the heart of the Alleghenies
Is my home town.

The Fred Waring show over NBC was preceded by another tribute from the NBC network when a native son of Philipsburg, William J. Thomas, broadcast his weekly program A Main Street

Editor Looks at the News, from the editorial rooms of the Philipsburg Daily Journal, where over 25 years ago he secured his first job on a daily newspaper. Bill Thomas is now editor of the Clearfield (Pa.) Progress and he is also a member of the Westinghouse KDKA news staff, with a weekly broadcast that is well presented and, because of its informative value, has resulted in a large and highly appreciative radio audience over Station KDKA, Pittsburgh. His radio tribute in commemoration of Philipsburg's sesquicentennial is as follows:

I am speaking to you this evening from Philipsburg, up here in Centre County—very close to the geographical center of the Keystone State.

This Main Street community is filled with excitement and anticipation—Philipsburg is just one hundred and fifty years old. Beginning tomorrow, Philipsburgers have set aside six whole days to celebrate—but, we'll come back to that in a moment.

This evening we want to look at three things—some of the highlights of the past 168 hours, the day's outstanding developments, and this Philipsburg celebration, for it is the kind of thing that helps us keep our perspective—maybe it even has a lesson worth learning.

As I said earlier, I am speaking from Philipsburg in Centre County and Philipsburg tomorrow begins a six-day celebration—its sesqui-centennial celebration. Philipsburg—150 years old and its nearly 4,000 residents will be hosts to many more thousands from near and far.

I am very happy to be invited to take part in this important event in Philipsburg's life, for this broadcast is a kind of unofficial opening of what everybody here calls "The Sesqui."

I am not only happy, but proud to be here, for I was born and raised in this typical, friendly and enthusiastic Main Street town.

As I drove up Front and Presqueisle Streets this afternoon—colorfully decorated streets, they are too—I thought how far this town has traveled since 1797. You couldn't buy the town today for several million dollars. Yet 150 years ago you could have bought the land on which it stands for 2 cents an acre.

Things have changed a lot in a century and a half. As a matter of fact the streets were sticky mud bogs after every rain, with street after street of board sidewalks. Today, practically every street, alley, and sidewalk is paved—I remember as a boy—the passenger trains. There aren't any passenger trains at all coming into town now. But when I was a boy—it seems almost unbelievable now—there were 3 railroads with 24 passenger trains a day. Although there aren't any passenger trains, nobody seems to mind it. There is good bus service and I suppose there are as many automobiles to the block as anywhere in the United States.

Like most progressive Main Street towns, Philipsburg has interesting history. It has also had its dark days as well as its bright ones.

The town was founded by the Philips family of Manchester, England. Three brothers helped to found it, but one of the brothers, Hardman Philips, dominated the Philipsburg scene for about 35 years. He had great hopes for this town in the wilderness. He built an iron forge and the first screw factory in the United States. Then, the Pennsylvania Canal was built. It missed Philipsburg by 28 miles. Philips tried to have a railroad built into the town, but was unsuccessful. His iron forge burned. A man by the name of Harvey invented a new kind of screw—one with gimlet point—the Philips' screw had blunt ends. His business declined and he returned to England.

But other men carried on. The town eventually got its railroad. Coal was discovered and a new industry sprang up. The town became identified with the early development of electrical power. It is the first town in the world to have street arc lights. The Episcopal Church was the first church in the world to be lighted by electricity. And here is another "first" that I copied out of the July bulletin of the Pennsylvania Department of Internal Affairs.

"In 1878, medical history was made (in Philipsburg) when Dr. J. C. Richards and Dr. John D. McGirk, performed what was probably the first appendicitis operation. The two doctors made an incision in a child to discover a pin piercing the middle of the appendix and protruding through the opening. They cut off the appendix with a pair of scissors and the child recovered. It was not until 8 years later—in 1886—that appendicitis was recognized."

The men who founded the town and others who have helped keep it wholesome and progressive will be honored during the next 6 days. There will be a church day, an all-veterans' day, a miners' and industrial day, a founders' day, a firemen's and sports day, and an education day.

Some of the members have just been telling me what they have planned for the week. It sounds like a pretty full week. Next Wednesday, for instance, is founders' day. There will be a memorial service at the Old Union Church, built by Hardman Philips; a muzzle-loading contest—whatever that is—trap shooting, a State police dog show, a parade depicting the town's history, a pageant at Memorial Field, and two dances, one of them the sesquicentennial ball.

Celebrations like this have a place in the life of every community. They are valuable. They help give us a sense of perspective. They impress upon us that change is not only a characteristic of today—it was a predominating characteristic of the 1800's and the 1700's, too.

These celebrations and the reunions they foster are satisfying, not alone because of what we see and hear, but because of what we remember. They become sentimental journeys into the past.

The very spot from which I am speaking holds many memories for me. I am in the office of the Daily Journal, where I was once city editor. More than a quarter of a century ago, the man who was then editor and publisher of the paper, the late W. T. Bair, gave me my first daily newspaper job.

Among those who are here in the Daily Journal Office for this broadcast is the chairman of the sesquicentennial committee, Roy H. Schreffler. Roy, would you mind saying a word to our Main Street Editor audience?

Mr. SCHREFFLER. First of all, Bill, we want to welcome you back to Philipsburg. I should also like to say that anyone is welcome to attend any of the events during any of the days of our celebration. We assume, then, that any of the activities will be most interesting and entertaining. While you have mentioned next Wednesday, there will be no one big day. Every day will be a big day. However, we do wish to emphasize our Sunday evening union service at the Legion Memorial Field—that's tomorrow night.

Mr. THOMAS. Thank you, Roy Schreffler.

The six fun-filled days that commemorated the founding of Philipsburg presented daily programs to fit every possible mood of the thousands who lined the streets and avenues of this hospitable Pennsylvania town.

Historical pageants, block-dancing, centennial balls, daily parades of beauty and magnitude, night baseball, a dazzling collection of antiques descriptive of the 150-year period of Philipsburg's existence are only a few of the stellar attractions that delighted the vast crowds that daily gathered to enjoy the carnival atmosphere that provided clean fun and keen enjoyment to young and old.

Philipsburg is located on the boundary line of Clearfield County and according to the 1940 census, had a population of 3,963. However, Chester Hill Borough in Clearfield County, with a population of 900, and South Philipsburg Borough, with approximately 600 inhabitants, are regarded as a part of Philipsburg when considering the town's population, which would approach approximately 5,500. There are numerous towns in Clearfield County within a radius of a few miles of Philipsburg and because of their size, use Philipsburg as a trading center, with the result that it enjoys a drawing population conservatively estimated to be in excess of 35,000.

Centre County is the second largest county in area among the counties of Pennsylvania and is located in the geographic center of the State. Organized in 1800, Centre County is made up of parts from old Northumberland, Mifflin, Huntingdon and Lycoming Counties. The original area has since been diminished to form other counties.

The whole surface of Centre County is elevated and is also broken by several distinct ranges of mountains, which have a southwesterly course. These mountains outline splendid valleys which, in most cases, bear the same names as adjacent ridges: Brush, Nittany, Penns, and Bald Eagle. The valley lands are largely limestone and highly fertile, contributing an important element to the economic wealth of the country. Settlement of this section of Pennsylvania was undertaken as early as 1768 when small beginnings were made at Milesburg and Potter's Fort, attracted by the opportunity to engage in iron making. In that early period there was iron ore and limestone in abundance, together with timber for charcoal, but the production of bituminous coal was developed much later. At the present time, in addition to coal, the county's principal mineral products are crushed limestone, lime and fire clay.

After the county was created the county seat was located on an unusually fine site and took its name from a nearby spring of great volume. The name Bellefonte (beautiful fountain) was suggested by Charles Maurice, Duc de Talleyrand, who visited the place in 1794–95 while an exile from France. Bellefonte was the home of Andrew Gregg Curtin, famous Civil War Governor, who died there October 7, 1894. Governors Beaver and Hastings also lived at Bellefonte.

State College, the largest borough in Centre County, is the site of the Pennsylvania State College, which was founded in 1854 as a farm school but has developed into a general college of wide scope, with an enrollment in excess of 10,000 students.

The principal classes of industry in Centre County are clay, glass and stone

products, metals and metal products, textiles and textile products, food and kindred products. The chief products are brass, bronze and copper products, lime, terra cotta and fire clay products, bituminous coal and bakery products. Agriculture and dairy products play an important part in the economic life of Centre County.

Philipsburg is the third largest borough in Centre County and its industries are diversified. They consist principally of coal mining, planing mills, ice cream, candy and meat packing plants; wearing apparel and other fabricated textile products; bakery products and food processing plants; men's and boys' clothing, men's trousers and sportswear. During World War II MacLaren Sportswear Co. in Philipsburg, with an annual pay roll of over three-quarters of a million dollars, was engaged in the manufacture of clothing for our armed forces and handled Government contracts totaling millions of dollars.

Philipsburg residents are kept well informed by a modern daily newspaper, The Philipsburg Daily Journal, established in 1888 by the late W. T. Bair, and now published by members of the Bair family. The Daily Journal is the oldest daily newspaper in Centre County and is ably edited by a competent staff of news analysts. In addition, up-to-the- minute news of world-wide events is afforded readers since the Daily Journal has wire service from nationally known news outlets.

The sesquicentennial celebration provided an occasion for appraising the steady development of Philipsburg during the past 150 years. As you view the modern streets and fine homes in this thriving community, it is easily recognized that such progress results from the industry and zeal of civic-minded residents who have taken pride in advancing the best interests of Philipsburg at every opportunity.

The Pennsylvania State Hospital, with an experienced and skilled medical and surgical staff, has ministered to the needs of Philipsburg and vicinity to such an extent that it is widely recognized as one of the finest hospitals in the Keystone State.

As the curtain falls on the celebration of the sesquicentennial of Philipsburg the six fun-packed days have served to focus national and international attention on one of the finest towns in my congressional district. The high spirit of patriotism that the citizens of Philipsburg have exhibited during every war in which this nation has been involved reflects the highest American ideals. With such a priceless tradition as a heritage and conscious of the zeal and determination of the people of Philipsburg, I am confident that the future of this thriving and enterprising community is secure. Therefore, on this memorable occasion I join with all the people of Pennsylvania in saluting the citizens of Philipsburg and wishing them continued progress, good health, long life, and a full measure of happiness in what I regard as one of the finest communities in the Keystone State. Forward! Philipsburg!

The Faith and Credit of Foreign Nations

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. CRAWFORD. Mr. Speaker, the International Bank for Reconstruction and Development had floated its first offering of $250 million consisting of two issues—a 10-year and a 25-year obligation. As was expected by reason of these issues carrying rates of interest far in excess of those which govern on Federal issues, the offering was oversubscribed. Thus the bonds and debentures of the International Credit Bank are now moving on their way into the portfolios of our people, their banks and their savings institutions.

During the past 7 years the United States Government has committed itself to expenditures in behalf of foreign aid totalling some $73,000,000,000. During these war years private capital did not enter into these operations on a large scale. But now with the bank selling its debentures to our people private investment again moves into the picture.

Will these foreign governments pay their obligations? This is a question which will take on more and more importance as the years come and go.

If there is one subject on which, more than another, a keen and well-informed public opinion is needed, it is precisely this question of our giving and lending to foreign people and governments. In order to give a bit of light on the attitude of one government with respect to its international obligation, let me present copy of a letter addressed to the Iranian Ambassador to the United States. Here is a case upon which both the State Department and the Iranian Government has too long delayed. If this is a sample of how our people are to be treated, it will be well for the citizens of this country to become better informed on many of these transactions.

ULEN REALIZATION CORP.,
New York, July 24, 1947.

HUSSEIN ALA,
Iranian Ambassador to the United States,
Washington, D. C.

EXCELLENCY: At the request of Messrs. Nemazee and Aram, of your Government's Embassy in Washington, this letter has been prepared for purposes of restating the substance of the Ulen company's claim against the Government of Iran. Informal conversations were held with Messrs. Nemazee and Aram on Monday, July 21, and it was the position of these two gentlemen that neither they, nor anyone in official position in Teheran, was sufficiently well informed on this matter to discuss it. Their statement that insufficient information and documentation of this matter was available to the Government of Iran struck the writer as being somewhat strange, inasmuch as the Government is known to have a complete set of records incident to the matter in question, plus the records and documents which it confiscated, by military force, from my company. Nor is it particularly reassuring that the spokesmen for Iran would assume this attitude in discussing this matter with me, whereas they discuss it freely and in detail with others.

Ulen company's claim against the Government of Iran, as stated repeatedly in previous correspondence, arises from the Government's unilateral cancellation of contracts by the Iranian Government in connection with the construction of the southern portion of the Trans-Iranian Railway. The following sums represent Ulen's documented claim for unpaid balances:

1. Ulen's own funds, disbursed in payment of purchases and expenses for the account of the Iranian Government	$267,388.72
2. Interest on the above amount, from 1930 to 1946	349,216.70
3. Balance of fee, unpaid	432,000.00
Total	1,048,585.42

The contract in question was illegally and unilaterally cancelled by the Government of Iran on May 13, 1930. As of that date, Ulen & Company had spent $267,388.72 of its own funds for materials, equipment, and expenses incident to the construction project, for which it has not yet been reimbursed. As noted, the second item, $349,216.70, is interest on that sum, for the period from May 1940 to 1946. This interest has been charged at the rate of 6% per annum, which as you know is much less than the prevailing interest rate in your country. The third item is self-explanatory.

As you know from previous correspondence, and as the records will show, this was a "cost-plus" construction contract, although your Government confiscated Ulen & Company's records in Iran—fortunately the Company is in possession of a completely documented record of all agreements, purchases, waivers, etc., incident thereto which were forwarded weekly by the company's works manager. This documentation shows conclusively that the Government of Iran failed to comply with many terms of the contracts entered into; it will show that the Government of Iran defaulted in furnishing funds for the prosecution of the work as it had agreed to do; it will show that innumerable changes in plans beyond those provided for in the contracts were forced; it will show failure to approve plans promptly, harrassment by Government inspectors who were neither experienced nor qualified for their duties; it will show failure on the part of the Government to reimburse Ulen for current expenditures as provided in the contracts, and many other deviations.

Notwithstanding these facts, within two days of the receipt by Ulen's representatives in charge, of the sudden, unexpected and illegal unilateral cancellation of the contracts, the Iranian Government placed its military in Ulen's offices and on the project, and by military force took possession of Ulen's books, records, equipment, material, etc., and ordered Ulen's American representatives and employees from the project.

It is further a matter of record that Ulen kept its accredited representative in Teheran from the date of the cancellation of the contract, May 13, 1930, until October 16, 1932, a period of over 2 years, in an effort to settle the outstanding accounts; but to no avail.

Since that time, the Government of Iran persistently has pursued a policy of evasion in this matter, seeking first to build up a fictitious counterclaim, and now professing ignorance of the affair to the degree that no official in the whole government is qualified to discuss it, or possessed of sufficient authority to even recommend payment of the claim.

Ulen & Company, and its engineering associates, The J. G. White Engineering Co., of

New York, the Societe de Construction de Batignolles of France, and Stewart & MacDonald of London, undertook and prosecuted the project in good faith. Since the cancellation of the contract, Ulen for itself and their associates has at every available opportunity, sought to secure payment of the funds due to them. The claim has been presented to the Iranian Government on numerous occasions. To date, the Iranian Government has ignored this claim completely and has refused even to designate any representative with authority to discuss and settle the matter.

Mr. Nemazee, the Commercial Attaché, and Mr. Aram, the First Secretary of your Embassy, stated at the outset of last Monday's conference that they possessed no authority to negotiate and settle the matter. While stating that they had little information on the subject, they did not hesitate to criticize Ulen's claim and the company's attempts to secure payment. In asking for a restatement of the claim it was obvious that they were interested only in continuing Iran's 17-year policy of evasion in this matter.

In the course of the conference my legal counsel and I were told by Messrs. Nemazee and Aram: (1) that they did not understand Ulen's claim; (2) that Ulen's actions to collect its just debt were resented; (3) that there was little hope of any serious consideration of the claim by the present Iranian Government since there was no authority vested in any member of the present Government to make a settlement of the matter; (4) that, this matter involving acts by a former Iranian administration, none of the present ministers of Iran's present Government would dare take the responsibility of making a recommendation that the matter be settled; (5) that no early action could be expected—"it might take 16 months or 16 years—and further—what difference did it make inasmuch as Ulen had already waited 17 years"; (6) that in any event it would take years to secure passage of legislation which would permit payment of the claim; (7) that neither the State Department, which has recently authorized $30,000,000 in credits to the Government of Iran, nor the International Bank, which will consider Iran's application for a loan of $250,000,000, would take the slightest cognizance of Ulen's claim.

In the light of these statements by official spokesmen of your Government, it will be understood if Ulen & Company and its associates make appropriate representations to the Department of State, and to the International Bank for Reconstruction and Development, and protest the giving of further financial assistance to the Government of Iran until that Government has demonstrated proper respect for its financial obligations, and some orderly process under which American citizens can secure fair and equitable treatment in dealing with the Government of Iran.

With assurances of all appropriate esteem and regard.

Respectfully submitted,

FRANK H. REDIKER,
Agent and Attorney-in-fact,
Ulen Realization Corporation.

New Zealand Social Security Plan

EXTENSION OF REMARKS
OF
HON. FOREST A. HARNESS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters and statement:

FEDERAL SECURITY AGENCY,
Washington, July 11, 1947.

Hon. FOREST A. HARNESS,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HARNESS: As you know from the conversation we had with you on June 17, Mr. Mitchell, the Acting Commissioner for Social Security, and I were greatly disturbed by your criticism, in a speech on the floor of the House on the 16th, of our proposed study of social security in New Zealand. I regret that I was not afforded an opportunity to provide you with the facts which follow before your speech was made.

You had been correctly informed that we had planned to send a member of our staff, Mr. Jacob Fisher, to New Zealand. However, he was not being sent merely or even primarily "to study compulsory health insurance in that country" as was stated in your speech but to study the whole social security system. Mr. Fisher's inquiries on health benefits were to be only a fraction of a broad social security study which was planned to include cash benefit provisions for old age, invalidity, unemployment, sickness, widows, orphans, minors, etc.

The New Zealand Social Security System is recognized among experts as being of great significance on account of its unified nature, comprehensive scope, and other special characteristics. It is different in many important respects from our own and from the systems of most other countries. It combines social insurance and public assistant concepts in unusual ways, its coverage is national, the protections are very broad, and the financing rests on earmarked national income taxes. It has attracted world-wide attention, and is widely regarded as something in the nature of a laboratory experiment for testing many important and controversial proposals in the field of social security. It has been criticised by some insurance and medical writers as a bad and overambitious program that cannot succeed; and at the same time it has been held out, in a report from the Brookings Institution of Washington, as something of a model for a new type of social security program for the United States. Obviously, it cannot be all that is claimed or charged. We have learned all that we could about it through published documents, correspondence and personal inquiries here. Though we have had every courtesy and assistance from the New Zealand representatives in Washington and by correspondence from officials in New Zealand, many questions about administration, effectiveness of the system, costs, etc. have remained unanswered; and some conflicting reports have been left unresolved. Study and inquiry on the ground were, in our opinion, clearly indicated.

Mr. Fisher had already made careful studies of all the available information on the New Zealand system, with the assistance of other technical experts on our staff. As far as we know, his two publications on this subject[1] have been received—both here and abroad—as accurate, objective, and authoritative documents. He was therefore selected for this new investigation. In your speech to the House you said that his "report on socialized medicine * * * has been described by several reputable authorities as extremely biased and dishonest." In this connection may I say, first, that Mr. Fisher's article did not deal with socialized medicine. It described the New Zealand system of cash and health benefits. Secondly, no comments such as those you referred to have come to our attention. I trust that the sources of this criticism may be made known to us in order that we may learn the basis for the charges.

Your speech referred to this trip to New Zealand as a type of activity "never authorized by Congress" and "never * * * authorized directly or indirectly in the appropriation bills." While you reiterated this view during our discussion in your office, I presume that any confusion which may have existed on that subject has now been cleared up by your committee counsel who has assured us that he has no question as to our authority to engage in this activity or to incur financial obligations in connection with it. His opinion in this respect conforms to that of the legal staff of this agency.

The Social Security Act (sec. 702) imposes a positive "duty" upon this agency for engaging in activities such as the one regarding which you have raised question. This duty to make studies and recommendations has always included studies of foreign as well as domestic practices and experiences. Indeed, you will find that foreign systems, and the lessons to be learned from them, were carefully and extensively considered by the House and Senate Committees when social security legislation was first enacted, just as they have been on various occasions since then when committees of Congress have considered changes in the social security laws. All countries have a great deal to learn from each other about social security, from both successes and failures, and this has always been the attitude of Congress. I have not the slightest doubt that congressional committees would regard us as having done less than our duty under the law if they found, at hearings or on other occasions that we had not taken all reasonable steps to be informed on foreign experience.

Since you have raised questions and expressed disapproval of our selection of Mr. Fisher for the New Zealand study, and since I have high regard for the wishes of Members of Congress and its committees, and acknowledge our responsibility to them, I have directed that the study be postponed until after our investigation of the charges against him is completed.

While I expect to go into the matter thoroughly the data obtained thus far from your committee counsel, from the House Committee on Un-American Activities and from Mr. Fisher himself impress me as not justifying so serious a reflection upon the reputation of a person whose conduct and service, so far as we have been able to observe, have been beyond reproach.

In view of the fact that your criticism of this Agency and certain of its programs and officers has been made a public record, I trust that you will similarly make this letter a public record.

Sincerely yours,

WATSON B. MILLER,
Administrator.

JULY 24, 1947.

Hon. WATSON MILLER,
Administrator,
Federal Security Agency,
Washington, D. C.

DEAR Mr. MILLER: I desire to acknowledge your letter of July 11, 1947, regarding the remarks I made on the floor of the House on June 16. In the speech to which you refer, and at a conference held with you and Mr. Mitchell in my office on June 17, I definitely expressed my disapproval of international junkets by Federal employees. I refer to trips designed to make studies of foreign concepts of government to further the plans and ideologies of groups in this country to influence legislation being considered by the Congress of the United States; and I reiterate I am today strongly of the same opinion.

[1] Cash Benefits Under the New Zealand Social Security Program, Bureau of Research and Statistics Report No. 13, June 1945; 42 pp.; the New Zealand Social Security Program, Social Security Bulletin, September 1945, vol. 8, No. 9, pp. 3–11.

I have made careful study of the memorandum submitted by Isadore Falk, Director of the Bureau of Research and Statistics, entitled, "New Zealand Social Security Plan: Principal Features, Aspects Warranting Field Study." Under "Principal Features," it is stated:

"New Zealand Social Security Plan is of interest to the rest of the world because it ties up in one package protection against all of the major risks to income, 'free' medical care, complete population coverage, pay-as-you-go financing."

The list of subjects given in the memorandum to be studied, most of which relate to Compulsory Health Insurance, are of such nature that I feel they could be secured without great expense to the Government; and that travel to the far corners of the globe is unwarranted, as well as unauthorized.

The Subcommittee to investigate publicity and propaganda (of which I am Chairman) does not concern itself with the merits of pending legislation but is interested in the subject of improper and unlawful activities of Federal employees attempting to influence the Congress for or against pending legislation.

In view of your reference, I should like to direct your attention to Relief and Social Security, written by Lewis Meriam, and published by the Brookings Institution, in 1946, in which there is some criticism of the New Zealand plan; and I refer, particularly, to language contained on page 548, which reads as follows:

"The New York Times of October 7, 1945, reported that the Minister of Health of New Zealand had stated in the house of representatives that because of abuses the government is seriously considering whether free physician services will be continued. It admits widespread racketeering which followed the institution of a system under which a New Zealander may consult a physician as frequently as he likes, and the doctor can collect a fee for each visit. The costs are running far higher than the government had anticipated when it instituted the system, and they constitute a serious drain on the social security fund. Placing physicians on salary is one of the possibilities under consideration."

Certainly, the language above-quoted, taken from the report of the Brookings Institution, would not justify the New Zealand plan as being a model which might be adopted by the United States Government.

In my speech on the floor, reference was made to articles written by Jacob Fisher. In your letter of July 11, 1947, you stated that "Mr. Fisher's article did not deal with socialized medicine. It described the New Zealand system of cash and health benefits."

The coverage given medical care in Mr. Fisher's article, The New Zealand Social Security Program, most certainly presents a picture of socialized medicine.

Four of the five paragraphs in the introduction deal with New Zealand's health benefits program.

The second section of the article is headed "Health Benefits" and devotes nine columns to the subject with subsections on "Medical benefits," "Hospital benefits," "Maternity benefits," and "Other benefits." "Other benefits" are divided into "Pharmaceutical," "X-ray," "Massage," and "District nursing." The next section in the article is titled and deals with "Relationships with the medical profession."

The following subtitle "Relative success in attaining goals" begins with this paragraph—"To what extent has the health program achieved its objective—elimination of ability to pay as a factor in the distribution of medical care?"

It is a well-known fact that elimination of ability to pay as a factor in the distribution of medical care has been a favorite argument by proponents of socialized medicine.

Two days prior to writing this letter to me, you testified before the United States Senate Subcommittee on Health of the Committee on Labor and Public Welfare. The record of the hearing of July 9, on page 1723, reveals that Senator Donnell made inquiry as to the books and pamphlets you had read on the subject of social security programs of other countries. I quote briefly from the record:

"Senator DONNELL. You have not read any books, as distinguished from pamphlets, on the subject of compulsory health insurance, either in England or in Germany?

"Mr. MILLER. No extensive documents.

"Senator DONNELL. How about New Zealand? Have you read the experience of New Zealand with compulsory health insurance?

"Mr. MILLER. I have not."

It is apparent, therefore, from your sworn testimony that, although you have outlined at length the New Zealand Plan and referred to Mr. Fisher's article, you are, in fact, without knowledge of the New Zealand Plan or the content of Mr. Fisher's article. Therefore, in view of your testimony, I feel further reference to the New Zealand Plan or the Fisher article is unnecessary.

You have stated that Counsel for my Committee has assured the FSA that he has no question as to its authority to engage in this activity or to incur financial obligations in connection with it. Mr. Bow, who is Counsel for the Committee, has advised me that no such advice has been given by him to the Federal Security Agency, or any other department or agency of Government. Mr. Bow recalls that, at the time of the Hearings on the Health Workshop, inquiry was made of him regarding any prohibition by statute, relating to foreign travel. Mr. Bow's reply was that, at that time, he could cite no prohibiting statutes nor statutes authorizing the travel; and he suggested that, as counsel for the committee, further study would be made of the subject. The subcommittee counsel study does not conform with that of the legal staff of your agency.

Section 702 of the Social Security Act, reads as follows:

"DUTIES OF THE ADMINISTRATOR

"SEC. 702. The Administrator shall perform the duties imposed upon him by this act and shall also have the duty of studying and making recommendations as to the most effective methods of providing economic security through social insurance, and as to legislation and matters of administrative policy concerning old-age pensions, unemployment compensation, accident compensation, and related subjects."

The history of the enactment of this law is interesting, and I shall refer to it only briefly. The Social Security Act was recommended by the President to the Congress on January 17, 1935. On the same day, there was introduced in the Senate, Senate Bill 1130; and, in the House, H. R. 4120.

Each of the proposed bills contained a section, "Duties of the Social Insurance Board," which stated that the Board should, among its other duties, have the "duty of studying health insurance." However, the bill was rewritten and reintroduced as H. R. 7260, on April 4, 1935; and the provision, "duty of studying health insurance," had been eliminated; and the bill, as amended, became law on August 14, 1935.

It is apparent, therefore, that the Congress of the United States, by the elimination of the authority to study health insurance, intended that the agency, under the Social Security Act, should not engage in such studies. Such an interpretation is elementary in the field of statutory construction, and I shall not burden this letter with further comment upon the question of proper construction. However, may I say that there is serious question as to the authority of the Federal Security Agency to conduct the study of health insurance.

In view of the foregoing, I repeat my statement made on the floor of the House, to which you have made reference:

"These international junkets are an item of considerable expense. Such activities have never been authorized directly or indirectly in the appropriation bills."

That the attitude of Congress on foreign studies was known to the Federal Security Agency is obvious from an interoffice communication dated April 1, 1947, from Maurine Mulliner to Mr. Falk and others, which reads as follows:

"Subject: Project to Study Social Security in Other Countries:

"Several questions have been raised during the last 10 days, in considering congressional attitudes with respect to the budget for this administration, about the wisdom of proceeding with the project to study social security in other countries. It is the consensus of those who have commented that nothing further should be done at this time on this project. Consequently, this project is being dropped unless you bureau directors believe that further consideration should be given to it."

You further state in your letter that the information which you have thus far received does not justify so serious a reflection upon the reputation of Mr. Fisher. This is a charge I cannot permit to remain unanswered, for it is again obvious that those upon whom you rely have withheld facts from you, or have distorted facts to which you were entitled. I have seen Jacob Fisher's report to Mr. Isadore Falk, dated June 17, 1947, relative to his investigation of the published volumes of the Un-American Activities Committee. If the accuracy of his investigation in this matter is any criterion upon which his ability might be tested, I am sure that further study or investigation by the individual should not be considered or contemplated.

Mr. Fisher failed to mention the magazine, "Social Work Today" (of which he was managing editor and a member of the board of editors). In the reports of the Special Committee on Un-American Activities, the following comment relating to Mr. Fisher's magazine will be found:

"A study of the contents and policies of the magazine (Social Work Today) indicate, however, that it is primarily a vehicle whereby the line of the Communist Party is promulgated among social workers in a form calculated to be most palatable and effective to this particular group.

"Social Work Today has been the vehicle for considerable publicity in behalf of numerous front organizations supporting the line of the Communist Party.

"Social Work Today has been quick to respond when individual Communists are under fire.

"In 1935, the magazine was sponsored by the National Coordinating Committee of Rank and File Groups in Social Work, an organization of left-wing social workers."

Jacob Fisher was the chairman of the National Coordinating Committee of Rank and File Groups in Social Work, from its inception.

I am attaching to this letter a report submitted to me by the staff of my subcommittee. It is too lengthy to be the subject of this letter; but I am sure that, after you have given consideration to the evidence in the report, you will understand my anxiety in this matter and why I called it to the attention of the House of Representatives. It would seem your duty in the matter is, also, well defined.

You have asked that your letter be made a public record; and I am pleased to comply with your request, by asking that it be printed in the CONGRESSIONAL RECORD, together with this, my reply.

Sincerely yours,

FOREST A. HARNESS,
Chairman.

Attachment: Staff report.

To: Hon. FOREST A. HARNESS, chairman, Subcommittee on Publicity and Propaganda of the House Committee on Expenditures in the Executive Departments.
From: Committee Staff.
Subject: Jacob Fisher.

REFERENCES

We are in receipt of the following applications filed by Jacob Fisher for positions with the Social Security Board of the Federal Security Agency:

Social Security Board, dated June 30, 1936.

United States Civil Service, dated September 1, 1938.

Federal Security Agency, dated June 19, 1940.

Without exception the individuals given as references, by Jacob Fisher, in these applications, are found in the published reports of the Special Committee on Un-American Activities (Dies Committee).

The references given by Jacob Fisher are:

June 30, 1936: Mary van Kleeck, Herbert D. David, Simon Breines, Albion W. Hartwell, George Wolfe.

September 1, 1938: Mary van Kleeck, Harry Greenstein, George Wolfe, Maurice Bernstein, Morris Lewis.

June 19, 1940: Philip L. Klein, Mary van Kleeck, Harry Greenstein, Louis Sobel, Morris Lewis.

The mention given in the published reports of the Special Committee on Un-American Activities (Dies committee) range from a single mention for Herbert D. David, who is listed as the signer of a statement defending the Communist Party, to Mary van Kleeck, who "has a long list of connections with front organizations and movements dominated by the Communist Party" (Report on the National Citizens Political Action Committee, p. 918).

ACTIVITIES OF JACOB FISHER

He was a member of the executive committee of the New York chapter of the Interprofessional Association which was also the Provisional National Executive Committee of the Interprofessional Association.

(Jacob Fisher was elected to this membership at the meeting of the organizing group on March 24, 1934.) He later appears as a member of the national executive committee.

The Interprofessional Association was later known as the Interprofessional Association for Social Insurance.

The Interprofessional Association and the Interprofessional Association for Social Insurance cooperated closely with various Communist-controlled front organizations; received favorable publicity in the Daily Worker (official publication of the Communist Party); and carried on their activities in close cooperation with leaders of the Communist Party.

He was secretary of the Interprofessional Association for Social Insurance. His name appears on the letterhead of a letter sent by Mary van Kleeck, chairman of the association and chairman of the provisional committee for National Congress for Social Security, which accompanied a "Call to a National Congress for Unemployment and Social Insurance."

"Herbert Benjamin, member of the National Committee of the Communist Party in the United States, general secretary-treasurer of the Workers Alliance, and later executive secretary of the International Workers Order, was executive secretary of the national sponsoring committee for the National Congress for Unemployment and Social Insurance. Among the other avowed members of the Communist Party who served on this committee were the following: Max Bedacht, William Z. Foster, Granville Hicks, Lem Harris, Israel Amter, Earl Browder, Ben Gold, Roy Hudson, Elmer Johnson, Fred Biedenkapp, Benjamin Davis, Jr., Harold Hickerson, George Primoff, Grace Hutchins. The foregoing names tell an accurate story of the National Congress for Unemployment and Social Insurance. Its completely Communist character was not even thinly veiled" (p. 1183, Report on the National Citizens Political Action Committee).

He was a member of the executive committee of the Social Workers Committee to Aid Spanish Democracy. "This committee was one of the numerous Communist fronts which were set up for agitation around the issues of the Spanish civil war" (p. 1577, Report on the National Citizens Political Action Committee).

He was one of the endorsers of the Campaign to Aid International Volunteers. The campaign was a project of the Communist-controlled North American Spanish Aid Committee. Almost all of the other endorsers were persons whose names will be found on the lists of numerous Communist-front organizations.

He was one of the endorsers of an emergency Conference for the Release of International Volunteers in Spanish and French Prison Camps, held April 13, 1940, Hotel Capitol, New York City. Some of the other endorsers were the Honorable Vito Marcantonio, Dr. Edward Barsky, Herman Shumlin, Marcel Sherer, Rockwell Kent, and Sam Wiseman, of the Workers Alliance. (Appeared in Daily Worker, March 25, 1940.)

He was a sponsor of a conference called by the Consumers' National Federation. In 1939, Earl Browder identified the Consumers' National Federation as a "transmission belt." A "transmission belt" is described by the Special Committee on Un-American Activities as being "In Communist nomenclature, an organization through which the Communist Party extends its influence and ideology to groups which are broader than the party (Communist Party) itself." Among the other sponsors are found such well-known Communists as Israel Amter, Grace Hutchins, Rose Nelson and Bella V. Dodd.

He was one of the individual sponsors of a campaign to raise funds for the Disabled Veterans' Fund launched by the Friends of the Abraham Lincoln Brigade, which was completely controlled by the Communist Party as indicated by the report of Earl Browder, General Secretary to the National Committee of the Communist Party on May 6–8, 1939.

He was active in the Rank and File Movement of social work groups. The Rank and File Movement was originally composed of other than professional social workers. The Rank and File Movement began with discussion clubs of which the New York Discussion Club was among the most active. The program followed by the discussion clubs paralleled the program of the Communist Party. There was an interlocking between the discussion clubs and the Inter-Professional Association (later the Inter-Professional Association for Social Insurance). Communist Party leaders were active in many of the undertakings of the aforementioned groups. At the first national convention of Rank and File Groups in Social Work, Jacob Fisher was elected chairman of the National Coordinating Committee of Rank and File Groups in Social Work. In April of 1936 the name was changed to the National Coordinating Committee of Social Service Employee Groups and Jacob Fisher continued as chairman. A month after the first national convention and the formation of the National Coordinating Committee of Rank and File Groups in Social Work with Jacob Fisher as chairman, rank and file social work employees began work stoppage, mass demonstrations, picketing, and general demonstration activities. "It was in New York that the mass meetings, petitions, publicity, delegations, demand for collective bargaining by social workers was first engaged in.

The rank and file groups lent support to other groups and affiliated themselves with a series of Communist Party cause celebre, such as the Angelo Herndon case, the Scottsboro boys, the department store strikes, the Newspaper Guild strikes, defense of David Poindexter, and similar activities. The 1936 convention of the National Coordinating Committee was opened with greetings from the National Unemployment Council, a completely Communist-controlled group, and the Workers' Alliance of America, which was also dominated by the Communist Party.

The official publication of the Discussion Clubs and the NCC was "Social Work Today." Jacob Fisher was the first editor. As in the case of his references, mentioned at the beginning of this report, every one of the contributing editors in the first few issues are found in the published reports of the Dies Committee. Harry L. Lurie, Jacob Fisher's last supervisor before he was employed by the Federal Security Agency, was active with the above-mentioned group and is given considerable mention in the published reports of the Dies Committee. The report on "Social Work Today" follows.

Jacob Fisher given as editor and/or one of a group of editors in the following issues of Social Work Today:

Jacob Fisher, sole editor, volume 1, Nos. 1, 2, and 3, 1934.

Jacob Fisher and three others listed as editors, October 1934 through July 1935, seven issues.

Jacob Fisher and two others listed as editors, volumes 4 and 5, October 1936 through June 1937.

ACTIVITIES

Social Work Today, Publication of the Social Workers Discussion Club of New York.

March–April 1934, volume 1, No. 1: Editor, Jacob Fisher (p. 9).

Page 19: Advertisement. There is only one advertisement in this issue. It reads as follows:

"INFLATION DOES NOT AFFECT YOUR TRIP TO THE U. S. S. R.

" 'Full value of your dollar.'

"Special group sailings to the Soviet Union for the May Day celebration. Arrangements are now being made for 'special worker,' student, and teacher groups to the Soviet Union during the spring and summer. Our long and thorough experience warrants you the best service.

"Torgsin orders sent through us are executed by mail or cable 'at the lowest rates.'

"World Tourists, Inc., 175 Fifth Avenue, New York City. Telephone ALgonquin 4–6656–7–8.

" 'Excursion boats and buses chartered for organizations at lowest prices.' "

(NOTE.—The single-quoted portions above are in italics in the advertisement.)

Pages 3, 4, 5, and 6: Article describing the convention of the American Association of Social Workers which was held at the Mayflower Hotel, Washington, D. C., early in 1934. The following are excerpts from the article:

Page 4: "Social workers must realize that it is terribly important to get behind the whole economic program of the President. As for him, he has appointed his last right winger! [Applause.] From now on he will

appoint only people sympathetic with that program."

Page 5: "Fisher of New York suggests there are other measures before Congress. But first he would like to propose three principles. One, that insecurity can be corrected only by redistributing income. Two, that goodwill and intelligence won't put through any program that runs counter to the interests of any control group. The most effective pressure for social change comes from the group that will benefit—in the case of unemployment insurance, labor itself. The best social workers can do is to get behind the pressure group. Three, wealth is distributed unevenly geographically and a Federal program alone can do the job."

May–June 1934, volume 1, No. 2: Editor: Jacob Fisher (p. 2).

Page 9: Article by Jacob Fisher, Social Work and Liberalism. Opening sentence: "American social work is an integral part of the liberal's answer to life under capitalism."

July–August 1934, volume 1, No. 3: Editor: Jacob Fisher (p. 2).

October 1934, volume 2, No. 1: Editors: Flora Davidson, Jacob Fisher, Clara Miller, Elizabeth Ruth Sherman (p. 2).

November 1934, volume 2, No. 2: Editors: Same as above (p. 2), Jacob Fisher and three others.

Page 12: Article by Jacob Fisher Do Strikers Get Relief? with picture of southern textile strikers picketing (p. 13); two pictures of police brutality (p. 14).

January 1935, volume 2, No. 3: Editors: Same as above (p. 2), Jacob Fisher and three others.

February 1945, volume 2, No. 4: Editors: Same as above (p. 2), Jacob Fisher and three others.

Page 8: Article by Jacob Fisher, Meet the Relief Administration. This article is an account of the Unemployed Council delegation led by Israel Amter, on a visit to Aubrey Williams, Assistant Administrator of F. E. R. A. This two-page article is typical of the agitation technique which was carried on in the year 1935 by the communist, communist-front and fellow-travel groups. The phraseology of the article eliminates any doubt as to the author's pro-communist leanings.

Back cover: An apt description of the publication Social Work Today is given on the back cover of this issue:

"Social Work Today is the voice of social workers who . . . realize that they must become the allies of labor in the struggle for a new social order" (Pen and Hammer Bulletin, organ of revolutionary writers' group, quoted on back cover, Feb. 1935 issue).

"The well edited Social Work Today . . . has effectively represented the radical wing of the social workers . . ." (From The Nation. This item appears on the back cover of of the Feb. 1935 issue.)

April 1935, volume 2, No. 5: Editors: Jacob Fisher and three others (p. 2).

Pages 5, 6, 7, and 8: Article by Jacob Fisher, Rank and File Challenge—First National Convention of Rank and File Groups in Social Work.

Page 8: Jacob Fisher was chairman of the arrangements committee for the convention, and was elected Chairman of the National Coordinating Committee of Rank and File Groups in Social Work, which was set up at the convention.

October 1935, volume 3, No. 1: Article by Jacob Fisher, Threat to the Relief Workers. This article deals with the program of action engaged in by the various groups affiliated with the National Coordinating Committee, of which Jacob Fisher was Chairman, and their program for bringing pressure to bear on Aubrey Williams and the F. E. R. A. administration.

February 1936, volume 3, No. 5: Article by Jacob Fisher, The Rank and File Movement 1930–1936.

Page 5 and 6: Precedent for protective organization already existed in private social work. The New York Association of Federation Workers, organized in 1931 to promote the economic interests of employes of agencies deriving their support from the Jewish Federation of that city, had done considerable spade-work in the theory and practice of protective organization. It was this New York group which first defined the employer-employee relationship in social work, first developed the techniques of mass meetings, petitions, publicity, the support of other groups, delegations, and first raised the demand for collective bargaining. It was this group which later engaged in the first stoppage in social work history.

Page 18: Social Work Today addressed letters to a group of representative individuals requesting a brief statement of their views on the use of demonstrations, picketing and stoppage in social work.

One of the replies was by Ewan Clague. Excerpts from that reply are:

Page 18: "Under such circumstances it seems to me essential that social workers should organize themselves into efficient, coordinated groups. I think this will be the best, if not the only, effective way to protect themselves and their work."

"In dealing with the Government it is impossible to use the more aggressive tactics that are used on a private employer. Perhaps it is unfortunate that this is so, but the fact remains that such action against the Government is always interpreted as being directed against the public as a whole. Any politician can cry 'subversive,' 'revolutionary,' 'communistic,' and easily persuade the public that concerted action by a group of Government employees is a threat to the general welfare. Even the most militant trade unions have refrained from aggressive, open warfare against a Government agency.

"Social workers will never enjoy the full confidence of the community until they have demonstrated that they are doing a skilled job requiring special training and experience. So long as a considerable section of the public, along with many of the cheap politicians, believe that the only necessary requirement of a social worker is 'common sense' and that unpaid, volunteer service is better than professional service, just so long will social workers be ineffective, no matter what tactics they attempt. Therefore, I would counsel centering attention upon this one point, perhaps to the exclusion of most others, and hammer upon it by the most effective means at our disposal. This, to my mind, would constitute the best tactics at the present time."

(NOTE.—The first contact made by Jacob Fisher for a position with the Federal Security Agency was a letter to Ewan Clague (See SSA Jacob Fisher personnel file). Ewan Clague, formely with SSB, is now Director of Labor Statistics of the Bureau of Labor Statistics, Department of Labor.)

April 1936, volume 3, No. 7, paragraph 11: At a convention of the National Coordinating Committee in Cleveland, Ohio, February 22 and 23, 1936, the name was changed to the National Coordinating Committee of Social Service Employe groups. Jacob Fisher continues as chairman.

Page 11: Article by Jacob Fisher, The AASW Takes Its Stand, "Good, But Not Good Enough." This is a report on the 1936 Delegate Conference of the AASW held in Washington, D. C., Feb. 14–16, 1936.

November 1936, volume 4, No. 2, page 27: Under "Books in Review" is a review by Esther Lucille Brown of a book by Jacob Fisher entitled "The Rank And File Movement In Social Work," a 49-page pamphlet published by the New York School of Social Work. In the review Esther Lucille Brown states "this is the story that Mr. Fisher tells of the period from 1931–1933 when a group of courageous young persons became so dissatisfied with the social order or their own economic status or both that they proposed to 'do something about it.'"

April 1937, volume 4, No. 7, page 3: Editorial entitled "We Support the President." Some excerpts from this are as follows:

"Social Work Today calls upon all social workers to lend unqualified support to the President's plan to enlarge the Supreme Court because:

"1. It will remove the threat of judicial veto hanging over the activities of the Social Security Board, the Tennessee Valley Authority, the Public Works Administration, and the Labor Relations Board.

"2. It will do so immediately avoiding the lengthy process of reform thru constitutional amendment.

"3. It is clearly constitutional.

"4. It will bring the federal judiciary in line with the overwhelmingly progressive sentiment of the country.

"We may well remind the first group (the manufacturers asscociation) that there always has been politics in the Court. The question is not politics or no politics, but what kind of politics? Whose political aspirations shall be honored, those of the sweat-shop manufacturer, or those of the working population?"

May 1937, volume 4, No. 8, page 3: Article by Jacob Fisher "It Just Doesn't Belong!" supporting the viewpoint that trade-unionism belongs in the professional field of social work.

October 1937, volume 5, No. 1, page 8: Article by Jacob Fisher, Forward With the C. I. O.

This is a report on the birth of the United Office & Professional Workers of America, a C. I. O. international union. It was formed chiefly from local unions previously members of the A. F. of L. The United Office & Professional Workers of America issued charters to four social service locals, one of which was the Social Service Employes Union of New York which became Local 19, UOPWA.

Page 30: Under a column headed "Shop Talk" appears the following item:

"Jacob Fisher and Daniel Allen (Forward With the C. I. O. and C. I. O. for Public Agencies) are leaders in the converging lines of public and private agency employees into the C. I. O. Mr. Fisher is President of the Social Service Employes Union of New York, Local 19, United Office & Professional Workers of America. Mr. Allen is New York District Organizer for the State, County and Municipal Workers of America."

November 1937, volume 5, No. 2, page 30: In a column headed "Shop Talk" under a subheading "At the New York State Conference" appears the following:

"Delegates and visitors to the New York State Conference of Social Work are to be offered two interesting sessions sponsored by the Joint Trade Unions in Social Service in New York City. On October 20th, Jacob Fisher, New York SSEU President, will preside at the first session entitled 'Unionism and Professionalism'."

Page 31: In an advertisement of the Social Workers Committee to Aid Spanish Democracy—For Child Welfare—soliciting funds for children in Republican Spain, Jacob Fisher's name appears as a member of the executive committee of this organization.

December 1947, volume 5, No. 3, page 18: Article by Jacob Fisher, Private Agency Annuity Plans. The New York Social Service Employes Union, of which he is president, evaluates 11 existing annuity plans and recommends inclusion under the Social Security Act.

Page 30: Under a column headed "Shop Talk" appears the following: "Jacob Fisher (Private Agency Annuity Plans) is one of our first, best, and most faithful contributors."

January 1938, volume 5, No. 4, page 15: Jacob Fisher is listed under the 1936–37

Social Work Today Cooperators as having contributed $20 in the preceding 12 months to the support of the magazine.

March 1938, volume 5, No. 6, page 29: In the section, Books In Review, Jacob Fisher does a review of the book, When Clients Organize, by Helen Seymour. Among his comments are:

"Judging from the growing concern of the C. I. O. and Labor's Non-Partisan League with unemployment, with relief and social insurance, that future (of the organized client movement) may lie perhaps with the economic and political organization of labor rather than with client organization as we have known it in the past."

June 1938, volume 5, No. 9, page 21: Article by Jacob Fisher One Year of the CIO in Social Work.

In this he reviews the activities of the past year of the State, county, and municipal workers of America and the United Office and Professional Workers of America and their respective locals in the field of social service.

He reports that the New York Local, Local No. 19, the Social Service Employes Union, sent delegates to the American Youth Congress in Milwaukee. Jacob Fisher was President of Local 19 at that time.

Page 46: Under "Shop Talk" is the following item: "Jacob Fisher is president of Social Service Employes Union, Local No. 19 of UOPWA, CIO, New York City."

December 1938, volume 6, No. 3, page 25: The following item appears in a box headed "The Profession Is Proud."

"On September 16th Jacob Fisher, President of the New York City Social Service Employes Union, was elected a vice-president of New York State's new CIO Industrial Council. Thus, one of the early leaders of the trade union movement in social work has been given the responsibility of representing the white collar and professional workers who constitute an important section of the 800,000 CIO members in the State."

January 1939, volume 6, No. 4, page 17: Under the heading "Social Work Today Cooperators—1938" and the sub-heading "New York City" Jacob Fisher is listed as having contributed $10 to the magazine Social Work Today during the year 1938.

April 1939, volume 6, No. 7, page 9: Article by Jacob Fisher, President, Local 19, Social Service Employes Union, UOPWA, entitled "The Future of the Private Field."

May 1939, volume 6, No. 8, page 27: Under the column heading "Trade Union Notes" and the sub-heading "Joint Trade Unions at Buffalo" is the program of the Joint Committee of Trade Unions in Social Work at the Buffalo National Conference June 18–24. Among the various items is the following:

"Jacob Fisher, President, SSEU Local 19, is to speak on 'Social Work and the Democratic Tradition'." (This was on the program for Thursday, June 22.)

January 1940, volume 7, No. 4, page 17: Under the heading "Social Work Today Cooperators—1939" and sub-heading "New York City" Jacob Fisher is listed as having contributed $15 to the magazine Social Work Today during the year 1939.

Pages 5 and 6: Jacob Fisher is one of the 75 national and local leaders in social work who signed a statement of principles that was prepared by the editorial board of Social Work Today. This appeared under the heading, "Meeting social need: A peace program." The statement of principles was against America being geared into a military program; was against military preparation; advocated taxing all the profits out of those industries supplying war materials; advocated peace and was against involvement in the European war. This statement of principles was released to the press and mailed to every Member of the United States Congress.

April 1940, volume 7, No. 7, page 9: An article by Jacob Fisher, "Relief: Old Problem, New Setting." He is listed as president, New York City Joint Council UOPWA. "With business on the downgrade and legislatures bending to reactionary pressure, the outlook of the unemployed is little short of desperate."

January 1941, volume 8, No. 4, page 5: A reprint of the January 1940 article A Statement of Principles which has Jacob Fisher as one of the 75 signatories.

Page 16: Under the heading "Social Work Today cooperators—1940" and the subheading "Illinois," Jacob Fisher is listed as having contributed $15 to the magazine, Social Work Today, during the year 1940.

Pages 28–29: Under Books in Review, Jacob Fisher does a review of the book "Foundations of American Population Policy," by Frank Lorimer, Ellen Winston, and Louise K. Kiser. It was published by Harper & Bros.

Mr. Jacob Fisher's review is an adverse one which he heads up "Control for what?" and in it refers to the "Fascist" mentality from which the authors obtained their ideas of eugenics.

June–July 1941, volume 8, No. 9, page 17: Article by Jacob Fisher, Social Security Board, Regional Office, Chicago, entitled "Running Out on the Needy." [A note at the bottom of the page stated: Mr. Fisher writes in his personal capacity. The Social Security Board is not responsible for the views expressed.—Eds.]

This article defended the large relief rolls despite the marked upturn in business activity and prosperity and fought any cuts in relief funds.

February 1942, volume 9, No. 4, page 51: Under the heading "Social work today cooperators—1941" and the subheading "Illinois," Jacob Fisher is listed as having contributed financially to the support of the magazine, Social Work Today, during the year 1940.

Georgia Warm Springs Foundation

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. HILL. Mr. President, on June 25 last, the National Foundation for Infantile Paralysis, generally known as the Georgia Warm Springs Foundation, presented to the State of Georgia its properties at Warm Springs, Ga. In connection with the presentation, an inspiring and historical ceremony was held. The Army band from Fort Benning, Ga., furnished music for the occasion, and Graham Jackson, a gifted Negro musician, played and sang a most appropriate number. I would like to have the speeches delivered on that occasion printed in the Appendix of the RECORD. I have consulted the Government Printing Office, and I find that the printing of the speeches will exceed the two pages allowed to be printed without an estimate, and that the cost will be $266.25. I ask that, in spite of that, the speeches may be printed in the Appendix of the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

A TRIBUTE BY JOSEPHUS DANIELS AT THE DEDICATION OF THE LITTLE WHITE HOUSE AT WARM SPRINGS, GA., JUNE 25, 2947

Many of us come here today out of affection for a man, but those of us who loved him most, I believe, come also in devotion to the things to which Franklin Roosevelt gave his life. It was his genius that he could speak clearly in warm-hearted leadership for us in an American period of difficulty never equalled in the history of our Nation.

What we say here will be soon forgotten. On this day we are only a little group of the millions who will come not merely for aid in the ills of the body but for help in the deeper sicknesses of the spirit.

We come to these springs to which a young man came. How young and debonair, striding and strong he had been. I am glad I can remember not only that he was great but that he was beautiful as well. He came here a cripple to recruit his strength.

It is fitting that we come here in an hour today when there seems to be more hate and confusion than love and purpose in the world. In New World and Old World alike recent allies of courage and sacrifice are made in their victory to seem implacable enemies across an impermanent peace. There are men among us who would defend democracy by infringing its liberties. There are some who think that the democratic faith depends for defense upon military force rather than the steady fulfillment of its promise for plenty and freedom together and everywhere.

We need not be the captives of our fears.

Only the already lost can think of our future as besieged.

We have more to give than to guard.

Our powers are not weapons but tools with which to build the promise of democracy into the purposes of mankind.

Sometimes that faith is hard to hold. Even to one who has seen many years, these times seem dark. But this place is lit with courage. Indeed, it is illumined with faith. At Warm Springs today our task is not to dedicate a shrine, but here and now to rededicate ourselves.

THE WHITE HOUSE,
Washington, June 18, 1947.

HON. BASIL O'CONNOR,
President, Georgia Warm Springs Foundation, New York 5, N. Y.

DEAR MR. O'CONNOR: I regret exceedingly that the unremitting pressure of the public business makes it impossible for me to be present and to deliver an address at the Warm Springs Foundation on June 25.

It is fitting, indeed, that at ceremonies marking the twelfth anniversary of the establishment of the foundation—the Little White House—where my predecessor's life came to an untimely close, should be presented to the State of Georgia to be maintained as a national shrine.

The Warm Springs Foundation, which Franklin D. Roosevelt created body and soul, stands as a living memorial to his overflowing love for his fellow men and to his tender sympathy for all who suffer from the afflictions to which mankind is heir. He had conquered the insidious foe which struck him down without warning. He wanted all—particularly those less privileged in wordly goods than he—to have the benefit of the skills which brought him back to continue and complete a career of public service without a parallel in American annals.

Franklin Roosevelt's victory made him the inspiration of those who came to the foundation for similar relief, and for all of them he had a true affection and understanding. This sympathetic understanding was reflected in the principle upon which he insisted—that the foundation should always be a home—never an institution. God grant

that the work of the foundation be always carried on in the noble tradition which he inspired.

The little white cottage in which died the man who led his country to victory in the greatest war in history will become one of the sacred places of the Nation. This cottage happily stands adjoining the grounds of the great humanitarian center which he established and which will enshrine his memory through the generations in the hearts of a grateful pepole.

Very sincerely yours,

HARRY TRUMAN.

RADIO ADDRESS BY BASIL O'CONNOR AT THE DEDICATION OF THE LITTLE WHITE HOUSE, GEORGIA WARM SPRINGS, JUNE 25, 1947

We stand here today before the Little White House in Warm Springs, Ga., as visitors who have come to call upon our good friend, Franklin D. Roosevelt. We find him not at home.

But this was indeed his home. As we look at these hills he loved, these red clay roads he delighted in driving over, these rooms in which he lived, we feel his presence.

Franklin D. Roosevelt is alive today, in the hearts and minds of many men. His service to his country and to the world needs no monument for remembering. Yet it is here, at the Georgia Warm Springs Foundation, scene of his struggles against physical disability, that he is most alive. Everything reminds us of the man who brought this place into being.

He came here for the first time in 1924, seeking to overcome the handicap of a crippling disease. Here he found new strength, new courage to resume public life, when it was commonly assumed his political career was at an end. Here, as President of the United States of America, he found relaxation from the burdens of war. And here he brought courage to hundreds of others who, like him, had had infantile paralysis.

Whatever other accomplishments may keep the name of Franklin D. Roosevelt great throughout history, here at Warm Springs the memory of the man is bright. Here he showed others how to conquer fear. The spirit he infused into this place, transforming it from a neglected summer resort to the first and largest center for the care of those suffering from the after effects of infantile paralysis, is as strong and fine today as in the beginning, 20 years ago.

Georgia Warm Springs Foundation this year is celebrating its silver anniversary. It is natural for those of us who have known this place since 1927 to remember the familiar wave of the hand at the Warm Springs railroad station, when the founder arrived. We have seen his smiling face so often in front of Georgia Hall, or gathered round his fireplace for familiar chat and banter. Yet those who are visiting for the first time today sense the presence of the founder, too. The spirit he created is in the faces of the patients here now, just as it used to be.

To the struggling and confused on every tortured continent, the name Franklin D. Roosevelt symbolizes the American Nation—an enlightened people, a courageous people, a people who took positive action to propagate the gospel of human understanding. His leadership awakened the world to the meaning of true democracy. Men of every nation responded enthusiastically to his exhortation to faith in God and the goodness of humanity.

"We have nothing to fear but fear itself," he said—and the world responded with courage.

We think of Franklin D. Roosevelt, the man, today—as we dedicate his Georgia home, the Little White House, as a national and international shrine. Twenty years ago that man practiced the philosophy of overcoming fear. He refused to be overcome by his handicap. And by his example and his determination to help others, thousands have been able to conquer their infirmities.

Franklin D. Roosevelt set in motion the machinery through which other victims of infantile paralysis now can make the same effort to overcome their handicaps—here at the Georgia Warm Springs Foundation and in all parts of the country. Through the National Foundation for Infantile Paralysis, which he founded 9½ years ago, the great fight against this disease is going forward today, bringing help and hope to thousands of boys and girls, men and women, throughout the United States. Franklin D. Roosevelt, the man, symbolizes that living fight.

In the tranquillity of this Little White House, Franklin D. Roosevelt found renewed strength and courage when the tide of battle was turned against him. And here, with victory in sight, he found eternal peace.

By his will, the Little White House became the property of the Georgia Warm Springs Foundation. But it can never belong to any one group or individual. It belongs, rather, to the citizens of the world—to the millions of the hungry, the sick, and the oppressed, whose heavy hearts burn with hope that the ideals of Franklin D. Roosevelt may not be forgotten. That is why it is being given to the State of Georgia—why, in the future, countless thousands will come to visit here, as we come today.

As president of the Georgia Warm Springs Foundation, I invite you, Governor Thompson, to accept for the State of Georgia, and for all humanity, this deed to the Little White House. May this cottage become an international public shrine, eternally dedicated to the principles for which Franklin D. Roosevelt so gallantly fought.

God grant that the memory of this man may sustain our courage and inspire us to renewed confidence in our quest for permanent peace.

Governor Thompson, I present you with the deed to the Little White House.

ADDRESS BY MICHAEL FRANCIS DOYLE, CHAIRMAN, PRESIDENTIAL ELECTORS, ON UNVEILING MEMORIAL TABLET, "LITTLE WHITE HOUSE," WARM SPRINGS, GA., JUNE 25, 1947

Mr. Chairman, we are met here to dedicate this national shrine today. This marks the last earthly spot in which Franklin Delano Roosevelt lived. This is the place where his great heart was centered. If the choice had been his, it would be here he would have closed his book of life. Here he founded a solace for suffering humanity. He was one who bore his full share of suffering. Human suffering makes humanity one—this suffering which any of us may at some time endure. The great and the small—the rich and the poor—the powerful and the helpless, are all creatures of the laws of human nature and all subject to them. Human suffering is the tie which binds us to a common interest. Humanity thus finds nature's democracy. If mankind fails to find equality under man-made laws, it will find it at the end when death makes all equal.

Our Nation was founded on the principle of equality before the law and the right to life, liberty, and the pursuit of happiness. The voice of democracy is the voice of the people. It is in the administration of the law that we find the real test of democracy. Franklin Delano Roosevelt administered the law in the spirit of democracy.

The Presidential electors most rightfully participate in these ceremonies. They, under our Federal Constitution, which was founded on the principles set forth in the Declaration of Independence, represent the citizens in the election of the President and Vice President of our country. They accept the guidance of the voice of those who elected them in making the selection to these great offices. This trust has never been sullied and the electors have cast their votes for those whom the majority of the citizens of their State designated as their choice. They have thus become a model of faithful adherence to democracy. For 160 years they have chosen the Presidents of these United States. Their judgment in the fulfillment of their duties has never been challenged. They followed the people"s voice. This is democracy.

At the fortieth Presidential election in 1944 the electors, following the directions of the voters, chose Franklin Delano Roosevelt as President of the United States, and Harry S. Truman, as Vice President. They were inaugurated in Washington in the presence of these electors. President Roosevelt thereupon assumed the fourth term of his office in the midst of the greatest war whichever engulfed mankind. He organized our country for defense against its enemies. He formed the greatest Army and Navy and Air Force the world has ever known. He expressed again and again to the people of the world the great principles of human freedom. He promised our country that we would win the war and that, having won it, we would build a peace in which the spirit of Christ could rule the hearts of men and of nations. As our country was on its way to the conclusion of this war and to glorious victory, he was suddenly summoned on April 12, 1945, from this spot to eternity. He was not permitted to establish the peace in which he hoped to find a happier world.

The 531 Presidential electors comprising the last electoral college are represented here today and express anew their devotion to the ideals which he so nobly represented. Those ideals for which our country must forever strive and which, when adopted, and faithfully administered, will insure the peace and happiness of mankind. They take advantage of this opportunity to express their devotion and loyalty to Harry S. Truman, who has succeeded to the great office of President. They pledge their service and their loyalty to him and confidently pray that the people of our country will sustain him as they did President Roosevelt.

This tablet marks the expression of their loving devotion to Franklin Delano Roosevelt—

"No soldier gave more on any battlefield than he who here gave his life for his country.

"No greater martyr ever served the cause of freedom."

We honor the dead—we salute the living. May God ever protect and bless the United States of America.

RESPONSE BY GOVERNOR THOMPSON ON RECEIVING LITTLE WHITE HOUSE DEED FROM BASIL O'CONNOR AT CEREMONIES DEDICATING THE HOUSE TO THE MEMORY OF THE LATE PRESIDENT ROOSEVELT AT WARM SPRINGS, JUNE 25

One of the pleasant features of being Governor is to serve at functions like this, when I am permitted to act in behalf of the State of Georgia in accepting a gift of great worth.

From the hands of Mr. Basil O'Connor, president of the Georgia Warm Springs Foundation, I have just received deeds of gift—deeds that convey to the State of Georgia: (1) The hallowed grounds on which we stand; (2) the Little White House and other buildings which served as a haven for the great man we honor today; and (3) to more than 3,000 additional acres of land nearby.

By this act of dedication, this site becomes a monument, one that begets a world of memories; one that recalls a long list of valiant deeds—deeds that led to glory and to undying fame.

Mother Nature was good to Georgia in many ways, but fortune was never kinder to our State than when Franklin D. Roosevelt, man of destiny, found reason to adopt Georgia as his second home, his other State.

In order to accept this historic gift, Georgia has undertaken and has pledged the develop-

ment and maintenance of this property as a memorial shrine forever, to the memory of one who was not only a friend and benefactor of Georgia and all its people, but who was one of the greatest men the Nation has yet produced.

His stature will grow as the years pass. The memory of what he did—what he stood for, lived for, and fought for—will endure for all time enshrined in the hearts of a grateful people whose lives were brightened by his efforts and influence.

Georgia is honored in having this distinguished group of visitors present here today, in one of the best known spots on the globe. Warm Springs are familiar words wherever the English language is understood. It is my pleasure to assure all those present, and those listening in over the radio, that we regard the task of creating this monument to one of the really great men of this century in all the world, as a sacred trust, to the execution of which, we pledge our best efforts and cheerful service.

ADDRESS BY IVAN ALLEN, CHAIRMAN, FRANKLIN D. ROOSEVELT WARM SPRINGS MEMORIAL COMMISSION

Welcome. The great Roosevelt. Before he was Governor of the State of New York—before he was President of the United States, 4 terms, he came here to these simple, rural, rustic surroundings in pursuit of health, and here also, found happiness and friends. In solitude and tranquillity, here he had humanitarian dreams and planned a government with a soul. Afterward these dreams and plans were enacted into laws. Through the years these laws have not been materially changed.

There is being dedicated here today a national, yes, an international, shrine, a sanctuary of glory, an altar of liberty. It shall light the pathways of the generations to come.

On this 3,000-acre reservation is a mountain called Dowdell's Knob. Mr. Roosevelt bought this mountain and built a private road to the top. It was his favorite picnic grounds, and here he entertained his visitors and neighbors. Here he could look over the countryside for 50 miles in all directions. Shall we, his followers, build there on this eminence, the Franklin D. Roosevelt Peace Tower, higher than the Washington Monument, more elaborate and more beautiful in design, modernized, with radio, television, chimes, elevators, equipped to broadcast messages of inspiration to the world? Shall it be built with funds from all the 48 States? Yes, and from all the other nations of liberty-loving people. In the very words of the great Roosevelt, "This generation has a rendezvous with destiny."

God give us heart and will to take this mission forward to a new, more daring future, a new world of peace.

ADDRESS BY BASIL O'CONNOR ON WARM SPRINGS ANNIVERSARY, GEORGIA WARM SPRINGS, JUNE 25, 1947

The history of Georgia Warm Springs as we know it today—a great medical center for the care and treatment of sufferers from infantile paralysis—properly begins a little more than two decades ago, when the most famous of all victims of that dread disease first discovered the site and, in a very real sense, claimed it for his own.

The beginnings of the actual history of Warm Springs as a place of peace and beauty—where men might come to rest and recuperate from the ills of the mind and of the flesh—are unknown; lost in legend and the mists of antiquity.

Long before Franklin D. Roosevelt's time; long, indeed, before overland explorers first reached the mountain cradle of Warm Springs, Indians of the Creek Confederacy, in Georgia, Alabama, and northern Florida knew the beauty and practical worth of the site. According to legend, warriors wounded in battle were brought to the springs and bathed here after all other efforts to heal their injuries had failed. A stricken Indian brave was granted safe conduct through territories of hostile tribes if his destination was Warm Springs. And thus the springs became an influence for peace, a sort of intertribal sanctuary in the wilderness. As all who spend a little time here today never fail to note, that atmosphere of peace still pervades this clearing in the Georgia pine woods.

It was an Indians' spa, a dot on a crudely drawn map carried by restless white men, a post tavern on a military highway leading to Columbus, Ga.

And then it was discovered by men seeking relief from sultry cities and air contaminated by smoke from the multiplying chimneys of the new industrial age. It became a summer resort—with an inn famous for open-handed hospitality. But the magnet that drew men here, then as always, was the Warm Springs, whose waters were guaranteed—somewhat optimistically by the jovial landlord—to counteract hospitality's immediate effects, and, indeed, to cure virtually all the shocks that flesh is heir to.

Summer cottages began to spring up about it, built by merchants from Columbus and other nearby cities, who joined their families here for longer or shorter periods as the exigencies of business permitted.

Nearly a hundred years ago that hostelry was destroyed by fire. The property, including the springs and some 1,800 acres of these wooded hills and valleys that surround them, was acquired by Col. John Lloyd Mustian, stagecoach-line operator and pioneer Georgia railwayman, whose heirs still owned it when it was acquired, in turn, by George Foster Peabody, New York banker from whom it was bought by the group, headed by Franklin D. Roosevelt, that created the Georgia Warm Springs Foundation of today.

Under Colonel Mustian's ownership, a second hotel was built on the same site—and, in 1888, met the same fate. Miss Georgia Wilkins, great granddaughter of Colonel Mustian and donor of the beautiful little chapel fronting Georgia Hall, who, happily, is still with us today, well remembers the destruction of the second hotel, though she was a very small child at the time. For she was living in it, with her aged great grandmother, Colonel Mustian's widow, and the two barely escaped with their lives in the conflagration.

Miss Wilkins remembers, too, the building of the third, and last, the most famous of the Warm Springs summer hotels—Meriwether Inn—for this was in 1893, year of the Chicago World's Fair.

Meriwether Inn had gingerbread on its roof lines, gables and turrets galore, curlicues of wood along its numerous verandas that would shame an old-fashioned Spencerian penman—and contours unclassifiable in architecture. But it was a happy house. Two generations played here, sunning themselves, splashing in the Warm Springs pools, riding horseback, playing golf on the new nine-hole course.

Then came the automobile, and the discovery by city-dwelling Georgians that other, more up-to-date resorts, once too distant to be conveniently reached by stagecoach or horse and buggy, offered livelier attractions. Warm Springs went into a slow decline, only the loyal cottagers returning year after year to enjoy its peace and bathe in its waters. Meriwether Inn still stood, a gallant, but seedy and somewhat unkept reminder of earlier glories. It seemed just about ready to fall apart when Franklin D. Roosevelt first saw it. This was in the autumn of 1924.

It was 3 years earlier—in the prime of his life and at the height of his great physical powers—that he had been stricken with poliomyelitis—a paralyzing disease for which there still is no known cure. Meanwhile, with what soul-searing disillusionment none but him knew—for it is not on record that at that time—or at any other—he was ever heard to complain of his handicap, he tried unsuccessfully by every means then known to medical science to regain some use of his legs.

Many stories—some of them quite fantastic—have been told of how he first happened to come here. Most of them have to do with rumors that had reached his ears of the magical curative powers of the waters of Warm Springs—and the legends of how the Creeks and the Cherokees had only to visit the springs and bathe in their waters to be promptly cured of their ills and wounds.

Mr. Roosevelt loved those legends and delighted in retelling them—but the true story of his coming here, as he himself recounted it years after to his Warm Springs family, is quite simple.

In the spring of 1924, while he was in Boston, having his braces adjusted and learning some new leg exercises, his personal physician, Dr. Robert Lovett, famous orthopedic surgeon and pioneer in the modern treatment of infantile paralysis, told him of an interesting experiment he was making in the children's hospital with some of his little polio patients. He had discovered that those of his patients who went bathing in the warm waters of Buzzards Bay were showing vastly greater improvement in the use of their leg muscles than those that bathed in the chilly waters of the Maine coast. So Dr. Lovett had just installed a shallow tank in the hospital, to determine if he could not do more for his patients by having them exercise in the medium of warm water than was possibe by simply using tables—as was then the common practice.

"I thought he was pursuing an interesting course in developing his theory," Mr. Roosevelt said, "but I was too busy with the Democratic National Convention, and the subsequent political campaign, to give it much thought."

In September he had a letter from George Peabody, then owner of Warm Springs, telling him about young Louis Joseph, who, following an attack of infantile paralysis resulting in involvement very similar to his own, had gradually taught himself to use his legs in the Warm Springs pool—first getting his feet to the bottom, then walking a few steps in deep water, and then, gradually, in shallower water, until, at long last, he found he could walk on dry land.

"This," said Mr. Roosevelt to himself, "seems to confirm Dr. Lovett's theory"—and he straightway arranged to visit the Springs himself.

What that visit did for him he reported in a letter to Mr. Peabody 6 weeks later:

"Every morning," he wrote, "I spend 2 hours in the most wonderful pool in the world. It is no exaggeration to say that the muscles in my legs have improved to an extent noticeable in every way."

What the visit was to mean thereafter to his thousands of fellow-sufferers from infantile paralysis, about whom, typically, he was already thinking, is indicated in another paragraph of that same letter: "There is no question," he wrote, "that to the average case of infantile paralysis this Warm Springs pool is a great find * * * nothing finer, nor more useful to humanity, could be done than to establish a 'cure' where the best treatment could be given."

At that time, and on his return to the Springs the following year, it was as private citizen Roosevelt that he visited Georgia, but his "discovery" of the Springs had already been spread abroad. A reporter from the local press came over to interview him—in the pool—and then wrote a flamboyant Sunday supplement story called "Swimming his way back to health," which featured not only Mr. Roosevelt, but two famous and shapely

professional women swimmers who had recovered from youthful attacks of infantile paralysis. The story was widely reprinted—with the result that before the summer of 1925 was well advanced, and long before any preparations could be made to receive them—a dozen hopeful and unheralded polios, on stretchers, or crutches, or in wheelchairs, descended on him.

It was in that same spring—of 1925—that I first heard of Warm Springs—from the enthusiastic lips of my new law partner. He insisted on my going down with him to see the place. I must admit I did not share his enthusiasm for it. Looking at these beautiful grounds and buildings today, it would be difficult for anyone to believe what a sad, rundown, ramshackle establishment it was then. Buildings were falling down, roofs leaked, and there was an air of complete hopelessness about the place that left me very cold, indeed.

My partner saw it in a different light, because one of his finest assets was vision. He could dream practically. He didn't have to see all four parts of a square closed. If he could see only a little distance ahead, he didn't worry—though he never grew careless about the rest of the journey, either.

Well, he took on those first Warm Springs visitors himself. I will not say singlehanded, for he had an able and enthusiastic assistant in Dr. J. A. Johnson, on of his lifelong admirers, who blithely neglected his own practice in nearby Manchester to aid his hero. Dr. Johnson, who later was to become chief of medicine here and who, also, happily, is still with us, says that his first assignment, which took many a long evening after office hours, was to prepare an anatomical chart showing every muscle in the human body, against which the physical involvement of each patient was carefully checked and his course of muscular treatment plotted.

Those treatments were not given under ideal conditions. The summer residents of Warm Springs, who later were to lead all the generous citizens of the State of Georgia in their wholehearted and substantial support of the Foundation, at first—and very understandably—resented the influx of helpless men and women and children, suffering from a crippling disease of which little was then popularly known. The dining room of the Meriwether Inn, where business quickly fell off, was at first barred to the newcomers. They were not welcomed at the public pool. Most of them were without funds. Housing, in the cottages or in rooms in the nearby village, presented difficult problems. "Doctor" Roosevelt and Doctor Johnson had to do a lot of jumping about to visit their patients, chart affected muscles, exercised wasted limbs, bring some strength and more cheer to the afflicted, and in lieu of modern equipment, make use of dining tables, ironing boards, stationary washtubs, and anything else that could be contrived for examinations and treatments.

Nevertheless, promptly at 11 o'clock every day, when the "cottagers" had deserted it, they caused the patients to foregather at the pool, where for 2 hours the team of Roosevelt and Johnson put them through their paces. And it was always Dr. Johnson who was first ready to cry "quits." "F. D. R. was tireless," he recalls. 'In the pool where he was on equal terms with other swimmers," says Dr. Johnson, 'President Roosevelt was the physical match of any man living."

Besides the expenditure of time and energy, all these labors meant the expenditure of money. Soon a sympathetic public was aware of what their beloved President was undertaking. The famous birthday balls had been organized and so generous was the popular response that in time sufficient funds were available not only to take care of all the immediate needs of the Warm Springs project, but also to launch the National Foundation for Infantile Paralysis.

But all this came later. Back in 1925, when I first saw it, Warm Springs was not a very prepossessing place. A tumbledown hotel; a few scattered cottages, many of them long unfamiliar with the protective touch of a paint brush; the melancholy pines; and the pool, which to my practical eyes seemed just another pool, and not a very attractive one at that; although, as I have said, to my law partner it was already "the most wonderful pool in the world."

It was to such a shabby place that Franklin D. Roosevelt came to meet a desperate personal crisis. And it was in his wonderful pool that there first dawned in his consciousness the hope that a cure—and possibly a preventive—might be found that should rid the world forever of the terrible threat of infantile paralysis.

Perhaps, too, it was in this selfsame pool, or in the lonely solitude of Pine Mountain—on the famous knob, where he was wont to go to rest and meditate—that there first came to him his blessed dream of a world at peace, a world in which courage and helpfulness and understanding would guide the relationship of man to man, and of nation to nation.

For a Warm Springs Mr. Roosevelt found—and gave—something more than mere physical strength and muscular coordination. As the news of this neglected resort and its beneficial waters and what Franklin Roosevelt was attempting with a few fellow polio-sufferers spread about the land, other people, similarly handicapped, trekked to Georgia. Soon the tiny hamlet was crowded beyond capacity. Facilities for care and treatment were nonexistent. There was not even sufficient accommodation properly to house the many who came with the burning hope that here they might find relief from the bodily ills that had so restricted their lives.

Mr. Roosevelt clearly was under no obligation to assist any of these people, some of whom had neither the means nor the physical capacity to support themselves. Actually, it seemed to many that their coming might seriously impede his own progress. But far from resenting the intrusion, he found in this influx of the stricken an opportunity to utilize his own limited strength in lending assistance to others.

Under his guidance the problems of each lonely, brooding individual were dissipated in the common effort to assist all along the road to recovery. The terrible agony of helplessness that had beset so many of the afflicted suddenly became a rallying point as one by one they shed their hopelessness in the realization that now, more than ever before, were their best efforts of consequence, not only to themselves, but to the recovery of all with whom they associated.

They found strength in the energy of this tireless friend who took upon himself so much of the responsibility for housing and feeding the many who arrived at Warm Springs with nothing more than a flickering spark of faith in their ability to conquer infirmity with the help of this "wonderful pool." They listened with rapt attention to his explanation of stretching exercises that he had devised and found beneficial in his own case. They followed his direction as he personally led them in water exercises that stimulated the use of long-dormant muscles.

The clinical value of these early exercises might well be a subject for medical discussion. But we cannot possibly doubt that here these stricken people found the means to a positive philosophy that transcended the severe handicaps imposed upon their bodies by an unkind fate. Here, pursuing a common cause, and with the guidance of the indomitable spirit of Franklin D. Roosevelt, they experienced a resurgence of hope and faith.

Some of them were restored to health in an almost incredible manner. Others made partial recovery in a greater or lesser degree. And there were those for whom the waters were not so obviously beneficial.

But the importance of physical gains was paled by the miraculous rebirth in the hearts of these visitors of a common will to carry on cheerfully and constructively despite bodily limitations.

Georgia Warm Springs has changed considerably since those early days. Its accomplishments in the field of polio treatment have become part of medical history. Neat, modern structures have replaced the ramshackle buildings of a score of years ago. The hit-or-miss water exercises with which visitors experimented in the mid-twenties have given way to supervised individual treatment of the highest order, under the direction of an efficient staff of polio experts. Visitors to the Springs now approach with something more than hope in their hearts. They approach with confidence—confidence that whatever can possibly be done for their well-being will be done.

The changes that have taken place are obvious. But there is one thing that has not changed through the years. The spirit that dominated Warm Springs 20 years ago—the spirit that inspired Mr. Roosevelt to purchase, renovate, and rebuild this neglected resort and dedicate it to the treatment of polio patients from every part of the country—that spirit continues to burn brightly in the hearts of all these good people who abide here today.

It is as if every small flame of hope that has been placed upon this great altar of courage had taken on added strength, added luster, firing the atmosphere with a happy warmth of spirit, driving from men's souls the coldness of fear and despair.

Franklin Roosevelt's dream of establishing at Warm Springs a citadel of hope for polio patients has become a reality through no mere chance. It is the result of intelligent planning and maximum effort by its founders. And, most important, it is the direct result of concerted action by millions of Americans who decided, after long and bitter experience with polio epidemics, that they would no longer stand idly by while thousands of children fell victim to this crippling malady.

When the first President's birthday ball was inaugurated in 1934 to raise funds for indigent polio patients, America responded enthusiastically. The Nation, awakened to a sense of its responsibility in the fight against a specific disease, signified its willingness to participate in the development of Warm Springs. Today, that willing spirit not only contributes to the continuous support of Georgia Warm Springs Foundation—it is the motivating force that makes possible the world's second largest people's philanthropy, supporting an intensive Nation-wide program of polio research, education, medical care, and epidemic aid. The American people have decided to conquer this disease. And, through the National Foundation for Infantile Paralysis—an outgrowth of Warm Springs—every man, woman, and child in the Nation has a share in the project.

So when you see these smiling patients looking forward to the future with optimism, you know what has made such an attitude possible—the cooperation of a people inspired by a great and compassionate leader, who have looked beyond the tiny sphere of their own existence and turned to help a neighbor in need.

I have spoken of President Roosevelt's fondness for the Indian legends associated with Warm Springs. More than once in his informal, unrehearsed talks to his Warm Springs family, he referred to these legends, ascribing what he called "The Spirit of Warm Springs"—which barred all talk and all thought of war and strife from these peaceful premises—to the heritage of the warring Indians that here, at least, could dwell together in trust and amity. That spirit, he once said, "has been here at least as long as I have been here, and I am quite sure it will always rest upon these buildings."

These were the words of a true prophet—but the spirit of Warm Springs is not just the tenuous influence of the long-dead redmen, seeking surcease from war and healing for the wounds of war. It is the spirit of what the Indians themselves have poetically called "the Great White Father in Washington"—the living spirit of Franklin Roosevelt, which dwells here today as through the last two decades—a warm and vital presence that breathes in every living flower and shrub and tree and blade of grass that grows in Warm Springs, and that is reflected in the hearts and faces of all Warm Springs' dwellers—the polios, who fight patiently to regain health and strength, and the doctors, nurses, physical therapists and all the other good people of this foundation who minister to them.

Yes; the spirit of Franklin D. Roosevelt—and I am thinking now not of the great statesman, President, and war leader, but of the great humanitarian—is indeed a living spirit, and though it is surely here present with us today, it is not in Warm Springs alone that it dwells. Increasingly now as midsummer approaches, and the still terrible scourge this foundation was created to combat once more spreads over the land, the spirit of Franklin D. Roosevelt is on the march.

It will be found wherever new victims of poliomyelitis are found—in the gleaming wards of city hospitals, where iron lungs are being wheeled in; in the modest kitchens of remote ranches and farms in the wastelands of Colorado and the Badlands of Dakota, whither doctors and nurses and polio emergency volunteers are hurrying with crude hot packs to relieve the distress of the suffering.

You can fancy his towering figure at the head of each of 10,000 beds, as he looks down, with understanding and compassion, on twisted bodies, tortured limbs, arching backs, stiffening necks—bringing hope and courage to the stricken children of America and, where need is, comfort to their bereaved parents.

Yes; the living spirit of Franklin D. Roosevelt is abroad—is here with us today as surely as any of us who loved and revered him is here in the flesh. And to that great spirit we renew our loyal pledge—to carry on the good work he here began—to lead, direct and unify the fight against the great crippler until, in God's good time, the final victory is won.

Everybody's for It, But

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Everybody's for It, But," appearing in the Bismarck (N. Dak.) Tribune for July 21, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EVERYBODY'S FOR IT, BUT

If everybody is for tax reduction—and everybody is for it—why did President Truman dare to veto the income tax reduction bill? Why do the Democrats say they welcome it as a 1948 campaign issue?

The answer may be available when the campaign of 1948 rolls around. And then, again, it may not be.

For the prospect is that we'll have a tax reduction early in the session of 1948 and the issue of 1947 will be forgotten. There is a theory that the American people have no memory on public affairs beyond 6 months and, while it may be wrong in some cases, there is plenty of evidence to sustain it.

Meanwhile, there is some reason to believe that the people as a whole were less enthusiastic for this particular tax reduction bill than would be indicated by the strong support for it in Congress. A good many individuals agree with the President that it constituted the wrong kind of tax reduction even though they may disagree with him that it came at the wrong time.

The average individual with a family—and dad and mother have two votes between them—feels that it didn't take their needs into consideration. The cost of caring for a child has risen sharply in the last 18 months and they are feeling the pinch. In the view of many parents the income tax exemption for a child never was high enough and now it's lower than ever if prices are considered.

Thus many individuals will feel that Congress did not do the best possible job in devising this tax bill and to the extent that this feeling prevails resentment at Truman will be diminished in intensity.

It is sincerely to be hoped that a better tax-reducing bill can be enacted at the next session of Congress and approved by the President. But it should not be on the same basis as this last one. This tax bill is reminiscent of the man who made horse-and-rabbit sausage on a 50–50 basis. The proportions were one horse to one rabbit.

The Zionist Movement

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Zionist Club at Manhattan Center, New York City, July 6, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Dr. Silver, distinguished guests, and ladies and gentlemen, I am very happy to join you here tonight on this great occasion. For many years I have enjoyed visits from your distinguished leader, Dr. Silver, in Washington, and have been impressed and influenced by his eloquent appeals in the cause of the Zionist movement. [Applause.] I wish to assure you that you have strong friends in Washington. [Applause.] Only a short while ago I had the honor of organizing a luncheon in Washington for the purpose of bringing your friends in the Senate together for the purpose of considering this problem we are considering which is foremost in your hearts here tonight. [Applause.]

As a result of that luncheon in Washington, which was attended by distinguished leaders of your cause, among others Freda Kirchwey, of The Nation, who has been in correspondence with me for some time on this matter, we arranged a conference of Senators with the Secretary of State, General Marshall. As a result of that meeting, at which we were accorded a generous and cordial reception, I have great confidence that you will not be disappointed by the final action of our Government in this matter. [Applause.]

After 50 years of organized Zionist endeavor, after almost a century of growing pro-Zionist sentiment in the world, after 2,000 years of suffering and longing, after two great world wars, and after the catastrophe that has struck the Jewish people in the past decade, it would seem this meeting tonight should have been called together for another purpose—for the purpose of celebrating the establishment of a Jewish state. [Applause.]

I can understand how tedious it must be for you, who devote to Zionism so much of your lives, to gather over and over again only to hear the same friendly speeches from people who want to help but cannot, and to hear the same excuses from people who could help but would not. I know how discouraged even I become at times, in this and in other issues, at the never-ending opposition of those determined to stop progress in the world.

And yet, getting discouraged is the worst disservice one could perform for your movement, for any movement. This is what the enemies of Zionism, this is what the enemies of any worth-while cause are waiting for—that its friends should lose heart and patience and give up.

You are right, therefore, in gathering here to celebrate the occasion of the fiftieth anniversary of your movement. During these 50 years, you have withstood many enemies, overcome many obstacles, and brought about—despite them—many encouraging results.

Today you are no longer a small band of men and women endowed with courage and vision. Today yours is an effective voice uniting the overwhelming majority of the Jewish people everywhere. [Applause.] Your objectives, through formal treaties executed by our Government and congressional resolutions duly enacted, have become part of the law of the land, which must be recognized, as well as part of the international law of the world. [Applause.] Today a foundation has already been laid in Palestine for the Jewish state—a prosperous, freedom-loving, progressive Jewish community of 650,000 men and women who are happy to live for their freedom—do not underestimate the importance of this fact in our hard and cruel world—ready to die for it. [Applause.]

Today you stand on firm ground, supported by the law and the facts, and your enemies have to battle against both law and facts.

I think that despite disappointments and tragedies of your people you have a right to celebrate the progress achieved, and to look forward to greater achievements to follow. And because I am convinced that your cause is a just and necessary cause, and because I have been with you adding my voice in your struggle, I am glad to be with you sharing the fiftieth anniversary of your movement.

Still, the fight has to go on. And perhaps the most important thing we can do at this point is to ask just why the fight has not yet been won.

There is a lot of loose talk that the Palestine question is so utterly complicated, so dangerous, and so explosive, and so whatnot, that its solution must be postponed again and again. To my mind, the Palestine question is very simple. To summarize briefly what I think of this argument—nonsense! Humanity in the past has solved questions that were infinitely more complicated, dangerous, and explosive. Upon

close scrutiny, the "dangers" of a just solution of the Palestine problem resolve themselves as figments of the imagination; often as figments of an uninformed imagination, but just as often as figments of a malicious, hostile imagination.

In characterizing these hostile influences, I do not propose to search for new words to describe an old situation. I would rather, with your permission, quote from an address I made on the floor of the United States Senate on October 2, 1945, and which, unfortunately, still applies in this struggle:

"The chapter of British rule in Palestine contributes nothing to the honor of the British Government. It is a blank chapter in English history. It is a chapter full of evasion and duplicity. After having received the trusteeship over Palestine mainly in order to help the Jews establish their national home, British administrators did their best to prevent the Jews from doing so. For the present, and, as it has been ever since 1939, Palestine is ruled under the notorious British document known as the Chamberlain white paper of 1939, under which no more Jews may enter Palestine, and under which, in this so-called national homeland of the Jews, Jews are not even permitted to live or to own property anywhere except a tiny part of the territory of Palestine.

"This document is reviled and repudiated even in England. Winston Churchill, the man who pulled Great Britain through the war, called the white paper a unilateral breach of promises and a violation of international obligations.

"But on the part of Mr. Churchill, too, just as on the part of many others, these were only words. For four long years Churchill was Prime Minister of England, and he had it within his power to right the wrong that was done. He did not do so. For most of those 4 years there was an explanation—the critical war situation. But for the last year and a half this explanation no longer held true.

"During the past year and a half it would have been easily possibly to abrogate the white paper, to open Palestine to the Jewish refugees of the Old World, and to lay the foundation of the Jewish state. [Applause.]

"It was not done by Mr. Churchill's government, and now we hear that Mr. Attlee's government does not intend to do so, either. It is said to wish to maintain the white paper intact, with but slight and insignificant concessions. It is said to intend to 'pass the buck' for the future of Palestine to a United Nations organization which has not yet started operating and which, God knows when, will be able to start operating effectively.

"An overwhelming majority of the members of both Houses of Congress, both political parties, the Administration, are publicly pledged to support the policy of a Jewish commonwealth, and yet in practice we are failing to carry this policy into execution. It is reported that the President of the United States has asked that 100,000 Jewish refugees be admitted to Palestine at once. This is, indeed, an elementary requirement of the mandate. The victims of our enemy's brutality who by some miracle survived in his concentration camps and who desire to go to the country that was promised to them should be enabled to go without the least delay.

"But this is only the first step. Without shirking responsibility, our Government and the Government of Great Britain, who have made so many far-reaching decisions in the international field in the interest of peace and humanity, must not shirk this responsibility, either—the long overdue responsibility of redeeming and carrying out a sacred obligation." [Applause.]

This, my friends, is what I had to say to my colleagues in the Senate in 1945, more than a year and a half ago. Since then, the British Government has not improved its record. Indeed, it has blackened that record beyond anything that has happened heretofore. Since then, to my deep regret, the desire to shirk responsibility or, indirectly, to make more difficult a just solution in Palestine has been manifest in certain circles in Washington as well, thus causing American policy to deviate from its logical and officially prescribed path, or, at best, causing this policy to be pursued in so hesitant and round-about a manner as to rob it of all efficacy.

I would not like to indulge on this occasion in criticism of British policy across 3,000 miles of ocean. What we think of British policy in the matter of Palestine has been said quite often, quite audibly, and quite clearly, and I could hardly add anything to it.

There is a task much nearer home that has to be tackled and I should like to tackle it tonight. This has to do with the problem, already touched upon, of American policy on Palestine. [Applause.] I have early in my address referred to the call which a group of United States Senators, including myself, paid the Secretary of State. The matter was published in the papers of the country. The visit was due to our growing apprehension that the singular lack of firmness and of enthusiasm displayed by representatives of the Department of State for the official American policy on Palestine will cause irreparable harm. That Secretary Marshall gave us a very earnest hearing was quite encouraging. Some things which the Secretary told us were still more encouraging. Nevertheless, I think it useful to make clear in public what has been pointed out by my colleagues and by myself in private.

The law- and policy-making body under our Constitution is the body that represents the people of the United States—the Congress. On the matter of Palestine Congress has spoken—spoken with a unanimity hardly ever achieved in our deliberations. The resolution of Congress on Palestine, adopted by the Senate on December 17, 1945, and by the House of Representatives 2 days later, reads as follows:

"Whereas the Sixty-seventh Congress of the United States on June 30, 1922, unanimously resolved 'That the United States of America favors the establishment in Palestine of a national home for the Jewish people, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of Christian and all other non-Jewish communities in Palestine, and that the holy places and religious buildings and sites in Palestine shall be adequately protected'; and

"Whereas the ruthless persecution of the Jewish people in Europe has clearly demonstrated the need for a Jewish homeland as a haven for the large numbers who have become homeless as a result of this persecution; and

"Whereas these urgent necessities are evidenced by the President's request for the immediate right of entry into Palestine of 100,000 additional Jewish refugees; and

"Whereas the influx of Jewish immigration into Palestine is resulting in its improvement in agricultural, financial, hygienic, and general economic conditions; and

"Whereas the President and the British Prime Minister have agreed upon the appointment of a 'Joint Anglo-American Committee of Inquiry' to examine conditions in Palestine as they bear upon the problem of Jewish immigration and the Jewish situation in Europe and have requested a report within 120 days: Therefore be it

"Resolved by the Senate (the House of Representatives concurring), That the interest shown by the President in the solution of this problem is hereby commended and that the United States shall use its good offices with the mandatory power to the end that Palestine shall be opened for free entry of Jews into that country to the maximum of its agricultural and economic potentialities, and that there shall be full opportunity for colonization and development, so that they may freely proceed with the upbuilding of Palestine as the Jewish National Home and, in association with all elements of the population, establish Palestine as a democratic commonwealth in which all men, regardless of race or creed, shall have equal rights."

This, and nothing else, is the official policy of the United States with regard to Palestine.

All the talk that pretends to assume that American policy on Palestine must yet be defined, or developed, or crystallized, misses the point. The actual point is that American policy has been defined, developed, and crystallized. All that is needed is that it be applied and executed. And this must be the task of the officials of the executive branch of our Government. [Applause.]

I am personally convinced that President Truman is fully in accord with this policy and desires to see it applied. His message to the King of Saudi Arabia, of October 28, 1946, shows this to be the case. I am also convinced that our Secretary of State has no other thought than to have this policy carried out just as forcefully and effectively as other policies to which our Government is committed. [Applause.]

And yet, I am constrained to state that in the matter of Palestine, there has developed in the State Department the tendency to postpone taking a clear position in defense of our official program, and, when a stand had to be taken, to do it half-heartedly, with qualifications and mental reservations that were only too obvious.

This was the case before the matter came up in the United Nations, and this was also the case since then. Our Government which, in all other questions tries to lead the nations of the world, in this one question displays a tongue-tiedness and a faint-heartedness which are quite out of character and which neither befit our role in the world, nor correspond to our responsibilities in the question of Palestine, nor are likely to result in the attainment of the goal which Congress has set by its resolution. It is not for me to say what can be the justification for this attitude, but the time has come to make it clear that in this country of ours, all executive officials are duty-bound to execute policies laid down by Congress; that those who, for lack of sympathy with these policies, do not do so should have no controlling voice in these matters. [Applause.]

Mr. Chairman, ladies and gentlemen: I am aware that you represent a great many of our fellow citizens of Jewish ancestry. I could never understand why a cause is rendered less just because many fellow citizens believe in it. On the contrary, in a democracy, the very fact that a large section of the citizenry favors a certain cause, entitles this cause to additional respect. [Applause.] I recall, not so many years back, when Ireland was fighting for its freedom. [Applause.] I recall the response that the American people gave in that cause. I recall very vividly the support we received from our Jewish fellow citizens. [Applause.] I attended many meetings in those days, not only in my own State, but in distant parts of the country. In every section I visited, I found that our Jewish fellow citizens were in full sympathy with the struggle of the Irish people for their freedom. [Applause.] They were fighting the same sort of a battle the Jews today are fighting. You deserve and are entitled to the sympathy of every fair-minded American regardless of race who realizes what the struggle means. I am sure you will have it. [Applause.]

It seems to me that even if America did not have a single citizen of Jewish ancestry among its population, the world-wide problem caused by the homelessness of the Jewish people, by the need to provide for the Jewish people that which is granted as a matter of course to all other peoples—an independent national homeland, would still justify our ardent support of this cause. [Applause.]

The brazen disregard of the international arrangements made 30 years ago to remedy this situation is sufficiently challenging to America's role as a major world power, to impel our Government to exert itself on behalf of this cause.

If you, and we, all of us who believe in the righteousness and the wisdom of Zionism, continue our efforts unabated, your next convention, let us hope, will find us all, Jew and Gentile alike, celebrating the attainment of your ancient and historic objective—the establishment of Palestine as a free and democratic Jewish commonwealth. [The assembly arose and applauded.]

Palestine

EXTENSION OF REMARKS
OF

HON. J. HOWARD McGRATH

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. McGRATH. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by Dr. James G. MacDonald, former Higher Commissioner of the League of Nations for German Jews, the Chairman of President Roosevelt's Committee on Refugees, a member of the Anglo-American Committee of Inquiry on Palestine, on the occasion of the Jubilee Convention of the Zionist Organization of America, at the Hotel Pennsylvania, New York City, July 4, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the convention, for a few minutes during the last of the JNF appeal, I felt that this was really becoming a Jewish meeting. [Applause and laughter] For, after all, I feel that it is a loss of time to get a lot of good Jewish people together and not make them poorer and better Jews at the same time. [Laughter and applause.]

It is a great honor to speak at this convention—a convention which would bring great pleasure to the two great figures whose pictures are on the wall here at my back—Dr. Herzl, a man who had an extraordinary vision, all the more extraordinary because he was, in a certain sense, rather remote from his Jewish background. Despite that, he more nearly than any man of his generation, perhaps, foresaw the future. This convention would be to him a large measure of fulfillment of his dreams.

I am glad to be on the same platform with the President of the JNF, though, of course, I suspect that he is only a facade for the irrepressible activities of Mr. Fisher. [Laughter.] Speaking of Mr. Fisher, if I may, on a personal note for a moment, I think you will all be happy to know that his son who underwent a very serious operation 3 or 4 days ago is definitely better today. [Applause.]

I think the JNF would do well to teach Zionists the story of Ussishkin. Of the many Zionists interested in the JNF, to my mind he is one of the greatest. He was a general Zionist, but a general Zionist in the fullest and most comprehensive sense. He believed in political activity. He believed in cultural activity. But he also knew that without the land, all the rest would be in vain.

I want, finally, to say just a word about my friend, Aaron Wright, who has spoken to you. He was very kind to me in England when I was there during their delightful winter last February and March. [Laughter.] What a winter that was! The meeting of welcome to me in Kingsway Hall had what the British call 10 degrees of frost. That is, it was exactly 10 degrees below freezing. But the orators went on and the audience remained—perhaps frozen to their seats. [Laughter.]

I want to pay my personal respects to the efforts he has been leading in England under very difficult circumstances. I want also to say that I share his view that next to land itself in Palestine, the most critical problem is the problem of housing. It must be met. I do not mean to say delay in meeting it should in any way limit immigration, because the immigrants who come will be taken care of, houses or no houses. [Applause.] Yet, from the point of view of sound economic building and the welfare of the community, those 100,000 rooms are sorely needed.

My mission this spring and winter was threefold. First to England to help there in the opening of the joint Palestine appeal. Then to Palestine for a special mission on behalf of the new medical school of the Hebrew University and Hadassah. In Palestine I was the guest of the JNF and had the fine privilege of being shown Palestine by Dr. Granovsky.

I have one bit of advice to you. I know that you delegates have been getting advice from all the orators. I dare say either now or later, you would all like to have your turn in giving advice to the orators. Well, I hope you get it. But this advice applies also to orators. It applies to Judge Rothenberg here, and I have given it to him before and I am going to continue to give it to him until he takes it. [Laughter.] That advice is to go to Palestine and see for yourself. [Applause.] I do not imply the judge has never been there, but he has not been there recently enough.

Indeed, if I had my way, if I were a dictator—of course, I know the role of dictators among Jews is a very sorry one. [Laughter.] Indeed, I could disprove the old libel about the Elders of Zion and the Protocols. I know if the Elders of Zion has existed they would not have agreed, and had they agreed and drawn up the protocols, they would not have been followed. [Laughter and applause.]

Now, with complete seriousness, there is no substitute for going to Palestine and seeing and feeling what is taking place there on the ground itself. Not even the unmatchable eloquence of Dr. Silver can give you that feeling. Not even the analytical summations of a Dr. Neumann can do the easy job. Nothing can do the job except to go and see. It is very easy now. From New York it is a matter of 20, 24, 36 hours—no time at all.

My report to you is twofold. First, very briefly, about the political situation which I found in Palestine in April and in May of this year. On the surface, conditions have sorely worsened in Palestine since we members of the Anglo-American Committee of Inquiry were there a year ago. Oh, I know it is true that the British Government, the high commissioner in his wisdom, has carried out one fractional, infinitesimal, parenthetical, insignificant portion of our report. [Laughter.] Perhaps you all know what it is. Some of the members of our committee last year were shocked when they went to Tiberias and there learned that a night club on the Sea of Galilee played jazz music and the young people occasionally danced to that music. So somebody dragged it into our report.

Well, Sir Alan in his wisdom has now decreed the sacred waters of that lake are not to be contaminated by jazz music. We did not know then that night club was owned by a Christian Arab. [Laughter.] Even if we had known it, we ought not to have put anything in. Of course, the British and we, at least most of our committee, had forgotten, if we ever knew, that in the days of Jesus the Sea of Galilee was the center of many Roman villas, a great winter resort of the Roman aristocracy. I imagine the things that went on in those villas in Jesus' day would make jazz music seem fitting for the most strict evangelical Sunday school. [Laughter and applause.]

We had our initial experience in Jerusalem which gave the key to the present situation there. We arrived at the Eden Hotel about teatime. I was planning to take my wife out to see the old city immediately thereafter, but the hotel said "No, not tonight. You see, the curfew is on. You are not allowed outside the door on the street. You may not sit or appear on your balcony overlooking the street." As you know, several Jewish children have been wounded and some killed who had escaped from their mothers and had appeared on the balconies overlooking the streets during the curfew time.

The next morning we were awakened by a raucous voice saying something in Hebrew which we could not understand. At breakfast we were told we would not go out that day because the previous night there had been the four executions and the curfew was extended. Again that night. So our first 36 hours in Jerusalem was a period of confinement in our hotel. That told us more of the police state which Palestine today is than any amount of reading could have done. Everywhere in Jerusalem one is running straight up against the so-called controlled areas into which the city is divided. Everywhere barbed wire, tanks, machine guns, heavier guns, armored vehicles racing through the streets at top speed—everyone held up and searched and checked, even Americans, non-Jews. You can imagine, therefore, what happens to Palestinian Jews.

One must be off the roads in the country at 6 o'clock. One must be back in the city at 6:30. One never knows when he starts out whether he will arrive at his destination or at what time he will return. Sometimes he may be held up for 10 minutes, sometimes for an hour, sometimes for 4 hours, by road checks or road searches. Everywhere one sees the evidence of overwhelming military might. Last year, when we were there officially, there were perhaps 60,000 British troops and police in Palestine. Today there are 125,000 British police and soldiers in Palestine. Everywhere there is the dominance of force. Yet the more force the British pile up in Palestine the weaker becomes their moral position in Palestine. [Applause.]

One day I had two important political interviews which I report to you briefly. The first was with the chief secretary of the British administration, Sir Henry Gurney, in the King David Hotel, now no longer a beautiful hotel, but, instead, a fortress. Sir Henry was in a bad mood. Nothing about the Jews pleased him. He complained about everything, even about my dear friend whom I regard as perhaps the ablest woman in the world, Goldie Meyerson. [Applause.] Even she no longer satisfied him. You know the heart of his complaint? It was that the Jews show no confidence in the British administration. [Laughter.] He complained that they did not tell him in advance of "Operation Negev," and give the British Government an opportunity to cooperate [laughter] in all these settlements in the south.

He even complained a little bit about me, though sort of indirectly. He said, "You see how uncooperative they are. They did not serve notice on me and did not invite me to the party which the university and Hadassah had yesterday on the breaking of the ground for the new biological building of the new medical school on Mount Scopus." Well, of course, there were no social relations then between the agency and the Government. Besides, had Sir Harry been invited, and had he come, he would have felt called upon to bring with him a squadron of troops, machine guns, tanks, and the rest.

And even he should have known that they did not fit into a quiet academic groundbreaking of a biological building. [Applause.]

As we talked, I got a new sense of the difficulties under which Jewish leaders have to work in Palestine, and a new sense of the necessity of Jewish self-rule in Palestine.

My second political interview was with Sir Alan Cunningham, the high commissioner, a man with whom I feel I was quite friendly last year. This can be described in a moment. The lunch was good, the food was excellent, the talk was casual and friendly. Afterwards, I expected that the high commissioner would invite me into his office for serious talk. Instead, he invited my wife out into the gardens and kept her there until it was time for us to go home. [Laughter.] I do not know whether my wife thought it was because of her beauty or charm. If she did, I quickly corrected her in the best husbandly fashion. [Laughter.] Don't we have a right? The wives are always putting us in our place. Surely we should occasionally have a right to reciprocate. [Laughter.]

I explained to her that the reason Sir Alan had kept her so long was because he did not want to talk to me.

Politically then, militarily, conditions in Palestine are bad, deteriorating. But beneath the surface, there is the best evidence of growth—many indications which give reason for high hope and optimism.

Just two stories about the land in the north and in the south. On one of our trips we went up to the Huli, to what were the swampy areas, from which now the mosquitoes have been so completely eliminated that when one of the Jewish professors at the university or at the hospital wants mosquitoes for experimental purposes, he has to send a special expedition up to Syria to get them. [Laughter.] The Huli is cleared of mosquitoes. New settlements are being established. But the full carrying out of that program waits upon the British Government.

Above the Huli, in the mountains of Galilee, is the settlement of Menorah which I like to tell about. It was on the rocky fields covered with stones and huge granite pieces that some 4 years ago 40 Jewish boys and girls went to work. They cleared half the land. They built their buildings of stone. They built their stables. They built their reservoirs. They get their only water from the rain. They built their fortifications. They are now building a rest house to be shared by them and the members from the colonies in the lower reaches of the Jordan. This rest house is on the bluff overlooking the great Jordan Valley, from which one gets a view up to Mount Hermon with its perpetual snow and on down to the Sea of Galilee.

The leader of that group, as is so often the case of the leaders in colonies, was a girl. Only in Palestine, of all the places in the world, do women have an equality of opportunity—only in Palestine. [Applause.] In this settlement the colonists showed good judgment in choosing this young girl. She was 22. She had been 18 when she went there. As she showed me about, I could feel her sense of pride, the pride which a mother would have in her own children. I looked at her hands and at her face. As I did, I thought of our own daughter, the same age, and the daughters of most of my rich and well-to-do Jewish friends. I thought how creative has been the life of this young girl. How she has demonstrated the capacity of young Jews to rebuild. It is that feeling you can get only in the colonies in Palestine. I cannot give it to you. No one can give it to you. You must go and get it for yourselves. [Applause.]

Then we passed through the Emek. As we did, I remembered the experience of Ussishkin back in 1920–21, just after he bought a large section of the Emek on behalf of the Jewish national fund. Do you know that if the Zionist organization of that day had an inquisition, Ussishkin would have been punished. He was bitterly criticized for wasting money. Yet today, that valley which was then cursed with malaria, largely uninhabitable, is one of the richest valleys in the world, comparable to the Sacramento Valley in California. Ussishkin represented the spirit of the JNF. It was that sort of a pioneering, individualistic spirit which has helped so much to make what has happened in Palestine possible.

In some respects, the south is the most challenging and the most encouraging of all the parts of Palestine. I do not have time to describe the settlement in the far south which has been engaged in water experimentation, the control of floods. I cannot take the time to tell you how the first year the dam was swept away by unprecedented floods. The second year there were no floods, and the third year the water was diverted. When we were there, young Jews were beginning to mix the salt water from their wells with the water they had saved.

I want to tell you just a word about two or three of the young people in that settlement. One of them, a young meteorologist, a boy who in this country would be a professor, there he is serving with no thought of professional advancement in a highly technical job. Others are agronomists. There is a third to whom I want to make special reference because she represents the spirit to which I referred earlier. The buildings, as I say, are very primitive. Conditions are extremely primitive. No babies can be raised there. It is tough and hard. We went into the bakery where a young girl of about 18 was preparing to put some 20 loaves of brown bread in an improvised oven. It was heated by a blow-torch, fed by a gas tank sent down from Jerusalem. The room was hot and unpleasant. This young girl of 18, do you know who she was? She was the daughter of Goldie Meyerson. The daughter of the most important woman in Palestine chose as her place of national service such a spot in Palestine. [Applause.]

I saw the pipe line, partly completed. I later heard Sir Harry's devious excuses for the British opposition. But I want to say this to you: Already the Jews have done enough in the Negev to prove it can be made to bloom as the rest of Jewish Palestine. [Applause.]

I spent the night at Rehovoth with my old friend, Dr. Weizmann. [Applause.] We talked about many things. I do not say he was cheerful on every subject. What Zionist leader ever is cheerful on every subject? Indeed, what leader of any great militant movement has ever been cheerful on every subject? But Weizmann was cheered because he said to me, "We have now proved in the Negev that there are facilities and resources to care for from 300,000 to 500,000 Jewish settlers. That has been proved." [Applause.]

Well, I am about through. I wish I could go on and give you more details, because it seems to me nothing really matters except the detailization of the achievements in Palestine. But there is no time. The substance of what is being done is extraordinary. The spirit in which it is being done is incomparable. The confidence of those who are doing it is the sort to make ashamed timid souls elsewhere. One indication of the confidence of the Jews of Palestine in the future is their resolute effort to go about the building of the new medical school, in connection with the hospital school of Hadassah and the Hebrew University.

And now I am going to give you a special assignment, as all the other orators have done. You will have nothing at all to do when you get home except carry out the various suggestions made to you during this convention. But this is an easy one. If you have anywhere in your home, in your district, a Jewish millionaire who unlike most millionaires has not lost most of his imagination and most of his intelligence in getting rich—I do not mean to say he hasn't intelligence to continue to get money, that is another matter [laughter]—but intelligence and imagination enough to see far in a nonbusiness area, then please tell him that on Mount Scopus, in the proposed medical school, he has an opportunity to build for himself and for his people and for the good of all the Jews and the Arabs, too, in that part of the world, a lasting and an incomparable monument. See if you can strike his imagination.

Finally, I used to be accused, and rightly, I think, of speaking of Palestine almost always and perhaps almost exclusively in terms of a place of refuge. There are even times when my good friend, Dr. Silver, felt that though I was useful in a certain way, I too narrowly restricted my conception of Palestine. I want here and now to confess that he was right and I was wrong. [Applause.]

Palestine is a great place of refuge. But Palestine is more than a great place of refuge. Believe it or not, since I was League of Nations High Commissioner, since I was on the Anglo-American Committee of Inquiry, I have been reading. The more I read of Jewish history, the more I read of new books on Palestine—and there are some excellent ones now—the more I can understand that Palestine has a meaning far transcending its role as a place of refuge. As I read the history, I see how the men of vision, fighting against the obscurantists and those without vision, have stuck stanchly to the central point—that Palestine is to be a home for Jews in which Jews can create distinctively and unique Jewish values which can be created nowhere else. So now, I have taken onto myself a special assignment. You see, I not merely give you jobs, but I take one myself. This job is to show my wealthy Jewish non-Zionist friends, those of them who have that imagination and intelligence to which I refer, to show them that the young people in the colonies, whether in the Huli, in Galilee, in the Emek, or the Negev—that those young Jewish boys and girls building nobly as they are in Palestine, for themselves and the people of Palestine, are, in the long run, doing more for the sons and grandsons of these rich American Jews than all the antidefamation societies and all the defense societies in the world. [Prolonged applause.]

This is no criticism of my good friend, Judge Proskauer, who, by the way, is becoming a better and better Zionist. [Applause.] It is no criticism of my good friends in the B'nai B'rith. It is merely to reaffirm a principle which Jews should long ago have understood—that the creative, the affirmative, the positive approach is the only answer. [The assembly arose and applauded.]

Visit of President Truman to the Senate

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Arthur Krock from this morning's New York Times. In the article reference is made to a man beloved on both side of this Chamber, Mr. Leslie Biffle.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOLASSES INSTEAD OF VINEGAR FOR A CHANGE

(By Arthur Krock)

WASHINGTON, July 24.—The President's visit yesterday to the Senate, where he spent "what I think were the best 10 years of my life," and his brief reoccupancy of his old seat in the Chamber, will not bring enduring political peace between him and the Republicans. But the deft and brilliant personal touch of the episode somewhat soothed the ill feeling which vetoes and other Presidential actions have aroused.

The homely, pleasant scene, the friendly words uttered by Senator VANDENBERG to Mr. Truman and the equally friendly words of the President in response, are bound to send many Members home from the adjournment of Congress with the consciousness that they and he, after all, are laboring to serve the state according to their lights. This soothes the keen edge of partisan controversy, even though the effect be only temporary.

There was, of course, a master showman behind the scenes. No Senator, daring the President to resume his old seat, was the impresario. The man to whom the agreeable idea occurred was Leslie L. Biffle, of Arkansas, secretary to the Senate minority, and a friend of rare devotion to the President—devotion which dates from Mr. Truman's first appearance in the Senate from Missouri.

For some years Mr. Biffle has employed the luncheon hour at the Capitol to bring together political notables of both parties and others, but mostly Senators, with the faith that men who come to know each other work more constructively on common problems. It was he who first suggested to the President, after Mr. Truman left the Capitol for the White House, that there was no good reason why he should not return occasionally to "visit," as country folk say, with his former colleagues. The President agreed and acted on the suggestion once or twice, out of which grew yesterday's great idea.

STAGING THE IMPROMPTU

Mr. Biffle had asked the other guests, after getting the President's acceptance to the luncheon yesterday, and was gazing out of the window when the thought came to him. He proposed it to the actor designed to be principal in the kindly drama and got Mr. Truman's consent. Then Mr. Biffle carefully arranged matters so that nothing of the impromptu color of the surprise visit would be lost.

It was necessary to a good show that a certain number of people be prepared for the breaking of every Senate precedent and the writing of a new chapter in executive-legislative history. But it was also necessary that the show give off no odor of grease paint. Mr. Biffle, therefore, kept his secret from the press and public. One result was that two groups of tourists, after briefly inspecting the droning Senate from the galleries, left a few minutes before the President appeared. Doubtless they are today the most chagrined citizens of the United States.

Mr. Biffle, a slender man of great sagacity and firmness, and yet as friendly as every gesture he makes, came to Washington in 1913 as "patronage." The late Senator Joseph T. Robinson, of Arkansas, gave him one of the Capitol jobs assigned to that member, a humble clerkship in the folding room. But the youth's talents, projected by unceasing industry and instinctive loyalty, soon brought him to the attention of the entire Senate. He became indispensable to the minority in the 1920's, and when the Democrats became the majority in 1933 Mr. Biffle was elected Secretary to the majority of the Senate. He served in that capacity until he succeeded the late Col. Edwin A. Halsey as Secretary of the Senate in February 1945. On the change in the political complexion of the Senate caused by the 1946 elections, it was decided he should have an office called Executive Director of the Democratic Policy Committee, with ample quarters and facilities. The Republicans, with whom he is as popular as the Democrats, were glad to agree.

MR. BIFFLE'S DUTIES

In this niche Mr. Biffle is even more important in some respects than when he was Secretary of the Senate. His work as professional whip of the Democrats—a Senator always holds the amateur title—has become more consequential, because, with the narrow margin of the Republican majority, an alert Democratic whip may upset it at any time, as Mr. Biffle has demonstrated. His intimate relations with the President, who relies on his counsel in many matters, bring to his office Republicans as well as Democrats with questions and requests that involve the White House.

To all who come on legitimate errands Mr. Biffle is helpful, his only reservations being two: He will attempt nothing that even possibly might conflict with the interests of his party in Congress, especially in the Senate; and he will not listen to a proposal or a request for White House assistance which he thinks would have an adverse effect on the President, though unintended. Despite this, and also despite the schism between administration and antiadministration Democrats in the Senate, Mr. Biffle has the goodwill and strong liking of every member of that branch as well as of hundreds of others in Washington.

Shrewdness, tact, and the good taste of which tact is a part are strong constituents in Mr. Biffle's make-up. This was shown again yesterday when the Republican leadership of the Senate was represented at the luncheon by Senator WHITE, the titular leader, Senator VANDENBERG, and Senator WHERRY. The distinguished co-leader, Senator TAFT, was not there because of the feeling that has grown up between him and the President. Mr. Biffle, though he is on the best of terms with Mr. TAFT, made sure that nothing would mar the day of good feeling.

Compensation of Letter Carriers

EXTENSION OF REMARKS

OF

HON. WILLIAM B. UMSTEAD

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. UMSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Letter Carriers' Due" from the New York Herald Tribune of July 20, 1947, and an editorial entitled "A Matter of Justice" from the Daily Mirror of New York of July 22, 1947.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of July 20, 1947]

THE LETTER CARRIERS' DUE

Postmaster Generals come and go according to the exigencies of politics, and so still does a sizable proportion of postmasters, but the great mass of the Department's employees came under the status of civil servants and make a career of their jobs. Thus it is that for promptitude and accuracy of delivery our mails have no serious rival the world over.

Nevertheless, in their case Uncle Sam has never been too generous an employer. He demands of his mail carriers and postal clerks a high degree of literacy, also hard work and for wages and security privileges which are hardly commensurate with his demands. And they may not strike for better treatment; their only recourse is to public sympathy and to its reflection in Congress.

This newspaper has consistently supported their modest requests over the years and does so now in the form of the Langer-Chavez bill which has been on the calendar of the Senate since mid-May and the companion Stevenson measure in the House. These bills would liberalize the retirement pay of letter carriers after 30 or more years of service by adding $6 to their present weekly pension of $23, providing for the first time for widows' and survivors' benefits, and for an annuity increase for active carriers who will retire. The present maximum annuity, set in 1930, is $1,200, which, one can agree with a recent correspondent, forces retired employees "to seek light employment to augment their earnings during their twilight years." To finance the cost of a pension increase of 20 percent the proposed legislation would step up pay-roll deductions into the retirement fund from 5 to 6 percent. The Government, according to careful computation, would lose nothing.

Decency and fairness, it seems to us, require that this legislation be passed before Congress adjourns on July 26.

[From the New York Daily Mirror of July 22, 1947]

A MATTER OF JUSTICE

We've always tried to give help to the mailmen because we believe they are about the highest type of public servant developed in this country, the hardest working, and the closest in their contacts with the people.

They are the men and women who have made the United States postal service the best the world.

They are not highly paid. Only a year ago, they won the first pay increase that had been granted them in 20 years. We are happy to have had a part in winning the approval of that increase.

The mailmen cannot strike. They cannot engage in political activity. They can only request measures to improve their condition.

One such request won the approval of the House yesterday. It is a modest request for the liberalization of retirement. It would add $6 to the present $23 weekly pension. It would provide for widows' and survivors' benefits. It would be financed by increasing retirement deductions from 5 to 6 percent. It would represent little or no additional expense to the Government.

In addition, it would open up new jobs for veterans and others in the service by permitting the retirement of men who now simply cannot afford to quit.

The legislation represents only elementary justice to our best public servants. It should be accorded full congressional approval and sent to the White House as finished business.

The People Win

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD an

editorial from the St. Louis Post-Dispatch commenting on the great decision of the United States Supreme Court in the tidelands oil case. It is entitled "The People Win." The Court's decision is truly a victory for the people. But it is also a victory for the St. Louis Post-Dispatch itself, a great crusading newspaper, which has done so much to prevent the despoliation of the public domain.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PEOPLE WIN

The Supreme Court's decision upholding the right of the United States Government to tidelands oil is a victory for national defense. Justice Black's majority opinion is a stinging rebuke to would-be despoilers of the public domain.

This last great reserve of national fighting oil would have been turned over to private exploiters by the State governments of California, Texas, and Louisiana, to be drained as fast and wastefully as they chose, if the supporters of legislation quitclaiming the Federal right to it had had their way.

The quitclaim legislation was intended to head off judicial decision of a suit which the Department of Justice filed in the Supreme Court in October of 1945 in behalf of the Interior Department, asserting Federal ownership of the mineral rights in the lands from low tide 3 miles seaward. It was pressed upon Congress with an array of extravagant arguments.

The quitclaimers contended that State ownership of the tidelands had already been upheld by at least 52 court decisions, including the Supreme Court. They asserted that if the Federal Government could take over tidelands oil in the Interior suit it could also take over, among other things, New York Harbor, much of lower Manhattan, the built-up Chicago lake front, the more than one-half of downtown Boston that consists of reclaimed land, the coal beds under the Ohio River in West Virginia, and the San Francisco waterfront up to the Russ Building.

The Supreme Court's decision shows the falseness of the claim that the issue had already been decided by the court, and the falsity of the claim that Federal ownership will extend to all those other items will be demonstrated by the simple fact that it won't.

The proper people should be ashamed of this attempt to mislead the officials of 48 States into sponsoring a greedy grab of a vital national resource in the mistaken notion that they were protecting their rights. And there are plenty of people who have every right to be embarrassed by their roles in this affair.

There are the attorneys general of 41 States who let themselves be duped by the three States really involved. Only the attorneys general of Missouri, Washington, Arizona, and Georgia refused to be gulled into going along with selfish legislation which in no way concerned them.

There are the National Association of Attorneys General, the policy committee of the United States Chamber of Commerce, and the board of managers of the Council of State Governments, which passed resolutions in favor of the grab.

There were Governors Green, of Illinois, Hildreth, of Maine, and the late Walter S. Goodland, of Wisconsin, and former Goveronor Kerr, of Oklahoma, who let themselves be made cat's-paws.

There are Senators MCCARRAN, KNOWLAND, and MOORE, and Representatives HINSHAW and HÉBERT, who spearheaded the quitclaim bill. There are the 108 Representatives and the 88 Senators who voted the quitclaim bill and were saved by President Truman's veto from giving away the Government's right to a resource which its security requires.

"It is difficult," said the State government of California at the time, "to conceive that all of these responsible public officials have been duped * * * into defending an issue which concerns only California—and oil." It is not only difficult to believe, it is necessary to believe, in the light of the Supreme Court decision.

We trust also that the lesson of tidelands oil will not be lost upon Edwin W. Pauley, the California oil man who benefits from State exploitation of tidelands oil and who used his influence as a crony of President Truman to try to shenanigan the quitclaim bill through Congress.

We trust that it will be clear to all others who seek to thwart the prerogatives of the Supreme Court by legislative lobby, including the advocates of legislation to exempt railroads and insurance companies from the operation of the antitrust laws. In its widest implication, the tidelands oil case is a victory for the principle of judicial, not legislative decisions of lawsuits.

Alabama Electric Cooperative, Gantt, Ala.

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. Maury A. McWilliams, president of the Alabama Electric Cooperative, Inc., to Hon. Claude E. Wickard, Administrator of the Rural Electrification Administration, under date of June 7, 1947, in behalf of the REA loan to the Alabama Electric Cooperative for the construction of a steam generating plant at Gantt, Ala., together with a copy of a telegram sent to me by Hon. Gordon Persons, president of the Alabama Public Service Commission, under date of June 9, 1947, containing information with reference to the same matters.

There being no objection, the letter and telegram were ordered to be printed in the RECORD, as follows:

ALABAMA ELECTRIC COOPERATIVE, INC.,
Andalusia, Ala., June 7, 1947.

Hon. CLAUDE R. WICKARD,
Administrator, Rural Electrification Administration, United States Department of Agriculture, Washington, D. C.

DEAR MR. WICKARD: At the request of the Senators from Alabama and Florida and Congressmen GRANT, SIKES, and HOBB: I am submitting to you this additional information and justification for the construction of a steam generating plant by the Alabama Electric Cooperative at Gantt, Ala.

Our cooperative and the other cooperatives receiving service from the Alabama Power Co. have known for some time that the power-supply situation has been very insecure. We have known that the Alabama Power Co. did not have sufficient assured generating capacity to carry its own peak loads without relying on outside help. We also knew from bitter personal experience that when it was a low-water year, as it was in 1941, the Alabama Power Co. had to call upon our cooperative to curtail the use of its power.

You will certainly appreciate that no one is as dependent upon a stable and reliable source of power as the farmer whose farm is electrified. A farmer is not merely inconvenienced when he is denied the power he needs but he may actually be ruined financially. I am sure that I do not have to detail for you the various ways in which a shortage of power can be disastrous to the farmer. You will, therefore, appreciate our great concern that this cooperative be made secure in the knowledge that it will at all times have sufficient power to meet the needs of its consumers and not have to fear that a certain power company may, as it has in the past, find itself short of power and decide to favor other consumers as against the cooperative, or may have to curtail everyone's use of electricity.

As I have stated, we, in this area, have been aware of the inadequacy of the Alabama Power Co.'s generating capacity for some time and I fear that we have taken for granted that others were aware of the situation, so that we have not brought it sharply to your attention, as perhaps we should have. We have, therefore, gone to the records of the Alabama Public Service Commission to study the testimony given by the officials of the Alabama Power Co. in support of that company's application for permission to build a new 120,000-kilowatt steam generating plant at Gadsden, Ala. We shall later in this letter detail some of our findings, but they can be summarized as follows:

The Alabama Power Co. is short of reliable generating capacity. Under any but the most favorable conditions, it will require outside help to meet the power demands upon its system. The new company plant will not materially change this situation, since the company expects a load growth that will exceed the capacity of the new plant by the time that plant is placed in operation. The company testified, and we agree with that testimony, that to be secure it must have sufficient generating capacity of its own, since it can call upon others for help only when the others have surplus power available and, therefore, may not be able to get the help when it is needed. There is, then, an existing shortage of power in our area. The new plant of the Alabama Power Co. will not cure that shortage and the only way in which our cooperative can be made secure as to its power needs is for it to construct the proposed plant at Gantt, Ala.

In detailing the testimony and statistics which establish the above findings, I should first like to quote Mr. Robinson, vice president in charge of operations of the Alabama Power Co., on the question of the necessity of a supplier having adequate capacity in its own system:

"But as I say we must look out, we must take care of ourselves. Each of these companies in the group start out on the same basis. * * * Well, each one of them is taking care of its own situation."

"We will then have this tight spot in 1949, unless we and the other companies provide for it and each one of them takes its own share of the burden and nobody leans on anybody, except as you can use the surpluses at a saving."

We have no quarrel with this statement. We think it represents sound policy. On the other hand, let us examine the adequacy of the generating system of the Alabama Power Co. to meet the demands upon it. Item 2 of the supplemental data furnished by the Alabama Power Co. to the Alabama Public Service Commission at the latter's request in connection with the company's application for permission to build the Gadsden plant shows that the net total generating capacity of the Alabama Power Co. is 683,360 kilowatts. This includes units more than 30 years old and which can be operated only for short periods. It also includes all of the hydro installations, which depend, of course, upon water conditions for their actual output. Item 2 also

shows that the Alabama Power Co.'s own estimate of its actual operating capacity is only 409,260 kilowatts. This, Mr. Wickard, is from the statistics furnished by the Alabama Power Co. In exhibit II of the Alabama Power Co. filed with the Alabama Public Service Commission we find that the peak demand, as estimated by the company itself, for 1946 through 1949 is as follows:

	Kilowatts
1946	577,000
1947	651,000
1948	695,000
1949	730,000

You will, therefore, see that from their own statistics and estimates the Alabama Power Co. has established the fact that it was, in 1946, and will be thereafter, short of actual operating generating capacity to meet the demand upon its system. The new installation of 120,000 kilowatts will not correct that situation, since, as shown above, the power company anticipates an increase of 153,000 kilowatts in its load by 1949.

What would happen to our cooperative in a low-water year, or when one of the 60,000-kilowatt units of the company was down, or some of its old units were down?

I have discussed the question of power supply with Mr. Gordon Persons, president of the Alabama Public Service Commission, and he has assured me that in his mind there is no doubt but that the Alabama Power Co. is short of the necessary generating capacity to carry its load by itself and that the commission had approved the company's application for permission to build the new plant at Gadsden on the basis of the company's clear showing of need for that plant. He further informed me that he had discussed the problem with Mr. Gordon Clapp, Director of TVA, and that Mr. Clapp had confirmed the fact that there was real need for the plant. This plant will not, however, solve the problem of adequate power supply insofar as the Alabama Electric Cooperative is concerned. The company completely disregarded the needs of the cooperatives to be served by the Alabama Electric Cooperative in making its showing of its need for the new plant. In fact, Mr. Robinson minimized the entire plan for the cooperative's plant and the power it would release to the company, by saying, "Well, I am not too familiar with the plant, but I guess they would serve five or six more co-ops in addition to the Alabama Water Service Territory * * * we will say six or seven thousand kilowatts, something like that."

We thus have the situation where the Alabama Electric Co. already has an overloaded generating system and is installing less additional capacity than is needed to take care of only the expected load growth between the present time and the time the new plant is operating.

Furthermore, Mr. Wickard, many of the generating units of the Alabama Power Co. are very old units. For example, there are two 2,500-kilowatt units in the company's Montgomery plant which were installed in 1911. There are two 5,000 kilowatt-units in the company's Gadsden plant which were installed in 1913. There are two units of 20,000 kilowatts and 30,000 kilowatts in the company's Gorgas No. 1 plant which were installed in 1917 and 1918, respectively. Many of the hydro units are also very old. Add to these facts that in a low-water year only a fraction of the hydro capacity is available and you will see how insecure any customer of the Alabama Power Co. must feel with respect to the reliability of his power supply—and how much more insecure we would feel, with our firm commitments to others to furnish them with power. We do not want, we cannot afford to have, that type of insecurity.

Also, Mr. Wickard, any insecurity which we feel will be reflected in similar feelings by our consumers. It is quite possible that, when they consider the over-all inadequacy of the Alabama Power Co.'s generating system and the antagonistic and shabby manner in which that company has treated our cooperative in the past, some of our most important consumers will try to make other arrangements for their power—unless we are assured our power needs by having our own source. Should they do so, repayment of the Government's loan to us would be seriously jeopardized. This must not be permitted to happen.

Although it has already been brought to your attention, because reliability of service is so important to us, I should like to remind you of the fact that in 1941 the Alabama Power Co. called upon the cooperatives to curtail their use of power; and only this past May 8 the company asked this cooperative to reduce its demand at the Samson substation to 1,000 kilowatts, despite the fact that the company has delivered to the cooperative as much as 5,000 kilowatts over this connection.

Mr. Wickard, we believe that the record is clear beyond any reasonable doubt. There is a power shortage on the Alabama Power Co.'s system. New generating capacity is needed over and above the company's proposed plant at Gadsden. To insure reliable service to our cooperative, an additional source of power must be obtained. We are already generating much of the power that we use. We are convinced, therefore, that from every engineering, business, and policy consideration, the only way for us to handle this power shortage situation is to install our proposed steam plant in Gantt, Ala.

In further connection with this, may we again quote the Alabama Power Co. in its sworn testimony before the Alabama Public Service Commission to demonstrate the advisability of having the cooperative served from a plant located at Gantt, Ala.:

"President PERSONS. But the plant in your load center is more desirable from an operating standpoint?

"Mr. ROBINSON. Of course. We have the peak load in the Anniston and Gadsden area and, over and above any cost consideration, it is worth a great deal to have the better service assurance that you have with the plant right there rather than at Gorgas or in some other distant point where you are subject to transmission line interruptions."

Not even the Alabama Power Co., I presume, would contend seriously that different engineering rules apply to power company systems than to cooperative systems. If it is advantageous to a power company to locate its plant in its load center, certainly it is just as advantageous to a cooperative to locate its plant in its load center. That is what we are proposing to do.

Mr. Wickard, we have already in previous presentations to you, discussed the many other compelling reasons why the cooperative should build this plant and we do not wish to belabor those points. We do, however, want to take this opportunity to remind you that the Alabama Power Co. sat back for more than 2 years after the Alabama Electric Cooperative purchased the system of the Alabama Water Service Co. without making any serious move to help us solve our power problems. Not until after a costly and extensive engineering survey was made by the cooperative and an allocation was made by the REA for the construction of the steam plant at Gantt did the Alabama Power Co. make any new proposal. Yet its proposal, even if sincere, would not result in lower power costs for the cooperative. In fact, whatever advantage in cost would exist would favor the cooperative's steam plant. In addition, the Alabama Power Co. has merely talked about its new rate to distribution cooperatives. Months have passed since the original proposal, but the company has taken no step to have the rate approved by the Alabama Public Service Commission nor has it even worked out the terms of the contract which would cover this rate. We seriously question the sincerity of the company with respect to that proposed rate. There are cooperatives in Alabama which are ready to sign contracts with the Alabama Power Co. covering that new rate and which have asked the company for contracts to execute, but the company has not offered them such contracts. This is merely part of the entire pattern of delay, delay, delay which the Alabama Power Co. has followed from the beginning. Always they are "too late with too little." They are interested only in preventing the construction of the cooperative's plant in order to maintain their monopolistic position in the generation of power and they care not at all about the fact that the best interests of the cooperative and its consumers would be served only through its own plant.

Don't you, therefore, think, Mr. Wickard, that we have waited long enough? The power situation in our area becomes more critical daily. The correction of that situation cannot be an overnight task. The longer we delay, the more serious will be the consequences. We earnestly submit that there has already been too much of this delay and that in all fairness to the Alabama Electric Cooperative, and to the distribution cooperatives and other consumers that it serves, we should immediately be granted the right to move ahead.

In our previous letter to you, we set forth in some detail the various other considerations for the construction of the steam plant at Gantt and we shall not burden the record further by repeating those considerations. We want you to know, however, that we are fully appreciative of the rules and restrictions under which you must operate. You have made it completely clear as to when you can and when you cannot approve a loan for generating facilities. It is our firm conviction that our case meets every requirement of established REA policy and that every consideration dictates the construction of the plant.

Summarizing some of these considerations, we find that:

1. There is a power shortage on the Alabama Power Co.'s system insofar as actual operating and reliable capacity is concerned.

2. The company's proposed new plant at Gadsden will not relieve that shortage, since the new plant will have a capacity of only 120,000 kilowatts, whereas the company anticipates an increase of 153,000 kilowatts in its load by 1949.

3. The cooperative's plant would not only solve the cooperative's own power problems, but it would also help relieve the power shortage in that entire area of Alabama.

4. The company has failed, for months, to take any affirmative steps to place in operation the new rate that it is publicizing.

5. The proposed new rate, even if finally made operative—which we question—will not result in lower costs to the distribution cooperatives than would the cooperative's proposed plant at Gantt.

6. The proposed cooperative plant would be at the load center of the cooperative, and not many miles away, as are the company's plants—a distinct and definite advantage in insuring reliability of service.

7. The proposed cooperative plant would result in our having a complete and integrated system giving the greatest possible assurance of adequate and reliable service.

8. At the end of the amortization period, the cooperative would own, free from debt, a valuable generating system. This, added to the lower cost of generated, as against purchased, power, makes the cooperative's plan much more attractive, businesswise, than the company's plan.

9. The Alabama Power Co. has been one of the leaders in the fight against REA-financed cooperatives. Its treatment of us has been particularly shabby. If we had to rely upon them for our power needs we would constantly fear for both our costs and

reliability of service. We cannot live and prosper under the constant threat of this Damocles sword.

10. All of our plans have been made—and those plans received REA approval. REA is committed to this loan.

11. When the studies were made and REA approval was given, the advantage was clearly with the cooperative's plan—and it still is. Even if the company is sincere about its proposed new rate, this would merely reduce the savings of generated power.

12. Our situation has been made critical by the delays which have been forced upon us. Immediate action is imperative. The cooperative's generating plant must be constructed without further delay.

We urge you, therefore, to permit us to proceed immediately so that we may know once and for all that the only satisfactory solution of our power difficulties is at hand.

Respectfully yours,

MAURY A. MCWILLIAMS,
President.

MONTGOMERY, ALA., *June 9, 1947.*

Senator LISTER HILL:

I have your wire with reference to Alabama Power Co. At formal hearing on December 23, 1946, President Thomas W. Martin, of the Alabama Power Co., testified that company's load was increasing far more than anticipated and that construction of 120,000 kilowatt steam plant at Gadsden was vitally necessary. In 1946, according to annual return, Alabama Power Co. purchased 376,261,630 kilowatt-hours from Tennessee Valley Authority. As president of Alabama Public Service Commission I refused to sign order approving construction of Alabama Power Co.'s Gadsden steam plant until Mr. Martin was able to furnish me with full facts showing absolute need for this particular plant to partially satisfy their own requirements. Also was assured by Mr. Gordon Clapp, General Manager of TVA, that TVA would probably have to curtail sale of power to Alabama Power Co. due to their own heavy requirements, and this would, of course, further aggravate Alabama Power Co.'s anticipated shortage. I recommend construction of cooperative's Gantt steam plant, as I am positive that it and all other power sources in State are urgently needed for present and future requirements. Territory of Alabama Power Co. and Alabama Electric Cooperative, Inc., are clearly defined and there is no overlapping therefore, construction of cooperative's steam plant will not in any way be a duplication of generating facilities. This commission has no knowledge of any 7-mill wholesale rate to cooperative and we have not received petition for approval of such rate. If further information is needed please do not hesitate to call on me.

GORDON PERSONS,
President, Alabama Public Service Commission.

Monopoly

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article on the subject of the concentration of monopoly power in America, by A. F. Whitney, president of the Brotherhood of Railroad Trainmen, published in the Railroad Trainmen for July 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONOPOLY—CONCENTRATION OF MONOPOLY POWER IN AMERICA NOW AT ITS PEAK

In answer to a recent editorial published in the Cleveland (Ohio) Plain Dealer, which stated that "the only business monopolies in the United States today are the public utilities," President A. F. Whitney of the Brotherhood of Railroad Trainmen wrote the following to the editor of the Plain Dealer:

Editor Plain Dealer, SIR: An editorial published in the May 13 issue of the Cleveland Plain Dealer asserts "the only business monopolies in the United States today are the public utilities."

Just whom, Mr. Editor, are you trying to kid?

On May 21, Mr. Wendell Berge, who resigned on May 1 as head of the Justice Department's Antitrust Division, said "The concentration of monopoly power in American industry now stands at the greatest peak in history."

On the same day, Berge described the N. A. M.-sponsored campaign to hound labor unions as a red herring to divert public attention from the real menace—the growing concentration of business monopoly.

"Insufficient funds and insufficient personnel," the former trust buster charged, are making enforcement of the antitrust laws "woefully inadequate."

The Federal Trade Commission recently said the growing concentration of economic power in the United States constitutes today's greatest domestic challenge to the American theory of competitive enterprise.

In April 1947, the United States Government opening its attack on illegal monopoly in the railroad field, said that the conspiracy here has created the most far-reaching concentration of monopoly power thus far known to the law.

The Government action was brought against the Association of American Railroads, the Western Association of Railway Executives, 47 railroads, operating practically all the railroad mileage west of the Mississippi River, the New York banking firm of J. P. Morgan Co., Inc., and Kuhn, Loeb & Co., and 89 individuals, who participated in the unlawful combination and conspiracy as directors or officers of railroads or as officials or agents of organizations formed by the railroads.

The Department of Justice stated that this conspiracy served the purpose of nonrailroad interests as well as some of the railroads, emphasizing that alliances between the defendants' private government and dominant groups in the oil, steel, cement, and other industries have perpetuated the economic status quo by imposing restraints upon trade and commerce in both transportation and basic industry.

Attorney General Clark said in Boston last fall that the monopoly tax paid by housewives, storekeepers, and even small manufacturers runs into billions of dollars a year. This, he said, is money which could have bought more radios and clothing, automobiles and housing. Many times it is money which could have bought food.

American monopolists, through their tie-ups with German cartels, helped to precipitate the last war. Cartels created a set of world-encircling economic governments, each based on a commodity or field of science.

No business monopolies? The N. A. M., whom the Plain Dealer customarily lauds, has said so through advertisements which it paid the Plain Dealer money to publish. Yet, the N. A. M. itself elected as its president in 1945 Mr. Ira Mosher, who had been indicted for violating the laws "guaranteeing free competitive enterprise." Mosher came to the N. A. M. from the American Optical Co., which he had served as general manager and through which a system of business monopoly price control was created designed to hold the price of spectacle frames at an exorbitantly high level.

Did the Plain Dealer say there is no monopoly in aluminum? It was just a year ago that the aluminum cartel was cracked by the Reynolds Metals Co.

What about the stranglehold which Standard Oil maintained on the development of buna synthetic rubber even after Pearl Harbor?

Standard had concluded a cartel deal with I. G. Farben of Nazi Germany to control the development and use of buna. Mr. Frank Howard, president of Standard Oil Development Co., made this statement about its tie-up with Hitler's industrialists:

"War does not abrogate contracts of this kind; it only suspends them."

In a consent decree, Standard Oil finally agreed to break its contract with I. G. Farben, but it did so only under heavy Government pressure.

No business monopolies today? The writer of your editorial would do well to read Darel McConkey's "Out of Your Pocket" and get the facts. Or read the report of the Monopoly Subcommittee of the Senate Small Business Committee (79th Con.).

No business monopolies? Whom are you trying to kid?

A. F. WHITNEY,
President, Brotherhood of Railroad Trainmen.

Call to Action

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD what I call "A Call to Action," a speech that was delivered by me at the Roosevelt Hotel a few nights ago.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

A CALL TO ACTION

Mr. President, because I was twice attorney general and twice Governor of North Dakota before I was elected Senator over the unscrupulous opposition of the old gang predatory political machines I feel it my bounden duty, in these most perilous hours, to call the people to action.

If you millions of plain, everyday folks were in one vast auditorium, ready to embark on a fight to protect your own and your children's interests, I would speak to you thus:

PEOPLE OF AMERICA

People of America, we are facing a national election. On the one side are your political enemies, those who believe in vast aggregations of wealth and monopoly, in a continuation of the old system where the farmer and laboring man get just enough to exist, and the small businessman is almost no more; on the other side are you, the miner, the factory worker, the farmer, and the laborer, whom these autocratic, powerful monopolists wish to keep on robbing. These predatory, sinister interests are again already engaged in trying to array the farmers against the laborers, the laborers against the farmers, and dividing both the farmers and

the laborers into organizations where they even fight each other; in arousing the passions of one class against the other, in the continuation of prejudice against American citizens because of race, color, or creed.

These monopolists and cartelists who divided the business of the world before the war and were responsible for the low wages, the starvation farm prices, and farm foreclosures, are once again conniving to dominate the economic world, now that the war is over The international banker, the members of infamous cartels, the new war-made millionaires, all these disciples of greed and avarice are determined by electing the next President of the United States to gain a deadly strangle hold upon the lives of the people.

Through a pliant tool in the White House whom they hope to elect while your minds are occupied by the struggle to stretch your income to meet the present high cost of living, they plan to make certain that they continue to rule your lives. Abolition of the electoral college and direct nomination through the primary system and election by popular vote of the President of the United States must be our first fight.

Unless you wake up you will find yourselves helpless. As of today millions of soldier boys and possibly any girl in World War II who trusted you to preserve democracy at home, while hundreds upon thousands lost their lives or came back blind, insane, or maimed, now find no hope for a return to the way of life they left to fight for the preservation of America and its freedom. There are no homes, no decent jobs for the majority of returned veterans. Grand promises of assistance and preferential consideration have been almost completely forgotten by those who made the promises—but the veteran has not forgotten. Shall we look to the new crop of millionaires created by World War II to rehabilitate them or shall we do this job ourselves?

My friends, our enemies are organized. They know neither race, color, nor creed. They are interested in money and profits and in ruling you. To them the word "democracy" is a joke. To them a Republican or a Democrat or a Socialist is all right if he plays their game. They know neither East, West, North, nor South, except to array one against the other.

They have proven that party affiliations mean nothing to them. You, by voting for non-partisan candidates for school boards, township officers, mayors, and governors, have proven that you have the power now to go one step further and vote men into the offices of President and Vice President on a nonpartisan basis, through the primary system and popular vote.

ORGANIZE YOUR VOTING PRECINCT

It is to rally you to that kind of fight that I address you. Alone, one of you suffering from injustices can do little. United, you can rule America as the Constitution intended the people should rule. The way to do that is by the organization of yourselves. Adopt the slogan "Every man a politician," and organize your voting precinct.

THIS IS HOW

On a day chosen we will ask you leaders in every precinct in America to call a meeting of the people at your home. People of all political faiths, Republicans Democrats, and all others. Let no party lines divide you. There, delegates will be chosen who will meet a week later that the county or parish courthouse. There, delegates will be selected to meet at a State convention, and there delegates will be chosen to meet at a national convention. In no other way can the people, whom our political enemies are attempting to divide and array one against the other, better work out their problems, adopt their own platform, select their own candidates, and emerge unitedly pledged to fight for that platform and for those candidates.

If you Americans pledged yourselves to enter this fight, we would start with a strong nucleus of votes. By secret vote at the national convention of your elected delegates they may select some great labor or farm leader or businessman who today has not even been mentioned, but when they choose one man for President and another for Vice President, you can definitely depend upon the fact that it is your convention, made up of your friends, who are selecting these candidates whom you are pledged to support, and not the parasites who have grown fat and wealthy and powerful through the selection of their candidates to office.

ENLIST, ENLIST

This fight can be successful only if enough of the people enlist in it. This fight will not even get started unless enough of you show that you are determined to take control and organize. If enough of you respond by signing the pledge herein contained, we will go on to a glorious victory. You are not organizing a new party.

You are simply calling a convention in an endeavor to have the people take control of one of the parties now existing. But if you find that the politicians are controlling the present political parties, and that you cannot nominate a liberal friend of the people in one of these party conventions, then the national convention, made up, as I have before said, of your own delegates, representing you, will decide the course to take and which of the parties to support and you can dominate that party which you choose for you have the power because you have the votes.

EXPLOITATION OF THE MANY

If you will take up this battle, America at last will have one political group fighting for America first. You who gave your sons and daughters in the last World War, and not the politicians, will say whether this world is going to continue to be a place of exploitation for the benefit of the few at the expense of the many, you and not the politicans will say where there is to be a continuation of discrimination because of race, color, or creed.

ILL-CLAD, ILL-HOUSED, ILL-NOURISHED

Already, although the peace treaties are not yet signed formally ending the last war, we see an attempt to tie this country into commitments which can conceivably send your boys into another shooting war in the very near future. We are witnesses to the fact that America today is the bread basket for a great part of the world. We are attempting to feed and clothe and arm Europe, the Asiatic countries, as well as the nations comprising the South American hemisphere. We see this despite the fact that your taxes remain the same as during the costly days of the recent war, although we all know that wartime taxes on big business were reduced months ago. We see this although one-third of our own people are still undernourished and ill-clad, and ill-housed. We have seen our Government for decades making a ghastly failure at ruling little Puerto Rico, and yet some wish to have us help rule the world. I say that you and not groups of internationally minded should decide.

YOU WILL DECIDE

You, and not the politicians, will decide whether patriotic lovers of America shall run this country, or whether it shall be governed by a horde of bureaucrats, none of whom you elected, and most of whom are seemingly more interested in how much of the taxpayers money and property they can give away to other countries rather than in America. You will never sell America short. To you America will always be first. You and not the politicians will be the political force that will unite the farmer, the laborer, the returned soldier, the small businessman, the miner, the factory worker, and all other patriots into a relentless battle against monopoly, greed, cunning, wicked, cruel avarice, and un-Christian prejudice. Never forget. You have the votes if you will but use them collectively.

YOUR PLEDGE

The pledge we ask you to sign is as follows:

"PLEDGE

"I do hereby promise at a date to be selected by the national committee to call together at my home on the day specified, patriotic men and women who, regardless of race, color, and creed, will pledge themselves to fight the battle of the people.

"Name _____
(Print name)

"Address _____
(Print address)

_____
(Signature)

"Mail to Senator LANGER today."

Sign this pledge and mail it to me, Senator WILLIAM LANGER, Washington, D. C., as temporary chairman, together with the names of five of your friends, and if enough of you will do this you will begin one of the most effective battles for the common man ever begun in any nation on this earth. You, if you believe in America's future, sign this pledge that you will organize your precinct immediately, and mail it to me today.

An Un-American Iron Curtain

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. KEM. Mr. President, last night I delivered an address over the broadcasting facilities of the National Broadcasting Co. on the subject of the business now pending before the Senate, which is the motion of the junior Senator from Nebraska [Mr. WHERRY] to proceed to the consideration of Senate Resolution 150, which is a resolution to discharge the Committee on the Judiciary from further consideration of Senate Resolution 116. As the President pro tempore will recall, this has been the pending business in the Senate since July 17, but it has been impossible to secure action on the motion.

The subject of my address was An Un-American Iron Curtain, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN UN-AMERICAN IRON CURTAIN

At the outset, let us go back for some local political history.

For years Kansas City, Mo., has been disgraced by one of the most ruthless and corrupt political machines that has ever besmirched an American city. In an election in the year 1936, the returns were amazingly lopsided in favor of the candidates sponsored by the Pendergast machine. Maurice Milligan, a courageous and incorruptible United States District Attorney, instituted an investigation with the unrestricted assistance of the FBI. Of course, no help could be expected, and none was forthcoming, from the Pendergast-controlled local law-enforcement agencies. Let it be said to the credit of

the late President Franklin D. Roosevelt that in spite of the support he received from the Pendergast machine all attempts by interested politicians to secure his intervention in their behalf were of no avail. As a result of the crusade of Mr. Milligan and his assistants, 259 persons were indicted and convicted of illegal conduct.

Now let us come to the year 1946, 10 years later. Tom Pendergast was dead. Jim Pendergast, his nephew and protege, had picked up the fallen reins of power, and quietly bided his time to drive the machine back into full control of governmental affairs in Kansas City. The 259 persons who were sentenced to the penitentiary after the 1936 election had served their terms and many had received Presidential pardon. Thanks to the efforts of Mr. Truman, Maurice Milligan had been replaced as District Attorney by Sam Wear, long recognized as an ally of the Pendergast machine.

AND THEN CAME THE PURGE

Roger C. Slaughter, the member of Congress from the Fifth Congressional District of Missouri, incurred the displeasure of President Truman because, as a Member of Congress he had opposed some of the measures favored by the President. He had committed the unpardonable sin of thinking for himself. In July, 1946, President Truman called Jim Pendergast to Washington and you may recall he was an overnight guest at the White House. While there, Pendergast received his instructions from the President to oppose the nomination of Roger Slaughter and to support Enos Axtel. President Truman is a dues-paying member of the Pendergast organization, and after he became President he sent his dues by check and wrote Jim Pendergast, "I hope the outfit is still going good." I do not hesitate to call attention to his membership, because the President himself has on several occasions referred to it with pride and satisfaction. Even though Pendergast had previously announced his support of Slaughter, he returned to Kansas City and prepared to carry out the order of the President.

In recent years there have been other attempts by a President to purge Members of Congress. But never has a President resorted solely to a political machine to carry out his purge. Other Presidents have had the courage to go directly to the people, but Mr. Truman called for the help of a corrupt political machine, notorious for its ability to produce results.

The President, from personal experience, knew the effectiveness of the Pendergast machine. In 1934, Mr. Truman, then a candidate for the Democratic nomination to the Senate, received a plurality of less than 41,000 votes in the entire State of Missouri. Yet in only four Pendergast wards in Kansas City he was given a reported plurality in excess of 50,000 votes. In those same four Pendergast wards, Mr. Truman's opponent, the late Representative Jack Cochran, one of the most popular men ever to run for public office in Missouri, was credited by the Pendergast vote-counters with receiving only 160 votes.

In 1946, the Pendergast machine again delivered according to plan. Enos Axtell was shown on the reported returns to have been nominated for Democratic candidate for Congress. Shocking anti-Slaughter majorities were returned from the Pendergast precincts, such as 80 votes for Axtell and none for Slaughter, and 145 votes for Axtell and 1 for Slaughter. This was too much even for the people of Kansas City. In the November election, Enos Axtell was defeated by his Republican opponent in a district long regarded as safe for the Democrat candidate.

CLARK RECEIVED REQUESTS FOR INVESTIGATION

What I have related is shocking enough, but what has happened since is even worse. The chief law-enforcing agent of the United States for many months attempted to protect the Pendergast mob from criminal prosecution. Following the primary election, Attorney General Tom Clark received requests from the Kansas City board of election commissioners and the city council of Kansas City that an investigation be made. The Kansas City Star, an independent and crusading newspaper, conducted a thorough and vigorous investigation at its own expense, and uncovered astounding evidence of fraud, corruption, and ghost-voting. All this revealing material was made available to Attorney General Clark. The House of Representatives Special Committee on Campaign Expenditures also made an investigation and turned its evidence over to the Attorney General.

THE HANDS OF THE FBI WERE TIED

On October 11, 1946, the Attorney General directed the FBI to make a preliminary investigation, but in doing so he specifically limited and restricted the FBI so that it could interrogate only the following two classes of persons:

First. Members of the Kansas City election board.

Second. Employees of the Kansas City Star.

These persons were known not to be witnesses of illegal acts and could in the nature of things have only hearsay information. The FBI operates under the direction and supervision of the Attorney General and in complying with the Attorney General's instructions only six witnesses were interviewed. On January 6, 1947, the Attorney General closed his files and instructed the FBI to make no further investigation, for the reason, as he stated, that he had no evidence of Federal crime.

In January of this year I wrote Attorney General Clark and requested a detailed report of what he had done and expected to do to bring to justice those guilty of Federal crime in connection with the election. The Attorney General replied in one letter that the FBI had conducted a lengthy and detailed investigation and in another letter that the FBI had made a full investigation. The replies of the Attorney General were a misrepresentation of known facts, because the investigation by the FBI, in accordance with the instructions received, was limited and restricted to the interview of witnesses who could have only hearsay information.

STATE GRAND JURY

After the Attorney General closed his files a State grand jury was impaneled. This State grand jury returned 81 indictments against 71 individuals. In its investigation it found wrongful, illegal, and wholesale marking of ballots, vote buying, and bribery, and that ballots were cast in large numbers by impersonators. A recount by the State grand jury of some of the ballots revealed miscounts of shocking proportions, and in every case where there was a sizable miscount it was in favor of the candidates backed by the Pendergast machine On May 27, the grand jury made its final report, in which it stated that it believed that Roger Slaughter had been deprived of the nomination for Congress by a fraudulent miscount of votes and by other types of fraud, and strongly urged the United States Department of Justice and the FBI to enter the investigation.

THE BALLOTS ARE STOLEN

Less than 24 hours after the grand jury report was made public, and less than 12 hours before Attorney General Clark was to appear before a Senate subcommittee to explain why he tied the hands of the FBI, the vaults of the election board were blown open with dynamite and the ballots from 32 of the worst precincts were stolen. Those ballots have not been recovered, and there have been no arrests.

THE ATTORNEY GENERAL IS GUILTY OF DERELICTION OF DUTY

Attorney General Clark testified that no evidence of a Federal crime could be found in the material furnished him. This is a shocking statement because since then a Federal grand jury has returned indictments against five persons. I have previously stated it and now repeat, that until Tom Clark was forced into reluctant action by the Senate investigation, he was doing everything possible to whitewash this sordid affair.

The President recently asked for, and Congress authorized, the expenditure of $400,000,000 of the taxpayer's money to guarantee free elections in Greece and Turkey. Is it now out of order to ask Mr. Truman what he intends to do to guarantee free elections in his own community?

For over a week, the able and determined Republican leadership in the Senate has tried to have the resolution calling for a full investigation of the inaction of the Attorney General brought to a vote in the Senate. The Democrats immediately came to the Administration's rescue with a filibuster. The Republicans fought desperately all last night, but the rules of the Senate made it impossible to prevent a small clique from thwarting the people's will as shown by a majority in the Senate.

The vital issues are clean elections and fair and impartial enforcement of the criminal laws without regard to political advantage. If the Attorney General is innocent of the charges made against him and has nothing to hide, he is entitled to, and no fair-minded man will deny him, a triumphant vindication as the result of a complete investigation. I challenge the Truman administration to raise this un-American iron curtain and let the people know the facts.

Immigration Policy

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent, able, and thought-provoking article on why we must modernize our immigration policy by Mr. Stanley High.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY WE MUST MODERNIZE OUR IMMIGRATION POLICY

(By Stanley High)

In justice to ourselves, in fairness to our increasing immigrants, the United States urgently needs a new immigration policy to be based on three common-sense principles:

First. The number of immigrants should be determined by, and periodically adjusted to, our economic needs.

Second. Immigrants should be selected individually for skills and capacities that match our requirements.

Third. We should require that immigrants be distributed geographically and occupationally in conformity with our needs.

Until that is our policy, the growing antagonism toward all immigrants is not likely to abate; efforts to furnish haven for more of Europe's refugees will probably continue to be blocked; many of the advantages which

should accrue to America from its rising immigration stream will continue to be dissipated.

The number of legal immigrants entering the United States for permanent residence is now running at the rate of about 130,000 a year and growing. We are receiving seven times the number of the early 1930's. Many more are entering illegally, by forged documents, border jumping, as ship deserters. Last year the immigration authorities actually apprehended more than 150,000 such illegal entrants—twice as many as in the previous year.

Back of the increasing thousands who are finding refuge and opportunity in the United States are millions more—14,000,000 from Italy alone, says an Associated Press dispatch to the New York Times—who would come here if they could In most European countries the waiting lists for a place among the annual quotas are full from 2 to 10 years ahead. Of the 850,000 homeless victims of the war in displaced-persons camps in Europe, a vast majority want to come to the United States. More than 200,000 Poles from our occupation zone have already applied. Enough people in Greece want to come to fill the quota until 1997.

For determining which among these millions we will admit, our present immigration laws—in striking contrast to those of every other important immigration-receiving country—permit scarcely any selectivity at all. The law enacted in 1924 fixes the annual total of quota immigration at 154,000. It fixes the total which annually can come from each country. But it is selective only in such elementary matters as illiteracy, criminal records, confessed leanings toward violent revolution, and outright pauperism. Aside from contagious disease, there is at present no examination adequate to determine an immigrant's physical fitness as a prospective American. Such insurance should be a minimum requirement.

In regard to the immigrant's ability to support himself, he has merely to satisfy the consul, sometimes with faked affidavits, that he will not become a public charge. He is not required to have a job in prospect or a place of residence. The immigrant's skills and adaptability—or his lack of them—in no wise affect his eligibility. As to whether or not the immigrant believes in the violent overthrow of our institutions, the American consul is generally obliged to take his word for it. It is largely a matter of first come, first served.

This lack of selectivity in large measure accounts for the antagonisms which have arisen against refugees in the United States and against proposals to admit more. Up to this year, from both the Nazi and the Communist terrors, we admitted 300,000 refugees—many times the number admitted by any other nation. About 1,600 more are still coming in each month. The cost of their transportation is sometimes borne by themselves, but more often by individuals and organizations in the United States.

To find a permanent solution for the tragic and worsening problem of displaced persons is an inescapable international responsibility—the most pressing moral problem left by the war. Last January, President Truman addressed an earnest plea to Congress to authorize the United States to do its full part, within the framework of our existing immigration laws. Many Members of Congress, who earnestly want to succor war victims, hesitate to do so because our immigration laws permit so little selectivity. In the best interest of both the United States and the refugees, say these Members of Congress, we should take not only our numerical proportion of the 850,000 but also our share of those whose skills and adaptabilities make them likely Americans. There is a great shortage here, for example, of farm hands and domestics. Under our present laws no such selection can be made. Out of 108,721 immigrants admitted last year, the total of farmers and farm laborers was only 1,136. There were only 2,464 domestics—a 2-percent result.

Nor is there any way whereby those who do come can be directed into areas where their talents can be most usefully employed. Certain sections of the United States are in dire need of doctors. In some States there is only one doctor for every 1,500 people, in some counties only one for every 10,000. Between 1933 and 1944 we admitted more than 5,000 refugee doctors. Most of these settled where they were least needed. Fifty-five percent of them remained in New York State, which in 1940 had one doctor to every 597 persons—more than any other State in the Union.

According to the report made in Germany last year by George Meader, chief counsel for the Senate Committee to Investigate the National Defense Program, there are, among the remaining displaced persons, a substantial number of undesirables. "These persons," Mr. Meader reported, "do not desire to work, but expect to be cared for, and complain when things are not as well done as they think they should be. It is doubtful that any country would desire these people as immigrants." Mr. Meader's conclusions have been supported by other investigators. Under the present law our numerical share of the remaining refugees is almost certain to include a disproportionately large number of these undesirables.

That prospect, unfortunate both for America and for the immigrants who will suffer from consequent antagonisms, is made more probable by the fact that other immigration-receiving nations propose to accept none but the more desirable.

Despite Great Britain's acute shortage of manpower, the basic British immigration policy, stated in March 1946, is that "an alien may be given leave to land only if he proposes to enter the employment of a particular employer and produces a permit in writing for his engagement issued to that employer by the Minister of Labor."

Since 1931 Canada—admittedly in need of increased population—has had its doors virtually barred against all save British and American immigration. Exception was made at the close of the war to admit 3,000 Polish war veterans, hand-picked by special examiners sent to Europe for that purpose. In addition to the usual requirements, it was specified that each applicant be unmarried and willing to work as a farm hand for 2 years at $45 a month. On reaching Canada he is directed to a farm job. For 2 years he remains on probation. If at the end of that time he can against pass muster, he has the right to remain permanently.

The Canadian Government recently announced its intention to accept an unspecified number of refugees. The number will be determined by a survey now under way to find out how many refugee openings are in prospect in various Canadian industries and occupations. When that study is complete selection officers will go to Europe to choose specific refugees for specific occupations in specific places.

Australia and New Zealand are proceeding with equal caution. Argentina plans to admit at least 50,000 immigrants each year for the next 5 years. But they will be selected to meet Argentina's need for farmers, fishermen, and industrial technicians. They will be sent, on arrival, to specific jobs which they will be required to keep for 2 years.

Brazil's planned immigration, which calls for the admission of 35,000 immigrants this year, is specifically aimed "to promote the opening up of the country." Eighty percent of the immigrants must be farmers and farm workers. The government will direct them to designated farming areas. Each immigrant must remain in the business of farming for at least 4 years.

Because of the emotions involved and the pressures invariably unloosed, Members of Congress regard immigration legislation as an explosive issue to be avoided whenever possible. Last year, however, the House of Representatives developed sufficient concern to authorize its Immigration Committee to make a study of the problem—the first study of its kind in more than 20 years.

After holding hearings in eight cities and collecting 1,500 pages of printed testimony, the committee concluded that our laws are in general need of overhauling. But it prudently recommended that specific measures to overhaul them be postponed until a committee of experts makes a further study. That committee, to date, has not been authorized.

Members of Congress in the present session have dropped some 35 immigration bills into the legislative hopper. One would admit close to a million refugees. Another would admit no one so long as the number of unemployed persons in the United States is 100 or more. No bill in Congress goes to the root of the problem and offers an immigration policy in which immigrants will be selected on the basis of our requirements and absorptive capacities.

Early in May, in outlining Canada's post-war immigration policy, Prime Minister King declared: "I wish to make it quite clear that Canada is perfectly within her rights in selecting persons whom we regard as desirable future citizens. It is not a fundamental human right of any alien to enter Canada. It is a privilege."

We are in need of legislators who, for our own and our immigrants' good, can declare such a principle for America and undertake to write it into law.

Democratic Folly

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Democratic Folly," from this morning's New York Herald Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEMOCRATIC FOLLY

The record of the Republican Party in Congress has its weak spots as well as its solid achievements in execution of its election pledges. None of its mistakes, however, can compare with the fantastic folly of the Democrats in blocking, by one subterfuge after another, an investigation of the Department of Justice's relation to the Kansas City voting frauds of 1946.

The charges which have been on the floor of the Senate are not pleasant ones. Senator KEM, one of the two Republicans representing the State of Missouri in the upper Chamber, asserted that the Attorney General "tied the hands of the Federal Bureau of Investigation and whitewashed the whole incident." The prima facie evidences of fraud in the election are strong. When a grand jury, called for a recount, thugs broke into a steel vault in the Jackson County Courthouse and carried away incriminating ballots, records, poll books, and toll sheets of the August 1946

Democratic primary. President Truman was at the time staying at the Hotel Muehlebach, a few blocks away. The best comment he could find to make was that the case should be "carried through to its logical conclusion."

If the Democrats wanted to plead guilty in advance of trial, they could hardly do better than use the tactics of suppression which they have done. All they have accomplished in a parliamentary sense is to postpone action until 1948. For the country and Congress will insist that such a gross scandal, affecting the integrity of the Congress itself, cannot be brushed into a corner. It must and it will be investigated to the limit, let the guilt fall where it may.

The New Day and a New Way

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. THOMAS of Utah. Mr. President, while we were in Switzerland, Mrs. Thomas and I were guests of Dr. Frank N. D. Buchman, at Caux. On the 17th of July, Dr. Buchman delivered an address to the representatives of many countries who were at Caux. Because of its universal interest, I ask unanimous consent to have the address printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Caux is the answer to crisis. All the world wants an answer. We have reached the moment when, unless we find an answer and bring it quickly to the world, not just one nation but all nations will be overwhelmed. Too long we have breathed an atmosphere of problems. We move from conference to conference but give up hope of a fundamental solution. We are cynical of success yet we have become slaves of our defeats personally and nationally.

Nations desire the fruits of an answer without having the answer. We want production, prosperity, world organization, a united Europe, and a new national life but we do not go to the root of the matter. You cannot continue to cry crisis without providing an adequate answer. The habit of crisis breeds the habit of apathy. We must lift people to a new level, out of the fogs of fear and the bogs of bitterness where today humanity founders.

Nations fail because they try desperately to combat moral apathy with economic plans. Economic break-down walks as a black specter through the heart of every statesman and citizen. Yet material crisis may obscure the real crisis from us, for people do not recognize material break-down as the moral breakdown that underlies it and so they do not know how to cure it. Until we deal with human nature thoroughly and drastically on a national scale, nations must still follow their historic road to violence and destruction. The problem is not just an iron curtain which separates nation from nation, but steely selfishness which separates man from man, and all men from the government of God. When men listen to God and obey, steel and iron melt away.

A generation ago a group of men gripped by a materialist ideology decided to capture the world with it. They gave their lives to that task. For 25 years they have worked every hour, sleeping, waking, ceaselessly, skillfully, ruthlessly, on a world front. Suddenly statesmen of democratic nations have awakened and they rub their eyes as they see what is happening, a world force of materialism has penetrated every nation, infiltrated their schools and industries, invaded their offices and government departments, influenced their families and colleagues, even themselves. At last they realize the imminence of crisis. They perceive the colossal progress of organized materialism in its march toward world chaos and control.

"Why," they ask, "are we in this situation? How did it come about?" The reason is simple, while many slept and others busied themselves with their own affairs, materialists have been working out their revolution with philosophy, passion and plan. What is the answer? A generation ago the force of moral rearmament began fighting too on a world front. It has been answering a plan with a plan, an idea with an idea, militant godless materialism with a militant inspired ideology for democracy. The idea caught hold. It remade men and infiltrated nation after nation. Now it girdles the globe.

Today at this MRA assembly at Caux we see this force in action with an answer available for service. At a time when statesmen realize the lateness of the hour it freely offers the fruit of 25 years of toil. It is a force in the war of ideas with training and experience which under God can equip statesmen and ordinary men with an ideology adequate to remake nations now. This new message goes out from Caux to a stricken world. An answer has been found. It has been given legs and is on the march. Here at Caux we are reaching the end of an age of crisis and pioneering an era of cure.

Take a great world problem today: The production of coal. Test this answer. Britain must produce more coal or, as Cabinet Ministers say, the midnight hour will strike for her. This week the coal industry announces that the output of coal nationally is considerably short of the target set by the Government. But where miners have been trained at Caux and in coal fields where the MRA drama, The Forgotten Factor, has been shown there is a different picture. In one mine the 6-day target was reached in 4½ days. In another the target was passed so often that miners asked for the target to be raised. Absenteeism, too, was affected. Reports from one area say that absenteeism has dropped in 12 months from 20 percent to 3 percent. Paper plans will never raise production. Only new men working together in a new spirit with the fire of an ideology will raise production, build teamwork springing from happy homes, and set nations on the path to recovery.

Test the answer again. A great Indian labor leader was with me at Caux last week end. He told of two problems that dogged India, racial bitterness and class bitterness. We saw no solution. After one day he told me he had seen the answer. He says, "Moral rearmament is the answer, because moral apathy is the problem. I have seen here a way of life without tragedy. As I make this way my own life I can be effective, I can make others effective. This is our chance. One of us can make many. Thousands can make millions. The world can be saved from tragedy." His words are a key to the statesmanship that can save the world. He shows us where to begin because MRA is for everyone everywhere. Human nature can be changed. That is the fruit of the answer. World history can be changed. That is the destiny of our age.

Let's be honest and face facts. A new conference is no answer to a false philosophy. A new theory is no answer to a militant ideology. Plans fail for lack of inspired people to work them. Yet we multiply plans. Caux produces inspired people who will make plans work.

A statesman came to Caux, the president of the board of trade of his nation. For years his life has been governed by a hatred of the British so powerful he had sworn never to speak English again. He was involved in incidents which brought his country to a crisis that in his words could very easily have led to civil war. He spoke English as he told us, "I have experienced myself how that hatred which at times used to flash to white heat can be removed in an instant through my willingness, though I did not know or believe in God, to learn his miracle-working power." He learned the secret that honest apology leads to honest peace. Civil war was averted. Change in this statesman and the guidance of God turned him from being a divisive element in the nation to a pioneer of teamwork and taught him to live effectively for other races as well as his own.

Change of heart. Inspired statesmanship. The answer to hate and division. Is that the answer we are all seeking? MRA offers the world and the statesmen of the world a force trained and on the march that has the answer to individual and national selfishness. It is a chance for everyone everywhere to step today into the fresh dimension of a new age. It is not theory but a way of life tested and tried in every circumstance. It is a force that has the power to save and re-create a society on the brink of collapse. On his return from the Antarctic, Admiral Byrd summed up his own conviction about MRA, "I want to say with all the emphasis at my command that it gives you the chance you have been looking for to go into action to save civilization." Men born again are bringing renaissance to nations. Industry with this force of MRA at its heart will produce enough for the needs of all. Homes with this force in everyday life will secure the next generation from chaos. Armies with this force will give new standards of moral training to their nations. Cabinets and diplomats with this force will be totally effective for they will have the power to turn their enemies into friends. Europe will arise from sleep and the defeat of apathy and disillusionment. This is the only possible hope for world reconstruction. "Men must be governed by God or they will be ruled by tyrants," said that great American, Willian Penn.

This is the new day and a new way.

Railroad Reorganization

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. HAWKES. Mr. President, in view of the fact that the pressure on me, urging my support of S. 249, as amended by the Senator from Kansas [Mr. REED] and the Senator from Pennsylvania [Mr. MYERS] has been terrific, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD, statements sent out by Henry W. Harrison, chairman, special stockholders committee, National Conference of Railroad Investors, together with a form by which contributions may be made for the purpose of carrying on the efforts of this group of lobbyists.

I do not question the right of these people to urge action by Members of

Congress, and included in these statements is one by Mr. Harrison, giving the names of those who should be contacted. While this may be perfectly proper, it illustrates the pressure exerted by the lobby operating in behalf of those who have secured the stock at almost nothing to get the comparatively few who have held their stock through the years to join in the effort to undo the work of reorganization under the bankruptcy law over the past 12 or 14 years in the courts.

In my opinion, the sponsors of this move desire to control railroads under their new plan of reorganization. To illustrate, I had a letter from a very small stockholder in which she stated:

I have been requested to write you this letter but I do not understand what it is all about.

Her letter to me was the result of these communications.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

SPECIAL STOCKHOLDERS COMMITTEE,
NATIONAL CONFERENCE OF R. R. INVESTORS,
New York, N. Y., July 9, 1947.

FELLOW ROCK ISLAND STOCKHOLDER: You will be glad to know that there is an excellent chance of passing a reorganization bill at this session of Congress, which will not only protect our stocks from being wiped out but will, in addition, increase the value of their equity.

We invite your careful consideration to the enclosed progress report. We wish to emphasize the following points:

1. The general provisions of the present bill are more favorable to stockholders than the bill passed a year ago but vetoed by the President.

2. The provision for reducing interest on the old outstanding bonds during the 12 or more years these roads have been in bankruptcy will greatly increase the stockholders' equity in these properties.

3. We are confident the President will sign the bill if it is passed by Congress.

4. We feel sure Congress will pass the bill if every stockholder does his full part in the way of using his personal influence with his Senators and Representatives, and if he contributes his pro rata share toward expenses so that we can continue our work during the critical weeks ahead.

Accordingly, if you have not sold your stock, we are counting on your support, and trust that we may hear from you by return mail.

Sincerely yours,
HARRY W. HARRISON,
Chairman, Special Stockholders Committee.

HARRY W. HARRISON,
Chairman,
New York, N. Y.:

I enclose check for ------ as my subscription toward defraying expenses connected with legislation which will protect my railroad stock in reorganization. It is understood that the funds shall be used exclusively for this purpose and any unused portion shall be returned.

I hold ------ shares of stock in railroads now in reorganization and my subscription is computed as follows:

------ shares at 5 cents per share, $------
Plus flat service fee, $1.
Check enclosed for total of $------.
Name----------
Address----------

Checks should be made payable to Harry W. Harrison, chairman, and mailed to suite 1110, 116 Nassau Street, New York, N. Y.

Senator ROBERT A. TAFT, chairman of the Senate committee which decides on what bills may be considered at this session of Congress, has stated that he doubts whether the Reed railroad reorganization bill can be brought up for vote on the floor of the Senate before Congress adjourns. This would be a calamity because the New Haven, Missouri Pacific, and Rock Island reorganizations probably will be completed, and their stockholders wiped out, before Congress reconvenes in January 1948. Therefore, if the Reed bill is not passed at this session of Congress it will, in all probability, be too late for Congress to enact legislation which will protect our stocks.

However, Senator TAFT stated that the door is not closed, but implied that the members of his committee believe there is not sufficient public interest in this bill to entitle it to the priority necessary for passage at this time.

The members of the committee are Senators ROBERT A. TAFT, chairman, of Ohio; C. WAYLAND BROOKS, of Illinois; GUY CORDON, of Oregon; HOMER FERGUSON, of Michigan; ALBERT W. HAWKES, of New Jersey; LEVERETT SALTONSTALL, of Massachusetts; EUGENE D. MILLIKIN, of Colorado; KENNETH S. WHERRY, of Nebraska; and WALLACE H. WHITE, JR., of Maine.

Please immediately telegraph or write to each of these Senators and explain to them that only through passage of the Reed railroad reorganization bill at this session of Congress can your stock investment be protected. Tell them what the loss of your stock investment would mean to you and your family. Tell them that the Senate Interstate and Foreign Commerce Committee has reported the bill favorably, and it is now ready for vote on the floor of the Senate. Urge them to have the bill brought up for action on the floor of the Senate at the earliest possible date—and, in any case, before this session of Congress adjourns.

Also urge your own Senators and Representatives to see the members of Senator TAFT's committee and urge their prompt and favorable action.

HARRY W. HARRISON,
Chairman, Special Stockholders Committee.

Mr. Truman's Homesickness

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I am sure we were all impressed by the visit of the President of the United States to this Chamber the other day. The Philadelphia Bulletin yesterday published an editorial which I really think should be read by every Member of the Senate. In the closing words of the editorial, the Bulletin had this to say:

That his visit was a spur-of-the-moment affair, without showmanship, is the best testimony to the spirit that motivates the President. Here is evidence of a human touch and an understanding which are still all too rare.

Despite his high place, the man from Missouri is still one with those of us who occasionally long to sit again for a little while at an old and carved school desk.

I ask that the entire editorial be placed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. TRUMAN'S HOMESICKNESS

Of the 11 Senators who have become Presidents of the United States, Harry S. Truman is the first to go back, even for a brief visit, and occupy his old seat.

His return was without formality, but not without nostalgia. The President confessed he was a bit homesick for his old associations: that 10 of the happiest years of his life had been spent in the Senate.

Such a feeling will be understood by millions who enjoy going back to the scenes of happy experiences. Perhaps the reason the other 10 Senator-Presidents didn't return is that they lacked the depth of feeling enjoyed by Mr. Truman.

That his visit was a spur-of-the-moment affair, without showmanship, is the best testimonial to the spirit that motivates the President. Here is evidence of a human touch and an understanding which are all too rare.

Despite his high place, the man from Missouri is still one with those of us who occasionally long to sit again for a little while at an old and carved school desk.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Forty-ninth State" from the Dayton, Ohio, News of July 6, 1947; an editorial entitled "Hawaii's Good Americans," from the Pasadena (Calif.) Star-News of July 1, 1947; an editorial entitled "A New Star for Old Glory?" from the New York Herald Tribune of July 4, 1947; an editorial entitled "Case for Hawaii," from the Dallas (Tex.) News of July 3, 1947; and an editorial entitled "Hawaiian Statehood Bill," from the St. Louis Globe-Democrat of July 3, 1947.

I wish also at this time to express the hope to the chairman of the Committee on Public Lands that very early in the next session hearings will be held on the statehood-for-Hawaii bill.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Dayton (Ohio) News of July 6, 1947]

FORTY-NINTH STATE

Admission of Hawaii to the Union as the forty-ninth State is forecast by the House approval of a bill to that end by a substantial and bipartisan majority. Though the measure may not come to a vote in the Senate before next year, it is supported by Democratic and Republican leaders, as well as by President Truman, and now appears to be on the way to enactment.

The Hawaiian Islands, "the cross roads of the Pacific," were annexed to our Republic 49 years ago, their people heartily assenting,

and in 1900 were given a Territorial government, with a promise of statehood as soon as they should be qualified for it. In the judgment of a congressional committee which has studied the question at first-hand on the islands themselves, that time has come. The survey shows that Hawaii's present population of 519,000 exceeds that of either New Mexico or Arizona when they were admitted as the forty-seventh and forty-eighth States, respectively, in 1912; that it pays the Federal Treasury more taxes than do 14 of the States; and that its expenditures for public education are proportionately much larger than those of many of the States.

One of the opposition arguments in the House debate dwelt on the fact that nearly a third of Hawaii's inhabitants are of Japanese ancestry. The reply was that the vast majority of these Japanese proved loyal to America throughout the war, that they "were given a clean bill of health" by the military authorities and the FBI, and that 7,000 of them entered the armed services. Another opposition argument, that Hawaii is 2,100 miles across the ocean from our nearest mainland, has little weight as against air transport schedules and modern communication facilities. The fact is, Honolulu is nearer to San Francisco than San Francisco is to Washington, D. C. In view of our vital interests and increased responsibilities in the Pacific, Hawaii has an importance greater than ever before.

[From the Pasadena (Calif.) Star-News of July 1, 1947]

HAWAII'S GOOD AMERICANS

Only a few years ago there was strong opposition to every proposal that Hawaii be admitted to the Union. Probably a big majority of the people in the United States were opposed to it, and certainly a majority of Californians were.

It is different today when the news comes that the House of Representatives has voted to make Hawaii a State. Pearl Harbor and what came afterward have changed the attitude of a great many Americans toward the islanders. In spite of the fact that they are a racial mixture with Orental stock predominating, Hawaiians, in the test of war proved themselves as American as the inhabitants of continental United States.

If there had been disloyalty among any racial group in Hawaii the chance to show it was after Pearl Harbor when the United States Navy was crippled, the Japanese probably could have taken Hawaii and the way laid open for the enemy to attack the Pacific coast of the United States.

The FBI found no evidence of disloyalty by any Hawaiian of Japanese blood who was born under the United States flag. As soon as their services would be accepted the young men of the islands, including those of Japanese stock, flocked to the colors and fought gallantly for America.

Americans of Hawaii paid war taxes, bought war bonds and did war work. They were 100 percent in the war for their country the same as the rest of the American people. They are Americans and belong in the Union.

The movement for Hawaiian statehood dates back almost a century. The islands were annexed to the United States in 1898. Hawaii was made a Territory in 1900. Fifteen editions for statehood have been presented to Congress. Twenty-eight bills granting statehood have been introduced in Congress. The President has recommended statehood. The people of Hawaii voted for it in a plebiscite. Hawaii has the population and the resources to justify statehood. Action by the Senate will assure it. And the approach of July 4, Independence Day, is a fitting occasion to grant these Americans self-government.

[From the New York Herald Tribune of July 4, 1947]

A NEW STAR FOR OLD GLORY

The House of Representatives has approved by 196 votes to 133 the bill giving statehood to the Territory of Hawaii. Now the issue is up to the Senate, but a crowded calendar will delay a vote until next year, and it would take a year or so after that for statehood to become a reality. Anyone can understand the aspirations of Hawaiians to be brought integrally into our great Union after 47 years of probationary status. The long wait seems no better characterized than by the islanders' own word for their spirit of leisure—"mahope," which means "tomorrow, let it go until later, there's no sense rushing."

Can the legitimate claims of Hawaii to statehood be much longer denied? Here is a problem to which Americans as a whole have given little thought; 101 Members of the House did not vote the other day, and they might easily have upset the majority of 63 by which the bill got through.

Shall the United States in its great tradition of encouraging self-government among dependent peoples neglect this opportunity to set an example of democracy in the Pacific that might give new strength to democratic elements in Japan, Korea, and China? Mindful on this Fourth of July of its own birth cry, "No taxation without representation," shall this Nation perpetuate that condition in Hawaii, whose people pay Federal taxes but cannot vote for a President, and must accept a federally appointed Governor?

Would not Hawaii, a crucible of racial tolerance, be a fitting addition to a Nation founded on that very principle but still striving to perfect it? Has not the Territory proved its loyalty, demonstrated its economic and social stability? Not one act of sabotage was committeed against the United States by a resident of Hawaii during the war. Its 160,000 persons of Japanese ancestry—all but 35,000 of whom are American citizens—maintained allegiance to our flag; 18,000 of Hawaii's Japanese-American sons fought in the war with distinction.

Or will we set a bad precedent by extending the United States beyond its continental limits? Will the statehood clamor now increase from Puerto Rico and Alaska? Have we something to fear from Japanese-American Senators and Representatives coming to Washington, if they are so elected? Is Hawaii's polyglot populations really unassimilable into the Union? Or have we forgotten so soon our own roots in other lands? These are grave questions, honest doubts. The Nation must soon decide.

[From the Dallas (Tex.) News of July 3, 1947]

CASE FOR HAWAII

Hawaii's long-cherished ambition of statehood got a big boost from the lower House in its approval Monday. If the Senate of the Eightieth Congress acts favorably, the flag makers can try to solve the difficult problem of placing with geometrical precision 49 stars on the blue field of the corner of Old Glory.

With us, Hawaii should be a case of put up or shut up. Denying all claims to imperial status, we still have retained on Territorial basis a country that merged its independent kingdom voluntarily in the Union 49 years ago. It has suffered for us and fought with us. Simple justice and a sound theory of fair play urge admission now.

The American babyhood of the 20 islands was passed in an era when Americans, flush with the easy victory over Spain's decadent naval power in 1898, spoke of manifest destiny without catching the vision that might have gone along with it. Hawaii furnished a ready example for Pacific hegemony that might have been developed with profit both to ourselves and the thousands of land dots that make up Oceania. Had we viewed Hawaii as a stepping stone to governmental relations with these isolated insular areas, long before this the Pacific might have been developed under the American flag. Japan's hideous dream of expansion by force majeur might never have developed into its costly reality.

Size and population and economic limitations make impractical the maintenance of many thousands of separate political units. On the other hand small islands lend themselves admirably to the development of localized governments resembling municipalities or counties, larger ones like Hawaii to statehood. A benign imperialism might have cultivated the Pacific toward ideal government, guaranteeing the civil rights of its populations and furnishing trade advantageous to all concerned. It is far too late to realize now on that dream. Hawaii, State or Territory, is not a gateway but an outpost.

[From the St. Louis Globe-Democrat of July 3, 1947]

HAWAIIAN STATEHOOD BILL

The Territory of Hawaii has long worked for statehood. Back in the nineties it repeatedly sought annexation, finally becoming a part of the United States in 1900. Since then it has made consistent progress in agriculture, its educational system, its territorial government and institutions. It has merited the right to be included among the sovereign States of the Union.

Often considered only as the land of the lei, aloha, and grass skirts, Hawaii is actually a thriving country. Its somewhat conglomerate population, largely of Japanese descent, proved itself during the war a most loyal part of the American family. It has a major sugar industry and is a strategic outpost in the Pacific.

Not only in recognition of Hawaii's development and United States fealty does it seem entitled to statehood. It would be hard-headed statesmanship to link Hawaii even more intimately with Washington. Granting it full rights not only will bind it closer but afford practical evidence that the United States practices the creed of self-determination and equal government for all members of its family.

The measure before Congress is not the first petition for Hawaiian statehood. But it is the first ever to have come to a vote in either Chamber. The House has approved the bill. It now goes to the Senate, where it will probably not get to ballot before 1948. We believe the Senate should make Hawaii the forty-ninth star in the American flag.

Peacetime Military Training

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MARTIN. Mr. President, at the next session of Congress we shall very likely be studying the question of universal military training. I ask unanimous consent to have printed in the RECORD the last Gallup poll on the subject.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

THE GALLUP POLL—SAMPLE SURVEY FINDS NATION 4 TO 1 FOR PEACETIME TRAINING

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., July 24.—As Congress prepares to adjourn, two major pieces of

business that have wide public support remain unfinished.

One is legislation to raise minimum wages. The other is the peacetime military training bill.

If the country were to vote today in an official referendum on peacetime military training, the results would be as follows on the basis of the estimated 61,000,000 eligible voters at the time of the last Presidential election: 45,700,000 voters in favor; 11,000,000 voters opposed; 4,300,000 not voting.

That reflects the results of the latest institute survey on military training—an unofficial sampling referendum among the voters in all 48 States. A cross section, scientifically selected to represent all walks of life, was interviewed on the following:

In the future, do you think every physically fit young man (who has not already been in the armed forces) should be required to take military or naval training for 1 year?

The vote:	Percent
Yes	75
No	18
No opinion	7

Experience has shown that sampling referendums such as this are subject to error that rarely exceeds 3 to 4 percentage points.

If a national referendum had been held on the military training issue at any period in the last 4½ years, it would have resulted in a vote something like 2 to 1 in favor. Twelve surveys by the institute since December 1942 have found that only twice has the percentage in favor been as low as 63 percent, with the average around 70 percent.

These poll results form a substantial body of evidence to illustrate the general unreliability of letters to Congressmen as an index of public opinion.

Congressmen and Senators have received many letters opposing military training just as they did in 1940 when the selective service bill was pending. In the summer of 1940, 14 Senators alone received 30,000 letters on the selective service bill. An analysis published in the Public Opinion Quarterly showed that 90 percent of those letters were against the bill, 10 percent in favor—or a ratio of 9 to 1 against selective service.

But when polls were conducted among a scientific cross section of the population by the institute, it was found that 68 percent were in favor of the bill, while 27 percent were opposed and 5 percent had no opinion.

In short, Congress in 1940 was hearing almost entirely from the 27 percent who opposed the bill, and today it is hearing from the 18 percent who oppose peacetime military training.

(The Washington Post poll found, in June of this year, that 76 percent of Washingtonians favored universal military training during peacetime. Only 20 percent of local residents expressed opposition and the remaining 4 percent were undecided.

(In an earlier survey, in November 1945, the Washington Post poll recorded an overwhelming majority of 82 percent of local residents—more than 4 out of every 5—in favor of universal military training. At that time, just after the war's end, 7 percent more Washingtonians approved the plan than did the country as a whole.)

It was also said in 1940 that President Roosevelt would suffer a great loss in the Presidential election of that year because the selective service bill was adopted. Irate mothers were supposed to take it out of the hide of the Democratic Party. But analysis of political trends, as shown in impartial polls, fails to show that adoption of selective service had any material effect on the outcome of the 1940 election.

In today's survey a special question was added in order to be able to single out the men and women in the population who have a son or a brother between the ages of 15 and 20.

It was found that such people are as likely to be in favor of peacetime military training as anybody else, in spite of having a blood relative of draft age or soon to be of draft age. The vote for this group was 77 percent in favor, 19 percent opposed, and 4 percent without opinion.

Preparedness and protection for the future are the chief reasons given by people in favor of the peacetime draft. Next is a belief that a year's military training is "good discipline" for a young man. Third: People say that in the current difficulties with Russia we should take steps to assure ourselves of sufficient military manpower.

REASONS FOR OPPOSITION

Those opposed to peacetime training say that it is not necessary, that we should be able to accumulate a force of sufficient size by enlistment. The second objection raised, the poll finds, is that military training makes for war-mongering and war-mindedness. The third is that because of the atom bomb we no longer need big armies, and the fourth objection is that peacetime training disrupts a young man's educational plans.

One thing the survey brings out is that endorsement of peacetime training is uniformly high in all major population groups. There are no striking differences by age, amount of education, geographical section, sex, or party.

Certain labor-union leaders have opposed the peacetime training bill. But today's survey finds an overwhelming approval of such training among the rank and file of union members questioned in the sample.

The vote by groups follows:

	Yes	No	No opinion
	Percent	Percent	Percent
By age:			
21 to 29	75	19	6
30 to 49	75	18	7
50 and over	74	18	8
By sex:			
Men	74	20	6
Women	76	16	8
By education:			
College	72	23	5
High school	78	17	5
Grade or no school	71	17	12
By party:			
Democrats	76	16	8
Republicans	75	20	5
By section:			
New England and Middle Atlantic	74	18	8
East Central	73	20	7
West Central	72	20	8
South	80	14	6
Far west	73	20	7

Among labor-union members polled, the vote is 75 percent in favor, 19 percent opposed, and 6 percent undecided.

National School-Lunch Program

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the RECORD an outline of the work of the National Congress of Parents and Teachers, consisting of excerpts from reports of State school-lunch chairmen of State congresses, and other data pointing to the need for the program and increased Federal grants.

There being no objection, the outline was ordered to be printed in the RECORD, as follows:

AN OUTLINE OF THE WORK OF THE NATIONAL CONGRESS OF PARENTS AND TEACHERS AND A BREAK-DOWN OF BENEFITS TO THE SEPARATE STATES

NATIONAL SCHOOL-LUNCH PROGRAM—EXCERPTS FROM REPORTS OF STATE SCHOOL-LUNCH CHAIRMEN OF STATE CONGRESSES AND OTHER DATA POINTING UP NEED FOR THE PROGRAM AND INCREASED FEDERAL GRANTS

1. Schools in many States were compelled to discontinue their lunch programs because of insufficient Federal funds to assist in carrying their programs to the end of the school year.

Minnesota reports: "When the April 15 deadline was reached, the State Department of Education was not in a position to know whether additional Federal moneys were to be made available, so 27 percent of the school-lunch programs were discontinued. Unfortunately, the program closed down in most instances were those we particularly wanted to continue because of the nutritional needs of the children. The shutting down of these programs affected approximately 35,000 children, mostly in rural areas."

South Carolina reports: "We were obliged, in March, to close the lunch programs in 150 rural schools due to lack of Federal funds. Because the deficiency funds came too late and because school-lunch workers had already taken other jobs for the summer, they could not open up again for the short period before the close of school. Therefore, South Carolina has had to turn back some of the Federal funds for lunches, even though these funds were desperately needed."

2. In school districts where the program was continued and where it become necessary to increase the prices of the lunches, the number of children who could afford to pay for them was greatly reduced.

North Carolina reports: "Our State school-lunch program was considerably curtailed due to inadequate Federal grant. The majority of the school-lunch projects continued to serve lunches with an increase in cost to pupils. This price increase meant a large reduction in the number of lunches served. The pupils unable to pay at the increased rate were the children most in need of a well-balanced noon meal."

3. As an alternative to increasing the price, some school districts decreased the quality and the quantity of the lunch.

Idaho reports: "The original allocation to the Idaho school-lunch program was exhausted as of March 1. Many schools that continued serving lunches were obliged to decrease the quantity and the quality of the meal to such an extent that children weren't satisfied and spent their money for candy and soft drinks at neighborhood stores."

Oregon reports: "Some few schools ceased to operate lunch programs but, in the main, they continued by increasing the charge made to the child for the lunch and by using other and more devious means of raising funds to meet the deficit. Unquestionably, the quality of meals suffered and many programs closed their operations in the red."

4. A majority of the States during the past year had to deny the benefits of the program to many new communities that wished to enter it because the Federal appropriation was insufficient not only to allow new schools to enter but to carry the program through the school year in communities already participating.

Michigan reports: "Last December an announcement went to all school administrators stating that no more school-lunch programs could be accepted because the Federal grant was insufficient. Many schools have indicated a desire to join the program and a long list of schools is waiting to join up next fall."

Maryland reports: "More than 200 schools made application to join the program last fall, which had to be denied because Federal funds were not adequate to carry the existing program through the entire school year."

5. If the matching feature is changed, State legislatures, municipalities, and school districts whose budgets are predetermined will be unable to meet the new Federal requirements.

New Mexico reports: "If the Federal Government does not allow the receipts for the sales of lunches as matching money, New Mexico will be without a school-lunch program for the next 2 years because the State legislature does not meet again until 1949."

Idaho reports: "It is essential that the ruling that the money received as payment for the meal cannot be used as part of the matching money be eliminated from the appropriation bill, as Idaho matching from other funds would not be adequate until the State can enact legislation to meet the new requirement."

6. Every report that we received from throughout the Nation shows that the program has been of great benefit to the children in the communities where it operates and has been one of the most popular of the federally assisted programs.

Missouri reports: "I wish that you might take up the reports of the lunchrooms and show them to the ones responsible for setting aside this money for the school-lunch program. Not only is there an increase in attendance at school, better scholastic standing, and improvement in social relations, but it is almost uncanny to read the reports on improved health."

New Jersey reports: "We have made tests in certain schools with undernourished children. At the end of 3 months both weight, mental ability, and general health showed great improvement. This proves to us that it is money well spent."

Wyoming reports: "In a recent survey regarding whether or not school-lunch programs can operate another year if Federal funds were cut, results showed that 64 percent would have to close and 36 percent would try to carry on by raising the prices of lunches and allowing no free meals. Naturally, this would cut down on school lunch participation and eliminate many of those children most in need of a balanced meal. Wyoming transports 13,661 children to school by busses. This represents over 25 percent of all school children in the State. Good noon lunches are important to this group of pupils, many of whom travel distances of 25 miles or more."

All the reports received indicate the need for continuing the school-lunch program and for increasing rather than decreasing the Federal grants. During the past year no State has failed to meet the requirements of the National School Lunch Act and the regulations of the Department of Agriculture. Every State had matched more than the dollar for dollar requirement. The State matching the least spent $1.28 against each Federal dollar received; one State spent $10.68 against each Federal dollar.

Information from the Department of Agriculture shows that $3,000,000 of the $6,000,000 deficiency appropriations will not be spent this year because before the money was made available to the States which had exhausted their funds, the school-lunch programs had been forced to close and were not reopened. Therefore, it is imperative that the appropriation of Federal funds for the coming year be large enough to cover the entire school year.

On the basis of figures submitted by the States and tabulated by the Department of Agriculture with the average national matching of $2.18 for each Federal dollar, an appropriation of $133,500,000 is required to carry the program next year. The appropriation of $75,000,000 granted for this past year proved to be inadequate by $23,000,000 for the program existing as of last fall. If this is not increased, the 3,000,000 additional children which the States report are ready to be included in their programs next year will get nothing.

Compiled by Edna P. Cook (Mrs. Stanley G. Cook), chairman, committee on legislation.

TABLE VI.—*Analysis of funds, national school-lunch program, January 1947, as submitted by State educational agencies*

*These States have requested the balance of their allotment for their third quarter grant of funds.

[1] Includes full year's allotment to private schools where handled by PMA State Office.

[2] Includes the direct distribution money in process of transfer ($7,325,000).

[3] Data are for April 1946, the month when total participation was at its peak. (These data include child-care centers.)

National Congress of Parents and Teachers, an organization dedicated to the welfare of children and youth which in the 50 years of its existence has grown to a membership of four and one half million with State congresses in every State in the union. In each State is a school lunch chairman to promote the establishment of school-lunch program—this organization being one of the pioneers in this field.

Background and Work of Senator Malone

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the Engineering News-Record dated January 2, 1947, on the background and work of GEORGE W. MALONE, the junior Senator from Nevada, who is the chairman of the Special National Resources Economic Committee studying the effect of the factors affecting production in this country.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

RANDOM LINES FROM AN EDITOR'S NOTEBOOK, IN WHICH ARE GIVEN SOME HIGH LIGHTS IN THE CAREER OF GEORGE WILSON MALONE WHO, AS THE ONLY CIVIL ENGINEER IN THE UNITED STATES SENATE, OUGHT TO BECOME A NATIONAL ASSET

One of the victors in the several spirited contests for seats in the United States Senate that enlivened the November election was GEORGE WILSON MALONE, Republican, of Nevada.

Of special interest to the engineering profession is the fact that Senator MALONE is a successful civil and hydraulic engineer of long experience. When he takes his seat upon the opening of the Eightieth Congress this week, he will be the only representative of the profession in the upper House. One civil engineer—Representative CARL HINSHAW, of Pasadena, Calif.—now represents the profession as a Member of the House of Representatives.

It seems particularly appropriate that at a time when plans are under way for an almost unprecedented amount of construction for water power, water supply, irrigation, and flood control there should enter the Senate a man with Mr. MALONE'S experience and qualifications, one who has long been active in the development of important engineering projects in the West.

He entered the University of Nevada in 1914 and proved himself to be not only a good student but a good athlete. He became captain of both the baseball and the football teams, and at that time was also the winner of the amateur middleweight boxing championship of the Pacific coast.

When the United States got into the First World War, MALONE promptly enlisted in the Army and in 1918-19 he served as lieutenant in the Field Artillery in the AEF. Later he was in the regimental intelligence office of the Fortieth Division. After the war he was a major in the One Hundred and Fifteenth Engineers, Nevada National Guard.

STATE ENGINEER OF NEVADA

In 1927 he became State engineer of Nevada, and afterward served on many public bodies, including the State public service commission, the Colorado River Commission, State planning board, and the National Committee on Conservation and Administration of the Public Domain. While carrying on his own engineering and consulting practice, he published a report on resources and industrial uses of power in the Boulder Dam area. He was also adviser to the Secretary of the Interior for construction and sale of power, and he was consulting engineer on the Central Valley water project, now under construction in California.

Since 1937 Mr. MALONE has been managing director of the Industrial West Foundation; and he has recently compiled and published an industrial encyclopedia on the Western Economic Empire, including the 11 Western States, Alaska, Hawaii, and the Philippine Islands.

TAKES POSITIVE STAND

During his campaign for election Mr. MALONE, basing his views on his professional background, demanded a positive program of improvements on the fundamental (for the West) issues of water power development and storage, improvement of rangelands, and other matters.

URGES RESOURCES DEVELOPMENT

As to power and industry, he thinks:

"We should immediately install our 82,500-kilowatt generator at Boulder Dam, demand a withdrawal privilege for the same percentage of power to be generated at Davis Dam as we secured from Boulder, and make a thorough investigation of ways and means to deliver low-cost power for mining, agricultural, and domestic users to the northern and central areas of our State.

"Possibilities in this line are tremendous, but plans must be made by men of vision and initiative, and pursued with vigor, if Nevada is to realize any benefits.

"It is time that we directed our best thoughts along the lines of utilizing our vast resources for the benefit of our people and raising our living standards through the creation of additional employment, business opportunities, and taxable wealth to help carry out the necessary tax load."

As a Senator from Nevada, Mr. MALONE will be in a position to aid the implementation of some of these ideas for the benefit of his local constituents. And he will also have the broader responsibility of serving the needs of the whole country. In both cases, his engineering training will stand him in good stead, and in both he can measurably add to the stature and influence of the civil engineering profession.—T. D. M.

Importance of Independent Testing, Research, and Inspection Laboratories

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MARTIN. Mr. President, because of the importance of independent testing, research, and inspection laboratories to the national economy, particularly as applied to small business, I ask unanimous consent, at the request of the American Council of Commercial Laboratories, to have printed in the Appendix a statement issued by that organization, April 15, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Large corporations have been consistently spending large sums of money for research activities such as these over many years because experience has proved it is profitable to do so. But a majority of the smaller firms have been going on without research plans or programs. Of 100,000 industrial and manufacturing companies in the United States, it is estimated only 2,000 have any research facilities of their own. And yet, in the light of modern competition, research can no longer be regarded as a luxury which the small business cannot afford. Indeed, research is an investment—and a mighty profitable one which the small business cannot afford to disregard.

The war has in itself created demands for improved material, and the stimulation of higher wages has created an increased market for the products of all types of business. Competition for these markets will call for greater efficiency on the part of both personnel and product. Research, testing, and rigid inspection will increasingly be demanded of all types of business establishments. And these developments must be tailored to the particular needs of each one.

Nine out of ten employment-producing ideas in this country over a period of many years have originated in small establishments The open path of new ideas and new leadership from bottom to top and back again must be maintained. Without a steady growth of new business and new employers, together with improved efficiency of existing organizations we shall lack adequate job opportunities.

With limited floor space, estimated to be 1,500,000 square feet, independent laboratories offer a special service to small business enterprises. Without these laboratories small business would be deprived of its major research, testing, and inspection assistance. Collectively these laboratories lead directly toward the objectives of independent research, protection for the independent inventor, and encouragement of new processes and materials which make for a more productive small business economy.

The United States leads the world in technological development in large part because the American way of life and our system of government have allowed room for the individual and his unique contributions.

The maintenance of balance within the framework of our social and economic structure is of primary importance to the commercial laboratories which are taxpaying organizations rendering over $10,000,000 in taxes to the Federal Government over the last 10 years. This balance has been upset by the war. Now that we are emerging from a war economy, thorough consideration must be given to definite ways and means whereby independent research may continue to thrive in terms of facilities, equipment, personnel, orders, and free enterprise.

Until a proper adjustment is made, a proportionate share of governmental aid which has been made available for every other segment of our national economy should be available to the commercial laboratories. This, however, is not viewed as an ultimate objective, which might be nothing better than state socialism, but rather as a step toward the maintenance of conditions of private enterprise where men and ideas that are worth while can survive because of their own individual worth.

This situation involves an improved relation of independent laboratories to large business enterprise and to the Government itself, so that neither will be unfairly competitive with independent research. Particular attention must be given to the so-called nonprofit organizations offering research to

individual business firms on a fee basis without regard to the effect of such business arrangements on the taxpaying independent laboratories.

The research findings of tax-free institutions, every field and at every level, no matter how financed, are in the public domain and should not be handed over privately to an individual firm or organization. This point of view is implicit in the now famous Saratoga Springs water case.

Basic research which aims to project the frontiers of knowledge of fundamental character, irrespective of any specific application, is the fountain head of all technological developments. The American Council of Commercial Laboratories is heartily in favor of increased basic research by industrial laboratories, educational institutions, and the Government. Applied research which draws upon basic research for its sense of direction is the workable form of these fundamental principles as developed by industry.

Funds spent for basic research by the Government and educational institutions feed the technological resources of the Nation and make possible an increase of applied research on a commercial basis. Independent scientific laboratories find their greatest field of activities in industrial or applied research testing and inspection.

It is difficult to believe that until a few weeks ago the Government of the United States had never given any direct recognition of the importance of commercial laboratories. The National Resources Committee in its volume, Research—A National Resource, December 1938, devoted a full section, section 6, to research in American universities and colleges but made no study of independent scientific laboratories which paid enough in taxes to finance several such studies.

We, therefore, recommend to the President's Scientific Research Board that:

1. Additional efforts be made to survey and to publicize the scope and importance of this issue.

2. Encouragement be given to independent scientific laboratories to associate together; to survey their needs in terms of equipment, personnel, contract work from all sources; relation to other scientific associations; and to create for themselves a more clearly defined place in our national economy.

3. Practical measures be taken to continue the political, social, and economic conditions which make for private enterprise without which research cannot continue to be independent.

Who Is Walter S. Steele?

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. SABATH. Mr. Speaker, who is this man Walter S. Steele who was given an open forum by the Committee on Un-American Activities for his savage attacks on decent progressive Americans, and his fantastic Hitlerian charges of "5,000,000 Communists" in the United States?

What is this American Coalition of Patriotic, Civic and Fraternal Societies?

Walter Steele is a prosperous businessman, owner of a big printing plant here, and of a magazine he publishes.

Although America has been very kind to him, somewhere along the way his emotions jumped the track.

He became enamored of the Nazi ideals. He swallowed the Goebbels line, hook and sinker. For more years than I can remember he has been engaged in Red baiting, with all that that implies. Many of you receive his magazine. You can recognize his obsession with racism, with religious prejudices, with hatred of labor unions—though his own shop is organized.

FRIENDS OF DEMOCRACY CALLS HIS NUMBER

First of all, Mr. Speaker, I wish to insert a brief sketch of Walter S. Steele prepared and issued by Friends of Democracy only yesterday. It seems to me Steele should be the one investigated.

[Friends of Democracy, Inc. For release Friday, July 25, 1947]

Communism in the United States is strengthened, rather than retarded, when the House Committee on Un-American Activities invites a questionable witness like Walter S. Steele of Washington, D. C., to testify on communism, it was charged today (Friday) in a statement by L. M. Birkhead, founder and national director of Friends of Democracy, Inc., which has been combatting the propaganda of American subversives on both the right and the left for more than 10 years.

According to Birkhead, regarded as America's outstanding authority on political extremists of all shades, Steele, who appeared before the committee on Tuesday, and entered 300 pages of testimony, has a long record of close cooperation with Nazi and pro-Fascist elements here and abroad.

Steele, publisher of a magazine called National Republic, made his appearance before the congressional inquiry group as chairman of the National Security Committee of the American Coalition of Patriotic, Civic, and Fraternal Societies

CALLED "FASCIST" BY ARMY

Birkhead said that the National Republic in 1942 was characterized by United States Army Intelligence as a Fascist organization. The Coalition of Societies, according to Birkhead, has approximately 100 member outfits, ranging from genuinely respectable organizations to out-and-out Fascist fronts. Closely linked to native Fascist groups are member organizations such as Harry Jung's American Vigilance Intelligence Federation, the American Indian Federation, and the American Women Against Communism, he charged. Birkhead said that coalition literature has been distributed widely by many pro-Fascists including George Deatherage, indicted for sedition, and Francis Moran, of the Boston, Mass., Christian Front. John Roy Carlson said in Under Cover, "This literature was frequently, if not always, found in the company of outright German propaganda from World Service (Nazi Propaganda Bureau) as well as the propaganda efforts of the indicted seditionists, such as (Robert) Edmonson, (James) True, (William Dudley) Pelley, (Eugene) Sanctuary, etc."

Birkhead said: "Communist activities in the United States must be watched closely and carefully. However, under no circumstances, must we play into the hands of the Communists by viewing communism and Communists through the distorted, irresponsible eyes of a person like Walter S. Steele, who has a long record of close collaboration with Nazi and pro-Fascist elements here and abroad.

ENDORSED NAZI BOOK

"The House Committee on Un-American Activities should realize that communism is strengthened rather than retarded when a person like Steele, who indiscriminately lumps genuine liberals and progressives in the Communist camp, is permitted to give testimony that has only the effect of confusing the American people."

Birkhead revealed that Steele, together with 15 other Americans, including former Congressman Hamilton Fish, endorsed a Nazi-inspired book, printed in Germany and titled, "Communism in Germany." The foreword, signed by Steele, Fish, and the others, said: "Here is a challenging book. It should be read by every citizen, because it presents the history of the life and death struggle Germany has been waging." It was this book which said: "The total contrast to Jewish-Marxist bolshevism is exclusively represented by German national socialism."

Birkhead asserted that Steele is highly regarded in native pro-Fascist circles and has been lauded often by many of the individuals indicted for sedition by the Federal Government in World War II. Steele, in turn, has defended the indicted individuals, a list which included George Sylvester Viereck, convicted Nazi agent; Ralph Townsend, convicted agent of the Japanese Government; and William Dudley Pelley, serving 15 years for sedition.

"Individuals like Steele are dangerous realities," Birkhead said. "Their outward, seeming respectability actually cloaks sinister purposes."

TOO KIND TO STEELE

But actually, Mr. Speaker, Friends of Democracy is almost too kind with the ubiquitous Mr. Steele.

Dr. Birkhead omitted all mention in his release of the difficulties which Steele and his magazine had with the Better Business Bureau in Kansas City. You have to realize that very few of these Red baiters are motivated solely by their inverted patriotism or by their venom. They are out for a profit. They use their Fascist propaganda as a means of putting over their deals.

A fundamentalist "preacher" named Gilbert solicited subscriptions for the National Republic, which Steele calls a magazine of fundamental Americanism. Steele has recommended Reverend Curran as an expert on communism, and defended Father Coughlin and his Christian Front. He regards most progressive, non-Communist Americans as Reds and has collaborated closely with Mrs. Dilling in the publication of patriotic books.

Steele testified before the Dies committee on communism. One of his fund solicitors exploited that testimony, according to the Kansas City, Mo., Better Business Bureau. Its bulletin of October 26, 1942, charged that Steele's representative, V. W. Carrington, in selling subscriptions to National Republic and other patriotic Steele literature to businessmen, also stated that the literature had the approval of Dr. Harold C. Hunt, superintendent of schools. Businessmen could subscribe in the following amounts: $7.50, $22.50, $45, and $75. Subscription to the magazine is $2 a year.

STRIPLING DISOWNED STEELE

According to the Better Business Bureau release, Carrington solicited funds in units of $7.50, each unit to pay for the mailing of Steele's literature to a public-school teacher in the Kansas City system. Dr. Hunt strongly denied authorizing Carrington to use his name, stating that he had only had an interview with the solicitor. Following complaints about Carrington's methods, the Kansas City Police Department investigated. The Bureau report stated:

In a special meeting of the * * * welfare board, October 21, a resolution was passed commending the police department for stopping the unlicensed and unauthorized solicitation.

Robert E. Stripling, chief investigator of the Dies committee, wired the Better Business Bureau on October 14:

There is no connection between this committee and the National Republic of Washington, D. C. No individual or agency is authorized to solicit funds under the pretext that they are aiding the Dies committee.

WHY DID STRIPLING CHANGE?

If Robert Stripling knew of this racket in 1942, why did he bring Walter S. Steele to the public forum of the Committee on Un-American Activities in 1947?

In his 1937 testimony before the Dies committee Steele's statements filled 402 pages but less than 7 pages were devoted to the perils of nazism and fascism, though the Nazi panzers rolled into Vienna that very year.

Steele claimed the credit or discredit for bringing about the WPA investigation in 1939. I am informed that he is a close friend of Hiram Ralph Burton, who was counsel for admitted Nazi propagandists in 1934, a former lobbyist for Father Coughlin, counsel for the coalition, and part of the old Ford labor spy network; that Steele and Joe Kamp told Burton who to investigate and what to find during the WPA investigation, and that Steele and Burton were in frequent telephone communication. Steele and Burton, like the Dies committee, accepted Edwin P. Banta, the psychotic, as authentic and reliable. Both Steele and Burton defend and cooperate with Father Coughlin, though Steele seems to be tinged with anti-Catholicism.

PRIVATE GESTAPO SYSTEM

Steele operates his own private Gestapo system. He is reputed to have the largest card file system on what he calls subversives—meaning chiefly progressives and liberals—in America, and sells a phony patriotic service which seems to bear a close resemblance to the industrial blacklist system.

ESCAPED SEDITION INDICTMENT

Though as a sop to the public Steele occasionally has an article in his magazine touching the Nazi war machine, there can be little doubt of his prewar sympathy with Nazi Germany. His office manager, Mrs. Flora Walker, openly expressed her own enthusiasm for the march of the Nazi war machine to several investigators. Some of Steele's close friends and collaborators were even more outspoken in their allegiance to Hitler Germany. Washington police files reveal interesting information linking Burton with surveillance in connection with both German and Japanese espionage activities before Pearl Harbor.

John B. Trevor is president of the "Coalition," which was required by the Senate Committee on Campaign Expenditures in 1944 to file a questionnaire for organizations engaged in political activities within the scope of the Federal Corrupt Practices Act. The American Coalition was mentioned as a "factor" in the indictment of 28 persons on charges of seditious conspiracy, although Trevor and Steele and Burton escaped indictment. Nevertheless, the National Republic and Walter Steele are regarded as important cogs in George Sylvester Viereck's plot to keep America out of the war by spreading "the truth as Germans saw it."

This, then, is the Walter S. Steele paraded before the American people as an expert on "un-American" activities. Good God, Mr. Speaker, he should be an expert; he seems to me to have been engaged in them most of his life. Why, Mr. Speaker, why, why is this man not himself under investigation?

Hon. Leo F. Rayfiel to the Judiciary

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. WEICHEL. Mr. Speaker, this morning I was most happy to learn that the gentleman from New York [Mr. RAYFIEL] received the appointment of Federal district judge in Brooklyn. He was a most valued member of the Committee on Merchant Marine and Fisheries and his great background of experience and law contributed much to the deliberations of the committee.

While we are sorry to lose him, he goes to the judiciary with the best wishes of the Committee on Merchant Marine and Fisheries.

Real Estate Lobbies

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mrs. DOUGLAS. Mr. Speaker, the President on June 30, 1947, asked that the real-estate lobbies be investigated. He said:

One of the most stubborn obstacles in the way of any constructive housing program has been the opposition of the real-estate lobby. Its members have exerted pressure at every point against every proposal for making the housing program more effective. They have constantly sought to weaken rent control and to do away with necessary aids to housing. They are openly proud of their success in blocking a comprehensive housing program.

This group has sought to achieve financial gains without regard to the damage done to others. It has displayed a ruthless disregard to the public welfare.

It is intolerable that this lobby should be permitted by its brazen operations to block programs so essential to the needs of our citizens. Nothing could be more clearly subversive of representative government. I urge the Congress to make a full investigation of the activities of this selfish and short-sighted group. When the truth is known, I am confident that this obstacle to constructive housing legislation will be removed.

Six weeks before the session began, Boyd Bernard, then president of the National Association of Real Estate Boards, told members to "wait for the new Congress on the Capitol steps with a proposal for a cushioned decontrol of rents."

On May 12, after the House had passed the bill opening the way for rent increases and repealing most of the Veterans' Emergency Housing Act, the association notified members:

We won the first round of rents through the passage of the Wolcott bill. This embodies substantially the program we wanted.

I have introduced a resolution intended to carry out the President's request that the real-estate lobby be investigated.

I had hoped that even at this late hour the Republican leadership of the Eightieth Congress would support this resolution. I intend to reintroduce it the day that Congress reconvenes. I trust that the experience of the Members while they are home will cause them to support the President's request.

The housing problem which the Republican leadership of the Eightieth Congress has seen fit to ignore has become a housing crisis.

Families are living doubled up in one room from one end of the country to the other.

Veterans and their families are living under the most indescribable conditions—in one-room dwellings, basements, trailers, tents, and even chicken coops, and automobiles.

The housing shortage is a catastrophe for millions of American families.

In the face of this tragedy, the Republican leadership of the Eightieth Congress has not only rejected the administration plan for a central housing agency but has scrapped most of the remaining controls on home building and other construction. It has pigeonholed all measures for public housing and even sought to completely strangle the public-housing program by inadequate appropriations for FPHA and impossible regulations which seek to make the FPHA an agency of clerks.

And as a final blow to the American people, the Republican leadership in Congress passed the Wolcott so-called "rent-control" bill which already has brought privation and misery.

Mr. Speaker, I have introduced a resolution to have the real-estate lobby investigated. I hope it will have the backing and support of the Republican leadership of the Eightieth Congress.

Families are looking for homes. Families are being evicted. And yet Congress prepares to go home. This is deeply regrettable, Mr. Speaker.

Mr. Speaker, for the convenience of the Members, I include my resolution:

Resolution creating a select committee to conduct an investigation and study of the real-estate lobby and other pressure groups

Resolved, That there is hereby created a select committee to be composed of five Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.

The committee is authorized and directed to conduct a full and complete investigation and study of the activities of the real-estate lobby and any other pressure group during the Seventy-ninth and Eightieth Congresses in weakening rent control, doing away with necessary aids to housing, and otherwise blocking a comprehensive housing program, and such further investigation and study as in its judgment will contribute to removing the obstacles presented by such lobby or pressure group to constructive housing legislation.

The committee shall report to the House (or to the Clerk of the House if the House is not in session) on or before January 3, 1948, the results of its investigation and study, together with such recommendations as it deems advisable.

For the purpose of carrying out this resolution the committee, or any subcommittee thereof authorized by the committee to hold hearings, is authorized to sit and act during the present Congress at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memoranda, papers, and documents, as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

Resolution to provide funds for the expenses of the investigation and study authorized by House Resolution 341

Resolved, That the expenses of the investigation and study to be conducted by the select committee created by House Resolution 341, not to exceed $25,000, including expenditures for the employment of such investigators, attorneys, and clerical, stenographic, and other assistants as may be necessary for the purposes of such investigation and study, shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman thereof, and approved by the Committee on House Administration.

Effect of Report by Conference Committee on Government Corporations on the Federal Public Housing Authority

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mrs. DOUGLAS. Mr. Speaker, having been unable to strangle the public housing program by legislation, the report of the conferees on Government corporation appropriations, does the job effectively by appropriations.

The Senate, having restored a workable program after the House had scuttled FPHA is faced with the fact that its conferees had capitulated straight across the board.

Administrative appropriations are reduced from the Senate approved $13,000,000 to $11,500,000. The Bureau of the Budget had approved $17,000,000. This means more than a 50-percent reduction in personnel.

The report restores the House provision that not more than 20 percent of the total number of paid employees from the administrative funds can receive $4,500 annually or more.

For example, if the reduction is made according to salary grades, the Commissioner of FPHA would be required to reduce his top staff—P–8 classifications—assistant commissioners, comptroller, and regional directors from 16 to 3.

If reductions are made by divisions, by regions or by lumping the entire organization, the result is the same. There will be an agency of clerks to carry out one of the most technical assignments in Government.

The report also provides a reduction in the payments of annual contributions to local housing authorities in order to maintain low rents from the Senate-approved $5,200,000 to $4,000,000. The agency, on the basis of need, had requested $7,500,000. Therefore, the Congress is legislating to jeopardize local and Federal public housing bonds. Firm contracts may well be abrogated.

Any one of these actions might well mean death to public housing, but combined it is nothing short of murder at the time, when the housing crisis is the most critical in our history.

It must be remembered that FPHA is a supervisory and lending agency. It establishes public housing policy within the provisions of the law, makes loans to local public agencies for the construction of low-rent housing, and makes annual contributions to such agencies to permit families of lowest incomes to move from slums into decent shelter.

The agency, through highly trained personnel, audits the management, construction, and financing operations of local housing authorities in order to protect the Federal Government's interest.

This action today is not economy; it is a deliberate attempt to scuttle public housing. It will result in extravagance, due to the lack of competent audits of operations by trained people. It jeopardizes the faith and credit of the United States. It is gross irresponsibility.
